GENERAL NOTES

1. Wood picket fence, continuing to the right, shall be spaced 20' apart and securely fastened to all posts with 12-gauge galvanized steel line ties or 3/8" gage galvanized steel wire ties.

2. All fence posts complete with anchor plates shall be set into the ground at least 12" below ground level. Anchor plates shall be securely fastened to each post and shall be the same size as the post.

3. In general, wood fence shall be placed at least 25 feet from the edge of roadway. However, the specific location on each project will be shown on the plans or as determined by the District.

4. Snow fence may be placed immediately in front of the right of way fence on the highway side when such location is suitable. This will give protection of need and help between the fence. In such installations, the snow fence shall not be tied or fastened to the right of way fence.

5. Fence shall be securely braced at each end post with a regular line post and diagonal cable consisting of 2 strands of twisted wire. Each strand to consist of two 1/4" gage galvanized wire ties.

6. Line brace posts shall be installed every 40' plus 10' where the fencing is continuous and shall not be placed for separate poles or poles in the area.

7. Two horizontal wires shall be strung behind the pickets for the full length of the fence, each horizontal wire shall consist of two 3/4" twisted, galvanized wire, each horizontal wire shall be fastened securely to each fence post by means of 12-gauge wire clamps or 3/8" gage galvanized wire ties.
