1.0 Project Description

A hazardous materials evaluation was completed for the Interstate 25 (I-25) North, United States Highway 36 (US 36) to 104th Avenue project.. Colorado Department of Transportation (CDOT), in cooperation with the Federal Highway Administration (FHWA), is preparing a template Environmental Assessment for the I-25 North, US 36 to 104th Avenue project. The Regional Transportation District is a cooperating agency.

The I-25 North, US 36 to 104th Avenue project includes improvements to relieve congestion and improve safety on I-25 from US 36 to 104th Avenue in Adams County and the City of Thornton, Colorado (Figure 1 and Figure 2). The project will provide improvements to an approximately 4-mile segment of I-25 between US 36 and 104th Avenue. The current cross-section of I-25 between US 36 and 104th Avenue includes three general-purpose lanes and one Express Lane along the inside shoulder, with an auxiliary lane between 84th Avenue and Thornton Parkway. The inside shoulder varies in size between 2 and 12 feet, and the outside shoulder varies between 10 and 12 feet. There is a 2-ft inside shoulder and a 2-ft buffer between the Express Lane and the nearest general-purpose lane.

Proposed improvements associated with this project are as follows:

- ▶ Adding a fourth general-purpose lane in each direction from 84th Avenue to Thornton Parkway with the northbound general-purpose lane extending to 104th Avenue,
- ▶ Constructing continuous acceleration and deceleration lanes between the I-25/84th Avenue interchange, and the I-25/Thornton Parkway interchange,
- ▶ Widening the inside and outside shoulder to a consistent 12-foot width,
- ▶ Accommodating a proposed median transit station and pedestrian bridge for the Thornton Park-n-Ride just south of 88th Avenue, and
- ▶ Replacing the 88th Avenue bridge.

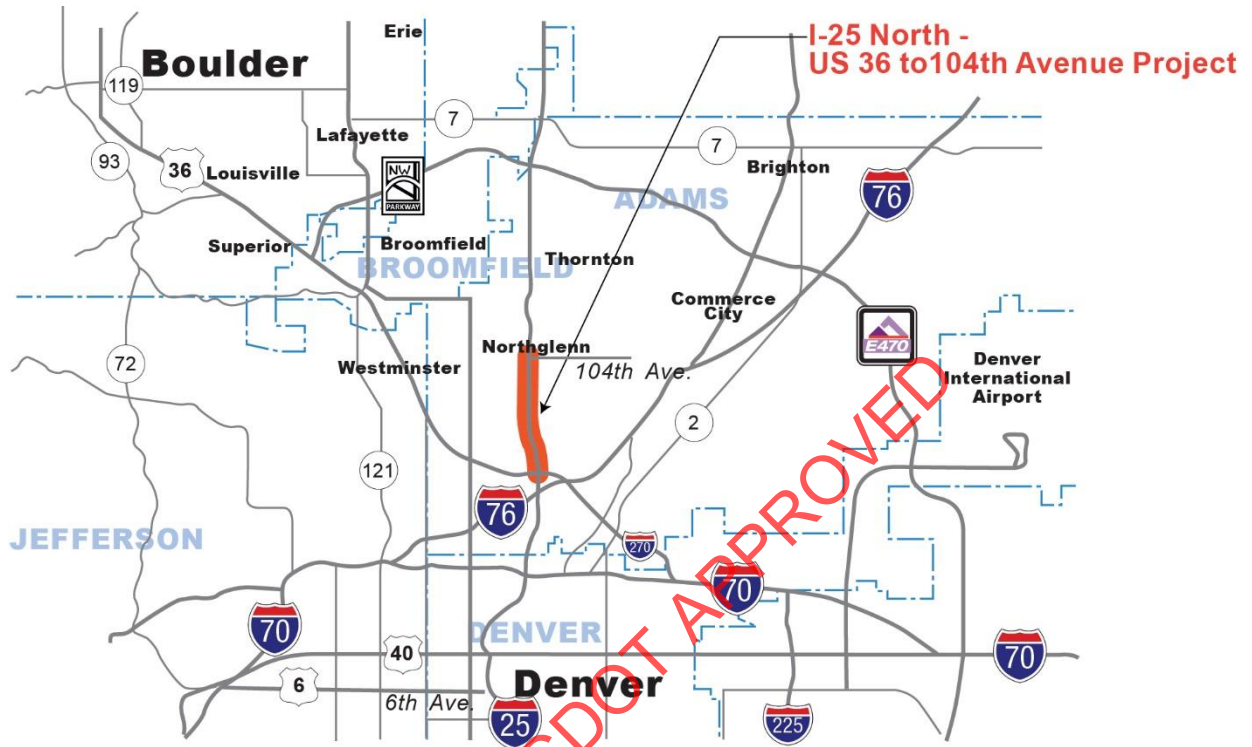

The proposed typical section on I-25 will consist of four 12-ft general-purpose lanes, a 12-ft Express Lane along the inside travelled way, and a 12-ft outside auxiliary lane between each interchange. Additionally, the inside and outside shoulders will be widened to 12 feet, the Express Lane buffer will be widened to 4 feet, and a 2-foot barrier will separate the northbound and southbound lanes of I-25. Surrounding the median station will be a 2-ft concrete barrier separating the Express Lanes from the bus station and bus lanes.

Figure 2. Project Area

Source: FHU, 2019

2.0 Purpose

This assessment provides information about facilities that pose a potential risk of being affected by regulated hazardous materials from Recognized Environmental Conditions (RECs), Controlled RECs (CRECs), and Historical RECs (HRECs), which may cause owner liability in the event of property acquisition or easements. Thorough assessment of facilities in and near the project area for past or present soil and/or groundwater impacts is also an integral component of the planning process and evaluating project liability, as regulated materials may be encountered during project activities (i.e., ground disturbance). As part of this assessment, Pinyon Environmental (Pinyon) also evaluated project liability risk as summarized in **Section 2.3**.

The Modified Environmental Site Assessment (MESA) was completed by an Environmental Professional or under the supervision or responsible charge of an Environmental Professional. At a minimum, the Environmental Professional was involved in planning the project area reconnaissance and interviews, and in reviewing and interpreting the information used in developing the conclusions. Pinyon declares that, to the best of our professional knowledge and belief, the Environmental Professionals involved met the definition as defined in §312.1 of 40 Code of Federal Regulations (CFR) 312. Other persons involved are qualified individuals and have the training and experience necessary to complete their assigned tasks. These personnel have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject project area. Pinyon has developed and performed all appropriate inquiries in conformance with the standards. **Appendix A, Resumes/Credentials**, presents resumes of the personnel involved in this project.

RECs are defined conditions by American Society for Testing and Materials (ASTM) as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. ASTM defines a CREC as a REC

resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. ASTM defines a HREC as a past release of any hazardous substance or petroleum product that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The terms REC, CREC, and HREC do not include *de minimis* conditions that do not present a threat to human health or the environment and that would not be the subject of an enforcement action if brought to the attention of appropriate environmental agencies.

2.1 Summary of Scope of Services

This MESA has been prepared in general accordance with the ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E 1527-13) and CDOT Environmental Programs Branch Hazardous Materials Guidance Table (CDOT, 2011). The following discussion presents the scope of services used to complete this assessment.

Physical Setting: The physical setting of the project area was reviewed to help evaluate potential regulated material transport mechanisms, including topographic and hydrogeologic conditions.

Regulatory Files: A review was completed of the compliance history of facilities within and near the project area, as identified by a regulatory database search and other reports (if available). This search included a review of publicly available local, state, and federal records, or other reports.

Historical Land Uses: A review of historical uses in and around the project area was completed, using multiple sources. This review focused on uses that could potentially affect the project area through a release of hazardous substances to the soil or groundwater, such as commercial and industrial uses, and the storage and use of regulated materials.

Reconnaissance Survey: Pinyon completed reconnaissance surveys of the project area and project vicinity on February 8, 2017, and on July 20, 2018. The reconnaissance survey evaluated the potential presence of regulated materials sources. Pinyon personnel visually surveyed the project area by driving the perimeter and surrounding areas of the project vicinity via access roads and by walking areas with safe public access. Due to the length of the project area, driving was used as the main survey method. Following the reconnaissance survey, any areas that could not be visually assessed were evaluated more closely on current aerial photographs provided by public sources (e.g., Google Earth). Additionally, photographs were taken, and a photographic log is attached as **Appendix B, Photographic Log**.

Interviews: The owner interview was not conducted as part of this MESA as most, if not all, work will be completed within the CDOT right-of-way (ROW).

Additional Services: Services beyond those required by ASTM or CDOT were not completed.

2.2 Project Area and Project Vicinity Descriptions

This MESA considers two geographical areas. The first is the project area, which encompasses the actual project limits (i.e., project footprint and/or limit of disturbance) as known at the time of the MESA. The second geographical area is the project vicinity. The project vicinity includes properties and lands outside, but adjacent to or in proximity to, the project area.

2.3 Impact Categories for Project Liability

The magnitude of the project impact from a regulated material depends on several factors, including the distance between a potential source of a regulated material and the project; status of regulated facilities (e.g., active or inactive); known or suspected releases into soil, surface water or groundwater; the hydrogeologic relationship of the source of a regulated material to the project; and the depth and/or duration of construction. This MESA considers these factors as part of the evaluation of whether a regulated material has the potential to affect the project.

Facilities were categorized as having either a low or a high potential to affect the project area.

Low Potential: Facilities that fit this category include:

- ▶ Facilities with minimal indications of an existing release, a past release, or a material threat of a release of regulated materials into the ground (soil), groundwater, or surface water that could affect the project area.
- ▶ Facilities located hydraulically downgradient of the project area.
- ▶ Those facilities where regulated materials have affected the soil or groundwater at the project area; however, there is a low potential for known or suspected impacts to be exposed during project construction.

High Potential: Facilities that fit this category include:

- ▶ Facilities with indications of an existing release, a past release, or a material threat of a release of any regulated materials into the ground (soil), groundwater, or surface water, and the possibility of migration from the contaminant source into the project area.
- ▶ Those same facilities that have caused a migration of the contaminants into the project area, and where construction would likely result in exposure of media affected by those contaminants (e.g., soil, soil vapor, groundwater).

These criteria have been used throughout this report to evaluate the potential significance of impacts resulting from potential regulated or affected materials that might be encountered during the project.

2.4 Project Design and Hazardous Materials Re-Evaluation

Project design is currently ongoing. It is possible that as project design and alternatives are refined, the conclusions and recommendations in this MESA would require re-evaluation. If a re-evaluation of this MESA is needed, an Addendum Memorandum(s) will be developed to document new information, conclusions, and recommendations that would supersede this MESA.

3.0 General Project Information

The proposed project is located along the I-25 corridor between US 36 and 104th Avenue and is part of the corridor improvements identified in the North I-25 Final Environmental Impact Statement (FEIS) (CDOT and FHWA, 2011a), the North I-25 ROD (CDOT and FHWA, 2011b), and the North I-25, US 36 to SH 7 Planning and Environmental Linkages Study (CDOT and FHWA 2014a).

3.1 Project Overview

The I-25 North, US 36 to 104th Avenue project includes improvements to relieve congestion, improve safety, enhance multimodal travel, and replace aging infrastructure on I-25 from US 36 to 104th Avenue (Figure 1 and Figure 2). The project will provide improvements to an approximately 4-mile segment of I-25 between US 36 and 104th Avenue. Table 1 describes the project.

3.2 Summary of Project Features

Proposed improvements associated with this project include adding a fourth general-purpose lane in each direction from 84th Avenue to Thornton Parkway, with the northbound general-purpose lane extending to 104th Avenue; constructing continuous acceleration and deceleration lanes between the I-25/84th Avenue

interchange and the I-25/Thornton Parkway interchange, widening the inside and outside shoulder to a consistent 12-ft width, accommodating a proposed median transit station and pedestrian bridge for the Thornton park-n-Ride just south of 88th Avenue, and replacing the 88th Avenue bridge.

The proposed typical section on I-25 will consist of four 12-ft general-purpose lanes, a 12-ft Express Lane along the inside travelled way, and a 12-ft outside auxiliary lane between each interchange. Additionally, the inside and outside shoulders will be widened to 12 feet, the Express Lane buffer will be widened to 4 feet, and a 2-ft barrier will separate the northbound and southbound lanes of I-25. Surrounding the median station will be a 2-ft concrete barrier separating the through-lanes from the bus station and bus lanes.

Final design has not yet been determined, but it is anticipated that minor excavation (up to a depth of 1 foot), grading, and concrete surfacing activities will be completed for roadway widening. In addition, underground utilities may be present near proposed construction activities that would require relocation and possible excavation up to 4 feet below ground surface (bgs); details regarding utility relocation are not yet known. Deeper excavations, up to 80 feet, may take place for bridge construction; signal installation and lighting installation may require drilling up to 20 feet. Table 2 summarizes the project features as presented on CDOT Form No. 881.

Table 1. Project Description

Information	Discussion
Project Name	I-25 North US 36 to 104 th Avenue Environmental Assessment
Location	I-25 North corridor between US 36 and 104 th Avenue
County	Adams
CDOT Region	1
Project Number	NHPP 0253-250 (21880)
Project Code (SA#)	115388-01
Route ID	Interstate 25
Mile Post Begin	217
Mile Post End	221

Table 2. Summary of Project Features

Project Feature	Present (Yes/No)	Comments
Structure Acquisition	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	Not anticipated.
Structure Modification	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	Not anticipated.
Structure Demolition	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	88 th Street bridge.
New Right of Way	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	New right-of-way is anticipated; specific locations will be surveyed.
Easements	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Easements are anticipated; specific locations have not yet been identified.
Utility Relocation	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Unknown	Work will likely be required near overhead and underground utilities; however, final design has not yet been determined and specific impacts are not yet known.
Excavation or Drilling	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Drilling will be conducted for geotechnical investigations, and soil and groundwater characterization will likely take place at additional locations. Additionally, caissons may be constructed for bridges, traffic signals, and lighting.
Disturbance Depth (feet)	Between 1 to 80 feet	
Dewatering	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Groundwater may be encountered in areas where deep foundations may be needed (e.g., caisson and signal construction, and bridge foundations).
Groundwater Anticipated	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Groundwater will likely be encountered during the construction of the 88 th Avenue bridge and installation of signals and lighting.
Depth to Groundwater (feet) (Section 3.3.6) of this report?	Throughout most of the project area, water table conditions predominate in the Denver aquifer, and the depth to the water table is generally more than 20 feet and commonly more than 100 feet (Hillier, et al., 1983). Between US 36 and 75 th Avenue, depth to groundwater is assumed to occur at depths between 10 and 20 feet; between 84 th Avenue and 88 th Avenue, depth to groundwater is assumed to be between 5 and 10 feet.	
Groundwater Flow Direction (Section 3.3.6) of this report?	Based on a review of the topographic maps depicting the project area and the reconnaissance survey, the general groundwater flow direction is expected to be to the north-northeast.	

Source: Pinyon, 2019

3.3 Physical Setting

3.3.1 Topography

The general topography of the project area increases at a steady gradient from south to north from US 36 to Thornton Parkway and then decreases from Thornton Parkway to 104th Avenue.

3.3.2 Elevation

The elevation in the project area ranges from approximately 5,150 feet above mean sea level (msl) at the southern project boundary to 5,400 feet above msl at I-25 and Thornton Parkway and then to 5,350 feet above msl at the northern project boundary.

3.3.3 Surficial Soil

Surficial soils within the project area consist of seven soil units (**Table 3**) present on hills, terraces, and plains (USDA, 2017). The soils are derived Pleistocene alluvium, eolian deposits, or residuum weathered from bedrock and are present in various combinations in the project area.

3.3.4 Geology

Surficial geology within the project area consists of five units (**Table 4**). The units are present in various combinations in the project area (Bryant et al., 1981; Lindvall, 1980).

3.3.5 Nearest Surface Water Body

The nearest man-made surface water bodies to the project area are the Colorado Agricultural Canal and Lower Clear Creek Canal. These features are located at the intersection of I-25 and US 36. The elevation of these features is approximately 5,150 and 5,160 feet above msl, respectively.

In addition to these canals, Niver Creek and an associated tributary cross the project area between 84th Avenue and 88th Avenue at an approximate elevation of 5,250 feet above msl.

Croke Lake, located on the northern boundary of the project area, is at an elevation of approximately 5,400 feet above msl. An unnamed tributary to the South Platte River crosses the project area approximately 1,200 feet to the south of 104th Avenue; the elevation of this feature is approximately 5,360 feet above msl.

3.3.6 Hydrogeology

Throughout most of the project area, water table conditions predominate in the Denver aquifer. The depth to the water table is generally more than 20 feet and commonly more than 100 feet (Hillier, et al., 1983). Between US 36 and 75th Avenue, depth to groundwater is assumed to occur at depths between 10 and 20 feet. Between 84th Avenue and 88th Avenue, depth to groundwater is assumed to be between 5 and 10 feet.

During previous soil and groundwater investigations near I-25 and 84th Avenue, depth to groundwater was measured between 12 to 13 feet bgs (ERM, 2003; Blaha, 1996a).

Based on a review of the topographic maps depicting the project area and the reconnaissance survey, the general groundwater flow direction is expected to be to the north-northeast. Based on a review of soil and groundwater investigation reports at 11 and 41 West 84th Avenue, groundwater flow in the project vicinity was to the northeast (ERM, 2003). Groundwater flow to the southeast has been reported along East 84th Avenue, over 500 feet to the east of the project area.

3.3.7 Wells

Pinyon searched the Colorado Department of Water Resources Well Permit Research Viewer (DWR, 2018). Several monitoring and domestic wells were mapped within or adjacent to the project area (**Figure 3**). The location of these wells was not field verified, and the status of these wells is not known.

Table 3. Summary of Surficial Soils in the Project Area

Soil Unit	Description
Gravelly land-Shale outcrop complex	Well drained, occurs on hillslopes <i>Typical soil profile</i> 0 to 3 inches: Gravelly sand 3 to 60 inches: Gravelly sand
Renohill loam, 3% to 9% slopes	Located on terraces; formed from Pleistocene alluvium and/or eolian deposits <i>Typical soil profile</i> 0 to 31 inches: clay loam 31 to 80 inches: loam
Ulm loam, 3% to 5% slopes	Located on plains; residuum weathered from sandstone and shale <i>Typical soil profile</i> 0 to 7 inches: Loam 7 to 13 inches: Silty clay 13 to 30 inches: Clay 30 to 48 inches: Clay loam 48 to 52 inches: Unweathered bedrock
Ulm loam, 5% to 9% slopes	Located on plains; residuum weathered from sandstone and shale <i>Typical soil profile</i> 0 to 4 inches: Loam 4 to 13 inches: Silty clay 13 to 30 inches: Clay 30 to 48 inches: Clay loam 48 to 52 inches: Unweathered bedrock
Samsil-Shingle complex, 3% to 35% slopes	Formed on hills; residuum weathered from shale <i>Typical soil profile</i> 0 to 4 inches: Clay 4 to 14 inches: Silty clay 14 to 18 inches: Weathered bedrock
Samsil clay, 3% to 20% slopes	Formed on hills; residuum weathered from shale <i>Typical soil profile</i> 0 to 4 inches: Clay 4 to 14 inches: Silty clay 14 to 18 inches: Weathered bedrock
Nunn clay loam, 0% to 1% slopes	Formed on terraces from Pleistocene alluvium and/or eolian deposits <i>Typical soil profile</i> 0 to 6 inches: Clay loam 6 to 10 inches: Clay loam 10 to 26 inches: Clay loam 26 to 31 inches: Clay loam 31 to 47 inches: Loam 47 to 80 inches: Loam

DRAFT NOT APPROVED

Table 4. Summary of Surficial Geology in the Project Area

Geological Unit	Description
Piney Creek Alluvium	Brown to light-brown and light- to dark-gray interbedded sand, silt and clay. Generally well-stratified, humic material is common in the upper 1 to 2 feet.
Colluvium (Holocene and Pleistocene)	Gray, dark-gray, brown to light-brown sandy silt and clay. In places contains pebbles and cobbles.
Artificial Fill	Clay, silt, sand, gravel, and various debris consisting of concrete, brick, wood, metal, plastic, vegetation and other trash. Includes engineered and compacted fill for highways, bridges and bridge abutments; engineered and semi-engineered fill for dams, canals and railway embankments, stream channelization dikes and some sanitary landfills; and uncompacted materials in local rubbish dumps.
Denver (Paleocene and Upper Cretaceous) and Arapahoe (Upper Cretaceous) Formations	Brown, yellowish-brown, gray and bluish-gray interbedded sandstone, claystone, siltstone, shale and conglomerate. Crossbedded and lenticular units are common throughout the formations.
Loess (Holocene and Pleistocene)	Yellowish-brown to light-grayish-brown sandy silt. Upper 2 to 4 feet may contain appreciable amounts of clay and silty clay.

DRAFT NOT CDOT APPROVED

4.0 Results

The following sections summarize the review of the regulatory files, historical land uses, and reconnaissance survey.

4.1 Regulatory Files

A database report was obtained of regulatory agency environmental records concerning known releases of hazardous substances or petroleum products, the location of landfills, and the

generation, storage or transport of hazardous waste from GeoSearch (**Appendix C**). The search was conducted in accordance with the search radii specified in the ASTM Standard; acronyms and abbreviations can be found in the database report (**Appendix C**).

The agency database report identified a total of 250 facilities (**Appendix D**). Based on the criteria described in **Section 2.3**, a total of 25 listings were identified during the review of regulatory files with a potential to affect the project area (**Table 5**).

Table 5. Summary of Facilities with Potential to Affect the Project Area

GeoSearch ID ¹	Facility Name(s)	Facility Type	Address	Hydrogeological Relationship to Project Area	Summary of Facility Use (s) ²
1	00070-0000192	HISTSWLF	NE of Fred Drive and 94 th Ave (W of 94 th and I-25)	Within project area boundaries and adjacent to the west	Shown on a 1977 TCHD map as "Open Demolition." No additional information identified.
2	00070-0000194	HISTSWLF	East of I-25 between 85 th and 87 th	Within project area boundaries and adjacent to the east	Shown on a 1977 TCHD map as "Open Demolition." No additional information identified.
3	I25 Managed Lanes 18695 IM 0253222; Colorado DOT I25/US 36 Interchange	ECHOR08; FRSCO; RCRANGR08; SPILLS	I-25 from US 36 to 120; I-25/US 36 Interchange	Within project area boundaries	Listed for permits associated with previous construction and a spill.
4	Not Reported	SPILLS	88 th and Grant St	Within project area boundaries	Diesel spill in 2003 resulting from an accident.
5	I25 and 104 th Avenue Bridge Replacements	FRSCO; SPILLS; HMIRSR08	I2-5 and 104 th Ave; I-25 and 104 th Ave	Within project area boundaries	An 8-gallon tetrachloroethylene spill reported in 1995.
6	I25 Managed Lanes Temporary Construction Yard	ECHOR08; FRSCO	I-25 and Thornton Parkway	Within project area boundaries	Listed for stormwater permits associated with previous construction.
7	00070-0000191	HISTSWLF	Approx 89 th and Delaware	Within project area boundaries and adjacent to the east; upgradient	Shown on a 1977 TCHD map as "Open Demolition." No additional information identified.

I-25 (US 36 to 104th Avenue) Environmental Assessment

GeoSearch ID ¹	Facility Name(s)	Facility Type	Address	Hydrogeological Relationship to Project Area	Summary of Facility Use (s) ²
8	CDOT Thornton Maintenance	SWF; UST; LST; ECHOR08; NLRRCRAG; RCRANGR08	7800 N. Valley Highway	Within project area boundaries and adjacent to the east; upgradient	Closed LST and two removed USTs. Former Resource Conservation and Recovery Act (RCRA) generator. LST event closed in December 1994.
9	Not reported	ERNSCO; SPILLS	7724 Sherman St; 7714 Sherman St.	Adjacent to the west; downgradient	Spill reported resulting from a meth lab explosion.
10	North Star Chevron #70359	UST; LST; ECHOR08; FRSCO	41 W 84 th Avenue	60 feet west; upgradient	Formerly operated as a gasoline station. Former UST and closed LST facility. Groundwater has been affected.
11	Sports Warehouse	VCRA	11 East 84 th Avenue	Within project area boundaries and adjacent to the west; upgradient	Groundwater at this facility affected by operations at the former Chevron gas station located upgradient and adjacent to the west. CDPHE granted this facility a No Action Determination.
13	American Furniture Warehouse	UST; LST; SPILLS	8501 Grant Street	Adjacent to the east; downgradient	This is an active UST facility with one 10,000-gallon gasoline UST and a closed LST event resulting from a spill during fueling. The facility was a generator of hazardous waste from at least 2003 to 2011 and has reported as a non-generator of hazardous waste since 2011. General manifest and pre-transport violations reported in 2003.

DRAFT NOT CDOT APPROVED

Figure 3. Project Area Detail

Source: Pinyon, 2019

I-25 (US 36 to 104th Avenue) Environmental Assessment

- 1. Historical Landfill (GeoSearch ID: 1; Facility ID: 00070-0000192), NE of Fred Drive and 94th Avenue (West of 94th Avenue and I-25):** This facility was reported on a 1977 Tri-County Health Department (TCHD) map as being an open demolition landfill used for construction debris. No additional information was identified.
- 2. Historical Landfill (GeoSearch ID: 2); Facility ID: 00070-0000194), East of I-25 between 85th Avenue and 87th Avenue:** This facility was reported on a 1977 TCHD map as being an open demolition landfill used for construction debris. No additional information was identified.
- 3. I25 Managed Lanes 18695 IM 0253222; Colorado DOT I25/US 36 Interchange (GeoSearch ID: 3):** This location was listed as a hazardous waste non-generator since 2000 with no violations or corrective actions and previously held a stormwater associated with construction permit. A spill of 45 gallons of floor finish on the on-ramp to US 36 was reported in 1996.
- 4. 88th and Grant St (GeoSearch ID: 4):** A spill of 50 gallons of diesel to the storm sewer was reported in 2003 as a result of an accident. A third party remediated the spill. A wastewater backup was reported in 2013; reportedly the backup was caused by a grease blockage.
- 5. I25 and 104th Avenue Bridge Replacements (GeoSearch ID: 5):** Eight gallons of tetrachloroethylene was spilled in a truck due to poor closure on a drum. The spill was contained within the truck.
- 6. I25 Managed Lanes Temporary Construction Yard (GeoSearch ID: 6), I-25 and Thornton Parkway:** This location was listed for a former stormwater associated with construction permit.
- 7. Historical Landfill (GeoSearch ID: 7; Facility ID: 00070-0000191), Approximately 89th Avenue and Delaware:** This facility was reported on a 1977 TCHD map as being an open demolition landfill used for construction debris. No additional information was identified.
- 8. CDOT Thornton Maintenance (GeoSearch ID: 8; Facility ID: 7468), 7800 N. Valley Highway:** This facility is listed as a registered tire hauler and, as of 2014, is no longer a regulated Resource Conservation and Recovery Act (RCRA) generator. No violations or enforcement actions were reported for this facility. In addition, leaking underground storage tank (LST) event ID 50 was reported in 1994 when two underground storage tanks (USTs) were removed from the facility. In 1990, one 10,000-gallon gasoline UST was removed from the property without notification to the state or confirmation sampling (CGS, 1994). In 1994, a second 10,000-gallon diesel UST was removed from the property. At the same time, the gasoline UST location was re-excavated and sampled. Four soil samples were collected from the excavations and analyzed for benzene, toluene, ethylbenzene and xylene (BTEX), total extractable petroleum hydrocarbons (TEPH), and total volatile petroleum hydrocarbons (TVPH). The results were reported as non-detect for these analytes, and the event was closed by the Colorado Department of Public Health and Environment (CDPHE) in December 1994.
- 9. 7724 Sherman St; 7714 Sherman St. (GeoSearch ID: 9):** A spill was reported in 2003 after an explosion at a meth lab.
- 10. North Star Chevron #70359 (GeoSearch ID: 10; Facility ID: 678), 41 West 84th Avenue:** This facility operated as a gas station from at least 1962 until 1990 (Hirsch Gibney, 2003). Three gasoline and one waste oil USTs were removed from the facility and LST event ID 5463 was reported in 1990. Complete sampling and/or characterization reports were not on file for this facility. Although the event is listed as closed in the Colorado Department of Labor and Employment, Division of Oil and Public Safety (OPS) Colorado Storage Tank Information System (COSTIS) website, reportedly the closure was granted after incorrect sampling results were submitted to OPS (Hirsch Gibney, 2003). Additional sampling was completed in 1999, and volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), RCRA metals and total oil and grease were detected in soil and groundwater samples. The LST event was

I-25 (US 36 to 104th Avenue) Environmental Assessment

reopened and the OPS requested a Corrective Action Plan be completed for this property. It is unknown if this was completed. This facility is located adjacent to the west and upgradient of the Sports Warehouse, located at 11 East 84th Avenue (GeoSearch ID 10).

11. **Sports Warehouse (GeoSearch ID: 11; Facility ID: 267), 11 East 84th Avenue:** This facility is listed as a Voluntary Cleanup and Redevelopment Program (VCUP) facility. This property was previously farmland and a residence and then was developed with a hotel and commercial structures in the 1960s (Hirsch Gibney, 2003). In May 2003, Sports Warehouse purchased the property for construction of a commercial store. This property had been affected by operations at the Chevron gasoline station adjacent to the west, located at 41 West 84th Avenue (GeoSearch ID 11). During review of previously completed soil and groundwater investigations, the consultant, ERM, determined that soil samples collected at the Sports Warehouse property did not contain contaminants at levels greater than OPS Risk Based Screening Levels (RBSLs); however, groundwater samples did contain levels of benzene and 1,2 dichloroethane (1,2 DCA) at levels above Colorado Basic Groundwater Standards (ERM, 2003). Depth to groundwater was measured at 12 to 13 feet bgs. CDPHE granted this facility a No Action Determination based on the conclusion that the facility had been affected by operations at the Chevron station adjacent to the west.
12. **American Furniture Warehouse (GeoSearch ID: 13; Facility ID: 15707), 8501 Grant Street:** This is an active UST facility with one 10,000-gallon gasoline UST currently in use at the property. LST event ID 10955 was reported in 2009 when a spill from an unattended dispenser during fueling reached Niver Creek, resulting in a sheen (Belfor Environmental, 2009). The sheen was contained and the event was closed. The facility was a generator of hazardous waste from at least 2003 to 2011 and has reported as a non-generator of hazardous waste since 2011. General manifest and pre-transport violations were reported because of a compliance inspection in 2003.
13. **Design Fabricators Inc./Charles Hughes & Co. (GeoSearch ID: 14), 500 East 76th Avenue:** Charles Hughes & Co. was listed on the Toxic Release Inventory (TRI) from 1993 to 1995 due to air releases. In addition, the facility was listed as an active RCRA small quantity generator (SQG). Design Fabricators was listed as a former RCRA hazardous waste generator with no violations or enforcement actions.
14. **Horizon Terrace (GeoSearch ID: 15; Facility ID: 630), 9351 Grant Street:** LST event ID 7270 was reported after the removal of one 560-gallon diesel UST from the facility in 1998. One composite soil sample was collected from the excavation and analyzed for BTEX, TVPH, TEPH, and methyl-tert-butyl-ether (MTBE). The results were reported as less than applicable standards and a No Further Action (NFA) request was submitted to the OPS. The request was rejected because three discrete soil samples and a groundwater sample were required per OPS protocol. A report with additional sampling results was not on file; however, an NFA letter dated August 12, 1999, noted that contamination levels were below state cleanup levels.
15. **The Home Depot (GeoSearch ID: 16), 10003 Grant Street:** The facility is an active SQG with no violations or enforcement actions. Spills were reported due to accidents and vandalism, including a meth lab in a car, 50 gallons of diesel from a cut fuel line, and 0.03 gallon of sodium hydroxide from damaged packaging. These spills were remediated.
16. **Estate of Sam S. Bloom (GeoSearch ID: 17; Facility ID: 4767), 80 West 84th Street:** This is a closed aboveground storage tank (AST) and LST facility with event ID 4767. This facility operated as a gas station from at least the mid-1960s to early 1970s (Blaha, 1996a). Investigations were conducted at the facility in 1995 and 1996 to determine impacts to the property from historical operations (Huntingdon, 1995; Blaha, 1996b). Investigations consisted of a geophysical survey to confirm USTs had previously been removed; removal of underground fuel lines and confirmatory sampling; and soil and groundwater sampling. A soil and groundwater investigation was conducted in 1995, and three soil borings were drilled and sampled for

I-25 (US 36 to 104th Avenue) Environmental Assessment

soil and groundwater. Levels of BTEX, TVPH, and TEPH were reported in upgradient wells and at the soil/groundwater interface at concentrations below state standards. Based on these results, it was concluded that the property had been affected by an upgradient source. Four boreholes were advanced at the property in October 1996; soil samples were collected from each borehole, and groundwater samples were collected from two boreholes completed as monitoring wells. Samples were analyzed for BTEX, TVPH, and TEPH; the samples were non-detect for the analyzed constituents. Groundwater was measured at 12 to 12.5 feet bgs, and the groundwater flow was to the northeast. OPS issued a closure letter for the facility in January 1997.

17. **Historical Landfill (GeoSearch ID: 18; Facility ID: 00070-0000199), West of Grant at Russell Boulevard:** This facility was reported on a 1977 TCHD map as being an open demolition landfill used for construction debris. No additional information was available.
18. **101 East 88th Ave (Fountain Knolls Apartments) (GeoSearch ID: 20):** A spill of 45 gallons of diesel to the storm sewer was reported in 1997 after pavement collapsed beneath a truck. A third party remediated the spill.
19. **North Suburban Medical Center (GeoSearch ID: 21; Facility ID: 00070-0000194), 9191 Grant Street:** This is an active SQG, AST, and UST facility. One 6,000-gallon diesel UST and one 1,830-gallon diesel AST are currently in use at the property.
20. **Walmart#1231/Powersecure Inc (GeoSearch ID: 23), 9901 Grant Street:** This is an active AST, RCRA SQG and SWF facility. One 800-gallon used oil AST and one 2,400-gallon diesel AST are in operation. One general violation was reported in 2014. A spill was reported in 2008 when four exit signs containing radioactive material were reported as missing. The facility reports as an SWF for waste tire hauling.
21. **Circle K #6521 (GeoSearch ID: 25; Facility ID: 156), 160 W 104th Avenue:** This is a former AST and closed LST facility. Three USTs are currently operational. LST events were reported at this location in 1990 and 2007. A confirmed release was reported in March 1990, and a NFA letter was issued for the facility in March 1991. No additional information about this release was on file.
22. **Highland Cemetery (GeoSearch ID: 27; Facility ID: 2884), 300 East 104th Avenue:** A release was reported at this facility in 1991 during the removal of a 1,000-gallon UST (SRK, 1991). Three soil samples were collected from the excavation and analyzed for BTEX and total recoverable petroleum hydrocarbons (TRPH); levels of these analytes were reported as non-detect. CDPHE closed this event in 1991.
23. **Unser Karting & Entertainment/Larry Miller Toyota (GeoSearch ID: 28), 7300 N. Broadway:** This location is an active AST and SQG facility. One 1,000-gallon waste oil AST is in operation. In 1997 a spill of 129 gallons of oil was reported from a transformer; affected soil was excavated. No violations were reported.
24. **Chesrown Chevrolet/Go Chevrolet (GeoSearch ID: 29), 7320 North Broadway:** The facility is an active conditionally exempt small quantity generator (CESQG) and listed as a solid waste facility (SWF) for tire hauling. One AST for used oil is also located at the facility. General pre-transport and recordkeeping violations were reported in 2010, resulting in a compliance advisory in

May 2010 followed by a compliance order in November 2010.

25. **City of Thornton (GeoSearch ID: 35; Facility ID: 1792), 9500 Civic Center Drive:** LST event ID 9716 was reported for the facility in 2004, after the removal of two 8,000-gallon gasoline USTs. Three soil samples were collected from each excavation and analyzed for BTEX, TVPH, TEPH, total petroleum hydrocarbons (TPH), and oil and grease. Analytes were not detected in the soil samples and the facility was granted closure. OPS originally denied the closure because water was observed in the excavation and not sampled; however, the consultant stated that the water was from snow melt and was not groundwater.

4.2 Historical Land Uses

The following sections discuss historical land use in the project area and project vicinity.

4.2.1 Project Area

From at least 1890 until the mid-1950s, the project area was generally agricultural or vacant land (*topographic maps; aerial photographs*). During this time, several residences, unimproved and improved roads, and ephemeral streams and ponds were also located within the project area. By 1957, I-25 had been constructed through the project area. From the 1960s to the 1980s, the present-day streets running east to west through the project area were constructed (*topographic maps; aerial photographs*).

4.2.2 Project Vicinity

From at least 1890 until the mid-1950s, the project vicinity was agricultural or vacant land with scattered residences (*topographic maps; aerial photographs*). By 1953, I-25 had been constructed to the south of the project area, stopping at the intersection of I-25 and US 36. By the 1960s, several residential subdivisions had been constructed, and 84th Avenue was an unimproved road (*topographic maps; aerial photographs*). Throughout the 1960s to the 1980s, additional residential and commercial uses were constructed in the project vicinity; these uses continue to the present day.

4.3 Reconnaissance Survey

To obtain current information on the presence of RECs, a limited reconnaissance survey of the project area and vicinity was conducted on January 14, 2017. After changes to the project footprint, an additional limited reconnaissance survey of portions of the project area and vicinity was conducted on July 20, 2018. The reconnaissance survey was conducted from public ROW and included an assessment of the current land uses and observable activities associated with properties in and adjacent to the project area. Access to some areas immediately adjacent to I-25 were limited due to fences, noise walls, and safety considerations.

During the reconnaissance survey, photographs were taken, and a photographic log is attached as Appendix B.

4.3.1 Project Area Land Uses

The project area consists of:

- ▶ I-25 and the adjacent ROW
- ▶ The intersection of I-25 and 104th Avenue
- ▶ The intersection of I-25 and Thornton Parkway and associated entrance and exit ramps
- ▶ The intersection of I-25 and 88th Avenue
- ▶ The intersection of I-25 and 84th Avenue and associated entrance and exit ramps

4.3.2 Project Vicinity Land Uses

Land use in the project vicinity consists of residential, office, and commercial structures and open space adjacent to I-25 and the side streets. Specific uses include a cemetery and shopping centers to the south of 104th Avenue; City of Thornton offices and a school to the north of Thornton Parkway; open space to the west of I-25 between Thornton Parkway and 88th Avenue; and a medical complex and apartment complex to the east of I-25 between Thornton Parkway and 88th Avenue. Various commercial uses and parking lots are located along I-25 between 84th Avenue and 88th Avenue. The area between 84th Avenue and 88th Avenue is a mix of residential and commercial uses.

4.3.3 Summary of Observed Potential Environmental Concerns

During the reconnaissance survey, the project area and vicinity were observed for evidence of potential presence of regulated materials, such as:

- ▶ General uses; in particular, uses that could result in the use and/or release of hazardous substances or petroleum products;
- ▶ Evidence of USTs, including fill ports, vent pipes, and fueling facilities;
- ▶ Presence of ASTs and evidence of secondary containment for spill prevention;
- ▶ Disposal of solid waste, waste management practices, and general housekeeping of waste storage/disposal areas;
- ▶ Evidence of on-site dumping or landfilling;
- ▶ Presence of equipment types that have been historically associated with the use of polychlorinated biphenyls (PCBs) as a dielectric fluid coolant and stabilizer;
- ▶ Handling and storage of hazardous materials, such as the presence of 55-gallon drums or tote containers; and
- ▶ Presence of drains, sumps, septic systems, wastewater discharges, pits, ponds, lagoons, staining, pooled liquids, stressed vegetation, odors or wells.

Table 6 summarizes observed potential regulated materials that could be present in either/or the project area or the project vicinity. Where observations indicate the potential presence of regulated materials, additional discussion is presented in the following sections.

Table 6. Summary of Observed Potential Regulated Materials

Potential Environmental Concern	Project Area	Project Vicinity	Potential Environmental Concern	Project Area	Project Vicinity
Underground storage tanks(s)	No	Yes	Protected/fenced/ placarded area(s)	No	No
Aboveground storage tank(s)	No	Yes	Liquid waste (pits, ponds, lagoons, etc.)	No	No
Monitoring/well(s)	No	No	Oil sheen (soil/water)	No	No
Electrical transformer(s)/ equipment	Yes	Yes	Oil/gas well(s) or production facilities	No	No
Cistern(s), sump(s), drain(s)	Yes	Yes	Mine tailings waste	No	No
Barrel(s), drum(s), container(s)	No	No	Painted/preserved material(s)	No	No
Stockpile, surface trash, debris	No	Yes	Odor(s)	No	No
Exposed/buried landfill	No	No	Chemical storage	No	Yes
Battery(ies)	No	No	Suspected asbestos-containing materials (facility component)	No	No
Surface staining	No	No	Suspected asbestos-containing materials (in soils)	No	No
Stressed vegetation	No	No	Suspected methamphetamine lab(s)	No	No

PCBs

During the reconnaissance survey, several pad-mounted electric transformers were observed within the project area. Electrical transformers have the potential to include fluid that contains PCBs. Although PCBs were generally banned in 1979, the installation date of the transformers observed within the project area is unknown. Although these transformers have the potential to

contain PCBs, they are likely owned and operated by the local utility provider (Xcel Energy). In the event of a release or a relocation, the utility provider would be responsible for the management of the regulated waste. No specific evidence of a release (e.g., staining) was noted on or around the observed transformers.

Underground Storage Tanks

An operational UST for fueling was located at the American Furniture Warehouse property (8501 Grant Street), adjacent to the east of the project area. USTs were located at the Shell gas station (290 West 104th Avenue) approximately 600 feet to the west of the project area and the Conoco (160 West 104th Avenue) approximately 300 feet to the west of the project area.

Aboveground Storage Tanks

ASTs were observed from a distance at the CDOT Del Norte property.

Cisterns, Sumps, and Drains

Storm drains were observed at cross streets intersecting I-25 and in the project vicinity.

Stockpile, Surface Trash, and Debris

Two piles of dirt and debris, including concrete, were located at mile marker 218, on vacant land adjacent to the east of the project area. A small encampment, including shopping carts, clothing, and other debris, was located along ROW to the west of the Thornton Town Center.

Chemical Storage

Chemicals are likely used and stored at the following facilities in the project vicinity based on observed or assumed property uses:

- ▶ 7800 North Valley Highway, CDOT Maintenance, adjacent to the east of the project area
- ▶ 7320 North Broadway, Chesrown Chevrolet, adjacent to the west of the project area
- ▶ 9191 Grant Street, Medical Center, adjacent to the east of the project area
- ▶ 290 West 104th Avenue, Shell, approximately 600 feet to the west of the project area
- ▶ 160 West 104th Avenue, Conoco, 300 feet to the west of the project area
- ▶ 10003 Grant Street, The Home Depot; adjacent to the east of the project area

4.4 Interviews

In completing this MESA, interviews with property owners, CDOT, or Adams County representatives were not conducted. However, individuals with knowledge about the site were contacted (Table 7). Pertinent information about the interviews can be found in the subsequent sections.

Table 7. Summary of Online Agency Records Searched

Agency/Affiliation	Agency Website	Date Contacted	Summary of Interview
Tri-County Health Department Historical Landfills Map	http://www.arcgis.com/apps/OnePane/basicviewer/index.html?appid=2fcd097f2e204e7990bc57e5cc0ae022	3/5/17 7/31/18	Historical landfills were not mapped in the project area.
Colorado Department of Public Health and Environment	cdphe_cora_hmwmd@state.co.us	3/1/17	Information was reviewed regarding investigation and remediation activities at Sports Warehouse, located at 11 East 84 th Avenue (Section 3.1).
Division of Oil and Public Safety	cdle_ops_public_records_center@state.co.us	3/6/17 7/31/18	Records were reviewed for USTs and LSTs identified as a concern during a review of the GeoSearch database results.

4.5 Additional Investigations

4.5.1 Lead Paint Sampling

The demolition of the 88th Street bridge is anticipated as part of the proposed project. This bridge was surveyed for lead containing paint in 2017 (CTL, 2017). Six samples were collected; five samples were reported as below 100 parts per million (ppm) lead and one sample was reported at 49,000 ppm lead (88-L-GirdLtGray).

4.5.2 Asbestos Sampling

The demolition of the 88th Street bridge is anticipated as part of the proposed project. This bridge was surveyed for asbestos containing materials (ACM) in 2017 (CTL, 2017). Five bulk samples were collected of caulking, isolation materials, and asphalt membrane materials; Polarized Light Microscopy analyzed these samples for asbestos type and content. All five samples were reported as non-detect for ACM.

4.6 Previous Environmental Site Assessments

Pinyon reviewed the following reports completed in the project vicinity.

4.6.1 I-25/84th Avenue Bridge Reconstruction Project Non-Programmatic Categorical Exclusion

In 2010, CDOT and FHWA completed a summary of environmental documentation for the I-25/84th Avenue Bridge Reconstruction Project Non-Programmatic CatEx (CDOT and FHWA, 2010). The following mitigation measures were recommended for the hazardous materials resource.

Hazardous Materials: An Initial Site Assessment (ISA) was prepared to evaluate potential soil and groundwater contamination that would require materials management during construction or long-term remediation. It was reported that residual contamination from upgradient facilities could have affected the site and that contaminated soils and groundwater and the presence of hazardous materials require special consideration for worker health and safety and materials management practices. Recommendations included completing a Materials

Management Plan (MMP), managing groundwater in accordance with CDOT and CDPHE specifications, examining and sampling debris in soil or utility lines as necessary, and completing a state demolition permit.

4.6.2 North I-25, US 36 to SH 7 Planning and Environmental Linkages Study

In 2014, CDOT and FHWA completed the North I-25, US 36 to SH 7 Planning and Environmental Linkages Study (CDOT and FHWA, 2014b). The study was completed to identify transportation improvements on the I-25 corridor to relieve congestion, improve safety, and enhance multimodal travel. The study developed a Purpose and Need statement, evaluated alternatives, and recommended a potential implementation plan for improvements. The Recommended Alternative included additional general-purpose lane segments, continuous acceleration/deceleration lanes, ramp meters, intersection improvements, multimodal transportation improvements, and several complementary projects and strategies. The study also evaluated potential environmental consequences and mitigation strategies for the Recommended Alternative. Potential impacts identified in the I-25 corridor between US 36 and 104th Avenue include impacts to air quality, environmental justice populations, floodplains and floodways, hazardous materials, historical resources (Clear Creek Ditch), land use, traffic noise, parks and open space, wildlife/threatened and endangered species, wetlands, and ROW.

The following specific facilities that could cause a potential REC in the I-25 corridor between US 36 and 104th Avenue were identified:

- ▶ **Denver/Performance Mobility, 333 East 76th Avenue:** Automotive service facility with unknown chemical handling, storage, and disposal practices.
- ▶ **Denver/Auto Nation/Chevrolet North, 7320 North Broadway:** Automotive dealership and service facility with unknown chemical handling, storage, and disposal practices. One operating used oil tank.
- ▶ **Del Norte Street, Denver CDOT Northern Maintenance:** Unknown chemical handling, storage, and disposal practices.

4.6.3 North I-25, Draft Environmental Impact Statement

In 2008, CDOT, Federal Transit Administration (FTA), and FHWA completed the North I-25 Draft EIS (CDOT, FTA, and FHWA 2008). The MESA completed for this project identified corridor-wide issues of concern, including the potential presence of lead-based paint, asbestos, and oil and gas facilities. Global recommendations included following the CDOT ROW acquisition process by completing additional investigation as necessary and following CDOT specifications for removal of obstructions including monitoring wells, completion of Health and Safety (H&S) Plans and MMPs, contaminated soil and groundwater management, regulated materials clearance, and mine and landfill gas management.

The following facilities in the I-25 corridor between US 36 and 104th Avenue were identified as RECs and as requiring additional evaluation. Information about these facilities was taken from the MESA.

- ▶ **290 West 104th Avenue, Thornton:** This property was listed as an active LST, UST, Colorado Trust and Facility Index System facility. A gas station was located at this property since the 1970s. During a raze and rebuild of the facility in 1998, contaminated soil was observed. Approximately 1,300 cubic yards of impacted soil was removed, and quarterly groundwater monitoring was begun. This facility is 600 feet upgradient of the project area.
- ▶ **410 East 104th Avenue, Thornton:** This property was listed as an active LST, UST, Colorado Trust facility. A gas station was located at this property since the 1960s. Releases were detected in 1987 during inventory reconciliation and in 1994 during UST replacement. The gas station was shut down in 2002, and a Corrective Action Plan, including an air sparge/soil vapor extraction remediation system, was implemented. This facility is located approximately 1,200 feet downgradient of the project area.
- ▶ **160 West 104th Avenue, Thornton:** This property was listed as an active LST, UST, Colorado Trust and Facility Index System facility. A confirmed release was reported in 1990, and the OPS issued a closure letter in March 1992. This facility is discussed further in Section 4.1.
- ▶ **101 East 88th Avenue, Thornton:** This facility was listed in the Emergency Response Notification System (ERNS). It was recommended that an ISA be prepared. Records were reviewed from the current agency database for this facility (GeoSearch, 2017a). This facility was listed in the ERNS because of a 45-gallon spill of diesel fuel into the storm sewer caused by the rupture of a truck fuel tank. The spill was cleaned, and the storm sewer was flushed with water.
- ▶ **41 West 84th Avenue, Thornton:** This facility is a former gas station and open LST property. Approximately 1,200 cubic yards of contaminated soil were removed in 1992 and an air sparge/soil vapor extraction system operated from at least 1991 to 1998 and then from 2000 until an unknown date. Felsburg Holt & Ullevig (FHU) recommended completion of an ISA, Preliminary Site Investigation (PSI), H&S Plan, and MMP. This facility is discussed further in Section 3.1.
- ▶ **200 West 84th Avenue, Thornton:** This property is an open LST site with a confirmed release in December 2000. OPS approved a Corrective Action Plan (CAP) for this site in March 2006, and groundwater monitoring has been ongoing since December 2001. FHU recommended completion of an ISA, H&S, and MMP. This facility is located 750 feet upgradient of the project area.
- ▶ **450 East 84th Avenue, Thornton:** This facility is a former gas station and open LST property. Groundwater was reported to be approximately 12 to 26 feet bgs with a southeasterly flow. Benzene was detected in groundwater at concentrations ranging from 9.0 µg/L to 370 µg/L. FHU recommended completion of an ISA, PSI, H&S, and MMP. This facility is located approximately 600 feet downgradient of the project area.
- ▶ **505 East 84th Avenue, Thornton:** This facility was listed as an open LST and UST property with a confirmed release in April 1988. Four USTs were permanently closed at this site, including two 6,000-gallon USTs containing gasoline, one 8,000-gallon UST containing

gasoline, and one 500-gallon waste oil tank. OPS approved a CAP for this site in October 1994, and groundwater monitoring has been ongoing since May 1994. FHU recommended completion of an ISA, PSI, H&S, and MMP. This facility is located approximately 700 feet downgradient of the project area.

- ▶ **80 West 84th Avenue, Thornton:** This facility was listed in the ERNS. FHU recommended that an ISA be completed. This facility is discussed further in **Section 3.1**.
- ▶ **7714 Sherman Street, Thornton:** This facility was listed in the ERNS. FHU recommended that an ISA be completed. This facility is located adjacent to the west of the project area. Records were reviewed from the current agency database for this facility (GeoSearch, 2017a). This facility was listed in the ERNS as a result of a natural gas explosion.
- ▶ **8501 Grant Street, Thornton:** This facility was listed as a RCCRA SQG, UST, and Facility Index System. This facility is discussed further in **Section 4.1**.
- ▶ **9351 Grant Street, Thornton:** This facility is a closed LST and UST facility. Residual soil and groundwater contamination could be present. FHU recommended completion of an ISA, H&S and MMP. This facility is located adjacent to the east of the project area. This facility is discussed further in **Section 4.1**.

4.6.4 North I-25, Final Environmental Impact Statement

In 2011, CDOT and FHWA completed the North I-25 FEIS (CDOT and FHWA, 2011b). The MESA Addendum was completed to provide documentation of hazardous materials impacts associated with the Preferred Alternative. The Preferred Alternative was a combination of the alternatives evaluated in the Draft EIS; therefore, the Preferred Alternative was not evaluated in the EIS. Changes made to the Draft EIS did not affect

the facilities in the I-25 corridor between US 36 and Thornton Parkway.

5.0 Conclusions

The following section summarizes the review of the regulatory files, historical land uses, and reconnaissance survey.

5.1 Findings

Pinyon evaluated the project area and vicinity, including parcels that may sustain impacts from ground-disturbance activities, property acquisitions, or easements (if applicable) as a result of the project. CDOT identified facilities that pose a potential risk in the form of owner liability (i.e., property acquisitions and easements) as a result of environmental impacts from RECs, HRECs, or CRECs. Only facilities near the project were considered for liability as having a potential to be acquired or affected (i.e., easements) due to project activities.

For the purpose of evaluating project liability (i.e., encountering regulated materials during ground-disturbance activities), facilities were categorized as having a low or a high potential to affect the project area. Based on the information obtained and reviewed during this MESA, facilities were identified as having a potential liability. **Table 8** summarizes these facilities and indicates the type of liability to be considered as the project progresses.

The demolition of the 88th Street bridge is anticipated as part of the proposed project. This bridge was surveyed for lead paint and ACM in 2017 (CTL, 2017). Six paint samples were collected; five samples were reported as below 100 ppm for lead, and one sample was reported at 49,000 ppm lead (88-L-GirdLtGray). Five bulk samples were collected of caulking, isolation materials, and asphalt membrane materials. Polarized Light Microscopy analyzed these samples for asbestos type and content. All five samples were reported as non-detect for ACM.

Table 8. Summary of Identified Facilities

Facility Name (Figure 3)	Location/Distance (feet) and Direction from Project Area	Project Liability	Owner Liability	Summary of Facility Use (s) ²
00070-0000192 (GeoSearch ID 1)	Within project area boundaries and adjacent to the west	High	High	Historical landfill
00070-0000194 (GeoSearch ID 2)	Within project area boundaries and adjacent to the east	High	High	Historical landfill
I25 Managed Lanes 18695 IM 0253222; Colorado DOT I25/ US 36 Interchange (GeoSearch ID 3)	Within project area boundaries	Low	Low	Former permit for stormwater associated with construction activities, a spill of 45-gallons of floor cleaner and a former hazardous waste generator with no violations.
Not Reported (GeoSearch ID 4)	Within project area boundaries	Low	Low	Diesel spill in 2003 resulting from an accident.
I25 and 104 th Avenue Bridge Replacements (GeoSearch ID 5)	Within project area boundaries	Low	Low	An 8-gallon tetrachloroethylene spill was reported in 1995. Former permit for stormwater associated with construction activities.
I25 Managed Lanes Temporary Construction Yard (GeoSearch ID 6)	Within project area boundaries	Low	Low	Former permit for stormwater associated with construction activities.
00070-0000191 (GeoSearch ID 7)	Within project area boundaries and adjacent to the east; upgradient	High	High	Historical landfill
CDOT Thornton Maintenance (GeoSearch ID 8)	Within project area boundaries and adjacent to the east; upgradient	Low	Low	Closed LST and two removed USTs. Former RCRA generator. LST event was closed in December 1994.
Not reported (GeoSearch ID 9)	Adjacent to the west; downgradient	Low	Low	Spill reported resulting from a meth lab explosion.
North Star Chevron #70359 (GeoSearch ID 10)	60 feet west; upgradient	High	High	Formerly operated as a gasoline station. Former UST and closed LST facility. Groundwater has been affected.
Sports Warehouse (GeoSearch ID 11)	Within project area boundaries and adjacent to the west; upgradient	Low	Low	Groundwater at this facility was affected by operations at the former Chevron gas station located upgradient and adjacent to the west. CDPHE granted this facility a No Action Determination.

I-25 (US 36 to 104th Avenue) Environmental Assessment

Facility Name (Figure 3)	Location/Distance (feet) and Direction from Project Area	Project Liability	Owner Liability	Summary of Facility Use (s) ²
American Furniture Warehouse (GeoSearch ID 13)	Adjacent to the east; downgradient	Low	Low	This is an active UST facility with one 10,000-gallon gasoline UST and a closed LST event resulting from a spill during fueling. The facility was a generator of hazardous waste from at least 2003 to 2011 and has reported as a non-generator of hazardous waste since 2011. General manifest and pre-transport violations were reported in 2003.
Design Fabricators Inc./Charles Hughes and CO (GeoSearch ID 14)	Within project area boundaries and adjacent to the east; downgradient	Low	Low	Facilities at this address were TRI listed from 1993 to 1995 due to air releases; listed as an active RCRA small quantity generator (SQG), and listed as a former RCRA hazardous waste generator.
Horizon Terrace (GeoSearch ID 15)	Within project area boundaries and adjacent to the east; upgradient	Low	Low	Closed LST event.
The Home Depot (GeoSearch ID 16)	Within project area boundaries and adjacent to the east; upgradient	Low	Low	The facility is an active SQG with no violations or enforcement actions. Spills were reported due to accidents and vandalism.
Estate of Sam S. Bloom (GeoSearch ID 17)	300 feet to the west; upgradient	Low	Low	Former gas station and closed LST.
00070-0000199 (GeoSearch ID 18)	200 feet to the east; upgradient	High	High	Historical landfill
None reported (GeoSearch ID 20)	Within project area boundaries and adjacent to the east; upgradient	Low	Low	Spill of 45 gallons of diesel to the storm sewer.
North Suburban Medical Center/ HCA-HealthOne (GeoSearch ID 21)	Within project area boundaries and adjacent to the east; upgradient	Low	Low	This is an active SQG, AST, and UST facility. One 6,000-gallon diesel UST and one 1,830-gallon diesel AST are currently in use at the property.
Walmart#1231/ Powersecure Inc (GeoSearch ID 23)	Within project area boundaries and adjacent to the east and upgradient	Low	Low	This is an active AST, RCRA SQG, and SWF facility. One 800-gallon used oil and one 2,400-gallon diesel AST are in operation.
Circle K #6521 (GeoSearch ID 25)	300 feet to the west and upgradient	High	High	This is a former AST and closed LST facility. Three USTs are currently operational.

Facility Name (Figure 3)	Location/Distance (feet) and Direction from Project Area	Project Liability	Owner Liability	Summary of Facility Use (s) ²
Highland Cemetery (GeoSearch ID 27)	Within project area boundaries and adjacent to the west and upgradient	Low	Low	Closed LST and UST facility.
Unser Karting & Entertainment/Larry Miller Toyota (GeoSearch ID 28)	Adjacent to the west and downgradient	Low	Low	This is an active AST and SQG facility.
Chesrown Chevrolet/Go Chevrolet (GeoSearch ID 29)	Adjacent to the west and upgradient	Low	Low	The facility is an active CESQG and SWF (tire hauling). One waste oil AST is in use. Hazardous waste violations were reported in 2010, resulting in a compliance advisory in May 2010 and a compliance order in November 2010.
City of Thornton (GeoSearch ID 35)	Adjacent to the east and upgradient	Low	Low	Closed LST and UST facility.

GeoSearch database, 2017, 2018

5.1.1 Recognized Environmental Conditions (RECs)

- ▶ **Four historical landfills (Facility IDs: 00070-0000194, 00070-0000192, 00070-0000191, and 00070-0000199):** These landfills are located at least partially within or adjacent to the project area boundaries. There was no specific information about the boundaries or types of materials deposited within these landfills. Soil, soil vapor, and/or groundwater in the project area may have been affected, and ACM may be present. The historical landfills are considered a REC in association with the project area.
- ▶ **North Star Chevron #70359 (GeoSearch ID: 10; Facility ID: 678), 41 West 84th Avenue:** This facility operated as a gas station from at least 1962 until 1990 (Hirsch Gibney, 2003). Three gasoline USTs and one waste oil UST were removed from the facility and LST Event ID 5463 was reported in 1990. Complete sampling and/or characterization reports were not on file for this facility. Although the event is listed as closed in the OPS COSTIS website, reportedly the closure was granted after incorrect sampling results were submitted to

OPS (Hirsch Gibney, 2003). Additional sampling was completed in 1999, and VOCs, SVOCs, RCRA metals, and total oil and grease were detected in soil and groundwater samples. The LST event was reopened and the OPS requested that a CAP be completed for this property. It is unknown if this was completed. This facility is located adjacent to the west and upgradient of the Sports Warehouse, located at 11 East 84th Avenue (GeoSearch ID 11).

The facility received Tier II closure from OPS in 2009; however, residual contamination may remain downgradient from the facility. This facility is located adjacent to the west and upgradient of the Sports Warehouse, located at 11 East 84th Avenue. This is considered a REC in association with the project area; groundwater in the project area may have been affected.

- ▶ **Circle K #6521 (GeoSearch ID: 25; Facility ID: 156), 160 W 104th Avenue:** This is a former AST and closed LST facility. Three USTs are currently operational. LST events were reported at this location in 1990 and 2007. A confirmed release was reported in March 1990, and a NFA letter was issued for the facility in March 1991. No additional information about this release was on file.

I-25 (US 36 to 104th Avenue) Environmental Assessment

A second release was reported in October 2007 after soil samples collected during due diligence activities were reported as impacted (Delta, 2008). Levels of MTBE approximately 10 times the Tier I RBSL of 20 µg/L were reported from 2011 to 2013 in offsite well MW-04, located at the northwest corner of 104th Avenue and I-25, adjacent to the west of the project area (AnteaGroup, 2013). In July 2012, levels of benzene of 0.005 milligrams per liter, at the Tier I RBSL, were reported. A NFA letter was issued for the facility under Tier II limits in July 2013. Groundwater flow was reported to be to the north-northeast and depth to groundwater was reported to be between 5 and 10 feet bgs.

5.1.2 Controlled RECs

Controlled RECs were not identified in association with the project area.

5.1.3 Historical RECs

Historical RECs were not identified in association with the project area.

5.1.4 Non-RECs

Based on factors including, but not limited to, the overall setting in which the project area is located, potential depth to groundwater and groundwater flow direction, existing or past uses of the surrounding properties, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the project, the following facilities were identified as non-RECs in association with the project area:

- ▶ **I25 Managed Lanes 18695 IM 0253222; Colorado DOT I25/US 36 Interchange (GeoSearch ID: 3):** This location was listed as a hazardous waste non-generator since 2000 with no violations or corrective actions and previously held a stormwater associated with construction permit. A spill of 45 gallons of floor finish on the on-ramp to US 36 was reported in 1996.
- ▶ **88th and Grant St (GeoSearch ID: 4):** A spill of 50 gallons of diesel to the storm sewer was reported in 2003 as a result of an accident. A third party remediated the spill. A wastewater backup was reported in 2013; reportedly the backup was caused by a grease blockage.
- ▶ **I25 and 104th Avenue Bridge Replacements (GeoSearch ID: 5):** Eight gallons of tetrachloroethylene were spilled in a truck due to poor closure on a drum. The spill was contained within the truck.
- ▶ **I25 Managed Lanes Temporary Construction Yard (GeoSearch ID: 6), I-25 and Thornton Parkway:** This location was listed for a former stormwater associated with construction permit.
- ▶ **CDOT Thornton Maintenance (GeoSearch ID: 8; Facility ID: 7468), 7800 North Valley Parkway:** This facility is listed as a registered tire hauler and, as of 2014, as a no longer regulated RCRA generator. No violations or enforcement actions were reported for this facility. In addition, LST event ID 50 was reported in 1994 when two USTs were removed from the facility. In 1990, one 10,000-gallon gasoline UST was removed from the property without notification to the state or confirmation sampling (CGS, 1994). In 1994, a second 10,000-gallon diesel UST was removed from the property. At the same time, the gasoline UST location was re-excavated and sampled. Four soil samples were collected from the excavations and analyzed for BTEX, TEPH, and TVPH. The results were reported as non-detect for these analytes, and CDPHE closed the event in December 1994.
- ▶ **7724 Sherman St; 7714 Sherman St. (GeoSearch ID: 9):** A spill was reported in 2003 after an explosion at a meth lab.
- ▶ **Sports Warehouse (GeoSearch ID: 11; Facility ID: 267), 11 East 84th Avenue:** This facility is listed as a VCUP facility. This property was previously farmland and a residence and then was developed with a hotel and commercial structures in the 1960s (Hirsch Gibney, 2003). In May 2003, Sports Warehouse purchased the property for construction of a commercial store. This property had been affected by operations at the Chevron gasoline station adjacent to the west, located at 41 West 84th Avenue (GeoSearch ID 11). During review of previously completed soil and groundwater investigations, the consultant, ERM, determined that soil samples collected at the Sports Warehouse property did not contain contaminants at levels greater than OPS RBSLs; however, groundwater samples did contain

I-25 (US 36 to 104th Avenue) Environmental Assessment

levels of benzene and 1,2 DCA at levels above Colorado Basic Groundwater Standards (ERM, 2003). Depth to groundwater was measured at 12 to 13 feet bgs. CDPHE granted this facility a No Action Determination based on the conclusion that the facility had been affected by operations at the Chevron station adjacent to the west.

- ▶ **American Furniture Warehouse (GeoSearch ID: 13; Facility ID: 15707), 8501 Grant Street:** This is an active UST facility with one 10,000-gallon gasoline UST currently in use at the property. LST Event ID 10955 was reported in 2009 when a spill from an unattended dispenser during fueling reached Niver Creek, resulting in a sheen (Belfor Environmental, 2009). The sheen was contained, and the event was closed. The facility was a generator of hazardous waste from at least 2003 to 2011 and has reported as a non-generator of hazardous waste since 2011. General manifest and pre-transport violations were reported after a compliance inspection in 2003.
- ▶ **Design Fabricators/Charles Hughes & Co. (GeoSearch ID: 14), 500 East 76th Avenue:** Charles Hughes & Co. was listed on the TRI from 1993 to 1995 due to air releases. In addition, the facility was listed as an active RCRA SQG. Design Fabricators was listed as a former RCRA hazardous waste generator with no violations or enforcement actions.
- ▶ **Horizon Terrace (GeoSearch ID: 15; Facility ID: 630), 9351 Grant Street:** LST Event ID 7270 was reported after the removal of one 560-gallon diesel UST from the facility in 1998. One composite soil sample was collected from the excavation and analyzed for BTEX, TVPH, TEPH, and methyl-tert-butyl-ether (MTBE). The results were reported as less than applicable standards, and a NFA request was submitted to the OPS. The request was rejected as three discrete soil samples and a groundwater sample were required per OPS protocol. A report with additional sampling results was not on file; however, an NFA letter dated August 12, 1999, noted that contamination levels were below state cleanup levels.
- ▶ **The Home Depot (GeoSearch ID: 16), 10003 Grant Street:** The facility is an active SQG with no violations or enforcement actions. Spills were reported due to accidents and vandalism, including a meth lab in a car, 50 gallons of diesel from a cut fuel line, and 0.03 gallons of sodium hydroxide from damaged packaging. These spills were remediated.
- ▶ **Estate of Sam S. Bloom (GeoSearch ID: 17; Facility ID: 4767), 80 West 84th Street:** This is a closed AST and LST facility with Event ID 4767. This facility operated as a gas station from at least the mid-1960s to early 1970s (Blaha, 1996a). Investigations were conducted at the facility in 1995 and 1996 to determine impacts to the property from historical operations (Huntingdon, 1995; Blaha, 1996b). Investigations consisted of a geophysical survey to confirm USTs had previously been removed; removal of underground fuel lines and confirmatory sampling; and soil and groundwater sampling. A soil and groundwater investigation was conducted in 1995, and three soil borings were drilled and sampled for soil and groundwater. Levels of BTEX, TVPH, and TEPH were reported in upgradient wells and at the soil/groundwater interface at concentrations below state standards. Based on these results, it was concluded that the property had been affected by an upgradient source. Four boreholes were advanced at the property in October 1996; soil samples were collected from each borehole and groundwater samples were collected from two boreholes completed as monitoring wells. Samples were analyzed for BTEX, TVPH, and TEPH; the samples were non-detect for the analyzed constituents. Groundwater was measured at 12 to 12.5 feet bgs. Groundwater flow was to the northeast. OPS issued a closure letter for the facility in January 1997.
- ▶ **101 East 88th Ave (Fountain Knolls Apartments) (GeoSearch ID: 20):** A spill of 45 gallons of diesel to the storm sewer was reported in 1997 after pavement collapsed beneath a truck. The spill was remediated by a third party.
- ▶ **North Suburban Medical Center (GeoSearch ID: 21; Facility ID: 00070-0000194), 9191 Grant Street:** This is an active SQG, AST, and UST facility. One 6,000-gallon diesel UST and one 1,830-gallon diesel AST are currently in use at the property.

- ▶ **Walmart#1231/Powersecure Inc (GeoSearch ID: 23), 9901 Grant Street:** This is an active AST, RCRA SQG, and SWF facility. One 800-gallon used oil AST and one 2,400-gallon diesel AST are in operation. One general violation was reported in 2014. A spill was reported in 2008 when four exit signs containing radioactive material were reported as missing. The facility reports as an SWF for waste tire hauling.
- ▶ **Highland Cemetery (GeoSearch ID: 27; Facility ID: 2884), 300 East 104th Avenue:** A release was reported at this facility in 1991, during the removal of a 1,000-gallon UST (SRK, 1991). Three soil samples were collected from the excavation and analyzed for BTEX and TRPH; levels of these analytes were reported as non-detect. The Colorado Department of Health closed this event in 1991.
- ▶ **Unser Karting & Entertainment/Larry Miller Toyota (GeoSearch ID: 28), 7300 N. Broadway:** This location is an active AST and SQG facility. One 1,000-gallon waste oil AST is in operation. In 1997 a spill of 129 gallons of oil was reported from a transformer; impacted soil was excavated. No violations were reported.
- ▶ **Chesrown Chevrolet (GeoSearch ID: 29), 7320 North Broadway:** The facility is an active CESQG and listed as an SWF for tire hauling. One AST for used oil is also located at the facility. General pre-transport and recordkeeping violations were reported in 2010, resulting in a compliance advisory in May 2010 followed by a compliance order in November 2010.
- ▶ **City of Thornton (GeoSearch ID: 35; Facility ID: 1792), 9500 Civic Center Drive:** LST Event ID 9716 was reported for the facility in 2004, after the removal of two 8,000-gallon gasoline USTs. Three soil samples were collected from each excavation and analyzed for BTEX, TVPH, TEPH, total petroleum hydrocarbons (TPH), and oil and grease. Analytes were not detected in the soil samples, and the facility was granted closure. The closure was originally denied by OPS because water was observed in the excavation and not sampled; however, the consultant stated that the water was from snow melt and was not groundwater.

5.2 Recommendations

The following recommendations are presented:

- ▶ CDOT intends to complete environmental testing during the 88th Bridge Geotech exploration phase. Soil and groundwater samples will be collected from geotechnical boreholes and tested for regulatory compliance. Depending on the results of sampling, a Health and Safety Plan may be completed prior to construction. An MMP should be prepared and implemented to specify management practices in areas where contaminated soil and groundwater may be encountered during construction.
- ▶ It is anticipated that dewatering activities will be required during the installation of deep foundation systems for the new bridge, walls, signals, or other features. Results of sampling near I-25 and 84th Avenue indicate that BTEX and/or TPH concentrations in groundwater could exceed surface water and groundwater standards, and sampling results near I-25 and 104th Avenue indicate that MTBE concentrations in groundwater could exceed surface water and groundwater standards. Therefore, the water would require either treatment to meet those standards before discharge, or off-site disposal. In any circumstance, all groundwater encountered during construction that requires displacement (e.g., during drilling of caissons) should be containerized and disposed of properly and must not be allowed to be discharged onto the ground, into a sewer, or a water of the State of Colorado. This issue will be evaluated further during the subsurface investigations.
- ▶ Retesting of the 88th Street bridge girders is recommended due to inconclusive lab results. CDOT requires that all metal project components (e.g., light poles, metal railing, and bridge girders) be recycled. The recycling facility must be notified that metal project components contain lead. Regardless of lead content, the future contractor must comply with Occupational Safety and Health Administration (OSHA) Regulation 1926.62 for worker safety.
- ▶ If suspected ACM is encountered, including with buried utilities, workers must follow CDOT Specification 250.07 - *Asbestos-Containing*

I-25 (US 36 to 104th Avenue) Environmental Assessment

Material Management. Additionally, depending on the type of ACM, this material must also be abated in accordance with either Section 5.5 of the Solid Waste Regulations or Regulation No. 8 of the Air Quality Control Commission Regulations.

- ▶ Workers on this project must follow CDOT Specification 250 - *Environmental, Health and Safety Management*. A Revision to Specification 250 should be prepared detailing specific items the contractor needs to be aware of for the project. That revision should be completed as project design is advanced and as additional information about hazardous materials is collected and analyzed.
- ▶ Electric transformers within the project area may contain PCBs. If project activities will result in disturbance or removal, affected transformers may require special management and disposal. The contractor should coordinate with the utility owner for proper removal and disposal of electrical equipment that may be disturbed during construction.

- ▶ Several monitoring and domestic wells were mapped within or adjacent to the project area. The location of these wells was not field verified, and the status of these wells is not known. The contractor will attempt to avoid impacts on wells. If impacts on wells cannot be avoided, the contractor should coordinate with the well owners to replace or repair the wells.
- ▶ Full acquisition of properties by CDOT, if necessary, should be accompanied by Phase I Environmental Site Assessments completed in accordance with ASTM Standard E1527-13, which will also meet the United States Environmental Protection Agency All Appropriate Inquiry rule. This will provide CDOT with bona fide prospective purchaser landowner liability protection under the realm of Comprehensive Environmental Response, Compensation and Liability Act liability.
- ▶ These recommendations should be updated in Addendum Memoranda as design is advanced and additional information is collected.

DRAFT NOT CDOT APPROVED

6.0 Impacts and Mitigation Commitments of Hazardous Materials Resources

Table 9 documents the impacts of hazardous materials resources associated with the Proposed Action.

Table 9. Impacts on Hazardous Materials Resources

Context	No Action Alternative	Proposed Action
After reviewing regulatory files, 25 listings were identified with a potential to affect the project area. These 25 listings included historical landfills, known chemical spills, former gas stations, commercial businesses, and private residences.	<p>Permanent Impacts</p> <p>Would have no impact on sites with potential and recognized hazardous materials concerns.</p>	<p>Permanent Impacts</p> <p>No permanent impacts are anticipated.</p> <p>Temporary Impacts</p> <p>The Proposed Action has the potential to encounter hazardous materials during construction.</p>

Table 10 documents the impacts and mitigation commitments of hazardous materials resources associated with the Proposed Action.

Table 10. Mitigation Commitments for Hazardous Materials Resources

Impacts	Mitigation Commitments	Responsible Branch	Timing/Phase That Mitigation Will Be Implemented
Potential to acquire property with potential hazardous material concerns	An individual, property-specific Phase I Environmental Site Assessment will be conducted prior to private property acquisitions.	CDOT	Design Construction
Potential to encounter hazardous materials during construction	CDOT Standard Specifications 250 (Environmental, Health and Safety Management) for assessment, handling, transport, and disposal of hazardous materials will be implemented if hazardous materials are encountered during construction.	CDOT	Design Construction
Potential to encounter hazardous materials during excavation	<p>CDOT intends to complete environmental testing during the 88th Bridge Geotech exploration phase. Soil and groundwater samples will be collected from geotechnical boreholes and tested for regulatory compliance. Depending on the results of sampling, a Health and Safety Plan may be completed prior to construction. An MMP should be prepared and implemented to specify management practices in areas where contaminated soil and groundwater may be encountered during construction.</p> <p>Structural excavation, such as caisson construction, may require the dewatering of contaminated groundwater. If dewatering is necessary, groundwater brought to the surface will be managed according to Section 107.25 of the <i>CDOT Standard Specifications for Road and Bridge Construction</i>.</p>	CDOT	Design Construction

I-25 (US 36 to 104th Avenue) Environmental Assessment

Impacts	Mitigation Commitments	Responsible Branch	Timing/Phase That Mitigation Will Be Implemented
<p>Potential to encounter hazardous materials – lead containing paint (LCP), asbestos containing material (ACM)</p>	<p>Due to the potential presence of LCP and ACM, a LCP and ACM survey will be conducted on any structures to be demolished as part of this project, and the regulated materials should be managed in accordance with Section 250.07 and 250.04 of the <i>CDOT Standard Specifications for Road and Bridge Construction</i>. A retesting of the steel girders of the 88th Avenue Bridge over I-25 is recommended due to inconclusive lab results. Depending on the results of sampling, a Health and Safety Plan (HASP) may be completed prior to construction. CDOT requires that all metal project components (e.g., light poles, metal railing, and bridge girders) be recycled. The recycling facility must be notified that metal project components contain lead. Regardless of lead content, the future contractor must comply with Occupational Safety and Health Administration (OSHA) Regulation 1926.62 for worker safety.</p>	<p>CDOT</p>	<p>Design Construction</p>

DRAFT NOT CDOT APPROVED

Brian R. Partington Principal – Project Delivery

PROFESSIONAL EXPERIENCE

Mr. Partington has 18 years of environmental consulting experience, and is Pinyon's Principal of Project Delivery. At Pinyon, he has managed hundreds of projects and tasks for a variety of public and private sector clients. Mr. Partington has led multi-disciplinary teams through the planning, implementation, and completion of the tasks required to ensure that clients' projects meet regulatory requirements, goals, budgets, and schedules. Brian's experience has led to him being skillful at solving complex problems – whether that being identifying strategies to reduce project costs, expediting environmental permitting, or negotiating practical solutions with regulatory agencies. The result is that Brian has earned the title of 'trusted advisor' with many clients, across numerous market areas. Mr. Partington, in coordination with Principal Jeremy Musson and President Lauren Evans, conducts monthly internal Project Management training, with the intent that Pinyon's professionals deliver excellent experiences to our clients, and that the firm's technical staff continuously improve in their ability to deliver quality services. In his role as Principal of Project Delivery, Mr. Partington is responsible for overall project delivery – affirming the firm's culture of excellence, quality and responsiveness – where Pinyon's technical staff deliver the services that Pinyon's clients expect.

In recent years, Brian has led projects addressing the environmental documentation needs for disaster recovery projects that resulted from the catastrophic flooding in Boulder and Larimer Counties in 2013; most of Pinyon's projects related to its on-call contract with the City and County of Denver; Pinyon's role on the I-70 Mountain Corridor projects (e.g., Twin Tunnels and Peak Period Shoulder Lanes); and supporting CDOT Region I staff augmentation, including environmental project management and hazardous materials reviews and clearances. He has also acted as Principal in Charge for most of Pinyon's planning projects, providing a senior technical advisory role for Pinyon's project and task managers as related to complex problems and solutions, and conducting quality control on project deliverables.

RELEVANT EXPERIENCE

Due Diligence. Mr. Partington has completed numerous Phase I Environmental Site Assessments for sites across the Rocky Mountain West on vacant, private, commercial and mining properties. He completed Phase I ESAs for uranium developments in northeast Wyoming, west-central New Mexico and northern Nevada; and a gold prospect area in Idaho; all of which encompassed land areas that were many square miles in size. State and federally maintained records concerning historic mining, reclamation and prospecting were obtained and reviewed, and incorporated into the report conclusions. He has also completed Phase I's on ranch properties that encompassed hundreds of thousands of acres. Reports were developed that provided information on past and existing conditions at the sites. He helped develop baseline data for these projects, including collecting the necessary environmental data to allow the projects to proceed, as required by state and federal regulatory agencies. Mr. Partington has also completed several Modified Environmental Site Assessments and Initial Site

Assessments related to transportation projects for CDOT under provisions of NEPA.

Brian has also performed many Phase II investigations. These assessments have included completion of soil borings, and construction of groundwater monitoring wells and soil vapor wells. Investigations have been performed on a wide variety of sites, including landfills, junk yards, dry cleaners, gas stations and heavy-industrial properties. The investigations were completed to evaluate whether properties had been impacted by current and/or past activities at the sites or from adjacent properties.

NEPA. Mr. Partington has worked on dozens of NEPA projects, ranging in size from relatively simple Categorical Exclusions to extensive Environmental Impact Statements. Mr. Partington managed the Categorical Exclusion documentation for transportation projects across the state of Colorado, and also managed the Pinyon team for the Central Park Boulevard and Interstate 70 Interchange Environmental Assessment (EA) in Denver, the Grand Avenue Bridge Replacement EA in Glenwood Springs, and the Twin Tunnels EA in Idaho Springs. He has acted as an extension of staff in CDOT Region I, representing the Region's environmental unit as an Environmental Project Manager, as well as completing project technical review for the hazardous materials resource area. Brian also has a thorough understanding of other environmental resources areas, including biological resources, water quality, and Section 4(f)/6(f). Brian also led dozens of flood-recovery projects in Boulder and Larimer Counties, which received funding from various sources including the Federal Emergency Management Agency (FEMA) and Federal Highway Administration (FHWA).

PROJECT EXPERIENCE

Emergency Flood Repairs | Various Clients, Boulder and Larimer Counties, Colorado. Mr. Partington led the environmental documentation, NEPA processes, and permitting effort for over two dozen infrastructure projects in response to the Colorado flooding that took place in September 2013. As a part of this effort, he worked directly with the Federal Emergency Management Agency, Federal Highway Administration (FHWA), CDOT, Colorado Parks and Wildlife, U.S. Army Corps of Engineer, U.S. Fish and Wildlife, U.S. Forest Service and other agencies to scope and complete environmental documentation required to advance the recovery projects. Pinyon is currently a subconsultant to several major engineering design firms, and holds an on-call contract with Boulder County Transportation completing these evaluations.

I-70 Twin Tunnels Reconstruction | Colorado Department of Transportation Region I, Clear Creek County, Colorado. Mr. Partington was Pinyon's project lead for CDOT's Twin Tunnels project, which expanded the eastbound bore near Idaho Springs, an additional lane for capacity, and a new bridge. Brian's responsibility was for hazardous materials, which was a challenging resource due to a legacy of hard-rock and placer mining that had occurred in the vicinity for over 100 years. To evaluate these conditions, numerous soil and groundwater samples were collected, a Phase I Environmental Site Assessment was completed, and Mr. Partington prepared the associated Environmental Assessment technical sections and mitigation. For

mitigation, a Materials Management Plan was developed in cooperation with CDOT, Environmental Protection Agency (EPA), and Colorado Department of Public Health and Environment (CDPHE). This project was given the Federal Highway Administration's (FHWA) 2013 Environmental Excellence Award for Environmental Streamlining.

CDOT CatEx Support Project Management | CDOT Region I, Front Range, Colorado. Pinyon, specifically Mr. Partington and Karen Hadley, are currently acting as an extension of the CDOT Region I Environmental staff, as Environmental Project Managers managing CatEx projects throughout the region. These responsibilities include coordination with CDOT and consultant design staff, attendance at meetings, assignment of projects to resource specialists, managing schedules, and in some cases completing resource work as needed. Brian's responsibilities also include the "clearance" of the hazardous materials resource area for nearly half the current active projects in Region I, a responsibility given to him due to the trust he has earned completing numerous hazardous materials surveys on CDOT projects over the years. Under this task order, Mr. Partington has led the completion of Phase I ESAs, Initial Site Assessments, Phase II ESAs, development of project specifications, and completion of a detailed subsurface investigation of a potential landfill at the location of a proposed wetland mitigation site.

PROFESSIONAL EXPERIENCE

Ms. Marin has 23 years of environmental project management experience. Her experience includes environmental compliance auditing of industrial facilities, regulatory compliance and reporting at the local, state and federal levels, Spill Prevention Control and Countermeasures (SPCC) Plans, Environmental Site Assessments throughout the United States, all phases of soil and groundwater investigations and underground storage tank removals. Ms. Marin is skilled at leading multi-disciplinary teams through the planning, implementation, and completion of the tasks required to ensure that projects meet regulatory requirements, project goals, budgets, and schedules.

RELEVANT EXPERIENCE

Phase I Environmental Site Assessments. Ms. Marin has conducted several hundred Phase I ESAs for a wide variety of public and private entities throughout the United States. Sites have ranged from large tracts of rangeland to properties in highly industrialized corridors with over a century of industrial uses. She prepared reports in accordance with ASTM standards and the All Appropriate Inquiries (AAI) rule that provided information regarding Recognized Environmental Conditions (RECs), Historical RECs, and Controlled RECs and made recommendations for additional investigations when appropriate.

Phase II ESAs. Ms. Marin has performed and managed many Phase II investigations and underground storage tank removals. These assessments have included completion of soil borings, and construction of groundwater monitoring wells and soil vapor wells. Investigations have been performed on a wide variety of sites, including landfills, junk yards, dry cleaners, gas stations and heavy-industrial properties. The investigations were completed to evaluate whether properties had been impacted by current and/or past activities at the sites or from adjacent properties.

Spill Prevention Control and Countermeasure Plans. Ms. Marin has completed SPCC plans for industrial and commercial facilities throughout the Rocky Mountain Region. Her responsibilities have included providing technical review of previously completed reports, evaluation of secondary containment and review of compliance at the state and federal levels. Ms. Marin has also completed Oil Spill Contingency Plans in the event that secondary containment is determined to be impracticable or qualified oil-filled operational equipment has been present.

Stormwater. Ms. Marin has overseen and evaluated industrial facility compliance with stormwater management plans and stormwater permits in the Rocky Mountain Region. She has overseen stormwater management inspections and documentation for several industrial facilities, and provided recommendations for implementation of Best Management Practices. In addition, Ms. Marin has

experience in permitting and compliance with stormwater discharge regulations, and writing and implementing stormwater management plans (SWP3s). She has completed or reviewed SWP3s for commercial and municipal development, oil and gas facilities, parks, trails and structure demolition.

Colorado Department of Transportation Categorical Exclusion Documentation. Ms. Marin has served as the Environmental Scientist and Project Manager for a number of transportation improvement projects for long transportation corridors throughout the Colorado. She was responsible for completing fieldwork and documentation for the hazardous materials technical resource area, management of multi-disciplinary teams for the completion of biological resources and wetlands, hazardous materials, recreational/Section4(f), and historic properties resource areas, and coordination with consultant teams.

Regulatory Compliance Audits. Ms. Marin has completed regulatory compliance audits for commercial, municipal and industrial facilities in the Rocky Mountain Region and Texas. Audits have included desktop and on-site review of agency reporting, permitting and plan documents, facility compliance in the areas of hazardous materials and hazardous, universal and solid waste storage, use and disposal under the Resource Conservation and Recovery Act (RCRA); underground and aboveground storage tanks; air; stormwater; and wastewater. Audits have been conducted in compliance with regulations at the state and federal levels and have operated under federal, state and client specific guidelines. During and after the audits Ms. Marin provided recommendations for compliance actions and continued assistance as needed with report development, permitting and development of compliance procedures and documentation.

Regulatory Reporting

Ms. Marin has evaluated the need for reporting, audited previously completed reporting efforts and completed regulatory reporting at the state and federal level for facilities throughout the Rocky Mountain region and in Texas. This has included reporting under RCRA, the Emergency Planning and Community Right to Know Act, the Clean Water Act, Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the Toxic Substances Control Act.

Wastewater

Ms. Marin has assisted industrial facilities with wastewater compliance tasks, including reporting, analysis of sampling data, and evaluated facility compliance with permits.

PROJECT EXPERIENCE

Brighton Boulevard Reconstruction. Ms. Marin was responsible for completing two phases of hazardous materials evaluation of Brighton Boulevard between 29th and 44th Avenues on behalf of the City and County of Denver (CCD). CCD intends to reconstruct this major roadway to become an “entrance” to the City, and to facilitate redevelopment of the RiNo District. The project area had been heavily impacted by historical industrial activities, including smelting, landfilling, processing, junk yards and gas stations. She conducted a Modified Environmental Site Assessment (MESA) in accordance with CDOT processes, including data compilation from over twenty previously completed

investigations, as well as completing Phase I ESA reports for acquired properties. Ms. Marin then developed recommendations for, and managed completion of, Phase II soil, groundwater and landfill gas sampling, a Materials Management Plan and a Methane, Odor and Dust Control Plan.

Industrial Facility Regulatory Compliance Audits. Ms. Marin has completed over 30 regulatory compliance audits for an oil and gas client with a wide variety of industrial facilities (including labs, manufacturing, equipment reconditioning and storage facilities) throughout the Rocky Mountain region. Audits were conducted using a client provided checklist and have included site visits, personnel interviews and review of facility documentation and recordkeeping. Final reports include a photographic log, summary of items of concern with recommendations for actions and a client provided checklist.

Proposed Northside Treatment Pond, Denver, Colorado Ms. Marin was responsible for researching historical uses at a property being considered for use as a regional water quality treatment pond by the City and County of Denver Public Works. The proposed site was within the boundaries of the ASARCO Superfund facility and, for over 100 years, had historically been used for mineral process waste disposal in addition to other industrial uses. Referencing a number of sources, Ms. Marin compiled historical property use information and data from previous site soil and groundwater investigations. Preliminary soil disposal estimates for excavation and pond construction were very expensive, but based on historical property use research and GIS mapping, it was possible to significantly reduce the volume of soil requiring off-site disposal.

I-25 and Broadway Wedge Ramp. Pinyon is currently working in support of Felsburg, Holt and Ullevig to complete hazardous materials evaluation tasks for the planned City and County of Denver Wedge Ramp Project, comprised of construction of an on-ramp to Interstate 25 as well as surrounding roadway improvements. Ms. Marin completed a Modified Environmental Site Assessment for the Project area, and completion of Phase I ESAs for properties to be acquired is planned in the near future. She also managed the completion of a site specific Health and Safety Plan, completion of soil and groundwater sampling, environmental oversight during geotechnical sampling and completion of a Materials Management Plan.

INCIDENT DETAILS

SOURCE: SEWER SYSTEM
SOURCE TYPE: SANITARY SEWER/LIFT STATION
MEDIUM: WATER AND LAND
WATERWAY: MANHOLE-->STORM SEWER
CAUSE: OTHER
MATERIAL TYPE: SANITARY SEWER OVERFLOW

MATERIAL DESCRIPTION: WASTEWATER	MATERIAL QUANTITY: 200 GALLONS	WATER QUANTITY: 200 G
--	--	---------------------------------

CAUSE INFORMATION:

DUE TO A BLOCKAGE WITHIN A SANITARY SEWER LINE CAUSED BY GREASE BUILD UP, WASTEWATER BACKED UP WITHIN A MUNICIPAL SANITARY SEWER LINE AND WAS RELEASED FROM A MANHOLE. THE RELEASED WASTEWATER DID DRAIN INTO A NEARBY STORM SEWER.

ACTION:

THE BLOCKAGE WAS RELIEVED AND THE LINE IS BACK IN SERVICE. CITY OF THORNTON REPRESENTATIVES REMEDIATED ALL IMPACTED AREAS AND INSPECTED OUTFALL OF THE IMPACTED STORM SEWER WHICH IS A SIGNIFICANT DISTANCE FROM THE INCIDENT LOCATION. UPON INSPECTING THE OUT

RESPONSE COMMENTS:

CITY OF THORNTON REPRESENTATIVES DID TALK TO THE MANAGEMENT OF A NEARBY RESTAURANT THAT MIGHT BE THE SOURCE OF THE GREASE THAT BUILT UP WITHIN THE SUSPECTED LINE. IT'S UNKNOWN IF THE RESTAURANT IN QUESTION HAS A GREASE TRAP.

COMMENTS:

TRI-COUNTY-BRIAN HLAVACEK, TOM BUTTS, MICHELE ASKANAZI, HOPE DALTON

INCIDENT INFORMATION

CASE NUMBER: 2015-0488 NRC NUMBER: NOT REPORTED
SPILL DATE: 8/3/2015
SPILL LOCATION: 281 W 104TH AVE
SPILL CITY/STATE/ZIP: NORTHGLENN, CO 80234
SPILL COUNTY: ADAMS

RESPONSIBLE PARTY

NAME: CINZZETTI'S/ TOP GUN PRESSURE WASHING
ADDRESS: 281 W 104TH ST.
NORTHGLENN, CO 80234
COUNTY: NOT REPORTED
CONTACT: UNK
PHONE: NOT REPORTED

INCIDENT DETAILS

SOURCE: OTHER
SOURCE TYPE: YELLOW GREASE CONTAINER
MEDIUM: WATER AND LAND
WATERWAY: TRIBUTARY TO GRANGE HALL CREEK
CAUSE: OTHER
MATERIAL TYPE: OIL

MATERIAL DESCRIPTION: YELLOW GREASE	MATERIAL QUANTITY: 1 PINT	WATER QUANTITY: 10
--	------------------------------	-----------------------

CAUSE INFORMATION:

THIS STORY HAS A FEW STEPS LEADING UP TO THE ILLEGAL SPILL. ON FRIDAY, 7/31/15, A PARKS STAFF PERSON WHO TURNED AROUND IN THE PARKING LOT OF CINZZETTI'S NOTICED A STRONG ODOR AND SOME YELLOW GREASE ON THE GROUND. HE REPORTED THIS TO THE PRE-TREATMENT COORDINATOR, WHO INVESTIGATED AND FOUND PERHAPS 1 PINT OF YELLOW GREASE ON THE GROUND NEAR THAT CONTAINER, AND ALSO FOUND THAT THE DUMPSTER WAS LEAKING LIQUID AND HAD A STRONG ODOR. CINZZETTI'S CALLED A POWER WASHING COMPANY, POSSIBLY TOP GUN POWER WASHING, WHO WERE TO WASH THE PARKING LOT. ON MONDAY 8/3/15, YELLOW GREASE GLOBS WERE OBSERVED IN THE TRIBUTARY TO GRANGE HALL CREEK. THIS LEADS TO THE SPECULATION THAT THE STORM DRAIN IN THE PARKING LOT WAS LIKELY NOT PROPERLY BLOCKED OFF DURING THE POWER WASHING, AND THE YELLOW GREASE WENT INTO THE DRAIN AND THEN INTO THE TRIBUTARY. THERE IS SOME SUSPICION THAT VANDALS MAY HAVE OPENED THE YELLOW GREASE CONTAINER AND TAKEN SOME OUT TO PUT ON THE GROUND.

ACTION:

AT THAT POINT, THE CITY OF NORTHGLENN CALLED CUSTOM ENVIRONMENTAL SERVICES, WHO HAS CLEANED THE CREEK AND THE PARKING LOT TWICE EACH.

RESPONSE COMMENTS:

NOT REPORTED

COMMENTS:

TRI-COUNTY EH: BRIAN HLAVACEK, MICHELE ASKANAZI, TOM BUTTS

COUNTY: ADAMS

COMMENTS: FROM AN OLD CDPHE LIST OF LOCATIONS WHERE TANK LEAKS WERE SUSPECTED AND LUST TRUST FUNDS WERE USED IN AN EFFORT TO IDENTIFY THE SOURCE. OFTEN, THE SOURCE WAS FOUND NEARBY AND WAS ENTERED IN THE LUST DATABASE (NOW COSTIS).

THIS LISTING NOT ENTERED INTO COSTIS BACK WHEN CDPHE TRANSFERRED RESPONSIBILITY FOR TANK LEAKS TO OPS. FEW PEOPLE AT OPS KNOW OF THIS OLD CDPHE LIST, AND ANY ASSOCIATED FILES ARE THOUGHT TO HAVE BEEN DISPOSED OF OR MISPLACED.

Unlocated Sites Summary

This list contains sites that could not be mapped due to limited or incomplete address information.

No Records Found

DRAFT NOT CDOT APPROVED

Environmental Records Definitions - FEDERAL

BRS Biennial Reporting System

VERSION DATE: 12/31/11

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

ECHOR08 Enforcement and Compliance History Information

VERSION DATE: 08/26/17

The EPA's Enforcement and Compliance History Online (ECHO) database, provides compliance and enforcement information for facilities nationwide. This database includes facilities regulated as Clean Air Act stationary sources, Clean Water Act direct dischargers, Resource Conservation and Recovery Act hazardous waste handlers, Safe Drinking Water Act public water systems along with other data, such as Toxics Release Inventory releases.

FRSCO Facility Registry System

VERSION DATE: 04/17/18

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

ICIS Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 09/23/17

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

MLTS Material Licensing Tracking System

VERSION DATE: 06/29/17

Environmental Records Definitions - FEDERAL

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements.

PADS PCB Activity Database System

VERSION DATE: 07/18/17

PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

RCRANGR08 Resource Conservation & Recovery Act - Non-Generator

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities classified as non-generators. Non-Generators do not presently generate hazardous waste. EPA Region 8 includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

SEMSLIENS SEMS Lien on Property

VERSION DATE: 04/11/18

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs. This is a listing of SEMS sites with a lien on the property.

SFLIENS CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete.

SSTS Section Seven Tracking System

VERSION DATE: 02/01/17

Environmental Records Definitions - FEDERAL

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

TSCA Toxic Substance Control Act Inventory

VERSION DATE: 12/31/12

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

ERNSCO Emergency Response Notification System

VERSION DATE: 04/29/18

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

HMIRSR08 Hazardous Materials Incident Reporting System

VERSION DATE: 03/27/18

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

RCRAGR08 Resource Conservation & Recovery Act - Generator

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities currently generating hazardous waste. EPA Region 8 includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

Environmental Records Definitions - FEDERAL

TRI Toxics Release Inventory

VERSION DATE: 12/31/16

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

EC Federal Engineering Institutional Control Sites

VERSION DATE: 08/03/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

FEMAUST FEMA Owned Storage Tanks

VERSION DATE: 12/01/16

This is a listing of FEMA owned underground and aboveground storage tank sites. For security reasons, address information is not released to the public according to the U.S. Department of Homeland Security.

HISTPST Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

ICISCLEANERS Integrated Compliance Information System Drycleaners

VERSION DATE: 09/23/17

This is a listing of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Environmental Records Definitions - FEDERAL

LUCIS Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

RCRASC RCRA Sites with Controls

VERSION DATE: 03/21/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with institutional controls in place.

BF Brownfields Management System

VERSION DATE: 06/27/18

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

NLRRCRAT No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 03/01/18

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

ODI Open Dump Inventory

VERSION DATE: 06/01/85

The open dump inventory was published by the United States Environmental Protection Agency. An "open dump" is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

Environmental Records Definitions - FEDERAL

RCRAT Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities recognized as hazardous waste treatment, storage, and disposal sites (TSD).

SEMS Superfund Enterprise Management System

VERSION DATE: 04/11/18

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs.

SEMSARCH Superfund Enterprise Management System Archived Site Inventory

VERSION DATE: 04/11/18

The Superfund Enterprise Management System Archive listing (SEMS-ARCHIVE) has replaced the CERCLIS NFRAP reporting system in 2015. This listing reflect sites that have been assessed and no further remediation is planned and is of no further interest under the Superfund program.

SMCRA Surface Mining Control and Reclamation Act Sites

VERSION DATE: 08/25/17

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

USUMTRCA Uranium Mill Tailings Radiation Control Act Sites

VERSION DATE: 03/04/17

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office

Environmental Records Definitions - FEDERAL

manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

DNPL Delisted National Priorities List

VERSION DATE: 04/11/18

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

DOD Department of Defense Sites

VERSION DATE: 12/01/14

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

FUDS Formerly Used Defense Sites

VERSION DATE: 06/01/15

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. DISCLAIMER: This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

NLRRCRAC No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 03/01/18

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

NMS Former Military Nike Missile Sites

VERSION DATE: 12/01/84

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System,

Environmental Records Definitions - FEDERAL

12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites.

During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

NPL National Priorities List

VERSION DATE: 04/11/18

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

PNPL Proposed National Priorities List

VERSION DATE: 04/11/18

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

RCRAC Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with corrective action activity.

RCRASUBC Resource Conservation & Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 03/01/18

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground

Environmental Records Definitions - FEDERAL

tanks storing petroleum and other hazardous substances. This listing refers to facilities subject to corrective actions.

RODS Record of Decision System

VERSION DATE: 04/11/18

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

DRAFT NOT CDOT APPROVED

Environmental Records Definitions - STATE (CO)

HWSG Hazardous Waste Sites- Generator

VERSION DATE: 06/30/03

The Resource Conservation and Recovery Act (RCRA) was enacted by congress in 1976, followed by the promulgation of implementing regulations in 1980. In 1984, the State was authorized by EPA to implement the RCRA program in Colorado on their behalf. This facility listing includes RCRA sites listed as generators of hazardous waste (Small Quantity Generators and Large Quantity Generators) and was provided by the Colorado Department of Public Health and Environment.

Small Quantity Generators (SQG) generate, in any calendar month, more than 100 kg (220 lbs.) but less than 1,000 kg (2,200 lbs.) of RCRA hazardous waste; and generate, in any calendar month, or accumulate at any time, no more than 1 kg (2.2 lbs.) of acute hazardous waste and no more than 100 kg (220 lbs.) of material from the cleanup of a spill of acute hazardous waste; and accumulate on-site no more than 6000 kg (13,200 lbs) of hazardous waste at any one time; or, the site is a Small Quantity Generator if the site met all other criteria for a Conditionally Exempt Small Quantity Generator, but accumulated, at any time, more than 1,000 kg (2,200 lbs.) of RCRA hazardous waste.

Large Quantity Generators (LQG) generate, in any calendar month, 1,000 kg (2,200 lbs.) or more of RCRA hazardous waste; or generate, in any calendar month, or accumulated at any time, more than 1 kg (2.2 lbs.) of RCRA acute hazardous waste; or generate, in any calendar month, or accumulated at any time, more than 100 kg (220 lbs.) of spill cleanup material contaminated with RCRA acute hazardous waste.

SPILLS Spills Listing

VERSION DATE: 06/15/18

The Colorado Department of Public Health and Environment's Division of Emergency Preparedness and Response maintains this listing of chemical spills and/or releases.

AST Aboveground Storage Tank Facilities

VERSION DATE: 07/01/18

The Oil and Public Safety Division of the Colorado Department of Labor and Employment maintains this list of aboveground storage tank (AST) facilities. This AST database also includes other types of storage tank facilities such as liquefied petroleum gas (LPG), vehicle tank meters (VTM), and compressed natural gas facilities.

COVENANTS Environmental Real Covenants List

VERSION DATE: 05/08/18

Senate Bill 01-145 gave authority to the Colorado Department of Public Health and Environment to approve requests to restrict the future use of a property using an enforceable agreement called an environmental covenant. These covenants, which are recorded with the deed and run with the land, provide a mechanism to ensure that institutional controls that are part of environmental remediation projects are properly implemented and that engineered structures are protected and maintained, so that implemented remedies continue to be protective of human health and the environment for as long as any residual contamination remains a risk.

Environmental Records Definitions - STATE (CO)

UST Underground Storage Tank Facilities

VERSION DATE: 07/01/18

The Oil and Public Safety Division of the Colorado Department of Labor and Employment maintains this list of underground storage tank facilities.

CLEANERS Dry Cleaning Facilities

VERSION DATE: 05/14/18

This database contains dry cleaners which have obtained an air permit through the Air Pollution Control Division at the Colorado Department of Public Health and Environment.

HISTSWLF Historical Solid Waste Landfills

VERSION DATE: NR

This historical solid waste landfills database contains data from the Hazardous Materials Waste Management Division (HMWMD) of the Colorado Department of Public Health and Environment and other various state and local agencies. In the early 1980s, the HMWMD conducted a survey of staff members and local agencies to compile this listing of sites that were known or thought to have waste issues. This Solid Waste Historical Data is not considered complete or verifiable and has not been maintained since the late 1980s. The HMWMD is not responsible and shall not be liable to the used for damages of any kind arising out of the use of this data or information.

HWSTSD Hazardous Waste Sites- Treatment, Storage & Disposal

VERSION DATE: 06/30/03

The Resource Conservation and Recovery Act (RCRA) was enacted by congress in 1976, followed by the promulgation of implementing regulations in 1980. In 1984, the State was authorized by EPA to implement the RCRA program in Colorado on their behalf. TSD facilities treat, store, dispose, or recycle hazardous waste on site in units and therefore are subject to RCRA permitting requirements. Historic TSDs are facilities that have completed closure and/or post-closure of the RCRA Subtitle C Regulated Unit(s) or the Treatment/Storage/Disposal Unit is no longer regulated. This database was provided by the Colorado Department of Public Health and Environment.

LST Leaking Storage Tank Facilities

VERSION DATE: 07/01/18

The Oil and Public Safety Division of the Colorado Department of Labor and Employment maintains this list of leaking aboveground and underground storage tank facilities.

LUSTRUST Leaking Underground Storage Tanks Trust Fund Sites

VERSION DATE: 01/01/00

Environmental Records Definitions - STATE (CO)

Suspected tank leaks have been discovered at the sites included in this database, but the facility responsible for the leak has not been identified. The state's investigation and search for responsible parties is paid for out of the state's Leaking Underground Storage Tank (LUST) Trust Fund. This database was provided by the Colorado Department of Labor & Employment, Division of Oil and Public Safety, State Fund Section and is no longer updated.

METHANESITES Methane Gas Study Sites

VERSION DATE: 01/01/81

This Investigation of Methane Gas Hazards report was prepared by the Denver Office of Emergency Preparedness in 1981. The purpose of this study was to assess the actual and potential generation, migration, explosive and related problems associated with specified landfills, and to identify existing and potential problems, suggested strategies to prevent, abate, and control such problems and recommend investigative and monitoring functions as may be deemed necessary. The Colorado Department of Health selected eight landfills as priorities due to population density and potential hazards to population and property.

SWF Solid Waste Facilities

VERSION DATE: 06/11/18

The Colorado Department of Public Health and Environment maintains this database of solid waste disposal facilities, transfer stations, recyclers, waste tire registrants, and waste grease registrants.

UMTS Uranium Mill Tailings Sites

VERSION DATE: 08/09/02

There were nine uranium mill tailings sites in Colorado designated for cleanup under the federal Uranium Mill Tailings Radiation Control Act. These nine sites, know commonly as UMTRA sites, were remediated jointly by the State of Colorado and the U.S. Department of Energy during the late 1980's and early 1990's. Mill tailings were removed from 8 of the mill sites and relocated in engineered disposal cells. A disposal cell is designed to encapsulate the material, reduce radon emanation, and prevent the movement of water through the material. At one site, Maybell, CO, the tailings were stabilized in-place at the mill site. After remediation of the tailings was completed, the State and DOE began to investigate the residual impacts to groundwater at the mill sites. The groundwater phase of the UMTRA program is on-going. This database was provided by the Colorado Department of Public Health and Environment.

VCRA Voluntary Cleanup and Redevelopment Program Sites

VERSION DATE: 04/18/18

This site listing is provided by the Colorado Department of Public Health and Environment (CDPHE) and includes both voluntary cleanup and brownfield properties. The Voluntary Cleanup and Redevelopment program was created in 1994. The objective of the program is to facilitate the redevelopment and transfer of contaminated properties. Properties that sit untouched because of their real or perceived contamination can be rehabilitated

Environmental Records Definitions - STATE (CO)

using the CDPHE's Brownfields Program in conjunction with the Voluntary Cleanup Program. Cleanup decisions are based on existing standards and the proposed use of the property. The actual cleanup and verification is the owner's responsibility.

HWSCA Hazardous Waste Sites- Corrective Action

VERSION DATE: 06/30/03

The Resource Conservation and Recovery Act (RCRA) was enacted by congress in 1976, followed by the promulgation of implementing regulations in 1980. In 1984, the Hazardous and Solid Waste Amendments (HSWA) were added to RCRA providing for corrective action at facilities subject to RCRA. That same year, the State was authorized by EPA to implement the RCRA program in Colorado on their behalf. Corrective action may be implemented as part of a RCRA Hazardous Waste Permit, an Order, or a Corrective Action Plan pursuant to the Colorado Hazardous Waste Regulations. Corrective action is the process by which regulated facilities investigate and remediate, as necessary, all contamination (soil, ground water, surface water, air) associated with their releases into the environment. Historic Corrective Action Sites are facilities that have completed the RCRA Subtitle C corrective Action process. This database was provided by the Colorado Department of Public Health and Environment.

SF Superfund Sites

VERSION DATE: 06/01/03

This listing contains active, deleted and proposed "Superfund" hazardous waste sites, as well as those sites identified through the Natural Resource Damages section of Superfund legislation and one Private Non-Superfund Cleanup site. A site qualifies for the National Priorities List (NPL or Superfund list) when the U.S. Environmental Protection Agency (EPA) determines there is a release or threatened release of hazardous substances that may endanger public health, welfare or the environment. In Colorado, the lead agency for Superfund remediation may be either the EPA or the Colorado Department of Public Health and Environment.

ACFGO

Flammable Gas Overlay Areas

VERSION DATE: NR

This data is provided by the Adams County's Planning and Development Department. The location of known flammable gas hazard areas (solid waste disposal sites) were identified in the April 19, 1978 "Landfills in Which Methane Generation Has Been Documented" report, prepared by Tri-County Health Department. It is the purpose of the Flammable Gas Overlay District to establish reasonable and uniform limitations, safeguards, and controls over uses of land designated as and/or adjacent to an operating or former solid waste disposal site. Any building, excavation, construction, or other use proposed in this zone district shall require testing and/or mitigation related to flammable gas, as specified in this section, prior to obtaining a building permit and after receiving a certificate of occupancy. Adams County cannot be responsible for consequences resulting from omissions or errors in the information and graphic representations made herein. Users should consult with the Adams County Planning Department to ascertain whether any modification have been made since the publication of this material.

Environmental Records Definitions - TRIBAL

USTR08 Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/25/18

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

LUSTR08 Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/25/18

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

ODINDIAN Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

INDIANRES Indian Reservations

VERSION DATE: 01/01/00

The Department of Interior and Bureau of Indian Affairs maintains this database that includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.
