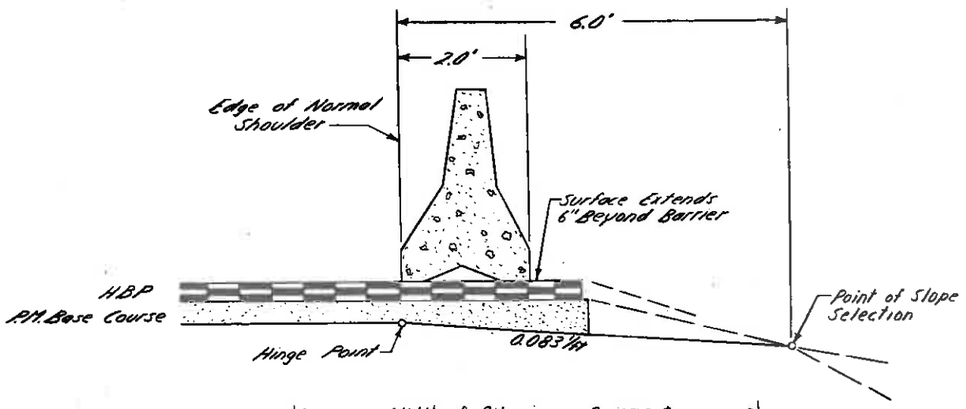
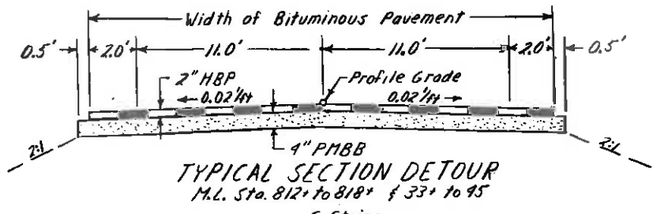
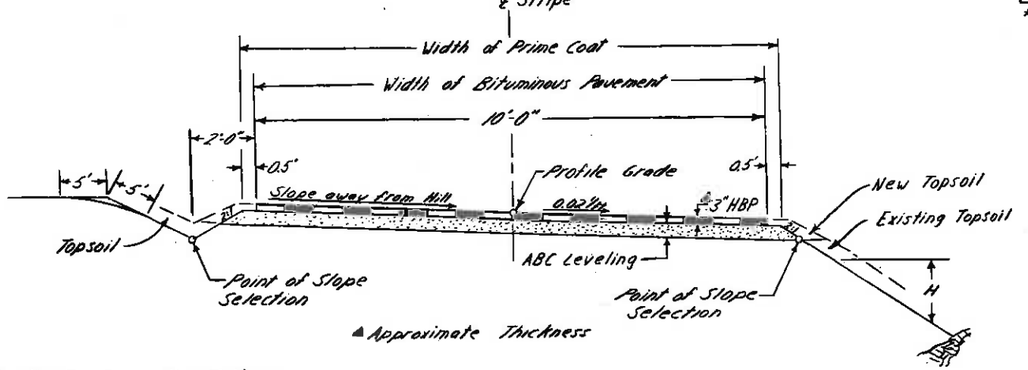
WIDENING FOR GUARD RAIL





TYPICAL SECTION DETOUR
M.L. Sta. 812+ to 818+ & 33+ to 95



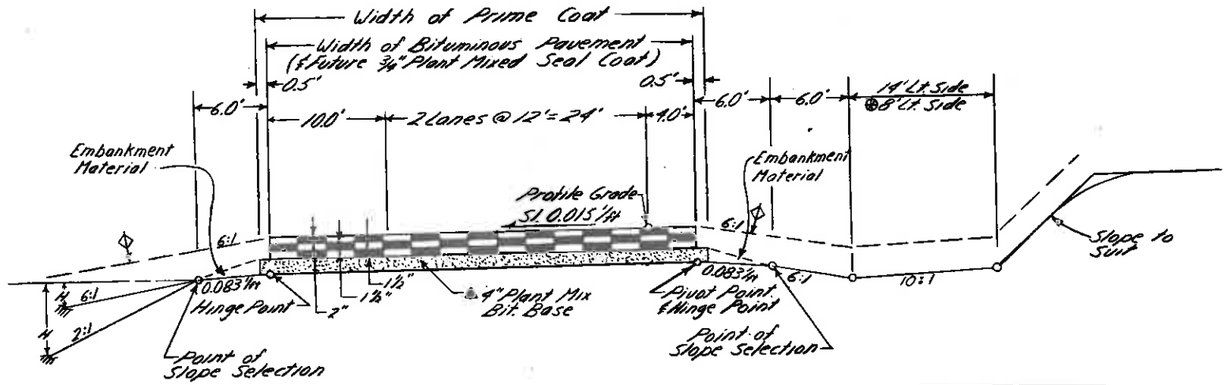
NOTE: Grading For Recreation Trail Was Completed on Previous Project, I 70-2(68)197. Any additional grading shall be accomplished by Equipment Hours

TYPICAL SECTION RECREATION TRAIL

Material shall be placed in separate courses at the following approximate rate per 100 lin. ft. of the Recreation Trail

Bituminous Pavement - Top Layer	19 Tons
ABC Leveling Course - Bottom Layer	7 Tons

TYPICAL SECTION (WEST BOUND ONLY)



*FILL SLOPE	
H	Slope
0' to 10'	6:1
10' to 20'	4:1
20' to 30'	3:1
Over 30'	2:1

*For information only, See Cross-Section

◊ Topsoil this Project

⊛ Sta. 996+00 to 996+50

▲ Approximate Thickness

* For Rock Cuts See Cross Sections For Slopes

*CUT SLOPE	
H	Slope
0' to 6'	6:1
6' to 10'	4:1
10' to 15'	3:1
⊛Over 15'	2:1

*For information only, See Cross-Sections

Material shall be placed in separate courses at the following approximate rate per 100 lin. ft. of roadway:

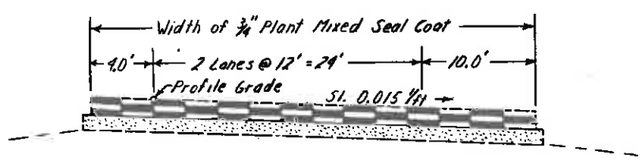
Bituminous Pavement - Top Layer	47 Tons
Middle Layer	35 Tons
Bottom Layer	35 Tons
Plant Mix Bituminous Base	96 Tons

The rates shown have been determined from information available at the time of design. Rates should be adjusted during construction to obtain the required approximate thickness

Hot Bituminous Pavement may be placed in two lifts when approved by the Engineer.

Break points on slopes and in bottoms of ditches shall be rounded on Construction for a pleasing appearance.

Slopes shall be varied as directed by the Engineer for aesthetics



TYPICAL SECTION (EAST BOUND ONLY)

Seal Coat shall be placed at the following approximate rate - 18 Tons per 100 Lin. Ft. of Roadway

AS CONSTRUCTED

NO REVISIONS ☐ REVISED ☐ VOID ☐

GENERAL NOTES

FOR PRELIMINARY PLAN QUANTITIES OF BITUMINOUS MATERIALS AND COVER COAT MATERIALS, THE FOLLOWING RATES OF APPLICATION WERE USED:

PRIME COAT (MC-70) @ 0.40 GALS. PER SQ. YD.
TACK COAT (CSS-1H) @ 0.10 GALS. PER SQ. YD.

DILUTED EMULSIFIED ASPHALT FOR TACK COAT SHALL CONSIST OF 1 PART EMULSIFIED ASPHALT AND ONE PART WATER.

RATES OF APPLICATION SHALL BE AS DETERMINED BY THE ENGINEER AT THE TIME OF APPLICATION.

ANY LAYER OF BITUMINOUS PAVEMENT THAT IS TO HAVE A SUCCEEDING LAYER PLACED THEREON SHALL BE COMPLETED FULL WIDTH BEFORE SUCCEEDING LAYER IS PLACED.

DILUTED EMULSIFIED ASPHALT SHALL BE USED AS A DUST PALLIATIVE WHERE REQUIRED AND SHALL CONSIST OF A DILUTION OF CSS-1H AND WATER, THE PORTIONS OF WHICH SHALL BE 9 PARTS WATER AND 1 PART CSS-1H, BASED ON VOLUME MEASUREMENT. PLAIN WATER SHALL BE USED AS A DUST PALLIATIVE WHERE REQUIRED IN OTHER AREAS. LOCATIONS SHALL BE AS ORDERED.

THE FOLLOWING SHALL BE FURNISHED WITH EACH BITUMINOUS PAVER:

1. A SKI TYPE DEVICE AT LEAST 30 FEET IN LENGTH.
2. AT LEAST 5,000 FEET OF CONTROL LINE AND STAKES.

IT IS ESTIMATED THAT OLD ROAD IS TO BE OBLITERATED AT THE FOLLOWING LOCATIONS:

STATIONS 874+ TO 887+.

DEPTH OF MOISTURE-DENSITY CONTROL FOR THIS PROJECT SHALL BE AS FOLLOWS:

FULL DEPTH OF ALL EMBANKMENTS

BASES OF CUTS 1 FOOT

BASES OF FILLS 1 FOOT.

COMPACTION FOR THIS PROJECT SHALL BE AASHTO T 180.

EXCAVATION REQUIRED FOR COMPACTION OF BASES OF CUTS AND FILLS WILL BE CONSIDERED AS SUBSIDIARY TO THAT OPERATION AND WILL NOT BE PAID FOR SEPARATELY.

IT IS ESTIMATED THAT 10,000 HOURS OF FLAGGING FOR CONTROLLING TRAFFIC WILL BE REQUIRED FOR THIS PROJECT.

THE MINIMUM THICKNESS OF TOPSOIL SHALL BE 4 INCHES. IT IS ESTIMATED THAT 33,780 CU. YDS. WILL BE REQUIRED FOR ROADWAY AND 750 CU. YDS. FOR SHOULDER EDGE ON RECREATION TRAIL. APPROXIMATELY 34,530 WILL BE OBTAINED FROM STOCKPILES RIGHT OF STATION 948+, FROM ROADWAY STATION 880± (W.B.) AND SURFACING STOCKPILE AREA

SEEDING, SOIL PREPARATION, FERTILIZING WITH COMMERCIAL FERTILIZER, AND MULCHING WILL BE REQUIRED FOR APPROXIMATELY 44 ACRES ON ALL DISTURBED AREAS NOT SURFACED.

ALL ROADWAY CUT SLOPE DITCHES SHALL HAVE SOIL RETENTION BLANKET (JUTE) APPLIED TO CONTROL EROSION.

SEEDING SHOWN BELOW WILL BE REQUIRED ON ALL ROADWAY DITCHES IN ADDITION TO NORMAL SEEDING.

COMMON NAME	BOTANICAL NAME	PERCENT PURITY	PERCENT GERMINATION	RATE PLS/ACRE
RED FESCUE V. DAWSON	FESTUCA RUBRA	80	77	35
FULTS	PUCCINELLIA DISTANS	85	80	35
LEMMONI	PUCCINELLIA DISTANS	85	80	20
KENTUCKY BLUEGRASS V. NUGGET	POA PRATENSIS	80	68	20
TOTAL PLS/ACRE SEEDING				110

CLASS "AX" CONCRETE WILL BE PERMITTED ON THIS PROJECT IN LIEU OF CLASS "A".

IT IS ESTIMATED THAT THE FOLLOWING WILL BE REQUIRED ON THIS PROJECT:

ITEM	HOURS
BLADING	100
DOZING	350
DOZING (LANDSCAPING)	200
TRUCK (DUMP)	150
FRONT END LOADER (RUBBER TIRE)	300
COMBINATION LOADER	400

IT IS ESTIMATED THAT 1,624 SQ. YDS. OF WATERPROOFING (MEMBRANE) WILL BE REQUIRED FOR CORRAL CREEK BRIDGE, STA. 880+.

ADDITIONAL LANDSCAPING MAY BE DONE ON FUTURE CONTRACT.

IT IS ESTIMATED THAT EXISTING HAUL ROAD IS TO BE OBLITERATED. WORK PAID FOR BY EQUIPMENT HOURS, TOPSOIL SEED AND MULCH.

COMMON NAME	BOTANICAL NAME	PERCENT PURITY	PERCENT GERMINATION	RATE PLS/ACRE
STREAMBANK WHEATGRASS	AGROPYRON RIPARIUM	97	92	7
WESTERN WHEATGRASS	AGROPYRON SMITHII	85	70	4

WHITE DUTCH CLOVER	TRIFOLIUM REPENS	98-1/2	90	2
ALSIKE CLOVER	TRIFOLIUM HYBRIDUM	98-1/2	90	3
TOTAL PLS/ACRE SEEDING (NATIVE)				40

COMMERCIAL FERTILIZER (FOR SEEDING)	PERCENT AVAILABLE	LBS/ACRE AVAILABLE	LBS/ACRE AVAILABLE	RATE LBS/ACRE
NITROGEN (18-0-0)	18	50		278
POTASH (0-45-0)	45		100	222
TOTAL LBS/ACRE FERTILIZER				500

RATE OF APPLICATION WILL BE ADJUSTED BY THE ENGINEER TO MEET SOIL CONDITIONS.

SEEDING (FORBS) WILL BE REQUIRED WHERE DESIGNATED. APPROXIMATELY 5 ACRES WILL BE SEEDED WITH FORBS. THE FOLLOWING TYPES AND RATES SHALL BE USED:

COMMON NAME	BOTANICAL NAME	OUNCES PLS/ACRE
PRIMROSE, YELLOW EVENING	OENOTHERA HOOKERI	1/2
PENSTEMON	PENSTEMON SPP. MIXED	1/2
GENTIAN, FRINGED	GENTIAMOPSIS THERMALIS	1/4
IRIS, WILD BLUE	IRIS MISSOURIENSIS	1/2
FLAX, WILD BLUE	LINUM LEWISII	1/2
COLUMBINE	AQUILEGIA	1/4
DAISY, ASPEN, FLEABANE	ERIGERON SPECIOSUS	1/4
COMPOSITES		3/4
TOTAL OZ./ACRE FORBS		3-1/2

SEED TYPES THAT ARE NOT AVAILABLE AT TIME OF CONSTRUCTION MAY BE SUBSTITUTED FOR AFTER APPROVAL OF THE ENGINEER.

THE ACTUAL TYPE OF MULCH AND SEEDING METHOD SHALL BE DETERMINED BY THE ENGINEER AT THE TIME OF APPLICATION. NORMALLY THE FOLLOWING WILL BE USED:

FOR ALL SLOPES 3:1 OR FLATTER, SEEDING SHALL BE DONE BY DRILLING. HYDRAULIC MULCHING SHALL BE APPLIED AT A RATE OF 1 TON PER ACRE.

FOR ALL SLOPES STEEPER THAN 3:1, SEEDING SHALL BE DONE BY THE HYDRAULIC METHOD OR HANDBROADCAST WHERE PERMITTED. MULCHING SHALL BE NATIVE HAY APPLIED AT A RATE OF 2 TONS PER ACRE. THESE STEEPER SLOPES SHALL HAVE PAPER FIBER MULCH NETTING UNLESS OTHERWISE DIRECTED. CRITICALLY ERODIBLE SLOPES SHALL HAVE SOIL RETENTION BLANKETS APPLIED, AS DIRECTED BY THE ENGINEER.

INTERCEPTING DITCHES

Delineators to be placed 6' from shoulder

*Includes 75 Yellow Type I for Median Side
^Includes 11 Yellow Type I Barrier for Median Side

Note: Reflectors are to be placed on the back side of existing Median Side Delineators for facing westbound traffic while detouring over the East Bound lanes. It is estimated that: 130 Crystal Type I, 7 Crystal Type I Barrier, and 6 Crystal Type III reflectors will be required for this project

MULCH NETTING

DESCRIPTION OF JOINTS AND SLOTS

Anchor Slot - Buried upper edge of Blanket

Junction Slot - Joint between upper and lower pieces. Upper piece overlapping buried end of lower piece

Check Slot - Extra piece of Blanket folded lengthwise and buried perpendicular to the slope. Continuous upper piece overlaying the unfolded portion remaining above ground. (To be used where directed)

Terminal Fold - Bottom edge of Blanket, folded under and stapled

Lap Joint - Overlap joint between two rolls, running down the slope

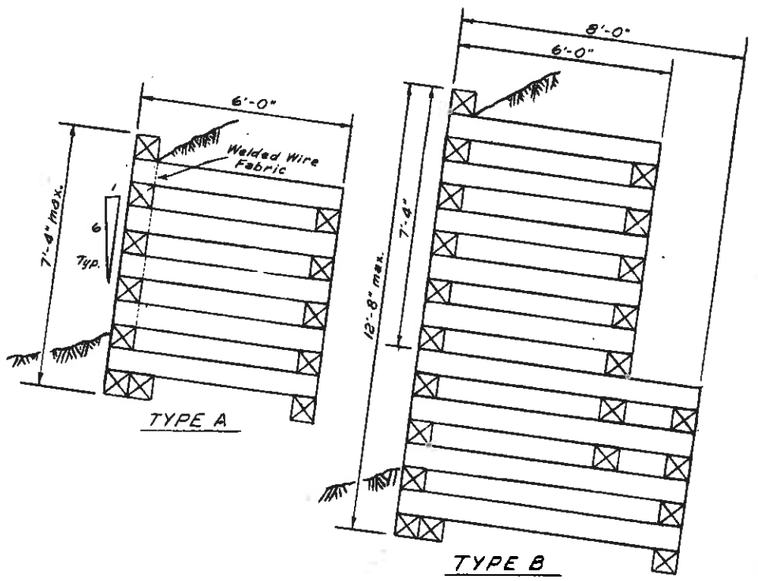
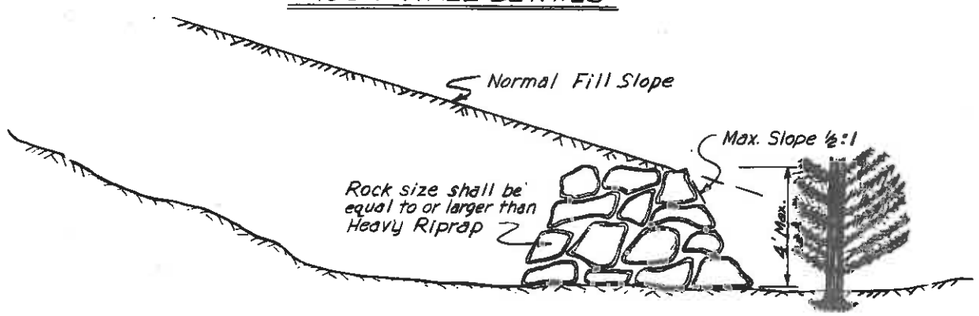
TIMBER CRIB WALL DETAILS

NOTES

1. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS.
2. ALL CRIBS TILT BACK TO FILL @ 2":12"
3. STABILITY COMPUTATIONS BASED ON 1-1/2:1 BACKSLOPE.
4. ALL TIMBER AND DRIFT PINS WILL BE STATE FURNISHED. TIMBER SHALL BE CUT AND REDRILLED TO FIT.
5. DRIFT PINS & HOLES TO BE 3/4" ø.
6. ALL STRETCHERS TO BE LAID HORIZONTAL.
7. FILL WITHIN CRIBS & BEHIND CRIBS CONSISTS OF SAND, SAND & GRAVEL, OR OTHER FREE DRAINING GRANULAR MATERIAL PLACED IN 6" LAYERS AND COMPACTED WITH VIBRATORY COMPACTORS.
8. SOIL WEIGHT ASSUMED TO BE 125#/FT^3.
9. EQUIVALENT SOIL FLUID PRESSURE 30#/FT^3.
10. WELDED WIRE FABRIC SHALL HAVE A MAXIMUM GRID OPENING OF 2" X 1" AND SHALL BE FABRICATED WITH 14 GAUGE GALVANIZED WIRE. WIRE FABRIC SHALL BE FURNISHED BY CONTRACTOR. PAYMENT WILL BE INCLUDED IN "PLACE TIMBER CRIBBING."
11. THE WELDED WIRE FABRIC SHALL BE FASTENED TO THE TIMBER STRETCHES BY STAPLING IN HORIZONTAL ROWS WITH A MINIMUM OF FIVE STAPLES PER ROW. STAPLES WILL BE 2" CEMENT COATED, BARBED. THE WELDED WIRE FABRIC SHALL BE STAPLED AT THE TOP AND BOTTOM STRETCHES AND AT ALTERNATE INTERMEDIATE STRETCHERS. IF THE WIRE IS TO BE OVERLAPPED, THE MINIMUM OVERLAP SHALL BE FOUR INCHES.



ROCK WALL DETAILS



NOTE : Rock wall construction will be paid for under appropriate equipment hours where directed.

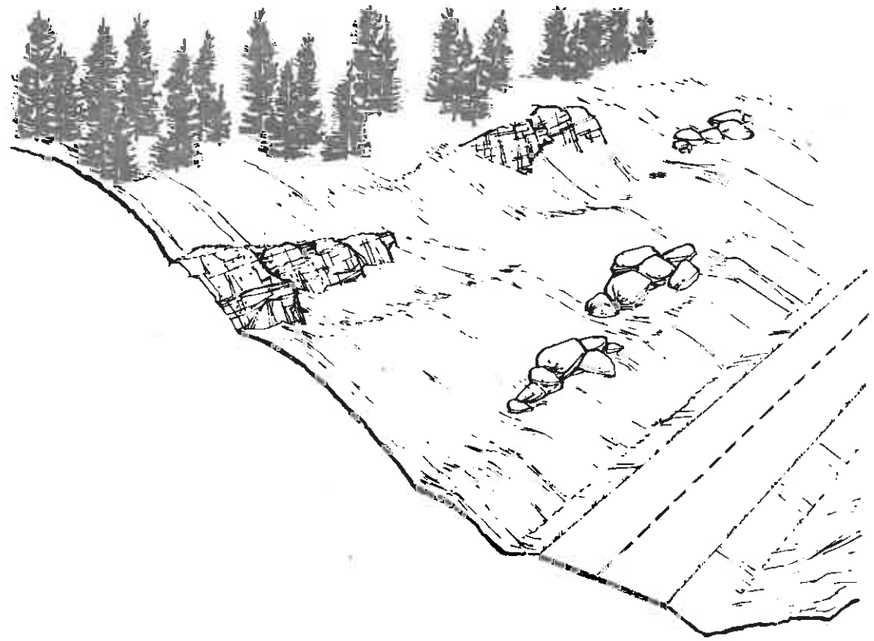
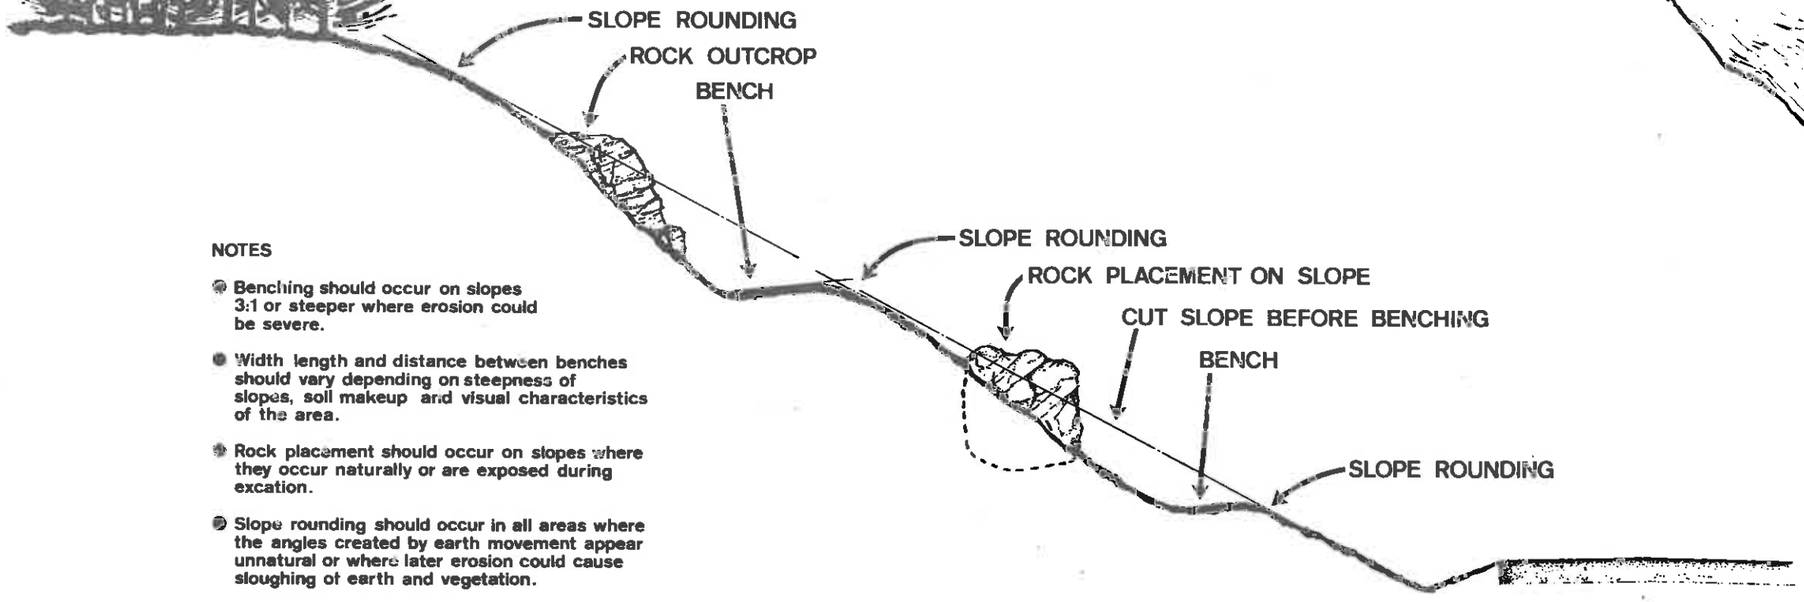
BENCHING, ROCK PLACEMENT AND ROUNDING

AREA OF SELECTIVE THINNING





NOTES

- Benching should occur on slopes 3:1 or steeper where erosion could be severe.
- Width length and distance between benches should vary depending on steepness of slopes, soil makeup and visual characteristics of the area.
- Rock placement should occur on slopes where they occur naturally or are exposed during excation.
- Slope rounding should occur in all areas where the angles created by earth movement appear unnatural or where later erosion could cause sloughing of earth and vegetation.
- Concepts shown on this sheet will be accomplished and paid for as part of earthwork operations except rock placement and selective thinning which will be paid for under Landscaping Special Effects (Force Account)

*= SIGN LAYOUT WILL BE FURNISHED WITH THE SPECIAL SIGNS.

NOTES:

1. SEE PLANS FOR FABRICATION DETAILS OF REGULATORY SIGNS, WARNING SIGNS, ROUTE MARKERS, AND AUXILIARY MARKERS.
2. PANELS FOR CLASS I SIGNS SHALL BE EITHER SINGLE SHEET ALUMINUM OR SINGLE SHEET STEEL AND SHALL BE REFLECTORIZED AS INDICATED. SEE STANDARD S-614-20B.
3. PANELS FOR CLASS II SIGNS SHALL BE EITHER SINGLE SHEET ALUMINUM OR SINGLE SHEET STEEL, SHALL HAVE BACKING ZEES, AND SHALL BE REFLECTORIZED AS INDICATED. SEE STANDARDS S-614-21B AND S-614-22C.
4. PANELS FOR CLASS III SIGNS SHALL BE EITHER LAMINATED ALUMINUM, EXTRUDED ALUMINUM, OR SHEET ALUMINUM. SEE STANDARDS S-614-23C, S-614-24B AND S-614-25C.
5. CLASS III SIGNS WITH A GREEN OR BLUE BACKGROUND SHALL BE FABRICATED FROM EITHER LAMINATED ALUMINUM OR SHEET ALUMINUM AND SHALL HAVE A REFLECTORIZED BACKGROUND. CLASS III SIGNS WITH A BLACK BACKGROUND SHALL BE FABRICATED FROM EITHER LAMINATED ALUMINUM OR EXTRUDED ALUMINUM AND SHALL HAVE A PORCELAIN ENAMELED BACKGROUND.
6. LEGEND AND BORDER ON ALL CLASS III SIGNS SHALL BE WHITE CUTOUT ALUMINUM WITH REFLEX REFLECTORS OR APPROVED ALTERNATE.
7. FOR TYPICAL GROUND SIGN PLACEMENT, SEE STANDARD S-614-19B.
8. FOR DETAILS OF SIGN SUPPORTS FOR GROUND SIGNS SEE STANDARD S-614-26C.
9. FOR DETAILS OF FOOTINGS, PEDESTALS, AND SIGN ISLANDS SEE STANDARD S-614-27C.
10. POST LENGTHS ARE APPROXIMATE ONLY. EXACT LENGTHS TO BE DETERMINED BY THE ENGINEER.

GENERAL NOTES

THESE SYMBOLS ARE INTENDED TO EXPLAIN THE VARIOUS TOPOGRAPHIC FEATURES INVOLVED ON THE ROADWAY PLAN SHEETS WHICH ARE PREPARED AT SCALES OF 1 INCH = 50 FEET OR 1 INCH = 100 FEET. NOTES ARE ADDED WHERE NECESSARY TO CLARIFY THE SYMBOL. IF THESE SYMBOLS ARE NOT APPROPRIATE FOR USE WITH OTHER SCALES, A LEGEND IS PROVIDED IN THE PLANS TO EXPLAIN THE SYMBOLS THAT ARE USED.

GUARD RAIL, CURB & GUTTER, ETC. ARE REPRESENTED BY A SYMBOL WITH TYPE GIVEN BY NOTE. SEE THE APPROPRIATE DIVISION M-STANDARD FOR EXPLANATION OF THE VARIOUS TYPES.

EXISTING BUILDINGS AND OTHER MAN MADE TOPOGRAPHICAL FEATURES NOT SYMBOLED HERE ARE SHOWN BY DASHED LINES WITH EXPLANATORY NOTES AS NECESSARY. NEW FEATURES TO BE CONSTRUCTED ARE SHOWN BY SOLID LINES.

GENERAL NOTES

ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE SPECIFICATIONS APPLICABLE TO THE PROJECT.

EROSION CONTROL DETAILS ARE CONSIDERED TO BE TEMPORARY AND ARE TO SERVE ONLY DURING CONSTRUCTION, OR UNTIL THEY ARE INTEGRATED INTO A FINAL EROSION CONTROL SYSTEM.

AT THE END OF EACH DAYS WORK THE APPROPRIATE COMBINATION OF TEMPORARY EROSION CONTROL MEASURES WILL BE PLACED FOR EACH DRAINAGE SECTION UNDER CONSTRUCTION, AS PER TYPICAL PLAN CONCEPT.

DESIGNED BY: RGM MADE BY: RDL CHECKED BY: MJT	APPROVED BY: B. L. Peterson STAFF DESIGN ENGINEER DATE: Apr. 21, 1975

STANDARD SIDE APPROACH ROADS, FLARING, CUT SLOPE TREATMENT & WIDENING AT BRIDGES AND AT CREST OF GRADES

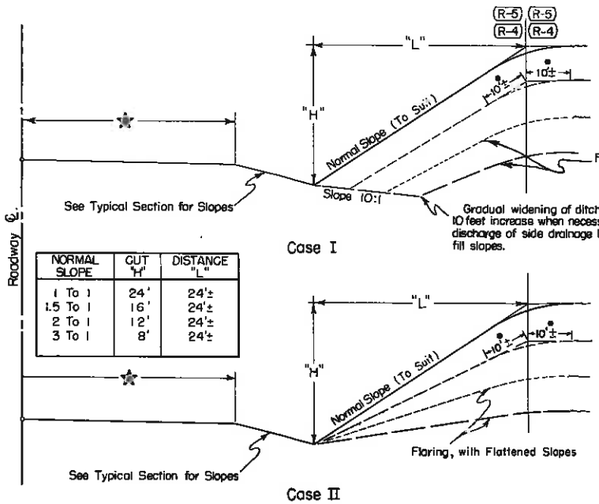
STANDARD M-203-B

(JULY 1, 1965)

FED. ROAD REG. NO.	DIVISION	PROJECT NO.	SHEET NO.
9	COLO.		

REVISIONS			
(R-1)	2-6-68	Median, Cross Over	MRH
(R-2)	7-30-68	Dept. Name	MRH
(R-3)	4-1-69	Widening for Guard Rail	M.R.H.
(R-4)	4-27-70	Cut Slope and Note	M.R.H.
(R-5)	12-11-72	Cut Slope Tr. Dimension	M.R.H.

GENERAL DETAILS FOR FLARING OF EARTH CUTS, CUT SLOPE TREATMENT & WIDENING AT BRIDGES



NORMAL SLOPE	CUT "H"	DISTANCE "L"
1 To 1	24'	24'±
1.5 To 1	16'	24'±
2 To 1	12'	24'±
3 To 1	8'	24'±

FLARING OF EARTH CUTS : The backslopes at ends of all earth cuts shall be flattened & where necessary the ditch shall be widened gradually to discharge side ditch drainage away from the base of adjacent fill slopes in order to avoid erosion & to improve appearance. The transition of flattened backslopes & widened ditch shall be constructed in such a manner that a uniform appearance of slope & ditch results. Backslopes shall be flared to the approximate "L" distance shown on Slope Table included with this detail. Rock cuts shall not be flared.

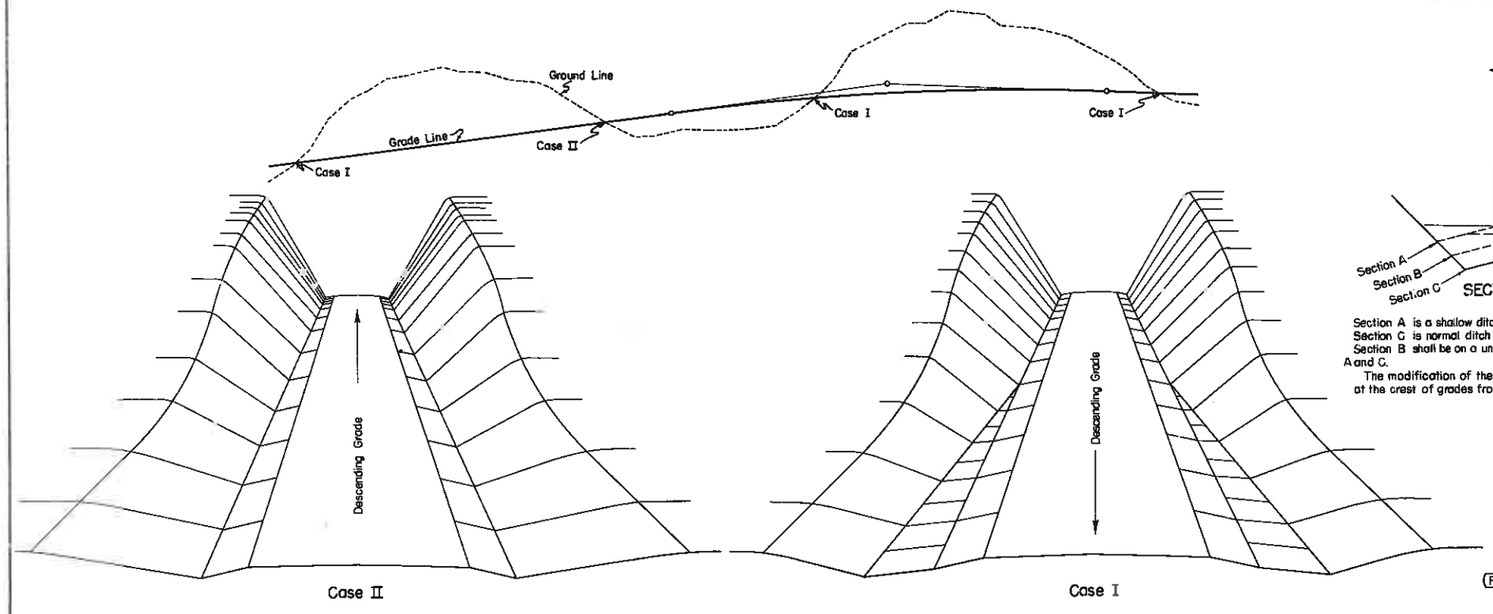
*CUT SLOPE TREATMENT IN EARTH CUTS: The intersection of cut slopes with the existing ground shall be rounded in earth cuts, beginning outside the slope stake and extending down the cut slope. The exact dimension will be determined by the Engineer based on the type of material encountered.

Quantities shall be included in "Unclassified Excavation".

*WIDENING AT BRIDGE APPROACHES: Roadway embankment at bridge approaches shall be so constructed that base of surfacing at shoulder point is a minimum of 2 ft. beyond the edge of bridge deck. Where widening is necessary to achieve this result it shall take place gradually over a distance of 300 ft. (R-4)

WIDENING FOR BITUMINOUS CURB (Only where Guard Rail is required); See appropriate M-Standard for Guard Rail. (R-3)

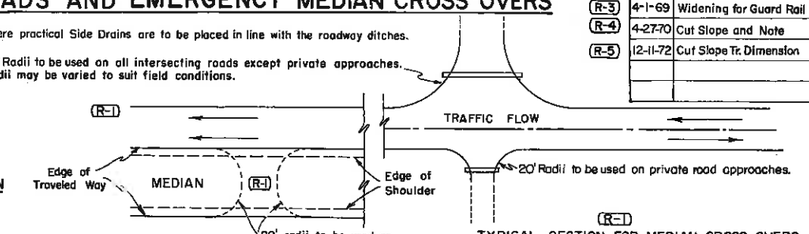
PLAN OF FLARING IN EARTH CUTS (R-4)



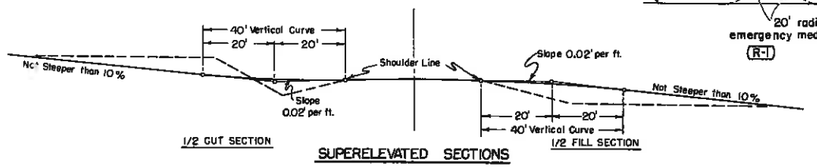
TYPICAL PLANS FOR SIDE APPROACH ROADS AND EMERGENCY MEDIAN CROSS OVERS (R-1)

Where practical Side Drains are to be placed in line with the roadway ditches.

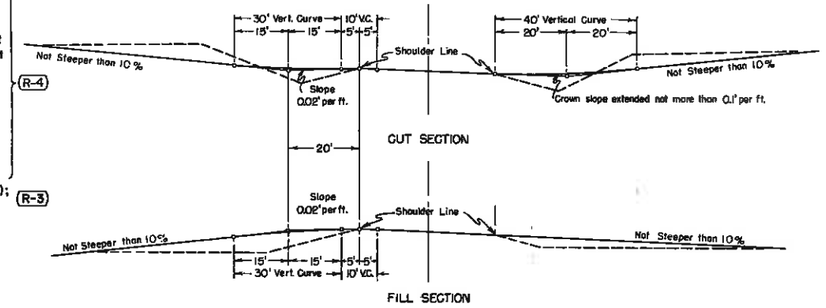
50' Radii to be used on all intersecting roads except private approaches. Radii may be varied to suit field conditions.



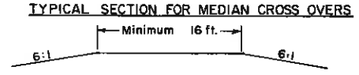
STANDARD CROWNED SECTION



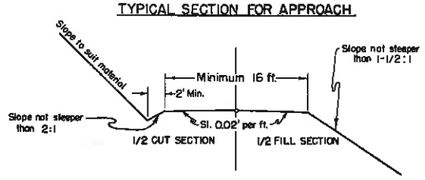
SUPERELEVATED SECTIONS



TYPICAL SECTION FOR MEDIAN CROSS OVERS



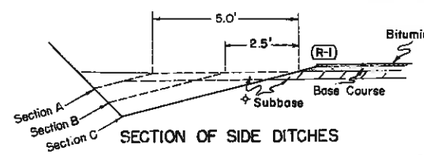
TYPICAL SECTION FOR APPROACH



NOTE:
Road Approaches shall conform to the above details unless otherwise indicated on plans. The width of the crowned section shall not be less than the width of the crowned section of the existing approach road and the new construction shall not be less than 16 feet in width.

DETAILS FOR DITCH & WIDENED SHOULDERS AT CREST OF GRADES

(TO BE USED ONLY WHERE SIGHT DISTANCE AT CREST OF GRADE IS 600 FT. OR LESS)



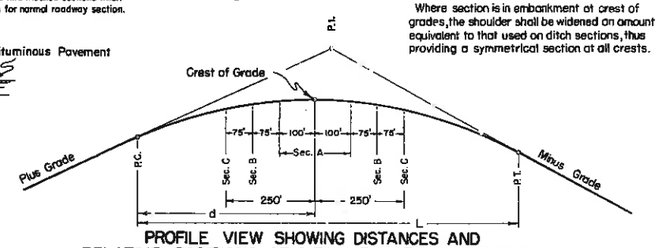
SECTION OF SIDE DITCHES

Section A is a shallow ditch section.
Section C is normal ditch section.
Section B shall be on a uniform transition between Sections A and C.
The modification of the ditch indicated shall be used only at the crest of grades from which drainage breaks both ways.

Formula for finding the Crest of Grade

$$d = \frac{\text{Plus Grade}}{\text{Algebraic Diff.}} \times L$$

NOTE
Where section is in embankment at crest of grades, the shoulder shall be widened on amount equivalent to that used on ditch sections, thus providing a symmetrical section at all crests.



PROFILE VIEW SHOWING DISTANCES AND RELATIVE POSITIONS OF DITCH-TREATMENT SECTIONS

GENERAL NOTES (R-2)

All work shall be done in accordance with the Standard Specifications applicable to the Project.

All side approach roads to the Project shall be Gravel Surfaced with a 4 inch thickness of Aggregate Base Course extending approximately to the Right of Way Line. Estimated tonnage and class of material required for this operation are shown in the Aggregate Base Course Plan.

The maximum grades shown are to be the limiting grades for all road approaches. Modifications of grades will be permitted where adherence to the grades as shown would cause damage to property or create other unsatisfactory conditions. Grades flatter than the maximum shown are to be used wherever feasible. (R-4)

STANDARD TYPES of DITCHES and CONSTRUCTION METHODS

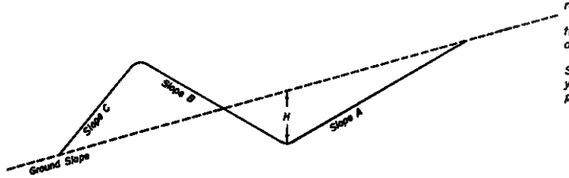
STANDARD M-203-C

(JULY 1, 1965).

FED. ROAD REG. NO.	DIVISION	PROJECT NO.	SHEET NO.
9.	COLO.		

DETAILS for CONTOUR INTERCEPTING DITCHES

Typical Section for Contour Intercepting Ditches



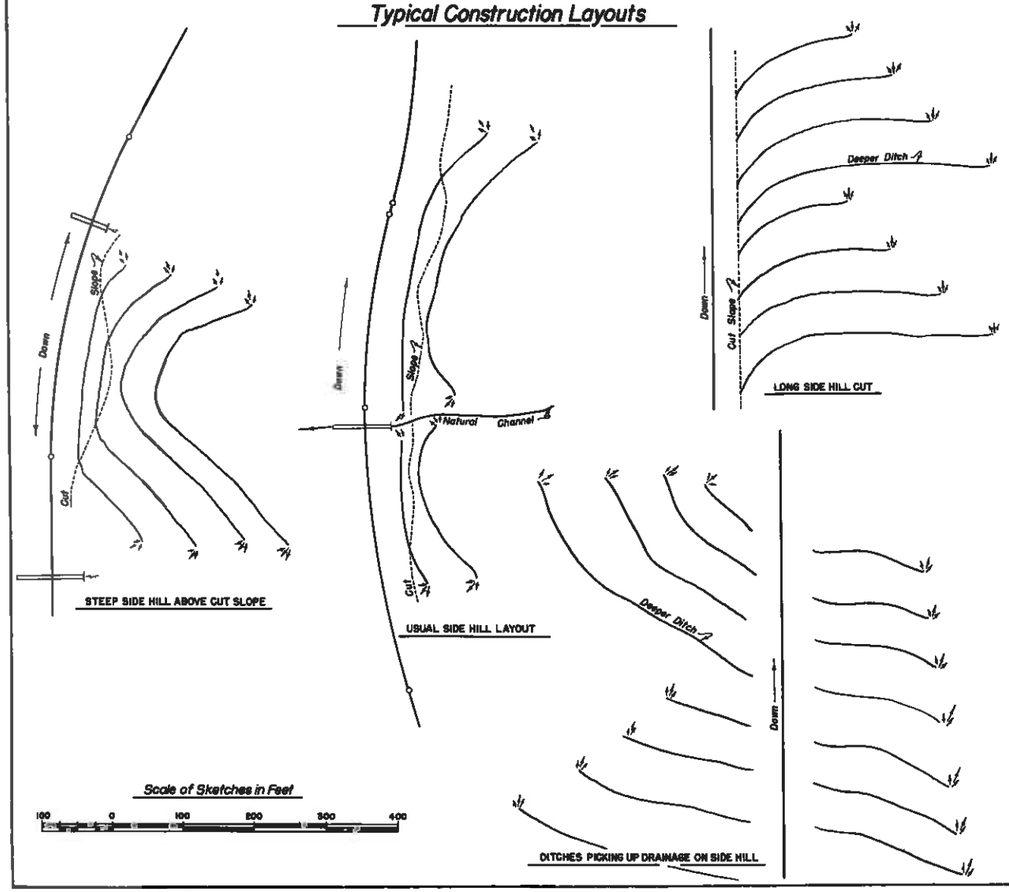
PURPOSE & USE OF THE TABLE

The primary purpose of the information for Contour and Intercepting Ditches shown on this sheet is to serve as a guide in construction and to readily arrive at yardages of excavation involved.

Foremost consideration in constructing these ditches is given first to the natural ground line slope contranted in construction, thence to the other values shown on the Typical Section.

By properly arriving at the combination of values shown on the Typical Section and in the Table for a specified condition, the number of cubic yards of excavation per 100 lin. ft. of ditch may be read under the appropriate column for this item.

Typical Construction Layouts



Scale of Sketches in Feet

100 0 100 200 300 400

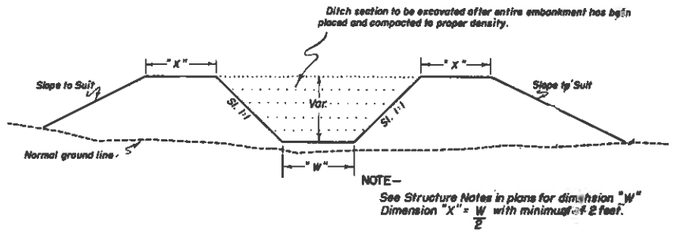
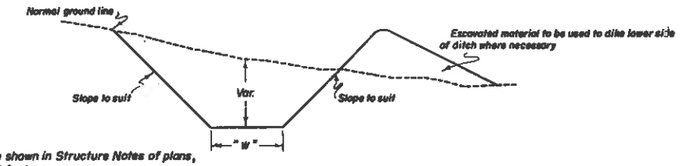
TYPICAL SECTIONS for DRAINAGE, IRRIGATION DITCHES and CHANNEL CHANGES



NOTE—
See Structure Notes in plans for dimension "W"
Dimension "X" = W/2 with minimum of 2 feet.

For Embankment Sections

(Generally for use in Irrigation Ditches & Channel Changes)



NOTE –
Unless otherwise shown in Structure Notes of plans, dimension "W" = 1 foot.

For Cut Sections

REVISIONS		
(R-1) 7-23-68	Dept. Name	M.R.H.

GENERAL NOTES

All work shall be done in accordance with the Standard Specifications applicable to the Project.

All ditches are to be constructed to lines and grades as staked by the Engineer using the ditch section shown on plans or as ordered by the Engineer.

CONTOUR INTERCEPTING DITCHES: *Ditches are to be laid out along the ground contour on a grade of not over 1% (Type of soil shall govern the grade).*

Ends of ditches are to be lined up so that concentration of flow from a higher contour ditch into one of lower contour is, as far as possible avoided. The use of a deeper ditch is recommended where this condition is encountered.

The following horizontal spacing of ditches is recommended:

4% to 6%	Approximately 70' Centers
8% to 10%	Approximately 60' Centers
20% to 4:1 Slope	Approximately 55' Centers
30% to 1-1/2:1 Slope	Approximately 50' Centers

(R-1)

Where ditch checks are required the intervening ditch between one set of ditch checks shall not exceed a grade of 1.0%. Details of checks will be shown on plans when required.

GENERAL NOTES (R-1)

All work shall be done in accordance with the Standard Specifications applicable to the project.

* — Where the roadway cross section is in FILL, excavation for box culverts shall be done as follows:

1. Embankment shall be built up to one foot above the bottom of the box culvert.
2. The trench shall then be excavated to accommodate construction of the box culvert.

Excavation and Backfill patterns different from those indicated on these sheets will be shown elsewhere on the Plans.

Excavation for structure installation shall be classified as "Structure Excavation" unless otherwise shown on the Plans.

Structure footings which are located in rock shall be poured out to undisturbed rock without forming.

GENERAL NOTES (Continued)

TRENCH INSTALLATION:

Trenches over 5 feet in depth shall be either shored or the trench walls shall be sloped to the angle of repose. If sloped, the bottom of the slope shall be a minimum of 1 foot above the top of the pipe.

Shoring will be required when the bottom of the slope is more than 3 feet above the bottom of the trench. Shoring shall extend a minimum of one foot above the bottom of the slope.

Timber sheeting or shoring may be cut off 1 foot above the top of the pipe after backfilling is complete.

NOTE:
See Sheet 1 for General Notes and Backfilling Details.

END SECTION FOR REINFORCED CONCRETE ELLIPTICAL PIPE (R-1)

GENERAL NOTES (R-5)

All work shall be done in accordance with the Standard Specifications applicable to the project.

Concrete End Sections are to be furnished with tongue or groove as req'd.

Alternate equivalent designs for Concrete End Sections may be submitted to the Division for approval. Design length of culvert is based on length of End Section shown in table. Additional pipe required to provide the design length of the culvert shall be furnished by and at the expense of the Contractor.

Other sizes of concrete pipe and end sections may be available upon request; however, the designer should contact supplier prior to calling for sizes other than those shown on this standard.

Inside configuration and joint of concrete end section and pipe shall match.

End sections for CSP Arch Culvert shall match the dimensions of the culvert shown on plans.

Galvanized Toe Plate as shown will be required on End Sections for corrugated steel pipe and shall be same thickness as End Sections. Toe Plate shall be field bolted to End Section with ⅜" galvanized bolts, nuts and washers.

Designs for Aluminum End Sections for use on aluminum culverts shall be submitted to the Division for approval prior to use.

Concrete Pipe Joint Fasteners, where shown on plans, shall be installed so that a minimum of 15 linear feet of the outlet end of the pipe are mechanically locked together. End Section lengths, when used, will be included in the 15 l.f. requirement.

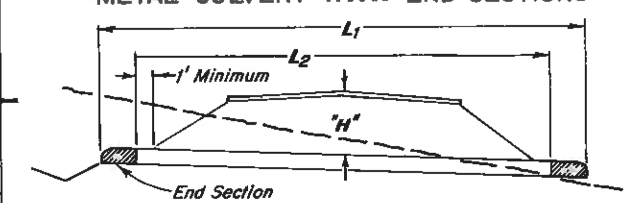
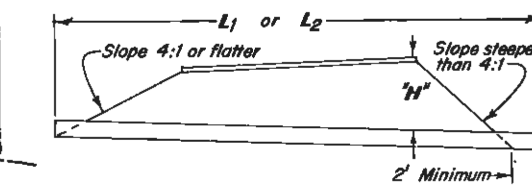
65 x 40	54	8	18	0.135	8	12
72 x 44	60	9	18	0.164	8	12

* *In the absence of a Bearing Pressure Report use fill heights listed under "2 Tons". Where bearing pressures exceeding 2 tons per square foot are required for given fill heights, the foundation material shall be investigated to determine its bearing capacity.*

METAL CULVERT WITH END SECTIONS

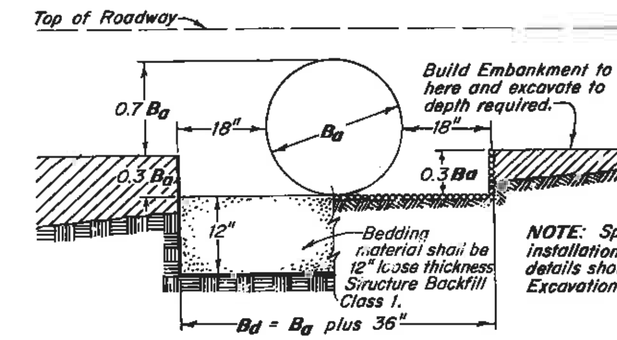


METAL CULVERT WITHOUT END SECTIONS



"H" = Maximum height of fill over top of Culvert, including pavement.
L_1 = Length of Culvert to be measured when placed in accordance with Section 617.
L_2 = Length of pipe to be measured when placed in accordance with Section 603. Length of extension, when placed in accordance with Section 617, shall be the actual number of feet of new culvert required.

INSTALLATION OF METAL CULVERT PIPE



—— = *Limits of Structure Excavation in ROCK.*
ooooo = *Limits of Structure Excavation in SOIL.*

NOTE: Spacing for multiple pipe installations shall conform to the details shown on M Standard for Excavation and Backfill for Structures.

(R-1)

GENERAL NOTES

All work shall be done in accordance with the Standard Specifications applicable to the project.

The tables on this sheet show minimum thickness for structural requirements only. They are intended for use only where corrosive and/or abrasive conditions are negligible. Heavier metal and/or protective coatings shall be used where site investigations indicate corrosive and/or abrasive conditions.

Pipe arch with equal periphery and with span and rise dimensions approximately equal to those required by plans will be permitted.

During construction, adequate cover shall be provided to protect the structure from damage.

Pipe shall be placed with longitudinal seams at the sides or quarter points but not along top of vertical axis.

When a culvert is to be extended with pipe of different material, the connection shall conform to the details on plans or be approved.

Structural plate pipes of equal or larger diameter, conforming to Section 510 of the Standard Specifications, may be substituted for the pipes shown on this sheet at no additional cost to the State.

Variations from corner radii shown will be acceptable provided the pipe is of sufficient strength to support it's designated fill height.

The minimum depth of fill excluding pavement over corrugated metal pipe culvert shall be as staked by the Engineer, but shall not be less than shown in the Fill Height Tables.

Extensions for CSP Arch Culvert shall match the dimensions of the culvert shown on plans.

Backfill and compaction shall be in accordance with Section 206.

TRENCH INSTALLATION

Installation and Maximum Fill Heights shall conform to the M Standard for "Pipe Sewer in Trench."

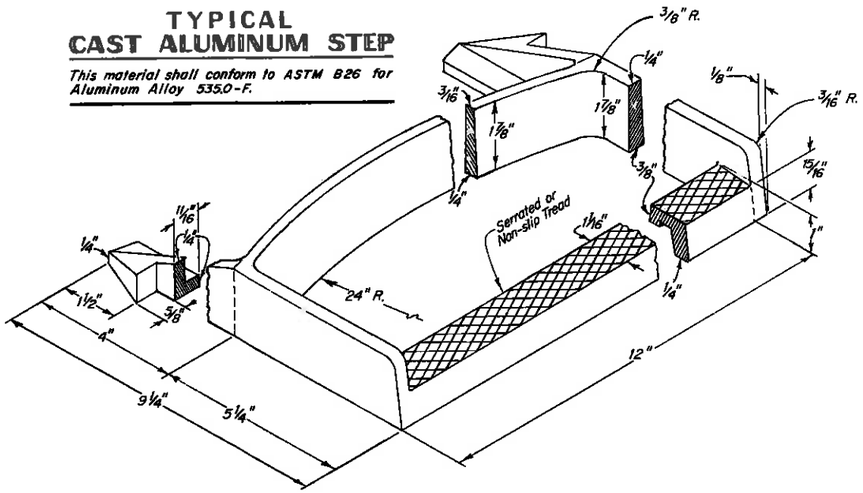
REVISIONS		

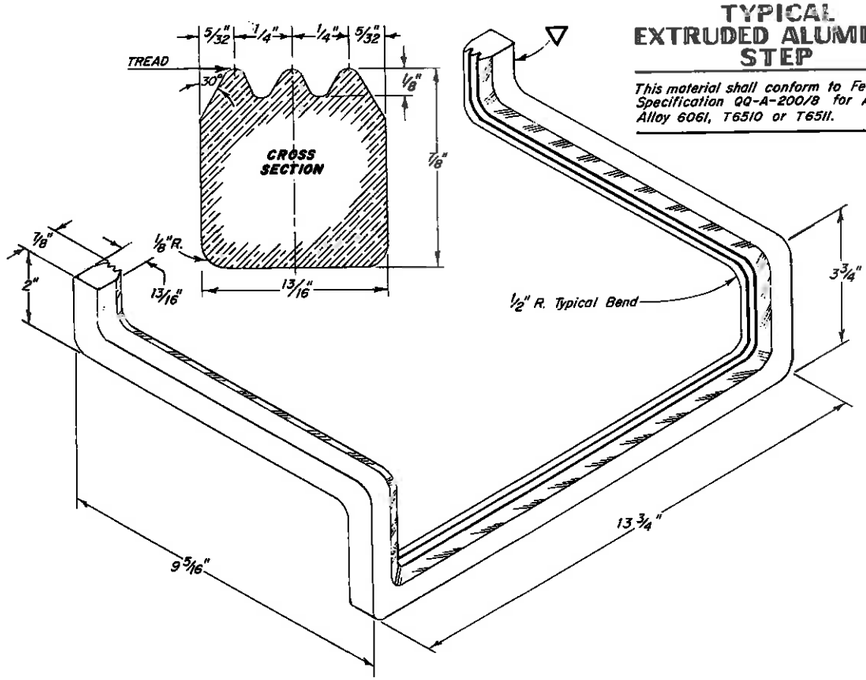
TYPICAL CAST ALUMINUM STEP

This material shall conform to ASTM B26 for Aluminum Alloy 535.0-F.



TYPICAL EXTRUDED ALUMINUM STEP

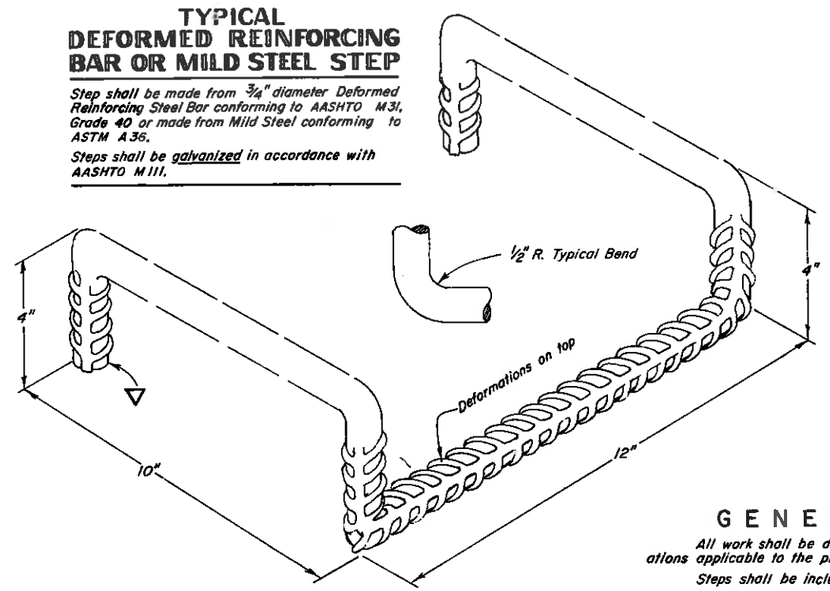
This material shall conform to Federal Specification QQ-A-200/8 for Aluminum Alloy 6061, T6510 or T6511.



TYPICAL DEFORMED REINFORCING BAR OR MILD STEEL STEP

Step shall be made from 3/4" diameter Deformed Reinforcing Steel Bar conforming to AASHTO M31, Grade 40 or made from Mild Steel conforming to ASTM A36.

Steps shall be galvanized in accordance with AASHTO M111.



GENERAL NOTES

All work shall be done in accordance with the Standard Specifications applicable to the project.

Steps shall be included in the cost of "Manholes" or "Inlets".

Cast Iron Steps will not be permitted.

All Steps shall conform to the requirements of AASHTO M199.

▽ *Concrete and Steel quantities are for ONE entire Inlet before deduction for volume occupied by pipe.*

* *Steel Ring weights are for the maximum pipe D shown.*

GENERAL NOTES

All work shall be done in accordance with the Standard Specifications applicable to the project.

Concrete shall be Class A, B, or D.

See plans for size and location of Conduit.

Inlet Grating shall be galvanized as described for Frames, Grates, Covers & Steps in Section 712.

All exposed concrete surfaces shall receive Class I finish.

Footings in rock shall be poured out to rock and not formed.

Inlet may be Cast-in-Place or Precast.

Steps will be required when Inlet "H" exceeds 3'-6".

For detail of Inlet Step, see Standard M-604-D.

Steps shall be included in the cost for "Inlet, Type D".

Grating shall conform to Section 604.

GENERAL NOTES

R-1

All work shall be done in accordance with the Standard Specifications applicable to the project.

Concrete shall be Class **A, B** or **D**.

All exposed loops shall be thoroughly cleaned and painted in accordance with Section 509.

Drainage Slots may be omitted on: median installations with inlet drainage; shoulder barrier on high outside superelevated shoulders; and median barrier on vertical crest curve.

Existing asphaltic surface shall be patched along the barrier foundation.

Nuts, washers, lifting hardware, connecting pins, drift pins and anchor bolts shall be galvanized.

Where transition is required (see "h" in Offset Roadways), cast-in-place barrier shall be constructed, complete with matching reinforcement and hardware, to abutt precast barrier.

Ø ——— Triangular space in base of barrier is typical, circular arch shape will be permitted.

▲ ——— Taper shall be 1" in 12" at traffic approach corners of Section to eliminate snagging of plowblade.

A_1 ——— MANDATORY: 1" x 12" Lifting Coil with double flared loops. (Safe working load, 8000 lbs.)

A_2 ——— OPTIONAL: Holes through Barrier for lifting by Rods and Yoke; maximum dia. 2".

TYPICAL SIPHON COUPLING BAND

GENERAL NOTES

All work shall be done in accordance with the Standard Specifications & AASHTO M 36 except as shown hereon.

All Coupling Band connection hardware shall be galvanized or electroplated in accordance with the Standard Specifications.

For Pipe Arches use the same width band as for round pipe of equal periphery.

Dimensions and thicknesses are minimum.

TOLERANCE: Inside pipe diameters shall not vary more than 1/2" for all sizes of pipe.

Spot welds shall develop minimum required strength of strap or angle.

DISCLAIMER: Infringement on patented couplings shall be the Contractor's responsibility in accordance with Subsection 107.03.

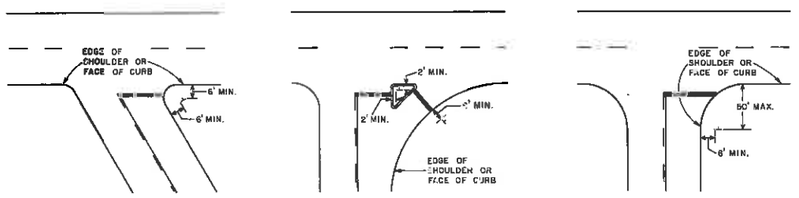
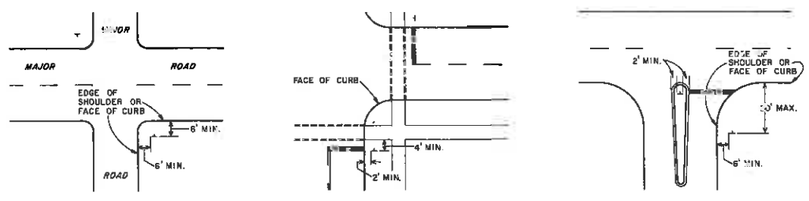
TYPICAL LOCATIONS STOP SIGNS AND YIELD SIGNS





GENERAL NOTES

1. All work shall be done in accordance with the Standard Specifications applicable to the project.
2. The Engineer shall establish grades and locations for all sign posts in accordance with details shown on the plans.
3. Special care shall be taken in sign location to ensure an unobstructed view of each sign.
4. Signs shall be set to provide as much lateral clearance as existing conditions permit but shall not exceed maximum clearances as shown in the LATERAL PLACEMENT TABLE.
5. The lateral placement for all signs may be reduced to a minimum of 2 ft. outside of the shoulder edge or face of curb where necessary to fit field conditions or improve sight distance.
6. Minimum post embedment shall be 3 ft. for U-2 posts and 4"x4" timber posts, and 5 ft. for 6"x6" timber posts. For footing depth see applicable Standard.

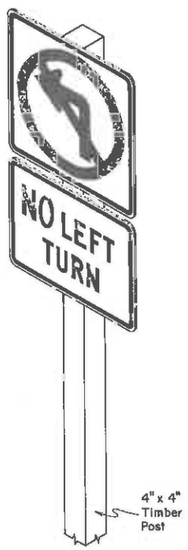
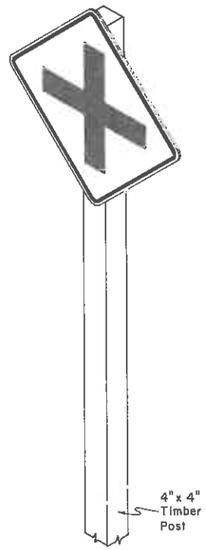
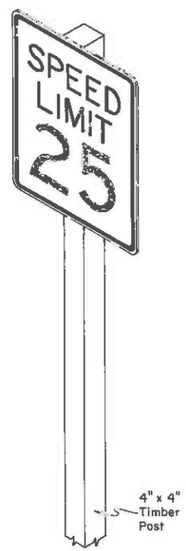
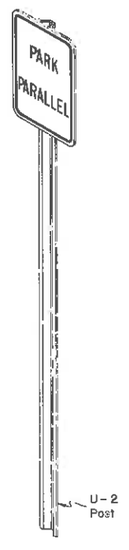
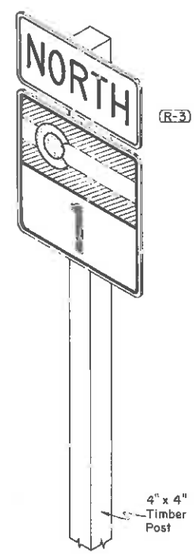
TYPICAL CLASS I GROUND SIGN INSTALLATIONS











GENERAL NOTES

1. All work shall be done in accordance with the Standard Specifications applicable to the Project.
2. All Class I sign panels shall be either sheet steel, 0.0598" minimum thickness, or sheet aluminum, 0.100" minimum thickness.
3. Class I sign panels shall be fastened directly to the post. Fasten to U-2 post with 2 - 1/4" stove bolts and to timber posts with 2 - 3/8" machine bolts. See appropriate Standard for exceptions.
4. A plastic fiber washer shall be placed between the bolt head and the face of the sign panel. Use a C.I.O.G. washer under the nut on the back of the timber post.
5. Bolts, nuts and metal washers shall be galvanized or cadmium plated.
6. Exposed bolt heads and fiber washers on the face of the sign panel shall be painted or reflectorized to match the surrounding color.

(R-2) 7. All reflective sheeting shall be of the Smooth Surface Type.

8. For sign placement see appropriate Standard.

(R-1) 9. Steel posts shall meet requirements of Paragraph 4.5 U.S. Department of Commerce Commercial Standard 184-51. Re-rolled rails will not be permitted. U-2 post to weigh 2 lbs./ft. A mill tolerance of minus 3 1/2 % of the weight of any one post will be allowed. Alternate post acceptable if section modulus is at least 0.200 in^3 about the X-X axis and at least 0.250 in^3 about the Y-Y axis.

10. For additional information, refer to "TABULATION OF SIGNS". Timber posts shall be 4"x4" or 6"x6" as noted therein and shall conform to Standard Dressed (S4S) Sizes.

(R-2) 11. Vertical spacing between panels on the same post shall be 1" minimum to 1 1/2" maximum.

GENERAL NOTES

1. All work shall be done in accordance with the Standard Specifications applicable to the project.
2. All Class II sign panels shall be either single sheet steel, 0.0598" minimum thickness, or single sheet aluminum, 0.100" minimum thickness, and shall be furnished with backing zees.
3. Timber posts shall be 4"x4" or 6"x6" as noted in the "Tabulation of Signs" and shall conform to Standard Dressed (S4S) Sizes.
4. Backing zees are 3"x 2¾" x ¼" at 6.7 lbs. per ft. for steel or 2.33 lbs. per ft. for 6061-T6 aluminum.
5. Exposed bolt heads on the face of the sign shall be painted or reflectorized to match the surrounding color.
6. For sign placement see "Typical Ground Sign Placement" Standard.
7. All reflective sheeting shall be of the Non-Exposed Lens Type.
8. Bolts, nuts and metal washers shall be galvanized or cadmium plated.

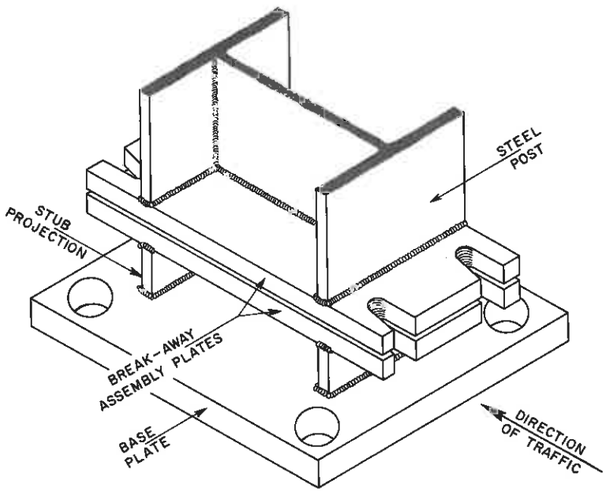
TYPICAL PROJECTED VIEW STEEL POST ASSEMBLY



GENERAL NOTES

1. All work shall be done in accordance with the Standard Specifications applicable to the Project.
2. Design conforms with AASHO "Specifications for the Design and Construction of Structural Supports for Highway Signs".
3. All structural steel shall conform to ASTM—A36 and Section 509 of the Standard Specifications.
4. Notched steel fuse plates shall conform to the requirements of ASTM—A36.
5. All high strength bolts, nuts and washers shall conform to ASTM—A325.
6. All bolts other than high strength bolts shall conform to ASTM—A307.
7. All bolts, nuts, and washers shall be galvanized as per ASTM—A153 or ASTM—A164.
8. All holes shall be drilled.
9. All steel cuts shall preferably be saw cuts; however, flame cutting will be permitted, provided all edges are ground. Remove all burrs. Metal shall not project beyond the plane of the plate face.
10. High strength bolts in the break-away assembly shall be tightened only to the torque shown in the table. DO NOT OVERTIGHTEN.
11. (R-1) The "STUB POST" and one "BREAK-AWAY PLATE" are considered part of the footing. The other "BREAK-AWAY PLATE" and all nuts, bolts and washers for fastening the break-away plates are considered a part of the post.
12. Timber posts shall be in accordance with Section 614 of the Standard Specifications as to Size, Alternate Size, Grade, Species, Treatment, and Break—Away Holes.
13. For all base plate and footing work see the applicable Standard included in the plans.
14. For additional information, refer to "Tabulation of Signs" and "Cross Sections for Class III Signs" included in the plans.
15. ▼ Timber post flush with top of sign panel for direct mount and 3 3/16" minimum above bolt for backing zee mount.

BOLTING PROCEDURE FOR BREAK-AWAY PLATE ASSEMBLY

1. Assemble post to stub with bolts and with one flat washer on each bolt top, bottom, and between the break-away plates.
2. Tighten all bolts to a "snug tight" condition with a 12" to 15" wrench to bed washers and to clean bolt threads, then loosen each bolt in turn and retighten in a systematic order to the prescribed torque. (See Break-Away Plate Data Table)
3. Burr threads at junction with nut using a center punch to prevent nut loosening.

6x6 TIMBER	5.0 kip ft.	TIMBER POST SHALL BE SET IN DRILLED OR EXCAVATED HOLES -- DEPTH SHALL BE 5' FOR 6x6 POST (Unless otherwise noted on the tabulation in the plans) AND 3' FOR 4x4 POST. POSTS SHALL BE PLACED PLUMB, BACKFILLED WITH EXCAVATED MATERIALS, AND THOROUGHLY TAMPED INTO PLACE.											
4x4 TIMBER	1.4 kip ft.												

GENERAL NOTES

1. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS APPLICABLE TO THE PROJECT.
2. ALL CONCRETE IS TO BE CLASS "A" OR CLASS "B". GROUT SHALL CONFORM TO "JOINT MORTAR".
3. ANCHOR BOLTS PROJECT ABOVE FOOTING 4", PLUS BASE PLATE THICKNESS, PLUS BOLT DIAMETER. THREAD UPPER PORTION -- PROJECTION PLUS 2"±. GALVANIZE UPPER PORTION -- PROJECTION PLUS 4"±.
4. USE ASTM-A36 STEEL FOR BASE PLATES AND BOLT PLATES. USE ASTM-A307 STEEL FOR ANCHOR BOLTS.
5. USE GRADE 40 FOR REINFORCING STEEL VERTICAL BARS, HORIZONTAL HOOPS, AND ANCHOR BOLT STIRRUPS.
6. FOR ALL STEEL WORK ABOVE THE BASE PLATE, AND FOR ANGULAR PLACEMENT OF SIGNS, SEE APPLICABLE STANDARDS INCLUDED IN THE PLANS.
7. FOR ADDITIONAL INFORMATION, REFER TO "TABULATION OF SIGNS" AND "CROSS SECTIONS FOR CLASS III SIGNS" INCLUDED IN THE PLANS.
8. ALTERNATE FOOTING DESIGNS ARE AVAILABLE FROM THE TRAFFIC ENGINEER FOR FOOTINGS IN ROCK.

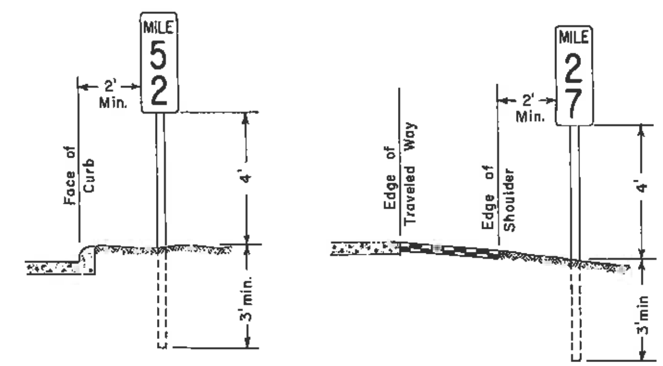
LATERAL PLACEMENT DETAILS



GENERAL NOTES

1. All work shall be done in accordance with the Standard Specifications applicable to the project.

2. Posts shall meet requirements of Par. 4.5 U.S. Department of Commerce Commercial Standard 184-51. U-2 posts shall weigh 2 lbs/ft. except that a mill tolerance of minus 3½ % of the weight of any one post will be allowed.
   Alternate posts will be acceptable if section modulus is at least 0.200 $in.^3$ about the X-X axis or at least 0.250 $in.^3$ about the Y-Y axis.
   Color of posts shall be interstate green.
   Posts shall be set in drilled or excavated holes, placed plumb and firmly tamped in place; or may be driven plumb.
   There shall be a minimum of 23—$\frac{5}{16}$" diameter mounting holes, drilled or punched on 2" centers with the first hole 1½" from the top of the post.

(R-1) 3. Fasten the panel to the U-2 post with ¼" Stove Bolts (Standard Fastener) as follows: Use a plastic fiber washer or nylon washer between the bolt head and the face of the panel and a lock washer under the nut on the back of the post. Bolts, nuts and metal washers shall be galvanized or cadmium plated. Jam bolt threads after tightening or use vandel-proof bolts.

4. All panels shall be either sheet steel 0.0598" minimum thickness or sheet aluminum 0.100" minimum thickness.
   Mounting holes shall be $\frac{5}{16}$" diameter.
   Background on sign panels shall be interstate green reflective sheeting. (smooth surfaced type)
   Legend and border shall be cutout silver reflective sheeting.

5. Mileposts shall be located in line with delineator posts.

FEDERAL ROAD REGION NO.	DIVISION	PROJ. NO.	SHEET NO.	TOTAL SHEETS
VIII	COLORADO			

REVISIONS			
(R-1)	5-8-78	Rev. Note No. 7	J.D.S.

GENERAL NOTES

1. All work shall be done in accordance with the "Standard Specifications" applicable to the Project and the "Manual on Uniform Traffic Control Devices for Streets and Highways" (adopted by the Federal Highway Administration) and the related "Colorado Supplement".

2. Where traffic is maintained through or over any part of the Project the Contractor will be required to mark all hazards within the limits of the Project (including connecting roads) with well-maintained Barricades, Warning, Regulatory, and Guide signs. All barricades and signs shall be moved, added to, changed or removed as required during the progress of construction and removed entirely when the Project is completed.

3. Where traffic must be diverted from the Project by road closure, the Detour will be marked by the Division except that the Contractor shall provide, erect and maintain Barricades (when required) at the ends of the Project, ends of the Detour and connecting roads. All U.S. or State Route Markers required for the Project will be furnished and installed by the Division. The location and positioning of Barricades, Warning and Regulatory signs shall be as recommended by the Engineer.

4. Work on the Project shall not be started until all required signs are in place and approved by the Engineer. Where speed limit reduction appears necessary such speed limit reduction shall be requested from the Engineer by the Contractor. Advisory Speed plates may be used in conjunction with Warning Signs (SW13-1 for use with 30" Diamond signs and XW13-1 for use with 36" and 48" Diamond signs), where the safe speed is lower than the imposed Regulatory speed limit.

5. All Barricades and Signs shall be placed for best visibility and legibility, maintained in good condition, and kept clean and free of dirt at all times. Contractor's and Engineer's vehicles and equipment must be parked so that barricades and signs are visible to approaching traffic at all times.

6. Where two identical signs are used for dual posting they are to be staggered on the two sides of the roadway for a minimum distance of 75' to avoid a tunneling effect.

(R-1) 7. Examples for signing Projects, as illustrated on Sheets 1 and 2, are typical of signs required and are subject to alteration to fit actual conditions encountered in the field. In all cases Warning signs are to be placed well in advance of the hazard, the distance depending on topography and existing approach speeds.

8. Desirable sizes for signs are shown on Sheets 1 and 2 of this Standard. Larger or smaller signs shall be used where warranted. Detailed dimensions for signs normally used in connection with construction are shown on Sheet 3 of this Standard. For information on standard roadway signs not detailed on this Standard see the "Manual on Uniform Traffic Control Devices for Streets and Highways" (adopted by the Federal Highway Administration) and the related "Colorado Supplement". Detailed layouts for these signs will be furnished in the plans or on request.

9. Signs with the prefix "R" in the sign code are Regulatory signs, and as such they impose legal restrictions on drivers and shall only be used as authorized by the Engineer.

10. Signs with the prefix "W" in the sign code are Warning signs, and are used to alert traffic to existing or potentially hazardous conditions.

11. Signs with the prefix "D", "G" or "M" in the sign code are Guide signs. Those with the prefix "D" or "G" convey general information and those with the prefix "M" are used to mark the traffic route.

12. All Warning and Regulatory signs shall be posted on both sides of the roadway on divided highways. Dual posting is required where warranted on two-lane, two-way highways.

13. Guide sign SG20-1 shall be placed to mark the beginning of all Projects more than 2 miles in extent, where traffic is maintained through the project. It shall be placed singly and near the beginning of construction.
Guide sign SG20-2 shall be placed to mark the end of the Project. It shall be placed singly and may be placed opposite barricade if desirable.

14. Inapplicable pavement markings that could be confusing to motorists shall be removed by a method approved by the Engineer. Temporary markings shall be used as necessary to define vehicle paths. Refer to the appropriate Division Standard (Typical Pavement Markings) for marking details.
Adhesive pavement marking tape and raised pavement markers may be used with the approval of the Engineer.

15. Lanterns and Torches: Lanterns shall be used only in low speed urban areas and Open-Flame Torches shall not be used under any circumstances.

16. Barricades, Flashing Beacons and Flashers: refer to appropriate Division Standard for details.

17. Traffic Cones shall be orange, at least 18" in height, and not weighted to an extent that would be hazardous to traffic. They shall not be used during the hours of darkness.

18. If closure is for extended period, including nighttime operations, barricade warning lights and temporary pavement markings are to be installed through-out the construction zone and inapplicable pavement markings are to be removed.

19. Sign panels furnished by the Contractor for use only during construction may be fabricated from plywood, aluminum, steel or other suitable material but shall be stable and durable enough to meet other requirements of this Standard.

20. All signs shall be reflectorized unless otherwise specified on plans. All reflective sheeting shall be non-exposed lens type.

21. When Flags are used in lieu of the Flagman Sign, they shall be a minimum of 24"x24", made of a good grade of bright red material, and fastened securely to a staff of approximately 3 feet in length. The free edge should be weighted to insure that the flag will hang vertically, even in heavy winds.

22. All material shall be sound and durable. Barricades, signs, symbols and lettering shall be of good workmanship. Uneven lettering will not be accepted.

23. Flagman Sign: The background of the STOP face shall be reflectorized red with white reflectorized letters and border. The background of the SLOW face shall be reflectorized orange with black letters and border.

24. Painting for all wood surfaces shall conform with the "Standard Specifications".

25. Alternate methods of processing signs or the substitution of symbols or other reflecting elements for painted symbols will be permitted only after approval by the Division.

26. Posts for regulatory, warning and guide signs shall conform with the "Standard Specifications" for Timber Sign Posts.

27. Diamond warning signs shall have a standard size of 48"x48". Where speeds and volumes are relatively low, a minimum size of 36"x36" may be used for Construction Approach Warning Signs, provided that a minimum letter size of 5" can be accommodated on this size with the appropriate legend.

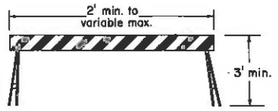
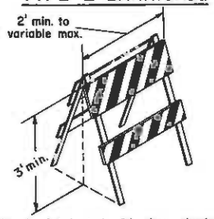
TYPE 1 BARRICADE ▲ (R-3)



May be fabricated of lumber, aluminum or other suitable light weight materials of structural soundness.
Stands may be detachable for mobility.
Type 1 Barricade has 2 reflectorized rail faces (one each direction).

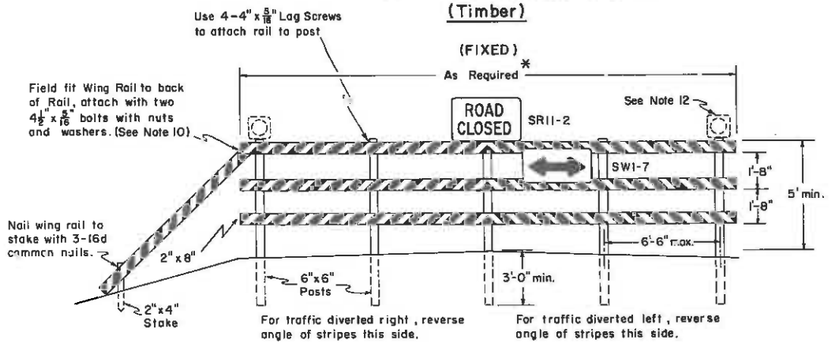
TYPE 2 BARRICADE ▲ (R-3)



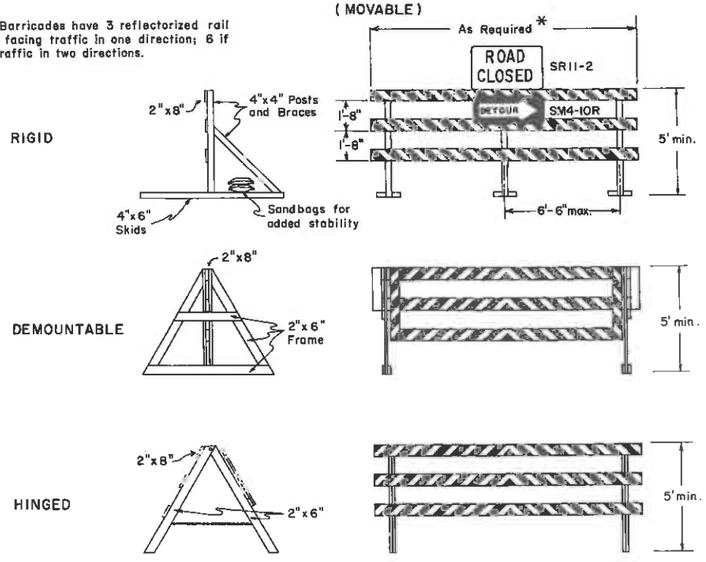
May be fabricated of lumber, aluminum or other suitable light weight materials of structural soundness.
Type 2 Barricade has 4 reflectorized rail faces (two each direction).

TYPICAL TYPE 3 BARRICADES ▲ (R-3)

(Timber)



Type 3 Barricades have 3 reflectorized rail faces if facing traffic in one direction; 6 if facing traffic in two directions.



(R-3)

	BARRICADE DESIGNATIONS		
	TYPE 1	TYPE 2	TYPE 3
Rail Width	8" min. – 12" max.	Top – 8" min. – 12" max. Mid – 4" min. – 8" max.	8" min. – 12" max.
Rail Length	2' min. to variable max.	2' min. to variable max.	As required, see Table *
Height	3' min.	3' min.	5' min.
Stripes	See Detail of Barricade Striping		See Notes 4 & 7
Frame	Demountable or Heavy Duty "A" Frame	Light "A" Frame	Posts, Skids or "A" Frame
Flexibility	Movable	Portable	Fixed or movable
Use	Temporary	Temporary	Temporary or Permanent

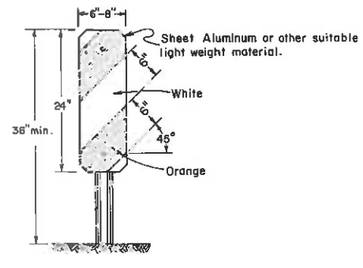
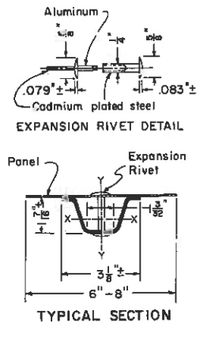
(R-3)

TYPICAL VERTICAL PANEL CHANNELIZING DEVICE





GENERAL NOTES

1. All work shall be done in accordance with the Standard Specifications applicable to the project.
2. All signs, sign materials, beacons, and barricade warning lights shall conform to the standards set forth in the "Manual on Uniform Traffic Control Devices for Streets and Highways" published by the Federal Highway Administration, of current issue, and the Colorado Supplement thereto, and this standard.
3. The various types and combinations of approved signs and beacons for barricades required for each project shall be governed by field conditions and subject to approval by the Engineer. Typical barricade applications are shown in Part 6 of the Manual on Uniform Traffic Control Devices for Streets and Highways.

(R-3) 4. Painting shall conform with Subsections 508.08 and 614.07 of the Standard Specifications. All skids, braces and posts shall be painted with 2 coats of "Exterior White Paint". Horizontal and wing rails on all barricades shall have orange and white stripes. The entire area of orange and white stripes shall be reflectorized.

(R-2) 5. Each barricade rail and vertical panel channelizing device shall be striped on the face side only with stripes slanting downward at a 45° angle toward the side to which traffic is to turn or pass. The backsides of rails and vertical panel channelizing devices shall be painted with "Exterior White Paint".

6. When fixed barricades are designated on plans, the portion of the posts below ground line shall be dipped in hot creosote oil. The portion of the post above ground line shall be painted with 2 coats of "Exterior White Paint".

(R-3) 7. Black and white barricade may be used to mark the end of a road, street or highway where there is no crossroad or outlet.

8. All skids, braces, rails and posts shall be nailed together with No. 20d nails. All screws, bolts, nuts and washers shall be galvanized or cadmium plated. Skids (bases) of movable barricades shall be weighted where necessary to provide stability.

(R-1) 9. All timber shall be Grade No. 2 or better, S 4 S, Douglas fir or Larch, as described in the current Standard Grading Rules published by the Western Wood Products Association, and shall conform to applicable paragraphs for the rails and posts.

10. Detachable extension wing rails for bypassing of construction equipment are permitted when necessary. The length is variable and shall be adequate to provide closing of borrow pit and/or shoulder as required. May be used on Fixed or Movable Type 3 Barricades.

11. Alternate materials or other reflective elements on traffic signs or barricades will be permitted only after approval of such material by the Division in writing.

(R-1) 12. Flashing Beacons or Barricade Warning Lights shall be used in connection with barricades when called for by the Engineer. When used, they shall be positioned above the top rail of the barricades to produce the most effective results. When used, Barricade Warning Lights shall be of the type specified by the Engineer.

(R-1) 13. All reflective surfaces shall be reflective sheeting of the smooth surface type.

14. Barricades used as "Traffic Controls for Highway Construction" are not to be paid for separately.

15. Barricades will be paid for separately when designated on plans as bid items.

(R-2) 16. Drums shall be reflectorized for use at night and should never be placed in the roadway without advance warning signs.

(R-3) ▲ 17. For wooden barricades, nominal lumber dimensions are satisfactory.

(R-3) ■ 18. For rails less than 3' long, 4" wide stripes are to be used.

GENERAL NOTES

ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS APPLICABLE TO THE PROJECT.

(R-3) CENTER LINES
1. Broken yellow, 5 inches wide - 10 foot segments with 30 foot gaps.
2. Solid yellow, 5 inches wide.

These lines separate adjacent-opposite direction traffic lanes. Double lines shall be spaced 3 inches apart.

(R-3) LANE LINES
1. Broken white, 5 inches wide - 10 foot segments with 30 foot gaps.
2. Solid white, 5 inches wide.

These lines separate adjacent-same direction traffic lanes. A solid line may be used to discourage lane changing.

EDGE LINES
1. Parallel - Solid white or yellow, 4 inches wide.
2. Diagonal - Solid white, 10 inches wide, spaced at intervals of 20 feet minimum to 100 feet maximum.

(R-1) Yellow edge lines shall be used only for the left edge, in the direction of travel, of divided streets and highways (separated by other than a painted median) and one-way roadways (including ramps).

Edge lines are not continued through intersections and are not broken for driveways. Care must be taken to avoid edge line appearing as lane line along roadways with wide shoulders and / or closely spaced driveways.

CHANNELIZING LINES
Solid white, 10 inches wide. These lines are used with acceleration-deceleration lanes, pavement width transitions, and left-right turn slots or islands.

CROSS-HATCHING LINES
Solid white or yellow, 10 inches wide - 45 degree Diagonal, spaced at 25 foot intervals. These lines are optional and may be placed at locations indicated on the plans or determined by the Engineer. Yellow shall be used for painted median - undivided road only.

PARKING LINES
Solid white, 3 inches wide - diagonal or parallel as shown on the plans.

STOP LINES
Solid white, 24 inches wide - extend parallel to intersected roadway across all approach lanes or as indicated at locations on the plans. Locate at the desired stopping point, not more than 30 feet nor less than 4 feet from the nearest edge of the intersected traffic lane.

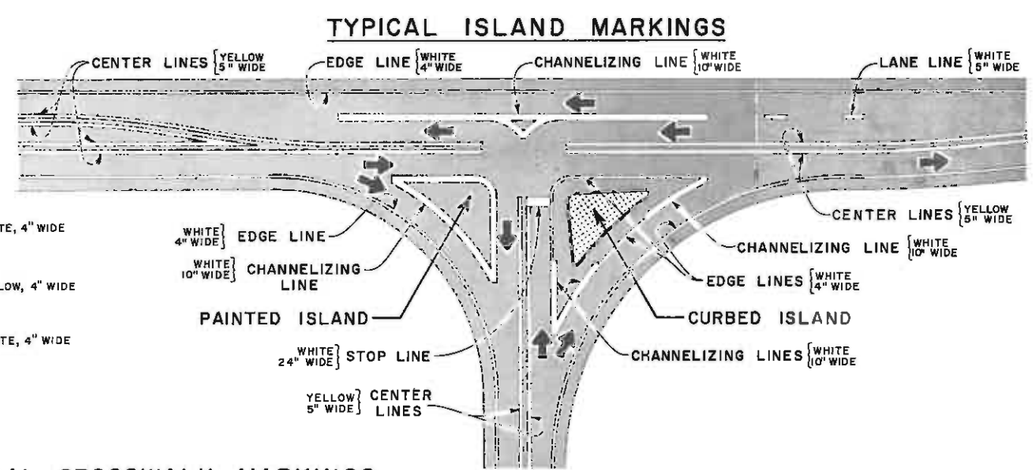
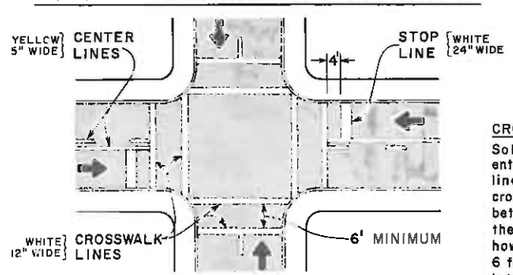
TYPICAL ISLAND MARKINGS



TYPICAL CROSSWALK MARKINGS



CROSSWALK LINE APPLICATION

Solid white, 12 inches wide — extend across entire width of pavement. If no advance stop line is provided, increase the width of the crosswalk lines to 24 inches. The distance between the lines is usually determined by the width of the sidewalks so connected, however, in no case shall this be less than 6 feet. Complicated and/or channelized intersections and mid-block crosswalks shall be as detailed in the plans or as directed by the Engineer.
