**LEGEND**

- **H** = Maximum Allowable Height of Cover over the top of the pipe, excluding pavement thickness.

**Fill Heights** are based on AASHTO M304 Polyvinyl Chloride (PVC) pipe with outer, ribbed wall and smooth inner wall, and on AASHTO T180 Minimum Relative Compaction of 95% or 90%.

Fill heights for installation with high water table require a special design. The maximum height in high water locations should be 15 feet or based on AASHTO LRFD design specifications.

**Minimum Cover** shall be as shown on these tables or conform to AASHTO requirements, whichever is greater.

**Minimum Cover** for pipe is measured from the top of the pipe to the bottom of the pavement: HMA or PCCP. **Minimum Cover** is measured from the top of the pipe to the top of the subgrade during construction.

**Minimum Cover** is based on dual axle loads up to 50,000 pounds.

**L1** = Length of pipe to be measured when placed in accordance with Section 624.

**L2** = Length of pipe to be measured when placed in accordance with Section 603.

**GENERAL NOTES**

1. All pipes shall meet the requirements of AASHTO M304 for Polyvinyl Chloride (PVC) profile wall drain pipe with 46 PSI wall stiffness per ASTM F949.

2. For pipes with diameters of 15 inches or less, solid wall PVC pipes meeting AASHTO M278 may be used.

3. When a pipe is to be extended, the same pipe material and size as in the original installation shall be used.

4. Minimum cover shall be provided during construction to protect the pipe from damage.

5. When installing a guardrail or a sign post directly above a pipe, the post's bottom must be at least 1 foot above the top of the pipe. The hole for the post shall be drilled into the soil.

7. For pipes 24 inches or less in diameter, **H Min.** may be reduced to one foot for low volume approach roads not on state highways.
