## INSTRUCTIONS

Note: This Scope of Work is to serve as a template for the Colorado Department of Transportation (CDOT) to develop and negotiate solid contracts with Consultant teams on projects and tasks. The Consultant shall coordinate all activities, tasks, meetings, communications and deliverables with the CDOT/ Project Manager (PM) (or his or her designee) for this project. All submittals will be through the CDOT/PM or a designee, who will make appropriate distribution. Upon notice to proceed, the Consultant shall be responsible and will account for all effort contained in the Final Scope of Work.

## SECTION 1 PROJECT SPECIFIC INFORMATION

#### 1. PROJECT BACKGROUND

Parker Rd (SH 83) connects the Denver Metro area, semi-rural and rural portions of Douglas and El Paso Counties, and Colorado Springs. Development in the region has caused remarkably high growth rates in traffic on SH 83. Also, SH 83 serves as a reliever to I-25 both during recurring and incident-related congestion. The segment between Lorraine Rd and Lake Gulch Rd is two lanes, 0 -2 ft paved shoulders, numerous accesses, and steep side slopes.

This project came from a safety study that was completed in 2022. Several of the projects from the study have been combined into this project.

This project will improve safety issues at several different areas from roughly Lorraine Rd to Lake Gulch Rd. The improvements include, but are not limited to turn lanes, accelerations/deceleration lens, widen shoulders, roadway side slope corrections, culverts, detention ponds, and guardrails.

#### 2. PROJECT GOALS

This project is intended to produce the following improvements:

A.	Increased capacity	
B.	Improved Safety	${\bf \!$
C.	Higher level-of-service	$\checkmark$
D.	Improved riding surface (smoother or stronger pavement)	
E.	Bridge Replacement	
F.	Resurfacing, Restoration, Rehabilitation	
G.	Reconstruction	
H.	Other	

## **3. PROJECT LIMITS**

This project is located on SH-83, between milepost 31.5 and milepost 42.4 in Douglas County.

#### 4. **PROJECT COSTS**

The construction cost of this project is estimated at \$12.7M.

#### 5. WORK DURATION

The time for the work described in this scope is approximately 30 months.

## 6. CONSULTANT RESPONSIBILITY AND DUTIES

The Consultant is responsible for:

Project Management and Coordination, Public Involvement, Environmental Services, Water Quality Services, Hydraulic Design, Data Collection, Alternative Analysis (includes Benefit/Cost), Roadway Design, Traffic Design, CADD Support, Utility Services, Subsurface Utility Engineering

## 7. WORK PRODUCT

The Consultant work products are:

A.	Reports (hard copy and/or digital, as required)	V
B.	Geographic Information Systems (GIS) Data and Layers	$\checkmark$
C.	Environmental Documents	$\checkmark$
D.	Traffic Modeling Output	
E.	Field Inspection Review (FIR) Plans and Estimates	$\checkmark$
F.	Final Office Review (FOR) Plans, Specifications, and Estimates	$\checkmark$
G.	AD/Bid Plans, Specifications, Cost Estimate	Ø
H.	Construction Plan Package	$\checkmark$
I.	Project Coordination	Ø
J.	Schedules	
K.	Meeting Minutes	
L.	Professional Engineer Stamped Record Sets	$\checkmark$
M.	Design Support During Construction	Ø

Requirements are further described in the sections that follow. All work required to complete this Scope of Work requires the use of English Units.

## 8. WORK PRODUCT COMPLETION

All submittals must be accepted by the CDOT Contract Administrator or designee.

#### 9. ADDITIONAL PROJECT INFORMATION

Additional information regarding this project is included in the following documents:

A.	CDOT accident history data of SH 83	$\mathbf{\overline{A}}$
B.	FEMA Flood Insurance Rate Maps (FIRMs) and Flood Insurance Studies (FISs)	
C.	MS4 Boundary	$\square$
D.	Receiving Water Status (303(d), TMDL, TMAL)	$\checkmark$
E.	Designs	$\checkmark$
F.	TMOSS Surveys	Ø
G.	Traffic Data	Ø
H.	Geotechnical Drilling Information and Report	$\square$
I.	As-constructed roadway, structure, and existing ROW plans	$\square$
J.	Pavement Design	Ø
K.	Other: SH83 Safety and Operations Analysis, and Concept Plans	$\square$

Copies of these documents may be requested from CDOT.

# SECTION 2 PROJECT MANAGEMENT AND COORDINATION

## 1. CDOT CONTACT

The Contract Administrator for this project is: Josh Breedlove, Region 1 Resident Engineer.

Active day-to-day administration of the contract will be delegated to the CDOT/PM:

- A. Name: Michael Kania
- B. Title: Professional Engineer I
- C. Address: 18500 E Colfax Ave., Aurora, CO 80011
- D. Office phone: 303-365-7262

#### 2. PROJECT COORDINATION

Coordination will be required with the following:

A.	Cities	
B.	Counties	$\checkmark$
C.	Irrigation Ditch Companies	
D.	Railroads	
E.	Regional Transportation District (RTD)	
F.	Denver Regional Council of Governments (DRCOG)	
G.	Metropolitan Planning Organizations (MPO's)	
H.	U.S. Army Corps of Engineers (USACE)	$\checkmark$
I.	Mile High Flood District (MHFD)	$\checkmark$
J.	Federal Emergency Management Agency (FEMA)	$\checkmark$
К.	Colorado Division of Parks & Wildlife (CPW)	$\checkmark$
L.	U.S. Forest Service (USFS)	
M.	Environmental Protection Agency (EPA)	$\checkmark$
N.	U.S. Fish and Wildlife Service (USFWS)	$\checkmark$
О.	Federal Highway Administration (FHWA)	$\checkmark$
P.	Federal Transit Authority (FTA)	
Q.	Utilities	$\checkmark$
R.	Colorado Department of Public Health and Environment (CDPHE)	$\checkmark$
S.	Other: Private Property Owners, Cherry Valley Elementary School	$\checkmark$

The consultant should anticipate that a design that affects another agency has to be accepted by that agency prior to its acceptance by CDOT. Submittals to affected agencies will be coordinated with CDOT.

# SECTION 3 EXISTING FEATURES

Note: This Section lists known features in the area. It should not be considered as complete, and should include, as appropriate, information from Section 2 Project Management and Coordination. The Consultant should be alert to the existence of other possible conflicts.

1.	STRUCTURES	V
	Minor culvert structures	
2.	UTILITIES	V
	Contact Utility Notification Center of Colorado (U.N.C.C.) at 1-800-922-1987 or 811	
3.	IRRIGATION DITCHES	
4.	RAILROADS	
5.	PERMANENT WATER QUALITY (PWQ) CONTROL MEASURES	V
6.	OTHER: Cherry Valley Elementary School	V

## SECTION 4 GENERAL INFORMATION

#### 1. NOTICE TO PROCEED

Work shall not commence until the written Notice-to-Proceed is issued by CDOT. Work may be required, night or day, and/or weekends, and/or holidays, and/or split shifts. CDOT must concur in time lost reports prior to the time lost delays being subtracted from time charges. Subject to CDOT prior approval, the time charged may exclude time lost for:

- A. Reviews and Approvals
- B. Response and Direction

#### 2. PROJECT COORDINATION

- A. Routine Working Contact: Routine working contact shall be between the CDOT/PM and the Consultant Project Manager (C/PM) as defined in Appendix C.
- B. Project Manager Requirements: Each Project Manager shall provide the others with the following:
  - 1. A written synopsis or copy of their respective contacts by telephone and in person with others
  - 2. Copies of pertinent written communications

#### 3. ROUTINE REPORTING AND BILLING

The Consultant shall provide the following on a routine basis:

- A. Coordination: Coordination of all contract activities by the C/PM
- B. Periodic Reports and Billings: The periodic reports and billings required by CDOT.
- C. General Reports and Submittals: In general, all reports and submittals must be approved by CDOT prior to their content being utilized in follow-up work effort.

#### 4. PERSONNEL QUALIFICATIONS

The C/PM must be approved by the CDOT Contract Administrator. Certain tasks must be done by Licensed Professional Engineers (PE) or Professional Land Surveyors (PLS) who are registered with the Colorado State Board of Registration for Professional Engineers and Land Surveyors. National Institute for Certification in Engineering Technology (NICET) certification or other certifications may be required for project inspectors and testers.

All tasks assigned to the Consultant must be conducted by a person on the Consultant team that is qualified and has specific expertise in that task. The qualified person is a professional with the necessary education, certifications (including registrations and licenses), skills, experience, qualities, or attributes to complete a particular task. Design of any special project features must be directed, completed, and overseen by a professional engineer with significant experience in design of those special project features.

This contract requires that the prime firm or any member of its team be pre-qualified in the following disciplines for the entire length of the contract.

Civil Engineering, Electrical Engineering, Environmental Engineering, Geotechnical Engineering, Highway & Street Design, Hydrology and Hydraulics (including PWQ), Landscape Architecture (including Stormwater Management Plans [SWMP]), Management (Contract Admin), Soils Engineering, Surveying, Transportation Engineering, Traffic Engineering, and Water Quality (including PWQ and SWMP).

#### 5. CDOT COMPUTER/SOFTWARE INFORMATION

The consultant shall utilize the most recent CDOT adopted software. The primary software used by CDOT is as follows:

A. Earthwork	OpenRoads Designer
B. Traffic	CDOT Statewide Travel Demand Model
C. Drafting/CADD	OpenRoads Designer w/CDOT's formatting, configurations &
	standards
D. Survey/photogrammetry	CDOT TMOSS, OpenRoads Designer
E. Bridge check	CDOT Staff Bridge software shall be used in either design or design
F. Estimating	AASHTOWare Preconstruction as used by CDOT
G. Specifications	Microsoft Word
H. Scheduling	Microsoft Project
I. Water Quality Data	ArcGIS
J. Geographic Information Syste	em (GIS) ArcGIS w/CDOT's geodatabase, formatting configurations
	& standards

#### 6. COMPUTER DATA COMPATIBILITY

The data format for submitting design computer files shall be compatible with the latest version of the adopted CDOT software as of Notice to Proceed for the contract. The Consultant shall immediately notify the CDOT/PM if the firm is unable to produce the desired format for any reason and cease work until the problem is resolved. Refer to Section 8, Table 1 - Submittals, for additional information regarding current formats and the acceptable transmittal media.

#### 7. PROJECT DESIGN DATA AND STANDARDS

A. General:

Appendix A provides a comprehensive list of state and federal reference material. However, Appendix A does not contain local agency reference material that may be pertinent to some projects. The consultant is responsible for obtaining and ensuring compliance with the most recent CDOT-adopted version of the listed references including standards and specifications, manuals, and software, or as directed by the CDOT/PM. Conflicts in criteria shall be resolved by the CDOT/PM.

B. Specific Design Criteria:

Appendix B is a list of specific project criteria. The list is comprehensive and may include items that are not required for tasks defined in this scope. The Consultant shall submit any proposed changes to the pertinent criteria to the CDOT/PM at one of the periodic progress meetings prior to initiating design.

C. Construction Materials/Methods:

The materials and methods specified for construction will be selected to minimize the initial construction and long-term maintenance cost to the State of Colorado. Non-typical construction materials and methods must be approved in writing by CDOT.

# SECTION 5 PROJECT INITIATION AND CONTINUING REQUIREMENTS

Note: This list establishes the individual task responsibility. Those tasks identified as CDOT/Other should utilize an abbreviation system to indicate whether the task will be completed by CDOT or another agency (i.e. "C" for CDOT and abbreviations as provided below). The consultant shall maintain the ability to perform all work tasks that are indicated below by an 'X' in the consultant column, in accordance with the forms and conditions contained herein, and the applicable CDOT standards. Where appropriate, mark "N/A" for not applicable items.

\*Other Agency Abbreviations: A. Douglas County = DC

	C D O T (C )/ Ot he r*	C on su lta nt	N ot A pp lic ab le
A. PROJECT MEETINGS			
The types and numbers of meetings shall be flexible and determined by an			
interactive process as approved by the CDOT/PM.			
1. Initial Project Kick-Off Meeting			
Schedule and facilitate initial project kick-off meeting. All appropriate disciplines should be included in the scoping meeting. Create an invitation list, send notices with a draft agenda prior to the meeting, and provide meeting minutes to all those invited. Whenever possible, the kick-off meeting will include an on-site inspection to familiarize the entire project team with the character and conditions of the area. The scoping meeting will also be used to clearly identify scope elements, responsibilities and coordination necessary to complete the work.	С	X	
2. Progress Meetings	<u> </u>		
CDOT and Consultant team will meet periodically as required (typically every two weeks). The meetings will review activities required to be completed since the last meeting, problems encountered/anticipated and potential solutions, project schedule update, action items, and coordination required with other agencies.	С	X	
3. Public Meetings			
The Consultant shall provide the presentation aids, and help conduct the meeting.			
<ul> <li>Small Group Meetings (one-on-one)</li> <li>Meet with property and business owners or others directly affected by the project work to identify likely impacts and discuss possible mitigation or resolutions.</li> </ul>	С	X	
b. General Public Meetings (information and workshops)			
The format of these meetings will be dictated by the project and goals for the meetings. These meetings may be used to establish communications with the public, add to the "contact list", and gather information regarding local concerns. The meetings may also take the form of a work session or workshop with the affected parties.		X	
c. Public Review Meetings		77

related t	compliance with all State of Colorado technology standards to technology accessibility and with Level AA of the most version of the Web Content Accessibility Guidelines (WCAG), rated in the State of Colorado technology standards.		x	
Accessi the State complia Standard	te may require Consultant's compliance to the State's bility Standards to be determined by a third party selected by e to attest to Consultant's Work Product and software is in nce with §§24-85-101, et seq., C.R.S., and the Accessibility ds for Individuals with a Disability as established by the Office mation Technology pursuant to Section §24-85-103 (2.5),		x	
B. PROJECT MA	ANAGEMENT			
At the kick-off meeting, o managing the project a schedule, document overall project budget (PMP) shall be prepar guidance . The Consu all parties to ensure p	r shortly thereafter, create and provide an approach for (i.e. involved staff, key team positions), including task orders, and agency reviews and other project needs. Should the t be \$500 million or more, an official Project Management Plan red in accordance with the most recent federal authorization altant shall coordinate all the work tasks being accomplished by roject work completion stages are on schedule.	С	X	
The Consultant is respons accomplished by CDO review by the CDOT/ requested. Modificati appropriate justificati	<b>PROJECT SCHEDULE AND ASSIGN TASKS</b> ible for coordinating the required work schedule for tasks OT and other agencies. Prepare the initial project schedule for 'PM and consultant team, and refine to provide detail as ons will be made as necessary in collaboration with CDOT and on. The tasks covered by this Scope of Work are expected to 0 months to complete.	С	X	
	SURANCE/QUALITY CONTROL (QA/QC)			
Prepare and submit a QA/	QC plan as part of the planning documents noted above, and			
	o the QA/QC process throughout the project.	С	Х	
A team of transportation of Engineering (VE) stu development process in the NEPA docume performed in accorda guidelines and recogr save the project cost, and certification in fa session. VE facilitator performing and leadin team member and sev education, and experi	<b>INEERING (VE) STUDY</b> lesign and construction experts will perform a Value dy. The VE study will be conducted early enough in the project to allow evaluation and incorporation of VE recommendations nt or design process, as appropriate. The VE study shall be nce with Federal Highway Administration's (FHWA) current nized techniques and will identify possible alternatives that may time, or other resources. An individual with prior experience cilitating VE studies (the VE facilitator) shall conduct each VE rs shall be qualified VE practitioners, experienced in ng VE studies (have participated in several VE studies as a veral as a team leader), and have sufficient VE training, ence to be recognized by the Society of American Value ternational as meeting the requirements for certification.			
	of individuals with no prior exposure to the project. Individuals arity and history with the project shall provide briefings to the			X

team. Consultants or firms shall not conduct studies of their own designs unless they maintain distinct organizational separation of their VE and design sections. The VE team will be assembled to review the Conceptual Background information and plans shall be provided to the team at least three weeks in advance of VE sessions. The VE facilitator will coordinate the study with CDOT, appropriate entities, and FHWA.			
The VE review team will formally evaluate each VE recommendation, and sufficient justification will be made for the acceptance or rejection of each. The VE facilitator will produce a document that summarizes the results, as well as the project elements investigated.			
The Consultant/PM shall prepare a written response detailing which recommendations were not included, the reasons for exclusion, and how all approved VE results will be incorporated into subsequent engineering efforts. These responses shall be forwarded to the CDOT/PM for distribution to the CDOT Region Transportation Director, FHWA, and other appropriate entities. All approved VE proposals shall be incorporated into the final design plans			
F. OBTAIN NECESSARY RIGHT-OF-ENTRY AND PERMITS			
Some activities may require work on land not controlled by CDOT. In such cases the			
Consultant shall obtain the necessary written permission to enter the premises. Written permission shall be coordinated with other CDOT staff and consultants that may need right-of-entry such as geotechnical and environmental personnel. Included in this written permission will be the names and telephone numbers of persons to			
contact should notification prior to entry be necessary.         1. Signature Copies	C	 	
Permissions apply to CDOT personnel as well as Consultant personnel. CDOT Form			
730 may be used for this purpose. Signed copies of written permission will be			
submitted to the CDOT/PM prior to entering private property for survey work.	С		
2. Permits			
Some activities such as materials testing on existing pavement and structures may			
require a permit. Permits will be obtained and copies submitted to the CDOT/PM.	С		

## SECTION 6 ENVIRONMENTAL WORK TASK DESCRIPTIONS

Note: This Section is written specifically for projects requiring an Environmental Impact Statement (EIS), an Environmental Assessment (EA), or a Categorical Exclusion (CatEx). It includes elements that are not required for all projects requiring NEPA protocol. Contact Region environmental personnel to determine which items in this section are necessary to address the requirements of the EIS, EA, or CatEx, or post-NEPA activities (ensuring that all of the commitments made by the NEPA document are implemented in the design package). Some tasks and resources are more appropriate depending on the Class of Action. Recommendations for each are made in parentheticals.

Use the CDOT NEPA Manual when completing this section to assure that the level of detail and documentation included meets CDOT expectations and requirements and any other applicable state and federal laws and regulations. Nothing in this Section precludes federal, state, or local agencies or officials from fulfilling their responsibilities under federal, state, or local laws and regulations, NEPA, as codified in 42 United States Code (USC), section 4321, et. Seq., or any of NEPA's implementing regulations.

This list establishes individual task responsibility. Those tasks identified as CDOT/Other should utilize an abbreviation system to indicate whether the task will be completed by CDOT or another agency (i.e. "C" for CDOT and abbreviations as provided below). The consultant shall maintain the ability to perform all work tasks that are indicated below by an 'X' in the consultant column, in accordance with the forms and conditions contained herein, and the applicable CDOT standards. Where appropriate, mark "N/A" for not applicable items.

\*Other Agency Abbreviations: A. Douglas County = DC

	C D O T ( C )/ O th er *	C o n s ul ta n t	N ot A p ic a bl e
A. PROJECT INITIATION			
1. Environmental Scoping Task (CatEx, EA, EIS)			
An early environmental coordination/scoping task will occur as directed by the CDOT			
Project Manager. An environmental scoping meeting should be held with the			
Environmental Project Manager, resources specialists such as the Regional Water			
Quality Specialist/Water Pollution Control Manager, or appropriate members of			
the Environmental Programs Branch (EPB), C/PM, and staff from Right-of-Way,			
Maintenance, Hydraulics, DTD and Region Traffic, Property Management,			
FHWA, and Utilities, as appropriate. This task will include a meeting with CDOT			
and the local agency representatives to discuss the initial work efforts of the			
project. Traffic modeling usually dictates the alternative evaluation process.			
Determine if macroscale, mesoscale, and/or microscale modeling is required for the project	C		
the project.			<u> </u>

4. Preliminary Design of Alternatives (EA, EIS)		
criteria, and measures of effectiveness, and submit them for review and approval by CDOT and FHWA before beginning the screening process. The rationale for eliminating alternatives will be thoroughly discussed within the documentation.		
(practical or feasible from a technical and economic standpoint), which will be subject to a more detailed evaluation. Develop NEPA-appropriate evaluation		
Apply an alternatives screening process to identify the reasonable alternatives		
3. Alternatives Screening Process (EA, EIS)		
in the design year during the project may be subject to a Scope of Work modification.		
CDOT and FHWA, will determine the design year to use for the project. Changes		
earlier and ongoing studies of the area. The Consultant team, in coordination with		
requirements of the project, including, but not limited to, those identified in		
Develop a range of reasonable alternatives that will satisfy the Purpose and Need

FHWA for approval of the logical termini, if applicable.	C	 
scoping. In coordination with the CDOT/PM, prepare a recommendation to the		
study area boundary for environmental resources and logical termini for use in		
of Work document. Perform necessary research and data collection to propose a		
Preliminary project study area limits are established in Section 1 of the Generic Scope		
3. Project Study Area Limits/Logical Termini (CatEx, EA, EIS)		 
analysis to define resources/impacts; 3) no analysis required; or 4) analysis already completed (for example, by a previous study).	C	
can be defined in four categories: 1) complete analysis required; 2) short		

For each alternative that passes the screening process, incorporate preliminary design	
to a level that clearly allows the identification of impacts within each	
environmental resource area. These alternatives may be carried through the entire	
analysis process until a decision document is written. If CDOT or another agency	
or Consultants performs selected alternative studies, the Consultant shall	
incorporate the results of these studies into the appropriate document.	
5. Evaluate Alternatives Impacts (EA, EIS)	
Apply projected design-year traffic volumes and projected opening day traffic	
volumes for new facilities as developed for this Scope of Work, or as modified	
through later studies and calculations by CDOT. Evaluate the impacts of these	
alternatives according to established guidelines and examine the degree to which	
these alternatives satisfy the Purpose and Need requirements of the project. Set	
out these evaluations both schematically and in narrative form for review within	
a reasonable time after the Notice to Proceed.	X
C. COST ESTIMATES AND FINANCIAL ANALYSIS	
1. Preliminary Construction Cost Estimates (EA, EIS)	
Prepare preliminary construction cost estimates based on 30% design of no more	
than 2 alternatives identified during the NEPA process. Project right of way	
acquisition and project environmental mitigation costs shall be included within	
the cost estimate. Include enough detail to ensure a reasonable degree of	
accuracy for the level of design performed. Submit the format of estimates,	
including the year from which the unit costs were assumed, to CDOT's Project	
Engineer for review and approval. Incorporate the analysis into the NEPA	
document.	X
2. Develop Cost Estimates and Financial Analyses (EIS)	
As part of evaluating reasonable alternatives in the NEPA document, including the	
No-Action Alternative, develop cost estimates and financial analyses at varying	
levels of detail throughout the process in coordination with FHWA. Basic	
engineering, preliminary engineering, construction engineering, construction, and	
operating/maintenance for the design life shall also be analyzed. A funding	
package identifying the funding sources necessary to construct and maintain the	
projects will be developed. Review the cost estimates and financial analysis,	
provide supplemental analysis as needed to support the Preferred Alternative, and	
incorporate findings into the draft NEPA document.	X
D. DATA COLLECTION, FIELD INVESTIGATION, MITIGATION	
MEASURES, AND DELIVERABLES	
The following analyses are required for each of the alternatives that pass the	
screening process. Each resource will be summarized, focusing on the project	
issues of concern. The scope shall define the level of documentation, project	
tasks, and project deliverables for each of the resource areas. Identify the required	
area and resources to evaluate and determine the early coordination/scoping	
process as discussed above. This may evolve over the life of the project as new	
information is discovered through analysis. The level of detail and analysis will	
be determined based on study and its appropriate level of environmental	
documentation (e.g., Feasibility Study, CatEx, EA, or EIS). Deliverables can be	
static reports, digital reports, and/or GIS data layers. The scope should be specific	
as to what type of deliverable is expected. It is anticipated that the level of detail	
for this NEPA document will be as appropriate for a CatEx. Follow CDOT NEPA	
Manual for guidance on methodology and level of detail.	

			1
1. Air Quality (CatEx, EA, EIS)			
Perform the necessary air quality assessment or modeling as required and provide the			
results for integration into the NEPA document and Air Quality Technical Report			
(with modeling data assumptions). These will include, but are not limited to,			
analysis or discussion of: NAAQS, carbon monoxide (CO) hot spots, PM 10 hot			
spot analysis, regional emissions analysis, Mobile source air toxics (MSAT) —			
qualitative or quantitative, greenhouse gases (GHG), climate change, construction			
issues such as fugitive dust emissions, and mitigation measures.			
CDOT staff will lead coordination with the Colorado Department of Public			
Health and Environment Air Pollution Control Division (CDPHE-APCD),			
FHWA and U.S. Environmental Protection Agency (EPA) (as necessary). The			
analytical methodologies (including number of intersections to be modeled) will			
be determined through the coordination. Each Build Alternative and the No-			
Action Alternative will be analyzed for impacts through the appropriate design			
year. Mitigation commitments will be developed, as necessary. The Consultant			
must get approval from the CDOT Region and/or EPB air quality specialist for			
any methodologies to evaluate hazardous air pollutants. Utilize the most current			
standard, accepted FHWA language for MSATs.	~		
	C		
2. Water Quality (CatEx, EA, EIS)			
a. Affected Environment: Investigate and document the status of the water			
resources (quality, etc.) for the purposes of describing the existing			
condition or "affected environment" before construction: groundwater,			
aquifers, lakes, rivers, streams, and springs, locations of drinking water			
treatment plants, Permanent Water Quality Control Measures and			
locations of sewage treatment facilities.		X	
b. Environmental Consequences: Investigate and document the impacts of			
the project, to Water resources (quality, etc) and quality impacts of the			
project during and following construction. Water Quality Modeling will			
be used for this task, determined by considering the project location and			
design concepts in relation to existing water resources including			
groundwater or alluvial waters or aquifers (particularly sole source),			
drainage ditches and other State Waters as defined by CDPHE Water			
Quality Control Division, aquatic as well as riparian habitat, and			
Sensitive Waters (Class 1 Aquatic Life, Recreation 1, and Water Supply,			
303[d] listed, etc).		X	
c. MS4 Permit requirements WILL apply to this project Determine the			
requirements of the Municipal Separate Storm Sewer System (MS4),			
Colorado Discharge Permit System (CDPS), and design and permitting		v	
issues per the CDOT PWQ program.	C	X	
d. Recommend appropriate Water Quality mitigation measures as			
necessary. A mitigation plan that includes conclusions of effects,			
permanent best management practices (BMPs), temporary/construction BMPs, erosion control measures, and definition of maintenance			
responsibilities.		X	
e. Deliverable: Prepare Water Quality Technical Report		X	
3. Wetlands and Waters of the U.S. (WUS) (CatEx, EA, EIS)			
a. Wetlands Determination/Delineation:	<u> </u>		
i. Conduct a field evaluation for the presence of wetlands within the			
project study area. Global Positioning System (GPS) or survey			
equipment should be used for this activity.	С		
ii. Delineate the boundaries of all anticipated jurisdictional and non-			
jurisdictional wetlands and waters of the US within the project area			
using United States Army Corps of Engineers (USACE) guidance	C		
Samp same same ring sorpe of highers (Correl) fundance	. <u> </u>	LL	

	endix A. Data to be provided to CDOT in the correct			
format – i.e. s	shapefiles with information separated in a report or			
memo				
corridor. The	that delineate the wetland boundaries within the ordinary high water mark should also be delineated, as	7		
	1.1. <i>Q</i>	2		
	e findings with the CDOT Region and if requested by			
	ith the USACE. If requested by the CDOT Region,			
	ctional determination of the wetlands from the			
USACE.		2		
b. Wetland Finding				
guidance/checklist. Th	ding Report according to CDOT's most recent e Functional Assessment of Colorado Wetlands			
	used, as appropriate according to current CDOT			
procedures. Conduct a	wetland assessment based on the NEPA document			
mitigation. Wetland m NEPA process. All we	of permanent and temporary wetlands impacts and itigation should be identified as early as possible in the stlands will be considered jurisdictional for mitigation			
	determine the type of mitigation – i.e. bank or onsite.			
	be evaluated for availability and suitability for wetland			
habitat.		2	X	
4. Vegetation and Noxi	ous Weeds (CatEx, EA, EIS)			
	ment: Investigate (GIS and field) and document the			
	on habitat and noxious weeds for the purposes of			
	sting condition or "affected environment" before			
construction		2		
	onsequences: Investigate and document the impacts of			
	etation habitat and noxious weeds during and			
following constru		2		
	opriate vegetation habitat and noxious weed			
mitigation measur		2		
	ated Noxious Weed Management Plan to be			
completed prior to		2	X	
	are and provide Vegetation Habitat and Noxious		<u>A</u>	
	Report, and project Noxious Weed mapping in GIS as			
		2		
necessary.				
5. Fish and Wildlife (Ca				
	rveys and identify fish and wildlife and their habitat			
	As appropriate, GPS will be used to identify habitat.			
	the Colorado Parks and Wildlife (CPW) Colorado			
	ife (CDOW) and US Fish and Wildlife Service	~		
(USFWS)		2		
b. Perform an impac		2		
		2		
d. Prepare Wildlife I	*	2		
	angered (T&E) Species (CatEx, EA, EIS)			
a. Coordination USI in the project area	WS to determine if T&E species or their habitat exists	C		
XX	y desktop and field surveys and identify T&E species			
and/or Designated		2		
***************************************	lanning documents to determine any existing Habitat			
e. iterien enisting p	is (HCP) under Section 10, if necessary, for T&E	_		
		1		
species.	lanning documents to determine need for a Biological	2		

federally listed T&E species and/or Designated Critical Habitat will be			
impacted and there is a federal nexus.			
e. Develop a HCP under Section 10 and/or Biological			
Assessments/Biological Opinions under Section 7, if necessary, with the			
USFWS if T&E species and/or Designated Critical Habitat will be			
impacted and if there is a federal nexus.	C	Х	
f. Identify any impacts and develop a mitigation plan to conform to			
requirements of the Endangered Species Act.	C		
7. Historic Properties (CatEx, EA, EIS)			
a. Perform and provide the survey report for review by the CDOT Region			
Historian or EPB Senior Staff Historian, and incorporate the			
information into the NEPA document. The following lists are not	_		
meant to be exhaustive.	C		
b. Collection and Evaluation of Baseline Information as defined by Section			
106 of the National Historic Preservation Act of 1966, as amended The			
scope of work for historic properties compliance varies depending on the			
project. The list below represents a typical scope of work, but			
consultants should coordinate with CDOT staff to determine the level of			
effort for each project. CDOT staff is very hands-on when it comes to its			
Section 106 compliance responsibilities. Consultants should never			
contact SHPO staff or submit any material without CDOT oversight and			
approval.	C		
c. Historic Clearance			
i. Identify the area of potential effect (APE), in coordination with			
CDOT and the State Historic Preservation Officer (SHPO).	C		
ii. Conduct literature and records search for previously recorded	1		
historic resources in the APE in the OAHP. Compass database.	C		
iii. Conduct an architectural field survey of the APE and determine			
National Register of Historic Places (NRHP) eligibility for			
resources at least 50 years old. Age of resources evaluated may			
vary depending on when the project will be constructed.			
Potential resources include man-made structures, ditches,			
railroads, etc. Level of effort (e.g., reconnaissance, intensive)			
for the survey may vary depending on the project scope and			
schedule and should be coordinated with CDOT staff.	C		
iv. In coordination with CDOT staff, identify and coordinate with			
consulting parties (e.g., public, historic preservation groups,			
local historical societies, museums) regarding historic			
properties in the project area and meetings to discuss project			
	C		
updates and Section 106 findings.			
v. Prepare a comprehensive Survey Report according to guidelines			
established by the OAHP to submit for review by the CDOT			
Region and/or EPB Senior Staff Historian. The report will			
include historical context information and other data to support			
eligibility determinations. Make revisions as requested by			
CDOT.	C		
vi. Determine potential effects, both direct and indirect, to historic			
resources and recommend strategies to avoid, minimize, or			
mitigate impacts. Depending on project scope, consultants may			
prepare a separate effects report for review by CDOT. Region			
or EPB historians.	C		
vii. Prepare draft correspondence as necessary for the CDOT			
Region and/or EPB Senior Staff Historian to submit to the			
Region and/or EPB Senior Staff Historian to submit to the SHPO. In some circumstances, consultants are asked to deliver submittals to SHPO and consulting parties.			

		·····
viii. When there are adverse effects, collaborate with the CDOT		
Region Historian or EPB Senior Historian to identify possible		
mitigation and assist in development of a Memorandum of		
Agreement, , for agency review and execution. Note that		
mitigation and development of MOA is typically completed by		
CDOT staff.	C	
ix. Prepare draft Section 4(f) documents as required. In most cases,		
CDOT staff will prepare documentation of Section 4(f)		
exceptions and de minimis findings Consultant assistance may		
be needed for programmatic and full evaluations.	C	
8. Archaeology (CatEx, EA, EIS)		
a. A review of historic Sanborn Fire Insurance maps and other appropriate		
archival sources will be completed to determine if the area may contain	0	
significant archaeological sites or features.	C	
b. Conduct an intensive field survey of the project corridor(s) and		
undertake site-specific test excavations, as necessary and appropriate, to		
determine NRHP eligibility. The Consultant shall not undertake test		
excavations before consulting with CDOT.	С	
c. Complete laboratory analyses of all collected artifacts and ancillary		
specimens.	C	
d. Write a comprehensive survey report according to guidelines established		
by the OAHP.	C	
e. Develop a data recovery plan to mitigate potential adverse effects to		
significant archaeological localities, as appropriate and necessary.	C	
f. Coordinate the mitigation plan with the EPB Senior Staff Archaeologist,		
appropriate Region staff, SHPO, and other required agencies.	C	
g. Conduct data recovery excavations at any significant archaeological site	C	
that cannot be avoided during construction.	<u> </u>	
h. Analyze artifacts.	<u> </u>	
i. Prepare and submit a data recovery excavation report which describes, in		
a thorough and comprehensive fashion, the project results and the nature		
of the site in the context of the regional archaeological database. The		
report must also include site management recommendations in the		
context of the NRHP.	С	
j. Coordinate Tribal consultation and support EPB Senior Staff		
Archaeologist as needed.	C	
k. Prepare Section 4(f) documents as required.	С	
9. Paleontological Resources (CatEx, EA, EIS)		
a. Perform a literature and museum fossil database search and field		
assessment.	C	
b. Determine the presence or absence of paleontological resources.	C	
c. Conduct analysis to determine the scientific significance (research and/or		
educational value) of the resource.	C	
d. Write the paleontological technical report, including mitigation		
proposals, if necessary. The assessment report will be reviewed by the		
EPB Staff Paleontologist for adequacy.	C	
e. Coordinate the mitigation plan with the EPB Staff Paleontologist, and		
appropriate Region staff.	C	
10. Section 6(f) Evaluation (CatEx, EA, EIS)		
a. Inventory and map project area for Section 6(f) resources. using		
CDOT's Online Transportation Information System (OTIS).	C	
b. Determine if any potential impacts or ROW acquisitions include		
Section 6(f) resources.		
	C	

	<del>-</del>	····· <del>·</del> ······
c. Evaluate project impacts on Section 6(f) properties using preliminary design information, and the necessary commitments for mitigation measures. Determine whether impacts qualify as a temporary non-conforming use or a park improvement. Document the level of impact, all practical alternatives to the conversion, and avoidance and minimization measures taken. Prepare the appropriate documentation in consultation with CDOT Region or EPB Staff.	С	
<ul> <li>d. If a full conversion is required, coordinate with Colorado Parks and Wildlife (CPW) to find a replacement property that is of equal fair market value and equivalent use of the property being converted. Purchase and document conversion of the property using National Park Service guidance.</li> </ul>	С	
11. Section 4(f) Evaluation: Please note that there are separate requirements for historic and non-historic Section 4(f) evaluations		
(CatEx, EA, EIS) a. Inventory and map project area for possible Section 4(f) resources.	C	
<ul> <li>b. Determine if any potential impacts or ROW acquisitions include Section 4(f) resources (e.g., publicly owned parks, recreational facilities, nationally significant historic sites, wildlife refuges).</li> </ul>	с	
c. Determine and evaluate project impacts on Section 4(f) resources using preliminary design information, and the necessary commitments for mitigation measures. Determine whether impacts require an exception, <i>de minimis</i> , programmatic, or individual 4(f) evaluation. Prepare an analysis that includes avoidance alternatives, discussion of prudent and feasible, least harm (if necessary), minimization, and mitigation related to Section 4(f) resources. This may include the development of a new alternative(s) as an avoidance alternative(s). Prepare the appropriate documentation in consultation with CDOT Region or EPB Staff.	С	
<ul> <li>d. Develop Official with Jurisdiction (OWJ) concurrence request letters (if necessary. For non-historic resources, OWJ will vary. For historic properties, the SHPO is the OWJ and the Section 106 consultation correspondence helps to inform the Section 4(f) process.</li> </ul>	С	
<ol> <li>Noise (CatEx, EA, EIS)</li> <li>Prepare a technical noise assessment in accordance with the most recent CDOT Noise Analysis and Abatement Guidelines and submit a comprehensive noise assessment document to CDOT for review and acceptance. The analysis will consist of the following, each of which must be covered in the noise assessment document:</li> </ol>		
a. Definition of relevant noise abatement criteria and identification of noise-sensitive land uses	С	
<ul> <li>Determination of existing noise levels (by measurement and/or modeling).</li> </ul>	С	
c. Prediction of future traffic noise levels for all alternatives, including the No-Action Alternative, using FHWA's current Traffic Noise Model.	C	
d. Determination of traffic noise impacts	C	
e. Identify and evaluate feasibility and reasonableness of noise abatement measures. Coordinate with Project Engineer with regards to locations and heights of proposed abatement measures	C	
f. Development of recommendations regarding noise abatement measures	C	
g. Assessment of construction related noise issues.	C	

h. The above items will be addressed and documented in a Noise	T		
Technical Report, which will be prepared and submitted to CDOT for			
review and acceptance. Prior to beginning this work, the Consultant			
shall meet with CDOT to review the appropriate noise methodology.			
Noise modeling should be completed for the model year 2045. The			
draft and final technical report will be completed and made available to			
the CDOT Noise Specialist and appropriate Region staff for review; the			
findings will be incorporated into the NEPA document.	C		
13. Hazardous Materials (CatEx, EA, EIS)			
Perform and document the following Initial Site Assessment (ISA) and/or Modified Environmental Site Assessment (MESA) activities:			
a. In accordance with CDOT Hazardous Materials Guidance, conduct	++		
regulatory research that includes the collection, mapping and			
evaluation of data.	C	X	
	++	Λ	
b. Analyze results of regulatory research and records review and identify			
potential impacts construction activities may have on existing			
hazardous waste sites. Assess potential liability issues and hazards to			
the public, construction workers, and the environment then develop			
potential mitigation options. Prepare the ISA/MESA Document to			
include the following:	C	Х	
i. Prepare the draft and subsequent final ISAs to address			
comments provided by CDOT.	C	Х	
ii. ISAs will emulate industry standards for Phase I reports (with			
limitations), and make a determination of the necessity of a			
Phase II report.	C	Х	
iii. Identify how the presence of hazardous waste locations may			
impact each alternative, including the no-action			
alternative. GIS mapping will be desired.	C	Х	
c. Conduct In-Situ Tests such as lead-based paint and asbestos testing as			
necessary, and provide a survey report, as determined on a project-			
specific basis.	C	X	
d. Phase II site assessment if necessary for the alternatives screening		Δ	
	C	X	
process. 14. Land Use (EA, EIS)	++	Δ	
Collect, map and evaluate baseline information. Prepare information on land use and			
zoning, including maps of existing, planned and future uses. Prepare land use			
mapping. Mapping may include parcel use categories such as land in public			
ownership, commercial, retail, wholesale, industrial, residential, vacant, mixed			
etc. identifying jurisdictional boundaries and land usage along each alternative.			
(Information may be obtained from the Department of Local Affairs, Sanborn			
maps, archival aerial photos, the local city, town or county, and/or from field			
verification.)	C		
15. Social and Economic Resources (EA, EIS)			
Collect, map, and evaluate baseline information to investigate and document the			
effects of the project alternatives on community cohesion, safety and security,			
neighborhoods, and accessibility of facilities and services. Investigate the effects			
of the project alternatives on commercial and industrial enterprises,			
employment, local tax base, regional earnings, etc. When relevant, recent			
Census data shall be utilized. This will be done at the regional and corridor			
level, as well as part of a cumulative effects analysis, as appropriate.	C		
16. Environmental Justice (EA, EIS)	1		
Collect the necessary U.S. Census and other applicable data to identify existing low-			
income and minority populations as well as adverse effects and mitigation			
income and minority populations, as well as adverse effects and mitigation measures or alternatives that would avoid or reduce the impacts according to			

	<del></del>	······
evaluated in accordance with the CDOT NEPA Manual and Executive Order		
12898. Beneficial effects of the project on these populations will also be		
identified. The analysis will cross-reference other resources as appropriate (e.g.,		
noise, air and water pollution, aesthetics, community cohesion, relocation		
impacts).		
As part of the project's public participation or public involvement program, ensure		
that meaningful opportunities for all members of the community to provide		
input to the project exist. Document the degree to which affected low-income or		
minority populations have been afforded the opportunity to provide input in the		
NEPA process. As dictated by the class of action, meaningful opportunity to		
comment on or related to the development of purpose and need, alternatives		
analysis and screening, impact analysis, preferred alternative identification, and		
mitigation measures development. Collaborate with EPB's Environmental		
Justice specialist and CDOT's EEO Office to determine the level of		
Environmental Justice and Title VI outreach activities necessary to obtain		
sufficient input from low-income and/or minority populations. Document all		
outreach efforts and input (or feedback) for low-income and/or minority		
communities within an Environmental Justice Technical Report in accordance		
with Chapter 7 of the CDOT NEPA Manual.		
17. Residential/Business/Right-of-Way (ROW) Relocations (EA, EIS)		
The following activities will be performed and documented by a qualified member of		
the Consultant team, in coordination with the CDOT Region ROW manager (or		
designee), or Headquarters ROW specialist assigned to the project, in		
accordance with Title 23 CFR 710:	C	
a. Prepare a table identifying and listing all potentially affected properties	+	
including, at a minimum, ownership names, property and mailing		
addresses, estimated areas of impacts per parcel, type of impact i.e. –		
full or partial acquisition, temporary or permanent easement, and		
indicating which alternatives impact each property. This table will be		
submitted to the CDOT Region ROW Manager for review and may be		
included in the NEPA document (without personal property details) at		
the discretion of the CDOT Region and/or Headquarters ROW staff.	С	
b. Perform a ROW field inspection of each short-listed alternative.	+	
Ascertain number of parcels, types of improvements, and possible		
issues (e.g., historic sites). Estimate family sizes for residential		
relocations.	C	
	C	
c. Compile a ROW acquisition and relocation cost estimate for [INSERT NUMBER NOT TO EXCEED OR FOR PREFERRED ONLY]		
alternatives.		2
d. Prepare a property ownership map based on tax records, which	C	
identifies ownerships for 20 alternatives.	C	
e. Develop and document mitigation measures	С	
18. Utilities and Railroads (EA, EIS)		
Collect utility location key maps for all existing and planned utilities in the area in		
coordination with the CDOT Region utilities specialist. Conduct all field utility		
locates. The potential impacts on or from utilities in the project area will be		
analyzed as well as any appropriate mitigation measures. Follow CDOT NEPA		
Manual, Chapter 9 for guidance on evaluation and documentation.	<u> </u>	

19. Farmlands (EA, EIS, occasionally CatEx)		
(For unique circumstances) In coordination with the Natural Resource Conservation		
Service (NRCS), investigate and quantify the effect of the project alternatives on		
farmlands—determining whether farmlands in question are classified as "prime"		
or "unique," as well as the extent to which impacts may affect local		
communities. The US Department of Agriculture Farmland Conversion Form		
(Form AD 1006) will be completed as necessary. Identify impacts and		
recommend appropriate mitigation measures as necessary. Follow CDOT NEPA		
Manual for additional guidance on evaluation and documentation.		
6	C	

20 Visu	al Resources (EA, EIS, CatEx)	T T	
	rent version of CDOT's Visual Impact Assessment (VIA) Guidelines		
	on the CDOT Landscape Architecture Website. Complete items a, b,		
-	r to obtaining a consultant or in some cases they are completed by the		
consultan			
	Conduct Pre-Scoping (Step E-1): The CDOT NEPA practitioner		
	coordinates with the project team to understand the project scope,		
1	ocation, context, and visual attributes. The CDOT VIA practitioner		
а	ind/or consultant completes Step E-1 in the VIA Guidelines, by		
f	following the sequence of steps in the Decision Tree (Figure 3), to		
	letermine if there is a potential for visual impacts and whether to		
	proceed with the VIA Scoping Process.		
1	1 0		
Ι	f a VIA is not required, based on Pre-Scoping, email Pre-Scoping		
	locumentation to the Environmental Project Manager and no further		
	iction is necessary.		
-			
Ι	f the Pre-Scoping process determines that a VIA may be necessary,		
	continue to next steps in the scoping process.	C	
	Conduct Scoping: Complete steps E-2 through E-5 in the VIA		
	Guidelines. In coordination with CDOT staff, the CDOT VIA		
	practitioner or consultant completes the Scoping Questionnaire to		
-			
Ĺ	letermine if a VIA is required.		
I	f a VIA is not required, based on Scoping, email scoping		
	locumentation to the Environmental Project Manager and no further		
	action is necessary.		
ð	iction is necessary.		
I	f a Memo or Standard VIA is required, proceed to part c to define the		
	Area of Visual Effect, and Delineate Landscape Units.	C	
	Plan for public involvement: Coordinate with CDOT NEPA	+	
	practitioner and project engineer for determining public involvement		
	opportunities. (Reference Chapter 7, Stakeholder Involvement Plan, in		
	he CDOT NEPA Manual).	C	
	Conduct Scoping (Steps E-6 and E-7): Define the Area of Visual Effect		
	nd Delineate Landscape Units.	C	
	Prepare visualizations: Coordinate with the CDOT NEPA practitioner		
	and project engineer to determine the appropriate level of project		
	visualizations for communication, assessing visual impacts, and		
f	acilitating public input. The appropriate level of visualizations may		
	vary by project, to reflect the available level of project design		
	conceptual, preliminary, or final), and present an accurate scale and		
	epresentation of details. Refer to the Visualization Matrix (Appendix		
	O of the VIA Guidelines) for guidance in applying 3D visualization	C	

	and conceptual modeling software, and image enhancement software. Graphics may include cross-sections, hand drawn sketches, simulations (with site current site photos (whenever possible) and/or 3D graphics; or augmented/virtual reality fly through of key viewpoints.		
f.	Create content for CDOT Active Projects Webpage. May include site maps, photographs, renderings, videos, and a project write up.	C	
g.	Complete Visual Resource Inventory and Analysis: follow and apply CDOT VIA Guidelines, templates, and tools.	С	
h.	Complete NEPA Mitigation commitments (if applicable, developing design guidelines can be made a commitment and completed after CATEX/EA/EIS) Track mitigation measures in CDOT's Mitigation Tracking Spreadsheets, NEPA Manual Tables 9-1 and 9-2.	С	
i.	Develop Design Guidelines, to be completed prior to FIR (30% Design) in order to inform and be incorporated into the design – <i>if applicable</i> .	С	
j.	Project Delivery - (incorporate mitigation measures and NEPA commitments into design – Preliminary and/or Final).	С	
k.	Construction Phase - and field mitigation/design oversight, for design compliance. (CDOT LA or Region Mitigation Coordinator)	С	
l.	Post-construction monitoring - of irrigation and plant establishment success and health <i>if applicable</i> . (CDOT LA)	С	

21. Geologic Resources and Soil (EA, EIS)         (For unique circumstances) Perform and document in the NEPA Document, and a         Geologic Technical Report, a thorough investigation of the project area to         determine possible geologic influences on the alternative designs under         consideration, or vice versa. Constraints, including but not limited to major         excavations, unsatisfactory sub-grade materials, present and potential         subsidence, potential for rockfall, the presence of abandoned mine sites, etc.,         will be evaluated. This task includes consideration and description of the         corridor water table (i.e., depth/gradient).         X         22. Cumulative Impacts (EA, EIS)         Consistent with CEQ regulations, the cumulative effects of each proposed action on         a resource, ecosystem or human community will be evaluated for each         alternative. The analysis will both list and consider incremental impacts of each         alternative in conjunction with all past, present, and reasonably foreseeable         future actions, no matter what entity (federal, non-federal, local government, or         private) is taking or has taken the action; but the analysis should only focus on         meaningful effects. Develop the scope of the analysis in consultation with         FHWA and CDOT, and, in general, will base temporal and spatial boundaries on         the natural boundaries of resources of concern and the period of time that the	•

document. X		
		X

a.	Develop traffic volumes using available traffic demand models;	
	determine the design year during the scoping process for the project.	
	The model expected to be used for this project is the official	
	Metropolitan Planning Organization model, if one is available for the	
	project area, or the official CDOT Statewide Travel Demand Model if	
	the project's study area is not contained inside an MPO area. [FILL	
	<b>IN APPROPRIATE MODEL i.e. 2040</b> model. The method for	
	traffic modeling will be determined at the beginning of the project upon	
	FHWA approval. Forecasts should be based on existing roadways and	
	roadways that are committed to be constructed (that is, "No Action"—	
	those that will be constructed regardless of whether the project in	
	question moves forward). Future traffic forecasts must be developed for	
	the No-Action Alternative and any build alternatives. The results of the	
	travel demand forecast process will be developed into a technical	
	report.	 X
b.	Analyze existing and future traffic operations analysis will be	
	conducted for the No-Action Alternative and build alternative(s).	
	Analysis will be completed in accordance with the latest edition of the	
	Highway Capacity Manual or similar methodology. In addition, the	
	Consultant shall use a micro simulation software package (i.e.,	
	CORSIM, VISSIM, Dynasmart-P, or others as approved by CDOT) to	
	evaluate the operations of the entire roadway network and report the	
	appropriate measures of effectiveness for the alternative(s). The	
	selection of the software package for the required analyses will depend	
	on the size and other characteristics of the network, the alternatives to	
	be analyzed, and the measures of interest. At a minimum, analysis will	
	consider existing traffic volumes, accident history, percent of truck	
	traffic, directional splits on all arterials, turning movements at	
	intersections, interchange and ramp characteristics, travel/access	
	patterns, level of service, delays, travel times and speeds, and areas of	
	congestion. During the alternatives development and evaluation	
	process, the appropriate level of operations analysis will also be	
	conducted on the alternatives being considered. The results of the	
	operations analysis are documented into a Transportation Technical	Х
	Report.	 Λ
с.	Conduct safety analysis and document accident rates based on data	
	collected from local emergency services, Colorado State Patrol, and	
	CDOT Traffic Analysis Unit; obtain weighted hazard index from	
	CDOT/PM; evaluate trends; document safety issues and how they can	
	be addressed.	 X
d.	Bicycle and Pedestrian Facilities	
	Research and identify existing and future planned bicycle and	
	pedestrian facilities in the project area. The necessary data will be	
	collected from project design documents, community transportation	
	plans, local land developers, open space and park trails, or local	
	governmental agency or community interest groups to determine if any	
	facilities will be impacted, and as a result what mitigation is necessary.	
	If the corridor is a heavily traveled biking facility, the scope of work	
	shall include meetings to coordinate with bike users throughout the	
	NEPA process. Identify impacts and recommend appropriate mitigation	
	measures as necessary.	Х
24. Ene	ergy (EIS)	
	circumstances) Discuss in general terms the construction and operational	
	equirements and conservation potential of various alternatives under	
	ation. The discussion should be reasonable and supportable. A calculation	
consider	anon. The abouttion should be reasonable and supportable. A calculation	Х

of energy consumption during construction should be included. If applicable, follow CDOT NEPA Manual for guidance on evaluation and documentation.	
25. Other	
E. DELIVERABLES	
The following documents will be considered as official deliverables. Deliverables to	
CDOT will occur at the dates agreed to within the project contract and related	
agreements.	
F. PUBLIC AND AGENCY INVOLVEMENT	
1. Develop an Agency Coordination Plan (required for an EIS, optional for an EA or CatEx)	
2. Stakeholder Involvement Plan (required for an EIS, optional for an EA	
or CatEx)	
Prepare a Stakeholder Involvement Plan specific to the nature of this project. The	
level of effort included in the plan will be in keeping with the complexity and	
expected controversy of the project. Coordinate with the CDOT/PM and project	
team to identify the level of effort to be documented in the plan. NEPA Manual	
Chapter 7 has additional guidance. At a minimum, the plan should:	
a. Develop a stakeholder database	
b. Identify methods for public notification and dissemination of information, such as newsletters, social media, flyers, postcards, web	
site, press releases, miscellaneous informational materials, etc.	
c. Identify outreach strategies that comply with Title VI and Limited	
English Proficiency (LEP) requirements.	
G. NEPA DOCUMENTATION PROCESS	
Develop, coordinate, write, review, conduct QA/QC and finalize the appropriate	
NEPA document in accordance with CDOT NEPA Manual Chapter 8, as well as	
the current provisions of the following laws, regulations, and standards.	
1. Draft and Final NEPA Document Preparation (EA or CatEx)	
Assign a team leader qualified to (1) manage the NEPA process, (2) develop a schedule for document preparation, printing, review, and comment response, (3)	
will direct the Consultant team in the following tasks in coordination with the	
CDOT Region, EPB, and FHWA. The CDOT NEPA Manual specifies the	
number of copies to be provided for document review for each phase of the	
NEPA process.	
Use of Geographic Information Systems (GIS) for environmental data is required to	
be in compliance with CDOT GIS standards. All GIS data shall be provided to	
CDOT in electronic format with the annual updates for the project file.	
a. Distribute the internal draft NEPA document and relevant technical reports for review to a distribution list specified by CDOT. Prepare no	
more than <b>[INSERT NUMBER]</b> versions of the draft NEPA document	
and relevant technical reports with each version. Provide effort for no	
more than [INSERT NUMBER] review cycles of the draft NEPA	
document and relevant technical reports. Coordinate and conduct no	
more than two comment resolution meetings for distribution list	
comments. Respond to comments within a reasonable number of	
working days after received.	
b. Prepare a NEPA document outline for review by CDOT and FHWA. Prepare no more than three versions of the outline to be submitted and	
reviewed, with reviews and approvals being conducted by CDOT,	
FHWA, and other appropriate agencies.	

	For the review cycles, prepare a comment/response matrix for each draft			
	NEPA document and relevant technical reports that describe how each			
	comment was addressed. This matrix will be distributed with each			
	version of the draft document and relevant technical reports that CDOT			
	and FHWA review.			Х
d.	Submit the NEPA document to CDOT for signature and routing to			
	FHWA for approval.			Х
е.	Draft NEPA Document Distribution, Advertising and Public Review,			
	Review and Concurrence, and Public NEPA Document Availability and			
	Advertisement [MAKE PROJECT SPECIFIC]			Х
	Create draft and final text for the public Notice of Availability of the			
	NEPA document and the date, time and location of the public hearing [if			
	appropriate for NEPA document] for placement in all appropriate local			
	papers and within the Federal Register [if for an EIS] and provide to the			
	FHWA Operations Engineer for processing.			Х
	Provide an electronic version of the NEPA document and relevant			
	technical reports on the CDOT website in PDF, or other read only			
	format.			Х
	Make revisions to the final draft NEPA document and relevant technical			
	reports. The resulting NEPA document and relevant technical reports			
	will be provided to CDOT for distribution and final review, prior to			
	preparing the signature copy. Provide certification that all comments			
	have been addressed. [SELECT ONE: The Consultant shall submit a,			
	<b>CDOT will produce a</b> ] the signature copy of the NEPA document and			
	relevant technical reports [to CDOT] for signatures and routing to			
	FHWA for approval, and then will provide copies of the signed final			
	NEPA document to CDOT.			Х

3. Decision Document (FONSI/ROD) Preparation (EA or CatEx)	
There is no guarantee of the outcome of the NEPA process in order to determine next	
steps after an [EA/ EIS], and therefore a scope of work cannot be prematurely	
developed for the NEPA decision document. This scope of work and contract will	
be reevaluated once the preliminary [EA/DEIS/FEIS] process is complete and the	
lead agency has made a decision on how to proceed.	
In the event that significant impacts are identified in the EA, the NEPA process would	
be required to continue to the preparation of an EIS rather than a FONSI.	
Continuing to prepare an EIS after completion of an EA is at CDOT's and	
FHWA's discretion and should not be considered part of the initial EA scope of	
work. At this point, a separate Consultant contract would be required, with a new	
scope of work.	
In the event that a decision document is deemed necessary, this contract and scope of	
work would be amended with the concurrence and agreement of both CDOT and	
FHWA (and other applicable agencies). At the conclusion of the public comment	
period, (if the project is determined to have no significant impact, a Finding of No	
Significant Impact (FONSI)) (if determined to have a significant impact then a	
Record of Decision (ROD)] document may be prepared. In the event a scope of	
work is prepared for a NEPA decision document to be drafted, the following	
services would be addressed in coordination with the Region and EPB:	
a. Prepare draft NEPA decision document and relevant supporting	
documentation for incorporating comments received at the public	
hearing/meeting or from the NEPA document public review period.	X
i. Submit draft NEPA decision document, using templates when	
appropriate, (note how many copies: electronic vs. paper) and	
relevant supporting documentation to CDOT Region, EPB, and	
FHWA for [INSERT NUMBER] reviews.	X
ii. Coordinate and conduct a draft NEPA decision document and	
relevant supporting documentation review meeting and modify	
the draft decision document to respond to comments received.	
Provide certification that comments have been addressed.	X
iii. If necessary, re-submit the draft NEPA decision document and	
relevant supporting documentation for review to ensure that all	
comments have been made.	X
iv. If necessary, modify the draft NEPA decision document and	
relevant supporting documentation to respond to comments	
received.	X
	Λ
v. Submit final NEPA decision document and relevant supporting	
documentation for signature using the signature process	N7
outlined in the CDOT NEPA Manual.	X
b. This Scope of Work could be supplemented for additional as-yet	
unidentified work, if CDOT determines additional work is warranted or	
needed. In the event that none of the alternatives is selected at the	
conclusion of the [EA/EIS] process, this portion of the scope and	
contract will be voided.	X

## SECTION 7 PRECONSTRUCTION WORK TASK DESCRIPTIONS

Note: The following activities of communication, consensus building, project team reviews, conceptual design, data gathering, documentation, and formal public notice shall be planned by the Consultant and coordinated with the CDOT PM. The time of their accomplishment may overlap and parallel paths of activity that should be planned to finish the development phase in accordance with the shortest possible schedule. A project plan shall be developed by the Consultant that satisfies the requirements of the project development. This plan must be approved by the Contract Administrator (see Section 2.01) before starting the work. Deliverables can be static reports and products, digital reports and products, and/or GIS data layers. The scope should be specific as to what type of deliverable is expected.

This list establishes the individual task responsibility. Those tasks identified as CDOT/Other should utilize an abbreviation system to indicate whether the task will be completed by CDOT or another agency (i.e. "C" for CDOT and abbreviations as provided below). The consultant shall maintain the ability to perform all work tasks indicated below by an 'X' in the consultant column, in accordance with the forms and conditions contained herein, and the applicable CDOT standards. Where appropriate, mark "N/A" for not applicable items.

	C D O T ( C )/ O t h e r *	C o n s u lt a n t	N o t A p li c a b l e
A. PROJECT INITIATION AND CONTINUING REQUIREMENTS			
1. Environmental Mitigation and Requirements			
Ensure that any mitigation commitments within the NEPA documentation are incorporated into the project.	С	x	
2. Independent Design Review	C	<u>A</u>	
An independent design review shall be performed on any design accomplished by others			
that will be used in this project. A report identifying the results of these reviews shall			
be submitted to the CDOT/PM within one week of the review.	C		
3. Identify Design Criteria			
Submit a copy of Appendix B -Specific Design Criteria with the appropriate items			
completed.	C	Х	
4. Initiate Survey			
Arrange Preliminary Field Survey and/or Aerial Survey. CDOT Form 1217a is an outline			
of a complete survey request and may be used as a guide for completing the survey	C		
plan.	C		

5 Traffic Control			
5. Traffic Control			
Consultant field activities that interfere with traffic operations within existing roadways			
will require control of traffic. The Consultant shall plan and provide any required			
traffic control for the survey, testing, or the design process. Traffic control operations			
will be in accordance with the MUTCD. The proposed Method for Handling Traffic			
(MHT) must be submitted to the CDOT/PM. Also, certification of the Traffic Control			
Supervisor as a Worksite Traffic Supervisor by the American Traffic Safety Services			
Association (ATSSA) or as a TCS (Traffic Control Supervisor) by the Colorado			
Contractors Association (CCA) shall be required.	C	x	
λ	C	Λ	
6. Structure Review Meeting			
While the major structural design work is progressing, the Consultant shall meet			
periodically with the CDOT Structure Reviewer to review the work. These meetings			
may be in addition to, or in conjunction with, the Project Progress Meetings. The			
complexity of the structure shall be considered by the CDOT Structure Reviewer to			
determine the frequency of review meetings. Other required meetings are described in			
subsequent sections.	С		
7. Initial Submittals			
Submit the following samples to the CDOT/PM for approval:			
a. An original plan sheet that complies with this scope of work	C	Х	
b. Photogrammetric and/or survey data and a drawing or photograph in			
accordance with the requirements specified in this scope of work	C	Х	

Note: No original plan sheets or photogrammetric survey work will be accomplished until satisfactory samples have been received and approved by the CDOT/PM.

<b>B. PROJECT DEVELOPM</b>	ENT		
1. <b>Survey</b> Surveys will be conducted in acco addendum thereof, and appli reviewed by the Region surv to complete the review and s	ordance with the CDOT Survey Manual, the latest cable state statutes. The completed survey shall be ey unit. Two weeks should be provided in the schedule ufficient time should be provided to address all eview. Design shall not proceed until all comments		
	ve been satisfactorily addressed.		
a. Pre-survey Conferen	nce ence shall be held. The consultant shall attend the		
	e prior to any right of way or survey work	C	
b. Survey Data Resear			
Research shall be do	ne as per current CDOT manuals	C	
c. Project Control Surv	/ey:		
Project control Reference Netw stations within or HARN Densifi HARN Densifi shall be follow include proper observation pro	lish HARN Stations shall be tied to the nearest Colorado High Accuracy work Station (HARN). In the event there are no HARN 3 miles of the project (Order B, 1:1,000,000 accuracy), ification (Order B-2, 1:500,000 accuracy), additional cation stations shall be set. NGS Blue Book procedures ed for all HARN Densification stations. This will spacing using proper monumentation, equipment, cedures, coordination through the Colorado State or and submission to NGS for inclusion in the National	С	
monumentation	be supplied by CDOT. Care is to be taken to install said in locations that are readily usable for the project and on so that they can be utilized throughout construction	С	

	(no monumentation shall be set on or near the centerline of the			
	proposed roadway).			
	<ul> <li>iii. Local Project Control Survey the required project control (centerline/baselines and elevation reference) as required. Prepare a control survey diagram showing graphical representation of all monuments used for control. Tabulate coordinates and physical descriptions of all found monuments and other physical evidence.</li> </ul>	C		
d.	Land Survey/Boundary Survey			
	Tie aliquot, property and other land monuments to the control survey. Prepare a Land Survey Control Diagram showing graphical representation of all found aliquot, property and land monuments and their relationship to the project control. Tabulate the coordinates and physical description of all found monuments and other physical evidence.	C		
e.	TMOSS (Topographic) Survey Collect the data required to produce a planimetric map and submit in TMOSS format. Features located will include, but not be limited to signs, mailboxes, fences, driveways, curb cuts, curbs, sidewalks, and edges of pavements. Horizontal accuracy shall be as specified for a CDOT class C or D TMOSS survey	C		
f.	D TMOSS survey.			
1.	Terrain (Relief or Elevation) Survey Collect elevation data and submit in TMOSS format. Natural ground elevations shall be as specified.	С		
g.	Utility Survey (ONLY INCLUDE HOURS FOR TASKS NOT COMPLETED IN THE ENVIRONMENTAL SECTION ABOVE [SECTION 6]). Locate utility poles, manholes, valves, pedestals, guy wires, and other visible utility features. Survey underground utilities as marked by the utility companies. Determine invert elevations of menholes and walts and survey.			
	companies. Determine invert elevations of manholes and vaults and survey	C	v	
1.	the locations of utilities exposed by "potholing".		X	
h.	Hydraulic Survey Locate existing bridge limits, bridge high chords and low girders, culvert invert elevations and locations and sizes, storm sewers, inlets, vaults, manholes, PWQ structures, and determine invert and rim elevations and sizes and materials. Accomplish existing drainage site surveys for designated culverts and bridges in accordance with the Drainage Design Manual. Prepare a topographic survey of the waterway, overbanks, and floodplain areas upstream and downstream to limits determined by the Region Hydraulic Engineer or his/her designee. Incorporate statewide LiDAR data from State of Colorado resources whenever available at www.coloradohazardmapping.com or https://geodata.co.gov/.	С		
i.	Material Sources			
1.	Survey designated material sources as specified.	C		
j.	Supplemental Surveying: As required and specifically requested.	C		
k.	Survey Report:			
	Prepare a Survey Report as required in the Survey Manual.	С

recommendations; see CDOT pipe mat		
v. Bearing Capacity	C	
c. Prepare and submit a soils investigation rep	•••••••••••••••••••••••••••••••••••••••	
d. Prepare and submit pipe material selection	report. C	
3. Pavement		
a. Pavement Rehabilitation		
This section applies if the project includes e		
incorporated in the design for continued uti		
i. Determine the equivalent Design Traffi	· · · · ·	
pavement can carry	C	
ii. Estimate the 18k ESAL's experienced	by the existing pavement. C	

iii.	Obtain the projected 18k ESAL for rehabilitated pavement design period.	C	
137	Perform a distress survey		
1.			
	b) Determine the extent of each distress type		
	c) Develop a distress map for the existing pavement		
	d) Determine the causes of the existing distress utilizing tests and		
	required and analyses.		
	e) Determine the drainage conditions of the existing surface and	_	
	subsurface	С	
ν.	Investigate the existing pavement structure		
	a) Subgrade: soil classifications, moisture/density relationship,		
	resistance value and corrosiveness		
	b) Base: thickness, gradation, plasticity index, liquid limit,		
	resistance value, strength coefficient		
	c) Pavement: thickness, strength coefficient	C	
vi.	Perform deflection testing to obtain the following:		
	a) Deflection profile		
	b) Maximum deflection		
	c) Deflection basin		
	d) Differential deflections at transverse joints for portland cement		
	concrete pavement (pccp)		
	e) In place determination of the appropriate modulus for each layer	С	
	and subgrade	C	
V11	. Determine the remaining load carrying capacity from the above data.		
	Design the feasible alternatives for the required rehabilitation (and		
	widening if appropriate) utilizing the above investigations and test		
	results. The design of the feasible alternatives shall be checked		
	against the following:		
	a) The basic cause of distress which shall be corrected		
	b) <i>Effect on the rate of future deterioration</i>		
	c) Effect on surface characteristics		
	Where appropriate any new payement widening shall be included in		
	Where appropriate, any new pavement widening shall be included in the analysis.	C	
b. Ne	ew Pavement Structure		
	the feasible alternatives of new pavement structure shall be designed		
	lizing procedures accepted by the CDOT/PM. New pavement designs for		
	dening shall be compatible with adjacent rehabilitated existing pavement.	С	
	vement Justification	C	
	Basic factors:	U	
1.			
	a) Desired life expectancy (obtain design life from CDOT).		
	b) Required maintenance activities intervals.	_	
	c) Basis for performance life.	С	
ii.	Analyze life cycle cost of the selected alternatives		
	a) Perform analysis with unit and maintenance costs from CDOT.		
	Determine present worth and annual costs in accordance with the		
	procedures in the CDOT Pavement Design Guide.		
	b) Compare alternatives over the same life span.		
	c) Recommend the pavement structure and provide the basis for the		
	recommendations.	С	
d Da	vement Design Report	~	
	clude all the above tests, investigations, analyses, and calculations	C	
	rformed. Submit to the CDOT/PM for acceptance.	C	

	Structures and Foundation			
	ting bridge condition investigation			
	rmine condition of existing bridge deck, superstructure and substructure			
mate	rial as required.	С		
b. Four	ndation Investigation Report	C		
	Prepare a Foundation Investigation Request showing requested test hole			
	locations.	C		
ii.	Formulate drilling pattern, perform the necessary subsurface			
	investigation and collect samples as required.	C		
	Perform the appropriate laboratory tests and analyze the data. Determine	Ŭ		
	strength, allowable bearing capacity and corrosiveness of foundation			
	material.	C		
	Perform lateral analyses (deformation, moment, and shear) for the			
	caissons and/or piles which are subjected to lateral loadings. This may			
	be a computer analysis which will consider the group effect and	0		
	selection of the soil parameters.	С		
	If appropriate, a pile driving analysis using a wave equation will be			
	accomplished.	С		
vi.	Submit the Foundation Investigation Report to the CDOT/PM for			
	approval.	С		
vii.	Prepare engineering geology plan sheet and copies of the Foundation			
	Investigation Report foundation report with recommendations for type,			
	size, and tip (bottom) elevation of the required foundation. Specify if			
	pre-drilling, pile tip, casing, dewatering, etc., are needed for foundation			
	construction.	C		
	If requested, perform a gradation analysis of the streambed/waterway			
	native material using a sieve analysis, Wolman Count, or other			
	acceptable method as directed by the Region Hydraulic Engineer or	C		
	his/her designee.	C		
	gy/Hydraulic Engineering			
	Collection and Hydrology			
	Establish drainage basin data: delineate and determine size, waterway			
	geometrics, vegetation cover, and land use.		Х	
ii.	Collect historical data: research flood history and previous designs in			
	the project proximity; obtain data from other sources (e.g., MHFD,			
	CWCB, CDOT Maintenance, and local residents).		X	
	Complete a project site visit to evaluate channel/overbank roughness			
	coefficients, channel stability, vegetation, condition/adequacy of			
	existing structures, Ordinary High Water, allowable high water, etc.			
	Document the site visit with photos.		X	
			X	
	Select a design storm frequency based on the established criteria.		Λ	
	Complete a hydrological analysis using existing studies or approved			
	methods.		X	
	Perform a risk analysis.		X	
	raulics			
i.	Complete preliminary design of minor drainage structures:	T		
	a) Determine locations, sizes, and alignment based on preliminary			
	hydraulic design. Identify locations by highway station or			
	coordinates, as appropriate.			
	b) Determine the allowable headwater.			
	c) Assess the degree of sediment and debris problems to be			
	encountered			
	d) Assess abrasion and corrosion levels based on CDOT Pipe Material Selection Policy.			
	Mandanial Valastian Dalian		X	

e) Prepare preliminary structure cross-sections and determine	Т	
elevations, flow lines, slopes and lengths of the structures.		
f) Present initial designs of any necessary deck drainage or other		
drainage off the structure.		
ii. Complete preliminary design of major drainage structures:		
a) Complete hydraulic analysis and water surface profiles.		
b) Determine required hydraulic size/skew of major		
structures/channels		
c) Determine minimum low chord elevation per CDOT criteria		
d) Determine design storm and 500-year water surface elevations.		
e) Determine scour for design storm, the 500-year event, incipient		
overtopping condition, and maximum scour-inducing storm (if		
applicable).		
f) Assess channel erosion protection for structures.		
g) Present initial designs of any necessary deck drainage or other		
drainage off the structure.		X
iii. Complete preliminary design for Permanent Water Quality Control		
Measures (PWQ CMs) and outlet structures with details as needed.		
Adequate detail should be included in the FIR construction plan set if		
FIR-level decisions are required with respect to right-of-way,		
easements, maintenance, etc. to move to final design.		X
jjj. If required, identify and assist CDOT in coordinating potential funding		
participation of local, state, and/or federal agencies.		X
c. Prepare preliminary construction plans that include:		
i. Drainage Plan Sheets		
ii. Drainage Detail Sheets as needed		
iii. Hydraulic Information Sheets as needed		X
d. Prepare a Preliminary Hydraulics Report or Preliminary Drainage Report in		
accordance with the CDOT Drainage Design Manual		
i. Introduction, Hydrology, Existing Structures and Design Discussion		
sections should be close to final at this level. Design Discussion		
should include CDOT and local criteria the project intends to meet.		
ii. Recommended design should be preliminary at this level and progress		
through final design.		
iii. All design assumptions and related design decisions shall be		
documented.		
iv. The Appendix shall contain:		
a) Drainage basin maps		
b) Hydrology/hydraulic worksheets		
c) Drainage construction plan sheets.		
d) CDOT pipe material selection documentation		
e) Water Quality report and PWQ worksheets		X
e. Perform internal QA/QC prior to submission to CDOT.	С	X
6. Floodplain Assessment		
a. Identify location of regulatory floodplains and floodways published by		
FEMA and local agencies, and assess impacts of planned changes to those		
boundaries from CDOT activities or planned map revisions by others.		X
b. Add information to environmental resource mapping of existing conditions		X
c. Determine the adverse impacts of each alternative with respect to the base		
flood elevation (BFE), floodway boundary, and local drainage. This must		
include the impacts of construction and other "temporary" activities.		Х
d. Analyze impacts and develop possible actions to mitigate for the adverse		
impacts, then coordinate with roadway and structural designers.		X
e. Analyze the impacts and mitigation. Included in the analysis will be a		
determination of significant impacts due to:	1	X

i) Cingle community concern neutron	
<ul><li>i) Single community access routes.</li><li>ii) Risk for social or economic losses due to flooding</li></ul>	
iii) Alteration of beneficial floodplain values.	
iv) Recommend preparation of a local floodplain development permit for	
all work in floodplains and floodways, as required by state and federal	
law.	
v) Show all ground survey point elevations in the same vertical datum	
identified on the current effective FIRM.	
vi) Add notes to indicate the waterway name, jurisdiction and community	
number, panel number, date of current effective information, a	
sentence describing which local code requires permits, a sentence for	
permitting and no rise compliance, and a note recognizing that	
flooding may occur outside the mapped Special Flood Hazard Area	
(SFHA).	X
f. Prepare a Floodplain Information Sheet for the final approved plan set.	X
i) Show and clearly label the current effective 100-yr floodplain and	
floodway boundaries, and the 500-year floodplain (as applicable).	
ii) Show and clearly label all cross sections and BFE lines published on	
the current effective FIRM (note; all elevations must be reported in the	
same vertical datum identified on the current effective FIRM).	
iii) Show and clearly label any fluvial hazards, buffer zones or erosion	
management zones.	
iv) Show the limits of disturbance for all permanent and temporary	
activities, and label as such.	
v) Show all ground survey point elevations in the same vertical datum	
identified on the current effective FIRM.	
vi) Add notes to indicate the waterway name, jurisdiction and community	
number, panel number, date of current effective information, a	
sentence describing which local code requires permits, a sentence for	
permitting and no rise compliance, and a note recognizing that	
flooding may occur outside the SFHA.	
vii) Add all conditions of approval from the local agency to the notes,	
especially for as-built survey and P.L.S. & P.E. re-certification	
requirements.	
viii) Add a note identifying any 625 Survey specials.	X
g. Prepare a Preliminary Floodplain Report or Memo as outlined in the CDOT	
DDM or as directed by the Region Hydraulic Engineer or his/her designee.	X
7. Environmental – Water Quality	
a. Storm Water Management Plan	
Initiate a Storm Water Management Plan in accordance with:	X
i) Municipal Separate Storm Sewer Systems (MS4)	
ii) CDPHE's Construction Discharge Permit System requirements	
iii) CDOT's Erosion Control and Storm Water Quality Guide	
iv) Local agency SWMP/GESC/EC requirements	
v) CDOT's Standard Specifications	
vi) CDOT Standard Plans	37
vii) Other appropriate documents	X
b. Topsoil sampling, <i>if applicable</i> .	
i) Determine number for revegetation units required by coordinating	
with SWMP designer and design team. Number of samples: 3	

iii) Insert topsoil amendments into the SWMP using the CDOT			
Amendments Calculator to determine quantities.			
c. Vegetative Transects		Х	

i) i. Determine number of revegetation units req with SWMP designer and Environmental Spe		
<ul><li>transects:</li><li>ii. Conduct <u>vegetation transect(s)</u> to determine</li></ul>		
percent cover as required for each vegetation SWMP prior to construction disturbance.	unit as determined in the	
<ul><li>iii) iii. Document transect location(s) and percent map. Place map and photographs into Tab 17</li></ul>		
d. Prepare preliminary Permanent Water Quality (PV		
with Section 7.C.5.b.iii of this document.		X
i) Determine PWQ requirements (local agency l	MS4 requirements,	
CDOT requirements, etc.)		
ii) Develop PWQ alternatives that will meet CD	OT and local agency	
MS4 requirements		
iii) Identify right-of-way requirements and utility	impacts for alternatives	
iv) Identify all entities and		
v) Other appropriate documents		X
e. Prepare preliminary water quality report as an app		
Design Report to include PWQ Evaluation and Tr	acking Forms, cost	
estimate for PWQ CMs, etc.		x
f. Conduct a PWQ meeting just prior to FIR to discu		
PWQ Specialist/Water Pollution Control Manager	r, Hydraulics Engineer, and	
Project manager.		x
g. Perform internal QA/QC prior to submittal to CD		x
8. Utility Coordination (ONLY INCLUDE HOURS F COMPLETED IN THE ENVIRONMENTAL SEC		
[SECTION 6]).		
a. Location Maps		
Obtain utility location maps from the Utility Com	panies which identify	
utility features in the project area. Requests and re	eceipt of maps will be	
coordinated with the Region Utility Engineer via	copies of request and	
transmittal letters.	C	X
b. Reviews and Investigations		
Conduct field reviews and utility investigations w	vith the Region Utility	
Engineer and Utility companies, as required, to en		
	a dama additining man	
and vertical utility data. When possible this will b	be done utilizing non-	
destructive investigative techniques. The horizon	tal and vertical locations

a. Roadway Design	
i) Input, check, and plot survey data	C
ii) Verify that a project specific coordinate system approved by CDOT is	
used to identify the horizontal locations of key points. The coordinate	
systems used for roadway design and ROW shall be compatible.	C
iii) Input and check horizontal and vertical alignments against all design	
criteria. Necessary variances and/or design decisions will be identified	
with justification and concurrence by CDOT & FHWA.	C
iv) Provide alignments, toes of slope and pertinent design features,	
including permanent and temporary impacts, to the ROW, Utility and	
Environmental Managers.	C
v) Plot/develop all required information on the plans in accordance with all	
applicable CDOT policies and procedures.	C
vi) Using current approved CDOT software, generate a 3 dimensional	
design model and produce preliminary quantities	C
b. Roadside Development:	
For roadside items including but not limited to, guardrails, delineators,	
ditches, PWQ CMs, landscaping, sprinkler systems, sound barriers, bike	
paths, sidewalks, lighting, curb ramps, truck escape ramps, and rest areas	
provide the following layouts in the plans:	C
i) Critical locations in the plans for irrigation sleeves and other utility	
conduits underneath the proposed roadways.	C
ii) Coordinate the roadside items with the Storm Water Management Plan	
(SWMP).	C
10. Right-of-Way	
The following work shall be done by, or under the immediate supervision of, a	
Professional Land Surveyor (PLS). The following work may be included as part of a	
Surveying contract or part of a Right-of-Way plans preparation contract.

v) Calculate coordinates of lost or obliterated aliquot corners using	I	
guidelines established by the Bureau of Land Management. (To be used		
in resetting corners according to Colorado Revised Statutes)	C	
	↓C	
vi) Establish subdivisions of sections using Bureau of Land Management		
Guidelines. Show all section lines and <sup>1</sup> / <sub>4</sub> section lines on the ownership		
map and ROW plans	C	
vii) Determine existing Right-of-Way limits from deeds of record, CDOT		
plans and found ROW markers. Previous Right-of-Way plans, if		
available, will be provided by CDOT as an aid	C	
viii) Determine ownerships and their property boundary locations. Locate the		
intersection of these property boundary lines with the existing CDOT		
Right-of-Way. Determine location and ownership of existing easements		
of record.	C	
ix) Secure additional property ties and additional topography where the	Ŭ	
highway improvement may affect improvements adjacent to the Right-		
of-Way. This additional topography should include:		
a) Proximate buildings, sheds, etc.		
b) Underground cables and conduits		
c) Wells		
d) Irrigation ditches and systems		
e) Septic tanks, cesspools, and leaching fields		
f) Landscaping		
g) Other	C	
x) Reconcile overlaps and gaps in ownerships as required by CDOT,		
documenting method used (may require additional field work). Include		
reasons for decisions in the "Project Narrative".	C	
xi) Plot OWNERSHIP MAP. If entire ownership will not fit on the sheet at		
this scale, an additional abbreviated OWNERSHIP MAP may be used at		
a scale of 1 inch=1 mile, or other suitable scale, to show the		
configuration of large ownerships. Metric equivalents may be required.	С	
	├C	
xii) Label all monuments found with description of monument and project		
coordinates (from Control Survey Diagram)	С	
xiii) Show improvements and topography within the ownerships and existing		
access to the street/county road system.	C	
xiv) Number ownerships alternately as they occur along the centerline from		
south to north or west to east in the same direction as the stationing.		
Show current names of owners and lessees	C	
xv) Calculate the total area of all ownerships affected, including coordinates		
of all property corners. Deduct areas for existing road Rights-of-Way.		
Bearings and distances do not need to be shown on $1^{"} = 1$ mile		
abbreviated OWNERSHIP MAPS	C	
xvi) Different land uses within a property should be cross-hatched or shaded.	C	
xvi) In the lower right corner of the OWNERSHIP MAP, show seal,		
number and name of Professional Land Surveyor supervising the work	С	
*	C	
xviii) Transmit finished reproducible OWNERSHIP MAP, electronic		
drawing files, and Memoranda of Ownership to CDOT along with all		
calculations, field notes, and supporting data. The OWNERSHIP MAP		
will include a copy of the control and monumentation sheet	C	
11. Major Structural Design		
Major structures are bridges and culverts with a total length greater than twenty feet or		
retaining walls with a total length greater than one hundred feet and a maximum		
exposed height at any section of over five feet. This length is measured along		
centerline of roadway for bridges and culverts, and along the top of wall for retaining		
walls. Overhead sign structures (sign bridges, cantilevers, and butterflies extending		
over traffic) are also major structures, but are exempt from the structure preliminary		1

coordinating this activity.		
a. Structural Data Collection	C	
<ul> <li>i) Obtain the structure site data. The following data, as applicable, shall be collected: (Typical roadway section, roadway plan and profile sheets showing all alignment data, topography, utilities, preliminary design plan) Right-of-Way restrictions, preliminary hydraulics and geology information, environmental constraints, lighting requirements, guardrail types, recommendations for structure type, and architectural recommendations.</li> </ul>	с	
ii) Obtain data on existing structures. When applicable, collect items such		
as existing plans, inspection reports, structure ratings, foundation information, and shop drawings. A field investigation of existing		
structures will be made with notification to the Resident Engineer.	C	
b. Structure Selection and Layout	C	
<ul> <li>Review the structure site data to determine the requirements that will control the structure size, layout, type, and rehabilitation alternatives. On a continuing basis, provide support data and recommendations as</li> </ul>		
necessary to finalize the structure site data.	C	
<ul> <li>Determine the structure layout alternatives. For bridges, determine the structure length, width, and span configurations that satisfy all horizontal and vertical clearance criteria. For walls, determine the necessary top and bottom of wall profiles.</li> </ul>	С	
iii) Determine the structure type alternatives. For bridges, consider precast		
and cast-in-place concrete and steel superstructures and determine the		
spans and depths for each. For walls, determine the feasible wall types.	C	
<ul> <li>iv) Determine the foundation alternatives. Consider piles, drilled caissons, spread footings, and mechanically stabilized earth foundations based on geology information from existing structures and early estimates from the project geologist. To obtain supporting information, initiate the foundation investigation as early as possible during the preliminary</li> </ul>		
design phase.	C	
<ul> <li>v) Determine the rehabilitation alternatives. Continued use of all or parts of existing structures shall be considered as applicable. The condition of existing structures shall be investigated and reported. Determine the modifications and rehabilitation necessary to use all or parts of existing structures and the associated costs.</li> </ul>	С	
<ul> <li>vi) Develop the staged construction phasing plan, as necessary for traffic control and detours, in conjunction with the parties performing the roadway design and traffic control plan. The impact of staged construction on the structure alternatives shall be considered and</li> </ul>		
reported on.	C	
<ul> <li>vii) Compute preliminary quantities and preliminary cost estimates as necessary to evaluate and compare the structure layout, type, and rehabilitation alternatives.</li> </ul>	С	
<ul> <li>viii) Evaluate the structure alternatives. Establish the criteria for evaluating and comparing the structure alternatives that, in addition to cost, encompass all aspects of the project's objectives. Based on these criteria, select the optimum structure layout, type, and rehabilitation</li> </ul>		
alternative, as applicable, for recommendation to CDOT.	C	
<ul> <li>ix) Prepare preliminary general layout for the recommended structure.</li> <li>Prepare structure layouts in accordance with current standards. Special detail drawings and a detailed preliminary cost estimate shall</li> </ul>		
accompany the general layout. The special detail drawings shall include	С	

the architectural treatment. Perform an independent design and detail	Γ	
check of the general layout.		
c. Structure Selection Report		
Prepare a structure selection report to document, and obtain approval for,		
the structure preliminary design. By means of the structure general layout,		
with supporting drawings, tables, and discussion, provide for the following:	C	
i) Summarize the structure site data used to select and layout the	1	
structures. Include the following:		
a) Existing structure data, including sufficiency rating and whether		
or not the structure is on the "select list".		
b) Project site plan		
c) Roadway vertical and horizontal alignments and cross sections at		
the structure		
d) Construction phasing		
e) Utilities on, below, and adjacent to the structure		
f) Hydraulics:		
g) Channel size and skew, design year frequency, minimum low		
girder elevation, design year and 500-year high water elevations,		
estimated design year and 500 year scour profiles, and channel		
erosion protection		
<ul><li><i>h)</i> Preliminary geology information for structure foundation</li><li><i>i)</i> Architectural requirements</li></ul>	C	
ii) Report on the structure selection and layout process. Include the		
following:		
a) Discuss the structure layout, type, and rehabilitation alternatives		
considered		
b) Define the criteria used to evaluate the structure alternatives and		
how the recommended structure was selected		
c) Provide a detailed preliminary cost estimate and general layout of		
the recommended structure	C	
iii) Obtain acceptance by CDOT on the recommended structure and its		
layout. Allow approximately two weeks for review of the structure		
selection report. The associated general layout, with the revisions		
required by the CDOT review, will be included in the FIR plans. The		
structure selection report, with the associated general layout, must be		
accepted in writing by CDOT prior to the commencement of further	~	
design activities.	C	
d. Foundation Investigation Request		
Initiate the foundation investigation as early in the preliminary design phase as		
is practical. On plan sheets showing the project control line, its stations and		
coordinates, utilities, identify the test holes needed and submit them to the		
project geologist. The available general layout information for the new structure		
shall be included in the investigation request.	C	
12. Construction Phasing Plan		
A construction phasing plan shall be developed for all projects which integrates the		
construction of all the project work elements into a practical and feasible sequence.		
This plan shall accommodate the existing traffic movements during construction		
(detours). A preliminary traffic control plan will also be developed which will be		
compatible with the phasing plan.	C	X
13. Preparation for the Field Inspection Review (FIR)	ļļ.	
a. Coordinate, complete, and compile the plan inputs from other branches:		
materials, hydraulics, traffic, right-of-way, environmental and water quality, and		
Staff Bridge.	C	X

b. If a major structure is included in the project, including a PWQ CM, a general layout (which has been accepted by CDOT) will be included in the FIR			
plans.	C	X	
c. Prepare the preliminary cost estimate for the work described in the FIR			
plans based on estimated quantities.	C		
d. The FIR plans shall comply with CDOT requirements and shall include a			
title sheet, typical sections, general notes, plan/profile sheets, and preliminary			
layouts of interchanges/intersections. The plan/profile sheets will include all			
existing topography, survey alignments, projected alignments, profile grades,			
ground line, existing ROW, rough structure notes (preliminary drainage design			
notes, including pipes, inlets, ditches and channels), and existing utility locations.			
notes, including pipes, inclus, uncles and enamers), and existing utility locations.	С	X	
i) The following items will be mandatory for the FIR plans:			
a) Preliminary earthwork (plotted cross sections at critical points			
with roadway template and existing utility lines at known or			
estimated depths)			
b) Catch points			
c) Proposed Right-of-Way			
d) Pit data (if required)			
e) Soil profile and stabilization data			
f) Structure general layouts (if applicable)	C	X	
ii) Typical plan sheet scales will be as follows:			
a) Plan and Profile 1 inch = 50 Feet (Urban)			
b) $1 \text{ inch} = 100 \text{ Feet (Rural)}$			
c) Intersections $1$ inch = 20 feet	С	Х	
e. The ROW ownership map shall be included in the FIR plan set	C		
f. The plans shall be submitted to the CDOT/PM for a preliminary review			
prior to the FIR	С	X	
g. FIR plan reproduction not to exceed N/A of sets	С		
h. The preliminary construction phasing including preliminary traffic control			.,,
plan with proposed detours will be included in the FIR plan set	С	Х	
i. CDOT form 1048 – project scoping procedures completion checklist			
14. Field Inspection Review			
a. Attend the FIR	С	Х	
b. The FIR meeting minutes shall be prepared by the CDOT/PM, and			
distributed as directed	С		
c. The FIR original plan sheets shall be revised/corrected in accordance with	_	_	
the FIR meeting comments within thirty (30) working days	C	X	
d. Design decisions concerning questions raised by the FIR will be resolved in			
cooperation with the CDOT/PM. The C/PM shall document the decision and			
transmit the documentation to the CDOT/PM for approval.	С	X	
e. A list of all deviations from standard design criteria along with the written	~		
justification for each one shall be submitted to the CDOT/PM	С	X	
15. Post-FIR Revisions			
The Consultant shall complete the revisions required by the FIR before this phase of work			
is considered to be complete	~		
a. Update project schedule	C	37	
b. Coordinate activities	С	X	
	~	v	
c. Finalize design decisions, variances, justification process, and traffic signal	C	X	
c. Finalize design decisions, variances, justification process, and traffic signal warrants			
<ul> <li>c. Finalize design decisions, variances, justification process, and traffic signal warrants</li> <li>D. FINAL DESIGN</li> </ul>		+	
<ul> <li>c. Finalize design decisions, variances, justification process, and traffic signal warrants</li> <li>D. FINAL DESIGN         <ol> <li>Traffic Engineering</li> </ol> </li> </ul>		v	
<ul> <li>c. Finalize design decisions, variances, justification process, and traffic signal warrants</li> <li>D. FINAL DESIGN</li> </ul>		X X	

ii) Prepare plan sheet with intersection condition diagrams and required			
traffic signal design and forward to appropriate agency. Prepare 1 inch			
to 20-foot scale intersection plan sheet for each intersection which will			
have a traffic signal designed for it.		X	
iii) Prepare and provide the construction traffic control plans and quantities		X	
2. Materials Engineering			
a. Finalize and provide the stabilization plan/pavement design report.	С		
b. Finalize geotechnical considerations and incorporate them into the plans.	C		
i) Rock fall	C		
i) Rock cut	C C		
	++		
iii) Landslides	C		
iv) Other	С		
3. Environmental Permits			
This activity is concurrent with final design and must be completed prior to the			
advertisement for construction. Coordinate between the agencies, the			
Environmental Manager and the PM and prepare and submit application and			
design information to the Environmental Manager for the following permits:			
a. 401 Permit Process (Water Quality Certification)			Х
b. 402 Permit Process (Point Source Discharge)			Х
c. 404 Permit Process (Discharge of Fill)		X	
i) Determine impacts		X	
		<u></u>	
ii) Coordinate with the U.S. Army Corps of Engineers, Region and Staff Design		v	
		X	
iii) Incorporate permit stipulations into the final plans		X	
d. Senate Bill 40 Certification			Х
e. CDPS or NPDES Storm Water Permit for Construction Activities	С		
4. Structures			
Ensure approval of the Foundation Investigation Report from CDOT/PM.	С		
5. Hydrology, Hydraulics and Floodplain Management			
a. Data Review			
Review data and information developed under the Preliminary Hydraulics			
Report, Preliminary Drainage Report, and/or Preliminary Floodplain Report, and			
update both/all in accordance with decisions made since the FIR.		X	
<b>b.</b> Hydrology and Hydraulics		X	
i) Review data and information developed under the preliminary hydraulic			
investigation and update per FIR decisions		X	
ii) Complete final design for minor drainage structures			
a) Finalize horizontal and vertical locations and sizes for all			
drainage structures based on hydraulic design. Update locations			
in construction plans by highway station or coordinates, as			
appropriate			
b) Make final recommendations for pipe material based on CDOT			
Pipe Material Selection Policy guidelines. Document			
recommendations in a letter with supporting design information.			
c) Finalize structure cross-sections and profiles to determine the			
elevations, flow lines, slopes and lengths of structures.			
d) Finalize deck/structure drainage in coordination with CDOT Staff			
Bridge or their designee.		X	
iii) Complete final design for major structures.			
a) Finalize hydraulic analysis elevations, flow lines, water surface			
profiles and hydraulic information.			
b) Finalize configuration, size and skew of major structures and			
channels.			
c) Coordinate final water surface profiles and final low girder			
elevation for selected structures.		X	

	1) $D^{-1}_{1}$ 1 1 $C^{-1}_{1}$ C 1 C 1 $C^{-1}_{1}$ 1 500	
	d) Finalize channel scour profiles for design year and 500-year	
	scour for selected structures.	
	e) Finalize channel erosion protection limits and mitigation	
	measures for selected structures and provide appropriate details.	
i	f) Finalize deck/structure drainage in coordination with CDOT Staff	
	Bridge or their designee.	
	Complete final design for all drainage details required for minor and	
	major drainage structures.	X
	Recommend culvert pipe sizes, type, shape and material for proposed	
	construction detours.	X
	Erosion and sedimentation problems identified with solutions in place,	
	including but not limited to erosion and scour countermeasure designs,	
	analyses and reports.	X
c. Prep	are final construction plans in accordance with requirements in the	
CDO	T Drainage Design Manual (DDM)	
i) 1	Drainage Notes	
ii) 1	Drainage Tabulation Sheets	
iii) 1	Drainage Plan Sheets	
iv)	Drainage Profile Sheets	
v) ]	Drainage Detail Sheets	
	Bridge Hydraulic Information Sheets	
	Floodplain Information Sheet	X
	are a Final Hydraulic Design Report or Final Drainage Report in	
	dance with the requirements of the CDOT DDM	
	Review data and information in the Preliminary Hydraulic Design	
	Report and/or Preliminary Drainage Report and update in accordance	
	with decisions made at FIR	
	Finalize all sections of the report and include Bridge Hydraulic	
	Information Sheets. All design assumptions and related design decisions	
	shall be documented in the report.	X
	Provide a PDF copy of the Final Hydraulic Design Report or Final	
	Drainage Report to the CDOT Project Manager for disbursement to	
	appropriate parties.	X
	Floodplain & floodway information incorporated into the plan sheets	X
	Bridge hydraulic information incorporated into the plan sheet	X
	Provide digital linework from all drainage and floodplain analysis in	
	GIS Shapefiles, AutoCAD/Civil3D drawings, or MicroStation/InRoads	
	drawings. All CAD or MicroStation drawings must be compressed into	
	a single drawing. All surfaces (DTMs, TINs, Rasters, etc.) must be	
	separated and labeled clearly for archiving and rediscovery	X
	are Final Floodplain Report	X
i) 1	Include the Floodplain Information Sheet from the plan set in 11x17	
,	with all other hydraulic mapping information relevant to requisite	
	permits and certifications	
ii)	List and identify all applicable ordinance or code, and describe how	
	those specific standards were addressed and resolved	
	Discuss all alternatives analyzed, analysis results, recommendations,	
	and final design direction	
	Record all relevant current effective floodplain information, like	
	community number, panel number(s), effective date(s), waterway	
	names, cross sections, BFEs, and contact name and information for local	
	floodplain administrators contacted for the project.	
	Provide a copy of approved floodplain development permits and no rise	
(	certifications	l

vi) Identify all construction and as-built stipulations required from		
approved permits and certifications		
vii) Provide all background survey information on 11x17 or smaller		
viii) Identify future actions required <u>prior</u> to CDOT project close-out,		
especially as-built survey and P.L.S. certification, and final P.E. re-		
certification with local agencies.		
f. Perform internal QA/QC on all hydrologic, hydraulic and floodplain		
information prior to submittal to CDOT.	X	
6. Environmental – Water Quality		
a. Storm Water Management Plan		
Initiate a Storm Water Management Plan in accordance with:	X	
i) Municipal Separate Storm Sewer Systems (MS4)		
ii) CDPHE's Construction Discharge Permit System requirements		
iii) CDOT's Erosion Control and Storm Water Quality Guide		
iv) Local agency SWMP/GESC/EC requirements		
v) CDOT's Standard Specifications		
vi) CDOT Standard Plans		
vii) Other appropriate documents	X	
b. Permanent Water Quality	X	
i) Finalize PWQ design to meet CDOT and local MS4 requirements		
ii) Coordinate with all entities and municipalities regarding ownership		
and maintenance responsibilities for PWQ CMs.	X	
c. Prepare a Final PWQ report as an appendix to the Final Hydraulic Design		
Report.	X	
d. Conduct a PWQ meeting just prior to FOR to discuss documentation of		
PWQ with CDOT PWQ Specialist/Water Pollution Control Manager, Hydraulics		
Engineer, and Project Manager.	X	
e. Perform internal QA/QC prior to submittal to CDOT.	X	
7. Utility Coordination		
Following the finalization of the roadway horizontal alignment and profile grade and the		
horizontal and vertical location of drainage structures, sewers, and other underground		
structures, coordinate with the Utility Engineer to identify and resolve any conflicts to		
finalize utility clearances.		
a. Prepare and provide final utility plans	X	
i) The final utility plans shall be prepared following the resolution of the		
FIR comments, the completion of the final hydraulic design, and the		
completion of the design of the other items in the list in paragraph (b)		
	v	
below.	X	
ii) The final utility plans shall include all horizontal and vertical locations		
of the existing and proposed utilities and any other details which would	v	
indicate possible utility conflicts.	X	
iii) The new or revised utility locations will be added to the plan		
topography. Conflicts will be resolved and appropriate pay items and	v	
specifications added, if required, to adjust utilities.	X	
b. Final railroad plans		
Coordinate the following activities through the Region Utility Engineer and in		
accordance with railroad requirements.		
i) Develop the railroad encroachment plan (with cross sections)		X
ii) Define construction responsibilities between the railroad and highway		X
iii) Develop cost estimates based upon cost allocation previously		
determined		<u>X</u>
iv) Prepare Public Utilities Commission application exhibits as required.		X
8. Roadway Design and Roadside Development		
a. Roadway design. Prepare and provide final roadway design plans		
incorporating all input from applicable CDOT specialties and outside entities.	C	

b. Roadside design	C		
c. Landscaping			
i) Determine the most economical alternative, finalize concept, and			
complete the plan.			Х
ii) Verify that an acceptable safe recovery distance exists between traveled			
way and all trees to be planted.			Х
iii) Coordinate special permits that may be required.			Х
iv) Verify availability of plant materials and submit letter to the CDOT/PM			
certifying that designated plants are available.			Х
d. Prepare and provide plans for sprinkler systems, bike paths, sound barriers,			
truck escape ramps, rest areas, and others, as appropriate.			Х
e. Lighting plans			
i) Provide a foundation investigation for each high mast light location.			Х
ii) After approval of the locations of the lights, the lighting design will be			
completed with the following information shown on the plan sheets:			
a) Circuit type and voltage of power source			
b) Location of power source (coordinated with the utility engineer)			
c) Lumina ire type and lumens			
d) Light standard type and mounting height			
e) Bracket arm type and length			
f) Foundation details			
g) Size and location of electrical conduit			
h) Locations of power sources(s)/lighting control center(s) (if			
appropriate)			
i) Location of direct burial cable			
j) Size of wiring and/or direct burial cable			Х
iii) Coordinate with local entities			X
f. Prepare and provide wetland mitigation plan.		X	
9. Right-of-Way Plans and Activities		<u></u>	
Reference the CDOT ROW and surveying manual' requirements for the following:			
a. Initiate ROW authorization process			
Coordinate with the CDOT/PM to initiate the ROW authorization process.			
Typically, the corrected FIR plans (with final hydraulic design inputs) will be			
used as the design basis for the ROW authorization plans.	C		
b. Ownership Maps	C		
c. Authorization Plan:	C		
i) Integrate toes of slopes and other design details such as lane lines,			
culverts, road approaches, etc. into ownership map (base map for ROW			
plans)	C		
ii) Determine new Right-of-Way requirements, access control, and			
easements from design plans following the FIR and plot on			
ownership/base maps. Normal scale, 1 inch=50 feet in urban areas,			
1 inch=100 feet in rural areas. Metric units may be required as per PM.			
Metric scales will be as shown in the CDOT "Metric Conversion			
Manual". Revise numbering of ownerships to correspond to ROW			
acquisitions.	C		
iii) Calculate areas of parcels, easements, and remainders	C		
iv) Prepare ROW plan sheets	C		
v) Prepare legal descriptions of parcels, easements and access control	C		
vi) Prepare tabulation of properties sheet	C		
vii) Prepare Right-of-Way Title Sheet	С		
viii) Incorporate the Control Survey and Monumentation Sheets into the			
plans	C		
ix) On the Monumentation Sheet, list the ROW, Easement, Control, etc.,			

· · · · · · · · · · · · · · · · · · ·	++	X
12. Preparation for the Final Office Review (FOR)		
phasing plan.	C	Х
final traffic control plan will be developed which shall be compatible with the		
shall accommodate the existing traffic movements during construction, and a		
of all project work elements into a practical and feasible sequence. This plan		
A final construction phasing plan will be developed which integrates the construction

specifications.	Х	
c. Prepare FOR Estimate.	<u>A</u>	
Item numbers, descriptions, units and quantities shall be listed and submitted to		
the CDOT/PM.		
d. Submit the FOR Plans and specifications (Originals) to the CDOT/PM for a		
preliminary review prior to the FOR.	X	
e. FOR plan reproduction not to exceed N/A of sets C		
13. Final Office Review		
a. Attend the FOR X	X	
b. The FOR meeting minutes shall be prepared, approved, and distributed		
within two weeks of the meeting as directed.		
c. The FOR original plan sheets and the specifications shall be revised in		
accordance with the FOR meeting comments and submitted to the CDOT/PM		
within eight (8) weeks after the FOR.	Х	
d. Submit the final revision of the plans after CDOT review.	Х	
E. PRIOR TO AD		
1. Construction Plan Package		
The bid plan construction contract package shall consist of the revised FOR plans and		
will completely describe the work required to build the project including project		
special provisions and detailed quantities.	Х	
a. Electronic and hard copies of the following: C	X	
i) Roadway		
a) Horizontal and vertical data		
b) Staking data		
c) Earthwork quantities		
d) Cross sections C	X	
ii) Major structures		
An independent set of the following shall be submitted to the CDOT		
Structural Reviewer for each major structure.		
a) Structure grades b) Structure geometry C	v	
	X	
b. Final engineering package. The consultant shall submit electronic copies of the following:		
×	v	
i)     All project calculations or worksheets     C       ii)     All final reports and their approvals:     C	X	
Traffic, hydraulics, lighting, pavement design and economic analysis,		
geology foundation report, etc. All reports will have the latest revisions		
included.	X	
iii) Copies of variances, design decisions, and variance approvals	X	
iv) Project meeting minutes C	<u>^</u>	
v) Utility clearance package		
v) Utility agreements and information regarding the utility location and		
clearance conditions	X	

vii) Maintain an environmental mitigation tracking tool for all		T	
environmental document commitments.	С	X	
viii)Bridge construction packet			
ix) Includes bridge grades, geometry, and quantity calculations or			
worksheets	С	X	
x) Any other information unique to this project and deemed important to			
the effectiveness of construction.	C	X	
c. Record plans sets			
Three (3) record plan sets for final design of roadways and structures will be			
produced which shall bear the seal and signature of the responsible			
Consultant Engineer on each sheet. One (1) set shall be retained by the			
Consultant for three (3) years. Two sets shall be submitted to CDOT. The			
original plan drawings shall not bear a seal.	С	X	
2. FEMA CLOMR Submittal			
Prepare a Conditional Letter of Map Revision package and submit to FEMA and the			
local Floodplain Administrator for community concurrence, for any work in the			
floodway that alters the BFE or floodway boundary, or as required by the local			
permitting agency's Floodplain Administrator.		X	
3. Water Rights Reporting			
If the project includes a detention or water quality pond, water rights reporting is			
required once the pond is substantially complete. See Section 8, Services After			
Design for additional information.			
4. All project permits, approved and in-hand.	С	X	
F. CORRIDOR MANAGEMENT SUPPORT			
1. Design Control			
a. Provide the required staff, communication equipment and computer systems			
with appropriate software for tracking and monitoring the planning efforts.			
b. Conduct periodic corridor progress meetings at an interval acceptable to the			
CDOT/PM. The following shall be reviewed:			
i) Activities complete since the last meeting			
ii) Problems encountered			
iii) Late activities			
iv) Activities required by the next progress meeting			
v) Solutions for unresolved and anticipated problems			
vi) Information or items required from other agencies			
c. Develop a quality assurance program that ensures correct error-free plans			
are produced by the project designers.			
d. The consultant shall coordinate the technical aspects of the planning efforts			
such as:			
i) Ensuring that the separate projects all utilize the same reference and			
data base for horizontal and vertical control.			
ii) Bearings, coordinates, grades and elevations are identical for common			
control lines on separate projects.			
iii) Earthwork balance is accomplished where appropriate			
2. Information Services			
a. Provide a management information system to monitor and report progress.			
This System will include a computer terminal and/or software for the CDOT/PM			
that the consultant shall furnish and maintain. This system will:			
i) Provide access to current project data and status (e.g., progress versus			
schedules and cost estimates versus budgeted funds)			
ii) Include the project schedules for submittals and key events			
iii) Identify progress with respect to the schedules			
iv) Identify critical path activities			

v) Provide upon demand the scheduled submittals/key events for designated time periods	X
b. Produce and periodically update a strip map which outlines the entire	
corridor. The Information Shown on this Map will Include the following:	X
i) Preliminary engineering project limits	X
ii) Construction project limits	X
iii) Construction project estimated costs	X
iv) Construction project Advertise-for-Bid (AD) dates	X
v) Other information that is considered appropriate	X
3. Budget Planning Support	X
a. Maintain a current file of project cost estimates. The date and type of each estimate will be identified.	X
b. Maintain a current file of existing and proposed funding for projects. Types of funding sources will be identified.	x
c. Develop a proposed ad schedule based on the estimated costs and the existing and anticipated future funding. The proposed ad schedule will be compared to the design schedule. Adjustments to the design and ad schedules may be made with CDOT concurrence.	x
d. A continuing evaluation of cash flow requirements and drawdown schedules administrative, preliminary engineering, right-of-way, utility, and construction costs will be accomplished. The funding requirements will be compared with the budget, also on a continuing basis. CDOT will be notified immediately of changes in funding requirements. (this will be completed when needed)	x

# SECTION 8 SERVICES AFTER DESIGN

Note: The Consultant shall appoint a responsible member of the firm to be the contact person for all construction services. That person should be available until the end of construction to coordinate the following services.

Deliverables can be static reports and products, digital reports and products, and/or GIS data layers. The scope should be specific as to what type of deliverable is expected.

This list establishes the individual task responsibility. Those tasks identified as CDOT/Other should utilize an abbreviation system to indicate whether the task will be completed by CDOT or another agency (i.e. "C" for CDOT and abbreviations as provided below). The consultant shall maintain the ability to perform all work tasks which are indicated below by an 'X' in the consultant column, in accordance with the forms and conditions contained herein, and the applicable CDOT standards. Where appropriate, mark "N/A" for not applicable items.

\*Other Agency Abbreviations:

A. Other

	C D O T ( C ) / O t h e r *	Co ns ult an t	No t Ap pli ca ble
A. REVIEW OF SHOP DRAWINGS			
Review contractor shop and auxiliary drawings as directed by the CDOT/PM.	C	Х	
1. Maintain a log of all submittals which includes the following information:			
a. Submittal description	C	X	
b. Date received	C	Х	
c. Date transmitted back to the sender	C	Х	
2. The review of submittals shall be done by a licensed professional engineer			
who is acceptable to the CDOT/PM.	C	Х	
<ol> <li>Review Shop Drawings         Review the construction contractor's shop drawings for conformance and compliance with         the contract documents, the provisions of the current "Standard Specifications for         Road and Bridge Construction, and the period of work shown in the CDOT         specifications in conjunction with the contract work.     </li> </ol>	С	X	
B. CONSTRUCTION SERVICES			
When requested by the appropriate Program Manager, the Consultant shall provide the services described below			X
<ol> <li>Coordinate Schedule         Coordinate and evaluate contractor's construction schedule at start of construction and continuously throughout construction phase.     </li> </ol>			X
2. Provide field observation prior to, and on the day of, the following:	İ		X
a. Pile driving and/or caisson drilling			X

b. All major concrete pours			
c. Placement of girders			
d. Splicing of girders			
e. Post-tensioning duct and anchorage placement			
f. Post-tensioning operations			
3. Technical Assistance			
Provide technical assistance to CDOT project personnel on an as-needed basis. This service shall include, but not be limited to, the following:			
a. Respond to questions in the field that arise relative to the plans, details or			
special provisions	С	Х	
b. Review girder erection plan			
4. Report Submittal			
The following reports/submittals shall be maintained and submitted:			
a. Diary - A complete diary will be accomplished daily for each field observation activity.			
b. Documentation/justification - Changes/revisions/documentation justifying			
changes and/or revisions to plans and specifications			
c. Progress reports - Monthly progress reports will be submitted for the			
Consultant's activities.			
d. Calculations, drawings, and specifications as needed.			
e. Daily time sheets - This will be filled out daily on a form approved by the			
Project Engineer. This sheet will remain with the Project Engineer.			
ж			
C. POST DESIGN PLAN MODIFICATIONS			
1. When requested by the Program Manager through the CDOT/PM, the Consultant			
shall provide design services for plan modifications required by unforeseen field			
conditions.			
2. Revisions to PWQ CMs and drainage design should be performed by the			
Engineer of Record.		Х	
D. POST CONSTRUCTION SERVICES		Λ	
1. Final Earthwork or Interim Determination			
Compute the final or interim as-built earthwork quantities. This will include the required			
surveying, engineering technician, and computer support.			
2. "As-Built" Plans			
Redline the original plan set in a "track changes" manner so that design information is			
shown alongside as-constructed information.			
3. PWQ CM GIS Attribute Tables and Feature Classes			
Information shall be submitted that meets all the reporting requirements of the MS4			
Permit and the CDOT PWQ Program, including pond volume certification.			
4. Revisions to the Final Right-of-Way Plans			
Review the final Right-of-Way line to identify any excess property due to construction			
changes. Prepare Final Plan Revisions, including legal Descriptions of excess			
property			
5. Monument the Right-of-Way			
a. Reset all monuments referenced prior to construction that have been			
damaged or destroyed.			
÷			
b. Reset any control monuments disturbed or destroyed by construction that are			
b. Reset any control monuments disturbed or destroyed by construction that are necessary to set Right-of-Way monuments.			
<ul><li>b. Reset any control monuments disturbed or destroyed by construction that are necessary to set Right-of-Way monuments.</li><li>c. Set all new Right-of-Way monuments as shown on final plans (or reference</li></ul>			
b. Reset any control monuments disturbed or destroyed by construction that are necessary to set Right-of-Way monuments.			

7. Deposit ROW Plans		
A Record Plan Set updated for revisions and showing all monuments set subsequent to		
construction, must be signed and sealed by the Professional Land Surveyor		
responsible for the work. The Record Set must be deposited in the appropriate county		
office in accordance with CRS 38-50-101 and CRS 38-51-107. A copy of the		
deposited plan set must be delivered to the CDOT/PM.		Х
8. FEMA LOMR Submittal		
Prepare a Letter of Map Revision package and submit to FEMA after receiving approval		
from the community Floodplain Administrator. This LOMR shall be based on the		
P.L.S. certified as-built topographic information and corresponding modifications to		
the modeling and report that were submitted to FEMA for the CLOMR application		
for all work that will alter the regulatory floodplain or floodway, or as required by the		
local permitting agency's Floodplain Administrator.	Х	
9. Update Floodway No Rise Certification		
Stipulations for no rise in regulatory floodways often include as-built surveys,		
certifications, and other operational standards. Check project specials from CDOT		
and floodplain development permit stipulations from local agencies issuing the permit		
to determine what is required.	Х	
10. Water Rights Reporting		
Submit pond information to the water rights reporting website. Pond information		
submitted should reflect the as-built condition for pond volume and		
stage/storage/discharge relationships, and any other information requested by the		
water rights reporting website during upload.		
		Х

# SECTION 9 CONTRACT CONCLUSION (CHECKLIST)

#### 1. SUPPLEMENTAL WORK

It is anticipated that this contract may be supplemented for:

- A. Preliminary Design
- B. Final Design

C. Construction Services

D. Construction Engineering

E. Final Earthwork Determination

F. Completion of the "as built" plans, PWQ Operation and Maintenance Plan sheet and/or final ROW plans

## 2. CONTRACT COMPLETION

This Contract will be satisfied upon acceptance of the following items if applicable:

- A. Project Schedule
- B. Project Progress Meeting Minutes
- C. Traffic Control Plan(s)
- D. All documents found In Research
- F. All Permission to Enter Property forms
- G. Monumented & Surveyed Ground Control Diagram(s)
- H. Legally Deposited Control Survey Diagram(s)
- I. Digital TMOSS Data
- J. Photography Products
- K. Ownership Map
- L. Survey Report (including monument recovery forms)
- M. Monumented and Sealed ROW Plans
- N. Legally Deposited Survey Plans
- O. Legal Descriptions (Signed and Sealed)
- P. NOAA-NGS Blue Book
- Q. Completion of review of contract submittals
- R. Design Plans, Specifications, and Final Estimate
- S. All Environmental Permits
- T. All Environmental, Utility, and ROW Clearances
- U. Floodplain Report
- V. Hydraulic Design Report, including PWQ design (signed and sealed)
- W. Structural Report (signed and sealed)
- X. Geotechnical Report (signed and sealed)
- Y. Materials Report
- Z. Environmental Technical Resource Reports
- AA. Environmental NEPA Documents
- AB. Floodplain Development Permit & No Rise Documents
- AC. GIS shape files

# **TABLE 1 – SUBMITTALS**

Note: This list establishes the individual task responsibility. Those tasks identified as CDOT/Other should utilize an abbreviation system to indicate whether the task will be completed by CDOT or another agency (i.e. "C" for CDOT and abbreviations as provided below). The consultant shall maintain the ability to perform all work tasks which are indicated below by an 'X' in the consultant column, in accordance with the forms and conditions contained herein, and the applicable CDOT standards. Where appropriate, mark "N/A" for not applicable items.

- A. Manual for Railway Engineering
- B. Urban Storm Drainage Criteria Manual (MHFD, formerly UDFCD)
- C. Any appropriate local agencies references as appropriate

# APPENDIX B SPECIFIC DESIGN CRITERIA

# Note: The following criteria will be developed by the consultant and coordinated with the CDOT/PM prior to starting the design. The Consultant shall develop the CDOT Form 463 and insert a copy upon completion.

#### 1. <u>ROADWAY</u>

#### A. BASIC DESIGN

The basis for design will be the data in CDOT Form 463, Design Data. A copy of the latest applicable Design Data form will be furnished to the consultant.

#### B. GEOMETRIC AND STRUCTURE STANDARDS:

- a Design Speed, horizontal alignment, curvature, vertical alignment, sight distance and superelevation is specified in Form 463.
- b Use of Spirals [YES OR NO]
- c Passing Sight Distance
- d Decision Sight Distance
- e Frontage Roads, Separation Width
- f CDOT Access Code
- g Airway Highway Clearances Design Guide
- h Bridges and Grade Separation Structures, Clearances to Structures and Obstructions, CDOT Design Guide
- i Curb and Gutters, Type
- C. GEOMETRIC CROSS SECTION are as specified in Form 463
- D. INTERSECTIONS AT GRADE:
  - a. Type
  - b. Special Considerations

#### E. TRAFFIC INTERCHANGES:

- a. Type
- b. Ramp Type
- c. Special Considerations
- F. DESIGN OF PAVEMENT STRUCTURE:

- a. Pavement Type & Percent Trucks are as specified in Form 463
- b. Economic Analysis Period
- c. Design Life

## G. MISCELLANEOUS DESIGN CONSIDERATIONS:

- a. Fence Type
- b. FEMA Flood Zone
- c. Design Flood Frequency

# H. ROADSIDE DEVELOPMENT

- a. Landscaping
- b. Specifications for Revegetating Disturbed Areas to be provided by CDOT
- c. PWQ Design
- d. Noise Control
- e. Type
- f. Guardrail and End Treatments
- I. LIGHTING:
  - a. Type

# APPENDIX C DEFINITIONS

# Note: For other definitions and terms, refer to Section 101 of the CDOT Standard Specifications for Road and Bridge Construction and the CDOT Design Guide.

satisfactory completion of the
DOT Engineer responsible for
e design effort (as defined in
CDOT Engineer responsible for
vee directly responsible for the tract administration is usually this document). le for combining the various g the Consultant design effort.
se)

ESE	Economic, Social and Environmental
FEIS	Final Environmental Impact Statement
FEMA	Federal Emergency Management Agency
FHPG	Federal Aid Highway Policy Guide
FHWA	Federal Highway Administration
FIPI	Finding In Public Interest
FIR	Field Inspection Review
FONSI	Finding of No Significant Impact
FOR	Final Office Review
GIS	Geographic Information Systems
GPS	Global Positioning System
LA	Professional Landscape Architect registered in Colorado
MAJOR STRUCTURES MHFD	<ul> <li>Bridges and culverts with a total clear span length greater than twenty feet. This length is measured along the centerline of roadway for bridges and culverts, from abutment face to abutment face.</li> <li>Retaining structures are measured along the horizontal distance along the top of the wall. Structures with exposed heights at any section over five feet and total lengths greater than a hundred feet as well as overhead structures including (bridge signs, cantilevers and butterflies extending over traffic) are also considered major structures.</li> <li>Mile High Flood District (formerly UDFCD)</li> </ul>
MPO	Metropolitan Planning Organization (i.e. Denver Regional Council of Governments, Pikes Peak Area Council of Governments, Grand Junction MPO, Pueblo MPO, and North Front Range Council of Governments).
MS4	Municipal Separate Storm Sewer System
NEPA	National Environmental Policy Act
NFIP	National Flood Insurance Program
NGS	National Geodetic Survey
NICET	National Institute for Certification in Technology
NOAA	National Oceanic and Atmospheric Administration
PAPER SIZES	See Computer-Aided Drafting Manual(CDOT); Table 6-13 and Table 8-1
PE	Professional Engineer registered in Colorado
PM	Program Manager
PLS	Professional Land Surveyor registered in Colorado
PRT	Project Review Team
PS&E	Plans, Specifications and Estimate
PROJECT	The work defined by this scope
PWQ CM	Permanent Water Quality Control Measure
ROR	Region Office Review
ROW	Right-of-Way: A general term denoting land, property, or interest therein, usually in a strip acquired for or devoted to a highway
ROWPR	Right-of-Way Plan Review
RTD	Regional Transportation Director
T/E	Threatened and/or Endangered Species
SFHA	Special Flood Hazard Area
SH	State Highway Numbers
TMOSS	Terrain Modeling Survey System
TOPOGRAPHY	In the context of CDOT plans, topography normally refers to existing cultural or manmade details.
USACE	United States Army Corp of Engineers
