

Bulk Cell Rotation from Line

Setup:

NOTE: Setup is a one-time process. If functionality is already set up skip to **Using the Functionality** section below.

1. Place the provided **ROTCELL.MVBA** in the folder where the variable **MS_VBASEARCHDIRECTORIES** points to.
2. Create a custom button in the interface and enter the key in **VBA RUN [ROTCELL]modMain.Start**. The button can be created anywhere in the interface. (You can also run from the key in browser) To create a button right click on any ribbon and select customized. Here is an example of the Customize Ribbon interface.

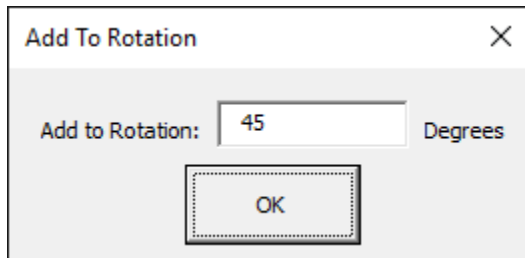

Using the Functionality:

To Rotate cells relative to a line

1. Make a selection set of the cells you want to rotate.
2. Start the command.

3. When the Add To Rotation dialog appears key in the value to add to the rotation. Select OK.
- 4.

NOTE: The Add To Rotation is applied after a cell has been rotated to the line. Use zero (0) to add no additional rotation.

5. Select and Accept the alignment you want to rotate the cells to.
