- ❖ Revise §8.05.2 to state “If the Commission determines, by resolution, the requirements of Rule 8.02.5 have not been met, the Commission shall restrict the use of all CMAQ, STBG, and 10-Year Plan funds anticipated to be expended on Regionally Significant Projects in the area funds pursuant to Rules 8.02.5.1.1 or 8.02.5.1.2, as applicable, to projects and approved GHG Mitigation Measures that reduce GHG. This clarification is necessary so that these funds are only fully restricted if compliance is not demonstrated under §8.02.5 are not met. If, however, the MPO demonstrates that it is using some CMAQ and/or STBG funds on mitigation measures as necessary to achieve the GHG reduction levels, then there should be no further restriction on the remaining funds.
- ❖ Revise §8.05.2 to state “~~Prior to the enforcement of such restriction, an~~ An MPO in a Metropolitan Planning Area, or CDOT and/or a TPR in a non-MPO outside a Metropolitan Planning Area area, may, within ~~thirty~~ sixty (3060) days of Commission action, ~~issue one or both of the following opportunities to seek a waiver or to ask for reconsideration as provided for in Rule 8.05.2.1 or Rule 8.05.2.2. Enforcement of such restriction shall not begin until the Commission has taken action on such requests under Rule 8.05.2.3. accompanied by an opportunity to submit additional information.”~~

The language in §8.05.2 is unclear about whether CDOT on its own can seek a waiver for a project within an MPO area. We believe the intent is that waiver requests for projects within MPO areas must go through the MPO process prior to submittal. We also believe that 60 days is a more appropriate timeframe in which an MPO can deliberate and decide whether to seek a waiver or reconsideration.

- ❖ Revise §8.05.2.1 to state “Request a waiver from the Commission imposing restrictions on specific Regionally Significant projects not expected to reduce GHG emissions. The Commission may waive the restrictions on specific projects on the following basis:”

The Rule as written requires a waiver for any “specific project not expected to reduce GHG emissions” (e.g., safety, operations, reconstruction, multimodal corridor planning, TDM, etc.). MPOs should not be required to seek a waiver from the Transportation Commission to invest federal CMAQ or STBG funds in otherwise eligible projects or programs that are not regionally significant, would not have an adverse impact on GHG emissions, and are important for the MPO to achieve other important transportation objectives.
- ❖ The Rule should either clarify the meaning of “substantial increase” in §8.05.2.1.2 or CDOT and the Transportation Commission should provide guidance that clarifies how “substantial increase” will be evaluated when considering waiver requests.

The term “substantial increase” is vague. The Rule or guidance should provide clearer direction to ensure fair and equitable evaluation of waiver requests.
- ❖ In §8.05.2.3, strike “If no action is taken within this time period, the waiver or reconsideration request shall be deemed to be denied.”

The full consideration of these requests should be documented and acted upon by the Transportation Commission through a vote on the record. A default denial of a request should not be the result of no action by the Commission.

DRCOG appreciates the state’s leadership in addressing climate change and air quality challenges. We also want to thank CDOT staff for the outreach efforts to the MPOs during the development of this proposed rule.

DRCOG acknowledges that meeting the ambitious targets set by the rule is predicated on a partnership with the state on several critical issues that are largely outside of an MPO’s authority to directly implement. The feasibility of achieving the targets will require the state to take meaningful action through supportive policies and direct funding within the DRCOG region to fully achieve the desired GHG reductions. We stand ready to continue working with the state to identify and implement relevant policies and funding initiatives.

Respectfully,

c

Dear Commissioners,

Le escribo para agradecerle por escuchar los comentarios comunitarios sobre el borrador actualizado del Estándar de Contaminación de Gase de Efecto Invernadero, y para pedirle que tome más medida al respecto

La reducción de las emisiones de gases de efecto invernadero beneficiaría a todos, pero según la política actual, es posible que esos beneficios no se distribuyan por igual. Los latinos, negros, indígenas y otras personas de color son los más afectados por la emisión del transporte y otra fuente de contaminación. Esta comunidad merecen fondos dedicados en todos los planes de mitigación. Al garantizar proyectos de transporte limpio en estas comunidades, la Comisión puede dar un paso significativo hacia la justicia ambiental para todos los habitantes de Colorado.

Gracias por su arduo trabajo y liderazgo

I am writing to thank you for listening to community input in your updated draft of the Greenhouse Gas Pollution Standard, and to urge you to take further action.

Reducing greenhouse gas emissions will benefit everyone, but under the current policy, those benefits may not be distributed equally. Latinx, Black, Indigenous, and other people of color are hurt worst by transportation emissions as well as other sources of pollution. These communities deserve a dedicated dollar carveout in all mitigation plans. By ensuring clean transportation projects in these communities, the Commission can take a significant step toward environmental justice for all Coloradans.

Thank you for your hard work and leadership.

CMCA Comments on Revised GHG Rule - 11-10-2021.pdf  
267K

**November 10, 2021**

Executive Director Shoshana Lew  
and Colorado Transp. Commissioners  
Colorado Dept. of Transportation  
2829 W Howard Pl  
Denver, CO 80204

**Dear Director Lew and Colorado Transportation Commission:**

Thank you for the opportunity to submit comments on the proposed revision to the Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions which identifies a process for addressing greenhouse gas (GHG) emissions and sets GHG standards for transportation plans. The Colorado Motor Carriers Association represents over 650 companies directly involved or affiliated with trucking in Colorado today. Over 115,000 people are employed in trucking related industries and our industry transports 84% of the state's manufactured freight.

**Introduction**

We would be remiss if we did not mention the bleak state of our supply chain within the country today. Over the last year our country has gone from one where there was an abundance of products in our stores and wide variety of different brands, to one where we are in many cases seeing shortages and limited choice in what we can buy. We now are being placed on waiting lists for items and goods. Further, where we once could obtain many items in 24 to 48 hours, there is little guarantee when we may receive certain products.

A major factor that has contributed to our supply chain problems is our aging and inadequate infrastructure where both on a federal and state level we have failed to make critical investments and improvements. This has led to various bottlenecks for freight throughout the country where trucks may be stuck in traffic or travel at a snail's pace either because of congestion or the deplorable condition of the highway or bridges. These bottlenecks exacerbate the problems now being encountered with our supply chain leading to even greater delays and higher costs for goods.

Both our State Legislature and Congress recognized the immense problems with our infrastructure, and both should be commended for passing major funding measures which hopefully will alleviate some of these bottlenecks. While the passage of those measures is good news, the reality is that those bottlenecks will remain until those critical highway and

bridge projects move forward.

It is critical as we look at these rules as well as others that we be sensitive to not inadvertently create additional hurdles or excessive delays to many of the critical highway and bridge improvements that are identified within CDOT's Ten Year Plan. Moving forward with those improvements is critical to addressing our supply chain problems not only for today but the future and will contribute to the well-being of the state.

### **Comments and Suggested Changes to the Rules**

First, we wish to commend CDOT and its staff on the work to date on the rules. We believe several of the changes to the earlier draft were constructive. Below are our comments and suggested changes to the rules for consideration.

### **Tracking and Reporting**

In the preamble for these rules, it notes as follows:

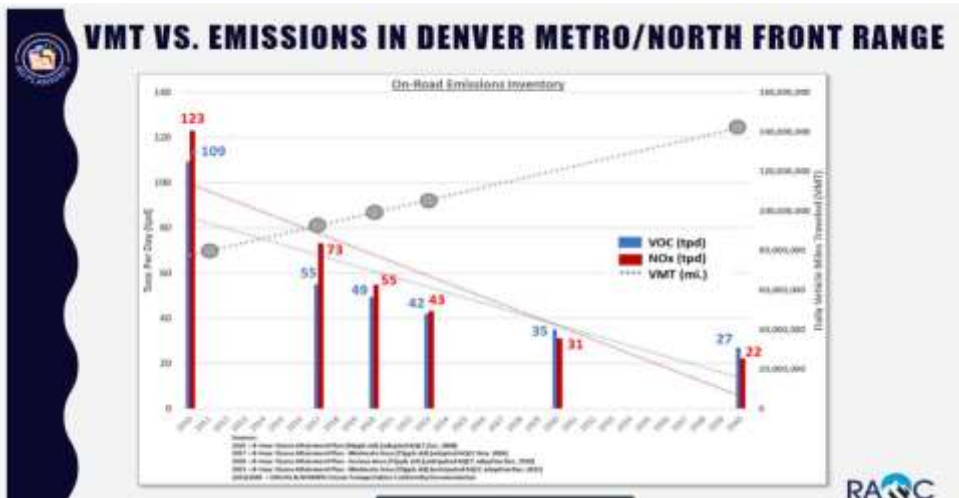

Section 8 of these rules establishes Greenhouse Gas (GHG) pollution reduction planning levels for transportation that will improve air quality, reduce smog, and provide more sustainable options for travelers across Colorado. The purpose of these requirements is to limit the GHG pollution and provide more transportation mobility options.

Vehicle Miles Traveled (VMT) is not mentioned in the Statement of Basis and Purpose for the Rules nor the Preamble to the Rules. The statement of basis and purpose of rules tends to reflect the parameters for rules and the fact that there is no reference to VMT implies that it was not a major consideration during the original drafting of the rules.

The revised draft rule now includes tracking and reporting of vehicle miles traveled (VMT) as can be seen in sections Section 8. Section 8.06.2 calls for the creation of an annual VMT report. Including total VMT per capita within the MPO areas and statewide for the past calendar year. Section 8.06.2.1 in the revised rule is disconcerting in that it states as follows:

*If three consecutive years of reports demonstrate no decrease in VMT per capita in one or more areas, the Commission shall consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this rule.*

Inclusion of VMT in the revised rule assumes that there is a direct correlation between VMT and GHG, where an increase in VMT would translate into an increase in GHG and other emissions. While this may have been true in years past that no longer is the case. An increase in VMT does not necessarily translate into an increase in GHG. As may be seen in the charts below (which were prepared by the RAQC), they reflect that while VMT in the Denver Metro Region grew by over 25% over the past 10 years, while daily VOC and NOx emissions dropped by almost 50%.

Much of this reduction in VOCs and NOx is attributable to the turnover of the overall vehicle inventory in the region where older, higher-emitting vehicles were replaced with newer, lower-emitting ones. In addition, cleaner fuels also contributed to those reductions. Both of those trends are continuing which should point to lower emissions on a per capita basis than in the past. As a result, the relationship between GHG and VMT is becoming less and less relevant. Based on this trend, we could have a continuing increase in VMT while at the same time seeing a significant drop in GHG and meet the desired objective under the rules.

Including a data element such as VMT which is becoming less and less an indicator of emission levels and then linking possible reconsideration of the GHG rules if that data

element fails to drop, is nonsensical based on recent trends. Further the tracking and reporting of VMT presents the appearance that the State is seeking to employ the rule for other purposes beyond GHG reduction, which are outside the boundaries of these rules and should be considered in another forum.

We request that the annual report on VMT be stricken along with the provision for a reconsideration after three years if there has not been a decrease in VMT. Our reasons and arguments supporting the removal of references to VMT are below.

Regarding reporting, the revised draft also makes changes to the reporting requirement on statewide GHG reduction accomplishments which had been every three years versus five years in the revised draft. In addition, the revised rules indicate that this report is to be presented not only to the Transportation Commission, the authorizing body for these rules, but the Air Quality Control Commission. We question both the change in timeline for the report as well as a requirement that it be presented to the AQCC. Having such language in the rules implies some sort of approval by the AQCC which was not included in SB 260. If this is not the case, why include this language? We would anticipate that CDOT may present this report to various groups including MPOs and TPRs as well as trade groups such as ours. Realizing that SB 260 was very clear in designating that the Transportation Commission was the body charged with promulgating this rule and CDOT is the agency identified to administer this rule. Adding such language related to the AQCC confuses the matter as to who is the authorizing body for these rules.

### **Greenhouse Gas Reduction Targets**

We recognize that the purpose of this rule and the intent of the Legislature was to balance transportation improvements while not adding to the problem related to greenhouse gas emissions. We do believe that the suggested reduction levels of CO<sub>2</sub> as shown on Page 26 appear to be ambitious and attaining those reductions especially in earlier years may prove very difficult. We would suggest that these proposed reductions be reconsidered.

### **Inclusion of Additional GHG Mitigation Measures**

#### **Scrappage and Replacement of Older, High Emitting Vehicles of Residents Adjacent to Major Highway Projects**

The greatest reduction in emissions and GHG over the years has been due to the “greening” of the overall inventory of vehicles in the country. Newer vehicles emit far less due to modern emission control systems as well as being much more fuel efficient. A newer vehicle emits at least 25% less GHG emissions than one of 10 years ago. In addition, the newer vehicles are safer because of the additional safety improvements made to vehicles over the years.

As we look at GHG reduction strategies associated with a specific highway improvement, it is important that we recognize that a high percentage of the users and trips on that highway today are made by individuals living adjacent to and proximate to the roadway. The highway not only serves as a means for them to commute longer distances for work (in many cases where transit service is unavailable), shopping or recreation. It also serves as a form of a neighborhood roadway linking different parts of a neighborhood or community together as well as adjacent areas. In many cases the highway tends to be the most direct and fastest way for such local trips. While these trips may be short in distance, the overall volume of trips over the course of the year may be substantial.

Many of the residents living proximate or adjacent to major highways may be lower income individuals living within disadvantaged areas. These individuals tend to own older vehicles which are higher emitting and have a greater GHG footprint than a newer car. Recognizing this, we would suggest that the GHG rule include a mitigation measure whereby financial assistance be available to residents with vehicles that are 10 years or older to obtain a newer, lower emitting vehicle with the older vehicle being scrapped. This action would not only reduce GHG and other emissions but also enhance safety. This strategy would greatly reduce GHG and other emissions and remove permanently some of our oldest and highest emitting vehicles from our roadways. This strategy also allows those in lower income areas greater mobility and enhanced safety while leading to a substantial emission reduction.

Heavier industry and commercial developments tend to be proximate to highways because of the access it provides them. Because of their operations next to the highway, those businesses receive and ship products by truck daily. Like the removal of older cars, the scrapping and replacement of older diesel trucks with newer, cleaner trucks is a strategy that may substantially reduce GHG and other emissions in a low cost and efficient manner. Providing grant funds to help companies in these areas offset some of the cost of a newer vehicle should be considered. As can be seen in the chart below, 75% of the diesel on-road emissions are generated by 25% of the vehicles which are older units.

In addition, another strategy that should be added is diesel roadside emission testing whereby visible high emitting vehicles in the corridor may be flagged and tested. If the vehicle is shown to exceed emission levels, the owner would be required to make improvements within 30 days.

**1) Last Mile Strategies**

We would encourage a mitigation strategy including certain last mile action for freight. The addition of more freight-only loading zones would reduce package vehicles from excessive circling of blocks to find a parking space and curb double parking which adversely affects safety and mobility. Concepts such as smart parking where fleets could reserve a space ahead of time to make deliveries more efficient and reduce overall travel and idling. The concept of freight lockers in major buildings and stores, rather than having a delivery truck travel through the entire neighborhood would also reduce travel and idling.

**Closing Remarks**

CMCA wishes to express our appreciation to CDOT for engaging us and various other stakeholders in this process and allowing us the opportunity to present our concerns. We look forward to continuing to workwithand collaboratewith CDOT staff in the development of this rulemaking and in subsequent implementation efforts.

Sincerely,

President  
Colorado Motor Carriers Association

## feedback comment on GHG Proposed Rules

1 message

Wed, Nov 10, 2021 at 4:27 PM

[REDACTED]  
to: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

As a resident of Jefferson County as well as a community social worker for over 20 years here in metro Denver, I appreciate the opportunity that CDOT is giving us. It is the only way that we will be able to create and sustain the changes that will help us achieve our goals.

I personally have several friends that have lived here for decades, who have to move due to the harmful air quality causing respiratory illnesses. That is devastating, but they are the fortunate ones, to have the resources to be able to move.

1. the draft rules actually fall short by almost 2 million metric tons
2. while the revision was made to 3 years for evaluation of progress, this is just not often enough. A comprehensive evaluation process needs to have a stringent and consistent process that would be responsively responsive to areas that indicate a lag or ineffectiveness that needs to be modified in time enough to achieve GHG reductions
3. Creative multi-modal strategies need to be part of the implementation process that is inclusive of the county and interested/relevant parties that can mobilize resources that exist in the community. The funds for these strategies that are earmarked for DI populations need to be directly benefitting communities' health, such as neighborhood electric transit support such as neighborhood vans that rotate locations but geared towards citizens having improved access to healthy food and health services. These community transit support that is more localized can strengthen a cohesive community and create more safe and healthy neighborhoods.
4. Single vehicle use mitigation does need to be outlined to reduce VMT even though some of the folks on the hearing disagree that vehicles contribute to GHG. Even if the mileage has improved in fossil fuel vehicles, the fact is that these automobiles contribute greatly to our problem.
5. It is not efficient to expand highways. The infrastructure funds that will come from the federal government can shore up our roads and bridges. Putting resources into solutions that created the problem is not a solution. NOW is the time to do it RIGHT. Bold, now, there is no choice but for CDOT to garner all the passion and purpose you all have shown in your careers into really making a difference.

Thank you.

Dear CDOT,

As an Indigenous Mom and community member. Transportation is necessary for our Communities and the state shouldn't leave the burden of cost to be the reason to not act on EV transitioning for Communities.

These transitions will need the support of industry polluters and state and federal funding to get EV Transportation going. We need Clean trucks and they need subsidies for these transitions.

Communities don't need more burden added to an already unjust system. Penalties on workers and commuters is not the solution. We need an equitable solution and are Communities need subsidies to get us to net zero.

We need CDOT to fund public transportation and support EV public transit for at least 5 years before adjusting for fare price. Free transit for 5 years would put us on a path that ensures increased ridership.

Colorado is continuing to see our communities grow with each year we're seeing 1.5 million transients. Unjust registration emissions standards is not the solution to get us to reduce GHG emissions nor will it encourage drivers to drive EVs.

Free public transit will encourage public participation in ridership. Offering 5 year pilot plan would help shape routes and routines. But we need a state program that works with communities.

We cannot separate communities anymore but we must get cities to work together on public transportation and access.

CDOT you can do a lot more to reduce GHG emissions. Fund and support EV public transit for communities and decrease traffic congestions.

Thank you for your time and please be bold for Climate Action.

CC4CA CDOT GHG proposal Comments Part 2 2021-11-11.pdf  
254K

November 11, 2021

CDOT Transportation Commission  
CDOT Headquarters 2829 W.  
Howard Pl.  
Denver, CO 80204

Dear Commissioners:

Thank you for the continued opportunity to provide public comments to the Transportation Commission on the proposed changes to the *Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions*, containing the Greenhouse Gas Transportation Planning Standard, proposed on August 13, 2021 and revised on October 19, 2021. Colorado Communities for Climate Action (CC4CA) previously submitted initial comments on the proposal on August 31, 2021. These comments respond to the recent revisions and focus on the key remaining issues that should be resolved.

This rule is one critical action for Colorado to tackle the climate crisis and to fulfill the equity intent of HB19-1261 and SB21-260. Additionally, the estimated cost savings for Coloradans from adoption of this rule are enormous. The cost savings are conservatively estimated at a stunning \$9.4 billion by 2030, and a total of \$40.3 billion by 2050, which takes into account the social cost of carbon.<sup>1</sup> Due to the revised proposal and conversations with the Colorado Department of Transportation (CDOT) since the last CC4CA comment letter that clarified some of our questions and positions on the proposed rule, we now have the following major comments: 1) Equity is currently not served by the proposal because quantified benefits to disproportionately impacted communities are not effectively prioritized in rule language, and greenhouse gas (GHG) reduction measures should be included as part of the compliance demonstration for transportation plans; 2) Implementation of GHG mitigation measures should not be optional after failure to demonstrate compliance with the GHG targets; 3) A waiver process could increase GHGs and inequity and should not be allowed except for GHG neutral projects; 4) The GHG budgets need to be strengthened and should apply across Colorado; and 5) Vehicle miles traveled (VMT) per capita reductions are critical.

### **The Proposed Rule Does Not Prioritize Disproportionately Impacted Communities in the Primary Planning Demonstration and Mitigation Measure Approaches are Inadequate**

This GHG planning standard represents one of Colorado's best opportunities to simultaneously tackle our largest source of GHGs and to address longstanding inequities affecting communities

---

<sup>1</sup> CDOT, Cost-Benefit Analysis for Rules Governing Statewide Transportation Planning, August 31, 2021, p. 3, Table 2.

disproportionately impacted by climate change. Statutory requirements from HB19-1261, HB21-1266, and SB21-260 clearly intend, as Colorado’s GHG Roadmap reinforces, that regulatory bodies implementing GHG reduction rules are required to “prioritize and direct the benefits of regulatory compliance, including economic, health, environmental, and resiliency benefits, to disproportionately impacted communities.”<sup>2</sup> This requirement is also called out in the Climate Equity Framework among its key principles: “Principle 2: Prioritizing Benefits – For GHG reduction strategies with the potential to provide benefits to individuals or communities, disproportionately impacted communities should be prioritized. Intentionally investing in these communities, while actively reducing harms to them is critical to equitable climate action.”<sup>3</sup> Despite the repositioning of this rule to the Transportation Commission (TC) from its original purview at the Colorado Air Quality Control Commission (AQCC), it’s clear the requirement to prioritize disproportionately impacted (“DI”) communities should and does still apply. Further, within SB21-260, the legislative declaration at Section 1(b)(IV) defines a sustainable transportation system as one that “Addresses inequities in transportation access and the increased exposure to transportation-related air pollution for communities, including disproportionately impacted communities, communities near major roadways, and, as documented in multiple peer-reviewed scientific studies, communities where many of the residents are Black or Hispanic” Further, the SB21-260 legislative declaration at 43-1-128(1)(c) C.R.S. states:

“To minimize the adverse environmental and health impacts of planned transportation capacity projects and address inequitable distribution of the burdens of such projects, it is necessary, appropriate, and in the best interests of the state and all Coloradans to require the department and metropolitan planning organizations, which are the state’s primary transportation planning entities with responsibility for selecting and funding transportation capacity projects, to engage in an enhanced level of planning, modeling and other analysis, community engagement, and monitoring with respect to such projects.”

We interpret this to apply to the CDOT and Metropolitan Planning Organization’s (MPO’s) initial planning demonstrations through their Statewide Transportation Improvement Programs (STIPs) and Transportation Improvement Program (TIPs) as well as to any mitigation for unmet required reductions.

In its proposed rule, however, CDOT makes no effective quantitative commitment of benefits or investment to DI communities, nor any up-front provisions to avoid further harm from capacity projects that would increase traffic and necessitate mitigation. Most references to DI communities are in the *Preamble for 2021 Rulemaking* rather than in the enforceable rule. In its recent changes to its *Preamble*, CDOT appropriately reflects that the “ongoing administrative process ... for selecting, measuring, confirming and verifying GHG Mitigation Measures ... shall include ... how CDOT and MPOs should ... measure and prioritize localized benefitsimpacts [sic] to communities and Disproportionately Impacted Communities in particular” (Section 8.02.4) but this intention is not borne out in the rule. To “prioritize” DI communities requires using that word in the sense of “prior-” or “first.” The CDOT proposed rule uses this sense of “priority” in “Four-Year Prioritized Plan” (Section 1.16 – “projects prioritized for near-term delivery and partial or full funding”) but it does not prioritize DI communities in the same way. Instead, most of the specific provisions for DI communities are deferred to the Mitigation Measures, as if CDOT is anticipating the primary projects

---

<sup>2</sup> Colorado GHG Pollution Reduction Roadmap Final Report 2021, p15, available at <https://energyoffice.colorado.gov/climate-energy/ghg-pollution-reduction-roadmap>

<sup>3</sup> Climate Equity Framework, 2021, p.6, available at <https://cdphe.colorado.gov/air-pollution/climate-change>

from the rule will not achieve the GHG reductions and will in fact need to make amends in the DI communities further damaged by some of these projects. This is opposite the intent of “prioritizing” these communities. To prioritize DI communities, the initial TIP planning demonstration needs to contain upfront commitments to pollution reduction and financial investment in projects that reduce VMT in and around these communities while providing pollution-free alternatives to driving, among other options currently deferred to the Mitigation Measures in Section 8.03.

We believe one remedy would be for some of the language added to the proposed rule’s *Preamble for 2021 Rulemaking*, in particular the language under the *Purpose of GHG Mitigation Measures*, to be added to the rule itself instead of the Preamble. The most critical example is that the revised Preamble language states that, “Additionally, the following core principles will guide the selection and delivery of mitigations:

- **Valuing Benefits to Disproportionately Impacted Communities:** Historically, communities have been impacted unequally by transportation project construction. Negative impacts -- both to air quality by virtue of proximity to highways as well as limited non-driving options in neighborhoods proximate to highways -- have often concentrated in disproportionately impacted communities, often minority neighborhoods in urban and industrial areas. To that end, mitigation investments are an important opportunity to provide localized benefit to disproportionately impacted communities.
- **Geographic Nexus with Impacts:** Where regionally significant projects are projected to increase net greenhouse gas emissions, those emissions should be offset with project-specific mitigation measures that benefit communities that will be impacted by the project. This principle is especially important for ensuring that disproportionately impacted communities that have often, historically, borne a significant share of the negative impacts of highway projects, are able to achieve direct project benefits associated with meeting mitigation requirements.”<sup>4</sup>

The inclusion of this language in the Preamble is a welcome acknowledgement, but this language needs to be operationalized, with quantified expectations of VMT-reducing projects, in the actual rule as well. Section 4.06.1.9 under *Statewide Transportation Plan (STP)*, adds new language to require that STPs, “Include an analysis of impacts on Disproportionately Impacted Communities.” CC4CA supports this addition for the reporting process. But we have several suggested edits to rule language that would more effectively prioritize DI communities. Those suggestions are (black text is from CDOT’s proposal, red text is suggested language):

- To assist in quantifying benefits to local communities, we note that other rulemakings at the AQCC have adopted (Greenhouse Gas Emissions and Energy Management and Audit Program for Manufacturing (GEMM) Phase 1) or proposed (Regulations 7 and 22 for Oil and Gas) definitions of “harmful air pollutants” and “co-benefits” to be realized by communities when these harmful air pollutants are reduced. For consistency across GHG rules, and to ensure co-benefits can be called out, quantified, and effectively prioritized, we would urge CDOT to mirror these definitions and tie them to emissions analysis, reporting, and mitigation strategies (we have indicated a few of the places these defined terms would be substituted in the further suggestions below):

---

<sup>4</sup> CDOT Proposed Rule, p. 6.

1.06 “Co-benefits” means the additional benefits associated with the reduction of harmful air pollution to local communities, including localized air quality benefits

1.21 “Harmful air pollutant” means pollutants designated by EPA as criteria air pollutants (carbon monoxide, lead, nitrogen dioxide, ozone, particulate pollution (PM) (PM<sub>2.5</sub> and PM<sub>10</sub>), and sulfur dioxide), or hazardous air pollutants.

4.06.1.9 Include an analysis of ~~impacts~~ harmful air pollutants and co-benefits in ~~on~~ Disproportionately impacted Communities.

8.02.4 By April 1, 2022, CDOT in consultation with the MPOs shall establish ... Such a process and guidelines shall include, but not be limited to, how CDOT and MPOs should determine the relative ~~benefits impacts~~ co-benefits of GHG Mitigation Measures, and measure and prioritize localized ~~benefits impacts~~ co-benefits to communities and Disproportionately Impacted Communities in particular. The mitigation credit awarded to a specific solution shall consider both aggregate and community ~~co-benefits impact~~.

8.02.6.3.3 Quantification of specific co-benefits ~~where feasible~~ including reduction of ~~harmful air pollutants co-pollutants (PM<sub>2.5</sub>, NO<sub>x</sub>, etc.)~~ as well as travel impacts (changes to VMT, pedestrian/bike use, transit ridership numbers, etc. as applicable).

- CC4CA suggests that new language be added to Section 8.02 (as a new Section 8.02.4) reflect the language in the Preamble addressing the *Geographic Nexus with Impacts* (“Where regionally significant projects are projected to increase net greenhouse gas emissions, those emissions should be offset with project-specific mitigation measures that benefit communities that will be impacted by the project.”) that would guarantee that 100% of project impacts are offset. New language would read:

8.02.4 The localized GHG mitigation co-benefits must be commensurate with the localized harmful air pollution impacts of highway capacity projects.

- Section 8.02.4 calls for localized benefits to be prioritized in the mitigation measures policy, but this should be required under the rule rather than conditional in the Mitigation Measures policy. To rectify this, we suggest adding a new Section 8.02.6.3 to 8.02.6 *Demonstrating Compliance* (and the existing Section 8.02.6.3 would change to 8.02.6.4) that reads:

8.02.6.3 An analysis of harmful air pollutant emissions and co-benefits showing how projects that reduce emissions were prioritized in Disproportionately Impacted Communities and how project-specific emissions reduction measures benefitted communities that were impacted by projects. This analysis must incorporate an evaluation of the level of community engagement in proposed projects and expected effect on Disproportionately Impacted Communities, including but not limited to answers to the “key questions” posed by Colorado’s Climate Equity Framework or a commensurate framework that may succeed it.

- Section 8.02.6.3 (the section that CC4CA suggests should be 8.02.6.4) includes a list of requirements for the Mitigation Action Plan, but to ensure a minimum level of GHG mitigation

investment in DI communities, the rule should guarantee a proportionate amount of benefits in these communities. New language should be added to this section as follows:

8.02.6.3.4 Description of benefits to Disproportionately Impacted Communities **and a demonstration that the percentage of total investment for GHG mitigation measures in these communities was at least equivalent to the percentage of residents living in Disproportionately Impacted Communities within each MPO region. Colorado’s Data Viewer for Disproportionately Impacted Communities should be used to retrieve this data, and the Colorado EnviroScreen tool currently being developed should take over this function when complete. For transportation projects that span multiple communities, CDOT or the MPO shall calculate the percentage of the project investment located within each community when determining compliance with the investment requirement.**

All the proposed rules’ DI community provisions are currently under the GHG Mitigation Measures remedy; however, in order to actually *prioritize* DI communities, all of CC4CA’s recommendations would be more effective if applied to measures that prevented harm rather than mitigated it and that directed investment and benefits from the outset. We believe that these provisions should apply in the initial planning demonstration before a failure to meet goals is found and “Mitigation Measures are needed ... [and] the MPO or CDOT shall submit a Mitigation Action Plan”- which is not guaranteed, and which according to the circular logic of 8.02.6, is “at the discretion of the MPO or CDOT.” The current language does not provide the needed assurance that this GHG planning standard will direct benefits to DI communities, so we urge the Commission to advance our recommendations to the initial demonstration, together with firm commitments of investment in projects that improve access to clean transportation and do not increase GHGs or pollution. Colorado Energy Office Director Will Toor reiterated as recently as November 6<sup>th</sup> that “[the proposed] GHG pollution standard ... will require state and regional transportation plans to shift funding towards public transit and walkable, bikeable communities.”<sup>5</sup> We are concerned that we don’t currently see the commitments to this shift in the proposed rule. While we are pleased to see the list of GHG Mitigation Measures (Section 8.03) that could fulfill this obligation, we believe it is misplaced as an antidote to unmet reductions and should be a principal toolkit for primary reductions, which is why we suggested the new Section 8.02.6.3 above.

Adding to our concern with the proposed approach to mitigating GHG reduction failures is our assessment that the measures proposed will not be enough to fill the gaps, either in GHG or other air pollution reductions. This is yet another reason that VMT-reducing projects that have the greatest potential to improve conditions in DI communities should come in the primary planning demonstration, where they can be weighed fairly with these benefits against projects that would increase capacity, VMT, GHGs, and air pollution. While the proposed rule attempts to amend capacity projects with Mitigation Measures, we are dubious that these measures can make up for the GHG increases or the further damage to communities that have been in put in harm’s way for generations. It’s time to recognize that increasing capacity, and the induced demand that accompanies it, is not reconcilable with our equity or our GHG goals. An approach that fully and fairly accounts for co-benefits from VMT reductions at the initial planning stage is the best way to meet our obligations to disproportionately impacted communities while meeting our GHG goals.

---

<sup>5</sup> Guest Opinion: Will Toor: There’s a lot being done in Colorado to address climate crisis  
<https://www.dailycamera.com/2021/11/06/guest-opinion-will-toor-theres-a-lot-being-done-in-colorado-to-address-climate-crisis/>

We understand that CDOT is assembling an environmental justice and equity branch pursuant to SB21-260 (43-1-116 (5) C.R.S.), but since its role and any framework for ensuring effective prioritization of DI communities is yet to be established, we recommend that CDOT apply CDPHE's Climate Equity Principles applied to this proposed rule by applying the key questions from the Climate Equity Framework.<sup>6</sup> We have answered these key questions in our Attachment A. We think these questions are important enough to be part of the initial evaluation of projects for STIPs and TIPs.

We urge CDOT and the TC to work with CDPHE's Environmental Justice Unit as well as the Climate Equity Advisory Committee and Climate Equity Community Advisory Group as CDOT develops its equity branch and evolves this rule further, and we think it appropriate to commit to this partnership in the *Preamble for 2021 Rulemaking*.

### **GHG Mitigation Measures Should Not be Optional After Failure to Demonstrate Compliance with GHG Reduction Targets**

With regards to the implementation of GHG Mitigation Measures, the proposed rule Preamble includes the following language: "In the event that a plan fails to comply, CDOT and MPOs have the option to implement GHG Mitigation Measures that provide travelers with cleaner and more equitable transportation options."<sup>7</sup> It is not clear why the implementation of GHG Mitigation Measures would be optional if the GHG reduction targets are not met. Our understanding is that the only other "option" is for funding restrictions to be placed on CDOT or an MPO. We suggest striking the language referring to the implementation of GHG Mitigation Measures being optional if compliance with the GHG targets is not demonstrated. Similarly, we suggest the following deletion from Section 8.02.6.1 to make it clear that a mitigation plan is not optional:

- 8.02.6.1 GHG emissions analysis and, ~~if applicable,~~ a GHG Mitigation Plan demonstrating that the Applicable Planning Document is in compliance with the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1 or that the requirements in Rules 8.02.5.1.1 or 8.02.5.1.2., as applicable, have been met.

These revisions would not only guarantee GHG emissions reductions but would also improve the benefits to DI communities and ensure the prioritization of improvements in these communities.

In their October 7, 2021 letter to the Transportation Commission, the Denver Regional Council of Governments (DRCOG) suggested an addition to Section 8.03 *GHG Mitigation Measures* that would, "Add a provision to require sponsors of regionally significant roadway capacity projects to identify and include GHG Mitigation Measures when including the project in a TIP or the STIP."<sup>8</sup> DRCOG explains that:

Many of the [sic] what the Rule calls GHG Mitigation Measures are planned investments identified in the DRCOG 2050 RTP. And in the context of a 30-year RTP, these investments are not "mitigations" and should not be reported annually. Mitigations are actions that are taken to avoid, minimize, or compensate for the impacts of a specific action (project). Therefore, the more appropriate application of many mitigation measures is in the context of a specific

---

<sup>6</sup> [Colorado Climate Equity Framework](https://cdphe.colorado.gov/air-pollution/climate-change) available at: <https://cdphe.colorado.gov/air-pollution/climate-change>

<sup>7</sup> CDOT Proposed Rule at 3.

<sup>8</sup> DRCOG letter to TC, 7 October 2021 at 4.

roadway project and should be documented and tracked as part of the project's implementation through the TIP or STIP.<sup>9</sup>

CC4CA agrees with DRCOG's recommendation, except that this language should be included in Section 8.02 of the rule so that it would be considered as part of the process for determining compliance and GHG reducing projects would then be included in the STIPs and TIPs rather than relegated to the Mitigation Action Plans. This speaks to the above comments that the mitigation measures should not be optional and that GHG emissions reductions need to be considered as part of the compliance process.

Furthermore, Colorado's affordable housing crisis necessitates immediate prioritization of clean transportation alternatives that fully serve DI communities and reduce VMT as soon as possible. Likewise, Colorado's greenhouse gas goals for the transportation sector require immediate action to reduce emissions by 25% by 2023 and by more than 40% by 2030.<sup>10</sup> We cannot do this amid strong growth pressure by reaching back to 20<sup>th</sup>-century approaches such as continuing to widen highways. If transit and clean transportation solutions are not prioritized immediately in the STIP and TIP planning processes, there will be a perverse incentive to rush capacity projects to approval before VMT-reduction priorities come into play through the Mitigation Action Plan. The unfortunate outcome would be an increase in GHG emissions and inequity just before the rule aimed at reducing emissions is implemented. The principle "first, do no harm" should take precedence in this rulemaking, or as the Climate Equity Framework Principles state, "Intentionally investing in [DI] communities, while actively reducing harms to them is critical to equitable climate action."<sup>11</sup>

### **A Waiver Process Could Increase GHGs and Should be Limited to Safety Projects**

We stand by our August 31 comments on enforcement and specifically the proposed waiver process, under Section 8.05. Under the proposed rule, if compliance is not demonstrated after committing to GHG mitigation measures, the Commission will restrict the use of certain funds, requiring that money be focused on projects that reduce GHGs. The proposal includes the option to apply for a waiver if the rule requirements have not been met and states that "a substantial increase in GHG emissions" will not be allowed. Because the proposed 1.5 million metric tons carbon dioxide equivalent (MMT CO<sub>2</sub>e) reductions by 2030 are not enough to meet the sector's goal of 12.8 MMT CO<sub>2</sub>e reductions, no amount of GHG emissions increase should be allowed. Also, the proposal does not define "substantial increase" and that phrase is too vague for rule language as it could have many different interpretations. Waivers could also circumvent the requirement to protect and prioritize disproportionately impacted communities that might otherwise see air quality and transportation infrastructure improvements. Any increase in GHG emissions would be counter to the goal of this rule.

One concern we have heard that addresses the need for the waiver process is that safety projects would not be allowed if an MPO or CDOT is not meeting its targets. We believe this is absolutely not the intent of this rule and safety projects should be allowed to proceed. To alleviate this concern, rule language should be added to specify that the waiver process will only be allowed for safety projects that are GHG neutral and fulfill other regional goals. CC4CA opposes the use of the waiver process for operations projects that facilitate single occupancy vehicle travel. Projects that ease bottlenecks or choke points for vehicle travel do so by increasing capacity, and therefore will increase VMT and GHG

<sup>10</sup> Air Quality Control Commission GHG Resolution 2020

<sup>11</sup> Climate Equity Framework, 2021, p.6, available at <https://cdphe.colorado.gov/air-pollution/climate-change>

emissions. Transit operations projects, including transit signal priority, queue jump lanes or other projects that facilitate the movement of transit vehicles increase transit ridership and decrease VMT/GHG, and would therefore not need to go through the waiver process as funds would never be restricted from these types of projects.

### **The GHG Budgets Need to be Strengthened and Should Apply Across Colorado**

The proposed rule is far too modest given the extent of transportation GHG emissions that are required. As we highlighted in the last CC4CA comment letter, Colorado’s existing and planned transportation measures leave a gap of 4.7 MMT of GHG reductions in 2030. This proposed rule would reduce that gap by 1.5 MMT. In past comments CC4CA asked that the 2030 reduction target be increased to 3.3 MMT; after hearing the resistance to increasing the GHG targets to that level, we request that the 2030 statewide target be increased to 2 MMT, at the very least. Because of the worsening nature of the climate crisis, early reductions have the largest impact and are absolutely necessary to reverse the current devastating course. Therefore, we strongly urge the Commission and CDOT staff to increase the GHG planning reduction levels identified in Table 1 (Section 8.01.2).

Another recommendation that would increase overall emissions reductions is to require reductions from CDOT and all the MPOs by 2025. As proposed, the sub-budgets would only apply to the Denver Regional Council of Governments (DRCOG) and the North Front Range Metropolitan Planning Organization (NFRMPO) until 2030. Because of the climate crisis, Colorado needs to be much more aggressive earlier and not delay action until 2030 for MPOs outside of the DRCOG and NFRMPO regions, therefore the three other MPOs should be subject to 2025 GHG reduction targets that align with the targets for the other MPOs and CDOT.

### **VMT Per Capita Reductions are Critical and the Rule Should Include a Minimum Threshold for Reductions**

CDOT’s Cost Benefit Analysis shows that the three largest sources of cost savings come from reduced vehicle operating costs, safety, and traffic delay. And the two largest categories – safety (reduced vehicle crashes) and traffic delay - make up over two-thirds of these savings, largely due to reductions in VMT.<sup>12</sup> This alone justifies making reduction of VMT a primary goal of this rule. And SB21-260 requires that VMT be reduced as part of this rule; see SB21-260 Section 30, 43-1-128 (3):

Effective as of July 1, 2022, the department shall establish and propose to the commission for its review implementing procedures and guidelines that require the department and metropolitan planning organizations to take additional steps in the planning process for regionally significant transportation capacity projects to account for the impacts on the amount of statewide greenhouse gas pollution and statewide vehicle miles traveled that are expected to result from such projects.

SB21-260 also specifically states that the proposal must, “Consider the role of land use in the transportation process and develop strategies to encourage land use decisions that reduce vehicle miles traveled and greenhouse gas emissions.”<sup>13</sup> VMT reductions should be included in this rule so that the transportation planning necessary to adhere to the rule results in greater multi-modal opportunities, particularly in underserved communities. Aside from the general need for VMT reductions, specifically

---

<sup>12</sup> CDOT, Cost-Benefit Analysis, p. 3, Table 2.

<sup>13</sup> SB21-260 Section 30, 43-1-128 (3)(d)

disproportionately impacted communities benefit directly from increased multimodal projects such as improved transit, bike, and pedestrian infrastructure as well as from improved local air quality.

For these reasons, CC4CA is encouraged to see that CDOT has included new language in Section 8.06 Reporting to require CDOT to submit an annual VMT report to the Transportation Commission that includes, "...total VMT per capita within the MPO areas and statewide for the past calendar year." The inclusion of VMT in the rule is a significant improvement but the rule should include a minimum threshold to ensure that the decrease is a meaningful amount that will result in improvements. Colorado's Greenhouse Gas Emissions Reduction Roadmap "HB 1261 Targets Scenario" assumes a VMT reduction of 10% by 2030; this amount of reduction by 2030 should be reflected in CDOT's rule. Therefore, we suggest the following revision to the rule language:

8.06.2.1 If three consecutive years of reports find that CDOT and the MPOs are not on track to deliver at least a 10% reduction in VMT per capita by 2030 compared forecast levels, the Commission shall consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this rule.

That additional requirement including a metric for measuring progress will ensure that meaningful VMT reductions are achieved and will help Colorado meet the critical climate and equity goals that have been discussed in this comment letter.

We appreciate the opportunity to comment on this proposed rule and the continued communications with CDOT staff to ensure that this is a strong rule that will help Colorado achieve its reduction goals for the transportation sector and realize great opportunities for Colorado communities. Much progress has been made and we encourage the Transportation Commission to swiftly approve the rule, with the incorporation of CC4CA's recommended rule revisions, at its December 2021 hearing.

Sincerely,

## ATTACHMENT A: CLIMATE EQUITY FRAMEWORK EVALUATION

In response to HB19-1261, the climate team of the Air Pollution Control Division in CDPHE assembled a Climate Equity Advisory Committee and jointly wrote the Climate Equity Framework<sup>1</sup>. At the time of this rulemaking, CDPHE is building out the Environmental Justice Unit with Boards specified in the HB21-1266 “Environmental Justice Act” that may add structure to how equity is to be addressed in GHG rulemakings. We are also aware that in response to SB21-260 (43-1-116 (5) C.R.S.), CDOT is assembling an environmental justice and equity branch, but its role and any framework for ensuring effective prioritization of DI communities is yet to be established. Since the statute behind the Climate Equity Framework was intended to apply to all GHG rulemaking for Colorado, we hold that the Framework should be used to evaluate the proposed GHG Planning Standard although that rulemaking is no longer being conducted through AQCC. We would like to offer our evaluation of the proposed rule and our preferred solutions through this tool:

1. **How did the [CDOT and Transportation Commission] encourage community input and participation in the policy process? How was community input used? (Principle 1. Equitable Representation)**

We appreciate that CDOT has held hearings and listening sessions to inform the public of the proposed rule and that these sessions have been conducted at a diversity of times and provided Spanish language access. We appreciate the changes that have been made to acknowledge the obligation to DI communities and to begin to address those needs.

Since many, if not most, transportation projects to be considered through this rule have the potential to help or harm DI communities, further steps from initial project evaluation and selection, to mitigation measure selection must involve direct input from the communities where these projects are to be considered. We specifically urge CDOT and the Commission to ensure the rule promotes the transparency called for in HB21-1266 ((3)(a) C.R.S): “To promote the goal of state engagement of disproportionately impacted communities, an agency shall strive to create new ways to gather input ... transparently sharing information about adverse environmental effects from its proposed state action.” This is particularly salient in transportation planning, where, as SB21-260 recognized,<sup>1</sup> transportation capacity projects frequently further health and quality of life inequities for DI communities.

In order to avoid perpetuating a historic pattern of seeking and disregarding input from marginalized communities, it is essential that the expressed needs of the communities engaged be demonstrably reflected in the projects chosen. We would recommend the use of this framework to track and record how input was translated into benefits for each DI community engaged, unless and until CDOT’s environmental justice and equity branch has a framework and protocol that can do the same.

---

<sup>1</sup> SB21-260 Declaration Section 1(b)

2. **How will this rule impact costs for disproportionately impacted communities? (Principles 2. Prioritizing Benefits and 3. Economic Impacts)**

As housing costs push DI communities farther from jobs, this rule has the opportunity to reduce travel costs, but only to the extent that it promotes and advantages clean and affordable transportation specifically and fully serving DI communities. We don't see provisions in the proposed rule that would effectively advantage these projects against those that continue to promote and induce demand for private cars (electric or otherwise) as a means of transportation.

With the increasing cost of healthcare in this country, living in a DI community impacted by traffic or highways becomes expensive as well as dangerous. If this rule were to favor projects that reduce VMT and reverse pollution in DI communities, residents would be at less risk of financial ruin due to medical bills or of forgoing needed healthcare due to cost.

3. **What are the financial benefits of compliance and are they being directed toward/prioritized within disproportionately impacted communities? (Principles 2. Prioritizing Benefits and 3. Economic Impacts)**

The rule as currently proposed, in which there is not a clear priority for benefits to DI communities in the primary planning process, is likely to result in the approval of capacity projects at the expense of projects that extend clean transportation services into DI communities. This would further erode property values adjacent to these capacity projects and perpetuate the pattern of disservice to areas already at the intersection of multiple inequities. This rule needs to establish the incentive and expectation for MPOs and CDOT to propose VMT-reducing projects as assertively as they have usually proposed capacity projects. Measures such as free or affordable transit and safe, walkable and bikeable street renovations have the potential to save residents of DI communities considerable travel costs, and they should be advantaged in the planning evaluation. We don't see such a prioritization in the planning standard as currently proposed, so we support advancing these "Mitigation measures" to the primary compliance process.

4. **What are the potential negative and positive impacts of the rule on physical and mental health? How can negative health impacts be minimized and positive impacts maximized for disproportionately impacted communities? (Principles 2. Prioritizing Benefits and 4. Health Impacts)**

Both HB19-1261 and SB21-260 were clear in their intent that GHG rules including this one redress the historical role of transportation projects in creating and deepening health inequity. While the preamble to this rule acknowledges this record, the rule language that follows does not effectively prioritize local health benefits to communities surrounding existing or potential transportation projects.

Our primary concern outlined in our comment letter is that the VMT reduction strategies that could most benefit or prevent harm to DI communities are relegated in this rule language to mitigation measures to be applied if and when GHG reduction targets are not met, due to inadequate project reductions or projects that increase GHGs. The requirement to address air

pollution and direct benefits to DI communities should not be deferred to mitigation, as an afterthought.

Quantification of benefits in the proposed rule are not presented as a measure to be used to advantage VMT- and pollutant-reducing projects, but is left to the mitigation measures; this section is further weakened by the recent addition by CDOT of “where feasible” to the quantification of “annual GHG emission reductions” (8.02.6.3.2) and “specific co-benefits where feasible including reduction of co-pollutants (PM2.5, NO<sub>x</sub>, etc.) (8.02.6.3.3).” Where the health of communities is at stake, good-faith estimation of both GHG and air pollutant benefits should not be conditional.

It is not enough for the rule to direct Mitigation Action Plans to “prioritize” co-benefits in DI communities, as this term is not defined, and the rule contains insufficient binding commitment to how or whether this will be done. Therefore, we support resolving this ambiguity with specific commitments of investment and VMT reduction measures in the primary planning process.

5. **What barriers and benefits exist for disproportionately impacted communities to adopting proposed mitigation technologies? How are barriers being addressed and benefits being maximized? (Principles 2. Prioritizing Benefits and 5. Access to Solutions)**

In order for clean transportation such as walkable/bikeable streets and transit to serve the needs of DI communities, it must be safe, affordable, efficient, and extend fully into these neighborhoods. The current proposed rule doesn’t specifically advantage these projects or prioritize the investment that would be needed to ensure projects benefitting DI communities are served first, before other projects that would potentially increase VMT.

Since DI communities are among the least able to transition directly from gas vehicles to EVs, clean transportation alternatives are critical in the near term to facilitate the transition away from car dependence. If this rule is modified to effectively realize alternatives to driving in DI communities, it will give these residents time to replace gas cars with EVs as those become more affordable in the new and used marketplace.

6. **How can the rule improve community resilience or quality of life for people living in disproportionately impacted communities? (Principle 6. Resilience)**

Car-dependency is extremely brittle, especially for residents with limited means, and it contributes to the disproportionate impact of climate change on DI communities. If there are several different ways of getting around other than driving, families will be more resilient to disruptions in fuel pricing, parts supplies, transit reliability, and weather conditions. If this rule is modified to promote true multimodality, rather than perpetuating the priority of cars, all communities will be more resilient, including those that are our most under-resourced, yet also most resourceful, communities.

The draft climate equity framework also includes “Other Important Questions to Ask” which we consider of tantamount importance to the “Key Questions:”

1. What are the plans for following up with communities after this rulemaking? (*Principle 1. Equitable Representation*)
  - a. Part of the Transportation Plan reporting should include follow-up with community stakeholders during project and program implementation to ensure these are reaching and benefitting all affected communities
2. If jobs are being created, what is in place to direct those benefits (including capacity-building, training) toward disproportionately impacted communities? (*Principles 2. Prioritizing Benefits and 3. Economic Impacts*)
  - a. Economic analysis should evaluate whether net jobs are created through project construction, transit expansion and fleet turnover and whether those jobs are created in or provide employment to disproportionately impacted communities.
3. How does the Social Cost of Carbon weigh into the economic and health benefits of proposals specifically on disproportionately impacted communities? (*Principles 2. Prioritizing Benefits and 3. Economic Impacts*)
  - b. We’re pleased to see the use, required by SB21-260, of the social cost of carbon in CDOT’s Cost Benefit Analysis dated August 31. We would like to see it linked to effects on disproportionately impacted communities. To fully realize the intent of the social cost of carbon, it should also be a factor in comparing potential projects for funding.

After this rulemaking is complete and consideration begins of specific transportation projects, we urge CDOT and MPOs to use these questions to evaluate and compare projects. We further urge CDOT to engage the state’s Environmental Justice Unit as they respond to what we expect will be growing calls for state agencies to address GHGs and air pollution. CDOT’s environmental justice and equity branch should not recreate the Environmental Justice Unit, but add transportation-specific capacity to allow project-by-project engagement of DI communities with the guidance of the EJ Unit under a consistent set of principles such as these from the Climate Equity Framework:

**Principle 1: Equitable Representation** - The GHG policy process should provide easily accessible opportunities for any interested person to participate. Policies that impact communities should be shaped by community input.

**Principle 2: Prioritizing Benefits** - For GHG reduction strategies with the potential to provide benefits to individuals or communities, disproportionately impacted communities should be prioritized. Intentionally investing in these communities, while actively reducing harms to them is critical to equitable climate action.

**Principle 3: Economic Impacts** - GHG reduction strategies should reduce costs, including currently externalized costs, and increase economic benefits for disproportionately impacted communities wherever possible.

**Principle 4: Health Impacts** - GHG reduction strategies should minimize negative health impacts and increase health benefits for disproportionately impacted communities.

**Principle 5: Access to Solutions** - GHG reduction strategies should promote clean technologies in ways that make sense, as much as possible.

**Principle 6: Building Resilience** - GHG reduction strategies should improve resilience and quality of life for disproportionately impacted communities.

## Comments on Green House Gas regulations

1 message

[Redacted]

Thu, Nov 11, 2021 at 3:44 PM

To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

I would like to thank the commission for their hard work on this document. Proposing, listening, and revising take time and patience. I have no specific comment on any of the proposed regulation but want you to know that looking into the future as you have done is the only way we can make the future a sustainable green place. Many comments want immediate actions—which must also be made—but if we don't look into the future there is no future. Our state, and our country, have not done the work to keep our infrastructure up to date and our voters don't seem to want to do that either. The voters want it done by magic it seem

So keep up the good work and I am behind you all the way

RE: Revised Transportation Greenhouse Gas Rulemaking

Dear Transportation Commissioners and CDOT Executive Director Shoshana Lew:

On behalf of the Pikes Peak Area Council of Governments, please accept this letter as a supplement to our previous letter of October 14. Our original comments continue to be relevant, and this document primarily addresses the changes included in the revised rule.

Thank you for the opportunity to provide these additional comments. As we've stated before, we are eager to be part of the solution to these challenges. We have reviewed the revised rule in detail to understand how it will truly work in meeting the goals of emissions reductions. Below we are addressing a few topics broadly, but also expressing concern on some elements of the draft rule as well as the draft mitigation policy that accompanies the rule.

#### **Land Use, the Built Environment and VMT**

As we have discussed at length during this process, regional travel demand (including vehicle miles of travel, VMT) is largely a by-product of our regional built environment. It is also obviously impacted by many other factors: safe and reliable travel choices that are available (which are also impacted by development patterns), fuel prices, economic conditions, employment options, housing affordability and availability, external growth, etc. The rule and draft mitigation strategies seem to recognize the critical connection between land use and transportation. However, what we feel is missing is the recognition that MPOs have no authority over these factors, including decisions around land use and development.

Changing the built environment across a region takes time, so measuring changes caused by land use policy and zoning changes, etc. likely won't show real effects for a number of years. We appreciate the inclusion of land use policy issues in the draft mitigation policy. However, the revised rule will now require annual reporting of VMT starting in 2022 (addressed further below), so our concerns around this issue where MPOs have no direct authority are now elevated even further.

## **VMT Annual Reporting (8.06)**

The revised draft rule now includes a requirement that CDOT provide a VMT report to the Transportation Commission annually, beginning in September 2022. If three consecutive years of reports demonstrate no decrease in VMT per capita in one or more areas, the Commission shall consider further revisions in order to achieve reductions per the rule's intent.

This is greatly concerning in a number of areas. First, we are all still in the midst of a pandemic which continues to impact regional travel patterns. We are concerned what the initial baseline year will be, as we feel that expecting reductions below an abnormal baseline is unrealistic.

Second, beginning such reporting next year, and expecting reductions within a three-year period so soon (by 2025), is occurring before we collectively even have an opportunity to plan, fund and implement new mitigation measures expected of us by this overall rule. Our understanding of the rule had been that we are planning and modeling to demonstrate GHG reductions (not VMT specifically) in specific horizon years beginning with 2030. We feel this new VMT reporting requirement unrealistically accelerates that timeline significantly.

Third, as described above, "controlling" and reducing VMT is an incredibly difficult and multifaceted challenge, and some of those factors (like land use patterns), take years to show results. Therefore, we are very concerned about enforcement approaches the Commission might contemplate if VMT reductions aren't occurring in such short-order, and what further tightening of the rule might mean.

## **Induced Demand / Mitigation Measures**

When the rule is taken into context with the text of the mitigation memo, it appears that the State and CDOT are willing to allow congestion to get worse in the short term with the promise of long-term impacts brought on by "induced demand" (where VMT will simply increase regionally when additional capacity is added). The rule seems to anticipate that induced demand will occur each time there is any type of improvement regardless of local and regional context, and that a large mode shift will occur when congestion increases enough.

We do acknowledge that induced demand will occur in certain circumstances; however, the impacts do not occur as pervasively and predictably as has been suggested during this process. Additional travel demand and VMT occur as a result of normal, planned growth patterns that were anticipated, as well as with population growth, and through latent demand that will occur as a result of enhanced economic activity.

Therefore, we do not believe that it is good public policy for the State to indirectly dictate mode choice to the traveling public by diminishing the effectiveness of certain choices.

We believe the rulemaking approach fails to truly calculate the increase in GHG due to an inefficient road network. It must be stressed that not all members of the public can easily access transit, even enhanced transit as envisioned by this rule, due to things such as physical limitations and family needs. This rule could make GHG worse in the short term AND if the general public refuses to make changes to their mode choice, it may also increase GHG over the long term as well.

We interpret the rule and mitigation memo, as currently presented, to mean that if a region is not in compliance with the GHG rule, that region will not be able to use our federal STP dollars to implement operational improvements to the system (such as traffic signal coordination, or ramp metering). We believe this is short-sighted and may severely impact emergency response times due to congestion, and we do not believe that improvements of that nature are demonstrably “inducing demand” of more drivers. We suggest a compromise to give those operational projects a lower mitigation score/value. We feel it is imperative that these important improvements are not prohibited from using federal transportation funds.

In addition to our broad comments above, the Pikes Peak region also offers the following specific comments to the latest draft of the rule:

8.03.1 – Transit to outside areas deemed a mitigation measure. We believe this measure rewards communities for implementing zoning not conducive to the spirit of this rule making. Communities that implement “growth boundary” type zoning regulations should not be allowed to count mitigation for situations that they cause toward their GHG goals.

8.06 – Reporting. The Commission may want to consider adding the word “estimated” in front of VMT. To our knowledge CDOT and the State will not actually collect VMT from every vehicle in the state. This will be only an estimate and that estimate will be predicated on assumptions based on the characteristics of the region in which the calculation is being made. Additionally, the text leads the reader to believe that this is total VMT in each region. Regardless of the effectiveness of any of these measures, VMT is likely to rise based on population alone.

- Are miles estimated for interstate travel included in this calculation? Especially if the interstate travel is just passing through the state?
- Travel time (VHT) is an important factor in determining GHG, why is this also not collected and considered?

In closing, we hope that the Commission will consider that the transportation system needs to address the needs of all of its users and should continue to allow for choice.

Sincerely

Pikes Peak Area Council of Governments

Attached please find my public comment on the proposed GHG reduction rule. Thank you.

[REDACTED]

**GHG comment.docx**

14K

I am writing as a physician at a safety net hospital in Denver who cares for many patients with COVID-19 and respiratory illnesses exacerbated by air pollution. I am also writing as a father who sadly will likely be taking my family away from Colorado for most of next summer because of the tremendous amount of damage ozone pollution is inflicting upon my childrens' lungs.

In a recent comment in the Denver Post, Director Lew stated that these GHG reduction rules will not prevent CDOT from moving ahead with planned highway expansions. In 2021 if we are serious about our goals of equity, air quality and greenhouse gas reduction, we absolutely can not continue to expand highways through our urban neighborhoods. Many of us will consider these rules a failure if they allow I-25 to be widened through the Sun Valley neighborhood of Denver, one of the poorest neighborhoods in the state. No amount of mitigation in the form of bike lanes and bus lanes will reduce the harm inflicted upon this neighborhood by the thousands of additional cars driving through it every day. These rules need a kill switch that will halt construction of highway projects that worsen air pollution and greenhouse gas emissions and disproportionately harm environmental justice communities.

My second point is regarding the reliance on inadequate traffic modelling. For example, modelling performed for the expansion of I-70 at Floyd Hill predicts that this highway project will actually reduce VMT by 2% by 2040. The prediction that eliminating a major source of highway congestion will cause less people to drive goes against all accepted scientific evidence and common sense. Conveniently if a highway expansion is modelled to not increase VMT then no mitigation measures will be required. It is clear that this flawed process cannot be relied upon to meet the challenges of climate change head on.

## Written Comment on the Draft Rule

1 me age

Mon, Nov 15, 2021 at 8:13 AM

to: dot\_rules@state.co.us

Dear CDOT and members of the planning commission,

My name is [REDACTED] and I am a pediatrician in Adams County. I work at a non-profit clinic called Every Child Pediatrics.

Despite the presence of COVID 19 in our communities, climate change and air pollution still remain one of the most critical public health issues we face. Ozone alerts are visible and constant warning signals that we must do more to limit our greenhouse gas emissions and address air pollution and climate change head on. Our health depends on it.

As a pediatrician, on my drive to work, I come over the crest of a hill where there is a view of downtown Denver. On many days the view is obscured by smog. On those days, I know that I will see more kids come into my clinic with asthma and difficulty breathing.

Over 100,000 children in Colorado suffer from asthma, making it the most common chronic illness of childhood. Worsening air quality places these children at risk for both chronic disability and acute life-threatening illness. And now, based on a recent study from Harvard, we know that people who live in areas with more pollution are more at risk to fall ill from COVID 19. These most vulnerable populations will also be those most impacted by climate change.

Each time an ozone alert is issued, Coloradans' health is put at risk by going outdoors. It is your friends, family, and neighbors who have underlying health conditions like COPD or asthma. who are most at risk. Ozone exposure also increases the risk of contracting respiratory infections. The Denver Metro area ranked # 10 in the nation last year for poor air quality due to ozone. The Environmental Protection Agency recently hung a badge of dishonor around our region's neck by penalizing us for our inability to make real progress in cleaning up our air.

Right now there is a real opportunity for improvement on the horizon. But we must act now and we must act with strong initiatives. Timely and strong action can make a meaningful change in the quality of our air.

Colorado lawmakers set aggressive goal for limiting greenhouse gas during their 2019 legislative session. As a healthcare provider, I am working to urge you to take the necessary step to limit greenhouse gas emissions. The research is clear. Polluted air is bad for us all, and particularly bad for those with other chronic health conditions. A warming planet will impact the health of our communities and this burden will fall disproportionately on children and other vulnerable populations. Communities of color as well as communities dealing with the impact of poverty are more susceptible to the worst effects of climate

As we struggle to contain COVID 19 and to understand the long term effects the virus may have on our heart and our lungs, the way that air pollution worsens disease from COVID 19, and the ways that air pollution, climate change and COVID 19 hit our most vulnerable populations the hardest, it is crucial that we address air pollution and take climate action now. We need more infrastructure for electric vehicles, plans

for transit that decrease miles travelled, and planning that incorporates multi-modal transportation with a focus on low income communities who are disproportionately impacted by air pollution. We must mandate rules for greenhouse gas emissions in transportation as we move forward in our planning process.

To make progress we need urgent and meaningful action. It is my hope, and that of health care professionals across the state, that you will act. My patient and their families, as well as a million of other Coloradans, need action now.

**Re: Greenhouse Gas Rulemaking**

Dear Commissioners:

Thank you for the opportunity to provide written comments regarding the Greenhouse Gas Pollution Reduction for Transportation Planning Proposed Standards. The Colorado Contractors Association (“CCA”) has been closely following this rulemaking and provided comments on the initial draft in a letter dated October 12, 2021. CCA appreciates many of the revisions made in the draft rule (the “**Initial Draft Rule**”) that CDOT published on October 19, 2021 (the “**Revised Draft Rule**”), as further described below.

CCA expresses the following additional comments with the Revised Draft Rule: (I) the extension of the public comment period, the publication of a revised rule for review, and the delay in the adoption of the rule by 30 days are appreciated, but CCA remains concerned with the rushed process to adopt the Revised Draft Rule; (II) the removal of the baseline Greenhouse Gas (“**GHG**”) emissions from the rule is acknowledged; (III) the procedural changes to the waiver process within the revised rule represent an improved process; and (IV) the inclusion of a vehicle miles traveled (“**VMT**”) report, which was not present in the Initial Draft Rule, presents significant concerns as further detailed below.

#### **I. Timeline of Rulemaking**

The draft rule was published on August 13, 2021 and the Transportation Commission (the “**TC**”) may adopt this rule on December 16, 2021, which is approximately 30 days later than was originally proposed. CCA appreciates that the public comment process was extended by 30 days and that CDOT published a Revised Draft Rule in response to comments submitted during the initial comment period. Our overall timing concerns remain, especially given the significant ways in which this rule will change our state’s transportation planning process, and the lengthy planning horizon covered by the draft rule. CCA appreciates the initial release of the Mitigation Policy Overview memo. However, given the importance of mitigation measures in continuing to advance regionally significant transportation capacity projects, it is difficult to assess whether the Revised Draft Rule is feasible and will allow for many important projects within CDOT’s 10-Year Plan to be advanced.

## II. Removal of Baseline GHG Projections from the Rule

The Initial Draft Rule included baseline estimates of GHG emissions that created the comparison with the reduction targets for each of the years of CCA recommended that the baseline estimates of GHG emissions be taken out of the rule for a number of reasons, most significant of which is that the baselines will likely need to be adjusted to continually improve their accuracy and in response to any changes such as population growth that differs from the model assumptions. CCA appreciates CDOT's responsiveness to this comment and the changes that have been made to the Revised Draft Rule.

## III. Changes to Waiver Process

CCA had previously raised a concern regarding the waiver process in the initial draft. In the revised rule, the waiver process now requires the TC to take action on all waiver requests. CCA appreciates this change and believes it will result in enhanced transparency and the opportunity for stakeholder input in the consideration of project waivers. CCA continues to recommend additional clarity on the criteria for approving a waiver request.

## IV. VMT Report

The revised draft rule includes concerning changes within Section 8.06, Reporting. The Initial Draft Rule had required that CDOT prepare and present to the TC a "comprehensive report on statewide GHG reduction accomplishments every five years." The frequency of this report has now been changed to every three years, and the report is now also to be presented to the Air Quality Control Commission, even though the authority to promulgate and administer this rule is clearly under the authority of CDOT. CCA recommends that this report be presented to the agency that is responsible for oversight of this rule, as authorized by state law.

However, there is an even more concerning addition to the Revised Draft Rule found in Sections 8.06.2 and 8.06.2.1. These sections require the creation of a VMT report. This role of this report is further outlined in the section below:

**8.06.2.1** *If three consecutive years of reports demonstrate no decrease in VMT per capita in one or more areas, the Commission shall consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this rule.*

Changing travel behavior is a complex endeavor that involves many factors well outside the authority of CDOT. It is more appropriate to create policy goals for changing travel patterns within planning processes, such as updates to the regional transportation plans created by metropolitan planning organizations and within CDOT's statewide transportation plan. As drafted, the VMT report provision also fails to recognize that transportation capacity projects improve traffic flow, reduce congestion and idling, and have meaningful impacts on the reduction of GHG emissions. Any report that is used to assess progress toward the policy goal of reducing GHG emissions from the transportation sector should be comprehensive and not limited exclusively on reducing VMT per capita.

The phrase that states “the Commission shall consider revisions to these rules in order to achieve reductions in VMT” is alarming because the overarching purpose and intent of the rule is to make changes to the transportation planning process to account for the impact of regionally significant transportation projects. The primary intent of this rule is not to reduce VMT. CCA is concerned that the language in Section 8.06.2 exceeds the authority that has been granted to CDOT by the General Assembly through the passage of Senate Bill 21-260.

CCA recommends that this reporting section be modified with the following recommended changes:

- a. Eliminate the standalone VMT report.
- b. Incorporate VMT as an element within the comprehensive progress report provided every three years to the TC.
- c. Add additional elements to the comprehensive progress report that influence GHG emissions. By way of example, some of the additional elements that should be included in a comprehensive report are transit ridership levels, traffic modeling that measures congestion mitigation, electric vehicle adoption, and the effectiveness of various mitigation measures such as pedestrian and bicycle infrastructure.
- d. Modify the use of the phrase “shall consider revisions to these rules” when describing the TC’s actions after reviewing the progress report. A more appropriate description of the TC’s role is that they may review the comprehensive report to evaluate the various contributors to transportation related GHG emissions.

**V. Conclusion**

CCA appreciates the work that CDOT has devoted to this effort and the staff’s willingness to hear our concerns and make changes to improve the rule. Thank you for the opportunity to comment within this rulemaking process.

Sincerely,

cc: Shoshana Lew, Rebecca White, Herman Stockinger, Theresa Takushi

Subject: Proposed Greenhouse Gas Rule

Dear Commissioners,

Thank you for the opportunity to provide comment and feedback on the revised proposed Greenhouse Gas Rule Draft. We applaud the CDOT staff and Commission for their efforts and willingness to receive comments.

As a Colorado company we support the effort to reduce gas emissions and mitigate the impacts of air pollution to improve the air quality of our great state. However, we have concerns related to the draft rule as currently constructed:

- We are concerned that this policy forces a drastic change to the transportation planning process in an extremely short period of time.
- The rule assumptions around redirecting funds to capital investments in Transit will result in a forecasted mode shift are unrealistic and not supported by data.
- The sudden appearance and addition of the reduction of Vehicle Miles Traveled as a goal of this rule is outside the stated intent of reducing GHG. Using an annual VMT report as an indicator for additional future changes to the rule at minimum is providing a very limited perspective but at worst may be misleading as VMT can increase while GHG production decreases as a result of better technology, efficiency, and conversion to zero emission vehicles. We recommend striking "VMT" from the name of this report and including additional data reference points like transit ridership and EV registration numbers to potentially inform future rule changes.
- Consider the \$9Billion backlog of transportation projects when considering waiver applications. Projects that have long been ignored or postponed for funding reasons should not be unilaterally penalized for possible increases in capacity.
- And finally, we caution the Transportation Commission and CDOT staff that while it has been reported that 75% of the feedback is "supportive" it would be a mistake to assume that this is reflective of the public levels of support for this rule. The public commentary received has been disproportionately skewed toward environmental activism groups and form letter responses. And while that is a valuable and respected perspective, it is also not representative of the traveling public who is more likely to be unaware of this rulemaking process than participating in it. We urge the commission to apply common sense to the balance of public comment.

Thank you in advance for your consideration.

Reply-to: [REDACTED]

To "dot\_rule @ state.co.us" dot\_rule @ state.co.us

My name is [REDACTED], I am writing today on behalf of myself and my community. Thank you for listening to the public and for the opportunity to provide comment!

Climate disruption is an issue that is impacting all of us. Colorado is experiencing an air quality crisis and transportation is our number one source of our greenhouse gases (GHG).

One of the best ways to permanently reduce transportation pollution is to reduce **vehicle miles traveled (VMT)** per person, per year, by giving people options other than driving their car. I have a friend who moved here from Portland, Oregon who tells me mass transit there is far better than it is here. They didn't even own a car until they moved here. When they first moved here they lived in a place near a light rail station but soon discovered that light rail did not meet all their needs.

I would ask the Commission to please clarify what type of decrease we need to meet the state's climate goals. The new draft requires each planning region to produce a yearly VMT report to make sure we're on track for a reduction but we don't know how much of a reduction is expected.

My husband and I both drive hybrids and generally stay fairly close to home. We would have gotten EVs if we had a place to charge them but we park on the street since we do not have a garage. When I have to venture downtown I usually take light rail or the bus depending on what part of town I am going to.

I am a retired critical care RN and I saw some of the health issues caused by our air quality during my time at the bedside. Some of the impacts include respiratory illnesses such as asthma, chronic obstructive pulmonary disease (COPD) and lung cancer, heart disease including stroke, neurological dysfunction, premature death, low birth weight, birth defects and premature birth.

I am concerned about my front range community. The CDPHE sent out a warning that higher rates of air pollution may be putting people at greater risk of coronavirus infection. Our neighbors who live in areas of high pollution are mostly impoverished, people of color, many of them essential workers. I am bothered that their health might be endangered!

Thank you again!

84K

November 16, 2021

Re: 2 CCR 601-22

RULES GOVERNING STATEWIDE TRANSPORTATION PLANNING PROCESS AND TRANSPORTATION PLANNING REGIONS

CDOT's proposed rules to reduce GHG emissions from the transportation sector

To Whom It May Concern,

The proposed rule will require CDOT to determine total GHG emissions expected from future transportation projects, including Regionally Significant Projects. The I-70 corridor has two such Regionally Significant Projects pending or underway – Floyd Hill and Vail Pass. The proposed rules cite the use of the Statewide Travel Model to establish a baseline of emissions and demonstrate compliance. Currently the Statewide Travel Model only includes weekday travel data, yet Floyd Hill and Vail Pass experience the great majority of their volumes on the weekends. The Statewide Travel Model will have limited applicability to these projects, and the I-70 mountain corridor in general, until weekend use is modeled.

The I-70 Coalition has a robust Transportation Demand Management (TDM) program aimed at reducing Vehicle Miles Traveled (VMT) on the I-70 mountain corridor. The incorporation of weekend data into the Model would improve the effectiveness of the I-70 Coalition's TDM efforts, providing valuable baseline data by which goals could be set and outcomes measured. Understanding weekend travel patterns, VMT, transit and ridership would inform our efforts to provide and promote multi modal options and decrease VMT on this highly congested corridor.

We understand CDOT is planning to extend the Model to include weekend travel data. The I-70 Coalition urges CDOT to expedite this plan and ensure the effort is funded to the level necessary to generate the same robust information that currently exists for weekday travel. Such an expansion of the current Statewide Travel Model is necessary to determine emissions levels on Regionally Significant Projects as well as support TDM efforts on the I-70 mountain corridor.

Sincerely,

STATE OF COLORADO

Executive Director Shoshana Lew  
and Colorado Transp. Commissioners  
Colorado Dept. of Transportation  
2829 W Howard Pl  
Denver, CO 80204

**REVISED COMMENTS**

**Dear Director Lew and Colorado Transportation Commission:**

Thank you for the opportunity to submit comments on the proposed revision to the Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions which identifies a process for addressing greenhouse gas (GHG) emissions and sets GHG standards for transportation plans. The Colorado Motor Carriers Association represents over 650 companies directly involved or affiliated with trucking in Colorado today. Over 115,000 people are employed in trucking related industries and our industry transports 84% of the state's manufactured freight.

**Introduction**

We would be remiss if we did not mention the bleak state of our supply chain within the country today. Over the last year our country has gone from one where there was an abundance of products in our stores and wide variety of different brands, to one where we are in many cases seeing shortages and limited choice in what we can buy. We now are being placed on waiting lists for items and goods. Further, where we once could obtain many items in 24 to 48 hours, there is little guarantee when we may receive certain products.

A major factor that has contributed to our supply chain problems is our aging and inadequate infrastructure where both on a federal and state level we have failed to make critical investments and improvements. This has led to various bottlenecks for freight throughout the country where trucks may be stuck in traffic or travel at a snail's pace either because of congestion or the deplorable condition of the highway or bridges. These bottlenecks exacerbate the problems now being encountered with our supply chain leading to even greater delays and higher costs for goods.

Both our State Legislature and Congress recognized the immense problems with our infrastructure, and both should be commended for passing major funding measures which hopefully will alleviate some of these bottlenecks. While the passage of those measures is

good news, the reality is that those bottlenecks will remain until those critical highway and bridge projects move forward.

It is critical as we look at these rules as well as others that we be sensitive to not inadvertently create additional hurdles or excessive delays to many of the critical highway and bridge improvements that are identified within CDOT's Ten Year Plan. Moving forward with those improvements is critical to addressing our supply chain problems not only for today but the future and will contribute to the well-being of the state.

### **Comments and Suggested Changes to the Rules**

First, we wish to commend CDOT and its staff on the work to date on the rules. We believe several of the changes to the earlier draft were constructive. Below are our comments and suggested changes to the rules for consideration.

#### **Tracking and Reporting**

In the preamble for these rules, it notes as follows:

Section 8 of these rules establishes Greenhouse Gas (GHG) pollution reduction planning levels for transportation that will improve air quality, reduce smog, and provide more sustainable options for travelers across Colorado. The purpose of these requirements is to limit the GHG pollution and provide more transportation mobility options.

Vehicle Miles Traveled (VMT) is not mentioned in the Statement of Basis and Purpose for the Rules nor the Preamble to the Rules. The statement of basis and purpose of rules tends to reflect the parameters for rules and the fact that there is no reference to VMT implies that it was not a major consideration during the original drafting of the rules.

The revised draft rule now includes tracking and reporting of vehicle miles traveled (VMT) as can be seen in sections Section 8. Section 8.06.2 calls for the creation of an annual VMT report. Including total VMT per capita within the MPO areas and statewide for the past calendar year. Section 8.06.2.1 in the revised rule is disconcerting in that it states as follows:

*If three consecutive years of reports demonstrate no decrease in VMT per capita in one or more areas, the Commission shall consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this rule.*

Inclusion of VMT in the revised rule assumes that there is a direct correlation between VMT and GHG, where an increase in VMT would translate into an increase in GHG and other emissions. While this may have been true in years past that no longer is the case. An increase in VMT does not necessarily translate into an increase in GHG. As may be seen in the charts below (which were prepared by the RAQC), they reflect that while VMT in the Denver Metro Region grew by over 25% over the past 10 years, daily VOC and NO<sub>x</sub> emissions dropped by almost 50%.

Much of this reduction in VOCs and NOx is attributable to the turnover of the overall vehicle inventory in the region where older, higher-emitting vehicles were replaced with newer, lower-emitting ones. In addition, cleaner fuels also contributed to those reductions. Both of those trends are continuing which should point to lower emissions on a per capita basis than in the past. As a result, the relationship between GHG and VMT is becoming less and less relevant. Based on this trend, we could have a continuing increase in VMT while at the same time seeing a significant drop in GHG and meet the desired objective under the rules.

Including a data element such as VMT which is becoming less and less an indicator of

emission levels and then linking possible reconsideration of the GHG rules if that data element fails to drop, is nonsensical based on recent trends. Further the tracking and reporting of VMT presents the appearance that the State is seeking to employ the rule for other purposes beyond GHG reduction, which are outside the boundaries of these rules and should be considered in another forum.

We request that the annual report on VMT be stricken along with the provision for a reconsideration after three years if there has not been a decrease in VMT. Our reasons and arguments supporting the removal of references to VMT are below.

Regarding reporting, the revised draft also makes changes to the reporting requirement on statewide GHG reduction accomplishments which had been every three years versus five years in the revised draft. In addition, the revised rules indicate that this report is to be presented not only to the Transportation Commission, the authorizing body for these rules, but the Air Quality Control Commission. We question both the change in timeline for the report as well as a requirement that it be presented to the AQCC. Having such language in the rules implies some sort of approval by the AQCC which was not included in SB 260. If this is not the case, why include this language? We would anticipate that CDOT may present this report to various groups including MPOs and TPRs as well as trade groups such as ours. Realizing that SB 260 was very clear in designating that the Transportation Commission was the body charged with promulgating this rule and CDOT is the agency identified to administer this rule. Adding such language related to the AQCC confuses the matter as to who is the authorizing body for these rules.

### **Greenhouse Gas Reduction Targets**

We recognize that the purpose of this rule and the intent of the Legislature was to balance transportation improvements while not adding to the problem related to greenhouse gas emissions. We do believe that the suggested reduction levels of CO<sub>2</sub> as shown on Page 26 appear to be ambitious and attaining those reductions especially in earlier years may prove very difficult. We would suggest that these proposed reductions be reconsidered.

### **Inclusion of Additional GHG Mitigation Measures**

#### **1) Scrappage and Replacement of Older, High Emitting Vehicles of Residents Adjacent to Major Highway Projects**

The greatest reduction in emissions and GHG over the years has been due to the “greening” of the overall inventory of vehicles in the country. Newer vehicles emit far less due to modern emission control systems as well as being much more fuel efficient. A newer vehicle emits at least 25% less GHG emissions than one of 10 years ago. In addition, the newer vehicles are safer because of the additional safety improvements made to vehicles over the years.

As we look at GHG reduction strategies associated with a specific highway improvement, it is important

that we recognize that a high percentage of the users and trips on that highway today are made by individuals living adjacent to and proximate to the roadway. The highway not only serves as a means for them to commute longer distances for work (in many cases where transit service is unavailable), shopping or recreation. It also serves as a form of a neighborhood roadway linking different parts of a neighborhood or community together as well as adjacent areas. In many cases the highway tends to be the most direct and fastest way for such local trips. While these trips may be short in distance, the overall volume of trips over the course of the year may be substantial.

Many of the residents living proximate or adjacent to major highways may be lower income individuals living within disadvantaged areas. These individuals tend to own older vehicles which are higher emitting and have a greater GHG footprint than a newer car. Recognizing this, we would suggest that the GHG rule include a mitigation measure whereby financial assistance be available to residents with vehicles that are 10 years or older to obtain a newer, lower emitting vehicle with the older vehicle being scrapped. This action would not only reduce GHG and other emissions but also enhance safety. This strategy would greatly reduce GHG and other emissions and remove permanently some of our oldest and highest emitting vehicles from our roadways. This strategy also allows those in lower income areas greater mobility and enhanced safety while leading to a substantial emission reduction.

Heavier industry and commercial developments tend to be proximate to highways because of the access it provides them. Because of their operations next to the highway, those businesses receive and ship products by truck daily. Like the removal of older cars, the scrapping and replacement of older diesel trucks with newer, cleaner trucks is a strategy that may substantially reduce GHG and other emissions in a low cost and efficient manner. Providing grant funds to help companies in these areas offset some of the cost of a newer vehicle should be considered. As can be seen in the chart below, 75% of the diesel on-road emissions are generated by 25% of the vehicles which are older units.

In addition, another strategy that should be added is diesel roadside emission testing whereby visible high emitting vehicles in the corridor may be flagged and tested. If the vehicle is shown to exceed emission levels, the owner would be required to make improvements within 30 days.

**2) Last Mile Strategies**

We would encourage a mitigation strategy including certain last mile action for freight. The addition of more freight-only loading zones would reduce package vehicles from excessive circling of blocks to find a parking space and curb double parking which adversely affects safety and mobility. Concepts such as smart parking where fleets could reserve a space ahead of time to make deliveries more efficient and reduce overall travel and idling. The concept of freight lockers in major buildings and stores, rather than having a delivery truck travel through the entire neighborhood would also reduce travel and idling.

**Closing Remarks**

CMCA wishes to express our appreciation to CDOT for engaging us and various other stakeholders in this process and allowing us the opportunity to present our concerns. We look forward to continuing to work with and collaborate with CDOT staff in the development of this rulemaking and in subsequent implementation efforts.

Sincerely,

President

Subject: Proposed Greenhouse Gas Rule

Dear Commissioners,

Thank you for the opportunity to provide comment and feedback on the revised proposed Greenhouse Gas Rule Draft. We applaud the CDOT staff and Commission for their efforts and willingness to receive comments.

As a Colorado resident, we support the effort to reduce gas emissions and mitigate the impacts of air pollution to improve the air quality of our great state. However, we have concerns related to the draft rule as currently constructed:

- We are concerned that this policy forces a drastic change to the transportation planning process in an extremely short period of time.
- The rule assumptions around redirecting funds to capital investments in Transit will result in a forecasted mode shift are unrealistic and not supported by data.
- The sudden appearance and addition of the reduction of Vehicle Miles Traveled as a goal of this rule is outside the stated intent of reducing GHG. Using an annual VMT report as an indicator for additional future changes to the rule at minimum is providing a very limited perspective but at worst may be misleading as VMT can increase while GHG production decreases as a result of better technology, efficiency, and conversion to zero emission vehicles. The commission should strike "VMT" from the name of this report and including additional data reference points like transit ridership and EV registration numbers to potentially inform future rule changes.
- Please consider the \$9Billion backlog of transportation projects when considering waiver applications. Projects that have long been ignored or postponed for funding reasons should not be unilaterally penalized for possible increases in capacity.
- And finally, we caution the Transportation Commission and CDOT staff that while it has been reported that 75% of the feedback is "supportive" it would be a mistake to assume that this is reflective of the public levels of support for this rule. The public commentary received has been disproportionately skewed toward environmental activism groups and form letter responses. And while that is a valuable and respected perspective, it is also not representative of the traveling public who is more likely to be unaware of this rulemaking process than participating in it. We would urge the commission to apply common sense to the balance of public comment.

Thank you in advance for your consideration.

It is clearly irresponsible, if not criminal, given the climate crisis, to continue expanding the highway system, which in turn only encourages more internal combustion engine traffic. Not only is it logically indefensible but it is contrary to the stated goals of the Biden administration—to get off fossil fuels. All money beyond safe maintenance of highways and bridges should go toward mass transit development, both locally and regionally. We cannot otherwise achieve the state goals of 26 percent reduction in GHG by 2025 or 50 percent by 2030

CDOT officials The only way to attack this climate crisis is to get single occupancy vehicles off of our highways and other roads. Public transit needs to be improved and expanded NOW! Foreign imports are to be ended. Long distance shipping need to be ended We all need to shop local! Why is it so difficult for our leader to take the "bull" by the horns and make these things happen. Are we not in many crises? How are you caring for the common good? Increasing pollution and destruction of the planet is not acting of and for and by the people! Why do you kowtow to those wealthy enough to own a car?

As an industrialized nation, we all have a responsibility to act NOW!

**CDOT GHG Pollution Strategy**

1 message

[REDACTED]  
to dot\_rules@state.co.us

Dear CDOT staff,

**We support your CDOT GHG Pollution Strategy but it must go much further and not fall short of the pollution reductions the law requires by 2025 and 2030.** Funds must be redirected to dig our state's air pollution hole deeper. CDOT must re-evaluate all expenditures to meet the full call of HB19-1261 to cut GHG 26% from 2005 levels by 2025 and 50% by 2030 this decade that could increase pollution or prevent this from being achieved. Public funds, including transportation funds need to more equitably serve all people and all modes, also enabling transportation and transit to be safer, more viable and comprehensively available. Most of all, transportation funding needs to be shifted to build out clean, affordable, accessible access for all. Transportation expenditures should not make these enacted and promised pollution reductions unachievable, as they remain with current plans.

CDOT is receiving between \$3.9 and \$5 Billion in transportation funds. We are relying on you to **build out missing systems for comprehensive, safe, accessible transportation for all**, including free transit (raises ridership by 30-100% within a year), benches at all stops and shelters at many greatly extended Bustang service, networks for active travel that are protected and safe for these are cost-effective systems minimizing congestion and maintenance costs on the existing roadway system. Capacity improvement dollars must be directed to address long-standing inequities for whitest folks on large urban peripheries, as recent decades of expenditures have done.

**CDOT should only be making investments that help achieve a 26% reduction in air pollution by 2025 and 50% by 2030. This was promised to all Coloradans. Not one dollar short.** reductions in state law unattainable by the promised dates of 2025 (26% reduction from 2005 levels and 50% by 2030). And as transportation investments are very long-term public investments, they must be made definitely not sooner, which is "cooking the books". This is a life and death issue, as described eloquently in this 6 min. Start at min 7: <https://vimeo.com/showcase/7077649> Password: THE-

**Many doctors have stated over the last decade that there is no safe level of fossil fuel emissions.** (See Appendix B) For this reason, Colorado law, climate threats, and to reach equity impacted by the highway-focused investment strategy of the past 5-7 decades, it is time to put capacity expansions on pause and focus capacity investments on buildout and access to Bustang transportation and more. **FHWA has been clear that highway capacity funds can be flexed to this upon request by the state.**

**There are ways to get to Colorado's statutory emission reduction levels and CDOT should not be funding anything that departs from that statewide obligation at this point**, again Appendix D for these and positions that we support from others' comments.

Finally, we ask you to note that our comments are submitted by many organizations and communities and on a voluntary basis from statewide medical, faith, and business organizations as well as Weld County comments we heard at the last hearing were all funded by fossil fuel interests in various ways. Please serve the public at large and not an industry that is supposed to be being

Sincerely,

To: dot\_rules@state.co.us

Dear rulemakers,

I write this as a long time resident of Colorado, a parent and grandparent, concerned citizen and public health professional.

This past summer, Colorado suffered from the worst air quality levels on record. High levels of ozone pollution have significant implications for Coloradan's health. Much of this came from the transportation sector.

While many of our politicians blamed our poor air quality on wildfire smoke from out of state, the reality is that hydrocarbons emitted from cars and trucks and oil and gas development are the primary drivers of ozone pollution. CPR 'Why Colorado's Record Ozone Pollution Is More About Cars Than Wildfire Smoke'

A primary focus of the plan for reducing air pollution and greenhouse gas emissions has been to encourage the adoption of electric vehicles. Given that it will take decades to replace a critical mass of the vehicles in our state, it is equally important that Colorado develop infrastructure and services to help reduce vehicle miles travelled in the short term.

The health consequences of our poor air quality support aggressive rules for reducing transportation emissions. [A 2019 study](#) compared long-term average ozone exposure with federal mortality data. It found breathing in more of the pollutant appeared to increase the risk of dying from heart and lung diseases.

[Other research](#) found people living in areas with high ozone pollution are more likely to develop acute respiratory distress syndrome, a severe condition where the lungs fill with fluid. Another California study looked into the effect on pregnancies. It found birth weights decreased about 1.7 ounces/pounds for every 12 part per billion increase in average ozone levels.

I support the strongest rule that will not only expand and replace existing highway infrastructure, but will give equal focus on investing in public transit, bike lanes and other healthy and far-reaching alternatives that will mitigate the impact of highway expansions particularly those impacting low-income and minority communities. <https://www.codot.gov/programs/environmental/greenhousegas>

Thank you,

**Rule Making Comment for Transportation (Green House Gas Reductions)**

1 message

Wed, Nov 17, 2021 at 1:27 PM

  
To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

November 17, 2021

Dear Sirs and Mesdames:

Thank you for the opportunity to provide comment. I support this transportation planning rule because it will bring new tools for our State to fight climate change, an issue hitting us in very acute ways in this county. Our reservoirs and rivers are at record lows as we are in a 20-year megadrought. In recent memory, we have had four major forest fires in La Plata County that threatened homes, lives and in fact entire communities. We are at a phase in the climate change discussion where transportation is a vital and important solution. So, it for that reason that I look forward to funding for mass transit; assistance for multi-modal projects; emission reduction requirements; expansion of or development of ride-share and bike-share programs; EV infrastructure; and more.

We here in La Plata County are innovative and creative. We are not waiting for the State or Federal Governments to “solve” this for us but also, we cannot do it alone. As examples, the City of Durango built a multi-modal trail that goes from the north to south end of town. Regional transit is available through a nonprofit called Southern Colorado Community Action Agency (<https://sococaa.org/road-runner-transit/>) but more routes are needed especially inter-regional ones. A nonprofit called 4CORE (<https://fourcore.org/>) does extensive work around EV charging, energy efficiency projects, and running a carbon offset program. Our regional COG (Southwest Colorado Council of Government) is currently looking to develop a transit app that would help residents in our five-county area link to transit. In 2023, La Plata County Government plans to finalize a multi-model plan building on past efforts. All of these efforts can benefit from State funding, policy and partnership(s).

Equity issues come into play. The reality is that many, many residents rely on their cars to get to work, school or appointments because of affordable housing challenges, a situation dramatically exacerbated by COVID-19. We have high in- and out-migration of commuters as a total of 28% of our workers commute out of the county and 23%

commute in (Root Policy Research, Inc., *Regional Housing Needs Assessment and Strategy*, Draft Report, August 2021). Also, many people simply cannot afford a car when also needing to pay for housing, child care, health care, food and heat. So, it is very clear workers will benefit from more regional transit, multi-modal and carpooling options. If these options are available, emissions can be lowered.

In order to address the climate crisis we face, it requires timely action. It also requires recognizing the unique nature of Colorado's 64 counties. That is why, in addition to this comment, I gave my approval to a comment that will be submitted by Colorado Counties, Inc. that addresses important issues such as modeling, transparency and timing. We need to bring as many communities across Colorado into this conversation as possible so we can build as much consensus as possible. Only through that approach will we have lasting changes happening not only in the MPOs but in all other counties as well. That said, we cannot wait for everyone to come into the fold before acting and that is why I support this rule.

Thank you.

[REDACTED]

Under the Colorado Open Records Act (CORA), all messages sent by me or to me on this county-owned email account may be subject to public disclosure.

Dear Transportation Commission-

Thank you again for the opportunity to comment on the Greenhouse Gas Pollution Reduction for Transportation Planning Proposed Standard. Attached you will find the second round of comment from the Mesa County Regional Transportation Planning Office submitted on behalf of the Grand Valley Metropolitan Planning Organization, Grand Valley Transportation Planning Region and Grand Valley Transit. We look forward to working with CDOT staff to finalize and implement this rule.

Sincerely,

[REDACTED]

 GHG Rule GVMPO Comment Round 2 FINAL SIGNED pdf  
340K

## Mesa County Regional Transportation Planning Office

November 15, 2021

Transportation Commission of Colorado  
c/o Herman Stockinger  
Commission Secretary  
CDOT Headquarters  
2829 W. Howard Pl.  
Denver, CO 80204

Dear Commissioners:

Thank you for extending the Green House Gas (GHG) Pollution Reduction for Transportation Planning Rule public comment deadline and the additional resources you provided that are related to the Rule. This comment letter is a follow-up of the comment letter submitted on October 11, 2021. These comments are submitted on behalf of the Regional Transportation Planning Office (RTPO), which represents the Grand Valley Metropolitan Planning Organization (GVMPO), the Grand Valley Transportation Planning Region (TPR) and Grand Valley Transit (GVT). RTPO staff has continued to be engaged in the advisory group and as a stakeholder with Colorado Department of Transportation (CDOT) staff throughout the development of this rule.

The GVMPO encompasses the urbanized area of Mesa County and includes the City of Grand Junction, City of Fruita, Town of Palisade and parts of unincorporated Mesa County. The Grand Valley TPR encompasses all of the rural areas of Mesa County. The Grand Valley Regional Transportation Committee (GVRTC) is the transportation policy board that oversees the GVMPO/TPR and includes elected officials from these four entities all of whom also help to fund the transportation planning functions of the MPO, TPR and the transit system.

The RTPO in all of its different capacities generally supports the revisions to the rule and additional supporting documentation. However, we still have a number of concerns and proposed revisions to the updated rule. The comments submitted include feedback from the perspective of the GVMPO, the rural area of the TPR and the small-urban transit system.

### **Grand Valley Metropolitan Planning Organization (GVMPO)**

#### *Modeling Process:*

GVMPO will be responsible for demonstrating compliance with the Greenhouse Gas Rule within the MPO as well as determining mitigation measures if the modeled emissions reduction levels do not satisfy the requirements. The October 19, 2021 Draft Greenhouse Gas Modeling Process speaks of the formation of a Statewide Model Coordination Group (SMCG) that "...will provide a modeling guidelines technical memo, that describes required practices in modeling that will satisfy the process described here." GVMPO is in support of this effort and believes it will be beneficial to ensuring consistency and transparency in modelling across state.

*Funding and Technical Assistance:*

As a small MPO in Colorado with few GHG-increasing projects, it is unlikely that the full reductions will be possible through project mix and the MPO may need to develop a Mitigation Action Plan for compliance. In reviewing the Mitigation Policy Overview, we believe we can comply with the requirements listed with additional technical assistance from CDOT and funding for modelling and plan implementation.

Funding for mitigation measures remains a concern. The Cost-Benefit Analysis for Rules Governing Statewide Transportation Planning (CBA) states that "...all dollars shifted away from certain capacity projects are assumed to fund worthy transportation investments that improve competitiveness, quality of place and life, safety, economic vitality, public health, air quality, and more...The projected cost of these policy choice packages is assumed to be absorbed into current transportation plan budgets (a net neutral approach)." While the GVMPO supports all of these types of projects, historically there has been insufficient funding for them, and with few capacity projects in our transportation plan, it is unclear where these funds will come from in an amount that will make the meaningful impact to the modelling described in the Rule and CBA. We understand that the Multimodal Transportation and Mitigation Options Fund (MMOF) is intended to fund these measures. However, the GVMPO still feels that this amount is insufficient to make the meaningful impact needed to drive change in mode-choice and reach the reduction levels shown in the Rule. Additionally, there has never been sustained funding for multimodal projects at the state or local level and because of this, there are many gaps in the multimodal system that must now be addressed. With this, we request additional, sustained funding to implement these mitigation measures at a scale that will reduce GHG emissions across the state. Indeed the funding should be sufficient not just for mitigation measures but for the eventual completion of a true multimodal system.

Since the Rule will create the need for additional travel modeling expertise within the MPO as well as statewide, the GVMPO continues to request additional funding be provided to the MPO and to CDOT for the staff resources to meet this need. This point is underscored in the September 29, 2021 joint Federal Highway Administration (FHWA) / Federal Transit Administration, FY 2022 Unified Planning Work Program Approvals letter addressed to CDOT Executive Director Lew. In the letter under the heading of Areas of Concern, item 4 states:

"The new requirements of the state GHG rule will require MPOs to provide financial resources and staffing capabilities to improve the travel modeling state of practice."

Clearly, FHWA does not seem to be poised to increase funding for compliance with the state-level rule. Likewise, current GVMPO funding would not allow for adding the required staff resources and therefore respectfully requests that CDOT allocate the needed funding to the MPO.

*Compliance Timeline:*

Per the draft Rule, GVMPO is not required to model reductions until 2030. As this is a new requirement for the GVMPO, and unlike DRCOG and NFRMPO, the GVMPO is in full attainment for all NAAQSs and we do not currently have the capacity or funding to do it earlier. Therefore, we continue to request that this date remain 2030.

### Transportation Planning Region

While we appreciate that CDOT has been included in the Rule as a responsible party with respect to areas outside of the MPOs, there continues to be a concern of how this rule will impact the rural areas of the state, including rural areas of the Grand Valley TPR. The CBA states, "Virtually none of these rural projects would trigger the need for GHG Mitigation Measures under this rule because, with rare exception, they do not add capacity or change land use patterns. Rather, they are generally focused on state of good repair (e.g. repaving projects), safety and resiliency improvements like adding shoulders and passing lanes, and increasingly, supporting the economic vitality of communities by investing in revitalizing main streets across the state." While this is true in many cases, this is not the case for large interstate projects such as those needed on I-25 and I-70 which travel through rural areas. With this, in order to meet GHG goals, we are concerned that funds may be pulled from one part of the state to be used for mitigation measures in another part of the state. We acknowledge that rural examples of GHG Mitigation Measures have been added to section 8.03 of the updated Rule but continue to request text in the Rule that speaks to the equity of funds for mitigations measures across the state and CDOT regions.

### Grand Valley Transit

As the transit operator in the Grand Valley, we are excited to see changes in this rule that are supportive to the expansion of transit systems across Colorado. GVT operations is funded by FTA 5307 funds matched with local funds from our funding partners. Federal funding for our system is based on population and population density, not on service or ridership as stated in the CBA. The CBA clearly speaks of moving funds from capacity projects to transit in order to increase transit services across Colorado which will require additional funds from the federal, state and/or local government for capital and operating expenses. It will also require additional buses, mechanics, maintenance facilities, and drivers to support this service, all of which can be difficult to find. We continue to request additional staff support from CDOT's Division of Transit and Rail, Procurement and Contracting and the additional local staff needed to support expanded services. As mentioned above, we continue to request funding in addition to currently proposed MMOF funding to expand transit services. Commensurate with that, additional CDOT staff will be needed to assist in expansion of transit services, particularly as funds will be flowing through CDOT to local transit agencies such as GVT.

**New Proposed Text Changes** (in addition to those included with our October 11, 2021 letter. Proposed changes in red)

The RTPO has the following general comments/changes regarding the proposed rule.

- Section 1.00- Add definition of GHG Transportation Report.
- Section 2.01.5 *The Grand Valley TPR comprises Mesa County, including the Grand Valley Metropolitan Planning Organization's metropolitan area.* Revisions are needed here or elsewhere in Section 2.00 to clarify the GVMPO area versus the GVTPR and how they will be addressed.
- Section 8.02.1: Clarify in added text that required emissions analysis is only required for the TIP for NAAs not for those in attainment.
- Section 8.02.5.3- Change text as shown in red below: **MPOs must for each Applicable Planning Document adopted or amended after October 1, 2022**, meet either the corresponding reduction levels within Table 1, or the relevant MPO and CDOT each must meet the requirements as set

forth in Rule 8.02.6, as applicable. **This provision shall not apply to MPO TIP Amendments or adoption of new TIPs for MPOs in attainment.**

- Section 8.02.6.1.1- For increased clarity, split text into non-MPO areas/CDOT and MPOs that do not receive CMAQ/STBG funding. Add sub-section headings.
- Section 8.02.6.3- New text makes first paragraph unclear. Mitigation Policy Overview also states that the Mitigation Action Plan include cost and funding source for Mitigation Measures, which is not currently included in the Rule.
- Section 8.03- Check referenced sections. Section 8.02.3 and 8.02.5.3 do not describe GHG Mitigation Measures
- Section 8.04.1 and 8.04.2- Sections may be able to be combined for clarification. Check referenced section.
- Section 8.05.2-Suggest revising text and including subsection titles i.e. Requesting a Waiver, Requesting Reconsideration.
- Section 8.05.2 and 8.05.2.2- Revise text to clarify intent on timeline for submittal.
- Check references in document. Several are incorrect with new numbering of revised document.

Again, we thank you for revising the draft Rule and the additional documentation provided. Your consideration of these suggestions and revisions will clarify and strengthen the Rule and consider both urban and rural portions of the state as well as transit agencies.

Sincerely,

[REDACTED]

Colorado Transportation Commission  
Colorado Department of Transportation  
2829 W. Howard Place  
Denver, Colorado 80204

Dear Colorado Transportation Commissioners,

Thank you for the opportunity to provide comments regarding the Rules Governing the Statewide Transportation Planning Process and Transportation Planning Regions (Rules). We applaud the approach you are utilizing to allow interested parties from across Colorado to engage in the public process. Additionally, we would like to formally thank Herman Stockinger and Rebecca White of the Colorado Department of Transportation (CDOT) for the thoughtful presentation regarding the proposed Rules they provided Move Colorado's membership in September.

For more than 25 years, Move Colorado – and our 30-plus member organizations representing planning and engineering consultants, contractors, and transportation interests – have engaged in transportation policy discussions, with a focus on increasing investment in our state's multi-modal transportation system. Our members have expertise as professionals in environmental analysis, planning, infrastructure design, engineering, and construction. In addition, many of our member firms also employ scientists and environmental specialists with local, national, and international expertise and experience in air quality and greenhouse gas (GHG) analyses and emissions reduction strategies. It is with this expertise that we write to seek additional clarity related to several proposed Rule provisions, and to assist the Transportation Commission in establishing an implementable and enforceable program that improves the quality of life of Colorado residents and reduces ambiguity as these Rules relate to other existing policies and regulations.

**Move Colorado supports the overall goal of taking meaningful steps to reduce GHG emissions in Colorado, and our comments are focused primarily on the administrative process and technical aspects of the rulemaking.**

Our comments or requests for clarity are not intended to be in conflict with the overall goal. However, we do seek greater clarification of the proposed changes to the transportation planning process to ensure the changes help to achieve the intended outcome and proposed to ease implementation.

Our membership agrees with the proposed process and approach, including the following areas:

- the existence of a waiver process,
- the creation of the State Interagency Consultation Team,
- plans to establish a GHG Mitigation Measure process outside the rulemaking, and
- that the Transportation Commission will not withhold funds from MPOs as a punitive measure if they do not reach their goals.

The areas in which we seek additional evaluation or clarification are organized by rulemaking section below. Move Colorado would be willing to expand on these comments, should additional clarification be requested by the Transportation Commission.

## **General**

We suggest adding clarity around how the Rules works with the National Environmental Policy Act (NEPA). Federally funded projects require adherence to NEPA to assess environmental impacts from a proposed action. In addition, CDOT has committed to generally following the NEPA process and assessing impacts and mitigation for state-funded transportation projects. The Federal Highway Administration NEPA process has very specific definitions of what constitutes an “impact” for an environmental resource and requires mitigation for those impacts. The use of the term “mitigation” throughout the Rules could be misconstrued as it is commonly used in NEPA documents; clarity around the interplay between the Rules and NEPA process and definitions should be included to provide clarity and minimize ambiguity during project development.

## **Section 1.00 Definitions**

Many of the terms used in the preamble and overview are not defined until later in the document. To provide clarity and improve readability, the definitions should be moved to the beginning of the document.

- Add a definition for “transportation capacity projects.” We suggest defining a capacity project as one that physically expands a road, usually by adding through lanes. Projects that focus on operational (improving traffic flow) or safety improvements, such as auxiliary lanes, should not be included in this definition.
- 1.12 Disproportionately Impacted Communities: In less populated areas, Census Block Groups tend to be geographically very large and population centers are not always located near a project area. Clarification should be added to assess where the population is located in relation to a proposed project.
- 1.35: National Ambient Air Quality Standards (NAAQS): “Small particles” is not the correct terminology for particulate matter. This should be changed to reflect the exact wording of the criteria pollutants.
- 1.36: Nonattainment Area: Clarification should be added that a nonattainment area is where the NAAQS are being exceeded; not solely where NAAQS exist.

- 1.42 Regionally Significant Project: The definition included in the Rules is the definition provided by the Environmental Protection Agency, which is meant to provide a general definition for all states. We suggest modifying the definition to rely on what the MPOs currently include in their models as “regionally significant”.
- 1.59 Transportation Systems Planning: It is unclear what this planning process is—if it is referencing CDOT’s 10-year plan and related process, it should be stated as such since the definition could also include what is identified during the NEPA process.

### **Section 8.01 GHG Emission Requirements**

- We request clarity on whether establishing a future year GHG emission target was considered rather than setting a baseline and reduction. Setting future GHG emission targets would be more directly comparable to the modeled emissions.
- Table 1: GHG Transportation Planning Reduction Levels in MMT of CO<sub>2</sub>e—additional clarification is requested regarding whether the baseline values listed for each MPO are consistent with the MPOs’ own methods and calculations. If the methods and calculations are not compatible, it could lead to two discrete calculation processes: one that is compliant with the Clean Air Act and one that is compliant with the Rules.
- Table 1: The “total” in each column should be the sum of all cells in the column. The rounding in the “total” row does not match the sum in some columns.

### **Section 8.02 Process for Determining Compliance**

- 8.02.1: Similar to the comment on Table 1, i.e., whether data from the different agencies will be directly comparable, is there a plan in place in case the baseline CO<sub>2</sub>e values differ? If the MPO's calculated value is under the Table 1 baseline value, would that difference count toward GHG reduction?
- 8.02.3: Please provide clarity on how GHGs impacts to Disproportionally Impacted Communities will be assessed. Similar to ozone, GHGs are usually examined on a larger scale and not on a smaller scale, like a neighborhood or specific project study area.

### **8.03: GHG Mitigation Measures**

We understand that the list of GHG mitigation measures is not exhaustive; however, many of these appear to be actions neither CDOT nor MPOs will have the authority to mandate. We request clarity on how CDOT and the MPOs will utilize these measures.

In addition, we request clarity on how GHG emission reduction estimates will be calculated. It will be nearly impossible to generate defensible GHG emission reduction estimates for the mitigation measures listed in paragraph 8.03.

## **8.05: Enforcement**

The Rules refer to projects or mitigation measures that reduce GHG emissions; however, no guidance is provided on how to evaluate these reductions. We request clarity on how GHG reductions will be assessed for individual projects.

- 8.05.2.1.2: Waiver denial mentions a “substantial” increase in GHGs. Please provide a definition of “substantial” to remove any ambiguity.

Move Colorado thanks you for the opportunity to share our feedback regarding the Rules. While we agree that time is of the essence in addressing GHG and its impact, **we strongly urge you to amend the rulemaking process to allow for a second round of public review following any amendments made by CDOT in response to feedback gathered through this initial public outreach process. We believe the additional review will help bring greater confidence and transparency to the process and increase acceptance for the revised Rule. Additionally, if of interest, we sincerely offer the expertise of our members with backgrounds in environmental science and air quality analysis, should that be of benefit.**

If you have questions or would like additional details, please do not hesitate to contact [REDACTED] Move Colorado’s Executive Director, at [REDACTED]

## GHG Emissions Reduction Comment

1 message

Wed, Nov 17, 2021 at 4:14 PM

[REDACTED]  
To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

[\*\*\* This email originated from outside Hinsdale County - PLEASE USE CAUTION OPENING LINKS, ATTACHMENTS OR REPLYING \*\*\* ]

To whom it may concern,

I had the opportunity and honor to speak before the Transportation Committee hearing on the 7th of October. I provided testimony via Zoom and would like to submit my comments to you via email as well. Below are the comments that I provided that day.

To give you a little background, Hinsdale County is the most remote area in the US's lower 48. Our County is more than 96% public lands, with twenty-five 13,000- and 14,000-foot peaks, and representing one of the most roadless areas in CO. We have 774 year-round residents, most of whom live in the County Seat of Lake City. This is the least populated county in Colorado.

Here in Hinsdale County with an elevation between 8500 feet and 1400 feet, we are feeling the effects of climate change, perhaps more than anywhere in the state. The emissions from vehicles is contributing to a changing climate that results in heat and drought that was unimaginable only a few years ago, and smoke in our skies all summer long.

With our county's large public lands make-up, recreation is by far our primary economy. As you can imagine, the emissions impact from off-highway vehicles is a major concern for Hinsdale County.

Additionally, virtually everyone who visits Hinsdale County travels here by petroleum powered vehicles. Because of our low population and our remote location, we are especially challenged to address emissions problems from vehicles. We are doing our best to keep up with EV charging stations and education for our visitors, but we need the state's help to provide incentives and requirements for transportation related emissions reductions and adaptations.

We will continue to partner in every way we can, but what we really need is for Colorado to be a leader in emissions reductions from vehicles, which is the quickest way for us to effect meaningful climate solutions.

Climate Change knows no boundaries. Reducing emissions across Colorado will help reduce the worst impacts of climate change here in Hinsdale County. Providing better transit funding, better access to electric vehicles and charging stations, and providing support for multi-modal transportation are all steps that will lead to reduced emissions, which we have to embrace.

I also feel strongly that equity must be a major priority in this rulemaking, including ensuring the Disproportionately Impacted Communities are fully engaged throughout implementation. Income levels in Hinsdale County cannot compete with the front range, but our citizens deserve access to Electric Vehicles and other benefits of an electrified transportation system.

Finally, I'd like to emphasize that the GHG emissions reductions must be measurable and the rule must include strong enforcement provisions.

Respectfully,

[REDACTED]

November 17, 2021

CDOT Transportation Commission  
Colorado Department of Transportation  
2829 West Howard Place  
Denver, CO 80204

Dear Commissioners:

Thank you for the opportunity to provide comments on the Rules Governing Transportation Planning Process and Transportation Planning Regions, containing the new Greenhouse Gas Transportation Planning Standard, proposed on August 13, 2021. We appreciate the process CDOT staff has implemented to explain the proposal and the subsequent Cost Benefit Analysis and other information that have been provided to analyze the rule further.

Commuting Solutions is a 501(c)3 nonprofit organization whose mission is *“to connect commuters to places in the Northwest metro region for today and for the future”* and is the Transportation Management Organization (TMO) for the Northwest metro region, representing business interests.

We understand this is new territory for Colorado but it’s important to keep in mind the overarching targets established by the GHG Pollution Reduction Roadmap to reduce the transportation sector’s carbon dioxide emissions by 12.8 metric tons by 2030.

Through our work as a TMO for the past 20 years, we are keenly aware of the need to integrate land use with multimodal investments to reduce travel demand and vehicle miles traveled (VMT), which are necessary to reduce transportation’s impact on climate change. Decreasing GHG emissions through a mix of projects that limit and mitigate air pollution and improve quality of life through more affordable commuting options is a priority for Commuting Solutions. Taking such action would be entirely consistent with our mission as a nonprofit organization focused on reducing the transportation sector’s impact on climate change.

We support strategies to reduce single occupant vehicle travel and increase multimodal options to further the state’s Roadmap to its GHG Pollution Reduction goal of a 10% reduction in VMT by 2030, and as called for by Senate Bill 260. We support the monitoring of VMT to help clarify how MPOs and the state will implement the rule and enable communities to prioritize investments that increase multimodal travel options and reduce the need for driving.

We request that Transportation Demand Management (TDM) and social marketing be included as eligible mitigation strategies, to maximize the use of existing infrastructure and to increase awareness of multimodal options, services, and programs. We encourage participation with the eight TMOs in the Denver metro region so that we are leveraging existing organizational resources who are already working on TDM strategies.

We also ask that equity considerations be incorporated into the rule to meaningfully prioritize benefits and avoid harm to disproportionately impacted communities. To this end, we would like to see greater specificity and assurance that a certain level of mitigation funding will be directed toward these communities.

Thank you, again, for the opportunity to provide input. We are excited about the prospects for Colorado to improve our air quality and expand the use of multimodal travel options that will result from this proposed rule.

Sincerely,

Executive Director

STATE OF COLORADO

CDOT Transportation Commission  
CDOT Headquarters  
2829 W. Howard Place  
Denver, CO 80204

RE: Proposed GHG Transportation Planning Standard Comments

Dear Commissioners,

Thank you for the opportunity to provide comment on CDOT's proposed GHG Transportation Planning Standard. These comments represent Denver's positions developed in coordination with Denver's Mayor's Office, the Office of Climate Action, Sustainability and Resiliency, the Department of Transportation and Infrastructure, the Department of Community Planning and Development, and the Department of Public Health and Environment. We appreciate the coordination with CDOT Executive Management during this planning process and will continue to work together to maximize the benefits of this rule.

*Sustainable Transportation Investment in Disproportionately Impacted Communities Should be a Priority*

Denver supports ambitious, economy-wide GHG reductions to achieve the science-based 2030 climate goals for transportation in Governor Polis' *Greenhouse Gas Pollution Reduction Roadmap*. We are optimistic that this rule will result in more transit and more bicycle and pedestrian infrastructure throughout Denver, the Front Range region, and the state, especially in our communities historically burdened by construction of highways and a lack of investment in sustainable transportation infrastructure. The rule could go further in requiring a set percentage or minimum level of investment by MPOs into these disproportionately impacted communities. Whether it is a direct percentage of the mitigation measure funds or a part of project scoring in the TIP or STIP, these communities should be prioritized in future transportation funding and infrastructure. Discussions with CDOT staff have indicated this kind of threshold will not likely be proposed through this rulemaking and left to the Administrative Process in early 2022. Denver will continue to advocate for prioritizing investment for affordable and equitable transportation options in these communities after this rule is adopted.

*Mitigation Measures Have Co-Pollutant and Cost Benefits*

The GHG planning standard provides other benefits that the Commission should weigh as it considers adopting this rule. Increasing investment in transit, bike/ped infrastructure, and travel demand management will improve local air quality from reductions in pollutants like PM2.5, VOC, and NOx. These benefits have a significant

multiplier and move us in the right direction towards reaching our climate goals as well as public health and air quality goals, which is greatly needed in our region.

The Cost-Benefit Analysis (CBA) published by CDOT also put into perspective the benefits of a GHG planning standard. Summarizing the costs from CDOT's analysis in Table 1 below shows there are substantial savings by building and incentivizing a sustainable transportation system rather than to continue on a path of prioritizing roadway capacity and expansion projects.<sup>1</sup>

---

<sup>1</sup> Note, as Denver reviewed these costs, we believe CDOT may have made an error in the cost estimate for maintenance of "bicycle/pedestrian/micro-mobility" in Table A.3 of the CBA. CDOT's maintenance costs are \$46 million in 2022-2025, \$145 million in 2026-2030, \$496 million in 2031-2040, and \$566 million in 2041-2050, which seem like unreasonably high costs to maintain pedestrian and bicycle facilities. These maintenance costs were corrected in the following table to represent 10% of capital construction costs, which is the percentage that the CBA cited as an estimate of ongoing costs after the infrastructure is built.

**Table 1: Summary of GHG Mitigation Measure Costs**

<i>Description</i>	<i>CBA Table Number</i>	<i>\$ Value per Unit</i>	<i>2022-2025 (\$MM)</i>	<i>2026-2030 (\$MM)</i>	<i>2031-2040 (\$MM)</i>	<i>2041-2050 (\$MM)</i>
Household-based trip reduction programs	A.1	\$30 per HH per year	\$2.9	\$6.2	\$13	\$13
Telework administration (govt)	A.2	\$131,000 per staff person	\$0.7	\$0.8	\$0.6	\$0.5
Sidewalk Infrastructure costs	A.3	\$170,000 / mile	\$100	\$112	\$187	\$32
Bicycle Infrastructure costs	A.3	\$25,000 / mile of lane \$250,000 / mile of special facility	\$46	\$50	\$84	\$15
Maintenance (bike/ped/micro mobility)	A.3	10% of capital	\$14.6*	\$16.2*	\$27.1*	\$4.7*
Electric micromobility equipment subsidy	A.3	\$250/HH/year	\$0.4	\$1.5	\$5.9	\$8.4
Transit vehicle costs	A.5	\$435,000 per bus	\$38	\$136	\$394	\$452
Transit Operating Costs	A.5	(see cost analysis)	\$200	\$718	\$2,083	\$292
New transit fare revenue	A.5	\$0.75 per trip	(\$68)	(\$243)	(\$706)	(\$809)
Efficient Land use admin costs (govt)	A.6	\$50,000 per municipality	\$7	\$8	\$13	\$11
<b>Total Costs</b>			<b>\$341</b>	<b>\$805.7</b>	<b>\$2,101.6</b>	<b>\$19.6</b>
Roadway Capacity/Expansion Project Costs	A.7	\$5 million per lane mile (freeway) \$1.5 million per land mile (arterial)	\$418	\$985	\$2,656	\$2,692
<b>Savings</b>			<b>\$76.4</b>	<b>\$179.3</b>	<b>\$554.4</b>	<b>\$2,672.4</b>

\* Denver revised these maintenance costs to reflect 10% of the annual cumulative construction costs as cited on page 14 of the CBA. Table A.3 in the CBA erroneously uses costs of \$46 million in 2022-2025, \$145 million in 2026-2030, \$496 million in 2031-2040, and \$566 million in 2041-2050. Denver believes these costs are in error since they greatly over-estimate expected maintenance costs.

In addition to these savings, the benefits of GHG mitigation and VMT reduction predicted for safety (\$20 billion), vehicle delay (\$15.1 billion), and vehicle operating costs (\$11 billion) are substantial. In fact, these benefits far outweigh the predicted benefits of the rule attributed to GHG (\$1.2 billion) and air pollution (\$270 million).

### *Denver Agrees the Mitigation Measures Should be Selected through DRCOG*

As expressed throughout these hearings, the public generally embraces the proposed rule but some chambers of commerce and local governments express concern. Denver, as a large local government, expresses our support for the proposed rule. The overall structure is appropriate to reflect the diversity of Colorado's regions. We agree it is most appropriate for regional MPOs to determine the mitigation measures through the Administrative Process and achieve those measures at the regional level. An outstanding question is how the administrative process will assign GHG reductions for similar mitigation measures in the DRCOG region, which has a wide spectrum of development densities and land uses. This must be resolved in the DRCOG Administrative Process. However, the Commission can provide flexibility to address these concerns by setting a future rulemaking date in this rule so the reductions in the rule's Table 1 can be reconsidered if necessary. We agree with DRCOG's comment that the modeling today may show different results than actual future conditions, especially the baseline emissions for each planning horizon year in Table 1. We also support the removal of the baseline projections in the October version of the revised rule.

### *Land Use and Transportation Are Inextricably Related*

The cost benefit analysis showed that we will not achieve these GHG reductions without significant changes to local land use policy. We must shift new growth into transit-adjacent development that can reduce dependency on single occupant vehicles and vehicle miles of travel. Just like other local governments, these changes are challenging to make in Denver. However, with our *Blueprint Denver* plan adopted in 2019, we are working to achieve 80 percent of all new housing in Denver in our high growth areas and strengthen sustainable transportation connectivity. In 2020, 74 percent of all new housing went into our high growth areas. While these are not perfectly analogous with the mixed-use areas, we will do our fair share to achieve the ambitious goal of 75 percent of all new housing in mixed-use areas with access to sustainable modes of transportation. We encourage the Commission to stand strong and establish bold policy that pushes local government to adapt its land use regulations to our climate reality. Denver will actively participate in future CDOT rulemakings or other initiatives that implement the statutory requirements of Senate Bill 21-260, including the requirement to "Consider the role of land use in the transportation planning process and develop strategies to encourage land use decisions that reduce vehicle miles traveled and greenhouse gas emissions."<sup>2</sup> We look forward to working with CDOT in fulfilling this requirement.

### *DRCOG Proposed Necessary Changes to the Rule in Their October Comments*

The DRCOG Board suggested many improvements to the proposed rule language in a letter addressed to the Commission on October 7<sup>th</sup>. Denver supports these comments, and specifically calls attention to the following:

- *Requiring reduction measures in the TIP.* Specifically, we support the DRCOG suggestion to add a provision in Section 8.03 to require sponsors of regionally significant roadway capacity projects to identify and include GHG Mitigation Measures when including the project in a TIP or the STIP.

---

<sup>2</sup> See Colorado Revised Statutes, 43-1-128(3)(d)

- *Restricting specific funding sources if the Table 1 GHG reductions are not met.* Denver supports granting the Commission the authority in §8.05.2 to restrict funding of all CMAQ, STBG, and 10-Year Plan funds to GHG mitigation measures if the Table 1 GHG reductions are not met. Denver supports this policy applying to Regionally Significant Projects in the MPO process.
- *Modeling the TIP.* Denver agrees with DRCOG's sensible approach to model the emissions associated with the last year of TIP and using interpolation when necessary between Table 1 horizon years. Denver strongly supports modeling the TIP and not just the Regional Transportation Plan.

Thank you for your time and we look forward to working with the Commission and CDOT staff throughout the remainder of this rulemaking.

Sincerely,

A large black rectangular redaction box covering the signature of the Chief Climate Officer.

, Chief Climate Officer

## APCD Comments on Proposed Transportation Commission GPS Rule

The Air Pollution Control Division (APCD) of the Colorado Department of Public Health and Environment appreciates this opportunity to provide input on proposed Section 8 of the Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions, 2 CCR 601-22, (referred to as the “GHG Transportation Planning Standard”, and in particular on the verification and input roles APCD is intended to play in conjunction with these proposed rules.

APCD supports the Transportation Commission’s efforts to address greenhouse gas emissions (GHG) from the transportation system through the GHG Transportation Planning Standard’s establishment of GHG pollution reduction planning levels for ensuring GHG reductions in transportation planning. These rules can serve as an integral part of achieving state goals of reducing the contribution of GHG emissions from the transportation sector as set out in the State’s GHG Reduction Roadmap and pursuant to the Colorado General Assembly’s directive for transportation planning to consider environmental stewardship and reducing GHG emissions in § 43-1-1103(5), C.R.S.; as well as toward the overall goals of reducing statewide GHG pollution as set out in § 25-7-102(2)(g), C.R.S.

The GHG Transportation Planning Standard will accomplish GHG reductions by requiring CDOT and Metropolitan Planning Organizations (MPO) to adopt plans that achieve the rule’s established GHG targets through a combination of projects that limit and mitigate GHG emissions. As proposed in Section 8.02 of the draft rule, CDOT and MPOs will be required to demonstrate compliance through travel demand modeling and air quality modeling, and to utilize mitigation measures for plans that exceed the specified emissions level. Examples of these mitigation measures envisioned in the GHG Transportation Planning Standard’s preamble include adding bus rapid transit facilities and services, enhancing first-and-last mile connections to transit, adding bike-sharing services including electric bikes, improving pedestrian facilities like sidewalks and safe accessible crosswalks, investments that support vibrant downtown density and local zoning decisions that favor sustainable building codes and inclusive multi-use facilities downtown.

Importantly, the proposed rule recognizes the importance of utilizing APCD expertise for verification of the modeling to demonstrate compliance and for developing mitigation measures. The GHG Transportation Planning Standard establishes, in Section 8.04, APCD’s role of providing confirmation and verification of the technical

data required for demonstrating compliance pursuant to Section 8.02.5. This section also provides for APCD to review and comment on changes to the process for selecting, measuring, confirming, and verifying GHG mitigation measures established in Section 8.02.3. APCD strongly supports these provisions. Utilizing APCD expertise in these roles will better guarantee accurate and fully transparent compliance verification along with assuring sound measures for mitigating GHG emissions are developed and maintained. Related, APCD believes the timeframes proposed in the rule for APCD to provide such verification and input are reasonable. APCD also believes the continued partnership between APCD and CDOT through early and ongoing sharing of data and expertise throughout the process will bolster GHG reduction goals; and can, as necessary, be detailed through the Intergovernmental Agreement called for in Section 8.02.2. APCD supports the requirement for CDOT to develop and provide publicly comprehensive reports on GHG reduction accomplishments as set out in Section 8.06. To support the development of this report, and to further the ongoing sharing of information as it becomes available, the Division specifically requests that CDOT staff be directed to provide annual updates to the Air Quality Control Commission on the status of GHG reduction accomplishments. Details for the updates can be further specified in the Intergovernmental Agreement that is call for in Section 8.02.2.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Shaun McGrath', is written over a faint circular stamp.

## OFFICE OF THE MAYOR

One DesCombes Drive • [REDACTED]

Dear Commissioners,

Everyday we watch the destruction of climate change continue to impact the daily lives of people all over Colorado. As the newly elected Mayor of Broomfield, I am cognizant of the fact that we cannot just stand by and perpetuate the destruction as future generations are dependent upon how we act now.

Throughout my years of public service I have made it a top priority to help protect our environment for future generations. I supported the formation of a new citizen-led Advisory Committee on Environmental Stewardship or ACES. Through these efforts, Broomfield launched the Zero Waste Resolution Campaign in 2020 with the goal of achieving 100% waste diversion by 2035. The City Council of Broomfield also adopted a greenhouse gas reduction plan based on emissions inventory to reach 100% renewable energy.

But these actions are not enough, we need to work with the state to ensure we reach the goals set by SB19-1261 and SB21-260 which establish statewide greenhouse gas emissions targets.

In order to follow-up on the work that has already been done, I am asking that we include Added tracking and reporting of Vehicle Miles Traveled (VMT). This was avoided entirely in the original proposal, and the addition is important. There is also a major loophole that needs to be closed. We need to make sure that a highway capacity project (e.g., adding lanes) cannot be done and claim it as air pollution mitigation by saying that reducing congestion through capacity additions means less pollution because vehicles stop less. This is not the type of infrastructure work Colorado needs.

Some other key concerns include:

- The overall pollution reduction target (up to 1.5MMT) is too small. That isn't adequate because it still leaves a sizable gap that CDOT must figure out how to fill. This proposal would be stronger if a target is set at a level closer to the actual gap.
- The addition of VMT tracking and reporting is great, but there should be actual VMT targets.
- The provisions intended to protect at-risk communities (which CDOT refers to as "disproportionately impacted communities") need strengthening. In order for the rule to meet the equity intent of HB21-1266, it needs to specify how benefits and investments will be prioritized for Colorado's most impacted communities.
- CDOT may need to clarify that you can't double-count emissions reductions from EVs, which is a potential loophole that needs to be addressed.

- GHG mitigation measures should be required if a plan fails to meet GHG reduction targets. These measures absolutely should not be optional.
- The proposed waiver process should be limited to safety projects.

This proposal should result in significant progress towards meeting the GHG Roadmap's transportation sector emissions reduction targets. There is still much more to be done, however, since even if this proposal is entirely successful there is still a big climate pollution gap.

The cost savings for Coloradans from adoption of this rule are conservatively estimated at a stunning \$9.4 billion by 2030, and a total of \$40.3 billion by 2050. The three largest sources of cost savings come from reduced vehicle operating costs, safety, and traffic delay. And the two largest sources – safety (reduced vehicle crashes) and traffic delay - make up over 2/3 of these savings, largely due to reductions in Vehicle Miles Traveled. VMT absolutely should be a primary goal of this rule and these economic benefits will be a win for all Coloradans, in particular for disproportionately impacted communities.

Every year we see our summers get longer, the fires burn faster, and the winters get more and more mild. My constituents are urgently demanding aggressive action to reduce GHG emissions and avoid the worst impacts of climate disruption. If we want a livable and vibrant planet to last we have to act now and that starts in my community and extends to all of Colorado.

Thank you to CDOT and the Transportation Commission for their leadership on this GHG planning rulemaking. This is an opportunity for Colorado to be a leader on climate-friendly transportation planning.

Sincerely,

A large black rectangular redaction box covering the signature area.

 **CDOT GHG RULE COMMENTS 111721 pdf**  
4782K

November 18, 2021

Colorado Transportation Commission  
2829 W. Howard Pl.  
Denver, CO 80204.

Attn: Theresa Takushi, Rebecca White

**Subject: Comment on “Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions” 2CCR 601-22**

Dear Members of the Colorado Transportation Commission:

Thank you for the opportunity to comment in this project. I am a member of the Sierra Club, but this submission is solely my own and does not represent the Sierra Club.

I offer comments based on my experiences in engineering, including transportation, to environmental planning and community impacts, with especial concern for environmental justice and communities that have suffered in this factor. My experience includes an M.S. Civil Engineering, Thayer School of Engineering at Dartmouth College, a founder and Board member of the Regional Transportation District (RTD), a member of the Colorado Highway Commission, service on transportation and urban quality committees of the Metro Denver Council of Governments (DRCOG), environmental/ecological projects on land use, energy, environmental quality and transportation at the Colorado School of Mines Research Institute, the Colorado Energy Research Institute at the Colorado School of Mines, and the Rocky Mountain Center on Environment (ROMCOE). I have been appointed to Citizen Advisory Committees on the Environmental Impact Statements (EIS) for I-70 Mountain Corridor, Northwest circumferential toll road, and several other such projects. I have worked with environment and community involvements such studies as the I-70 Central project, the I-25 widening project in Colorado Springs, the North Metropolitan Planning Organization (MPO) plans, and other issues. I am also a recipient of Wirth Chair University of Colorado environmental “Distinguished Service Award.”

It is heartening to note the state governments have direct decision-making powers in this national process and that the Federal government has provisions to guide states to take racial equity and EJ into full account along with climate change.

My comments will be oriented to broader and more general matters rather than detailed attention to specific quantification; I have not spent time to analyze the numbers. However, based on comments by Sierra Club members at the hearings on this action, I support their recommendations on quantifications as being based on excellent research and legitimate concerns. My comments will focus primarily on:

- Environmental Justice (EJ), Equity, Disproportionately Impacted Communities (DIC): a major concern in the entire new Infrastructure bill signed by the President on November 15, 2021.

- The broad issue of GHG reduction, given the disappointing result of the Glasgow COP26 conference and the desirability of state and local initiatives to set examples that could stimulate others could follow.
- In both of these two items, I will mention some actions that CDOT should take to meet the broad intent of GHG reduction and Environmental Justice in the CDOT action based on this bill and on other CDOT actions that are related to the issues of this bill.

Pursuant to the third bullet above. I note the emphasis and proposed analyses are on numerical quantification. We civil engineers are far more comfortable in this than we are on intangible, non-quantification and qualitative analyses. I was on the DRCOG Transportation Advisory Committee which generated reports for use by the Regional Transportation Committee. One of our main exercises was to develop project scoring based on numbers we assigned to each of about 25 variables such as drainage, sight distances etc. We would debate whether Item 13 should be awarded 4 points or 5 points. I have seen similar CDOT approaches and methodologies for environmental analyses in Environmental Impact Statements. To avoid this, CDOT should involve outside analysts to examine and recommend on intangible and qualitative matters such as community cohesion, and tie this into the quantification elements and “scoring criteria.” A really good GHG reduction, with actions to get ahead of, not behind, the general growth and transition away from fossil fuels, will benefit communities economically, functionally, in pride and in health. As an example of a CDOT failure in the past in this issue, the Final EIS for the I-70 Central project limited its coverage of Community Cohesion to one comment: *it will be improved because the community will have access to a better highway!*

Turning to the interrelated factors of equity and land use, and of course VMT and GHG reductions are directly tied to land use, some past actions and planning provide relevant guidance for the present and future. I will focus on Metro Denver because of my RTD experiences and involvement in specific projects such as I-25 south, the “Beltway” projects, and RTD projects. However, I also draw on my dealings with CASTA and as a member and officer of the non-profit statewide Colorado Mobility Coalition, which was an assembly of organizations involved with transportation issues for non-drivers, especially senior citizens, mobility-impaired people and income-limited travelers.

RTD was founded in 1969 and in 1973, it took its new plan to the voters who approved it 58% to 42%. A month before the vote, the nation was suddenly almost brought to a halt when the Arab Oil Embargo took place. It should be reviewed because VMT reduction was the major issue as gas prices went berserk, gas stations had long lines for sales of just a few gallons, and stations were often out of fuels. Car-pooling for all purposes was essential. Large businesses bought vans for employees to use to and from work, with employees as drivers and with special parking spaces. Pedestrianism increased. A more complete review of actions of those days should yield some ideas for GHG reductions in our present situation.

The RTD plan was designed to provide transit to generate denser and diversified land use. It was to service the 20% of the population who were non-drivers and to give drivers an option to car use. Nodes around stations were later called “Transit-Oriented Development” – TOD. RTD’s first decades did not have fixed guideway vehicles except for Denver’s 16<sup>th</sup> Street Mall

buses, which moved huge numbers of riders, many of whom arrived by bus and later by Light Rail. A large GHG reduction and cleaner air were the results. Around other Light Rail stations, TOD, some with Park-n-Ride facilities, denser development, primarily apartments with amenities, gradually developed. Planning at some stations was specifically oriented to EJ with rail stations having childcare facilities. We proposed these at “A” line stations in the ethnic areas and at the massive TOD on the Gates plant site near the Broadway station. Unfortunately, the social service features did not develop, but I recommend that these and similar intangible EJ equity factors be worked into the qualitative planning and the GHG-VMT and intangible equity benefits in quantitative aspects of studies for the future. This need not be limited to the Metro Denver area, of course.

Another qualitative consideration in DIC areas is the allocation of funds related the Electric Vehicles (EV) and charging stations. Obviously, public vehicles will become EVs first. But what about private and business vehicles? The high cost of EV will deter private and business ownership. But I believe that somehow attention should be devoted in DIC communities to try to increase EV use in certain types of local businesses in DIC areas. A pickup truck used by a small local building repair and modification business, a business that must pick up inventory and deliver sales, will generate a lot of mileage. GHG reduction and local air quality can be improved if the purchase or leasing of EVs for such businesses could be stimulated by governmental assistance. Such businesses and the community will get economic benefits.

Yet another land use qualitative factor should be ecological factors in land use, especially community and natural resiliency. Colorado is relatively fortunate in not having coastal lands, the extreme droughts of areas farther west, and the “Atmospheric Rivers” of warm air laden with water vapor that move Gulf of Mexico water inland, even fairly far north of the coastal areas, and now Pacific Ocean water onto large land areas. However, our infrequent floods such as that of 2013 could well become more frequent as climate change progresses. Wildfires will increase; some say the season will become year-long. Sensitive land that is prone to flooding or climate damage should be identified and GHG reduction projects should consider transportation effects on these places.

I support the Sierra Club in recommendations and comments on Core principles: (1) add a requirement that at least 40% of mitigation investments in each Mitigation Action Plan occur in DICs; (2) add a requirement that mitigation investments must be designed to ensure that there is no net increase in transportation pollution in DI Communities. Further, communities hit by severe air pollution in must directly benefit from any policies moving forward.

I close with an article from the Denver Post, Monday November 15, 2021, by Conrad Swanson.:  
Headline: “**emission-reduction goals with 2021 legislation, but still not there** - -Report indicates that much of Colorado’s progress by 2030 depends on rulemaking processes.” An Excerpt:

*“Colorado isn’t predicted to fall as drastically short of Gov. Jared Polis’ goals for cutting greenhouse-gas emissions as initially thought, according to a new report analyzing bills passed in the General Assembly’s 2021 session. The report released Monday by Energy Innovation and RMI — formerly Rocky Mountain Institute — follows a similar analysis in May indicating the state would fall drastically short of the governor’s quest to halve emissions from 2005 levels by 2030*

*and 90% by 2050. Now, Kyle Clark-Sutton, an analyst for RMI, said the state could be within "spitting distance" of its 2030 goals, but much still hangs in the balance. In short, some bills passed this year should yield almost immediate results and automatically lead to a 10% cut in emissions by 2030, Clark-Sutton said.*

Another RMI analyst noted that other Federal bills could have Colorado could see an additional 30% reduction in emissions. But reductions could fall far shorter if state agencies like CDOT don't tighten regulations on polluters as much as they could, the analyst said; in a best-case scenario the state could see up to a 40% cut in emissions by 2030. That is consistent with Sierra Club comments.

Respectfully submitted

## Written Comment for Proposed Rules

1 message

[Redacted]

Wed, Nov 17, 2021 at 10:03 PM

To: dot\_rules@state.co.us

I would like to provide the following comment to the proposed rule as a resident of Denver, Colorado

- I believe the STAC should also include at least one representative of someone with limited mobility and someone who does not use a car as a primary mode of transportation.
- I think section 4.02.5.2 should specify that an online comment platform be used for public comment to make less cumbersome.
- I think section 4.02.5.5 should also include consulting on cultural resource
- I did not see much in regards to housing and think this document should directly address an effort to prevent displacement of disproportionately impacted communities due to gentrification, highway expansion projects, and rising housing costs. Commute times for many workers in Colorado are over an hour due to lack of affordable housing which is likely one of the largest contributors to individual GHG emissions

Thank you,

November 17, 2021

Colorado Transportation Commission  
Colorado Department of Transportation  
2829 W. Howard Place  
Denver, CO 80204

Dear Commission Members:

Thank you for the opportunity to comment on the Greenhouse Gas Reduction Rulemaking. As a member of the North Front Range Metropolitan Planning Organization (NFRMPO), I have worked with MPO staff to understand the implications of the new rule on our regional transportation planning efforts. As you are aware, the NFRMPO has expressed concerns about several provisions in the rule and has recommended several improvements including, developing practicable GHG reduction levels, expanding the implementers of GHG mitigation measures, setting per capita GHG reduction levels, and requiring the assessment of GHG reduction levels. I believe that these measures would improve the rule, and I ask you to consider making modifications that are supported by counties, and MPOs across the state.

**I do want to clearly state, however, that I fully support efforts to reduce transportation related greenhouse gas emissions and understand the urgency of addressing climate change. As such, I am a strong supporter of an effective, and feasible rule.**

Thank you again for the opportunity to share my views. I look forward to working with CDOT and the Transportation Commission on efforts to reduce our GHG emissions and improve our air quality.

Best wishes,

**Letter Supporting Equitable and Ambitious Transportation Rule //**  
**Carta de apoyo a la regla de transporte equitativo y ambicioso**

---

Dear Commissioner,

Thank you for your work on the Greenhouse Gas (GHG) Pollution Standards Rulemaking.

This rulemaking is a chance to clean up the dirty air that is harming our health, especially our kids, elderly friends and family, and communities located near busy highways, and I am asking you to stand up for clean air, safe streets, and healthy neighborhoods.

As the Colorado Department of Transportation (CDOT) revises the draft GHG Pollution standard over the next few months, we are asking CDOT to:

1. Center EQUITY in all decision-making processes,
2. Elevate COMMUNITY VOICES through robust public participation processes that include language translation, targeted outreach, and early publication of hearings,
3. Set MORE AMBITIOUS pollution reduction targets.

This is Colorado's opportunity to make good on our climate and environmental justice commitments, prioritize investments in public transit, and include a public engagement process that centers communities most impacted by transportation pollution.

Estimado Comisario,

Gracias por su trabajo pertinente a la reglamentación de los estándares de contaminación de los gases de efecto invernadero (GEI).

Esta reglamentación es una oportunidad de limpiar el aire sucio que está dañando nuestra salud, especialmente a nuestros niños, amigos y familiares ancianos que viven en comunidades cerca carreteras muy tráflicas, y les pido que defiendan el aire limpio, calles seguras y barrios saludables.

A medida que el Departamento de Transporte de Colorado (CDOT) revisa la guía de (GEI) durante los próximos meses, le pedimos a CDOT lo siguiente:

1. Centrar la EQUIDAD durante el proceso de tomar decisiones,
2. Elevar las VOCES DE LA COMUNIDAD a través de procesos sólidos de participación pública que incluyen traducción de idiomas, divulgación directa, y publicación temprana de audiencias.
3. Establecer objetivos de la reducción de contaminación MÁS AMBICIOSOS.

Esta es la oportunidad de Colorado para cumplir con nuestros compromisos de justicia ambiental y climática, priorizar las inversiones en el transporte público e incluir un proceso de participación pública que se enfoque en las comunidades más afectadas por la contaminación del transporte.

Sincerely // Attentamente,

*Name, County:*

778K

November 18, 2021

Transportation Commission  
Colorado Department of Transportation  
2829 W. Howard Place  
Denver, CO 80204

(via email to (via email to [dot\\_rules@state.co.us](mailto:dot_rules@state.co.us))

Dear Commissioners:

Thank you for the opportunity to provide these comments on the proposed changes to the Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions (2 CCR 601-22).

Denver South is both the community surrounding the I-25 corridor south of Denver and the economic development organization that convenes public and private stakeholders to co-author the future of our shared community. We work to improve economic prosperity and the creation of primary jobs in the region through business retention, attraction, and expansion efforts.

Transportation is a core part of our mission. We work with Denver South Transportation Management Association (our sister organization) and partner with other organizations in the regions to identify commuting solutions that improve people's lives. This includes new and ongoing efforts to identify and implement mitigation projects and strategies.

Denver South and our partner jurisdictions have had demonstrable success with ongoing and existing mitigation efforts. We applaud the overall goal of reducing greenhouse gas emissions, improving air quality, and providing more transportation options. In that spirit, we offer the following comments.

The proposed new standard raises three important concerns the Commission must account for as planning proceeds:

1. Mitigation efforts governed by the State should recognize the value of existing efforts and projects by local jurisdictions.
2. Funding for mitigation projects must be adequate and appropriate.
3. Targets must be developed with local jurisdictions and in line with accurate projections, current experience, and realistic assumptions.

**First, mitigation efforts governed by the State should recognize the value of existing efforts and projects by local jurisdictions.**

Denver South is working toward the shared goal of reducing greenhouse gas emissions through efforts that reduce traffic congestion, increase mobility, accessibility, and practicality for everyone. Our partner jurisdictions and members have engaged in projects that have made a significant contribution to mitigation efforts. Attached to this letter is a brief overview of a few impactful projects completed or are underway by Denver South partnerships.

They have expanded choice and demonstrated success by delivering emission-reducing and multimodal-focused projects throughout the region. For example, Denver South members are funding multi-million-dollar projects that add new bike lanes along the I-25 corridor. They also maintain the I-25 interchanges from Belleview south through Ridgeway Parkway with trees and greenery – areas that might otherwise be concrete.

We believe that any new proposed standards should recognize and account for the value local jurisdictions contribute to mitigation efforts through existing projects and planning. Simply put, existing and ongoing investments by and within a jurisdiction should be factored as mitigations into future funding calculations. The State's approach to targets and funding should incentivize a holistic approach for projects undertaken and completed by metro area jurisdictions. These projects, investments and emissions mitigation efforts have an outsized impact on statewide targets. Including them in funding calculations rewards a holistic approach and provides incentives and resources for additional local efforts, multiplying the ongoing effect of transportation demand management (TDM) investments by metro area local jurisdictions and their partners.

**Second, funding for greenhouse gas mitigation projects must be adequate and appropriate.**

The inclusion of mitigation targets will increase the costs of projects. Local jurisdictions and municipalities may not have sufficient resources to meet the targets without thoughtful plans and dedicated funding.

In addition, it is vital that the State recognize the disproportionate impact the front range and I-25 corridor communities like Denver South have on reducing greenhouse gas mitigation. Funds invested with our partners and front range metro communities provide a high rate of return on investment per capita. It is critical that the State consider directing the allocation to front range and I-25 corridor communities and projects that will more effectively and efficiently help meet the legislatively mandated greenhouse gas targets.

**Third, targets need to be developed with local jurisdictions and in line with accurate projections, current experience, and realistic assumptions.**

Mobility is a central part of maintaining and improving the Colorado quality of life Denver South residents thrive on. It is also what makes our region among the most enjoyable places to live, work and play in the nation, and as such, we have a critical perspective and role to play in the process. The proposed new standard includes several key provisions and potential mitigation measures yet to be determined by CDOT. The selection, measurement and management of the targets must be clarified with the input of local jurisdictions and businesses. At this point, the lack of clarity from CDOT and the State is concerning.

Colorado is a diverse state, and Denver South represents a diverse community of members. We urge the State to consider the range of transportation needs, opportunities and ongoing efforts when drafting the new standard and rules. The individuality of local jurisdictions and businesses cannot be overstated, and that the Commission work closely with businesses and business advocacy groups is critical to the success of any new standard and to achieving air quality targets together.

In conclusion, we support the overall effort to reduce greenhouse gas emissions, improve air quality and increase transportation options across the state. Denver South members were instrumental in funding the creation of Denver's Light Rail and the Southeast Rail Line Extension and have contributed to cleaner air and reduced greenhouse gas through countless projects over the years.

It benefits us all to recognize the value of existing efforts and projects by local jurisdictions in the proposed new standard. Just as it is critical for mitigation funding to be adequate and appropriate, targets need to be developed with local jurisdictions and in line with accurate projections, current experience, and realistic assumptions. Our intention is to encourage the collaboration of all the stakeholders who play a critical role in the future of air quality for Colorado.

Sincerely,

President/ CEO  
Denver South

## **Voluntary Greenhouse Gas Mitigation Initiatives** Denver South's Commitment to Projects Protecting Air Quality

Along with our jurisdictional partners – including the City and County of Denver, Arapahoe County, Douglas County, Greenwood Village, City of Centennial, and City of Lone Tree – we help lead the charge for mobility and sustainability projects that protect and improve air quality throughout the region.

The following is a selection of recent partnership projects with our local jurisdictional partners, CDOT, DRCOG and RTD that showcase our investments in efforts to reduce greenhouse gas emissions.

### **RTD Southeast Rail Extension**

A partnership between the Federal Transit Administration, RTD, City of Lone Tree, Douglas County, Coventry Development, Rampart Range Metro District, and Denver South, this project extended RTD's Southeast Rail Line 2.3 miles from Lincoln Station to RidgeGate Parkway. With a total cost of \$233 Million – \$63 Million of which was derived from local sources – the extension added three new stations, paves the way for future large scale sustainable development, and reduces congestion along the I-25 corridor. In 2015, the partnership's Environmental Assessment won the "Outstanding Achievement Award for Excellence in Environmental Documentation Preparation award, a biennial award promoting efficient development of useful environmental documents.

### **Inverness Drive West Bike Path**

Arapahoe County, Inverness Metro District, and Denver South and DRCOG are working to construct a bikeway through the Inverness Drive West corridor from Dry Creek Road to County Line Road. This project will complete a critical primary segment of the regional north-south bicycle corridor. Once complete, this pathway will create active transportation connections and provide vital infrastructure for pedestrians and cyclists, as well as the future needs of electronic scooters, autonomous shuttles, and other options throughout the Southeast I-25 Corridor.

### **Yosemite Street Corridor Adaptive Signal System**

In 2020, the cities of Centennial, Lone Tree and Greenwood Village – with partnership funding from Denver South – launched the first multi-jurisdictional coordinated adaptive signal project in the region. This new smart system signal technology allows for a more connected, data-driven, traffic management plan for the Yosemite Street Corridor, promoting efficient and safe traffic flow and reducing travel and idling times to lower emissions and improve air quality. The attached press release provides a more detailed look at the impact and benefits of this new system.

### **Lone Tree Link on Demand**

Since 2014, Denver South has partnered with the City of Lone Tree and others to fund the Lone Tree Link. The Link began is a focused solution for first and last mile access for commuters using the Lincoln Light Rail Station. Since the completion of the Southeast Rail Extension, the Link has evolved into an on-demand microtransit service, providing fully subsidized rides to residents and visitors of Lone Tree to and from any location within city limits. Cumulatively, the Link has provided nearly 500,000 rides to complement RTD's existing services and keep more cars off the road.

## **Centennial, Greenwood Village and Lone Tree implement adaptive traffic control system**

In 2020, the cities of Centennial, Lone Tree and Greenwood Village launched the first multi-jurisdictional coordinated adaptive signal project in the region. This new smart system signal technology allows for a more connected, data-driven, traffic management plan for the Yosemite Street Corridor between Lincoln Avenue in Lone Tree and Belleview Avenue in Greenwood Village, that promotes efficient and safe traffic flow through the installation of sensors and adaptive signal controls at traffic signals.

A collaborative effort with Greenwood Village and Lone Tree, which implemented a similar adaptive control system in their portions of Yosemite Street to the north and south of the Centennial city limits. Dozens of intersections along the Yosemite Street corridor are equipped with new advanced detection systems and new camera technology.

The City of Centennial was recently recognized by [the American Public Works Association \(APWA\) Colorado Chapter](#) for implementing this technology and extending the adaptive traffic signal control beyond Centennial city limits in the award category of Operations/Maintenance.

“In addition to the future ready traffic control technology, the collaboration with Greenwood Village and Lone Tree ensured the success of this project. Without their participation the benefits of this proactive method of managing traffic would end at the city limits,” says Centennial Mayor Stephanie Piko. “The City of Centennial prides itself on being effective and efficient in providing the best possible service to our citizens.”

Through the implementation of an adaptive traffic control system in Yosemite Street, traffic is moving more efficiently with less congestion through the reduction in traffic signal cycle lengths and increases in the number of vehicles arriving at traffic signals on a green light, or in essence, reducing travel time in Yosemite Street and stop time at traffic signals. Traditional traffic signal control systems use time-based signal coordination plans developed from static or historical traffic volumes. Whereas adaptive traffic signal control uses real-time traffic count data to adjust signal timing and coordination to adapt to current traffic conditions, the benefits of which are most evident during “unplanned” traffic incidents. These benefits can be measured in the changes in traffic signal cycle lengths and the percentage of traffic arriving on green at a traffic signal.

**While the APWA award is specific to the adaptive signal technology implemented by the cities of Centennial and Greenwood Village, it is important to note the partnership with the city of Lone Tree on the installation of sensors across the three jurisdictions was integral to this project.**

Re: Proposed Standards for Greenhouse Gas Pollution Reduction for Transportation Planning

Dear Commission Members:

On behalf of the Transportation and Telecommunications Steering Committee of Colorado Counties, Inc. (CCI), I am writing to you today to provide comment on the current greenhouse gas reduction rulemaking underway at the Colorado Department of Transportation (CDOT). Our association represents 61 of the 64 counties in Colorado and is comprised of county commissioners from across the political spectrum.

CCI recognizes that increased levels of greenhouse gases like carbon dioxide, methane and nitrous oxide in our atmosphere are contributing to climate change and are having a detrimental impact on our state. As local elected officials, we share the goal of improving air quality, reducing pollution, increasing transportation efficiency, mitigating the effects of natural hazards and reducing greenhouse gas emissions.

The rulemaking currently being undertaken by CDOT is groundbreaking and ambitious from a transportation policy standpoint. **While we applaud the state for boldly embracing the challenge of greenhouse gas reduction, concerns have been raised by our membership about the transparency, pace, efficacy and flexibility of this policy endeavor.** We wish to highlight these concerns and see them addressed as this effort moves forward.

#### **Transparency**

Much of the proposed rule being forwarded by CDOT is predicated on greenhouse gas modeling – modeling that has **not** been shared by CDOT with the affected metropolitan planning organizations (MPOs). It is difficult – if not impossible – to evaluate the impacts of this proposed rule on communities within the planning regions without access to the data that is guiding the rulemaking. This modeling needs to be shared with the affected MPOs as soon as possible.

#### **Pace**

As mentioned before, the scope of this rulemaking is almost unprecedented and the speed at which it is moving is aggressive – especially given the large amount of uncertainty that is accompanying this effort. As modeling has not yet been made available to the MPOs, we would suggest an extension in the rulemaking deadlines that will allow adequate time for review,

analysis and comment by affected parties. Similarly, the deadline for revision of CDOT's 10-Year Plan and the regional transportation plans (RTPs) of DRCOG and NFRMPO to incorporate these greenhouse gas reduction goals is October of 2022. This timeline – which is delineated in both the proposed rule and in statute - may be unworkable due to the large amount of uncertainty that still exists and the extensive amount of planning work that is involved in updating an RTP. CCI would suggest an extension that will allow the state and the affected MPOs adequate time to properly update these guidance documents to reflect the goal in the rules.

### **Efficacy**

There are a number of questions about the workability of these greenhouse gas reduction policies that need to be answered as this rulemaking moves forward. One issue involves how the mitigation measures to offset greenhouse gas emissions will work and whether communities will get “credit” for measures that were previously taken in these jurisdictions. Similarly, the state’s plan for building charging stations for electric vehicles will likely result in more residents purchasing electric vehicles. How will that be accounted for in the modeling and greenhouse gas goalsetting?

Another issue raised is how the model and associated greenhouse gas levels will account for population growth. Colorado is expected to add another 500,000 residents through in-migration alone by 2030. MPOs may successfully meet the greenhouse gas reduction goals in the proposed rules through better transportation planning, only to see these successes undermined by population growth in their regions. How will the modeling account for population growth without penalizing the MPOs?

Finally, there is concern that the success of the multi-modal transportation alternatives called for in the rulemaking is largely dependent on a resident’s personal choice. Given the sharp decrease in ridership during the ongoing pandemic, it may be difficult to reengage the populace on bus and rail transit options and this may make some of the mitigation efforts less effective in the desired goal of reducing greenhouse gas emissions.

### **Flexibility**

We appreciate that the rule encourages innovation at the local government level in coming up with mitigation measures to offset transportation projects that might increase greenhouse gas levels. Our counties are incredibly diverse and their available resources and approaches to problem-solving are also quite varied. Moreover, many of the suggested mitigation measures in the rules are urban in nature and would not be workable in rural areas. We would ask that local governments continue to be given maximum flexibility in how they meet these greenhouse gas standards.

We thank you for your time and consideration of these comments and look forward to further conversation on this important undertaking as it moves forward.

Sincerely,

Chair, CCI Transportation & Telecommunications Steering Committee

To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

The I am writing today to ask that your draft Greenhouse Gas Pollution Standard include stronger greenhouse gas reduction target in order to meet the transportation reduction goal in the state's climate roadmap. More has to be done sooner to reduce emissions. This is especially important given the state agencies dropping of the proposed Employee Traffic Reduction Program requirement this summer. Reducing VMT is a critical element of reducing pollution from the transportation sector. There should be included a goal for vehicle miles traveled in line with the roadmap goal and HB 1261

I support the following

expanding mobility options that help improve mobility and quality of life for all residents

including equity in prioritization criteria for evaluation of all transportation planning and programs and progress indicators that track equitable implementation of the plan

requiring that the rule (and associated PD on mitigation) mitigate significant projects within the same region and community as the project, but also that project mitigation prioritize benefits to Disproportionately Impacted Communities

Thank you,

[REDACTED]

[REDACTED]  
to: dot\_rules@state.co.us

To the individual at CDOT

We have very limited time remaining to reduce greenhouse gas emissions so that we do not reach 1.5 degrees of global warming. We must prioritize biking, walking and public transportation in urban areas to reduce greenhouse gas emissions. Please adopt standards that reduce the building of highway in urban areas and support more convenient and safe multi-modal transportation.

Thank you,

## Comments on the Transportation GHGs Rulemaking

1 message

Thu, Nov 18, 2021 at 9:26 AM

To: dot\_rules@state.co.us

Cc: [REDACTED]

I am submitting these written comments on behalf of Fort Collins Mayor [REDACTED] and City Councilmember [REDACTED]. Both testified verbally this morning and asked that their comments be included in the written record, as well.

Please let us know if you have any question or need any other information. Thank you.

[REDACTED]

### Fort Collins Councilmember [REDACTED] Testimony

Good morning Commissioners, my name is [REDACTED] and I am a Councilmember in the great city of Fort Collins.

Both [REDACTED] and I are here this morning to express our support for CDOT's proposed rule on transportation GHG emissions. I know some parties want CDOT to go farther and others feel the proposed rule goes too far. From my perspective, this is a solid proposal and is a good start on our collective responsibility to tackle the enormous crisis of climate change, and we would support going even further with more ambitious climate pollution targets to meet the state's goals for emissions reduction.

Climate change is having very real impacts on communities across the state. 2021 was a record year along the Front Range for ozone alerts, and I know many of us were impacted by wildfires in 2020 and are watching the Kruger Rock Fire in Estes Park and thinking of our neighbors as they experience the results of longer fire seasons as a result of climate change.

In 2019, Fort Collins declared a global climate emergency, and our residents are calling on us to act as soon as possible to achieve our climate action goals both locally and statewide.

Also, reducing emissions helps communities like ours address multiple challenges, as these same emissions contribute to air pollution. Air pollution and climate change affects everyone, but is especially of concern for our most vulnerable community members, where those with respiratory conditions, older adults and younger children are most susceptible.

To speak to more specifics about the rulemaking, I will transition to [REDACTED] to share her thoughts.

### Fort Collins Mayor [REDACTED] Testimony

Good morning, Commissioners, my name is [REDACTED] and I am the Mayor of Fort Collins as well as a former state legislator who helped adopt HB 19-1261 which is a key driver for the rulemaking before you today.

As Councilmember Canonico stated, I too support the rules before you today. In particular, I appreciate that this proposed rule finds a balance between setting GHG pollution limits and still giving MPOs real flexibility on how best to meet those goals. If an MPO has critical projects that could result in increased climate pollution, it simply needs to be offset with other projects that help reduce these pollution levels, effectively supporting a shift to clean mobility options like transit, biking and walking

I also appreciate that the proposed rule finds a reasonable compromise on vehicle miles traveled (VMT). It involves tracking VMT data but doesn't establish any limits. This information can help us all adopt strategies that maximize GHG pollution and improve mobility benefits.

And this is the type of data that might enable us to achieve the pollution reductions we need without specific VMT limits. The better we understand what impacts VMT, the smarter we can be about finding the most reasonable strategies

There are a few areas of the proposed rule that could still use strengthening, such as how it will work to support disproportionately impacted communities and making sure the waiver process is limited to safety projects. In addition, we would support CDOT adopting a clear overall transportation sector GHG target that goes further than what this rule proposes – which recognizes transportation emissions are our largest source of emissions and that, as a result, reducing transportation emissions are a critical area of action for us all.

While we are concerned this rule does not get us as far as we need to go to meet the state's targets, on the whole, this proposal is a good start and a reasonable balance.

My thanks to the Commissioners and CDOT for working so hard to craft a reasonable rule that advances our state's and community's goals to reduce emissions and preserve the amazing quality of life we Coloradans get to enjoy

--

**Submitted via email:** [dot\\_rules@state.co.us](mailto:dot_rules@state.co.us)

Dear Colorado Department of Transportation:  
Cc: Governor Jared Polis

Please accept these 822 public comments from Colorado members and online activists of the Natural Resources Defense Council (NRDC) in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado — and cars and trucks are a leading cause of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation project construction in the past and vehicle pollution from highways

\* In addition, we urge you to go even further to prioritize projects that invest in disproportionately impacted communities to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Furthermore, we need to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

We are counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you!

Sincerely,

- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident and your constituent, I'm writing to support your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

I was shocked when I moved here in 2019 at how bad the air quality was. So much for the "pristine Rockies."

Coloradans, like myself, feel the impacts of climate change firsthand and daily. Transportation is the biggest source of carbon pollution in Colorado — and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please ensure that you monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

While we're at it, please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule to reduce the societal cost and especially when they have little to no say-so.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate. We were three miles from mandatory evacuation due to last year's wildfires. Many sleepless nights.

Transportation is the biggest source of climate-busting carbon pollution in Colorado — and cars and trucks are a leading cause of the state's poor air quality and an EV. We are doing our part as best we can on a fixed budget as retirees.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

I am ready to buy an electric car, but am unsure of an infrastructure to support it. Transportation is the biggest source of climate-busting carbon pollution in the state, a major cause of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Additionally, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado of the state's poor air quality. Further, there are people purposely altering their vehicles with illegal exhaust-system modifications (mostly to be obnoxiously unregulated carbon emissions).

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution and benefit everyone, not just those with wealth and privilege.

Please ensure that the final rule requires that an equitable percentage of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. We need to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle emissions.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule. Be sure they are invited to the table.

I'm disappointed that after living in Colorado for 30 years, we still don't have a world-class train and light-rail system across our state. Nor do we have frequent public transit options to get to some of the most heavily visited tourist locations, like from Denver/Boulder to Estes Park, Rocky Mountain Nat'l Park, national forests, open spaces, and scenic views. We rely on cars for convenient travel, and most of these places are filling up with car traffic that prevents others from visiting.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

There are whole cities that provide light rail and electric bus service to riders AT NO CHARGE. The only way I can see for us to dramatically increase use of mass transit is to prove we can make free use of mass work, financially.

Additionally, the air throughout Colorado is so dangerous now, especially in fire season/the warmer months, — and will continue to be so into the foreseeable future due to climate changes. This will lead to increased obesity, heart and respiratory disease and more unforeseen harms, including to the plants and creatures whose lives are dependent on clean air — right now!

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air. I have lived in Colorado and experienced the deterioration of the air we breathe. This past summer, Denver's ozone was horrendous.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation-related air pollution and vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also ensure that the rule requires the department to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule. These communities also have the least chance of having their voices heard.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation  
cc: Governor Jared Polis

As a concerned Coloradan, I strongly support your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air. All of us here in CO want to see real change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and cars and trucks are a leading cause of the state's pollution.

Your critical revised draft rule would help clean up Colorado's transportation sector and help protect communities from dangerous pollution by increasing clean transportation options like passenger rail, buses, and bike-sharing programs for all; investing in safe walking and biking paths that support healthy communities while cutting emissions; and providing access to clean electric vehicles.

While the draft rule acknowledges that disproportionately impacted communities such as communities of color and low-income communities have been harmed in the past and vehicle pollution from highways, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in our future. I ask that you please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. I also please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

We also need to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking and reporting on the progress of these investments.

I am counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities here in Colorado.

Thank you for your consideration of this matter of the utmost importance and urgency for all Coloradans.

Sincerely,

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

We need better public transportation. Light Rail is a great start.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I support your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

This rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles

Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

Thank you for the revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Our state is already suffering the impacts of climate change firsthand, and stronger emissions standards are long past due. Aside from the out of control fraction of transportation is the biggest source of carbon pollution in Colorado. Sometimes our air quality in Longmont is worse than any in the country, and between the brown cloud sits trapped beneath the mountains and extends all the way down to Denver. You know this. You've seen it yourself for decades, and yet it is all those of our children.

Critically, this revised draft will at least clean up Colorado's transportation sector and help protect communities from dangerous pollution by increasing options that have been paying for for years as well as better bus service, safe walking and biking paths, and better access to clean electric vehicles.

You should as well invest in the disproportionately affected communities in order to relieve the burden of pollution. Please ensure that the final rule requires that the money to reduce climate and air pollutants are invested in such communities.

And make sure that you monitor our state's progress in offering affordable and sustainable ways for residents to get around without having to use their cars. I grew up in a first place I've ever lived - and I've lived all over - in which traffic was so unpleasant that even walking two or three blocks to the supermarket is pretty much unbearable.

You must also ensure that communities of color and low-income communities - all too frequently ignored by transportation initiatives - are directly involved in the process.

We need a final transportation rule that addresses the climate crisis and protects communities. It's certainly one step in cleaning up our miserable air quality.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. We will monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

We're doing what we can to reduce our carbon footprint. We've worked to reduce our energy consumption for years. We buy carbon offsets for what we can't avoid. Last year, my car was totaled in a deer collision, we replaced it with a Nissan Leaf (EV). And we just signed a contract for rooftop solar PV. Now I'm counting on you to do the same. Please support a transportation rule that tackles the climate crisis and protects communities. This is our moral responsibility. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Westslope Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

I am feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado — and cars and trucks are a major source of air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities have been harmed by transportation project construction in the past and vehicle pollution

Furthermore, we need to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

I believe it's especially important that the revised draft greenhouse gas reduction rule include major subsidies to help Coloradans transition to electric cars. Walking, biking, or rail transit in mind, and these options are not practical in many cases, as they severely increase transportation time and effort. Spending to mitigate climate damage if these modes of transportation are not adopted by a significant percentage of the population.

Real climate change mitigation needs to focus on cleaning up the mode of transportation that the majority of Coloradans are already using - namely, cars. Electric cars now offer all the benefits of traditional gas-burning vehicles, but their purchase price is still prohibitive for most households.

Unfortunately, tax breaks for purchasing an electric car will not benefit most households who really need a subsidy, as most of these households do not itemize their deductions if they do. What is needed are up-front subsidies at the time of purchase to reduce the cost of these vehicles to be in line with other car purchase requirements that would push car manufacturers to produce all-electric vehicles and sell them at more affordable prices would be extremely helpful.

The need to address climate change in the next decade is extremely urgent, and funding to create this change is limited. Expecting the majority of Colorado's transportation within this time frame is unrealistic. Unfortunately, we don't have the time or resources to force a cultural shift around transportation - we need solutions that will be widely adopted. I respectfully urge you to put in place a final transportation rule that focuses on practical and substantive solutions for Colorado - cars. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

I am embarrassed and disappointed that Colorado's air is so very polluted

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

These actions are critical! I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. - \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

I live now on the western slope and am appalled there is no standard for car and truck emissions. If you have a truck that won't pass in Denver, haul it here, should be an easy fix. If tractors need an exception, okay, just get the dirty junkers off the road.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air. Colorado must take action to prevent a catastrophic climate disruption.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation-related air pollution and vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Additionally, please ensure that the rule requires the department to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

My personal story is that this problem has gotten visibly worse in the time that I've lived here, and with the population projected to increase much more yet, we need more control. I myself have a long-term health condition now due to COVID-19 and polluted air has made it impossible for me to go outside- the one thing that we need to continue to plague us.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a senior citizen and Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself, especially in my age group, are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting emissions, and trucks are a leading cause of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation-related air pollution and vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Additionally, please ensure that the rule requires the department to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

I'm originally from Europe, where I was used to a very convenient public transportation system.

I don't like driving myself and would be so happy to have a better public transportation system here in Colorado!

In addition to that, I'm very worried about the effects of climate change. I think we all need to work together and do everything we can to minimize devastation.

I fully support this critical revised draft rule, which would clean up Colorado's transportation sector and help protect communities from dangerous pollution.

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all

- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic

- \* Expanding access to clean electric vehicles

- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities.

monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities.

Thank you very much for all your efforts and everything you have done so far! I'm happy with your work as a Governor, it's not an easy job. I appreciate your leadership.

Kind regards,

Jutta Rauscher

- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

We've been raised to believe everything must be convenient. We've also been indoctrinated to believe most of what's bad for us is really good because that's what's most financially. Now it's past time to start making it inconvenient for all of us and especially those who profit from the status quo because it's only going to get worse. Stop the longer government fiddles around while the planet burns.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm one more writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air. This is a global issue that affects us all. We must strive even more to right this wrong.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution. Residents who live along the I70 corridor and in vicinity of Suncor who are profoundly impacted by pollution. Major health challenges confront many of these residents in their current plight.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Furthermore, we need to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. I hope for a Colorado whose clean air is a reality for all of us. Thank you.

The next car I buy will be electric. I pay for and participate in Greenswitch to purchase electric energy from renewable sources like wind from Wyoming wind farms before we are totally compromised. This is more than urgent. It is immediate and imperative.

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident and avid cyclist, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air. Ours, I have seen the dramatic decrease in air quality that directly affects my family. Coloradans deserve better.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please ensure that the rule requires the state to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Half solutions are not a solution at all. Thank you for your leadership on this issue.

- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

Also, please invest in charging stations for e-bikes; as a Colorado resident, I see 1st hand how much bike & e-bike traffic travels along the current trails or bike routes. Incorporating charging stations along trail &/or bike routes, would extend the miles to be travelled. It is so important to have more charging stations along trail & bike routes.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities.

Thank you for your time and attention,

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Although I live in an area with cleaner air than is found in other parts of the state, when I travel through Denver traffic and areas where there is obvious and the highest impact are communities of color or low income residents. We desperately need this critical revised draft rule for greenhouse gas reduction. And it requires the involvement from disproportionately affected communities.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. We also need to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air. I have been advocating on environmental issues such as cleaning up the Front Range's air pollution for decades.

Coloradans like myself are feeling the impacts of climate change firsthand, and have for years, due in part to our high altitude. Transportation is the biggest contributor to Colorado — and cars and trucks are a leading cause of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles

- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Taking action now in our polarized reality is difficult. But it will only be harder later. I agree with the steps taken in this rule. While its too late to maintain the status quo, inaction will absolutely allow things to get much worse.

Right now we can start with:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation and vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

You chose to take on this responsibility and now the time. Please implement a final transportation rule that tackles the climate crisis and protects communities.

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I don't know all the details of this bill, but surely one of the first steps to eliminate carbon emissions HAS to be the mandate for all fleet-type vehicles to become zero-emission. This should include public buses, postal vehicles, companies who use three or more fleet vehicles, and DOT vehicles, including those used in construction (backhoes, graders, etc.).

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

Last week, I had the occasion to drive from Boulder to Denver during morning rush hour. I was appalled by the heavy stop-and-go traffic as well as how many people were stuck in traffic. This included me, as there was no viable public transportation available to the hospital I was going to. It bothered me that I was contributing to the pollution.

That's why, as a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado, and it's a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation-related air and noise pollution and vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Additionally, please ensure that the rule requires the state to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air. I understand that you want to encourage public transportation modes, the acquisition of electric vehicles and provide greater access to walking and bicycle paths to get us out of our cars.

Vehicle transportation using traditional combustion engines is a major source of air pollution through particulate and gaseous emissions. Climate degradation in urban corridors can be slowed with the passage and effective monitoring of the proposed draft rule.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. The impact of asthma and other respiratory ailments in these areas has been documented and are assumed to be related to the air contaminants.

Please enact a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

My wife and I are extremely concerned - extremely - with how bad our air is once again turning. STRONG state action is needed now to do something about this. We need more aggressive and expensive incentives and slaps on the wrist. IT MUST INCLUDE HOLDING CORPORATIONS AND DRILLING COMPANIES RESPONSIBLE FOR A LOT OF THIS THROUGHOUT THE STATE. GET THEM TO REALLY DO SOMETHING. Recent statements about changes to state agencies to deal with this are anemic. Hiring more staff to more quickly respond to pollution is ridiculous. Staff is needed to investigate and fine fine fine those who are causing more pollution!

I, a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation-related air and vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. We also need to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

Although these measures will definitely help with reducing pollution, another item you can help with is to establish a 70 mph maximum speed limit on all Colorado highways. That reducing speed saves lives, and a 5 mph speed reduction would not be objectionable in terms of modifying arrival time.

Promoting work-at-home options is another great way to reduce vehicle emissions!

- \* In addition, I please prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Finally ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

If our federal officials are not willing to tackle these issues across political lines, our only hope is to do it ourselves.

Thank you.

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado, the leading cause of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles. The State must make people who can't get to work any way but driving, understand that the emissions from EVs (which use electricity is 100% from fossil fuel), drive that message home by telling them about [evtool.ucsusa.org](http://evtool.ucsusa.org), and remind them that vehicles which do not emit in fact reduce ozone.
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Also, please monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, a RN/ EMS Administrator, mother, grandmother and small business owner, I'm writing in support of your revised draft greenhouse gas rule to help us clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation-related air pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also ensure that the rule requires the department to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident of the northern Front Range with a daughter who resides in Denver, I'm writing in support of your revised draft greenhouse gas reduction rule to improve our air.

I have been dismayed to see increasingly poor air quality along the Front Range fueled by increasing numbers of cars and trucks and limited mass transit options. The impacts of climate change firsthand, including what seems to be an ever growing danger of large fires. Transportation is the biggest source of climate-busting emissions, and cars and trucks are a leading cause of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging, finally, that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by past and vehicle pollution from highways

In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a resident of southwest Colorado, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air. The northern New Mexico, I can see the 160 corridor is often polluted from cars and trucks.

Coloradans like myself are feeling the impacts of climate change firsthand, especially in the Four Corners. Since transportation is the biggest source of climate change, moving towards cleaner cars and trucks is essential.

In 2018, I bought a Prius in order to have an effect, though little, on how I was contributing to fracking more fossil fuels and putting out pollution. Getting 55 mpg contributed. NOW we must do more!

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident living in a community that has been disproportionately impacted by environmental hazards, pollution & toxins, I'm writing in support of the final rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and a major contributor to the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
  - \* Expanding access to clean electric vehicles
  - \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation-related air pollution from highways
- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution on these communities.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Additionally, please ensure that the rule requires the department to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles

Please ensure that the final rule requires that at least 15% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also ensure that the rule requires the state to monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing in support of your revised draft greenhouse gas reduction rule to reduce emissions and clean up our air.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado and the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic
- \* Expanding access to clean electric vehicles
- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income communities — have been harmed by transportation vehicle pollution from highways

\* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of pollution.

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. Please also monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I'm writing to say that I have lived in California and MO. and there are other ways to fight climate change besides attacking the poor. things. In California and Missouri the poor have to buy a cheap car, with super strict emissions laws then it's 1,000 to fix it, oh that didn't fix it, 1,000 more when the timeliness runs out you can't get to work especially in rural Colorado, lose your job, then your house. We are already bled dry with insurance and car maintenance of vehicles to the poor. Please!

Coloradans like myself are feeling the impacts of climate change firsthand. I don't believe Rural transportation is the major cause of the Climate change here cutting our way of survival.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all, which is great for the city, we have in Colorado.

- \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic

- \* Expanding access to clean electric vehicles which are way too expensive for poorer families who could be destroyed financially by this.

- \* Acknowledging that disproportionately impacted communities — like communities of color and low-income will be devastated by strict emission controls.

- \* In addition, I urge you to go even further to prioritize projects that invest in disproportionately impacted communities in order to relieve the burden of no public transportation. most of Colorado does not have public transportation. Please don't do this!

Please ensure that the final rule requires that at least 30% of the funds spent to reduce climate and air pollutants are invested in disproportionately impacted communities. monitor Colorado's progress in offering affordable and sustainable ways for residents to get around without having to use their cars by tracking vehicle miles traveled.

And please ensure that communities of color and low-income communities are directly involved in the development of this critical transportation rule.

I'm counting on you to put in place a final transportation rule that tackles the climate crisis and protects communities. Thank you.

Dear Colorado Department of Transportation:

Cc: Governor Jared Polis

As a Colorado resident, I am extraordinarily concerned about the dynamic of the environment and how it is being slowly destroyed by the gas polluting auto transportation, it would cut back on some of that pollution.

Coloradans like myself are feeling the impacts of climate change firsthand. Transportation is the biggest source of climate-busting carbon pollution in Colorado of the state's poor air quality.

But this critical revised draft rule would clean up Colorado's transportation sector and help protect communities from dangerous pollution by:

- \* Increasing climate-friendly transportation and mobility options like passenger rail, buses, and bike-sharing programs for all
  - \* Investing in safe walking and biking paths that support healthy communities while cutting air pollution and traffic

# ACEC Colorado Comments to the CDOT GHG Rules

1 message

Thu, Nov 18, 2021 at 10:00 AM

To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

Cc: [Redacted]

Good morning,

The American Council of Engineering Companies of Colorado (ACEC Colorado) appreciate the effort and time that CDOT has given to the proposed GHG Rules.

ACEC Colorado is pleased to provide its written comments to the Rules. We want to be a resource and partner as you move forward on further development and implementation of the rule. If we can be of any assistance, please do not hesitate to contact us.

Best regards,

[Redacted], CAE | Executive Director

 ACEC\_Colorado\_GHG-Comments\_Nov2021.pdf  
310K

Nov. 18, 2021

Dear Colorado Transportation Commissioners,

The American Council of Engineering Companies of Colorado (ACEC Colorado) appreciates the opportunity to provide comments regarding Colorado Department of Transportation’s (CDOT’s) proposed rules focused on greenhouse gas (GHG) emissions reduction. We recognize the comprehensive process that CDOT is using to garner input from stakeholders on the revised Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions (Rules) and thank you for extending the comment period. It is our hope that such a process will allow for fair and equitable rulemaking while trying to bring about meaningful change in air quality conditions around the state. Ultimately, ACEC Colorado supports a goal of reducing GHG emissions in our State.

ACEC Colorado represents approximately 260 member firms employing nearly 12,500 individuals in the independent and private practice of consulting engineering. These firms range in size from small to very large and serve as consultants to government, industry, contractors, developers and private sector clients. Our membership has diverse expertise in the areas of infrastructure design, planning, environmental resources and construction. We have relied on this expertise to formulate additional comments and questions on the revised Rules. Our goal is to bring more transparency and clarity to what is being regulated and to create opportunities for the regulated community to remain successful and compliant. ACEC Colorado has reviewed the revised Rules, Mitigation Policy, and GHG Modeling Technical Support Document. Our comments include questions for your consideration along with detailed concerns on a number of areas. Following are our comments on each document.

**Revised Rule**

**1. Statement of Basis & Purpose, Statutory Authority and Preamble**

The following statement is made, *“Section 8 of these Rules establishes an ongoing administrative process for identifying, measuring, confirming and verifying those best practices and their impacts, so that CDOT and Metropolitan Planning Organizations (MPOs) can easily apply them to their plans in order to achieve the pollution-reduction levels required by these Rules.”*

**Comment:** Although an administrative process is clearly laid out in the Rules, it is not clear how the impacts of best practices being implemented in a plan can be measured and confirmed. We recommend limiting this statement to identifying and verifying through an administrative process.

**2. Preamble for 2021 Rulemaking – Overview**

The following statement is made, *“CDOT and MPOs will be required to demonstrate through travel demand modeling and the Environmental Protection Agency Motor Vehicle Emission Simulator (MOVES) approved air quality modeling that statewide and regional aggregate emissions resulting from its state or regional plans do not exceed a specified emissions level in total.”*

**Comment:** Since Table 1 of the Rules establishes emission reduction levels, we recommend consistency with this modeling statement.

**3. Preamble for 2021 Rulemaking – Overview**

**Comment:** Although the list of mitigations is not intended to be all-inclusive, we recommend adding electric vehicle market penetration, since this metric does play a role in the GHG-reduction level analysis for modeling conducted either prior or after Oct. 1, 2022. Further comment concerning this metric is detailed in Comment #3 for the GHG Modeling Technical Support Document (see below).

**4. Purpose of GHG Mitigation Measures – Reasonable Scale**

**Comment:** Vetting the scoring rubric with stakeholders is a valuable and important step in rating effectiveness of mitigation measures; however, our concern lies with applying the same rubric to each stage of the transportation decision-making process. This is further detailed in Comment #2 for the Mitigation Policy (see below). As knowledge is gained with application of the rubric to specific projects, we recommend that the State Interagency Consultation Team perform at least an annual review of the scoring rubric, which would include a review of resources relied upon for scoring and how the scoring is actually conducted. Such a review would bring more transparency to how Regional Transportation Plans (RTPs) and associated mitigation plans will be approved.

**5. Section 1.0 Definitions – Carbon Dioxide Equivalent (CO<sub>2</sub>e)**

**Comment:** Recommend specifying which GHG constituents will be included in the calculation of CO<sub>2</sub>e.

**6. Section 2.02.3**

**Comment:** If the Commission approves a change to the boundary of a Transportation Planning Region, will the emission-reduction level in effect at the time of the change remain the same or will MPOs/Non-MPO Regional Planning Commissions (RPCs) have the opportunity to revise their plan to reflect the change?

**7. Sections 4.04.2.2 and 4.04.2.4**

**Comment:** CDOT is given a minimum of 30 days to review draft and final RTPs. Can consideration be given to how long CDOT can review either version of RTPs before it is approved so that MPOs and Non-MPO Regional Plan Documents can implement plans as soon as possible and allow them sufficient time to comply with emission reduction levels?

**8. Section 4.05.3**

**Comment:** We recommend defining “transportation related emissions” in Section 1.0.

**9. Table 1: GHG Transportation Planning Reduction Levels in Million Metric Tons of CO<sub>2</sub>e**

**Comment:** When reviewing emission reductions levels specified from 2025 through 2050, a sharp increase in reduction occurs from 2025 to 2030 followed by lower reductions for 2040 and 2050. This appears counter to development of overall multi-modal transportation options. Over time there could be more options/best practices available along with greater engineering feasibility to reduce GHG emissions and allow regions to meet higher reduction levels in the 20- to 30-year timeframe. With this in mind, we ask to lower GHG-reduction targets in the earlier years (2025 and

2030) and increase these targets for the later years (2040 and 2050).

#### 10. Section 8.02.2

**Comment:** Since CDOT, Colorado Department of Public Health & Environment (CDPHE) and MPOs will have responsibilities in an intergovernmental agreement, it is recommended that a template and more guidance be developed to address the contents of the agreement. Furthermore, is it clear who takes the lead on developing the agreement?

#### 11. Section 8.02.4

**Comment:** This section of the rule establishes a high-level process for considering GHG Mitigation Measures. It includes a public process, determining impacts from measures, and qualifying how mitigation credits will be considered (i.e., aggregate and community impacts). Bringing clarity to how each of these components will be defined should be detailed in the Rules, as this will have a significant impact on compliance.

#### 12. Section 8.02.5.1 Timing for Determining Compliance

**Comment:** The Rules require CDOT to update its 10-Year Plan and Denver Regional Council of Governments and North Front Range Metropolitan Planning Organization to update their RTPs by Oct. 1, 2022. Given these rules represent new requirements, we recommend establishing a one-year timeframe from rule adoption to demonstrate compliance. If this change is made, Sections 8.02.5.2 and 8.02.5.3 will need to be modified by removing the phrase, "...after Oct. 1, 2022" and replacing it with "...following one-year after rule adoption."

#### 13. Section 8.03 GHG Mitigation Measures

**Comment #1:** This portion of the Rules references 8.02.3 in the context of establishing approved GHG Mitigation Measures. Specifically, 8.02.3 discusses meetings held by the State Interagency Consultation Team. Should the reference be changed to "Section 8.02.4"?

**Comment #2:** The mitigation measures listed in this section include measures that are based on encouraging certain changes in commercial development, parking policies and education programs along with changes in various industries (e.g., trucking, construction). These are areas that CDOT and MPOs do not control in terms of implementation. Although these measures would have a positive impact on GHG emissions, they should not be perceived as options that can be chosen from a list of illustrative examples, unless third-party commitments have been made for their incorporation into a project.

#### Mitigation Policy

Thank you for the preliminary work in response to comments received during the rulemaking process. We are pleased that CDOT is seeking input to better adapt this guidance to Colorado's context before the Mitigation Policy is finalized in April 2022 and in association with the CDOT GHG Transportation Planning Standard rulemaking. Additionally, we are pleased to know about the GHG Mitigation Advisory Group that will be convened in coming months and sincerely hope that private industry partners will be included in the group. The following are responses to the specific questions CDOT asked.

1. **Should mitigation measures be evaluated based on their estimated GHG reduction, specifically, through a more generalized scoring/point system or some other approach?**

At this time, we do not recommend that mitigation measures be evaluated based upon their estimated GHG reduction, specifically, in part, because this accounting methodology remains in very preliminary stages and is significantly influenced by local context. Development of a more generalized scorecard system is recommended, especially if desiring inclusion of mitigation options that could be used at different points in time within transportation decision-making processes and by different decision-making authorities. To date, potential mitigation measures have been presented that could occur at different times in the transportation planning, funding, project selection and construction process. Additionally, potential mitigation measures have been presented that fall within different jurisdictions outside of the Commission’s decision-making power (e.g., land use zoning and decision-making processes that would be the responsibility of a local city/county’s board, council or commission).

**2. Should a particular method or tool for GHG estimation be specified or should CDOT and MPOs be able to propose and document their own approach?**

There are tradeoffs with a specific approach to regulation and a flexible menu approach to regulation. In using a specific method or tool for GHG estimation, CDOT and MPOs could potentially provide more predictability in decision-making outcomes. In using a more flexible method or tool for GHG estimation, CDOT and MPOs could potentially provide less predictability yet more room for creativity in decision-making outcomes. More discussion is needed on where the leverage points are and where a more specific or flexible approach might make more or less impact to achieve desired GHG emissions reduction goals. At this time, it remains unclear how and when the proposed changes to transportation planning rules will translate to changes at the project level.

Perhaps consider a different scoring rubric associated with each stage of the transportation decision-making process from planning, funding allocation, projects selection, project specific design, and construction scoring. The GHG Emissions reductions rubric and scoring options would be very different at each stage of the process. Regardless of the stage of the process, adding any GHG emissions reduction scoring would add costs in staff time, resources, and project specific costs. Future Requests for Proposals may need to reflect expectations for GHG emissions reduction within National Environmental Policy Act (NEPA), project design and permitting, and/or construction management processes.

**3. What other tools and resources would you recommend for consideration?**

Once a Mitigation Policy, menu and/or scorecard is developed and adopted for use as a tool for meeting GHG emissions reduction in the Colorado transportation sector, there may be a need to develop intergovernmental agreements to utilize the tool across jurisdictions. For example, any land use planning and zoning influenced mitigation options may require support from city and county planning and zoning decision-making bodies, and associated updates to development codes.

For GHG emissions associated with roadway projects during construction, several resources are available or are in development to account for the carbon released in the manufacturing, production and transportation of construction materials. For example, the International Organization for Standardization has developed the Environmental Product Declaration (EPD) that summarizes the estimated environmental impacts of a given product, such as a specific concrete design or asphalt mix. Projects could potentially identify ways to reduce GHG emissions during construction of a

transportation project. This could aid in the future for project-level analysis rather than planning level MPO analysis.

### **GHG Modeling Technical Support Document**

#### **1. Clarification regarding intersect between regional level modeling and project-specific modeling**

We are appreciative Rules will create a Statewide Model Coordination Group (SMCG) and provide minimum guidelines for conducting air and travel modeling for transportation plans. Since at this time it is expected that the SMCG will consist of CDOT, CDPHE and all MPOs, there are a few considerations we would like to bring up since there is discussion in the mitigation and technical documents regarding individual projects that do not result in the MPO meeting the GHG reduction limits identified in Table 1 of the Rules. We recommend some guidelines be included for project-level evaluations, whether that be under this or as an additional task of SMCG.

Our concern stems from a couple of scenarios outlined below.

1. Where one project that has a modeled increase in GHG emissions is offset by another project that has a modeled decrease in GHG emissions within the geographic boundary. For Senate Bill (SB)21 260, specifically, modeling is expected on a project-level basis and the GHG evaluation and potential availability for funding become a bit muddled when a project is viewed in isolation. A question to be asked of CDOT is whether the project that results in a GHG emissions increase be defunded or if it could avoid defunding when reviewed in combination with the project that did offset emissions.
2. Certain projects that improve traffic operations are not considered mitigation for GHGs under these Rules (e.g., roundabouts, intersection performance improvements, change of a functional class of roadway, etc.). Our recommendation is to vet the project examples within the Federal Highway Administration Congestion Mitigation and Air Quality Improvement program guidance to make sure that mitigation projects that would result in GHG reductions are not excluded.
3. The scoring rubric provides a variety of options for calculating mitigation measure emission reductions. Once at the project level, the methodology for quantifying GHG reductions may be more prescribed based on federal involvement, final design choices, etc. Our recommendation is that scoring rubrics be different at the regional-planning and project levels. Our concern is that construction decisions for a project or group of projects may not be known or even understood in the regional-planning phase.

#### **2. Project offsetting**

We are pleased to learn those projects generally outside the scope of emissions modeling can be included to take credit for additional efforts CDOT and MPOs make to reduce vehicle miles traveled (VMT) and GHGs. To be comprehensive, we recommend there be some guidelines as to what could qualify as an offset project. Things we ask CDOT to consider are the timing and location of projects. Namely, will an offset project need to be implemented within a specified time of the project it is offsetting? Also, does an offset project need to be a certain distance from the project it is offsetting? This last question may especially have implications on evaluations for disproportionately impacted communities under the Rules and SB21 260.

#### **3. EV Market Penetration Considerations**

We request a minor wording change and elaboration on page 4 of the technical memo under the

GHG-reduction level analysis. Rather than stating, “One run using the above baseline travel model run but including the best-estimate EV market penetration,” we suggest, “One run using the above baseline travel model run but including forecasted EVs on the road based on defensible assumptions, current trends and on-the-books legislation that may provide insight to forecasts.”

#### 4. Reduction Levels in Table 1

Similar to the option for the Commission to consider revisions to the Rules, should individual MPOs not meet VMT reductions per capita, we also request CDOT permit revisions, specifically, the future reduction goals in Table 1 should an MPO exceed its reductions in an early year. There is a point of diminishing returns when looking at reductions as a ceiling that we recognize CDOT realized when crafting Table 1 in that the reductions decrease over time. We do understand the importance of meeting Colorado’s short-term reduction goals. As an example, should an MPO exceed the planned reduction for 2030, it should be provided credit for that reduction for future reduction targets. Revising Table 1 reductions should also be allowed for successes by MPOs rather than only failures.

#### Closing Thoughts

ACEC Colorado provides these comments recognizing that while rulemaking may be needed to achieve air-quality goals, new regulatory requirements inherently translate into more work for MPOs, CDOT and the consulting engineering community that supports the planning, design, permitting and construction of transportation projects. It is our belief that these analyses will require additional time and funds. Our comments are intended to shed light on our concerns so they can be addressed early and avoid wasted funds and time once projects are in the NEPA, design and construction phases.

Thank you for the opportunity to provide comments on the revised Rules. ACEC Colorado wants to be part of the solution to create meaningful, positive and transparent change. Should you have questions or would like additional details regarding these comments, please do not hesitate to contact us.

Sincerely,

STATE OF COLORADO

**BEFORE THE DEPARTMENT OF TRANSPORTATION AND TRANSPORTATION  
COMMISSION  
STATE OF COLORADO**

---

IN THE MATTER OF PROPOSED REVISIONS TO 2 CCR 601-22

---

**WRITTEN COMMENTS FROM THE BOARD OF COUNTY COMMISSIONERS OF  
WELD COUNTY, COLORADO**

---

**EXECUTIVE SUMMARY**

The Board of County Commissioners of Weld County (“Weld County”) submits these comments in connection with the above-captioned rulemaking. These written comments are in addition to the comments Weld County already submitted on September 24, 2021 and October 14, 2021. Weld County appreciates the opportunity to participate in this rulemaking proceeding regarding the Colorado Department of Transportation’s (“CDOT”) revisions to 2 CCR 601-22, Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions (“Proposed Rule”). The Proposed Rule establishes greenhouse gas (“GHG”) emission reduction targets for transportation. It requires CDOT and the Metropolitan Planning Organizations (“MPOs”) to demonstrate through travel demand modeling and approved air quality modeling that statewide and regional aggregate emissions resulting from state or regional plans do not exceed target emission reduction levels. If compliance cannot be demonstrated, even after committing to GHG Mitigation Measures, the Proposed Rule requires the Transportation Commission (“TC”) to restrict the use of certain funds to projects that are recognized as approved mitigation measures to reduce GHG emissions from the transportation sector.

The transportation sector is one of the largest contributors to GHG and ozone precursor emissions. Therefore, Weld County generally supports common sense efforts to increase multimodal options and provide more sustainable travel options to achieve reductions in air pollution from the sector. However, Weld County cannot support the Proposed Rule as drafted, because CDOT’s CBA is fundamentally flawed and the Proposed Rule is based on a misunderstanding of the induced travel concept.

Weld County appreciates CDOT’s responsiveness to stakeholder feedback and the revisions made to the Proposed Rule in response to Weld County’s comments. Weld County also appreciates CDOT providing additional information in the two draft companion documents released on October 19, 2021 – the Greenhouse Gas Modeling Process Draft (“GHG Modeling Process Draft”) and the GHG Transportation Planning Standard: Mitigation Policy Overview draft (“Mitigation Policy Overview”). However, many of Weld County’s concerns still have not been addressed, and Weld County has additional concerns with the revisions made to the Proposed Rule and the corresponding documents released on October 19, 2021.

Moreover, significant uncertainty exists regarding the modeling assumptions and methods, and numerous important questions remain unanswered. On October 14, 2021, CDOT and CDPHE provided modeling data via a shared Google folder from CDPHE. However, subsequent discussion with CDOT and CDPHE staff <sup>1</sup> revealed that the provided model data was incomplete. On November 9, 2021, just one day before the final rulemaking hearing, Weld County received additional files it had requested. The limited time remaining for review before the close of the written comment period on November 18, 2021, coupled with the absence of a detailed technical support document describing the modeling methodology, severely limits Weld County’s ability to analyze data and provide meaningful comments.

Weld County supports efforts to reduce GHG emissions from the transportation sector, but it cannot support the Proposed Rule as drafted. We respectfully ask TC to reject the Proposed Rule and direct CDOT to revise the rule to adequately address stakeholder concerns.

### EXHIBITS

Weld County has attached several exhibits to these comments as shown in the table below.

## LEGAL, FACTUAL, AND POLICY CONCERNS

### I. The Proposed Rule Should Not Be Adopted as Proposed

Weld County cannot support the Proposed Rule as drafted. The cost-benefit analysis (“CBA”) is fundamentally flawed. Among other issues, the Proposed Rule mischaracterizes the benefits and underestimates the costs. Moreover, the Proposed Rule is based on an inaccurate understanding of the induced travel concept. For the reasons set forth below, the TC should not adopt the Proposed Rule as drafted.

#### A. CDOT’S CBA Is Fundamentally Flawed

The Colorado Administrative Procedure Act requires agencies to conduct a cost-benefit analysis that includes, among other things, (1) the anticipated economic benefits of the rule, (2) the anticipated costs of the rule, and (3) any adverse effects on the economy, consumers, private markets, small businesses, job creation, and economic competitiveness. C.R.S. § 24-4-103(2.5)(a)(I)–(V). If an agency fails to make a good faith effort to comply with these requirements, a court may render the rule invalid. *See* C.R.S. § 24-4-103(2.5)(d); *Pawnee Well Users v. Wolfe*, 2011 Colo. Water LEXIS 1062, \*38. Here, it is not clear that CDOT has made a good faith effort to comply with these requirements.

Among other flaws in CDOT’s analysis,<sup>2</sup> the CBA misuses a metric that correlates increase traffic to greater road capacity, as discussed in greater detail in Section I.B. CDOT then estimates VMT savings from cutting road capacity using this metric. Reduced road capacity, however, may not necessarily lead to lower traffic, because travel behavior is not easily reversed. For example, commuting travel is dictated by infrastructure and natural sources of demand. Once configurations of homes, highways, and offices are in place, they cannot be easily changed. This suggests that CDOT overestimates the benefits from reduced road capacity.

The CBA also includes policies that encourage greater density—policies which have been proven to be expensive in reducing greenhouse gas emissions.<sup>3</sup> For example, O’Toole reports that Plan Bay Area recently approved \$14 billion in subsidies for high-density housing and another \$5 billion of subsidies for rail transit to achieve an estimated 2 percent reduction in GHG emissions, which implies a cost of nearly \$1,200 per ton of abated emissions. In contrast, incentives to buy more fuel-efficient cars cost roughly \$22 per ton of abated emissions. Rebuilding America’s cities so that people drive less is extraordinarily expensive because most Americans want to live in single-family homes rather than multi-family housing. Moreover, the effect of greater density on

---

<sup>2</sup> In its October 14, 2021 comments, Weld County provided extensive comments on the flaws in CDOT’s CBA.

<sup>3</sup> R. O’Toole, “Zero-base Transportation Policy: Recommendations for 2021 Transportation Reauthorization,” Cato Institute, Policy Analysis No. 913 (2021), <https://www.cato.org/policy-analysis/zero-based-transportation-policy-recommendations-2021-transportation>.

per capita driving is likely to be quite minor, for instance, Godfrey, *et. al* (2019) found that a 40 percent increase in density would reduce driving per house by 5 percent.<sup>4</sup>

In addition, under Section C.R.S. § 24-4-103(2.5)(a), the CBA is supposed to analyze the adverse effects on the economy and consumers. But CDOT fails to recognize that the Proposed Rule may adversely affect the same disproportionately impacted communities it intends to help. One of the best transportation policies to help people out of poverty is providing access to an automobile. According to Ong and Blumenberg (1998), “car ownership is a significant factor in improving the employment status of welfare recipients.”<sup>5</sup> Likewise, O’Regan and Quigley (1998) argue that helping disproportionately impacted communities means “promoting the mass transit system that works so well for the nonpoor—the private auto.”<sup>6</sup> Similarly, Sullivan finds that people without a high school diploma are 80 percent more likely to have a job and earn \$1,000 more per month if they have a car.<sup>7</sup> Raphael and Stoll (2001) found that addressing racial inequalities in auto ownership would close nearly half the employment gap.<sup>8</sup> These studies demonstrate that automobile access is more effective than free transit in helping disproportionately impacted communities. By restricting road capacity and driving, the Proposed Rule could adversely affect these communities.

Overall, CDOT’s proposal to divert transportation funds from projects to improve highway capacity to policies encouraging people to get out of their cars is based on unrealistic assumptions, which will achieve minimal emissions reductions while at the same time increasing traffic congestion and diminishing public safety.

## **B. The Proposed Rule Is Based on an Inaccurate Understanding of the Induced Travel Concept**

The Proposed Rule relies, in part, on the concept of “induced travel” to justify restricting the use of certain funds to projects that are recognized as approved mitigation measures to reduce GHG emissions from the transportation sector. Specifically, the Proposed Rule prohibits capacity expansion projects (including operational projects) under the premise that expanded capacity will induce demand.<sup>9</sup> Weld County does not dispute the veracity of the induced travel concept.

<sup>9</sup> Induced travel generally refers to the idea that increasing roadway capacity encourages more people to drive. In the “I-70 Floyd Hill to Veterans Memorial Tunnels Environmental Assessment”

However, Weld County challenges its application in the context of Colorado and, in particular, the areas where the Proposed Rule relies on this concept to impede the growth and movement of people in and around Weld County.

Several references were submitted on this point during the public comment phase of this rulemaking.<sup>10, 11, 12, 13, 14</sup> Having reviewed these studies, Weld County believes that CDOT misapplied the concept of induced travel. The majority of research reviewed and used by CDOT to support the rationale of induced travel in the Proposed Rule is based on roadways in California and, particularly, those that exist in an urban context. None of the research reflects the needs or characteristics of the mostly rural communities of Weld County. The Proposed Rule, while possibly relevant to the urban conditions in Denver, cannot be categorically applied to rural communities like Weld County. In fact, CDOT acknowledges in the I-70 Floyd Hill Environmental Assessment that usage patterns and local traffic conditions affect induced demand and cause traffic to respond differently to capacity expansion in rural areas as compared with more urban areas.<sup>15</sup> Specifically, CDOT states “the effect of induced demand changes with the actual use patterns along a corridor and the unique conditions of Floyd Hill causes traffic to function—and respond—differently than what we might see in a more urban or suburban areas.”

In addition, the Proposed Rule fails to consider other natural sources of demand that may justify capacity improvements on Weld County’s roadways. Indeed, the Proposed Rule grossly ignores the fact that there are other sources of demand on Weld County’s roadways than simply

---

CDOT describes “induced demand” as the additional travel demand in a particular corridor that occurs over time if roadway capacity is increased and congestion is decreased. Colo. those induced by new capacity. Indeed, in cities around the world where careful attention is placed to avoid unnecessary induced travel by automobiles, capacity improvements are not categorically avoided. Instead, they are assessed using cost-benefit analyses where the risk of some induced travel is weighed against the greater good that certain capacity improvements might have on the region. The Proposed Rule seems to ignore all other priorities and abandon the importance of natural growth and development of rural communities for the sole purpose of thwarting GHGs.

Research about induced travel referenced during the public comment phase of this rulemaking acknowledges that the alternative solutions to a policy of no additional capacity are largely applicable to urban contexts. In this research, the proposed alternative solutions include creating more inclusive, compact, mixed-use communities that support walking, biking, and micro-mobility, while also expanding public transit. All of these solutions are mostly, if not exclusively, applicable to urban and sub-urban contexts. They are not relevant to the rural communities in Weld County. In other words, the Proposed Rule eliminates one solution to traffic demand caused by future growth (capacity improvements) but fails to suggest alternatives that are relevant to Weld County or other rural communities in Colorado.

For the reasons discussed above, the TC should not adopt the Proposed Rule as drafted.

## **II. If the TC Adopts the Proposed Rule, It Should Revise Critical Errors in the Proposed Rule**

If the TC decides to adopt some version of the Proposed Rule, it should address Weld County's remaining concerns and correct critical errors in the rule and supporting documents. These concerns are described in greater detail in the following sections.

### **A. The Role of Various Groups and Processes in the Development of, and Agreement upon, Modeling Assumptions Is Unclear**

First, as described in Weld County's October 14, 2021 comments, the Proposed Rule requires an Intergovernmental Agreement in Section 8.02.2, but the role of this agreement in ensuring consistent modeling assumptions and methodology for GHG emissions analyses is unclear. For example, it is not clear if CDOT, CDPHE, and the MPOs must agree upon a uniform set of modeling assumptions and methodology as implied by the section title (e.g., "Agreements on Modeling Assumptions and Execution of Modeling Requirements"), or if the agreement simply "outlines CDOT, CDPHE, and MPO responsibilities for development and execution of MPO Models or the Statewide Travel Model." Proposed Rule, Section 8.02.2. Weld County requested that additional language be added to the proposed rule in Section 8.02.2 to specify the items that must be addressed and information that must be included in the Intergovernmental Agreement, but this concern has not been addressed.

Additionally, it is not clear to what extent the State Interagency Consultation Team introduced in Section 8.02.3 participates in the formation of the Intergovernmental Agreement, given its stated role addressing any questions on modeling assumptions. Further, while the GHG Modeling Process Draft companion document is stated as describing the modeling process and technical methods of how models shall be run, neither the Intergovernmental Agreement nor the State Interagency Consultation Team are mentioned in the document. The lack of information on

the role of these various groups, agreements, and processes serve with respect to the modeling that must be conducted to meet the Proposed Rule's requirements leads to significant uncertainty and confusion.

Therefore, Weld County recommends that CDOT clarify the interaction among and relationship between the following, particularly as related to modeling that must be conducted to meet the Proposed Rule's requirements:

- The Intergovernmental Agreement specified in Section 8.02.2 of the Proposed Rule
- The State Interagency Consultation Team specified in Section 8.02.3 of the Proposed Rule
- The Statewide Model Coordination Group (SMCG) described in the GHG Modeling Process Draft, whose role includes “meetings as necessary to discuss modeling issues” in addition to “the development of key guidance documents”<sup>16</sup>
- The “cooperative, interagency process” described in the GHG Modeling Process Draft<sup>17</sup>
- The development of the “GHG Modeling Guidelines Technical Memo” and the “Technical Documentation Outline” described in the GHG Modeling Process Draft

Weld County also recommends additional detail be added in the supporting documents (i.e., GHG Modeling Process Draft or documents referenced therein to be developed by the SMCG) and the proposed rule be revised to clarify what information must be included in the Intergovernmental Agreement.

## **B. Some Timeframes Specified in the Proposed Rule Are Problematic**

Weld County appreciates the revisions made to the Proposed Rule to require the TC to review and evaluate the compliance of GHG Transportation Reports within a specified timeframe (Section 8.05) and avoid the automatic denial of waivers due to inaction (Section 8.05.2.3). However, many of Weld County's concerns that were raised in its October 14, 2021 comments were not addressed. Several sections of the Proposed Rule continue to specify timeframes that are problematic and may lead to compliance challenges. For instance, revisions to the Proposed Rule did not address the potential for the TC to evaluate a GHG Transportation Report without the benefit of the APCD's technical review. Under Section 8.04.1 of the Proposed Rule, “[i]f APCD has not provided written verification within thirty (30) days, the document shall be considered acceptable.” However, the APCD may not be able to complete its review and verification of the technical data contained in the draft GHG Transportation Report within 30 days. If the APCD does not have sufficient time to complete its review, it is not clear that the TC is equipped to perform

---

<sup>16</sup> “The SMCG will be convened by no later than December 15, 2021, and meet thereafter at least quarterly, with additional meetings as necessary to discuss modeling issues at the request of group members. Immediately after being convened, the SMCG will advise CDOT in the development of key guidance documents.” Colo. Dep’t of Transp., “Greenhouse Gas Modeling Process, DRAFT as of 10/19/21,” [https://www.codot.gov/business/rules/documents/draft-ghgmodeling\\_techsupportdocument-10-19-21.pdf](https://www.codot.gov/business/rules/documents/draft-ghgmodeling_techsupportdocument-10-19-21.pdf).

<sup>17</sup> “Model development and GHG model runs by all regulated entities will be conducted, confirmed and approved through a cooperative, interagency process.” *Id.*

this technical review and verification of the GHG emissions analysis. Without this review, the TC cannot confirm the accuracy of the GHG emission estimates.

Similarly, under Section 8.02.6, GHG Transportation Reports must be submitted to the TC at least thirty days prior to adoption or amendment of any Applicable Planning Document. In some instances, the GHG Transportation Report may be submitted to the TC 15 days after submission to the APCD, and the TC could reach a compliance determination before the APCD completes its review. Thus, the overlapping timeframe could result in the TC accepting a GHG Transportation Report that the APCD deemed unacceptable at the end of its 30-day review period.<sup>18</sup> Moreover, the Proposed Rule does not clarify what happens if the APCD deems a GHG Transportation Report unacceptable. While additional language was added to Section 8.04.1 of the proposed rule regarding written verification from APCD, the Proposed Rule is silent on the process for updates or revisions should APCD not consider the report acceptable. It is critical that the Proposed Rule be modified to prevent GHG Transportation Reports from being considered acceptable simply due to inaction and to clarify the process, procedures, and timeframes for revisions to the reports should they not be considered acceptable by APCD.

To address these concerns, Weld County recommends CDOT revise the Proposed Rule to require GHG Transportation Reports to undergo technical review and verification prior to the TC's compliance determination and describe the process for CDOT and the MPOs should the APCD deem a GHG Transportation Report unacceptable. Additional specificity on APCD's "review and verification of the technical data contained in the draft GHG Transportation Report" should be provided in the documents supporting the Proposed Rule.

### **C. Revisions to the Proposed Rule Should Be Considered Based on Progress Toward Achieving GHG Emissions Reductions, Not Reductions in VMT**

New language added to the Proposed Rule in Section 8.06.2 requires CDOT to provide to the TC an annual VMT report containing total VMT per capita within the MPO areas and statewide for the past calendar year. Per Section 8.06.2.1, the TC shall consider revisions to the Proposed Rule if three consecutive years of reports demonstrate no decrease in VMT per capita in one or more areas. The stated purpose of these revisions is to "achieve reductions in VMT consistent with the intent of this rule." However, the Proposed Rule establishes GHG Reduction Levels, not VMT reduction targets, and GHG emission reductions do not necessarily require reductions in VMT. While VMT reductions *may* lead to reductions in GHG emissions<sup>19</sup> and the addition of transit

---

<sup>18</sup> In addition, the Proposed Rule does not provide adequate guidance to the TC for performing its duties specified in the Proposed Rule. For instance, under Section 8.05, the TC must review "the sufficiency of any GHG Mitigation Measures needed for compliance." However, the Proposed Rule does not specify how to determine the "sufficiency" of mitigation measures, and it is not clear if the TC has the expertise and resources to perform such a review.

<sup>19</sup> The potential impact of VMT reduction measures must be considered to fully assess the net change in GHG emissions. For example, the potential emissions benefits of transit resources would largely depend on the type of vehicle or transit, the level of ridership, and the location of these

resources and implementation of some GHG mitigation measures can displace VMT, GHG emission reductions can be achieved through means other than VMT reductions. For example, increased use of renewable fuels and widespread adoption of electric vehicles do not reduce VMT but have the potential to reduce GHG emissions (although one must consider overall emissions, including both tailpipe and upstream or well-to-wheel<sup>20</sup> emissions). Even some of CDOT's example GHG mitigation measures included in the Proposed Rule target GHG emission reductions without a VMT reduction component (e.g., Sections 8.03.7, 8.03.8, and 8.03.11). Improvements in vehicle fuel economy and projects that improve traffic flow and reduce vehicle emissions per mile are two more illustrative examples of ways in which transportation GHG emissions can be reduced without a reduction in VMT.

Compliance with the Proposed Rule requires CDOT and the MPOs demonstrate "the applicable reduction targets in Table 1 have been met and the sufficiency of any GHG Mitigation Measures needed for compliance." Proposed Rule, Section 8.05. Because the Proposed Rule is fundamentally based on and sets forth requirements for GHG emission reductions, not reductions in VMT, revisions to the Proposed Rule should be considered based progress toward meeting GHG emission reduction targets. Therefore, Weld County recommends Section 8.06 of the Proposed Rule be revised as shown in **Exhibit 001**. Namely, the TC should consider revisions to the proposed rule if the report prepared per the requirements of Section 8.06.1 demonstrates that the reduction levels in Table 1 of the proposed rule have not been met.

### **III. If the TC Adopts the Proposed Rule, It Should Revise Critical Errors in the "Greenhouse Gas Modeling Process" Companion Document**

Weld County appreciates the additional information CDOT provided with respect to how modeling is conducted to demonstrate compliance with the Proposed Rule in the GHG Modeling Process Draft companion document. However, the document provided is incomplete, contains errors, and lacks the necessary specificity and details needed to fully characterize the modeling methodology. Several aspects of the document are also ambiguous and would benefit from clarifications. These concerns are discussed in detail in the following sections.

#### **A. The Document Is Incomplete and Contains Errors**

First, the document is missing information on the GHG Mitigation Measures Advisory Group ("Mitigation Group"), which CDOT failed to complete before the document was released. For example, on page 3, the document reads: "CDOT will establish a GHG Mitigation Measures Advisory Group (Mitigation Group), composed of (LIST HERE)." Second, the references to

---

riders (i.e., the VMT), among other factors. Similarly, reductions in VMT due to "road diets" that lead to increased congestion may have a deleterious effect on GHG emissions due to increased congestion, lower travel speeds, and increased GHG emissions per VMT.

<sup>20</sup> The Well-to-Tank analysis includes all steps from recovery or production of the feedstock, to the blending and transport of the finished fuel to the retail service station for distribution to the vehicle tank. The Tank-to-Wheels analysis includes the use of the fuel in an automobile. The Well-to-Tank and Tank-to-Wheels are combined to create a complete Well-To-Wheels analysis of a transportation fuel.

specific sections in the Proposed Rule are inaccurate. The section references and quotations throughout the document are based on the August 13 version of the rule, and therefore do not reflect the current Proposed Rule language. These errors occur throughout the GHG Modeling Process Draft and lead to confusion. Therefore, Weld County recommend revising the document to provide the missing information and correctly refer to the most recent version of the Proposed Rule.

## **B. Recommendations for the Statewide Model Coordination Group and Development of Key Guidance Documents**

In the GHG Modeling Process Draft, CDOT proposes to establish a Statewide Model Coordination Group (SMCG), “composed of CDOT, CDPHE, [and] all MPOs[,]” to “advise CDOT in the development of key GHG modeling guidance documents” and meet “at least quarterly, with additional meetings as necessary to discuss modeling issues at the request of group members.” These two guidance documents – the “GHG Modeling Guidelines Technical Memo” and “Technical Documentation Outline” – would provide information about the required practices in modeling and describe the contents of the documentation necessary to satisfy the requirements in the Proposed Rule. Similar to the GHG Mitigation Advisory Group and the public process for GHG Mitigation Measures, Weld County recommends that the SMCG be composed of CDOT, CDPHE, and all MPOs *at a minimum*, that SMCG group meetings be open to the public, and that all guidance documents be developed through a public stakeholder process. This ensures that representatives from local governments, the Colorado Energy Office, the U.S. EPA, and academic or National Laboratories will be afforded the opportunity to participate in the group. and the development of the GHG modeling guidance documents benefit from broad stakeholder engagement. Additionally, while CDOT states that the SMCG will be convened by no later than December 15, 2021 and that the group will advise CDOT on the development of key guidance documents “immediately after being convened[,]” CDOT does not specify the timeline for development of the guidance documents. Because these documents are critical to understand how modeling will be conducted to comply with the proposed rule and the corresponding technical documents required, Weld County recommends these documents be developed no later than April 30, 2022.

## **C. CDOT Should Be Held to the Same Standard for the Development of the Proposed Rule That It Requires of Regulated Entities**

The GHG Modeling Process Draft outlines numerous requirements CDOT and MPOs must comply with when conducting modeling to comply with the Proposed Rule. These requirements broadly apply to “required practices in modeling” and the “necessary contents of the documentation required” to comply with the requirements in the Proposed Rule. Unfortunately, CDOT has failed to meet many of these requirements during the development of the Proposed Rule, which highlights the insufficient documentation provided to stakeholders with respect to the modeling conducted to determine the GHG emission estimates in the proposed rule. For example, in the GHG Modeling Process Draft, CDOT states the following for the Technical Documentation Outline document to be developed by the SMCG:

This document will describe each model used for GHG estimation, addressing all elements in the GHG Modeling Guidelines Technical Memo, describing how the model satisfies the

requirements in that memo. Entities maintaining and operating the models used for GHG emissions modeling will then develop documentation of their models according to the [technical documentation] outline.

CDOT also lists numerous elements that will be included in the GHG Modeling Guidelines Technical Memo, many of which are critical information on modeling practices, methodologies, assumptions, sensitivities, and validation that Weld County has requested from CDOT for the modeling conducted for the Proposed Rule.

As described in Weld County’s October 14, 2021 comments, CDOT has failed to provide the underlying documentation supporting the Proposed Rule, particularly as related to the modeling conducted to determine the GHG emission estimates. Weld County has received some MOVES modeling data, but CDOT has not provided a technical support document describing in detail the modeling methods with associated documentation, data sources, and references supporting the analysis. The CBA provides only a high-level summary, contains numerous technical inaccuracies,<sup>21</sup> and does not include the information necessary to fully understand and review the assumptions and methodology used in the modeling. Simply put, CDOT has not provided documentation on the modeling conducted for the Proposed Rule consistent with its own expectations. Therefore, CDOT should provide a detailed technical support document describing the modeling conducted for the Proposed Rule. This document should include, at a minimum, the information CDOT and the MPOs will be required to submit for modeling conducted to meet the requirements of the Proposed Rule and the information requested by Weld County in this document and its October 14, 2021 comments. Until such information is provided for stakeholder review and comment, rulemaking on the Proposed Rule should not proceed.

#### **D. Weld County’s Technical Concerns and Recommendations**

Weld County also has the following specific concerns and recommendations on the GHG Modeling Process Draft:

- On Page 2, CDOT states that the GHG Modeling Guidelines Technical Memo will include “Appropriate sensitivity to induced demand”.
  - First, “appropriate sensitivity” is vague and should be quantified, with supporting references. As noted previously, the impact of induced demand varies between urban and rural contexts.
  - Second, declaring the modeling must have appropriate sensitivity to induced demand is myopic toward VMT reduction as the sole factor in mitigating GHG emissions and biases the results to be sensitive to induced demand without substantiation that induced demand occurs or the extent to which it is occurring. Furthermore, in addition to induced demand considerations, CDOT should ensure there is “appropriate sensitivity” to congestion relief, improved traffic flow, and other factors that tend to reduce GHG emissions.

---

<sup>21</sup> Weld County’s concerns with CDOT’s CBA are described in detail in its October 14, 2021 comments.

- On Page 2, the GHG Modeling Guidelines Technical Memo is stated to include “[a]greed-upon depiction in the MOVES model of travel model and mitigation measure outcomes and measures and other necessary assumption (such as EV market penetration).” This statement is confusing and should be clarified.
- On Page 4, the GHG reduction level analysis refers to a “best-estimate EV market penetration” to be included in the modeling.
  - First, the term “best-estimate” is vague and should be clarified, with supporting documentation. It is not clear if the “best-estimate” refers to estimates from existing studies, projections made as a part of the analysis conducted for the proposed rule, or a combination thereof.
  - Second, it is not clear if these estimates will remain fixed over time or change should new information become available throughout the time horizon of the proposed rule (i.e., through 2050). If CDOT intends for these estimates to remain fixed over time, specific values to be used in the modeling should be provided with supporting documentation. If these values are intended to change over time, CDOT should clarify the process through which the values are updated and the implications for the modeling conducted for the Proposed Rule.
    - For example, if EV market penetration estimates were increased in future years, tailpipe GHG emission factors per VMT would be lower. In turn, CDOT and MPOs would have to achieve greater VMT reductions to meet the reduction targets in the Proposed Rule, which may present compliance challenges.
- On Pages 3 and 5, CDOT states: “Model development and GHG model runs by all regulated entities will be conducted, confirmed and approved through a cooperative, interagency process.”
  - As described in Section II.A. above, Weld County recommends CDOT clarify the interaction among and relationship between the groups, teams, interagency processes, and intergovernmental agreements described in the proposed rule and companion documents.
- The GHG Modeling Process Draft does not address the process for APCD’s review and verification of the technical data contained in GHG Transportation Reports as required in Section 8.04.1 of the Proposed Rule. As described in Section II.B above, Weld County requests that CDOT provide additional specificity on this review, including the process for CDOT and the MPOs should the APCD deem a GHG Transportation Report unacceptable.

#### **IV. Weld County’s Concerns with CDOT’s Draft “GHG Transportation Planning Standard: Mitigation Policy Overview”**

Weld County appreciates the additional information provided by CDOT in the Mitigation Policy Overview companion document with respect to CDOT’s initial thinking on the process by which CDOT and MPOs may utilize GHG Mitigation Measures and prepare Mitigation Action Plans. Weld County also appreciates the solicitation of input and alternative suggestions from stakeholders as such engagement is critical to inform the development of the mitigation measure guidelines. CDOT requests input on the following three questions:

1. Should mitigation measures be evaluated based on their estimated GHG reduction specifically, through a more generalized scoring/point system, or some other approach?
2. Should a particular method or tool for GHG estimation be specified, or should CDOT and MPOs be able to propose and document their own approach?
3. What other tools and resources would you recommend for consideration?

Weld County provides input on these specific questions in the first two sections below. Additionally, Weld County has several concerns with other aspects of the Mitigation Policy Overview as discussed in more detail in the following sections.

#### **A. The Estimated GHG Emission Reductions of Mitigation Measures Must Be Quantified**

The Mitigation Policy Overview states that CDOT “intends to develop a scoring rubric over the coming months, with input from stakeholders, to provide a way to rate the relative effectiveness of measures and align the scale of mitigation needed with the deficit in MMT needed to achieve the Rule’s GHG Reduction Levels.” However, a scoring rubric or point system is not consistent with the state’s GHG reduction goals<sup>22</sup> nor the targets set forth in the proposed rule. Because the proposed rule establishes GHG reduction levels in MMT of CO<sub>2</sub>e and progress towards the state’s GHG reduction goals is determined based on quantifiable reductions in GHG emissions, it is critical that the GHG emission reductions from mitigation measures are quantified.

A scoring or point system is inconsistent with the Proposed Rule in several respects. For example, the proposed rule includes the following sections that indicate the GHG emission reductions associated with mitigation measures must be quantified to assess the sufficiency of the mitigation measures and compare with the reduction levels in Table 1:

- Section 8.02.4: “CDOT and MPOs may incorporate one or more GHG Mitigation Measures into their plans in order to assist in meeting the Regional GHG Planning Reduction Levels in Table 1”
- Section 8.02.6.1: “GHG emissions analysis and, if applicable, a GHG Mitigation Plan demonstrating that the Applicable Planning Document is in compliance with the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1”
- Section 8.02.6.1.1: “...approved GHG Mitigation Measures that reduce GHG emissions as necessary to achieve the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1.”
- Section 8.02.6.1.2: “approved GHG Mitigation Measures as necessary to achieve the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1.”
- Section 8.02.6.3: “If Mitigation Measures are needed to count toward the reduction levels in Table 1, the MPO or CDOT shall submit a Mitigation Action Plan that includes at the discretion of the MPO or CDOT, submission of a Mitigation Action Plan that identifies

---

<sup>22</sup> Colo. Greenhouse Gas Pollution Reduction Roadmap (Jan. 14, 2021), <https://www.codot.gov/programs/research/pdfs/other-reports/colorado-greenhouse-gas-pollution-reduction-roadmap/co-ghg-pollution-reduction-roadmap-final-report.pdf>.

GHG Mitigation Measures, if any, needed that will count toward the reduction levels within Table 1.”

- Section 8.02.7.3: “For measures that are in progress or completed, quantification of the benefit or impact of such measures;”
- Section 8.05: “The Commission, within thirty (30) days of receipt of a GHG Transportation Report or at the next regularly scheduled Commission Meeting, whichever is later, shall determine whether the applicable reduction targets in Table 1 have been met and the sufficiency of any GHG Mitigation Measures needed for compliance.”

Just as the proposed rule requires quantification of GHG emissions from projects in the GHG emissions analysis conducted for the GHG Transportation Report, it should require quantification of the GHG emission reductions associated with mitigation measures. This quantification is necessary to determine the sufficiency of any GHG mitigation measures needed to count toward the reduction levels in Table 1 and, more broadly, for the TC to be able to determine if an Applicable Planning Document is in compliance with the GHG reduction levels in MMT of CO<sub>2</sub>e. Because the mitigation measure process will not be fully defined until *after* the Proposed Rule has been adopted, it is critical the Proposed Rule explicitly require quantification of GHG emissions reductions from mitigation measures.

A scoring or point system is also inconsistent with CDOT’s core principles<sup>23</sup> and Mitigation Action Plan development guidelines described in the Mitigation Policy Overview. For example, one of CDOT’s core principles is Verification: “The mitigations should be able to be tracked and verified to ensure real reductions in greenhouse gas emissions.” Weld County agrees that GHG mitigation measures should be able to be tracked and verified and strongly believes that quantification of GHG emission reductions from mitigation measures is necessary for tracking and verification and to ensure real, measurable reductions in GHG emissions. Quantification of GHG emissions for mitigation measures is also critical to ensure “a reasonable relationship between the scale of mitigation required and that implemented” as stated in CDOT “Reasonable scale” principle. A scoring rubric will not allow CDOT and MPOs to “align the scale of mitigation needed with the deficit in MMT needed to achieve the Rule’s GHG Reduction Levels” as stated in this principle. Similarly, CDOT’s Mitigation Action Plan Guidelines state that “Mitigation Action Plans must include measures that when combined demonstrate compliance for all years in Table 1 of the Greenhouse Gas Transportation Planning Standard for which travel demand modeling indicates a gap in achieving the required GHG reduction levels.” Quantification of GHG emissions is necessary to make such a demonstration.

Finally, quantification of GHG emissions is critical to ensure GHG mitigation measures will actually provide net GHG emission reductions. In the same way that CDOT states one must consider both delay reduction benefits and induced demand to determine net GHG emission

---

<sup>23</sup> The core principles are included in the Proposed Rule and the Mitigation Policy Overview companion document.

impacts for capacity expansion projects<sup>24</sup>, a variety of factors influence the potential GHG emission impacts for mitigation measures. For example, the addition of transit resources does not guarantee GHG emission reductions if emissions associated with new transit resources are higher than the avoided emissions from displaced VMT.<sup>25</sup> Similar considerations exist for other mitigation measures. Without a full analysis and quantification of GHG emissions, these factors may be overlooked, and the net GHG emission benefit of the measure will not be able to be verified.

For the aforementioned reasons, Weld County recommends CDOT require quantification of GHG emission reductions from mitigation measures included in a Mitigation Action Plan. The Mitigation Policy Overview companion document should be revised consistent with this requirement and any discussion of a GHG effectiveness score or point system should be removed. Similarly, the Policy Directive and a Procedural Directive to be established by CDOT should be developed based on required quantification of GHG emissions. Finally, the Proposed Rule language should be modified as shown in **Exhibit 001**, such as by striking “where feasible” from Section 8.02.6.3.2, to clearly express quantification is required.

## **B. Methodology for GHG Emission Estimates from Mitigation Measures**

In the Mitigation Policy Overview, CDOT presents various resources to estimate GHG emissions for each of the identified mitigation measure categories. In the Mitigation Policy Overview, CDOT states that they “will be developing specific guidance for each measure prior to the finalization of this policy” and that “[t]he guidance for quantifying GHG emissions reductions (TBD) from measures is meant to clarify expectations around the level of detail and types of data sources to be used, and to ensure consistency in approaches.” Weld County appreciates CDOT’s efforts to develop guidance to quantify GHG emission reductions from mitigation measures as quantification is critical for the numerous reasons previously discussed. Additionally, Weld

---

<sup>24</sup> “Capacity expansion projects consider the effects of “induced demand”, or increased traffic that is observed to result over time after roads are expanded. This increased traffic may lead to net increases in greenhouse gas emissions as a result of the project, and may offset to some degree the delay reduction benefits.” Cost-benefit Analysis for Rules Governing Statewide Transportation Planning (Aug. 31, 2021).

<sup>25</sup> Section 8.0.3.1 proposes the addition of transit resources as an example mitigation measure: “The addition of transit resources in a manner that can displace VMT including in rural areas where the public may travel to a community for work but live outside that area due to affordability of housing.” However, even if a public transit system could be established in rural areas like Weld County, it is not clear that this transit system would reduce air emissions. The potential emissions benefits would largely depend on the type of vehicle or transit, the level of ridership, and the location of these riders (i.e., the VMT), among other factors. Moreover, many individuals in rural areas would still need to drive significant distances to their nearest public transit stop, thereby reducing or negating the potential emission benefits from public transit. Similarly, implementing ridesharing in these areas has the potential to provide little to no emissions benefits due to the high VMT associated with picking up riders in sparsely populated areas. These factors must be considered to demonstrate such a measure will provide meaningful emission reductions, particularly in sparsely populated areas.

County emphasizes the importance of developing a specific methodology for each mitigation measure. While numerous options are presented in Table 2 and the Appendix, a single, uniform methodology for each measure must be developed to ensure emission reductions are quantified using a consistent approach. Such methodology should include standardized assumptions and sufficient detail to ensure reproducibility of results among emissions estimates from CDOT and MPOs.

CDOT also presents the option for alternative quantification methods, such that CDOT and MPOs may use their own quantification methods for GHG mitigation measures, provided certain criteria are met (i.e., appropriate data sources and documentation on the method). Additionally, the GHG Mitigation Policy Overview states that “[a]ny alternative approach must be reviewed by the GHG Mitigation Advisory Group and approved by CDOT.” While Weld County is not opposed to allowing alternative quantification methods, these alternative approaches should be approved by an independent entity. As currently proposed, CDOT would be responsible for approving its own alternative quantification methods. Therefore, Weld County recommends alternative approaches require written verification from APCD in order to be considered acceptable, consistent with APCD’s role in providing review and verification of technical data in GHG Transportation Reports per Section 8.04 of the Proposed Rule. This requirement could be incorporated into the Mitigation Action Plan review and approval procedure described on Page 8 of the GHG Mitigation Policy Overview.

In response to CDOT’s request for other tools and resources to quantify GHG emission from mitigation measures, Weld County recommends CDOT consider the *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (“CAPCOA Handbook”).<sup>26</sup> The Handbook includes information and tools for evaluating greenhouse gas reduction measures, climate vulnerabilities and promoting equity to support sustainable, resilient, and equitable land use planning and project design. It includes quantification methods, tools, and recommendations, developed based on the latest science and literature available at the time of publication.

### **C. The Spatial Extent of Project Limits and GHG Mitigation Measure Impacts Is Not Well-Defined**

In the GHG Mitigation Policy Overview, CDOT highlights its focus on providing benefits to DI communities in part by establishing a requirement that any project which yields a net GHG emission increase offset its emissions by mitigation measures “within the geographic projects limits as defined in project planning documents.” Throughout the same document, CDOT makes several references to “close proximity” and the geographic extent of project or mitigation measure impacts which seems to differ from this requirement. Because no concrete definition is provided in the Proposed Rule or elsewhere, it is unclear how one would determine whether or not a project or mitigation measure affects or provides benefits to a particular community or geographic area. For example:

---

<sup>26</sup> Cal. Air Pollution Control Officers Ass’n, “Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity,” (2021).

- “In the event that a specific, significant project included within a plan yields net greenhouse gas emissions, those emissions shall be offset with project-specific mitigation that falls within the geographic project limits as defined in project planning documents. This constraint is especially important for ensuring that disproportionately impacted communities are able to achieve direct project benefits associated with meeting mitigation requirements.”
  - CDOT states that the mitigation must occur within the geographic project limits in order to ensure DI community achieve direct project benefits. This implies a strict, defined geographic boundary within which project-specific mitigation must occur in order to be considered as providing benefits to DI communities.
- “Geographic Nexus with Impacts: Where regionally significant projects are projected to increase net greenhouse gas emissions, those emissions should be offset with project-specific mitigation measures that benefit communities that will be impacted by the project. This principle is especially important for ensuring that disproportionately impacted communities that have often, historically, borne a significant share of the negative impacts of highway projects, are able to achieve direct project benefits associated with meeting mitigation requirements.”
  - CDOT states that project specific mitigation measures need to *benefit* communities that will be impacted by the project but does not define how to determine whether a community is impacted by the project or if it would “achieve direct project benefits associated with meeting mitigation requirements.”
- “Any Disproportionately Impacted (DI) communities (as defined in § 24-38.5-302(3), C.R.S) affected by the measure (i.e. within [½ mile] of the measure or targeted by a specific strategy).”
  - CDOT implies “affected by the measure” means the community is within ½ of the measure or targeted by a specific strategy.
- “For measures that benefit a DI community, meaning a project crosses through a DI community, is within close proximity (i.e. ½ mile), or targets benefits to specific members of a community, CDOT and MPOs may utilize a multiplier of [TBD] applied to the GHG estimate or score for that measure.”
  - CDOT implies a measure is considered to benefit a DI community if the project:
    - Crosses through the community;
    - Is within “close proximity”, implied to be ½ mile; or
    - Targets benefits to specific members of a community.

Given the focus on localized GHG mitigation and requirements for GHG mitigation measures that includes a “[d]escription of benefits to Disproportionately Impacted Communities, particularly those in close proximity to any capacity expansion projects being mitigated[,]” it is critical that CDOT defines “close proximity” and the criterion used to evaluate whether or not a mitigation measure provides benefits to a DI community. Weld County therefore recommends that a new definition be added to the Proposed Rule to explicitly define “close proximity” and any other terms needed to assess the spatial extent of project impacts and determine whether or not a project provides benefits to DI communities. Additional guidance should be added to the GHG Mitigation Policy Overview to clarify the procedure and expectations for assessing project and mitigation measure impacts.

## **D. Restrictions on Allowable Mitigation Measures May Present Compliance Challenges**

### **1. Geographic Nexus**

Weld County appreciates the importance of providing benefits to disproportionately impacted communities, many of which exist in the county.<sup>27</sup> However, Weld County is concerned that the requirement that GHG mitigation measures used to offset project emissions must be located within the geographic projects limits is overly restrictive and may lead to significant compliance challenges. First, the availability and suitability of GHG mitigation measures in a particular project area depends on numerous factors (e.g., land use, population density, existing infrastructure, transit resources, etc.) and it may not be feasible to implement sufficient mitigation measures within the geographic project limits to offset project emissions. Therefore, while Weld County agrees that CDOT and MPOs should consider “a holistic approach to project design that includes multiple choices for travelers[,]” many mitigation measures and travel choices are not suitable in the rural areas of Colorado, as described in Weld County’s October 14, 2021 comments. Additionally, mitigation measures not suitable for implementation in the project area may be more effective and provide greater benefits if implemented elsewhere.

Second, the premise that mitigation measures must have a geographic nexus with impacts conflates GHG emissions, which are a global issue, with congestion and emissions of criteria air pollutants and air toxics. While criteria air pollutants and air toxics emissions are important to consider at the local scale, reductions in GHG emissions in proximity to projects provides no localized benefit to impacted communities. Furthermore, because the purpose of the Proposed Rule is to reduce GHG emissions and establish regional GHG transportation planning reduction levels, the implementation of mitigation measures should be driven by optimizing their potential to achieve real GHG emissions reductions and not their geographic proximity to a particular project. Therefore, Weld County recommends CDOT remove this requirement, such as by qualifying with “where feasible,” and *encourage* local mitigation measures that benefit communities that will be impacted by the project.

### **2. Major Categories Excluded from Eligibility for Mitigation**

In the GHG Mitigation Policy Overview, CDOT unduly excludes certain measures from being counted as mitigation for the purposes of the Proposed Rule. Specifically, CDOT states that “traffic improvements that focus on improving traffic flow through either capacity expansion or technology measures that primarily benefit the flow of vehicular traffic without improving alternatives to driving single occupancy vehicles are not allowable for the purposes of approved mitigation.” Examples of these types of improvements may include lane capacity expansion, improvements to highway entrances and exits (e.g. ramp metering), intersection reconstructions

---

<sup>27</sup> Data Viewer for Disproportionately Impacted Communities in Colorado, <https://cohealthviz.dphe.state.co.us/t/EnvironmentalEpidemiologyPublic/views/EJActDICommunities-Public/HB21-1266DICommunities?%3AisGuestRedirectFromVizportal=y&%3Aembed=y>.

for the purposes of improving the flow of traffic (e.g. roundabouts/diverging diamond intersections), signal timing improvements, and similar traffic technologies. CDOT seems to exclude these measures on the basis of their *potential* to cause greater total emissions. However, the preemptive exclusion of these measures further constrains the availability of mitigation measures that may be necessary for CDOT and MPOs to demonstrate compliance with the Proposed Rule.

As stated in the CAPCOA Handbook, measures such as roundabouts can smooth traffic flow, reduce idling, eliminate bottlenecks, and manage speed, which can reduce emissions. Roundabouts may also be designed so that cyclists have the option to join traffic or bypass the roundabout with an adjacent path, supporting CDOT's goals to improve bike and pedestrian access. As with all mitigation measures, the achievable emission reductions depend on several factors, and a quantitative analysis is necessary to determine GHG emissions impacts. However, the need for such an analysis should not preclude these measures from consideration in a Mitigation Action Plan. Therefore, Weld County recommends CDOT not exclude these or any other mitigation measures from consideration, provided the necessary analysis be conducted to quantify the estimated GHG emission reductions.

**E. The Policy Directive, Procedural Directive, and Other Key Documents Should Be Developed Through an Open Public Process**

In the GHG Mitigation Policy Overview, CDOT states they anticipate establishing both a Policy Directive and a Procedural Directive for GHG Mitigations. Per CDOT, the Policy Directive would set forth the intent and principles of GHG mitigations as well as the process for establishing, verifying and tracking measures while the Procedural Directive would include the approved list of mitigations, guidance for quantifying GHG reductions, and/or scoring ranges. CDOT also states that the ability to nominate new GHG Mitigation Measures will be open to all MPOs, local governments, community and advocacy groups, and members of the public. Weld County appreciates CDOT providing stakeholders the ability to nominate new GHG Mitigation Measures for consideration. Weld County recommends that all nominations received by CDOT be posted publicly and that the process for assessing nominations be open to broad stakeholder participation. Similarly, Weld County recommends the Policy Directive and Procedural Directive be developed through a public process and that these documents be released for public review and comment prior to adoption. These recommendations are consistent with Section 8.04.4 of the proposed rule. Finally, Weld County recommends the GHG Mitigation Advisory Group meetings be open to the public such that representatives from local governments and the public and private sector are afforded the opportunity to participate.

**F. Crediting for Implementation of Mitigation Measures**

While CDOT has provided additional information on mitigation measures in the GHG Mitigation Policy Overview, CDOT has not addressed the concerns raised in Weld County's October 14, 2021 comments. Specifically, substantial ambiguity exists as to whether projects undertaken by the statutorily created enterprises constitute GHG Mitigation Measures under the Proposed Rule. SB21-260 created four enterprises "to serve the primary business purpose of reducing and mitigating the adverse environmental and health impacts of air pollution and

greenhouse gas emissions.”<sup>28</sup> The non-attainment area mitigation enterprise focuses its efforts on projects that “directly reduce air pollution,” including “retrofitting of construction equipment, construction of roadside vegetation barriers, and planting trees along medians.”<sup>29</sup> CDOT has not addressed the relationship between actions taken by the regulated entities to reduce GHG emissions and actions taken by the enterprises.

While it seems unlikely the Enterprises would complete a “regionally significant project” as defined in the Proposed Rule, the Enterprises may undertake projects that qualify as GHG Mitigation Measures under the Proposed Rule. It is not clear in the Proposed Rule or companion documents if projects that reduce GHG emissions undertaken by the Enterprises or other groups within the different regional areas could be used as mitigation measures by CDOT and the MPOs to meet the reduction targets. Accurate accounting of GHG reduction projects is critical to avoid double counting of GHG emission reductions and to understand CDOT and the MPOs’ funding and compliance options. The Proposed Rule should foster collaboration among agencies to reduce GHG emissions. Accordingly, Weld County recommends that CDOT recognize Enterprise activities and project undertaken by other entities (e.g., local government) as allowable GHG Mitigation Measures within each regional area.

#### **G. Weld County’s Other Concerns and Recommendations**

Weld County also has the following specific concerns and requests for clarifications on the Mitigation Policy Overview:

- On Page 9, CDOT describes the required documentation for alternative quantification methodologies: “[CDOT or MPOs] must document the step-by-step process, input data, sources, and calculations for each measure. They must use appropriate data sources for their area, and indicate how they determined their alternative method (e.g. if adapted from another academic, federal, or other rigorous source).”
  - We recommend CDOT provide documentation on the modeling conducted for the Proposed Rule consistent the requirements specified here and in the GHG Modeling Process Draft as described in Section III.C.
- It is not clear if criteria air pollutant co-benefits must be estimated due to differing language in the Proposed Rule and Mitigation Policy Overview. For example, page 9 of the Mitigation Policy Overview implies estimation of criteria air pollutant co-benefits is optional, while page 7 of the same document and Section 8.02.6.3.3 suggest it is required “where feasible”.
  - On Page 7, the Mitigation Policy Overview states “Each measure shall include the following details:” including “Co-benefits: Quantification, where possible, of specific co-benefits including reduction of co-pollutants (PM<sub>2.5</sub>, NO<sub>x</sub>, etc.)[.]”
  - On Page 9, the Mitigation Policy Overview states “If applicants wish to include estimated criteria pollutant co-benefits, they may utilize MOVES NO<sub>x</sub> and PM<sub>2.5</sub>

---

<sup>28</sup> SB21-260 created the community access enterprise, the clean fleet enterprise, the clean transit enterprise, the nonattainment area air pollution mitigation enterprise. *See* Colo. SB 21-260.

<sup>29</sup> *Id.*

per mile emission rates to estimate reduced air pollution based on calculated VMT reduction.”

- Sections 8.02.6.3 and 8.02.6.3.3 of the proposed rule state, respectively, “The Mitigation Action Plan shall include:” “Quantification of specific co-benefits where feasible including reduction of co-pollutants (PM<sub>2.5</sub>, NO<sub>x</sub>, etc.) as well as travel impacts (changes to VMT, pedestrian/bike use, transit ridership numbers, etc. as applicable).”
- Weld County recommends CDOT clarify if estimating criteria air pollutant co-benefits is required or optional.
- As a part of the Mitigation Action Plan review and approval procedure described on page 8, CDOT states that the plans must be submitted to APCD for review and “If APCD has not provided written verification within thirty (30) days, the document shall be considered acceptable.” Similar to its concern with Section 8.04.1 of the Proposed Rule, Weld County recommends this language be revised to prevent the plan from being considered acceptable simply due to inaction and to clarify the process, procedures, and timeframes for revisions to the plans should they not be considered acceptable by APCD.
- On Page 8 under reporting on compliance CDOT states: “For measures that are in progress or completed, quantification of the benefit or impact of such measures[.]”
  - While Weld County believes quantification of GHG emissions impacts from mitigation measures is a necessary component of GHG Transportation reports, it’s not clear from this statement what benefits or impacts need to be quantified. GHG Mitigation Measures may provide impacts to a variety of quantitative metrics such as VMT, GHG emissions, or criteria air pollutant emissions. Therefore, Weld County recommends CDOT clarify what benefits or impacts need to be quantified.

## **V. If the TC Adopts the Proposed Rule, It Should Address the Following Concerns with the MOVES Modeling**

Weld County appreciates CDOT and CDPHE providing MOVES modeling data via a shared Google folder on October 14, 2021, and additional files via email on November 9, 2021. However, the limited time remaining for review before the close of the written comment period on November 18, 2021, coupled with the absence of a detailed technical support document describing the modeling methodology severely limits Weld County’s ability to analyze data and provide meaningful comments. Additionally, these data were shared with Weld County in response to its CORA request, yet it is not transparent whether other stakeholders and technical experts have had the opportunity to review the data used to develop the proposed rule. During the rulemaking hearing on September 17, 2021, Weld County requested the modeling data be posted to the rulemaking website for all stakeholders to have access to the data and CDOT did not publicly provide the data for everyone. CDOT provided a CBA and a regulatory analysis but these documents did not include the information necessary to fully understand and review the assumptions and methodology used in the modeling. Significant uncertainty exists regarding the modeling assumptions and methods and several important questions remain unanswered.

It is important for a regulation that relies heavily on quantifiable data to carefully document modeling methods and assumptions and organize all pertinent files that ultimately lead to the reduction requirements in the Proposed Rule (i.e., Table 1). The file package received by CDOT and CDPHE is not organized and no file structure was provided. The information provided

included extraneous files (i.e., additional test model runs that were not used for the proposed rule), and the naming conventions are not intuitive which further complicates review. For example, the only MOVES output database provided includes 99 runs, out of which 20 are “inventory mode” and the rest are for “rate mode”. It is difficult to know which runs were used in the analysis to arrive at Table 1 in the Proposed Rule, and it is not clear what the different runs represent, or if there are duplicative or replaced versions of the same run. Additionally, the time stamps of the output database (ghg\_m3\_out) provided suggest that most of the runs were done in May 2021. The file MedoraQuestions.docx (dated in August 2021) acknowledges that there is potentially an issue in the estimates from MOVES and that it would have to be rerun or confirmed. Therefore, this suggests the files provided do not appear to be “final” and there may be outstanding issues to be resolved. Additionally, Weld County was unable to identify the files containing data on speed distributions to understand how the reduction in capacity expansion projects considered in the Travel scenario (as described in the CBA) was accounted for in the modeling, if at all. Because vehicle speeds directly affect GHG emissions per VMT, it is critical the modeling accurately capture the impact of reduce capacity expansion and other changes considered in the Travel scenario used the develop the Proposed Rule on vehicle speed.

CDOT has not kept a clean record of the data files and methodology used to develop the Proposed Rule. Weld County understands that the analysis conducted for the proposed rule involves highly technical and complex modeling that often leads to iterative analysis. For that reason, it is critically important to keep a clean record of key final files and documentation of assumptions to arrive at the reduction requirements in the Proposed Rule. Based on information and documentation received to date, this has not been accomplished. Any agency should be able to review CDOT’s modeling files, review the data, and replicate the results used to develop the reduction levels in the rule. However, the failure to post modeling data publicly and the lack of a technical support document prevents Weld County and other agencies from being able to do so.

Notwithstanding these issues, Weld County’s engineering consultant, Ramboll, performed a technical review of the MOVES modeling data received from CDOT and CDPHE. Concerns and potential technical issues identified are discussed in the following sections. The key files used in this review and referenced in the following sections include:

<b>File ID<sup>1</sup></b>	<b>File Name</b>	<b>File Type</b>

The specific sheets used in this analysis included those described by the following names: ghgSW2030_40_baseNoEV (7), ghgSW2030_40_baseEV (6), ghgSW2030_40_travelEV (5), ghgSW2030_50_baseNoEV (3), ghgSW2030_50_baseEV (4), ghgSW2030_50_TravelWithEV		

**A. VMT and Emissions in 2040 May Be Incorrect Due to Errors in Bus and Combination Truck VMT**

VMT data from excel sheets A, B, and C shows abnormal VMT values for buses (HPMSid 40) and heavy-duty combination trucks (HPMSid 60) in 2040 for the BaseEV scenario. Figure 1 below shows daily VMT for buses and combination trucks in calendar years 2030, 2040, and 2050 for the BaseEV scenario and the TravelEV scenario.<sup>30</sup> As shown in Figure 1, in the BaseEV scenario bus VMT is substantially higher in 2040 than in other calendar years and combination truck VMT is substantially lower in 2040 than in other calendar years. Specifically, bus VMT is over 1.25 million in 2040 in the BaseEV scenario as compared with less than 0.3 million in years 2030 and 2050 in the same scenario. This abnormally high bus VMT in 2040 for the BaseEV scenario is inconsistent with all other calendar years in both scenarios and does not follow the general trend of gradual increases in VMT over time due to growth and other factors. Additionally, this abnormally high VMT in the BaseEV scenario leads to erroneously high VMT reductions for buses in 2040 when the difference between the BaseEV scenario and TravelEV scenario is calculated to determine the reduction levels in the Proposed Rule. Specifically, Table 1 shows that bus VMT will be reduced by over 1,000,000 miles in 2040 due to implementation of the illustrative policy choices considered in the development of the proposed rule<sup>31</sup>, whereas bus VMT is only reduced by about 8,000 miles in 2030 and 16,000 miles in 2050. In turn, these VMT estimates result in artificially high GHG emission reductions from buses in 2040.

---

<sup>30</sup> The BaseEV and TravelEV scenario are the two scenarios used to develop the reduction levels in Table 1 of the Proposed Rule. The BaseEV scenario represents current planning assumptions with inclusion of estimates of EV market penetration in future years. The TravelEV scenario represents “Proposed Rule Implementation: Travel Choices + Transit + Land Use” as described in the CBA, including the same estimates of EV market penetration. The reduction in GHG emission due to implementation of the illustrative policy choices considered in the development of the proposed rule is determined by subtracting the TravelEV scenario from the BaseEV scenario.

<sup>31</sup> As described in the CBA, the Proposed Rule does not require a specific set of measures to be implemented by the State and its MPOs to achieve the rule’s targets. However, in order to conduct the analysis, “CDOT developed illustrative policy choice packages that assume implementation of three broad categories of VMT reduction measures: (1) expansion of transit service; (2) policies to encourage compact land use that reduces the need to drive by making it possible for travelers to access more of their preferred destinations easily within denser areas, in a manner that also facilitates strong and economically vibrant downtowns; and (3) various programs that expand travel choices through a variety of different approaches[.]” Thus, the TravelEV scenario represents the implementation of these illustrative policy choices, i.e., “Proposed Rule Implementation: Travel Choices + Transit + Land Use” as described in the CBA.

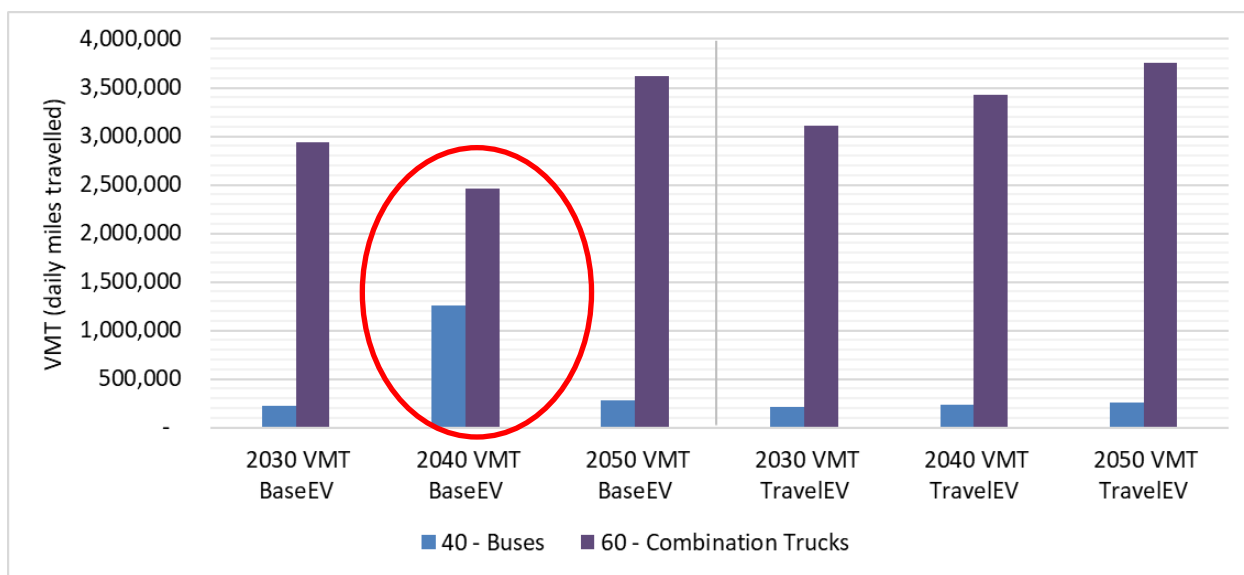

Figure 1: VMT for Buses and Combination Trucks in years 2030, 2040, and 2050 for the BaseEV and TravelEV scenarios.

Table 1: Changes in VMT between the BaseEV and TravelEV scenarios for years 2030, 2040, and 2050 by HPMSid.

HPMSid	VEHICLE TYPE	BaseEV minus TravelEV <sup>1,2</sup>		
		2030 VMT reduction	2040 VMT reduction	2050 VMT reduction
11	Motorcycles	58,278	70,775	81,996
21	Passenger cars	10,765,666	12,952,966	15,145,540
30	Passenger Trucks /Light Commercial Trucks	9,856,035	11,865,593	13,878,583
40	Buses	8,283	1,020,008	15,932
50	Single Unit Trucks	22,295	(161,533)	44,639
60	Combination Trucks	(172,230)	(965,077)	(139,551)
<b>Grand Total</b>		<b>20,538,327</b>	<b>24,782,733</b>	<b>29,027,138</b>

<sup>1</sup> Negative numbers (shown in red parenthesis) represent increases in VMT between the base and travel scenarios while positive numbers represent reductions in VMT between the base and travel scenarios.  
<sup>2</sup> Values are obtained from excel sheets A, B, and C.

A similar concern exists for combination truck VMT in 2040. Specifically, combination truck daily VMT is abnormally low in 2040 in the BaseEV scenario – about 500,000 miles lower than in 2030 and 1,000,000 miles lower than in 2050 – inconsistent with all other calendar years in both scenarios the general trend of gradual increases in VMT over time due to growth and other factors. Table 1 shows that this results in a nearly 1,000,000 mile increase in daily VMT for combination trucks due to implementation of the illustrative policy choices considered in the development of the proposed rule, which in turn causes a significant increase in GHG emissions from combination trucks.

There is no explanation provided in the CBA or other rulemaking documents for the abnormal VMT for these vehicle classes in this scenario and calendar year, and the VMT is not consistent with data for other calendar years. While these two errors cause opposite effects on GHG emissions, they may reflect significant issues in the modeling conducted for the proposed rule and should be investigated and resolved prior to considering the Proposed Rule for adoption. This further illustrates the need for proper documentation of the modeling methods and assumptions. Should additional modeling need to be conducted to address these issues, a revised Proposed Rule, including all supporting documentation and modeling, should be released for stakeholder review and comment prior to being considered for adoption.

### **1. Weld County's Other Concerns with VMT Changes Shown in the Modeling**

Table 1 above also raises two other concerns that should be resolved prior to considering the Proposed Rule for adoption:

- Table 1 shows that Travel scenario bus VMT decreases in all calendar years with respect to the Base scenario due to implementation of the illustrative policy choices considered in the development of the proposed rule. However, the CBA describes substantial increases in transit, including both fixed-route and demand-responsive buses, and states that VMT effects of transit expansion are modeled in EERPAT.
  - Specifically, the CBA assumes that “transit revenue-miles will increase by 6.0 percent per year between 2022 and 2030 (69 percent total growth between 2019 and 2030), and by 2.0 percent a year between 2030 and 2050 (151 percent total growth between 2019 and 2050) compared to base year (2019) service levels.”
  - Thus, it's not clear how bus VMT can decrease concurrent with significant expansion of fixed-route and demand-responsive bus services and increases in transit revenue-miles.
- Table 1 also shows a large increase in single unit truck (HPMSid 50) VMT in 2040 due to implementation of the illustrative policy choices considered in the development of the proposed rule, while single unit truck VMT tends to decrease due to implementation in other years. In turn, this VMT increase causes an increase in GHG emissions due to the Proposed Rule in 2040. There is no explanation provided for the increase in single unit truck VMT in 2040.

### **B. The Penetration of Electric Vehicles in the Modeling Does Not Reflect What is Described in the CBA and Other Rulemaking Documents**

The CBA, regulatory analysis, FAQ, and other rulemaking documents describe the electric vehicle market penetration estimates assumed in future years. For example, the regulatory analysis states “[t]his includes 940,000 LDV EVs in 2030 (20% of LD fleet), 3.38 million EVs (60% of LD fleet) in 2040, and 97% of Light Duty Vehicles being EVs in 2050.” Additional information is provided in Table A.13 of the CBA, although as noted in Weld County's October 14, 2021

comments, Table A.13 shows incorrect EV Stock and EV% of Stock values for 2050. The analysis described in this section utilized the value for 2050 from the regulatory analysis, consistent other rulemaking documents and presentation from CDOT.

Review of the Alternate Vehicle Fuel and Technology (AVFT) tables in the MOVES input databases provided by CDOT and CDPHE suggests that EV penetration values used in the modeling are inconsistent with the stated assumptions in the CBA and other rulemaking documents. In AVFT tables, MOVES users can enter actual local fractions of electric vehicles by model year<sup>32</sup>. The fraction of vehicles with electric fuel type (ID=9) in each model year would be equivalent to the percent of sales of vehicles in a given location, which should be based on actual registration data for past years and is forecasted for future model years. The CBA describes, at a high level, the assumptions for EV penetration in light duty vehicles (LDVs) in Table A.13. This includes the percentage of EV Sales for all LDVs, that is, the combination of passenger cars, passenger trucks and light commercial trucks (HPMSids 21 31, and 32). When comparing the AVFT files used for statewide runs (as suggested by the input database name), the EV penetration in 2030 and 2040 do not match or appear close to what the CBA had described as the assumed penetration. For example, in 2030 the AVFT files show 97% EV sales for passenger cars and 13% EV sales for passenger trucks, while the CBA indicates an EV sales percentage of 50% for all light duty vehicles. No EV penetration is assumed for light commercial trucks. There is no explanation or data provide to explain how the assumed EV Sales % in the CBA is applied to the different light duty vehicle classes used in the modeling or why the values in the CBA would differ from the values used in the analysis.

Table 2: EV penetration data from AVFT files and comparison to values in the CBA.

Source	HPMSid	Description	% EV in AVFT File by Model Year				
			2025	2030	2040	2045	2050
Input database used in MOVES: ghg_statewide_m3_30_in	21	Passenger cars	14%	97%	100%	100%	100%
	31	Passenger Trucks	1%	13%	73%	96%	100%
	32	Light Commercial Trucks	0%	0%	0%	0%	0%
CBA (Table A.13) EV Sales %	all LDVs		17%	50%	100%	N/A	100%
CBA (Table A.13) EV% of Stock <sup>1</sup>	all LDVs		4%	16%	57%	N/A	97%
<sup>1</sup> The 97% EV light duty stock in 2050 is obtained from the regulatory analysis and other rulemaking documents, not the CBA, due to the error in the CBA described previously.							

<sup>32</sup> Env't Prot. Agency, "MOVES3 Technical Guidance: Using MOVES to Prepare Emission Inventories for State Implementation Plans and Transportation Conformity," (Nov. 2020), <https://www.epa.gov/sites/default/files/2020-11/documents/420b20052.pdf>.

This discrepancy between the CBA and the modeling files also exists for the EV stock percentages. Table 3 shows average emission factors in grams per mile for the BaseEV and BaseNon-EV scenarios for different vehicles types in 2030, 2040, and 2050. The far-right column shows the percentage reduction in average emission rate between the Non-EV and EV scenarios for each vehicle type in each calendar year due to increased EV penetration. When looking at an average emission factor in g/mile (calculated in the excel sheets as the ratio of GHG emissions over the VMT), changes in emission factors for passenger cars and passenger trucks are not consistent with the assumptions for EV penetration of all light duty vehicles. For example, Table 3 shows that there is a 93% reduction in passenger car emission rates and a 52% reduction in passenger truck emission rates in 2050. However, neither of these, nor the combination of the two, is consistent with the assumption that 97% of all light duty vehicles are electric in 2050. Similar concerns exist for other years. If EV stock percentages are underestimated in the modeling, GHG emissions from passenger cars may be overestimated. In turn, the reduction levels in the proposed rule would be overestimated, which may present compliance challenges.

Additionally, there is an unusual trend in the non-EV emission factors for passenger cars between 2040 and 2050. Specifically, passenger car emission factors increase by nearly 40% between 2040 and 2050 in the BaseNon-EV scenario (676 to 946 g/mile, see Table 3). GHG emissions per VMT generally decrease over time due to federally mandated improvements in vehicle fuel economy and other factors, regardless of any assumed increases EV penetration scenario (which are not present in the non-EV scenario). Thus, it is not clear why passenger car emission factors are much higher in 2050 than in 2040 in the BaseNon-EV scenario. These abnormally high emission factors in the BaseNon-EV scenario suggest that GHG emissions from passenger cars may be overestimated in the BaseEV scenario, which in turn would overestimate the reduction levels in the proposed rule. It is critical that these discrepancies are addressed to ensure the accuracy and reasonableness of the GHG emissions estimates in the Proposed Rule.

Table 3: Average emissions rates and changes in average emission rates due to assumed electric vehicle penetration.

HPMSid	VEHICLE TYPE	Year	Average Emission Rate (g/mile)		% Reduction from EV Penetration
			BaseEV	Base Non-EV	
11	Motorcycles	2030	1,344	1,344	0%
11	Motorcycles	2040	1,356	1,356	0%
11	Motorcycles	2050	1,356	1,356	0%

60	Combination Trucks	2050	6,089	6,089	0%

Finally, not all of the input databases applied in the MOVES runs included in the MOVES output database used for the analysis (ghg\_m3\_out) were provided. Table 4 below shows input databases that were not included in the package provided. It is unclear, due to the lack of documentation, if these are relevant to the analysis. Nonetheless, these files, along with any other missing data, should be provided to all stakeholders for review and comment.

**C. GHG Emission Reductions by Regional Area in the Modeling Are Inconsistent with the Proposed Rule**

The modeling data reports VMT and GHG emissions by region for three primary areas: DRCOG, NFR, “rest of State”. Within the rest of state area, data is provided separately for Pikes Peak. Therefore, data is resolved by four regional areas: DRCOG, NFR, Pikes Peak, and rest of state. Weld County understands, based on presentations from CDOT, that the reduction levels for each regional area shown in Table 1 of the Proposed Rule were derived by allocating the total reduction level each year (after off-model adjustments<sup>33</sup>) to each regional area based on each regional area’s VMT. However, this approach results in reduction levels for different regional areas that are inconsistent with the reductions for each regional area estimated by the modeling.

---

<sup>33</sup> Off model adjustments include changes to the total reduction level estimated by the modeling. For example, while the modeling predicted GHG emission reductions of 1.69 MMT in 2030, the reduction level was set at 1.5 MMT.

Table 5: Emissions in the BaseEV and TravelEV scenarios by regional area for 2030, 2040, and 2050.

Region	BaseEV (MMT/year)	TravelEV (MMT/year)	Emission Reductions (MMT) <sup>1</sup>	% Contribution to Total
<b>2030</b>				
DRCOG	10.69	9.62	1.08	64%
NFR	2.63	2.43	0.19	12%
Pikes Peak	2.45	1.95	0.50	30%
Rest of State	4.20	4.29	-0.09	-5%
<b>2030 Total</b>	<b>19.97</b>	<b>18.29</b>	<b>1.69</b>	<b>100%</b>
<b>2040</b>				
DRCOG	7.17	6.36	0.81	63%
NFR	2.14	1.95	0.19	15%
Pikes Peak	1.44	1.30	0.14	11%
Rest of State	3.30	3.15	0.15	12%
<b>2040 Total</b>	<b>14.04</b>	<b>12.76</b>	<b>1.28</b>	<b>100%</b>
<b>2050</b>				
DRCOG	4.37	3.94	0.42	63%
NFR	1.41	1.31	0.10	15%
Pikes Peak	0.89	0.81	0.07	11%
Rest of State	2.21	2.14	0.08	11%
<b>2050 Total</b>	<b>8.88</b>	<b>8.20</b>	<b>0.68</b>	<b>100%</b>
<sup>1</sup> Negative values represent increases in emissions between the BaseEV and TravelEV scenarios.				

For example, Table 5 above shows GHG emission estimates in the BaseEV and TravelEV scenarios by regional area for 2030, 2040, and 2050, including the change in emissions between the scenarios and the percentage contribution each regional area comprises of the total estimated reduction. The percentage contribution values in 2030 shown in Table 5 are particularly concerning as they differ significantly from other years and the relative contribution of different regional areas to the total reduction level shown for 2030 in Table 1 of the Proposed Rule. Specifically, modeling data indicates that 30% of the total GHG emission reductions in 2030 from implementation of the illustrative policy choices considered in the development of the proposed rule would come from the Pikes Peak region. Additionally, the modeling indicates that GHG emissions in the rest of the state would actually *increase* due to implementation of the illustrative policy choices considered in the development of the proposed rule in 2030. It's not clear why CDOT chose to allocate total reductions to different regional areas based on VMT rather than relying on modeling data as this methodology is not described or explained in the rulemaking documents. Furthermore, this methodology may lead to compliance challenges, particularly for the non-MPO areas, as the modeling indicates implementation of the illustrative policy choices

considered in the development of the proposed rule would actually increase emissions for the “rest of state” region. Because modeling analogous to that conducted to develop the proposed rule will be used by CDOT and MPOs to demonstrate compliance with the rule, these concerning discrepancies between the modeling data and the proposed rule, particularly for 2030, must be addressed. Simply put, it’s not clear if the emission reduction levels in Table 1 of the Proposed Rule are achievable. Therefore, CDOT should provide the documentation necessary to fully understand the modeling conducted for the Proposed Rule and directly address the concerns raised in these sections.

### **CONCLUSION**

Weld County supports efforts to reduce GHG emissions from the transportation sector, but it cannot support the Proposed Rule as drafted. For the reasons set forth above, Weld County respectfully requests the TC to reject the Proposed Rule and direct CDOT to revise the rule to adequately address stakeholder concerns. Weld County appreciates the opportunity to participate in this rulemaking and thanks CDOT and the TC in advance for their attention to these written comments.

Respectfully submitted this 18th day of November, 2021.

**1.00 Definitions.**

**1.01** Accessible - ensure that reasonable efforts are made that all meetings are reachable by persons from households without vehicles and that the meetings will be accessible to persons with disabilities in accordance with the Americans with Disabilities Act (ADA), and also accessible to persons with Limited English Proficiency. Accessible opportunities to comment on planning related matters include those provided on the internet and through such methods as telephone town halls.

**1.02** Applicable Planning Document - refers to MPO Fiscally Constrained RTPs, TIPs for MPOs in NAAs, CDOT's 10-Year Plan and Four-Year Prioritized Plan in non-MPO areas, and amendments to the MPO RTPs and CDOT's 10-Year Plan and Four-Year Prioritized Plan in non-MPO areas that include the addition of Regionally Significant Projects.

**1.03** MOVES Approved Air Quality Model - Environmental Protection Agency's the most recent version of the Motor Vehicle Emission Simulator (or MOVES) issued model that quantifies GHG emissions from on-road transportation, or its successor, that is required for transportation conformity analyses per federal regulation.

**1.04** Attainment Area - any geographic region of the United States that meets the national primary or

secondary National Ambient Air Quality Standards (NAAQS) for the pollutants as defined in the Clean Air Act (CAA) (Amendments of 1990).

- 1.05 Baseline - estimates of GHG emissions for each of the MPOs, and for the non-MPO areas, prepared using the MPO Models or the Statewide Travel Model. Estimates must include GHG emissions resulting from the existing transportation network and implementation of the most recently adopted RTP for all MPOs and the 10-Year Plan in non-MPO areas as of the effective date of these Rules. For each MPO area and for the non-MPO areas of the state, for each of the model years 2025, 2030, 2040, and 2050: the GHG emissions, in million metric tons (MMT), produced by the most recently adopted model for that area, together with the current EPA-approved version of MOVES or its successors in the format currently run by APCD, resulting from modeling the MPO RTP or CDOT 10-year plan adopted as of the effective date of this rule.
- 1.06 Carbon Dioxide Equivalent (CO<sub>2</sub>e) - a metric measure used to standard unit for comparing the emissions from various GHG based upon the 100-year global warming potential (GWP). CO<sub>2</sub>e is calculated by multiplying the mass amount of emissions (metric tons per year), for each GHG constituent by that gas's GWP, and summing the resultant values to determine CO<sub>2</sub>e (metric tons per year). This calculation allows comparison of different greenhouse gases and their relative impact on the environment over different standard time periods.
- 1.07 Commission - the Transportation Commission of Colorado created by § 43-1-106, C.R.S.
- 1.08 Congestion Mitigation and Air Quality (CMAQ) - a federally funding mandated program established in 23 U.S.C § 149 to improve air quality in Nonattainment and Maintenance Areas for ozone, carbon monoxide, and particulate matter. References related to this program include any successor programs as established by the federal government.
- 1.09 Corridor - a transportation system that includes all modes and facilities within a described geographic area.
- 1.10 Corridor Vision - a comprehensive examination of a specific transportation Corridor, which includes a determination of needs and an expression of desired state of the transportation system that includes Transportation Modes and facilities over a planning period.
- 1.11 Department or CDOT - the Colorado Department of Transportation created by § 43-1-103, C.R.S.
- 1.12 Disproportionately Impacted Communities - defined in § 24-38.5-302(3), C.R.S. as a community that is in a census block group, as determined in accordance with the most recent United States Decennial Census where the proportion of households that are low income is greater than forty percent (40%), the proportion of households that identify as minority is greater than forty percent (40%), or the proportion of households that are housing cost-burdened is greater than forty percent (40%).
- 1.13 Division - the Division of Transportation Development within CDOT.
- 1.14 Division Director - the Director of the Division of Transportation Development.
- 1.15 Fiscally Constrained - the financial limitation on transportation plans and programs based on the projection of revenues as developed cooperatively with the MPOs and the rural TPRs and adopted by the Commission that are reasonably expected to be available over the long-range transportation planning period and the TIP and STIP programming periods.
- 1.16 Four-Year Prioritized Plan - a four-year subset of the 10-Year Plan consisting of projects prioritized for near-term delivery and partial or full funding.
- 1.17 Greenhouse Gas (GHG) pollutants means anthropogenic (man-made) emissions of carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, nitrogen trifluoride, and sulfur hexafluoride. - for purposes of these Rules, GHG is defined as the primary transportation greenhouse gases: carbon dioxide, methane, and nitrous oxide.

- 1.18 Greenhouse Gas (GHG) Reduction Level - the amount of the GHG expressed as CO<sub>2</sub>e reduced from the projected Baseline that CDOT and MPOs must attain through transportation planning.
- 1.19 Greenhouse Gas (GHG) Mitigation Measures - non-Regionally Significant Project strategies implemented by CDOT and MPOs that reduce transportation GHG pollution and help meet the GHG Reduction Levels.
- 1.20 Intergovernmental Agreement - an arrangement made between two or more political subdivisions that form associations for the purpose of promoting the interest and welfare of said subdivisions.
- 1.21 Intermodal Facility - a site where goods or people are conveyed from one mode of transportation to another, such as goods from rail to truck or people from passenger vehicle to bus.
- 1.22 Land Use - the type, size, arrangement, and use of parcels of land.
- 1.23 Limited English Proficiency - individuals who do not speak English as their primary language and who have a limited ability to read, speak, write, or understand English.
- 1.24 Long-Range Planning - a reference to a planning period with a minimum 20-year planning horizon.
- 1.25 Maintenance Area - any geographic region of the United States previously designated by the U.S. Environmental Protection Agency (EPA) as a Nonattainment Area pursuant to the Clean Air Act (CAA) Amendments of 1990 and subsequently redesignated to attainment subject to the requirement to develop a maintenance plan under § 175A of the CAA, as amended in 1990.
- 1.26 Memorandum of Agreement (MOA) - a written agreement between two or more parties on an intended plan of action.
- 1.27 Metropolitan Planning Agreement (MPA) - a written agreement between the MPO, the State, and the providers of public transportation serving the Metropolitan Planning Area that describes how they will work cooperatively to meet their mutual responsibilities in carrying out the metropolitan planning process.
- 1.28 Metropolitan Planning Area - a geographic area determined by agreement between the MPO for the area and the Governor, in which the metropolitan transportation planning process is carried out pursuant to 23 U.S.C. § 134.
- 1.29 Metropolitan Planning Organization (MPO) - an organization designated by agreement among the units of general purpose local governments and the Governor, charged to develop the RTPs and programs in a Metropolitan Planning Area pursuant to 23 U.S.C. § 134.
- 1.30 Mitigation Action Plan - an element of the GHG Transportation Report that specifies which GHG Mitigation Measures shall be implemented that help achieve the GHG Reduction Levels.
- 1.31 Mobility - the ability to move people, goods, services, and information among various origins and destinations.
- 1.32 MPO Models - one (1) or more of the computer-based models maintained and operated by the MPOs which depict the MPO areas' transportation systems (e.g., roads, transit, etc.) and development patterns (i.e., number and location of households and jobs) for a defined year (i.e., past, present, or forecast) and produce estimates of roadway VMT, delays, operating speeds, transit ridership, and other characteristics of transportation system use.
- 1.33 Multimodal - an integrated approach to transportation that takes into account all modes of travel, such as bicycles and walking, personal mobility devices, buses, transit, rail, aircraft, and motor vehicles.
- 1.34 Multimodal Transportation and Mitigation Options Fund (MMOF) - a program created in the State

Treasury pursuant to § 43-4-1003, C.R.S. which funds bicycle, pedestrian, transit and other Multimodal projects as defined in § 43-4-1002(5), C.R.S. and GHG Mitigation projects as defined in § 43-4-1002(4.5), C.R.S.

- 1.35 National Ambient Air Quality Standards (NAAQS) - are those established by the U.S. Environmental Protection Agency for air pollutants considered harmful to public health and environment. These criteria pollutants are: carbon monoxide, lead, nitrogen dioxide, ozone, particulate matter small particles, and sulfur dioxide.
- 1.36 Nonattainment Area - any geographic region of the United States which has been designated as nonattainment by the EPA under section 107 of the CAA for any pollutants for which a NAAQS exists.
- 1.37 Non-Metropolitan Area - a rural geographic area outside a designated Metropolitan Planning Area.
- 1.38 Plan Integration - a comprehensive evaluation of the statewide transportation system that includes all modes, an identification of needs and priorities, and key information from other related CDOT plans.
- 1.39 Planning Partners - local and tribal governments, the rural TPRs and MPOs.
- 1.40 Project Priority Programming Process - the process by which CDOT adheres to 23 U.S.C. § 135 and 23 C.F.R. Part 450 when developing and amending the STIP.
- 1.41 Regional Planning Commission (RPC) - a planning body formed under the provisions of § 30-28-105, C.R.S., and designated under these Rules for the purpose of transportation planning within a rural TPR.
- 1.42 Regionally Significant Project - a transportation project that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network or state transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternative to regional highway travel. Modifications of this definition shall be allowed if approved by the State Interagency Consultation Team. If the MPOs have received approval from the EPA to use a different definition of regionally significant project as defined in 40 C.F.R. § 93.101, the State Interagency Consultation Team will accept the modified definition. Necessary specificity for MPO Models or the Statewide Travel Model will be approved by the State Interagency Consultation Team.
- 1.43 Regional Transportation Plan (RTP) - a long-range plan designed to address the future transportation needs for a TPR including, but not limited to, Fiscally Constrained or anticipated funding, priorities, and implementation plans, pursuant to, but not limited to, § 43-1-1103, C.R.S. and 23 C.F.R. Part 450. All rural and urban TPRs in the state produce RTPs.
- 1.44 State Interagency Consultation Team - consists of the Division Director or the Division Director's designee, the Colorado Department of Public Health and Environment (CDPHE) Director of Air Pollution Control Division or the Director's designee, and the Director of each MPO or their designee.
- 1.45 State Transportation System - refers to all state-owned, operated, and maintained transportation facilities in Colorado, including, but not limited to, interstate highways, other highways, and aviation, bicycle and pedestrian, transit, and rail facilities.
- 1.46 Statewide Transportation Advisory Committee (STAC) - the committee created by § 43-1-1104, C.R.S., comprising one representative from each TPR and one representative from each tribal government to review and comment on RTPs, amendments, and updates, and to advise both the

Department and the Commission on the needs of the transportation system in Colorado.

- 1.47 Statewide Transportation Improvement Program (STIP) - a Fiscally Constrained, multi-year, statewide, Multimodal program of transportation projects which is consistent with the Statewide Transportation Plan and planning processes, with Metropolitan Planning Area plans, Transportation Improvement Programs and processes, and which is developed pursuant to 23 U.S.C. § 135.

- 1.48 Statewide Travel Model - the computer-based model maintained and operated by CDOT which depicts the state's transportation system (roads, transit, etc.) and development scale and pattern (number and location of households, number and location of firms/jobs) for a selected year (past, present, or forecast) and produces estimates of roadway VMT and speed, transit, ridership, and other characteristics of transportation system use.
- 1.49 Statewide Transportation Plan - the long-range, comprehensive, Multimodal statewide transportation plan covering a period of no less than 20 years from time of adoption, developed through the statewide transportation planning process described in these Rules and 23 U.S.C. § 135, and adopted by the Commission pursuant to § 43-1-1103, C.R.S.
- 1.50 Surface Transportation Block Grant (STBG) - a flexible federal funding source established under 23 U.S.C. § 133 for state and local transportation needs. Funds are expended in the areas of the State based on population. References related to this program include any successor programs established by the federal government.
- 1.51 System Continuity - includes, but is not limited to, appropriate intermodal connections, integration with state modal plans, and coordination with neighboring RTPs, and, to the extent practicable, other neighboring states' transportation plans.
- 1.52 Traditionally Underserved - refers to groups such as seniors, persons with disabilities, low-income households, minorities, and student populations, which may face difficulties accessing transportation systems, employment, services, and other amenities.
- 1.53 Transit and Rail Advisory Committee (TRAC) - an advisory committee created specifically to advise the Executive Director, the Commission, and the Division of Transit and Rail on transit and rail-related activities.
- 1.54 Transportation Commonality - the basis on which TPRs are established including, but not limited to: Transportation Commission Districts, the Department's Engineering Regions, Travelsheds, Watersheds, geographic unity, existing Intergovernmental Agreements, and socioeconomic unity.
- 1.55 Transportation Improvement Program (TIP) - a staged, Fiscally Constrained, multi-year, Multimodal program of transportation projects developed and adopted by MPOs, and approved by the Governor, which is consistent with an MPO's RTP and which is developed pursuant to 23 U.S.C. § 134.
- 1.56 Transportation Mode - a particular form of travel including, but not limited to, bus, motor vehicle, rail, transit, aircraft, bicycle, pedestrian travel, or personal mobility devices.
- 1.57 Transportation Planning and Programming Process - all collaborative planning-related activities including the development of regional and Statewide Transportation Plans, the Department's Project Priority Programming Process, and development of the TIPs and STIP.
- 1.58 Transportation Planning Region (TPR) - a geographically designated area of the state, defined by section 2.00 of these Rules in consideration of the criteria for Transportation Commonality, and for which a regional transportation plan is developed pursuant to the provisions of § 43-1-1102 and 1103, C.R.S. and 23 U.S.C. § 134. The term TPR is inclusive of these types: non-MPO TPRs, MPO TPRs, and TPRs with both MPO and non-MPO areas.
- 1.59 Transportation Systems Planning - provides the basis for identifying current and future deficiencies on the state highway system and outlines strategies to address those deficiencies and make improvements to meet Department goals.

- 1.60 Travelshed - the region or area generally served by a major transportation facility, system, or Corridor.
- 1.61 Tribal Transportation Improvement Program (TTIP) - a multi-year Fiscally Constrained list of proposed transportation projects developed by a tribe from the tribal priority list or tribal long-range transportation plan, and which is developed pursuant to 25 C.F.R. Part 170. The TTIP is incorporated into the STIP without modification.
- 1.62 Urbanized Area - an area with a population of 50,000 or more designated by the Bureau of the Census.
- 1.63 Vehicle Miles Traveled (VMT) - the traffic volume of a roadway segment or system of roadway segments multiplied by the length of the roadway segment or system.
- 1.64 Watershed - a land area that drains to a common waterway, such as a stream, lake, estuary, wetland, or ultimately the ocean.
- 1.65 10-Year Plan - a vision for Colorado's transportation system that includes a specific list of projects categorized across priority areas as identified in the Statewide Transportation Plan.

**8.00 GHG Emission Requirements**

**8.01 Establishment of Regional GHG Transportation Planning Reduction Levels**

8.01.1 The GHG emission reduction levels within Table 1 apply to MPOs and the Non-MPO area within the state of Colorado as of the effective date of these Rules. Baseline values are specific to each MPO and CDOT area and represent estimates of GHG emissions resulting from the existing transportation network and implementation of the most recently adopted RTP for all MPOs and the 10-Year Plan in non-MPO areas as of the effective date of these Rules. Table 2 reflects the difference in Baseline levels from year to year assuming a rapid growth in electric vehicles across the State (940,000 light duty electric vehicles in 2030, 3.38 million in 2040 and a total of 97% of all light duty vehicles in 2050). Values in both tables take into account include estimates of population and employment growth as provided by the state demographer.

8.01.2 Regional GHG Transportation Planning Reduction Levels

Table 1: GHG Transportation Planning Reduction Levels in MMT of CO2e

Regional Areas	2025 Baseline Projections (MMT)	2025 Reduction Level (MMT)	2030 Baseline Projections (MMT)	2030 Reduction Level (MMT)	2040 Baseline Projections (MMT)	2040 Reduction Level (MMT)	2050 Baseline Projections (MMT)	2050 Reduction Level (MMT)
<u>DRCOG</u>	<u>14.9</u>	<u>0.27</u>	<u>11.8</u>	<u>0.82</u>	<u>10.9</u>	<u>0.63</u>	<u>12.8</u>	<u>0.37</u>
<u>NFRMPO</u>	<u>2.3</u>	<u>0.04</u>	<u>1.8</u>	<u>0.12</u>	<u>1.9</u>	<u>0.11</u>	<u>2.2</u>	<u>0.07</u>
<u>PPACG</u>	<u>2.7</u>	<u>N/A</u>	<u>2.2</u>	<u>0.15</u>	<u>2.0</u>	<u>0.12</u>	<u>2.3</u>	<u>0.07</u>

Table 2: Baseline Emissions Due to Projected Number of Light Duty Electric Vehicles

	2025 Projections (MMT)	2030 Projections (MMT)	2040 Projections (MMT)	2050 Projections (MMT)
TOTAL	27.0	20.0	14.0	8.9

8.02 Process for Determining Compliance

8.02.1 Emissions Analysis Requirements When Adopting or Amending an Applicable Planning Document - Each MPO and CDOT shall conduct a GHG emissions analysis using MPO Models or the Statewide Travel Model, and the MOVES Approved Air Quality Model, to estimate total CO2e emissions. Such analysis shall include, at a minimum the existing transportation network and implementation of Regionally Significant Projects contained in the Applicable Planning Document. The emissions analysis must estimate total CO2e emissions in million metric tons (MMT) for each compliance year in Table 1 as long as the compliance year is not in the past and compare these emissions to the Baseline specified in Table 1. When adopting a TIP, the required emissions analysis will apply to one year corresponding with the last year of the TIP, using interpolation between Table 1 years if the last year of the TIP does not correspond to a designated year in Table 1. This provision shall not apply to MPO TIP amendments.

8.02.2 Agreements on Modeling Assumptions and Execution of Modeling Requirements. Prior to the adoption of the next RTP for any MPO, CDOT, CDPHE, and each MPO shall enter into an Intergovernmental Agreement which outlines CDOT, CDPHE, and MPO responsibilities for development and execution of MPO Models or the Statewide Travel Model, and MOVES Approved Air Quality Model.

8.02.3 The State Interagency Consultation Team shall meet as needed to address any questions on the classification of projects as Regionally Significant, modeling assumptions, and projects that reduce GHG emissions.

8.02.43 By April 1, 2022, CDOT in consultation with the MPOs shall establish an ongoing administrative process and guidelines, through a public process, for selecting, measuring, confirming, and verifying GHG Mitigation Measures, so that CDOT and MPOs may each incorporate one or more GHG Mitigation Measures into each of their plans in order to reach to assist in meeting the Regional GHG Planning Reduction Levels in Table 1. Such a process and guidelines shall include, but not be limited to, how CDOT and MPOs should determine the relative benefits impacts of GHG Mitigation Measures, and measuring and prioritizing localized benefits impacts to communities and Disproportionately Impacted Communities in particular. The mitigation credit awarded to a specific solution shall consider both aggregate and community impact.

8.02.54 Timing for Determining Compliance

8.02.54.1 By October 1, 2022, CDOT shall update their 10-Year Plan and DRCOG and NFRMPO shall update their RTPs pursuant to § 43-4-

**Commented [A1]:** Weld County recommends that additional language be added to the proposed rule in Section 8.02.2 to specify the items that must be addressed and information that must be included in the Intergovernmental Agreement.

Additionally, Weld County recommends CDOT clarify the interaction among and relationship between the groups, teams, interagency processes, and intergovernmental agreements described in the proposed rule and companion documents.

1103, C.R.S. and meet the reduction levels in Table 1 or the requirements pursuant to § 43-4-1103, C.R.S and restrictions on funds.

8.02.54.2 After October 1, 2022

8.02.54.2.4 CDOT must for each Applicable Planning Document adopted or amended after October 1, 2022, meet either the reduction levels within Table 1 for Non-MPO areas or the requirements as set forth in Rule 8.02.6.1.18-05.

8.02.54.32.2 MPOs must for each Applicable Planning Document adopted or amended after October 1, 2022, meet either the corresponding reduction levels within Table 1 for each Applicable Planning Document adopted or amended after October 1, 2022, or the relevant MPO and CDOT each must meet the requirements as set forth in Rule 8.02.6.1.1 or Rule 8.02.6.1.2, as applicable. This provision shall not apply to MPO TIP Amendments.

8.02.65 Demonstrating Compliance. At least thirty (30) days prior to adoption or amendment of any Applicable Planning Document except amendments to MPO TIPs, CDOT for Non-MPO areas and the MPOs for their areas shall provide to the Commission a GHG Transportation Report containing the following information:

8.02.65.1 GHG emissions analysis and, if applicable, a GHG Mitigation Plan demonstrating that the Applicable Planning Document is in compliance with the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1 or that the requirements in Rules 8.02.5.1.1 or 8.02.5.1.2, as applicable, have been met.

8.02.6.1.1 In non-MPO areas or for MPOs that are not in receipt of federal suballocations pursuant to the CMAQ and/or STBG programs, the Department utilizes 10-Year Plan funds anticipated to be expended in MPO areas and on 10-Year Plan funds anticipated to be expended on Regionally Significant Projects in non-MPO areas those areas on projects or approved GHG Mitigation Measures that reduce GHG emissions as necessary to achieve the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1.

8.02.65.1.2 In MPO areas that are in receipt of federal suballocations pursuant to the CMAQ and/or STBG programs, the MPO utilizes shall award those funds anticipated to be expended on projects or approved GHG Mitigation Measures that reduce GHG emissions, and CDOT utilizes shall award 10-Year Plan funds anticipated to be expended on Regionally Significant Projects in that MPO area on projects or approved that reduce GHG emissions or approved Mitigation Measures as necessary to achieve the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1.

8.02.6.1.3 The restrictions in 8.02.6.1.1 and 8.02.6.1.2 do not apply to projects which have been advertised for construction with funding identified prior to the adoption of the Applicable Planning Document.

8.02.65.2 Identification and documentation of the MPO Model or the Statewide Travel Model and the MOVES Approved Air Quality Model used to determine GHG emissions in MMT of CO<sub>2</sub>e.

8.02.65.3 If Mitigation Measures are needed to count toward the reduction levels in Table 1, the MPO or CDOT shall submit a Mitigation Action Plan that includes at the discretion of the MPO or CDOT, submission of a Mitigation Action Plan that identifies GHG Mitigation Measures, if any, needed to meet that will count toward the reduction levels within Table 1. The Mitigation Action Plan shall include:

8.02.65.3.1 The anticipated start and completion date of each measure.

8.02.65.3.2 An estimate, where feasible, of the annual GHG emissions reductions in MMT of CO<sub>2</sub>e achieved per year by any GHG Mitigation Measures.

8.02.65.3.3 Quantification of specific co-benefits where feasible including reduction of co-pollutants (PM<sub>2.5</sub>, NO<sub>x</sub>, etc.) as well as travel impacts (changes to VMT, pedestrian/bike use, transit ridership numbers, etc. as applicable).

8.02.65.3.4 Description of benefits to Disproportionately Impacted Communities.

8.02.76 Reporting on Compliance- Following the submission of a GHG Transportation Report containing a Mitigation Action Plan, Annually by April 1, CDOT and MPOs must provide a status report to the Commission annually by April 1 on an approved form with the following items for each GHG Mitigation Measure identified in their most recent GHG Transportation Report:

8.02.76.1 The implementation timeline;

8.02.76.2 The current status;

8.02.76.3 For measures that are in progress or completed, quantification of the benefit or impact of such measures; and

8.02.76.4 For measures that are delayed, cancelled, or substituted, an explanation of why that decision was made.

8.03 GHG Mitigation Measures. When assessing compliance with the GHG Reduction Levels, CDOT and MPOs shall have the opportunity to utilize approved GHG Mitigation Measures as set forth in Rules 8.02.3 and 8.02.5.3 to offset emissions and demonstrate progress toward compliance. Illustrative examples of GHG Mitigation Measures include, but are not limited to:

8.03.1 The addition of transit resources in a manner that can displace VMT including in rural areas where the public may travel to a community for work but live outside that area due to affordability of housing.

8.03.2 Improving pedestrian and bike access, particularly in areas that allow individuals to reduce multiple daily trips.

8.03.3 Encouraging local adoption of more effective forms of vertical development and zoning plans that integrate mixed use and in a way that links and rewards transportation project investments with the city making these changes.

8.03.4 Improving first-and-final mile access to transit stops and stations that make transit resources safer and more usable by consumers.

8.03.5 Improving the safety and efficiency of crosswalks for pedestrians, bicyclists, and other non-motorized vehicles, including to advance compliance with the ADA.

**Commented [A2]:** Weld County recommends CDOT require quantification of GHG emission reductions from mitigation measures included in a Mitigation Action Plan. Therefore, "where feasible" should be removed as shown here.

Additionally, the Mitigation Policy Overview companion document should be revised consistent with this requirement and any discussion of a GHG effectiveness score or point system should be removed.

- 8.03.6 ~~Adopting or encouraging the adoption of locally driven changes to parking policies and physical configuration that encourage more walking and transit trips.~~
  - 8.03.7 ~~Incorporating medium/heavy duty vehicle electric charging and hydrogen refueling infrastructure -- as well as upgrading commensurate grid improvements -- into the design of key freight routes to accelerate truck electrification.~~
  - 8.03.8 ~~Establishing policies for clean construction that result in scalable improvements as a result of factors like lower emission materials, recycling of materials, and lower truck emissions during construction.~~
  - 8.03.9 ~~Adoption of implementing or encouraging the adoption of transportation demand management practices that reduce VMT.~~
  - 8.03.10 ~~Encourage local adoption or expansion of school bus programs or school carpool programs to reduce private vehicle trips~~
  - 8.03.11 ~~Electrify loading docks to allow transportation refrigeration units and auxiliary power units to be plugged into the electric grid at the loading dock instead of running on diesel.~~
- 8.04 ~~Air Pollution Control Division (APCD) Confirmation and Verification~~
- 8.04.1 ~~At least forty-five (45) days prior to adoption of any Applicable Planning Document, CDOT for Non-MPO areas and the MPOs for their areas shall provide to APCD for review and verification of the technical data contained in the draft GHG Transportation Report required per Rule 8.02.65. If APCD has not provided written verification or committed to a review schedule within thirty (30) days, CDOT will commission review by an outside contractor the document shall be considered acceptable. The APCD shall submit any written verification to the agency adopting the Applicable Planning Document and to the Commission.~~
  - 8.04.2 ~~At least forty-five (45) thirty (30) days prior to adoption or amendment of policies per Rule 8.02.43, CDOT shall provide APCD the opportunity to review and comment. If APCD has not provided written comment within thirty (30) forty-five (45) days, the document shall be considered acceptable.~~
- 8.05 ~~Compliance Enforcement. The Commission, within thirty (30) days of receipt of a GHG Transportation Report or at the next regularly scheduled Commission Meeting, whichever is later, shall review all GHG Transportation Reports to determine whether the applicable reduction targets in Table 1 have been met and the sufficiency of any GHG Mitigation Measures needed for compliance. The Commission may not review a GHG Transportation Report until the report has undergone APCD confirmation and verification per Section 8.04.1 and has been deemed acceptable.~~
- 8.05.1 ~~If the Commission determines the requirements of Rule 8.02.65 have been met, the Commission shall, by resolution, accept the GHG Transportation Report.~~
  - 8.05.2 ~~If the Commission determines, by resolution, the requirements of Rule 8.02.65 have not been met, the Commission shall restrict the use of funds pursuant to Rules 8.02.65.1.1 or 8.02.65.1.2, as applicable, to projects and approved GHG Mitigation Measures that reduce GHG. Prior to the implementation enforcement of such restriction, an MPO, CDOT (upon concurrence with the applicable MPO) or a TPR in a non-MPO area, may, within sixty (60) thirty (30) days of Commission action, pursue issue one or both of the following actions: opportunities to seek a waiver or to ask for reconsideration accompanied by an opportunity to submit additional information:~~

~~8.05.2.1 Request a waiver from the Commission imposing restrictions on specific~~

**Commented [A3]:** It is not clear what steps would need to be taken if the APCD does not consider a GHG Transportation Report acceptable.

Weld County recommends CDOT revise the Proposed Rule to require GHG Transportation Reports to undergo technical review and verification prior to the TC's compliance determination and describe the process for CDOT and the MPOs should the APCD deem a GHG Transportation Report unacceptable. Additional specificity on APCD's "review and verification of the technical data contained in the draft GHG Transportation Report" should be provided in the documents supporting the Proposed Rule.

**Commented [A4]:** Weld County recommends adding this language to ensure GHG Transportation Reports have undergone review and verification of the technical data by the APCD prior to review and evaluation by the TC.

projects not expected to reduce GHG emissions.

8.05.2.1.1 By April 1, 2022, CDOT staff in consultation with the MPOs shall develop a waiver form for use by CDOT, MPOs or TPRs when requesting a waiver.

8.05.2.1.2 A waiver may be requested at any time, including concurrently with the submission of a GHG Transportation Report. The Commission may waive the restrictions on specific projects when applicants use CDOT's waiver form that specifies on the following basis:

8.05.2.1.34-The GHG Transportation Report reflected significant effort and priority placed, in total, on projects and GHG Mitigation Measures that reduce GHG emissions; and

8.05.2.1.42-In no case shall a waiver be granted if such waiver results in a substantial increase in GHG emissions when compared to the required reduction levels in this Rule.

8.05.2.2 Request reconsideration of a non-compliance determination by the Commission and provide a written explanation of how the requirements of Rule 8.02.65 have been met. A request for reconsideration must be submitted within thirty (30) days of Commission action.

8.05.2.3 The Commission shall act, by resolution, on a waiver or reconsideration request within thirty (30) days of receipt of the waiver or reconsideration request or at the next regularly scheduled Commission Meeting, whichever is later. If no action is taken within this time period, the waiver or reconsideration request shall be deemed to be denied.

8.05.3 Notwithstanding any other provision of this Rule, CDOT, DRCOG and NFRMPO must meet the requirements of § 43-4-1103, C.R.S.

## 8.06 Reporting

8.06.1 Beginning July 1, 2025, and every 35 years thereafter, the Executive Director on behalf of CDOT shall prepare for the Transportation Commission and Air Quality Control Commission a and make public a comprehensive publicly released report on the statewide GHG reduction accomplishments.

8.06.1.1 If the report prepared per Section 8.06.1 demonstrates that the reduction levels for a past compliance year in Table 1 have not been met in one or more areas, the Commission shall consider revisions to these rules in order to achieve reductions in GHG emissions consistent with the intent of this rule

8.06.2 Beginning September 1, 2022, and annually thereafter, CDOT shall provide to the Transportation Commission a VMT report. The report shall provide total VMT per capita within the MPO areas and statewide for the past calendar year.

8.06.2.1 If three consecutive years of reports demonstrate no decrease in VMT per capita in one or more areas, the Commission shall consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this rule.

**Commented [A5]:** Weld County understands that some flexibility in the waiver review process may be desirable, but nonetheless recommends that CDOT clarify the criteria used to evaluate waivers. For example, guidance on how "significant effort" will be evaluated should be provided, and a "substantial increase in GHG emissions when compared to the required reduction levels" should be quantified. CDOT should provide a standardized waiver form.

**Commented [A6]:** Because the Proposed Rule is fundamentally based on and sets forth requirements for GHG emission reductions, not reductions in VMT, revisions to the Proposed Rule should be considered based progress toward meeting GHG emission reduction targets. Therefore, Weld County recommends this section be removed from the Proposed Rule.

Instead, the TC should consider revisions to the proposed rule if the report prepared per the requirements of Section 8.06.1 demonstrates that the reduction levels in Table 1 of the proposed rule have not been met. This language is added in Section 8.06.1.1 above.

## 9.00 Materials Incorporated by Reference

**9.01** The Rules are intended to be consistent with and not be a replacement for the federal transportation planning requirements in Rule 9.01.1 and federal funding programs in Rules 9.01.2 and 9.01.3, which are incorporated into the Rules by this reference, and do not include any later amendments.

**9.01.1** Fixing America's Surface Transportation Act or the "FAST Act"), 23 U.S.C. §§ 134, 135 and 150, Pub. L. No. 114-94, signed into law on December 4, 2015, and its accompanying regulations, where applicable, contained in 23 C.F.R. Part 450, including Subparts A, B and C in effect as of November 29, 2017, and 25 C.F.R. § 170 in effect as of November 7, 2016.

**9.01.2** Congestion Mitigation and Air Quality Improvement (CMAQ) Program, 23 U.S.C. § 149, in effect as of March 23, 2018.

**9.01.3** Surface Transportation Block Grant (STBG) Program, 23 U.S.C. § 133, in effect as of December 4, 2015.

**9.02** Also incorporated by reference are the following federal laws and regulations and do not include any later amendments:

**9.02.1** Americans with Disabilities Act (ADA), 42 U.S.C. § 12101, et. seq., in effect as of January 1, 2009.

**9.02.2** Clean Air Act (CCA), 42 U.S.C. §§ 7407-7410, and 7505a, in effect as of November 15, 1990.

**9.02.2** Transportation Conformity Regulations, 40 C.F.R. § 93.101, in effect as November 24, 1993.

**9.03** Also incorporated by reference are the following documents, standards, and models and do not include any later amendments:

**9.03.1** Greenhouse Gas Pollution Reduction Roadmap by the Colorado Energy Office and released on January 14, 2021.

**9.03.2** MOVES3 Motor Vehicle Emissions Model for SIPs and Transportation Conformity released by the U.S. Environmental Protection Agency, in effect as of January 7, 2021.

**9.04** All referenced laws and regulations are available for copying or public inspection during regular business hours from the Office of Policy and Government Relations, Colorado Department of Transportation, 2829 W. Howard Pl., Denver, Colorado 80204.

**9.05** Copies of the referenced federal laws and regulations, planning documents, and models.

## CDOT GHG TRANSPORTATION PLANNING STANDARD (2 CCR 601-22)

### Concerns and Recommendations

November 10<sup>th</sup>, 2021

Presented by: [REDACTED]

Recommendations Submitted on/before Oct 14, 2021	Addressed in Updated Rule?*
1 Provide technical support document for Proposed Rule	
2 Provide MOVES and other modeling data	 Files provided but without corresponding documentation
3 Provide guidance on compliance modeling methods	 Draft outline provided but incomplete and contains errors
4 Provide guidance on mitigation measures	 Draft document provided but several concerns exist
5 Remove automatic denial of waivers due to inaction	
6 Ensure technical review by APCD, clarify process	 "Automatic approval" after 30 days remains; no guidance on disapproval
7 Add illustrative examples of rural mitigation measures	 Examples added, but some major categories excluded from eligibility
8 Specify timeframe for TC compliance determination	
9 Clarify crediting for mitigation measures (i.e., enterprises)	

\*Includes MOVES and other modeling data received on or before October 14, 2021 and the two companion documents released with the updated proposed rule on October 19, 2021.

<b>New Concerns with Updated Rule and Companion Documents*</b>	<b>Recommendation(s)</b>
Proposed Rule Section 8.06.2: TC considers revisions to the rule based on VMT per capita	Revisions should be considered based on GHG emissions, not VMT
The Role of Various Groups and Processes in the Development of, and Agreement upon, Modeling Assumptions is Unclear	Clarify the interaction among and relationship between the various the groups, teams, interagency processes, and intergovernmental agreements
GHG Modeling Process is incomplete and contains errors	Fill in missing information; update references to Proposed Rule; clarify vague language
GHG Modeling Process introduces SMCG and two forthcoming key guidance documents	Broaden participation in SMCG; ensure key guidance documents are developed through stakeholder process

\*Companion documents refers to the two draft documents released on October 19, 2021:

1. GHG Transportation Planning Standard: Mitigation Policy Overview ("Mitigation Policy Overview")
2. Greenhouse Gas Modeling Process ("GHG Modeling Process")

New Concerns with Updated Rule and Companion Documents*	Recommendation(s)
Mitigation Policy Overview is overly restrictive on mitigation measures	Clarify/define “close proximity” and “geographic nexus” requirements; do not preemptively exclude major categories
Mitigation Policy Overview introduces GHG Mitigation Advisory Group and forthcoming Policy Directive and Procedural Directive	Broaden participation in GHG Mitigation Advisory Group; ensure Directive documents are developed through stakeholder process
Mitigation Policy Overview does not clarify crediting for mitigation measures	Clarify crediting for Enterprise activities and mitigation projects from other entities
Mitigation Policy Overview proposes a generalized scoring/point system	Require quantification of GHG emission reductions from mitigation measures

\*Companion documents refers to the two draft documents released on October 19, 2021:

1. GHG Transportation Planning Standard: Mitigation Policy Overview (“Mitigation Policy Overview”)
2. Greenhouse Gas Modeling Process (“GHG Modeling Process”)

# Thank you

WeldCo\_EX-003

# Comments on Costs & Benefits of Proposed CDOT GHG Rule

  
Natural Resource Economics Inc.  
Testifying for Weld County

# 1. Unrealistic Shifts in Transport Modes

- ❧ How does CDOT achieve reductions in VMT?
- ❧ Increased adoption of:
  - ❧ Tele-Travel (3x)
  - ❧ Bicycles & walking (+37-77%)
  - ❧ Transit (+151%)
  - ❧ Greater density (+30-50%)
- ❧ Very ambitious adoption

## 2. Reducing Road Capacity May Not Reduce Congestion

- ❧ Reduced-road capacity may not necessarily lead to lower traffic because travel behavior is not easily reversed
- ❧ Once configurations of homes, highways, and offices are in place, they cannot be easily changed.
- ❧ This suggests that CDOT over-estimates the reductions in VMT from reduced road capacity.

### 3. Reducing Road Capacity Risks Public Safety

- ❧ Motor vehicles and highways are
  - ❧ more flexible and resilient than other forms of transportation,
  - ❧ especially in the face of economic or natural disasters.
- ❧ During the Camp Fire incident in California in 2018, 85 people died,
  - ❧ some of them in their cars stuck in traffic
  - ❧ on a road that was reduced from four to two lanes by a “road-diet” program.
- ❧ Reducing road capacity reduces public safety
- ❧ The CDOT CBA did not consider these impacts and, therefore, may have underestimated the costs of diverting highway funds

**NYT: Forced Out by Deadly Fires, Then Trapped in Traffic**

# 4. Pandemic May Have Undermined Transit Ridership

## Vehicle Miles Traveled

## Transit Ridership

## 5. Nudging People to Ride Bikes May Not Work

- ❧ Complete streets or road diets that increase congestion are a popular
- ❧ Demographics, however, rather than street design may have the greatest influence on the popularity of cycling and walking.
- ❧ While bicycling may be popular in Boulder, for example, it may be impractical for Sterling or remote rural areas.
- ❧ Failure to adopt bikes would reduce estimated benefits and any associated GHG emission savings

## 6. Pandemic Has Accelerated Decentralization

- ❧ Pandemic has accelerated decentralization
  - ❧ for both jobs and residences, which will reduce transit ridership because
  - ❧ mass transit doesn't work well in decentralized areas.
- ❧ If this trends continues then policies to increase density may not be as effective
- ❧ This implies that CDOT's benefits from policies to encourage higher density may be over-estimated

To the Transportation Department:

I am deeply concerned about the emission from transportation, which result from burning fossil fuel. We must have not only strong rules to limit emissions, but rules that will encourage and empower multimodal transportation. Expanding highways is not the answer as it will only lead to more car and truck travel and emission. Please make rules that will prioritize multimodal transportation more strongly.

Thank you,

[REDACTED]

**CDOT GHG Rule - CEO Comments - REVISION.pdf**  
185K

November 18, 2021

## Comments on the Revised Proposed Greenhouse Gas Reduction Planning Standard

Thank you for the opportunity to submit this second round of comments on the revised Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions, containing the Greenhouse Gas Transportation Planning Standard, originally proposed on August 13, 2021 and revised on October 19, 2021 (the “Rules”). On October 12, 2021, the Colorado Energy Office (“CEO”) submitted comments supporting the draft rule, which are included below for reference.

On October 19, 2021, the Transportation Commission (the “Commission”) published a revised notice of rulemaking which amended the draft rules, moved the rulemaking to December 16th, and published additional guidance memos on mitigation measures and modeling. CEO supports the amended draft rules and submits these additional comments highlighting its continued support for the rule, and offering comments on the new and changed elements of the revised rule.

### CEO previously supported the Rules for reasons which we summarize briefly here:

- **CDOT has both the authority and the obligation to adopt the Rules:** As CEO discussed at length in its October 12 comments, the Commission has both the authority and the obligation to adopt the Rules. As CEO has explained, CDOT and the Commission have the primary responsibility for ensuring compliance with GHG reductions in transportation planning.
- **The reduction levels should be adopted as proposed to maximize benefits:** Modeling conducted to set the reduction levels proposed in the Rules indicates these levels are achievable for the state and MPOs given ambitious yet feasible shifts in transportation spending and land use. The Cost-Benefit Analysis (or “CBA”), which quantifies the expected substantial benefits for Coloradans from implementation of the Rules, highlights that the reduction levels proposed are estimated to bring \$3.9 to \$6.6 billion more in cumulative benefits between 2022 and 2050 relative to Alternatives 1 and 2 respectively. The range and magnitude of co-benefits from adopting the preferred scenario is so large as to support the adoption of the rule at the highest level of emissions reductions analyzed.
- **The Cost-Benefit Analysis, which meets statutory requirements and utilizes reasonable methods and assumptions, demonstrates the substantial benefits of the Rules:** CEO concludes that the CBA is based upon reasonable assumptions; that it meets all statutory requirements; and that it presents a lower bound on the net benefits associated with the preferred scenario. In addition to the benefits included in the CBA, CEO also provided additional order of magnitude estimates for benefits not quantified, including reduced vehicle ownership costs (an estimated \$5.8B annually by 2050), increased access to jobs and other services (an estimated \$168M annually by 2050 just for increased access to jobs for persons with disabilities), and reduced costs for land, construction, and operations and maintenance costs for parking (an estimated \$6.4-\$8.1B annually by 2050).
- **We support the Rules establishing a process for GHG Mitigation Measures:** We support the Rule’s approach to establish an ongoing process for selecting, measuring, confirming, and verifying GHG Mitigation Measures, and its focus on prioritizing Disproportionately Impacted (“DI”) communities, and appreciate the work CDOT has already put in to begin defining this process with its newly issued draft Mitigation Policy Overview. We continue to believe that this approach will allow for

continuous improvement over time as we learn from academic and practitioner research, as well as our own experience in applying mitigation measures and understanding their relative effectiveness.

For more details on each of these reasons, please see our original comments, enclosed below.

**CEO offered the following suggestions, which were addressed in the updated Rules and associated memos:**

- **Induced travel:** Given that many travel demand models have historically not accounted for induced travel or underestimated its effects, it's important that models utilized to demonstrate compliance with the Rules can adequately assess the effects of induced travel. CEO previously suggested including language in the Rules to ensure model adequacy in assessing corridor-level induced demand. We are pleased to see "appropriate sensitivity to induced demand" now included as a key element in the Greenhouse Gas Modeling Support Memo, and look forward to seeing additional detail in the future modeling guidelines technical memo.
- **Clarifying the baseline and EV adoption assumptions:** We recognize these elements have been moved to the Greenhouse Gas Modeling Support Memo, and appreciate the updates that clarify how the baseline will be established, how reduction levels will be compared, and how the same EV adoption assumptions will be utilized in the baseline and plan model runs to ensure consistency. We encourage the EV adoption assumptions to reflect the trajectory CEO and other state agencies are planning for, such as in the HB1261 Scenario of the GHG Pollution Reduction Roadmap.

**CEO would like to support the following revisions to the rule and supporting materials:**

- **Traffic operations measures should not be eligible mitigation measures:** We applaud the exclusion of traffic operations measures such as ramp metering from the list of eligible mitigation measures, as a review of technical studies on the topic suggests the GHG and air pollution benefits of these measures is likely to be overstated.<sup>1</sup> Most technical studies of traffic operations measures' emissions benefits have been conducted using microsimulation models, as opposed to controlled field experiments, and very few studies account for the effects of induced demand that are likely to result from smoother traffic flows. Additionally, this provision ensures greater prioritization of multimodal investments that are more likely to result in co-benefits.
- **Project-specific mitigation requirements:** We also applaud the inclusion in the Mitigation Policy Directive draft of a requirement that regionally significant projects that increase GHG emissions shall be offset with project-specific mitigation measures that fall within the geographic project limits. We believe this is critical for mitigating potential harm to disproportionately impacted communities from future expansion projects, and ensures these potential impacts will be considered and addressed from the beginning of project planning.
- **Additional equity provisions:** We also support CDOT's revisions that address equity, both in the Rules and in the Mitigation Policy Directive draft, including the requirement to translate meeting

---

<sup>1</sup> Impacts of Traffic Operations Strategies on Passenger Vehicle Use and Greenhouse Gas Emissions Policy Brief. Available at: [https://ww2.arb.ca.gov/sites/default/files/2020-06/Impacts\\_of\\_Traffic\\_Operations\\_Strategies\\_on\\_Passenger\\_Vehicle\\_Use\\_and\\_Greenhouse\\_Gas\\_Emissions\\_Policy\\_Brief.pdf](https://ww2.arb.ca.gov/sites/default/files/2020-06/Impacts_of_Traffic_Operations_Strategies_on_Passenger_Vehicle_Use_and_Greenhouse_Gas_Emissions_Policy_Brief.pdf)

notices into primary languages spoken in the community, the requirement of an analysis of the potential impacts to DI communities in the statewide transportation plan, and the development of an equity multiplier for projects in DI communities.

We also recognize there is much more work to be done to center equity throughout our transportation system, and support the idea of developing a Transportation Equity Framework to guide investments, engagement, and policy, and adding more elements to the Rules and to the Mitigation Policy Directive that require reporting on transportation spending and impacts in DI communities. We believe these strategies will ultimately be more impactful than setting a specific funding allocation within DI communities, for a few reasons. First, transportation investments that are most beneficial to DI communities are not necessarily always within those communities, but may instead offer important connections and access. Second, transportation investments may not bring entirely positive community benefits, such as in the case of a roadway capacity project with mitigation measures that may represent a high level of spending in a community, but not the most equitable set of transportation investments. For these reasons, we believe the other provisions CDOT has included, plus pursuing the development of a Transportation Equity Framework, will result in better, more equitable outcomes for DI communities.

#### **CEO would like to offer the following final suggestions:**

- **Applicable planning document (Section 1.02):** We continue to support the inclusion of all TIPs in the definition of Applicable planning document, not just TIPs in NAAs, in order to ensure the strength of the rule. We recognize additional technical assistance and capacity may be necessary to support modeling for MPOs outside of the NAAs, and that their inclusion may need to be phased in over time.

With respect to TIPs, we also would like to express support for utilizing multiple modeling horizon years to determine compliance, not just the final year of the TIP, given that it can often take several years beyond project construction and implementation for ridership, induced VMT, and other travel behavior changes to take effect.

- **Project-level analysis (Section 8.02.1):** We also continue to support reporting project-level modeling results for all Regionally Significant Projects that have undergone that level of analysis, which is likely the case for many projects included in TIPs, to better understand the relative impact of different projects. We also believe the inclusion of this provision supports the project-specific mitigation requirement discussed above.
- **Requiring comparisons between modeled results and measured results (Section 8.06):** We applaud the added per capita VMT reporting requirements in the revised Rules, which will help provide an additional benchmark to ensure emissions reductions targeted in the Rules, along with other important co-benefits, are being achieved. Reducing per capita VMT does not signify lower quality of life or reduction in opportunity for disproportionately impacted communities; on the contrary, the increased travel options and land use changes that the Rules will support will enable improved access—including a greater variety of transportation modes and shorter distances to travel—to jobs, services, and other key destinations. The Cost-Benefit Analysis emphasizes this point - by investing more funds in multimodal transportation options that enable lower per capita VMT, the state and its residents can expect to see significant benefits from reduced vehicle operating and ownership costs,

reduced traffic crashes, improved health outcomes from lower air pollution and increased physical activity, and reduced time spent in traffic.

We also suggest including additional language either in the Rules or the Greenhouse Gas Modeling Support Memo to require regular comparison of modeled with actual measured results, particularly for VMT of Regionally Significant Projects, to enable continuous improvement of the travel models.

We again would like to express our appreciation for CDOT and the Transportation Commission's groundbreaking leadership on this issue, and look forward to the positive benefits this Rule will bring to Colorado. Thank you for the opportunity to comment.

Sincerely,

A handwritten signature in black ink that reads "Will Toor". The signature is written in a cursive, slightly slanted style.

Will Toor  
Executive Director, Colorado Energy Office

October 13, 2021

**SUBJECT: Comments on the Proposed Greenhouse Gas Reduction Planning Standard**

Dear Transportation Commission:

Thank you for the opportunity to provide public comments on the proposed changes to the Rules Governing Statewide Transportation Planning Process Transportation Planning Regions, containing the Greenhouse Gas Transportation Planning Standard, proposed on August 13, 2021 (the “Rules”). The Colorado Energy Office (“CEO”) supports the Rules and would like to offer the following comments.

**CDOT has both the authority and the obligation to adopt the Rules.**

Recent legislation and actions by the Polis administration concerning economy-wide greenhouse gas (“GHG”) reduction goals provides background and context to the Rules. On January 14, 2021, Colorado released the Colorado Greenhouse Gas Reduction Roadmap (“Roadmap”) which assessed 2005 emissions, laid out an achievable pathway to meet the state’s science-based climate targets, and presented a list of near-term actions that would help achieve the state’s 2030 targets. The Roadmap recognized “the transportation sector [is now] the leading source of GHG emissions and a significant contributor to local air pollution.”<sup>2</sup> One of the Roadmap’s “Key Findings” declared “[m]aking changes to transportation planning and infrastructure to reduce growth in driving is an important tool in reducing emissions.”<sup>3</sup>

House Bill 19-1261 recognized that “climate change adversely affects Colorado’s economy, air quality and public health, ecosystems, natural resources, and quality of life[.]” acknowledged that “Colorado is already experiencing harmful climate impacts[.]” and that “many of these impacts disproportionately affect” certain communities. See § 25-7-102(2), C.R.S. The general assembly also recognized that “[b]y reducing [GHG] pollution, Colorado will also reduce other harmful air pollutants, which will, in turn, improve public health, reduce health care costs, improve air quality, and help sustain the environment.” § 25-7-102(2)(d), C.R.S. Accordingly, House Bill (“HB”) 19-1261 set state goals of economy-wide reductions in GHG emissions of 25% below 2005 levels by 2025, 50% below 2005 levels by 2030 and 90% by 2050. § 25-7-102(2)(g), C.R.S.

Senate Bill (“SB”) 21-260 provides further background and explicit authority for the Commission to adopt the Rules. In that bill, the general assembly recognized that “transportation capacity projects ... [that] increas[e] the capacity of highways in major transportation corridors can cause adverse environmental impacts, including but not limited to incremental acceleration of climate change, and adverse health impacts[.]” § 43-1-128(1)(a), C.R.S. To minimize these impacts, the general assembly directed the Colorado Department of Transportation (“CDOT”) and metropolitan planning organizations (“MPOs”) to “engage in an enhanced level of planning, modeling and other analysis.” § 43-1-128(1)(c), C.R.S. The general assembly also directed CDOT and the Transportation Commission (“Commission”) to take steps to account for the impacts of transportation capacity projects on GHG pollution and Vehicle Miles Traveled and to help achieve statewide GHG pollution targets established in section 25-7-102(2)(g), C.R.S. § 43-1-128(3), C.R.S. The general assembly has also recognized that CDOT is “the proper body, in cooperation with regional planning commissions and local government officials, for developing and maintaining the state transportation planning process and the state transportation plan.” § 43-1-1101, C.R.S. The Commission is responsible for formulating policy with respect to transportation systems in the State and promulgating and adopting all CDOT financial budgets for construction based on the Statewide Transportation Improvement Programs. See § 43-1-106(8), C.R.S. The Commission is statutorily charged

---

<sup>2</sup> [Colorado Greenhouse Gas Pollution Reduction Roadmap](#) (Jan. 14, 2021), at XII.

<sup>3</sup> *Id.* at 32.

“to assure that the preservation and enhancement of Colorado’s environment, safety, mobility and economics be considered in the planning, selection, construction and operation of all transportation projects in Colorado.” § 43-1-106(8)(b), C.R.S. In addition, the Commission is generally authorized “to make all necessary and reasonable orders, rules and regulations in order to carry out the provisions of this part . . .” § 43-1-106(8)(k), C.R.S. As such, CDOT and the Commission are primarily responsible for ensuring compliance with GHG reductions in transportation planning.

Finally, CEO notes that should the Commission not adopt the Rules, then the Air Quality Control Commission (“AQCC”) would likely need to adopt rules affecting transportation planning. The Roadmap originally envisioned AQCC adoption of such rules.<sup>4</sup> The agencies made the determination that development by CDOT and adoption by the Commission was preferable given the greater depth of connection to transportation stakeholders and the greater level of expertise in transportation planning. However, statute ultimately makes the AQCC responsible for the economy-wide GHG targets set by HB 19-1261, and SB 21-260 states that CDOT shall implement relevant rules and regulations adopted by the AQCC to reduce GHG emissions. § 43-1-128(3)(a), C.R.S. Given the need identified in the GHG Roadmap for reductions due to transportation planning, the AQCC would likely need to take action if the Commission did not.

In addition to State authorities, the U.S. Department of Transportation (“US DOT”) is reprioritizing GHG reduction. As one initial step, US DOT’s 2021 regulatory agenda includes a directive for the Federal Highway Administration to “Re-establish a [GHG] Emissions Performance Measure for state and metropolitan planning” that was revoked during the previous administration.<sup>5</sup> Previously, this performance measure would have required agencies to set GHG performance targets and track their progress and would have prohibited setting targets allowing an increase in carbon pollution. The work that CDOT and the Transportation Commission are undertaking in developing this rule could provide an important model for the nation as federal policies regarding GHG reduction mature.

### **The reduction levels should be adopted as proposed to maximize benefits.**

The Rules should be adopted with the reduction levels proposed, as opposed to any lesser reduction levels contemplated in alternative proposals, in order to meaningfully contribute to the GHG reduction goals of the Roadmap for the transportation sector, as well as to maximize the co-benefits from implementation of the Rules outlined in the Cost-Benefit Analysis. To meet the goals of the Roadmap, the state needs to reduce GHG emissions from transportation by 12.7 million metric tons (“MMT”) by 2030. Colorado’s Low Emission Vehicle and Zero Emission Vehicle programs, as well as programs and investments designed to reach about 1 million Electric Vehicles on the road by 2030, are estimated to achieve a combined 8 MMT GHG reduction by 2030, leaving a 4.7 MMT gap. The Roadmap includes these Rules as one of the key near-term strategies to fill this gap, and given the uncertainty surrounding implementation and timing of other possible strategies, reduction levels in the Rules should be maximized to the extent possible. Nevertheless, it will also be critical to quickly pursue complementary strategies in the transportation sector to tackle issues like truck emissions.

Modeling conducted to set the reduction levels proposed in the Rules indicates that these levels are achievable for the state and MPOs given ambitious yet feasible shifts in transportation spending and land use. The Cost-Benefit Analysis (or “CBA”), which quantifies the substantial benefits for Colorado residents and businesses from the implementation of the Rules, highlights that the reduction levels proposed are estimated to bring \$3.9 to \$6.6 billion more in cumulative benefits between 2022 and 2050 relative to Alternatives 1 and 2 respectively.

---

<sup>4</sup> *Id.* at 66.

<sup>5</sup> [US Department of Transportation Releases Spring Regulatory Agenda | US Department of Transportation, US Department of Transportation](#) (June 11, 2021).

**The Cost-Benefit Analysis, which meets statutory requirements and utilizes reasonable methods and assumptions, demonstrates the substantial benefits of the Rules.**

CDOT's CBA meets the statutory requirements that the CBA include:

- (I) The reason for the rule or amendment;
- (II) The anticipated economic benefits of the rule or amendment, which shall include economic growth, the creation of new jobs, and increased economic competitiveness;
- (III) The anticipated costs of the rule or amendment, which shall include the direct costs to the government to administer the rule or amendment and the direct and indirect costs to business and other entities required to comply with the rule or amendment;
- (IV) Any adverse effects on the economy, consumers, private markets, small businesses, job creation, and economic competitiveness; and
- (V) At least two alternatives to the proposed rule or amendment that can be identified by the submitting agency or a member of the public, including the costs and benefits of pursuing each of the alternatives identified.

§§ 24-4-103(2.5)(a)(I)-(V), C.R.S. CDOT engages in a lengthy analysis of each of these topics and the CBA exceeds the requirement that the agency make "a good faith effort to comply." § 24-4-103(2.5)(d), C.R.S.

We support the methodology and conclusions of the Cost-Benefit Analysis, and appreciate the important air pollution, safety, health and economic co-benefits from investments in pedestrian, bicycle, and transit infrastructure that were included. The Cost-Benefit Analysis was developed by Cambridge Systematics, a longstanding, leading transportation consulting firm that has performed heavily cited research for federal, state, and local agencies, and relies upon assumptions from rigorous and credible studies that are commonly used in similar analyses.

While CDOT and the MPOs can achieve compliance with the Rules in a variety of ways, the Cost-Benefit Analysis illustrates a likely pathway that involves shifting some investments away from roadway capacity expansion projects into multimodal projects, and mitigating some remaining capacity projects. Under this scenario, the Cost-Benefit Analysis estimates substantial net economic benefits from savings in vehicle operating costs, monetized benefits from reduced impacts of greenhouse gas and air pollution emissions, monetized benefits from reduced traffic fatalities and injuries, and improvements in physical health. The net present value of total societal benefits anticipated from implementation of the Rules is estimated to total roughly \$40B between 2022 and 2050.

For several assumptions, research indicates a range of possible outcomes that are dependent on the context and design of specific projects, and are difficult to capture in a high-level, long-range analysis such as this. One important such assumption is induced demand elasticity, or the increase in trip-making that can be expected to result over time per lane-mile of road capacity added. The Cost-Benefit analysis conservatively utilizes the lower end of the range reported in a literature review of induced demand analysis for corridor-level studies, due to the statewide nature of the CBA. As a result, the estimated benefits of the Rules should be considered a lower bound in cases where implementation includes a shifting of investments away from capacity projects into transit, bicycling, and pedestrian projects. While reasonable arguments can be made for a range of larger levels of elasticity, these would only have the effect of showing even larger net benefits for the preferred scenario compared to the other two scenarios and a no action scenario and would not change the conclusion that the preferred scenario maximizes net benefits among the options considered.

Similarly, there are a range of assumptions that could be made for the cost of gas. The CBA uses the reference case scenario in the US Department of Energy 2021 annual Energy Outlook, which is a reasonable choice. However, it is worth noting that this scenario shows costs for gasoline in the range of \$2.22-\$2.58 throughout the decade of the 2020s; the current price for regular gasoline in Colorado has been hovering around \$3.55. As is the case with a higher elasticity of induced demand, a higher gasoline price would have the effect of increasing the net benefits of the preferred scenario compared to the two alternatives or a no action scenario.

In addition to the substantial benefits quantified, the Cost-Benefit Analysis also mentions several unquantified categories of benefits that nevertheless would provide real benefits to Coloradans. The following provides order of magnitude estimates of the additional benefits that could be expected from the Rules as proposed, as well as additional benefits from reduced demand for parking spaces.:

- **Reduced vehicle ownership costs:** Based on the projected reduction in VMT from the baseline in Table A.11 and the assumption of 10,450 annual VMT per vehicle in the Cost-Benefit Analysis, the reduced number of vehicles owned by Coloradans can be estimated. Based on an average annual vehicle ownership cost of \$6,200, Coloradans would save an additional \$4.1B annually by 2030, \$5.0B annually by 2040, and \$5.8B annually by 2050 in vehicle ownership costs under the Proposed Rule Implementation scenario.<sup>6</sup>
- **Increased access to jobs and other services:** Increased multimodal transportation options would provide improved access to jobs, higher education, medical appointments, and other services for people with disabilities, those who can't afford a vehicle, those who lack a driver's license, and others with transportation barriers. As one example, 165,000 Coloradans with disabilities are unemployed or not in the labor force, and nationally about 11% of persons with disabilities cite transportation barriers as a reason they aren't in the labor force.<sup>7</sup> If the substantial investments in transit, bicycling, and walking infrastructure assumed in the Cost-Benefit Analysis enabled 20% of persons with disabilities who are not working and face transportation barriers to access employment (approximately 4,000 people per year in 2030), estimated additional wages per year would total \$139M in 2030, \$156M in 2040, and \$168M in 2050.<sup>8</sup>
- **Parking:** A significant additional unquantified benefit from the Rules would be savings from the reduced need for parking, including land, construction, and operations and maintenance costs. In a typical urban area, it's estimated there are at least 3 off-street parking spaces for each vehicle (one residential and two non-residential), with researchers finding much higher ratios in some cities. Based on the estimated reduction in car ownership described above and estimates of annualized cost per parking space for construction, operations, and maintenance, the implementation of the Rules as proposed would save Coloradans an additional \$4.5-\$5.7B annually by 2030, \$5.4-\$6.9B annually by 2040, and \$6.4-\$8.1B annually by 2050.<sup>9</sup>

Thus, CEO concludes that the Cost-Benefit Analysis is based upon reasonable assumptions; that it meets all statutory requirements; and that it presents a lower bound on the net benefits associated with the preferred scenario. CDOT's analysis finds that the preferred scenario has the largest net benefits of the options analyzed even at this lower bound; incorporating additional economic benefits would not change

<sup>7</sup> <https://www.bls.gov/news.release/dissup.nr0.htm>, Bureau of Labor Statistics (2020).

<sup>8</sup> The average wage is assumed to be \$35,582 for public transit commuters, according to 2019 American Community Survey data for Colorado. The number of persons with disabilities is assumed to grow at the same rate as the state population, as projected by the Colorado State Demography Office.

<sup>9</sup> Litman, T., & Doherty, E. (2011). *Transportation Cost and Benefit Analysis II—Parking Costs*. Transportation Cost and Benefit Analysis Techniques, Estimates and Implications. Cost ranges vary based on the estimated average cost per space for surface parking vs. structured or underground parking in suburban, urban, and CBD contexts.

this conclusion but would amplify the size of the net benefits associated with the preferred scenario. The range and magnitude of co-benefits from adopting the preferred scenario is so large as to support the adoption of the rule at the highest level of emissions reductions analyzed.

### **We support the Rule’s approach to create a process for establishing GHG Mitigation Measures.**

We support the Rule’s approach to establish an ongoing process for selecting, measuring, confirming, and verifying GHG Mitigation Measures, and its focus on prioritizing Disproportionately Impacted communities. This approach will enable CDOT and the MPOs to continuously improve mitigation strategies over time, leveraging measured improvements and best practices to inform Mitigation Action Plans. In addition to the proposed types of mitigation measures in the Rule, some additional possible measures to explore include:

- **Parking policies:** Local government action within an MPO area to reform parking policy could count as a mitigation measure, due to the impact parking supply and pricing has on travel behavior, car ownership, and housing costs.<sup>10</sup> Actions could include local governments removing parking minimums or implementing parking maximums for new development, instituting local regulations that require parking to be “unbundled” (i.e. requiring separate payment for parking from housing costs), or regulations requiring employers to offer parking cash out to employees who do not drive to work.
- **Removal of exclusionary zoning:** Local government actions within an MPO area that remove exclusionary zoning restrictions, such as allowing accessory dwelling units, duplexes, triplexes, and/or fourplexes by right in all residential zones, could count as a mitigation measure due to these actions supporting incrementally more compact, walkable land use patterns within existing communities that help reduce VMT and increase walking, biking, and transit trips.<sup>11</sup>
- **Targeting growth to infill areas and existing urban areas:** MPO action to target growth to existing urban areas and limit growth in greenfield or unincorporated areas could count as a mitigation measure, again due to these actions supporting compact land use patterns that enable lower VMT per capita.<sup>12</sup> These actions could include adopting funding allocation rules that target investments to infill areas, adopting a regional urban growth boundary, counties within an MPO area prohibiting urban levels of development in unincorporated areas, cities and counties signing intergovernmental agreements that establish countywide urban growth boundaries, and housing commitments by cities in urban growth areas.
- **Conversion of existing lanes to transit lanes:** The conversion of existing arterial roadway lanes to dedicated bus rapid transit lanes could count as a mitigation measure, due to the improvements this would make to transit service quality and reliability that support increased ridership.<sup>13</sup>
- **Creation of low emission zones:** Cities could adopt low emission zones, using curb management or pricing strategies to reduce emissions from both light and heavy-duty vehicles. These could be incorporated into MPO plans.

<sup>13</sup> NCHRP Project 20-65, Task 22, [Cost/Benefit Analysis of Converting a Lane for Bus Rapid Transit-Phase II Evaluation and Methodology](#).

**CEO would also like to offer the following suggestions for minor changes to specific sections to further clarify the Rule:**

**Applicable planning document (Section 1.02):** We suggest including all TIPs because of the intention of the Rule to reduce GHGs, which are a global pollutant.

- **Suggested language (in red):** Applicable Planning Document - refers to MPO Fiscally Constrained RTPs, TIPs for MPOs ~~in NAAs~~, CDOT's 10-Year Plan and Four-Year Prioritized Plan in non-MPO areas, and amendments to the MPO RTPs and CDOT's 10-Year Plan and Four-Year Prioritized Plan in non-MPO areas that include the addition of Regionally Significant Projects.

We do understand that there may be initial challenges for MPOs outside of NAAs, which may have less experience and technical capacity for the necessary modeling, and that it may require technical assistance from the state or phasing in the requirements. Given the magnitude of emissions that are associated with large, urbanized areas on the front range, we would support a phased approach that first brought in the MPOs along the front range, particularly the Pikes Peak Area Council of Governments.

Incorporating TIPs is important because these are the stages in the process where funds are actually allocated to projects. Longer range planning documents are an important roadmap, but priorities change over time, and some projects in long range plans may not actually be implemented. It would be possible for a long-range plan to comply with the pollution reduction standard, but for a series of TIPs to implement projects that do not ultimately achieve the required level of pollution reduction.

**Induced travel (Section 8.02.2):** Given that many travel demand models have historically not accounted for induced travel or underestimated its effects, it's important this issue is sufficiently accounted for in any modeling to demonstrate compliance.<sup>14</sup> Otherwise, the strength of the Rule may be undermined, as in fact, projects that will increase pollution in real world operations could be shown, on paper, to decrease emissions. To assess each MPO's model, we suggest developing a checklist or other documentation that specifies model capabilities needed for assessing induced travel in travel demand models<sup>15</sup>, or allowing MPOs to rely on off-model calculations based upon synthesis research that has established the range of corridor-level induced demand elasticity.<sup>16</sup> In addition, it is important to consider induced demand from smaller operational projects, such as intersection improvements and signal timing projects, which tend to reduce congestion and idling in the near term, but also may increase total traffic volumes and associated pollution, safety impacts, and costs. CDOT should develop a uniform, simplified off-model approach to incorporating induced demand into assessments of the emissions impacts of operational projects that are not regionally significant projects.

- **Suggested language (in red):** Agreements on Modeling Assumptions and Execution of Modeling Requirements. Prior to the adoption of the next RTP for any MPO, CDOT, CDPHE, and each MPO shall enter into an Intergovernmental Agreement which outlines CDOT, CDPHE, and MPO responsibilities for development and execution of MPO Models or the Statewide Travel Model, and Approved Air Quality Model. **Travel demand models shall be evaluated for adequacy in assessing corridor-level induced travel from regionally significant highway capacity projects, utilizing a checklist developed by the Commission. If adequacy cannot be demonstrated, and for evaluation of induced demand from operational improvements that are not regionally significant projects, off-model calculations relying on robust estimates of induced travel elasticity in similar contexts may be utilized.**

**Project-level analysis (Section 8.02.1):** Lessons learned from similar policies elsewhere suggest including project-level emissions and induced travel is important for public transparency and project

---

<sup>14</sup> Milam, R. T., Birnbaum, M., Ganson, C., Handy, S., & Walters, J. (2017). [Closing the induced vehicle travel gap between research and practice](#). *Transportation research record*, 2653(1), 10-16.

<sup>15</sup> Ibid. This paper includes a checklist that can be used to assess travel demand model sensitivity to induced demand.

<sup>16</sup> Volker, J.M.B., and S. L. Handy (2021). The Induced Travel Calculator and Its Applications. University of California Institute of Transportation Studies, UC-ITS-2021-04.

prioritization. While it's understandable that it would be difficult to do project-level analysis for all projects, particularly in long range plans, many projects closer to funding and construction will have undergone individual project-level analysis and these outputs could be reported. This is certainly true for regionally significant projects that are funded in the TIP process, so that even if it is not possible to do this project level analysis for the evaluation of GHG impacts of long range plans, it should be possible when evaluating the emissions associated with TIP approvals.

- **Suggested language (in red):** Analysis Requirements When Adopting or Amending an Applicable Planning Document - Each MPO and CDOT shall conduct a GHG emissions analysis using MPO Models or the Statewide Travel Model, and the Approved Air Quality Model, to estimate total CO<sub>2</sub>e emissions. Such analysis shall include the existing transportation network and implementation of Regionally Significant Projects. The emissions analysis must estimate total CO<sub>2</sub>e emissions in million metric tons (MMT) for each year in Table 1 and compare these emissions to the Baseline specified in Table 1. **For Regionally Significant Projects that have undergone project-level modeling and analysis, the project-level GHG emissions and estimated induced travel shall also be included.** This provision shall not apply to MPO TIP amendments.

**Clarifying the baseline and EV adoption assumptions (Sections 1.03, 8.02.1):** As written, it isn't clear if the Rule indicates whether CDOT and MPOs are intended to assume the "rapid growth" EV adoption trajectory that informs the baseline figures in Table 2 and reduction levels in Table 1, a slower growth EV adoption assumption that underlies the baseline figures in Table 1, or something else when modeling GHG emissions. We think the Transportation Commission should specify this to help clarify which baseline the reduction levels are from. Because the reduction levels were developed based on modeling scenarios that assumed a rapid growth EV adoption trajectory and because this is what CEO and other state agencies are planning for, we suggest that the MPOs and CDOT assume that trajectory when conducting their modeling, and that the reduction levels then be from the baseline figures in Table 2.

- **Suggested language (in red): 1.03:** Approved Air Quality Model - the most recent Environmental Protection Agency issued model that quantifies GHG emissions from transportation. **The Transportation Commission shall specify a standard assumption for projected light duty EV adoption through 2050, consistent with the goals established in the Colorado GHG Roadmap and Colorado EV Plan, that CDOT and all MPOs shall use in estimating total CO<sub>2</sub>e emissions. This assumption may vary by region, and may be updated over time.**

**8.02.1:** Analysis Requirements When Adopting or Amending an Applicable Planning Document - Each MPO and CDOT shall conduct a GHG emissions analysis using MPO Models or the Statewide Travel Model, and the Approved Air Quality Model, to estimate total CO<sub>2</sub>e emissions. Such analysis shall include the existing transportation network and implementation of Regionally Significant Projects. The emissions analysis must estimate total CO<sub>2</sub>e emissions in million metric tons (MMT) for each year in Table 1 and compare these emissions to the Baseline specified in Table 42. This provision shall not apply to MPO TIP amendments.

**Requiring comparisons between modeled results and measured results (Section 8.06):** While CDOT has developed sophisticated and modern travel models, there is an inherent level of uncertainty in all forward-looking models. It would be valuable to build into the rule a periodic process for comparing VMT and GHG pollution that were projected by the models with actuals at both the statewide and MPO scale, to allow models or input assumptions to be changed as necessary to match real world experience over time.

- **Suggested language (in red):** Reporting. Beginning July 1, 2025, and every 5 years thereafter, the Executive Director on behalf of CDOT shall prepare and make public a comprehensive report on the statewide GHG reduction accomplishments. **This shall include a comparison of modeled VMT for regionally significant capacity projects with real world VMT, and these results shall be utilized to update the modeling requirements as needed.**

We appreciate CDOT and the Transportation Commission's groundbreaking leadership on this issue, and look forward to the positive benefits this Rule will bring to Colorado. Thank you for the opportunity to comment.

Sincerely,

A handwritten signature in black ink that reads "Will Toor". The letters are cursive and fluid.

## Written Testimony on the Proposed Transportation GHG Rules

1 message

Thu, Nov 18, 2021 at 10:38 AM

To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

Here is my written testimony:

My name is [REDACTED]. I am a Clear Creek County Commissioner and President of Colorado Communities for Climate Action representing on their behalf CC4CA is a coalition of town, city, and county across the state working to strengthen statewide climate policy. Our members range from under 1,000 in population to more than half a million, two-thirds are rural communities, and half are West Slope.

On behalf of our forty local government members, I want to make three main points this morning.

First, we support the proposed rule. There aren't any simple ways to dramatically reduce climate pollution from the transportation sector, but CDOT has crafted an approach here that is thoughtful and clever. Most fundamentally, it holds MPO accountable to meeting GHG emission target but give them flexibility in determining how best to do that, and how to integrate GHG reductions with other mobility goals given their own particular needs and circumstances.

Second, it doesn't go far enough, and we encourage the Commission to push the bar further. The overall target should be larger given the scale of transportation GHG emissions that we need to tackle. We are also concerned that the 'disproportionately impacted communities' elements are insufficiently vague and insufficiently developed. And we think the plan should consider VMT limit as a key tool instead of simply tracking VMT number.

Third, every CC4CA member jurisdiction is part of this coalition because they and their constituent are increasingly dealing with the very real impacts of climate change. There is broad public support for assertive climate action because climate change is already having enormous impacts on our communities, wasting taxpayer resources, harming our businesses, weakening our economy, and posing serious threats to our health and quality of life. People across the state understand that every fire that leaves Coloradan struggling to breathe through the smoke, every mudslide that threatens local water supplies, every bridge wiped out by a flood is caused or amplified by Climate Change, and.

On behalf of the forty towns, cities, and counties that make up CC4CA, and the 1.4 million Coloradans we represent around the state, we urge you to strengthen the proposed rule further if you can, and adopt it regardless.

We offer our sincere thanks to the Commission and to CDOT for your incredibly hard work in the process, including extensive stakeholder engagement and numerous public comment sessions. Local governments like ours across the state are counting on you to adopt the strongest rule you can.

Thank,

[REDACTED]

Under CO Open Records Act, all messages sent to or by me from this account may be subject to public disclosure, unless the word "private" or "confidential" is in the subject line.

**DRCOG Board GHG Rule Comment Letter.pdf**

494K

November 17, 2021

Colorado Transportation Commission  
2829 W Howard Pl  
Denver, CO 80204

VIA EMAIL SUBMITTAL to [dot\\_rules@state.co.us](mailto:dot_rules@state.co.us)

Dear Chair Hall and Commissioners,

I am writing on behalf of the Denver Regional Council of Governments' Board of Directors to provide comments on the October 19, 2021 version of the proposed revisions to 2 CCR 601-22 to establish greenhouse gas (GHG) reduction transportation planning requirements.

First, we appreciate CDOT's consideration of our previous comments submitted October 7, 2021. There are positive changes in the revised proposal that address several of our earlier comments and we believe they have improved the proposed rule. While we continue to urge the Commission and CDOT to further consider the remainder of our previous comments, we want to highlight a few of the comments that the Board of Directors believe should be addressed.

#### **Section 8.02 Process for Determining Compliance**

- ❖ Add §8.02.2.1 MPOs and CDOT shall prepare and publish a calibration and validation report for their respective travel model. The report shall document model components and key parameters and should address how models account for induced travel demand associated with changes to the transportation system.

As part of the required modeling assumptions agreement in §8.02.2, the MPOs and CDOT should document and make publicly available the travel model components and parameters.

#### **Section 8.03 GHG Mitigation Measures**

- ❖ Add a provision to require sponsors of regionally significant roadway capacity projects to identify and include GHG Mitigation Measures when including the project in a TIP or the STIP.  
We appreciate the effort made to incorporate this suggestion but adding language to the Preamble section of Rule does not address the intent of the comment and is not enforceable. Further, tying the consideration of mitigation measures to when a project is developed and submitted into a transportation plan, applies the provision to a project being added to a long range regional transportation plan. Most projects are not "developed" when they are included in an RTP. We continue to believe that the appropriate time to consider these investments is when a project is added to a TIP or the STIP.

#### **Section 8.05 Compliance**

- ❖ Revise §8.05.2.1 to state "Request a waiver from the Commission imposing restrictions on specific Regionally Significant projects not expected to reduce GHG emissions."

The Rule as written requires a waiver for any "specific project not expected to reduce GHG emissions" (e.g., safety, operations, reconstruction, multimodal corridor planning, TDM, etc.). MPOs should not be required to seek a waiver from the Transportation Commission to invest federal CMAQ or STBG funds in otherwise eligible projects or programs that are not regionally significant, would not have an adverse impact on GHG emissions, and are important for the MPO to achieve other important transportation objectives such as safety or federal air quality conformity.

- ❖ The Rule should either clarify the meaning of “substantial increase” in §8.05.2.1.2 or CDOT and the Transportation Commission should provide guidance that clarifies how “substantial increase” will be evaluated when considering waiver requests.

The term “substantial increase” is vague. The Rule or guidance should provide clearer direction to ensure fair and equitable evaluation of waiver requests.

In addition to these and our other previous comments, we offer the following comments on issues raised by the revised proposed rule.

### **Preamble for 2021 Rulemaking – Purpose of GHG Mitigation Measures**

- ❖ Revise the fourth bullet point on p. 6 by striking the last sentence. **“Holistic Air Quality Planning:** CDOT and MPOs should be able to demonstrate how they have supported the GHG Mitigation Measures included in a Mitigation Action Plan, through funding, technical assistance, or other forms of support. ~~Traffic improvements that focus on improving traffic flow through either capacity expansion or technology measure that primarily benefit the flow of vehicular traffic without improving alternatives to driving single occupancy vehicles are not allowable for the purposes of approved mitigation.”~~

These provisions seem inconsistent with the administrative and public process described in §8.02.4 “for selecting, confirming, and verifying GHG Mitigation Measures”. That process should be allowed to proceed before eliminating a whole category of potential GHG reduction investments.

DRCOG is within an Ozone nonattainment area under the federal Clean Air Act. The Congestion Mitigation and Air Quality Improvement (CMAQ) Program provides funds to States for transportation projects designed to reduce traffic congestion and improve air quality, particularly in areas of the country that do not attain national air quality standards. The program has been a key mechanism for supporting investments that encourage alternatives to driving alone, improve traffic flow, and help urban areas meet air quality goals. Transportation energy use contributes to increased greenhouse gas concentrations in the atmosphere.

According to the U.S. DOT Center for Climate Change, “The main goal of the CMAQ program is to fund transportation projects that reduce regulated emissions associated with carbon monoxide, ozone and particulate matter pollution in nonattainment and maintenance areas, often through congestion mitigation techniques. In addition to reducing regulated emissions, congestion relief can reduce travel delays, engine idle time and unproductive fuel consumption. So even though reducing greenhouse gas emissions is not a goal of the CMAQ program, such reductions may be achieved as an ancillary benefit.”

These types of strategic, non-regionally significant operational improvements are extremely important to our efforts to improve the region’s air quality, achieve federal ozone pollution standards, and reduce greenhouse gas emissions.

### **Section 8.05 Compliance**

- ❖ Revise §8.05.2.2 to state “Request reconsideration of a non-compliance determination by the Commission and provide a written explanation of how the requirements of Rule 8.02.6 have been met. A request for reconsideration must be submitted within ~~thirty (30)~~ sixty (60) days of Commission action.” §8.05.2 is revised to allow a waiver request or ask for reconsideration within sixty (60) days of Commission action. §8.05.2.2 should be revised to be consistent with this provision.

### **Section 8.06 Reporting**

- ❖ Strike §8.06.2 and §8.06.2.1 requiring annual reporting of VMT per capita beginning September 1, 2022 and requiring the Commission to “consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this rule” if three consecutive years of reports show no decrease in VMT per capita in one or more areas.

DRCOG has a goal to reduce VMT per capita and has a long history of working toward that goal with its planning and investment decisions. However, the intent of this Rule should remain focused on reducing GHG emissions. While there can be a correlation between VMT and GHG emissions,

GHG emissions are most directly linked to fuel consumption. Therefore, improved vehicle operations that reduce congestion will reduce GHG emissions even if VMT per capita does not go down.

The provision also starts the annual reporting with calendar year 2021, an artificially low year for VMT due to the ongoing global pandemic and its travel and economic impacts. This significantly increases the potential for not seeing a decrease in VMT per capita for three consecutive years. In contrast, year-over-year VMT is affected by many factors including gas prices and economic conditions. Transportation planning operates in long-term trends, not year-over-year changes. VMT changes every single day, estimates are based on samples, and the data is not accurate enough on an annual basis to trigger new policymaking.

Finally, if an MPO is achieving compliance with the Rule's GHG emission reductions, even if VMT per capita is not decreasing in that area, there should not be the threat of further rulemaking to achieve reductions in VMT.

Again, we extend our thanks to CDOT staff and the Commission for their consideration of our feedback on the proposed Rule. Meeting the ambitious targets set by the rule will require a strong partnership with the State. We look forward to continuing our work together identify and implement relevant policies and funding initiatives in support of our mutual goals.

Respectfully,

STATE OF  
COLORADO

## Comments

1 message

Thu, Nov 18, 2021 at 10:44 AM

[REDACTED]  
to: dot\_rules@state.co.us

Thank you for the opportunity to add to my public testimony. Our state has seen the impact of climate change firsthand as has Larimer County. In 2020 our county battled the Cameron Peak Wildfire and the East Troublesome Fire, which caused the evacuation of the town of Estes Park. Cameron Peak is now Colorado's largest historical wildfire. I want to add some more comments. The rule is a crucial step forward in addressing the state's largest source of GreenHouse Gas emission and the Transportation Commission has shown bold leadership in drafting this rule. The power of this rule is that it recognizes that the infrastructure decisions we make matter to how people choose to travel. I believe this rule will bring about more choices for our residents; making it easier to bike, walk, carpool and take transit. Senate Bill 260 provided important new funding for these measures through dedicated funding via the Multimodal Mitigations and Options Fund, the Nonattainment Enterprise, and Clean Transit Enterprise. This rule provides a powerful complement to those funds. This could be a transformational opportunity for our great State of Colorado. This is a unique moment for Colorado. New, stable transportation funding and a rule that ensures these dollars improve our transportation system, our climate, and our quality of life.

Respectfully,  
Larimer County Commissioner [REDACTED]

# PSR Colorado supports rulemaking most protective of public health

1 message

PSR Colorado <[REDACTED]>

Thu, Nov 18, 2021 at 10:53 AM

To: dot\_rules@state.co.us

Cc: [REDACTED]

Dear CDOT,

PSR Colorado is an organization of health professionals and allies that seek to protect human life from the grave environmental dangers to human health and survival. Of those dangers, the impact of climate change and associated pollution is of great concern to us.

Toward this end, we strongly support transportation rulemaking that will be the most protective of public health.

This past summer, Colorado suffered from the worst air quality levels on record. High levels of ozone pollution have significant implications for Coloradans' health. Much of this came from the transportation sector.

While some of our decision-makers blamed our poor air quality on wildfire smoke from out of state, the reality is that hydrocarbons emitted from cars and trucks and oil and gas development are the primary drivers of ozone pollution.

[CPR- Why Colorado's Record Ozone Pollution Is More About Cars Than Wildfire Smoke](#)

While we support and applaud encouraging the adoption of electric vehicles, we feel that the time needed to make that transition will not bring us to our desired goals. The time is now to develop the infrastructure and services to help reduce vehicle miles travelled.

We support rules that will result in investing in options such as public transit and bike lanes to mitigate the impact of highway expansions.

We oppose new highway expansions that will increase air pollution, GHG emissions, and respiratory and cardiovascular disease, particularly in the communities that are already disproportionately impacted by pollution. As examples, we point to highway expansions already being planned such as I-25 through the Sun Valley neighborhood and I-270 through Commerce City.

Thanks for your consideration,

**Re: Transportation Commission Proposed Greenhouse Gas (GHG) Rule 2 CCR 601-22**

The Adams County Board of Commissioners fully supports Colorado's commitment to reducing greenhouse gases by tying quantifiable reductions in emissions to the transportation planning process. We recognize the complexities of measuring and reducing pollutants in the Denver metropolitan area given Front Range weather and climate. Integrating GHG reduction goals into transportation planning is a necessary step in the improvement of air quality throughout Colorado.

The Adams County Board of Commissioners appreciates the time and effort the Colorado Department of Transportation (CDOT) and Colorado Department of Public Health and Environment (CDPHE) staff have committed to developing and further revising a GHG rule to reduce GHG emissions for transportation planning.

Based upon review of the revised rule, we have identified the following areas of concern that should be addressed or clarified to make the rule both robust and useful to the state:

***Clarify Transportation Modeling Standards***

The current rulemaking documentation does not include guidelines to define the relationship between the Environmental Protection Agency (EPA) Air Quality Model and Denver Regional Council of Governments (DRCOG) Travel Demand Model. Clarification is needed to explain how improvements for projects and programs within the DRCOG model will directly translate to GHG reductions within the EPA model.

***Establish Project Categories***

Projects identified as non-regionally significant (safety, traffic signal, complete street, bicycle/pedestrian) that do not meet GHG Reduction Levels should not require a waiver to proceed and should not be subjected to GHG Mitigation Measure annual reporting.

***Allow for Regional Growth***

Allow sponsors of regionally significant roadway capacity projects to bundle mitigation measures reducing GHGs including operational improvements. This will prevent penalizing 7 growing areas or areas with changing zoning and land uses.

The Adams County Board of Commissioners fully supports the reduction of GHGs to slow the impacts of climate change and move toward sustainable sources of energy. While this rulemaking process is a strong step in the right direction, the county feels the areas of concern included within this letter should be addressed prior to the rule becoming final. We look forward to continuing the rulemaking discussion to ensure the collaborative regional planning process prevails while reducing GHGs in the Denver metropolitan area.

Hello Theresa,

On behalf of the Sustainable Futures Commission, and its volunteer members in Lyons, please accept this letter, regarding the GHG draft rules.

Thank you,

*Please note that everything in my incoming and outgoing emails may be subject to the Colorado Open Records Act, § 24-72-100.1, et seq.*

November 17, 2021

Dear Ms. Theresa Takushi,

The Town of Lyons would like that thank CDOT and the State of Colorado for acknowledging our current climate crisis and offers our support for the proposed Greenhouse Gas Transportation Planning Standard. With a push from the Sustainable Futures Commission in Lyons, our Board of Trustees recently passed a resolution acknowledging the current climate crisis. To best meet Colorado's greenhouse gas (GHG) reduction targets, urgent action is needed, and the Town of Lyons is pleased to see CDOT's leadership in this regard. Given the magnitude of the climate crisis, we urge CDOT to continue to pursue the greatest possible GHG reductions being considered for this rule and keep the standard at 1.5 million metric tons of CO2 reduction.

As Colorado's private automobile fleet may still be years away from being 100% electric, and our electricity generation is also years away from being 100% renewable energy, achieving the GHG reductions mandated by this rule needs to include a reduction in driving and vehicle miles traveled (VMT). Given the many other positive externalities that reducing VMT will lead to (improved safety along our roadways, decreased local air pollution, and decreased time spent in congestion), we support an effort towards reduced driving in addition to electrification.

As a municipality in Boulder County, we would like to offer suggested revisions to further improve the draft rule, which we have detailed. We also support adding a provision to require sponsors of regionally significant roadway capacity projects to identify and include GHG Mitigation Measures when including the project in a TIP or the STIP. We support the request that the rule should either clarify the meaning of "substantial increase" in emissions when considering a waiver request (§8.05.2.1.2) or CDOT and the Transportation Commission should provide guidance that clarifies how "substantial increase" will be evaluated when considering these requests. Ideally, Lyons is supportive of Boulder County's request that waivers be reserved for only GHG-neutral projects, mainly safety projects, but if not, clarifying "substantial increase" would be a good fall-back option.

Any project that makes it easier to drive must be recognized as a capacity project which, through induced demand, will lead to increased VMT and increased GHG emissions. We agree with Boulder County that accurate modelling of these projects is essential for this rulemaking to be effective.

Thank you for the opportunity to provide comments on the draft rule, for your public process and for advancing this necessary change that can decrease Colorado's contribution to global warming.

Sincerely,

CCAT GHG Rulemaking Public Comment Letter\_11.18.21.pdf  
173K

To: Governor Jared Polis, Director Shoshana Lew, Hearing Officer Andrew Hogle, and Transportation Commissioners

Re: Public Comment Period Extension Request for the Proposed GHG Rule

Date: November 18, 2021

Thank you for the opportunity to provide comment on the Transportation Commission's (TC's) proposed greenhouse gas (GHG) rule for transportation plans.

Counties and Commissioners Acting Together (CCAT) was formed in 2016 to provide a unified, independent, and mission driven voice for local governments. Collectively, CCAT represents counties and individual commissioners with a membership that spans the state and includes urban, frontier, and rural counties.

Since CCAT's inception, our members have worked to secure a statewide approach to increasing transportation funding and modernizing our transportation network. We were proud to support SB21-260, Sustainability of the Transportation System.

A key part of modernizing Colorado's transportation network requires addressing transportation related emissions and air quality impacts consistent with the GHG goals for the transportation sector that were specified in the state's Greenhouse Gas Reduction Roadmap. The roadmap aims to reduce transportation sector emissions equivalent to 12.8 million metric tons (MMT) of carbon dioxide by 2030.

In order to successfully implement the new GHG standards, Colorado needs a statewide approach that balances the challenges and needs of both rural and urban communities. The new standards should be integrated into local transportation and land-use strategies to encourage diverse and holistic planning, ensuring that projects will reduce transportation related emissions.

***While CCAT fundamentally agrees with the goals of reducing transportation related emissions through GHG rulemaking, our members are concerned about the practical application of new modeling rules on Metropolitan Planning Organizations (MPO) and funding for rural Colorado of long term planning period.***

#### **MPO Modeling**

CCAT members believe that Colorado Department of Transportation (CDOT) should be prepared to adjust requirements for modeling in order to ensure effective and accurate compliance from MPOs.

Given the complexity of modeling, it will be vital to balance the need for realistic compliance with outputs that are as accurate as possible under the proposed rules. GHG baselines were set using the statewide model. Using one state model to set a baseline and a different model to assess compliance is a concern because they could show different outputs with the same set of inputs.

Alternatively, CCAT could support allowing MPOs the ability to use GHG Baselines from the Colorado Department of Public Health and the Environment (CDPHE) for each compliance year based on MPO models instead of the statewide model for any MPO that prefers the GHG Baselines in the rule to be set based on their in-house model. This approach can work as long as the component of the proposed rule that outlines a process to ensure consistency between models and the accuracy of the GHG projections is strengthened and annual reporting to CDOT continues to be required.

Using the MPO model to demonstrate compliance instead of the statewide model could be more resource efficient, allowing for model updates and iterations that may not be feasible if the information needs to pass through to CDOT and incorporated into the statewide model each time a GHG analysis is needed.

### **Rural Project Funding & Long Term Planning**

Rural areas of Colorado contribute a disproportionate portion of emissions on a per-capita basis. The reasons for this are clear; rural residents have less access to mass transit and on average, rural commutes are longer than those in metro regions.

As has been outlined in the State of Colorado's GHG mitigation roadmap, land-use policies that encourage dense development near services, and rules that allow mixed development patterns so that services, jobs, and housing can co-exist are our best tools to reduce the reliance on cars over time. CCAT encourages CDOT to develop long-range plans that coordinate with county planning efforts to encourage rural land use growth near population centers.

Just as the proposed rule focuses funding toward MPO plans and regionally significant projects that will have the highest impact on reducing GHG's, rural communities and relatively small projects that align efforts to reduce emissions should also be prioritized for funding.

The State should consider disaggregating the remainder of the State that is outside of an MPO. CCAT is concerned that rural projects could be at a disadvantage for funding because they may not be perceived as having "regionally significant" projects. It is critical that some of those heaviest uses like weekend tourism and traffic are accounted for in which ever model is used.

Given that it will take both rural and urban communities working toward these common goals of GHG reductions to achieve the intended reduction, CDOT should strive to create a balanced funding and prioritization system.

Generally, rural communities' tools to reduce emissions are less direct and constitute a more distributed effort than what is possible in dense urban environments. However, the combined impact of rural Colorado on transportation related emissions is significant.

CCAT believes that the proposed rules can be improved by allowing for and promoting collaborative planning with communities. A review of policies that may conflict with community goals to increase density and encourage multi-modal transportation is needed.

Thank you again for the opportunity to share these comments. On the behalf of the CCAT Transportation Committee and CCAT as a whole we appreciate the continued collaboration in this very important issue.

For further discussion please feel free to contact CCAT's Executive Manager [REDACTED]

**STATEMENT OF BASIS AND PURPOSE, ~~AND STATUTORY AUTHORITY~~ AND PREAMBLE**

The purpose of the Rules Governing the Statewide Transportation Planning Process and Transportation Planning Regions (Rules) is to prescribe the statewide transportation planning process through which a long-range ~~multimodal~~ Multimodal, comprehensive ~~statewide~~ Statewide transportation-Transportation plan Plan will be developed, integrated, updated, and amended by the Colorado Department of Transportation (Department ~~or CDOT~~), in cooperation with local governments, Metropolitan Planning Organizations (MPOs), Regional Planning Commissions, Indian tribal governments, relevant state and federal agencies, the private sector, transit and freight operators, ~~special interest groups~~, and the general public. This cooperative process is designed to coordinate regional transportation planning, guided by the statewide transportation policy set by the Department and the ~~transportation-Transportation eommission~~ Commission of Colorado ("Commission"), as a basis for developing the ~~statewide~~ Statewide transportation-Transportation plan Plan. The result of the statewide transportation planning process shall be a long-range, financially feasible, environmentally sound, ~~multimodal~~ Multimodal transportation system plan for Colorado that will reduce traffic, air pollution, and smog.

Further, the purpose of the Rules is to define the state's Transportation Planning Regions for which long-range Regional Transportation Plans are developed, and to prescribe the process for conducting and initiating transportation planning in the non-MPO Transportation Planning Regions and coordinating with the ~~Metropolitan Planning Organizations~~ MPOs for planning in the metropolitan areas. Memoranda of Agreement (MOA) that serve as the Metropolitan Planning Agreements (MPAs) ~~per~~ pursuant to 23 C.F.R. § 450 between the Department, each MPO, and applicable transit provider(s) further prescribe the

---

transportation planning process in the MPO ~~transportation-Transportation planning-Planning regionsRegions~~. In addition, the purpose of the Rules is to describe the organization and function of the Statewide Transportation Advisory Committee (STAC) as established by § 43-1-1104, Colorado Revised Statutes (C.R.S.).

The Rules are promulgated to meet the intent of both the U.S. Congress and the Colorado General Assembly for conducting a continuing, cooperative, and comprehensive statewide performance-based ~~multimodal-Multimodal~~ transportation planning process for producing a Statewide Transportation Plan and Regional Transportation Plans that address the transportation needs of the ~~stateState~~. This planning process, through comprehensive input, results in systematic project prioritization and resource allocation.

The Rules, governing the statewide planning process, emphasize Colorado's continually greater integration of Multimodal, cost-effective, and environmentally sound means of transportation which leads to cleaner air and reduced traffic. The Rules reflect the Commission's and the Department's focus on Multimodal transportation projects including highways, transit, rail, bicycles and pedestrians. Section 8 of these Rules establishes an ongoing administrative process for identifying, measuring, confirming, and verifying those best practices and their impacts, so that CDOT and MPOs can easily apply them to their plans in order to achieve the pollution reduction levels required by these Rules.

The Rules are promulgated by the Commission pursuant to the specific statutory authority in § 43-1-1103 (5), C.R.S., and § 43-1-106 (8)(k), C.R.S.

### Preamble for 2018 Rulemaking

In 2018, rulemaking was initiated to update the rules to conform to recently passed federal legislation, update expired rules, clarify the membership and duties of the ~~Statewide Transportation Advisory CommitteeSTAC~~ pursuant to HB 16-1169 and HB 16-1018, and to make other minor corrections. ~~The Rules are intended to be consistent with and not be a replacement for the federal transportation planning requirements contained in 23 United States Code (U.S.C.) §§ 134, 135 and 150, Pub. L. No. 114 94 (Fixing America's Surface Transportation Act or the "FAST Act") signed into law on December 4, 2015, and its implementing regulations, where applicable, contained in 23 Code of Federal Regulations (C.F.R.) Part 450, including Subparts A, B and C and 25 C.F.R. § 170.421 in effect as of August 1, 2017, which are hereby incorporated into the Rules by this reference, and do not include any later amendments. All referenced laws and regulations shall be available for copying or public inspection during regular business hours from the Office of Policy and Government Relations, Colorado Department of Transportation, 2829 W. Howard Pl., Denver, Colorado 80204.~~

~~Copies of the referenced United States Code may be obtained from the following address:~~

~~Office of the Law Revision Counsel  
U.S. House of Representatives  
H2-308 Ford House Office Building  
Washington, DC 20515  
(202) 226-2414~~

~~Copies of the referenced Code of Federal Regulations may be obtained from the following address:~~

~~U.S. Government Publishing Office  
732 North Capitol Street, N.W.  
Washington, DC 20401  
(202) 512-1800~~

~~The Statewide Planning Rules, governing the statewide planning process, emphasize Colorado's continually greater integration of multimodal, cost-effective and environmentally sound means of~~

transportation. The Rules reflect the Department's focus on multimodal transportation projects including highways, aviation, transit, rail, bicycles and pedestrians.

The Rules are promulgated by the Commission pursuant to the specific statutory authority in § 43-1-1103(5), C.R.S., and § 43-1-106(8)(k), C.R.S. The Commission may, at their discretion, entertain petitions for declaratory orders pursuant to § 24-4-105(11), C.R.S.

## Preamble for 2021 Rulemaking

### Overview

Section 8 of these Rules establishes Greenhouse Gas (GHG) pollution reduction planning levels for transportation that will improve air quality, reduce smog, and provide more sustainable options for travelers across Colorado. The purpose of these requirements is to limit the GHG pollution and provide more transportation mobility options, which would result from the transportation system if the plan was implemented, consistent with the state greenhouse gas pollution reduction roadmap. This is accomplished by requiring CDOT and MPOs to establish plans that meet GHG reduction levels targets through a mix of projects that limit and mitigate air pollution and improve quality of life and Multimodal options. CDOT and MPOs will be required to demonstrate through travel demand modeling and the Environmental Protection Agency Motor Vehicle Emission Simulator (MOVES) approved air quality modeling that statewide and regional aggregate emissions resulting from its state or regional plans do not exceed a specified emissions level in total. In the event that a plan fails to comply, CDOT and MPOs have the option to commit to implementing GHG Mitigation Measures that provide travelers with cleaner and more equitable transportation options, such as safer pedestrian crossings and sidewalks, better transit and transit access, or infrastructure that supports access to housing, jobs, and retail.

Examples of these types of mitigations, which also benefit quality of place and the economic resilience of communities, will include but not be limited to: adding bus rapid transit facilities and services, enhancing first-and-last mile connections to transit, adding bike-sharing services including electric bikes, improving pedestrian facilities like sidewalks and safe accessible crosswalks, investments that support vibrant downtown density and local zoning decisions that favor sustainable building codes and inclusive multi-use facilities downtown, and more. The process of identifying and approving mitigations will be established by a policy process that allows for ongoing innovations from MPOs, local governments and other partners to be considered on an iterative basis. Further, it is expected that CDOT, and MPOs and others shall consider these investments at the time a project is developed and submitted into a transportation plan. For example, applicants of interchange access requests that go to the CDOT Chief Engineer or Transportation Commission for approval should expect to articulate how they intend to mitigate the impacts of the request, such as the creation of induced demand, in the area of the interchange being proposed.

If compliance still cannot be demonstrated, even after committing to GHG Mitigation Measures, the Commission shall restrict the use of certain funds, requiring that dollars be focused on projects and approved GHG Mitigation Measures that reduce GHG that help reduce transportation emissions and are recognized as approved mitigations. These requirements address the Colorado General Assembly's directive to reduce statewide GHG pollution in § 25-7-102(2)(g), C.R.S., as well as the directive for transportation planning to consider environmental stewardship and reducing GHG emissions, § 43-1-1103(5), C.R.S.

### Context of Section 8 of these Rules Within Statewide Objectives

The passage of House Bill (HB)19-1261 set Colorado on a course to dramatically reduce GHG emissions across all sectors of the economy. In HB 19-1261, now codified in part at §§ 25-7-102(2) and 105(1)(e), C.R.S., the General Assembly declared that "climate change adversely affects Colorado's economy, air quality and public health, ecosystems, natural resources, and quality of life[,]” acknowledged that "Colorado is already experiencing harmful climate impacts[,]” and that "many of these impacts

---

disproportionately affect” certain Disproportionately Impacted Communities. see § 25-7-102(2), C.R.S. The General Assembly also recognized that “[b]y reducing [GHG] pollution, Colorado will also reduce other harmful air pollutants, which will, in turn, improve public health, reduce health care costs, improve air quality, and help sustain the environment.” see § 25-7-102(2)(d), C.R.S.

Since 2019, the State has been rigorously developing a plan to achieve the ambitious GHG pollution reduction goals in § 25-7-102(2)(g), C.R.S. In January 2021, the State published its Greenhouse Gas Pollution Reduction Roadmap (Roadmap). The Roadmap identified the transportation sector as the single largest source of statewide GHG pollution as of 2020, with passenger vehicles the largest contributor within the transportation sector. Additionally, the Roadmap determined that emissions from transportation are a “significant contributor to local air pollution that disproportionately impacts lower-income communities and communities of color.” see Roadmap, p. XII.

A key finding in the Roadmap recognized that “[m]aking changes to transportation planning and infrastructure to reduce growth in driving is an important tool” to meet the statewide GHG pollution reduction goals. see Roadmap, p. 32. Section 8 of these Rules also advances the State’s goals to reduce emissions of other harmful air pollutants, including ozone.

### **Why the Commission is Taking This Action**

Senate Bill 21-260, signed into law by the Governor on June 17, 2021, and effective upon signature, includes a new § 43-1-128, C.R.S., which directs CDOT and MPOs to engage in an enhanced level of planning, modeling and other analysis to minimize the adverse environmental and health impacts of planned transportation capacity projects. Section 43-1-128, C.R.S. also directs CDOT and the Commission to take steps to account for the impacts of transportation capacity projects on GHG pollution and Vehicle Miles Traveled and to help achieve statewide GHG pollution targets established in § 25-7-102(2)(g), C.R.S.

Under Colorado law governing transportation planning, CDOT is charged with and identified as the proper body for “developing and maintaining the state transportation planning process and the state transportation plan” in cooperation with Regional Planning Commissions and local government officials. see § 43-1-1101, C.R.S.

The Commission is responsible for formulating policy with respect to transportation systems in the State and promulgating and adopting all CDOT financial budgets for construction based on the Statewide Transportation Improvement Programs. see § 43-1-106(8), C.R.S. The Commission is statutorily charged “to assure that the preservation and enhancement of Colorado’s environment, safety, mobility and economics be considered in the planning, selection, construction and operation of all transportation projects in Colorado.” see § 43-1-106(8)(b), C.R.S. In addition, the Commission is generally authorized “to make all necessary and reasonable orders, rules and regulations in order to carry out the provisions of this part . . .” see § 43-1-106(8)(k), C.R.S.

As such, CDOT and the Commission are primarily responsible for ensuring compliance with GHG reductions in transportation planning.

### **What Relevant Regulations Currently Apply to Transportation Planning**

Transportation planning is subject to both state and federal requirements. Under federal law governing transportation planning and federal-aid highways, it is declared to be in the national interest to promote transportation systems that accomplish a number of mobility objectives “while minimizing transportation-related fuel consumption and air pollution through metropolitan and statewide transportation planning processes...” see 23 U.S.C. § 134; see *also* 23 U.S.C. § 135(a)(1). In the metropolitan planning process, consideration must be given to projects and strategies that will “protect and enhance the environment, promote energy conservation, improve the quality of life...” see 23 U.S.C. § 134(h)(1)(E); see *also* 23 C.F.R. Part 450, Subpart B (federal regulations governing statewide transportation planning and

---

programming). The same planning objective applies to statewide transportation planning. see 23 U.S.C. § 135(d)(1)(E); see also 23 C.F.R. Part 450, Subpart C (governing metropolitan transportation planning and programming). Further, the Statewide Transportation Plan shall be developed, as appropriate, in consultation with State...local agencies responsible for...environmental protection...” see 23 U.S.C. § 135(f)(2)(D)(i).

Under conforming Colorado law, the Statewide Transportation Plan is developed by integrating and consolidating Regional Transportation Plans developed by MPOs and regional transportation planning organizations into a “comprehensive statewide transportation plan” pursuant to rules and regulations promulgated by the Commission. see § 43-1-1103(5), C.R.S. The Statewide Transportation Plan must address a number of factors including, but not limited to, “environmental stewardship” and “reduction of greenhouse gas emissions.” see § 43-1-1103(5)(h) and (j), C.R.S.

Regional Transportation Plans must account for the “expected environmental, social, and economic impacts of the recommendations in the plan, including a full range of reasonable transportation alternatives...in order to provide for the transportation and environmental needs of the area in a safe and efficient manner.” see § 43-1-1103(1)(d), C.R.S. Further, in developing Regional Transportation Plans, MPOs “[s]hall assist other agencies in developing transportation control measures for utilization in accordance with state...regulations...and shall identify and evaluate measures that show promise of supporting clean air objectives.” see § 43-1-1103(1)(e), C.R.S.

### **Putting Section 8 of these Rules into Perspective**

Section 8 establishes GHG regulatory requirements that are among the first of their kind in the U.S. However, from an air pollutant standpoint, connecting transportation planning to emissions is not a new policy area. In fact, transportation conformity provisions within the Clean Air Act approach ozone much the same way. Transportation conformity ensures that federally funded or approved highway and transit activities within a Nonattainment Area are consistent with or “conform to” a state’s plan to reduce emissions. Colorado’s front range has been in ozone nonattainment for many years, which has required the North Front Range and the Denver Regional Council of Governments’ MPOs to demonstrate conformity with each plan adoption and amendment.

However, because the transportation sector encompasses the millions of individual choices people make every day that have an impact on climate, a variety of strategies are necessary to achieve the State’s climate goals. Section 8 of these Rules is one of many steps needed to achieve the totality of reduction goals for the transportation sector.

### **Purpose of GHG Mitigation Measures**

The transportation modeling conducted for this rulemaking may demonstrate that certain projects increase GHG pollution for a variety of reasons. These reasons may include factors such as induced demand as a result of additional lane mileage attracting additional vehicular traffic, or additional traffic facilitated by access to new commercial or residential development in the absence of public transit options or bicycle/pedestrian access that provides consumers with other non-driving options. Transportation infrastructure itself can also increase or decrease GHG and other air pollutants by virtue of factors like certain construction materials, removal or addition of tree cover that captures carbon pollution, or integration with vertical construction templates of various efficiencies that result in higher or lower levels of per capita energy use. The pollution impacts/benefits of various infrastructure projects will vary significantly depending on their specifics and must be modeled in a manner that is context-sensitive to a range of issues such as location, footprint of existing infrastructure, design, and how it fits together with transportation alternatives.

Furthermore, other aspects of transportation infrastructure can facilitate reductions in emissions and thus serve as mitigations rather than contributors to pollution. For example, the addition of transit resources in a manner that can displace Vehicle Miles Traveled (VMT) can reduce emissions. Moreover, improving

---

downtown pedestrian and bike access, particularly in areas that allow individuals to shift multiple daily trips for everything from work to dining to retail, can improve both emissions and quality of life. All told, a reduction in VMT has numerous societal co-benefits including reduced vehicle fatalities, wildlife mortality, and traffic congestion and improvements to public health, worker productivity and Colorado's economy.

There is an increasing array of proven best practices for reducing pollution and smog and improving economies and neighborhoods that can help streamline decision-making for state and local agencies developing plans and programs of projects. Additionally, the following core principles will guide the selection and delivery of mitigations:

- **Valuing Benefits to Disproportionately Impacted Communities:** Historically, communities have been impacted unequally by transportation project construction. Negative impacts -- both to air quality by virtue of proximity to highways as well as limited non-driving options in neighborhoods proximate to highways -- have often concentrated in disproportionately impacted communities, often minority neighborhoods in urban and industrial areas. To that end, mitigation investments are an important opportunity to provide localized benefit to disproportionately impacted communities.
- **Geographic Nexus with Impacts:** Where regionally significant projects are projected to increase net greenhouse gas emissions, those emissions should be offset with project-specific mitigation measures that benefit communities that will be impacted by the project. This principle is especially important for ensuring that disproportionately impacted communities that have often, historically, borne a significant share of the negative impacts of highway projects, are able to achieve direct project benefits associated with meeting mitigation requirements.
- **Holistic Air Quality Planning:** CDOT and MPOs should be able to demonstrate how they have supported the GHG Mitigation Measures included in a Mitigation Action Plan, through funding, technical assistance, or other forms of support. Traffic improvements that focus on improving traffic flow through either capacity expansion or technology measures that primarily benefit the flow of vehicular traffic without improving alternatives to driving single occupancy vehicles are not allowable for the purposes of approved mitigation.
- **Verification:** The mitigations should be able to be tracked and verified to ensure real reductions in greenhouse gas emissions.
- **Reasonable scale:** CDOT and MPOs are expected to strive for a reasonable relationship between the scale of mitigation required and that implemented, but are not expected to achieve a precise match. In some cases it also may not be possible, given current tools and models, to determine an exact ton reduction in GHGs. The Department intends to develop a scoring rubric over the coming months, with input from stakeholders, to provide a way to rate the relative effectiveness of measures and align the scale of mitigation needed with the deficit in MMT needed to achieve the Rule's GHG Reduction Levels.

[ Note: The Commission proposes to repeal Section 1 of these Rules in its entirety and re-enact Section 1 of these Rules below to re-format the numbering of the administrative rules into alphabetical order.]

[ Note: The Commission proposes to add nineteen (19) new definitions. New proposed defined terms include: Applicable Planning Document, ~~MOVES~~ Approved Air Quality Model, Baseline, Carbon Dioxide Equivalent, Congestion Mitigation and Air Quality, Disproportionately Impacted Communities, Four-Year Prioritized Plan, Greenhouse Gas, Greenhouse Mitigation Measures, Greenhouse Gas Reduction Levels, Mitigation Action Plan, MPO Model, Multimodal Transportation and Mitigation Options Fund, Regionally Significant Project, State Interagency Consultation Team, Statewide Travel Model, Surface Transportation Block Grant, Vehicle Miles Traveled, and 10-Year Plan. Only minor non-substantive changes, such as correcting grammar errors or capitalizing defined terms, were made to the existing forty-six (46) defined terms.]

---

**1.00 Definitions.**

- 1.01 Accessible - ensure that reasonable efforts are made that all meetings are reachable by persons from households without vehicles and that the meetings will be accessible to persons with disabilities in accordance with the Americans with Disabilities Act (ADA), and also accessible to persons with Limited English Proficiency. Accessible opportunities to comment on planning related matters include those provided on the internet and through such methods as telephone town halls.
- 1.02 Applicable Planning Document - refers to MPO Fiscally Constrained RTPs, TIPs for MPOs in NAAs, CDOT's 10-Year Plan and Four-Year Prioritized Plan in non-MPO areas, and amendments to the MPO RTPs and CDOT's 10-Year Plan and Four-Year Prioritized Plan in non-MPO areas that include the addition of Regionally Significant Projects.
- 1.03 MOVES Approved Air Quality Model - Environmental Protection Agency's the most recent version of the MOfor Vehicle Emission Simulator (or MOVES) issued model that quantifies GHG emissions from on-road transportation, or its successor, that is required for transportation conformity analyses per federal regulation.
- 1.04 Attainment Area - any geographic region of the United States that meets the national primary or secondary National Ambient Air Quality Standards (NAAQS) for the pollutants as defined in the Clean Air Act (CAA) (Amendments of 1990).
- 1.05 Baseline - estimates of GHG emissions for each of the MPOs, and for the non-MPO areas, prepared using the MPO Models or the Statewide Travel Model. Estimates must include GHG emissions resulting from the existing transportation network and implementation of the most recently adopted RTP for all MPOs and the 10-Year Plan in non-MPO areas as of the effective date of these Rules. For each MPO area and for the non-MPO areas of the state, for each of the model years 2025, 2030, 2040, and 2050: the GHG emissions, in million metric tons (MMT), produced by the most recently adopted model for that area, together with the current EPA-approved version of MOVES or its successors in the format currently run by APCD, resulting from modeling the MPO RTP or CDOT 10-year plan adopted as of the effective date of this rule.
- 1.06 Co-benefits - means the additional benefits associated with the reduction of harmful air pollution to local communities, including localized air quality benefits
- 1.07 Carbon Dioxide Equivalent (CO<sub>2</sub>e) - a metric measure used to standard unit for comparing the emissions from various GHG based upon the 100-year global warming potential (GWP). CO<sub>2</sub>e is calculated by multiplying the mass amount of emissions (metric tons per year), for each GHG constituent by that gas's GWP, and summing the resultant values to determine CO<sub>2</sub>e (metric tons per year). This calculation allows comparison of different greenhouse gases and their relative impact on the environment over different standard time periods.
- 1.08 Commission - the Transportation Commission of Colorado created by § 43-1-106, C.R.S.

- 
- 1.09 Congestion Mitigation and Air Quality (CMAQ) - a federally funding mandated program established in 23 U.S.C § 149 to improve air quality in Nonattainment and Maintenance Areas for ozone, carbon monoxide, and particulate matter. References related to this program include any successor programs as established by the federal government.
- 1.10 Corridor - a transportation system that includes all modes and facilities within a described geographic area.
- 1.10 Corridor Vision - a comprehensive examination of a specific transportation Corridor, which includes a determination of needs and an expression of desired state of the transportation system that includes Transportation Modes and facilities over a planning period.
- 1.11 Department or CDOT - the Colorado Department of Transportation created by § 43-1-103, C.R.S.
- 1.12 Disproportionately Impacted Communities - defined in § 24-38.5-302(3), C.R.S. as a community that is in a census block group, as determined in accordance with the most recent United States Decennial Census where the proportion of households that are low income is greater than forty percent (40%), the proportion of households that identify as minority is greater than forty percent (40%), or the proportion of households that are housing cost-burdened is greater than forty percent (40%).
- 1.13 Division - the Division of Transportation Development within CDOT.
- 1.14 Division Director - the Director of the Division of Transportation Development.
- 1.15 Fiscally Constrained - the financial limitation on transportation plans and programs based on the projection of revenues as developed cooperatively with the MPOs and the rural TPRs and adopted by the Commission that are reasonably expected to be available over the long-range transportation planning period and the TIP and STIP programming periods.
- 1.16 Four-Year Prioritized Plan - a four-year subset of the 10-Year Plan consisting of projects prioritized for near-term delivery and partial or full funding.
- 1.17 Greenhouse Gas (GHG) pollutants means anthropogenic (man-made) emissions of carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, nitrogen trifluoride, and sulfur hexafluoride.- for purposes of these Rules, GHG is defined as the primary transportation greenhouse gases: carbon dioxide, methane, and nitrous oxide.
- 1.18 Greenhouse Gas (GHG) Reduction Level - the amount of the GHG expressed as CO<sub>2</sub>e reduced from the projected Baseline that CDOT and MPOs must attain through transportation planning.
- 1.19 Greenhouse Gas (GHG) Mitigation Measures - non-Regionally Significant Project strategies implemented by CDOT and MPOs that reduce transportation GHG pollution and help meet the GHG Reduction Levels.
- 1.20 Harmful air pollutant - means pollutants designated by EPA as criteria air pollutants (carbon monoxide, lead, nitrogen dioxide, ozone, particulate pollution (PM) (PM<sub>2.5</sub> and PM<sub>10</sub>), and sulfur dioxide), or hazardous air pollutants.
- 1.21 Intergovernmental Agreement - an arrangement made between two or more political subdivisions that form associations for the purpose of promoting the interest and welfare of said subdivisions.
- 1.22 Intermodal Facility - a site where goods or people are conveyed from one mode of transportation to another, such as goods from rail to truck or people from passenger vehicle to bus.
- 1.23 Land Use - the type, size, arrangement, and use of parcels of land.
- 1.24 Limited English Proficiency - individuals who do not speak English as their primary language and
-

- 
- who have a limited ability to read, speak, write, or understand English.
- 1.25 Long-Range Planning - a reference to a planning period with a minimum 20-year planning horizon.
- 1.26 Maintenance Area - any geographic region of the United States previously designated by the U.S. Environmental Protection Agency (EPA) as a Nonattainment Area pursuant to the Clean Air Act (CAA) Amendments of 1990 and subsequently redesignated to attainment subject to the requirement to develop a maintenance plan under § 175A of the CAA, as amended in 1990.
- 1.27 Memorandum of Agreement (MOA) - a written agreement between two or more parties on an intended plan of action.
- 1.28 Metropolitan Planning Agreement (MPA) - a written agreement between the MPO, the State, and the providers of public transportation serving the Metropolitan Planning Area that describes how they will work cooperatively to meet their mutual responsibilities in carrying out the metropolitan planning process.
- 1.29 Metropolitan Planning Area - a geographic area determined by agreement between the MPO for the area and the Governor, in which the metropolitan transportation planning process is carried out pursuant to 23 U.S.C. § 134.
- 1.30 Metropolitan Planning Organization (MPO) - an organization designated by agreement among the units of general purpose local governments and the Governor, charged to develop the RTPs and programs in a Metropolitan Planning Area pursuant to 23 U.S.C. § 134.
- 1.31 Mitigation Action Plan - an element of the GHG Transportation Report that specifies which GHG Mitigation Measures shall be implemented that help achieve the GHG Reduction Levels.
- 1.32 Mobility - the ability to move people, goods, services, and information among various origins and destinations.
- 1.33 MPO Models - one (1) or more of the computer-based models maintained and operated by the MPOs which depict the MPO areas' transportation systems (e.g., roads, transit, etc.) and development patterns (i.e., number and location of households and jobs) for a defined year (i.e., past, present, or forecast) and produce estimates of roadway VMT, delays, operating speeds, transit ridership, and other characteristics of transportation system use.
- 1.34 Multimodal - an integrated approach to transportation that takes into account all modes of travel, such as bicycles and walking, personal mobility devices, buses, transit, rail, aircraft, and motor vehicles.
- 1.35 Multimodal Transportation and Mitigation Options Fund (MMOF) - a program created in the State Treasury pursuant to § 43-4-1003, C.R.S. which funds bicycle, pedestrian, transit and other Multimodal projects as defined in § 43-4-1002(5), C.R.S. and GHG Mitigation projects as defined in § 43-4-1002(4.5), C.R.S.
- 1.36 National Ambient Air Quality Standards (NAAQS) - are those established by the U.S. Environmental Protection Agency for air pollutants considered harmful to public health and environment. These criteria pollutants are: carbon monoxide, lead, nitrogen dioxide, ozone, particulate matter small particles, and sulfur dioxide.
- 1.37 Nonattainment Area - any geographic region of the United States which has been designated as nonattainment by the EPA under section 107 of the CAA for any pollutants for which a NAAQS exists.
-

- 
- 1.38 Non-Metropolitan Area - a rural geographic area outside a designated Metropolitan Planning Area.
- 1.39 Plan Integration - a comprehensive evaluation of the statewide transportation system that includes all modes, an identification of needs and priorities, and key information from other related CDOT plans.
- 1.40 Planning Partners - local and tribal governments, the rural TPRs and MPOs.
- 1.41 Project Priority Programming Process - the process by which CDOT adheres to 23 U.S.C. § 135 and 23 C.F.R. Part 450 when developing and amending the STIP.
- 1.42 Regional Planning Commission (RPC) - a planning body formed under the provisions of § 30-28-105, C.R.S., and designated under these Rules for the purpose of transportation planning within a rural TPR.
- 1.43 Regionally Significant Project - a transportation project that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network or state transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternative to regional highway travel. Modifications of this definition shall be allowed if approved by the State Interagency Consultation Team. If the MPOs have received approval from the EPA to use a different definition of regionally significant project as defined in 40 C.F.R. § 93.101, the State Interagency Consultation Team will accept the modified definition. Necessary specificity for MPO Models or the Statewide Travel Model will be approved by the State Interagency Consultation Team.
- 1.44 Regional Transportation Plan (RTP) - a long-range plan designed to address the future transportation needs for a TPR including, but not limited to, Fiscally Constrained or anticipated funding, priorities, and implementation plans, pursuant to, but not limited to, § 43-1-1103, C.R.S. and 23 C.F.R. Part 450. All rural and urban TPRs in the state produce RTPs.
- 1.45 State Interagency Consultation Team - consists of the Division Director or the Division Director's designee, the Colorado Department of Public Health and Environment (CDPHE) Director of Air Pollution Control Division or the Director's designee, and the Director of each MPO or their designee.
- 1.46 State Transportation System - refers to all state-owned, operated, and maintained transportation facilities in Colorado, including, but not limited to, interstate highways, other highways, and aviation, bicycle and pedestrian, transit, and rail facilities.
- 1.47 Statewide Transportation Advisory Committee (STAC) - the committee created by § 43-1-1104, C.R.S., comprising one representative from each TPR and one representative from each tribal government to review and comment on RTPs, amendments, and updates, and to advise both the Department and the Commission on the needs of the transportation system in Colorado.
- 1.48 Statewide Transportation Improvement Program (STIP) - a Fiscally Constrained, multi-year, statewide, Multimodal program of transportation projects which is consistent with the Statewide Transportation Plan and planning processes, with Metropolitan Planning Area plans, Transportation Improvement Programs and processes, and which is developed pursuant to 23 U.S.C. § 135.

- 
- 1.49 Statewide Travel Model - the computer-based model maintained and operated by CDOT which depicts the state's transportation system (roads, transit, etc.) and development scale and pattern (number and location of households, number and location of firms/jobs) for a selected year (past, present, or forecast) and produces estimates of roadway VMT and speed, transit, ridership, and other characteristics of transportation system use.
- 1.50 Statewide Transportation Plan - the long-range, comprehensive, Multimodal statewide transportation plan covering a period of no less than 20 years from time of adoption, developed through the statewide transportation planning process described in these Rules and 23 U.S.C. § 135, and adopted by the Commission pursuant to § 43-1-1103, C.R.S.
- 1.51 Surface Transportation Block Grant (STBG) - a flexible federal funding source established under 23 U.S.C. § 133 for state and local transportation needs. Funds are expended in the areas of the State based on population. References related to this program include any successor programs established by the federal government.
- 1.52 System Continuity - includes, but is not limited to, appropriate intermodal connections, integration with state modal plans, and coordination with neighboring RTPs, and, to the extent practicable, other neighboring states' transportation plans.
- 1.53 Traditionally Underserved - refers to groups such as seniors, persons with disabilities, low-income households, minorities, and student populations, which may face difficulties accessing transportation systems, employment, services, and other amenities.
- 1.54 Transit and Rail Advisory Committee (TRAC) - an advisory committee created specifically to advise the Executive Director, the Commission, and the Division of Transit and Rail on transit and rail-related activities.
- 1.55 Transportation Commonality - the basis on which TPRs are established including, but not limited to: Transportation Commission Districts, the Department's Engineering Regions, Travelsheds, Watersheds, geographic unity, existing Intergovernmental Agreements, and socioeconomic unity.
- 1.56 Transportation Improvement Program (TIP) - a staged, Fiscally Constrained, multi-year, Multimodal program of transportation projects developed and adopted by MPOs, and approved by the Governor, which is consistent with an MPO's RTP and which is developed pursuant to 23 U.S.C. § 134.
- 1.57 Transportation Mode - a particular form of travel including, but not limited to, bus, motor vehicle, rail, transit, aircraft, bicycle, pedestrian travel, or personal mobility devices.
- 1.58 Transportation Planning and Programming Process - all collaborative planning-related activities including the development of regional and Statewide Transportation Plans, the Department's Project Priority Programming Process, and development of the TIPs and STIP.
- 1.59 Transportation Planning Region (TPR) - a geographically designated area of the state, defined by section 2.00 of these Rules in consideration of the criteria for Transportation Commonality, and for which a regional transportation plan is developed pursuant to the provisions of § 43-1-1102 and 1103, C.R.S. and 23 U.S.C. § 134. The term TPR is inclusive of these types: non-MPO TPRs, MPO TPRs, and TPRs with both MPO and non-MPO areas.
- 1.60 Transportation Systems Planning - provides the basis for identifying current and future deficiencies on the state highway system and outlines strategies to address those deficiencies and make improvements to meet Department goals.
-

- 
- 1.61 Travelshed - the region or area generally served by a major transportation facility, system, or Corridor.
- 1.62 Tribal Transportation Improvement Program (TTIP) - a multi-year Fiscally Constrained list of proposed transportation projects developed by a tribe from the tribal priority list or tribal long-range transportation plan, and which is developed pursuant to 25 C.F.R. Part 170. The TTIP is incorporated into the STIP without modification.
- 1.63 Urbanized Area - an area with a population of 50,000 or more designated by the Bureau of the Census.
- 1.64 Vehicle Miles Traveled (VMT) - the traffic volume of a roadway segment or system of roadway segments multiplied by the length of the roadway segment or system.
- 1.65 Watershed - a land area that drains to a common waterway, such as a stream, lake, estuary, wetland, or ultimately the ocean.
- 1.66 10-Year Plan - a vision for Colorado's transportation system that includes a specific list of projects categorized across priority areas as identified in the Statewide Transportation Plan.

**2.00 Transportation Planning Regions (TPR).**

- 2.01 Transportation Planning Region Boundaries. ~~Transportation Planning Region~~TPRs are geographically designated areas of the state with similar transportation needs that are determined by considering transportation commonalities. Boundaries are hereby established as follows:
- 2.01.1 The Pikes Peak Area ~~Transportation Planning Region~~TPR comprises the Pikes Peak Area Council of Governments' metropolitan area within El Paso and Teller counties.
- 2.01.2 The Greater Denver ~~Transportation Planning Region~~TPR, which includes the Denver Regional Council of Governments' planning area, comprises the counties of Adams, Arapahoe, Boulder, Broomfield, Clear Creek, Denver, Douglas, Gilpin, Jefferson, and parts of Weld.
- 2.01.3 The North Front Range ~~Transportation Planning Region~~TPR comprises the North Front Range Transportation and Air Quality Planning Council's metropolitan area within Larimer and Weld counties.
- 2.01.4 The Pueblo Area ~~Transportation Planning Region~~TPR comprises Pueblo County, including the Pueblo Area Council of Governments' metropolitan area.
- 2.01.5 The Grand Valley ~~Transportation Planning Region~~TPR comprises Mesa County, including the Grand Valley Metropolitan Planning Organization's metropolitan area.
- 2.01.6 The Eastern ~~Transportation Planning Region~~TPR comprises Cheyenne, Elbert, Kit Carson, Lincoln, Logan, Phillips, Sedgwick, Washington, and Yuma counties.
- 2.01.7 The Southeast ~~Transportation Planning Region~~TPR comprises Baca, Bent, Crowley, Kiowa, Otero, and Prowers counties.
- 2.01.8 The San Luis Valley ~~Transportation Planning Region~~TPR comprises Alamosa, Chaffee, Conejos, Costilla, Mineral, Rio Grande, and Saguache counties.

- 
- 2.01.9 The Gunnison Valley ~~Transportation Planning Region~~TPR comprises Delta, Gunnison, Hinsdale, Montrose, Ouray, and San Miguel counties.
- 2.01.10 The Southwest ~~Transportation Planning Region~~TPR comprises Archuleta, Dolores, La Plata, Montezuma, and San Juan counties, including the Ute Mountain Ute and Southern Ute Indian Reservations.
- 2.01.11 The Intermountain ~~Transportation Planning Region~~TPR comprises Eagle, Garfield, Lake, Pitkin, and Summit counties.
- 2.01.12 The Northwest ~~Transportation Planning Region~~TPR comprises Grand, Jackson, Moffat, Rio Blanco, and Routt counties.
- 2.01.13 The Upper Front Range ~~Transportation Planning Region~~TPR comprises Morgan County, and the parts of Larimer and Weld counties, that are outside both the North Front Range and the Greater Denver (metropolitan) TPRs.
- 2.01.14 The Central Front Range ~~Transportation Planning Region~~TPR comprises Custer, El Paso, Fremont, Park, and Teller counties, excluding the Pikes Peak Area Council of Governments' metropolitan area.
- 2.01.15 The South Central ~~Transportation Planning Region~~TPR comprises Huerfano, and Las Animas Counties.
- 2.02 Boundary Revision Process.
- 2.02.1 TPR boundaries, excluding any MPO-related boundaries, will be reviewed by the Commission at the beginning of each regional and statewide transportation planning process. The Department will notify counties, municipalities, MPOs, Indian tribal governments, and RPCs for the TPRs of the boundary review revision requests. MPO boundary review shall be conducted pursuant to 23 U.S.C. § 134 and 23 C.F.R. Part 450 Subpart B and any changes shall be provided to the Department to update the Rules. All boundary revision requests shall be sent to the Division Director, and shall include:
- 2.02.1.1 A geographical description of the proposed boundary change.
- 2.02.1.2 A statement of justification for the change considering transportation commonalities.
- 2.02.1.3 A copy of the resolution stating the concurrence of the affected ~~Regional Planning Commission~~RPC.
- 2.02.1.4 The name, title, mailing address, telephone number, fax number and electronic mail address (if available) of the contact person for the requesting party or parties.
- 2.02.2 The Department will assess and STAC shall review and comment (as set forth in these Rules) on all ~~non~~Non-metropolitan-Metropolitan area-Area TPR boundary revision requests based on transportation commonalities and make a recommendation to the Commission concerning such requests. The Department will notify the Commission of MPO boundary changes. The Commission may initiate a rule-making proceeding under the ~~State-Colorado~~ Administrative Procedure Act, § 24-4-103, C.R.S. to consider a boundary revision request. Requests received for a MPO or non-metropolitan TPR boundary revision outside of the regularly scheduled boundary review cycle must include the requirements identified above.

- 
- 2.02.3 In the event that the Commission approves a change to the boundary of a TPR that has a ~~Regional Planning Commission~~RPC, the RPC in each affected TPR shall notify the Department of any changes to the ~~intergovernmental~~Intergovernmental agreement Agreement governing the RPC as specified in these Rules.
- 2.03 Transportation Planning Coordination with MPOs.
- 2.03.1 The Department and the MPOs shall coordinate activities related to the development of ~~Regional Transportation Plan~~RTPs, the Statewide Transportation Plan, TIPs, and the STIP in conformance with 23 U.S.C. § 134 and 135 and § 43-1-1101 and § 43-1-1103, C.R.S. The Department shall work with the MPOs to resolve issues arising during the planning process.
- 2.04 Transportation Planning Coordination with Non-MPO RPCs.
- 2.04.1 The Department and RPCs shall work together in developing ~~Regional Transportation Plan~~RTPs and in planning future transportation activities. The Department shall consult with all RPCs on development of the Statewide Transportation Plan; incorporation of RTPs into the Statewide Transportation Plan; and the inclusion of projects into the STIP that are consistent with the RTPs. In addition, the Department shall work with the RPCs to resolve issues arising during the planning process.
- 2.05 Transportation Planning Coordination among RPCs.
- 2.05.1 If transportation improvements cross TPR boundaries or significantly impact another TPR, the RPC shall consult with all the affected RPCs involved when developing the ~~regional transportation plan~~RTP. In general, RPC planning officials shall work with all ~~planning~~Planning partners-Partners affected by transportation activities when planning future transportation activities.
- 2.06 Transportation Planning Coordination with the Southern Ute and the Ute Mountain Ute Tribal Governments.
- 2.06.1 Regional transportation planning within the Southwest TPR shall be coordinated with the transportation planning activities of the Southern Ute and the Ute Mountain Ute tribal governments. The long-range transportation plans for the tribal areas shall be integrated in the Statewide Transportation Plan and the ~~Regional Transportation Plan~~RTP for this TPR. The TTIP is incorporated into the STIP without modification.
- 3.00 Statewide Transportation Advisory Committee (STAC).**
- 3.01 Duties of the ~~Statewide Transportation Advisory Committee~~-(STAC). Pursuant to § 43-1-1104 C.R.S. the duties of the STAC shall be to meet as necessary and provide advice to both the Department and the Commission on the needs of the transportation system in Colorado including, but not limited to: budgets, ~~transportation improvement programs~~TIPs of the ~~metropolitan planning organizations~~MPOs, the ~~Statewide Transportation Improvement Program~~STIP, transportation plans, and state transportation policies.
- The STAC shall review and provide to both the Department and the Commission comments on:
- 3.01.1 All ~~Regional Transportation Plan~~RTPs, amendments, and updates as described in these Rules.
- 3.01.2 Transportation related communication and/or conflicts which arise between RPCs or between the Department and a RPC.

- 
- 3.01.3 The integration and consolidation of RTPs into the Statewide Transportation Plan.
- 3.01.4 Colorado's ~~mobility~~-Mobility requirements to move people, goods, services, and information by furnishing regional perspectives on transportation problems requiring interregional and/or statewide solutions.
- 3.01.5 Improvements to modal choice, linkages between and among modes, and transportation system balance and ~~system~~-System ~~continuity~~Continuity.
- 3.01.6 Proposed TPR boundary revisions.
- 3.02 Notification of Membership
- 3.02.1 Each RPC and tribal government shall select its representative to the STAC pursuant to § 43-1-1104(1), C.R.S. The Ute Mountain Ute Tribal Council and the Southern Ute Indian Tribal Council each appoint one representative to the STAC. Each TPR and tribal government is also entitled to name an alternative representative who would serve as a proxy in the event their designated representative is unable to attend a STAC meeting and would be included by the Department in distributions of all STAC correspondence and notifications. The Division Director shall be notified in writing of the name, title, mailing address, telephone number, fax number and electronic mail address (if available) of the STAC representative and alternative representative from each TPR and tribal government within thirty (30) days of selection.
- 3.03 Administration of ~~Statewide Transportation Advisory Committee~~STAC
- 3.03.1 STAC recommendations on Regional and Statewide Transportation Plans, amendments, and updates shall be documented in the STAC meeting minutes, and will be considered by the Department and Commission throughout the statewide transportation planning process.
- 3.03.2 The STAC shall establish procedures to govern its affairs in the performance of its advisory capacity, including, but not limited to, the appointment of a chairperson and the length of the chairperson's term, meeting times, and locations.
- 3.03.3 The Division Director will provide support to the STAC, including, but not limited to:
- 3.03.3.1 Notification of STAC members and alternates of meeting dates.
- 3.03.3.2 Preparation and distribution of STAC meeting agendas, supporting materials, and minutes.
- 3.03.3.3 Allocation of Department staff support for STAC-related activities.
- 4.00 Development of Regional and Statewide Transportation Plans.**
- 4.01 ~~Regional Planning Commission~~RPCs, MPOs, and the Department shall comply with all applicable provisions of 23 U.S.C. § 134 and § 135, 23 C.F.R. Part 450, and § 43-1-1103, C.R.S. and all applicable provisions of Commission policies and guidance documents in development of regional and statewide transportation plans, respectively.
- 4.02 Public Participation
- 4.02.1 The Department, in coordination with the RPCs of the rural TPRs, shall provide early and continuous opportunity for public participation in the transportation planning process. The process

---

shall be proactive and provide timely information, adequate public notice, reasonable public access, and opportunities for public review and comment at key decision points in the process. The objectives of public participation in the transportation planning process include: providing a mechanism for directly-impacted communities to provide leadership, share public perspectives, needs, and ideas to be considered in the planning process; developing the Department's and public's understanding of the problems and opportunities facing the transportation system; demonstrating explicit consideration and response to public input through a variety of tools and techniques; and developing consensus on plans. The Department shall develop a documented public participation process pursuant to 23 C.F.R. Part 450.

- 4.02.2 Statewide Plans and Programs. Pursuant to 23 C.F.R. Part 450 Subpart B, the Department is responsible, in cooperation with the RPCs and MPOs, for carrying out public participation for developing, amending, and updating the ~~statewide Statewide transportation Transportation planPlan~~, the ~~Statewide Transportation Improvement Program (STIP)~~, and other statewide transportation planning activities.
- 4.02.3 MPO Plans and Programs. Pursuant to 23 C.F.R. Part 450 Subpart C, the MPOs are responsible for carrying out public participation for the development of ~~regional transportation planRTPs~~, ~~transportation improvement programsTIPs~~ and other related regional transportation planning activities for their respective ~~metropolitan Metropolitan planning Planning areasAreas~~. Public participation activities carried out in a metropolitan area in response to metropolitan planning requirements shall by agreement of the Department and the MPO, satisfy the requirements of this subsection.
- 4.02.4 Non-MPO TPR Plans and Programs. ~~Regional Planning CommissionRPC~~s for non-MPO TPRs are responsible for public participation related to regional planning activities in that TPR, in cooperation with the Department. Specific areas of cooperation shall be determined by agreement between the ~~Regional Planning CommissionRPC~~ and the Department.
- 4.02.5 Public Participation Activities. Public participation activities at both the rural TPR and statewide level shall include, at a minimum:
- 4.02.5.1 Establishing and maintaining for the geographic area of responsibility a list of all known parties interested in transportation planning including, but not limited to: elected officials; municipal and county planning staffs; affected public agencies; local, state, and federal agencies eligible for federal and state transportation funds; local representatives of public transportation agency employees and users; freight shippers and providers of freight transportation services; public and private transportation providers; representatives of users of transit, bicycling and pedestrian, aviation, and train facilities; private industry; environmental and other interest groups; Indian tribal governments and the U.S. Secretary of the Interior when tribal lands are involved; and representatives of persons or groups that may be underserved by existing transportation systems, such as minority, low-income, seniors, persons with disabilities, and those with ~~limited Limited~~ English ~~proficiencyProficiency~~; and members of the general public expressing such interest in the transportation planning process.
- 4.02.5.2 Providing reasonable notice and opportunity to comment through mailing lists and other various communication methods on upcoming transportation planning-related activities and meetings. Reasonable notice for Disproportionately Impacted Communities requires the notice be translated in the primary languages spoken in the community.
- 4.02.5.3 Utilizing reasonably available internet or traditional media opportunities, including minority and diverse media, to provide timely notices of planning-related activities and meetings to members of the public, including ~~LEP Limited English Proficiency~~ individuals, and others who may require reasonable accommodations. Methods that will be used to the

---

maximum extent practicable for public participation could include, but not be limited to, use of the internet; social media, news media, such as newspapers, radio, or television, mailings and notices, including electronic mail and online newsletters.

- 4.02.5.4 Seeking out those persons, ~~or~~ groups, and communities ~~Disproportionately Impacted or traditionally-Traditionally underserved-Underserved~~ by existing transportation systems including, but not limited to, seniors, persons with disabilities, minority groups, low-income, and those with ~~limited-Limited~~ English ~~proficiencyProficiency~~, for the purposes of exchanging information, increasing their involvement, and considering their transportation needs in the transportation planning process. Pursuant to § 43-1-601, C.R.S., the Department shall prepare a statewide survey identifying the transportation needs of seniors and of persons with disabilities.
- 4.02.5.5 Consulting, as appropriate, with ~~Regional Planning CommissionRPCs~~, and federal, state, local, and tribal agencies responsible for land use management, natural resources, environmental protection, conservation and historic preservation concerning the development of long-range transportation plans.
- 4.02.5.6 Providing reasonable public access to, and appropriate opportunities for public review and comment on criteria, standards, and other planning-related information. Reasonable public access includes, but is not limited to, ~~LEP-Limited English Proficiency~~ services and access to ADA-compliant facilities, as well as to the internet.
- 4.02.5.7 Where feasible, scheduling the development of regional and statewide plans so that the release of the draft plans may be coordinated to provide for the opportunity for joint public outreach.
- 4.02.5.8 Documentation of Responses to Significant Issues. ~~Regional Planning CommissionsRPCs~~ and the Department shall respond in writing to all significant issues raised during the review and comment period on transportation plans, and make these responses available to the public.
- 4.02.5.9 Review of the Public Involvement Process. All interested parties and the Department shall periodically review the effectiveness of the Department's public involvement process to ensure that the process provides full and open access to all members of the public. When necessary, the process will be revised and allow time for public review and comment per 23 C.F.R. Part 450.
- 4.03 Transportation Systems Planning. ~~Regional Planning CommissionRPCs~~, and the Department, shall use an integrated ~~multimodal-Multimodal transportation-Transportation systems-Systems planning-Planning~~ approach in developing and updating the long-range ~~Regional Transportation PlansRTPs~~ and the long-range Statewide Transportation Plan for a minimum 20-year forecasting period. ~~Regional Planning CommissionRPCs~~ shall have flexibility in the methods selected for ~~transportation-Transportation systems-Systems planning-Planning~~ based on the complexity of transportation problems and available resources within the TPR. The Department will provide guidance and assistance to the ~~Regional Planning CommissionRPCs~~ regarding the selection of appropriate methods. Transportation Systems Planning shall consider the following:
- 4.03.1 Transportation ~~systems-Systems planning-Planning~~ by ~~Regional Planning CommissionRPCs~~ and the Department shall consider the Results of any related studies that have been completed. ~~Regional Planning CommissionRPCs~~ and the Department may also identify any ~~corridorCorridor~~(s) or sub-area(s) where an environmental study or assessment may need to be performed in the future.

- 
- 4.03.2 Transportation ~~systems-Systems planning-Planning~~ by ~~Regional Planning Commission~~RPCs shall consider ~~corridor-vision~~ Needs and desired state of the transportation system including existing and future land use and infrastructure, major activity centers such as industrial, commercial and recreation areas, economic development, environmental protection, and modal choices.
- 4.03.3 Transportation ~~systems-Systems planning-Planning~~ by ~~Regional Planning Commission~~RPCs shall include Operational and management strategies to improve the performance of existing transportation facilities to relieve vehicular congestion and maximize the safety and ~~mobility-Mobility~~ of people goods, and services.
- 4.03.4 Transportation ~~systems-Systems planning-Planning~~ by the Department should include Capital, operations, maintenance and management strategies, investments, procedures, and other measures to ensure the preservation and most efficient and effective use of the ~~state-State transportation-Transportation system~~System.
- 4.03.5 Transportation ~~systems-Systems P~~lanning by the Department shall consider and Integration of all modes into the Statewide Transportation Plan and include coordination with Department modal plans and modal committees, such as the ~~Transit and Rail Advisory Committee (TRAC)~~.
- 4.03.6 Impacts on Disproportionately Impacted Communities and opportunities to promote equity and economic justice.
- 4.03.7 Transportation Systems Planning by the Department shall provide for the establishment and use of a performance-based approach to transportation decision-making to support the national goals described in 23 U.S.C. § 150 (FAST Act, P.L. 114-94). Performance targets that the Department establishes to address the performance measures described in 23 U.S.C. § 150, where applicable, are to be used to track progress towards attainment of critical outcomes for the state. The state shall consider the performance measures and targets when developing policies, programs, and investment priorities reflected in the Statewide Transportation Plan and STIP.
- 4.04 Regional Transportation Plans (RTP). Long-range ~~regional transportation plans~~RTPs shall be developed, in accordance with federal (23 U.S.C. § 134 and § 135) and state (§ 43-1-1103 and § 43-1-1104, C.R.S.) law and implementing regulations. Department selection of performance targets that address the performance measures shall be coordinated with the relevant MPOs to ensure consistency, to the maximum extent practicable.
- 4.04.1 Content of ~~Regional Transportation Plan~~RTPs. Each RTP shall include, at a minimum, the following elements:
- 4.04.1.1 Transportation system facility and service requirements within the MPO TPR over a minimum 20-year planning period necessary to meet expected demand, and the anticipated capital, maintenance and operating cost for these facilities and services.
- 4.04.1.2 State and federal transportation system planning factors to be considered by ~~Regional Planning Commission~~RPCs and the Department during their respective ~~transportation-Transportation systems-Systems planning-Planning~~ shall include, at a minimum, the factors described in § 43-1-1103 (5), C.R.S., and in 23 U.S.C. § 134 and § 135.

- 
- 4.04.1.3 Identification and discussion of potential environmental mitigation measures, ~~corridor-Corridor~~ studies, or ~~corridor-Corridor visions~~ Visions, including a discussion of impacts to minority and low-income communities.
- 4.04.1.4 A discussion of potential environmental mitigation activities and potential areas to carry out these activities, including activities that may have the greatest potential to restore and maintain the environmental functions affected by the plan.
- 4.04.1.5 For rural RTPs, the integrated performance-based ~~multimodal-Multimodal~~ transportation plan based on revenues reasonably expected to be available over the minimum 20-year planning period. For metropolitan RTPs, a ~~fiscally-Fiscally~~ constrained-Constrained financial plan.
- 4.04.1.6 Identification of reasonably expected financial resources developed cooperatively among the Department, MPOs, and rural TPRs for ~~longLong-~~ range-Range ~~planning-Planning~~ purposes, and results expected to be achieved based on regional priorities.
- 4.04.1.7 Documentation of the public notification and public participation process pursuant to these Rules.
- 4.04.1.8 A resolution of adoption by the responsible ~~Metropolitan-Planning~~ Organization ~~MPO~~ or the ~~Regional-Planning-Commission~~ RPC.
- 4.04.2 Products and reviews
- 4.04.2.1 Draft Plan. ~~Transportation-Planning-Region~~ TPRs shall provide a draft of the RTP to the Department through the Division ~~of-Transportation-Development~~.
- 4.04.2.2 Draft Plan Review. Upon receipt of the draft RTPs, the Department will initiate its review and schedule the STAC review (pursuant to these Rules). The Department will provide its comments and STAC comments to the ~~Transportation-Planning-Region~~ TPR within a minimum of 30 days of receiving the draft RTP. ~~Regional-transportation-plan~~ RTPs in metropolitan areas completed pursuant to the schedule identified in 23 C.F.R. § 450.322 shall be subject to the provisions of this section prior to being submitted to the Department for consideration as an amendment to the ~~statewide-Statewide~~ transportation-Transportation ~~plan~~ Plan.
- 4.04.2.3 Final Plan. ~~Transportation-Planning-Region~~ TPRs shall provide the final RTP to the Department through the Division ~~of-Transportation-Development~~.
- 4.04.2.4 Final Plan Review. Upon receipt of the final RTP, the Department will initiate its review and schedule the STAC review (pursuant to these Rules) of the final RTPs to determine if the plans incorporate the elements required by the Rules. If the Department determines that a final RTP is not complete, including if the final RTP does not incorporate the elements required by these Rules, then the Department will not integrate that RTP into the statewide plan until the ~~Transportation-Planning-Region~~ TPR has sufficiently revised that RTP, as determined by the Department with advice from the STAC. The Department will provide its comments and STAC comments to the ~~Transportation-Planning-Region~~ TPR within a minimum of 30 days of receiving the final RTP. ~~Transportation-Planning-Region~~ TPRs shall submit any RTP revisions based on comments from the Department and STAC review within 30 days of the
-

---

Department's provision of such comments. ~~Regional transportation plans RTPs~~ in metropolitan areas completed pursuant to the schedule identified in 23 C.F.R. § 450.322 shall be subject to the provisions of this section prior to being submitted to the Department for consideration as an amendment to the ~~statewide Statewide transportation Transportation plan Plan~~.

- 4.05 Maintenance and Nonattainment Areas. Each RTP, or RTP amendment, shall include a section that:
- 4.05.1 Identifies any area within the TPR that is designated as a ~~maintenance Maintenance~~ or ~~nonattainment Nonattainment area Area~~.
  - 4.05.2 Addresses, in either a qualitative or quantitative manner, whether transportation related emissions associated with the pollutant of concern in the TPR are expected to increase over the ~~long Long-range Range planning Planning~~ period and, if so, what effect that increase might have in causing a ~~maintenance Maintenance area Area~~ for an NAAQS pollutant to become a ~~nonattainment Nonattainment area Area~~, or a ~~non-attainment Nonattainment area Area~~ to exceed its emission budget in the approved State Implementation Plan.
  - 4.05.3 If transportation related emissions associated with the pollutant are expected to increase over the ~~long Long-range Range planning Planning~~ period, identifies which programs or measures are included in the RTP to decrease the likelihood of that area becoming a ~~nonattainment Nonattainment area Area~~ for the pollutant of concern.
- 4.06 Statewide Transportation Plan. The ~~Regional Transportation Plans RTPs~~ submitted by the ~~Regional Planning Commissions RPCs~~ shall, along with direction provided through Commission policies and guidance, form the basis for developing and amending the Statewide Transportation Plan. The Statewide Transportation Plan shall cover a minimum 20-year planning period at the time of adoption and shall guide the development and implementation of a performance-based ~~multimodal Multimodal~~ transportation system for the State.
- 4.06.1 The Statewide Transportation Plan shall:
    - 4.06.1.1 Integrate and consolidate the RTPs and the Department's systems planning, pursuant to these Rules, into a long-range 20-year ~~multimodal Multimodal~~ transportation plan that presents a clear, concisepath for future transportation in Colorado.
    - 4.06.1.2 Include the long-term transportation concerns of the Southern Ute Indian Tribe and the Ute Mountain Ute Tribe in the development of the Statewide Transportation Plan.
    - 4.06.1.3 Coordinate with other state and federal agencies responsible for land use management, natural resources, environmental protection, conservation, and historic preservation.
    - 4.06.1.4 Include a discussion of potential environmental mitigation activities and potential areas to carry out these activities that may have the greatest potential to restore and maintain the environmental functions affected by the plan developed in consultation with federal, state, and tribal wildlife, land management and regulatory agencies.

4.06.1.5 Include a comparison of transportation plans to state and tribal conservation plans or maps and to inventories of natural or historical resources.

4.06.1.6 Provide for overall ~~multimodal~~ Multimodal transportation system management on a statewide basis.

4.06.1.7 The Statewide Transportation Plan shall be coordinated with metropolitan transportation plans pursuant to 23 C.F.R. Part 450, § 43-1-1103 and § 43-1-1105, C.R.S. Department selection of performance targets shall be coordinated with the MPOs to ensure consistency, to the maximum extent practicable.

~~4.06.1.8 Include an analysis of how the Statewide Transportation Plan is aligned with Colorado's climate goals and helps reduce, prevent, and mitigate GHG, and other air pollutants, pollution throughout the State.~~

~~4.06.1.9 Include an analysis of impacts harmful air pollutants and co-benefits in en Disproportionately Impacted Communities.~~

~~4.06.1.9 Includes the 10-Year Plan as an appendix.~~

4.06.2 Content of the Statewide Transportation Plan. At a minimum, the Statewide Transportation Plan shall include priorities as identified in the RTPs, as identified in these Rules and pursuant to federal planning laws and regulations. The Statewide Transportation Plan shall be submitted to the ~~Colorado Transportation~~ Commission for its consideration and approval.

4.06.3 Review and Adoption of the Statewide Transportation Plan.

4.06.3.1 The Department will submit a draft Statewide Transportation Plan to the Commission, the STAC, and all interested parties for review and comment. The review and comment period will be conducted for a minimum of 30 days. ~~The Statewide Transportation Plan and appendices~~ The publication will be available in physical form upon request at public facilities, such as at the Department headquarters and region offices, state depository libraries, county offices, TPR offices, Colorado Division offices of the Federal Highway Administration and Federal Transit Administration, and made available on the internet.

4.06.3.2 The Department will submit the final Statewide Transportation Plan to the ~~Colorado Transportation~~ Commission for adoption.

## 5.00 Updates to Regional and Statewide Transportation Plans.

5.01 Plan Update Process. The updates of ~~Regional Transportation Plan~~ RTPs and the Statewide Transportation Plan shall be completed on a periodic basis through the same process governing development of these plans pursuant to these Rules. The update cycle shall comply with federal and state law and be determined in consultation with the ~~Transportation~~ Commission, the Department, the STAC and the MPOs so that the respective update cycles will coincide.

5.02 Notice by Department of Plan Update Cycle. The Department will notify ~~Regional Planning Commission~~ RPCs and the MPOs of the initiation of each plan update cycle, and the schedule for completion.

## 6.00 Amendments to the Regional and Statewide Transportation Plans.

6.01 Amendment Process

6.01.1 The process to consider amendments to ~~Regional Transportation Plan~~RTPs shall be carried out by rural RPCs and the MPOs. The amendment review process for ~~Regional Transportation Plan~~RTPs shall include an evaluation, review, and approval by the respective RPC or MPO.

6.01.2 The process to consider amendments to the Statewide Transportation Plan shall be carried out by the Department, either in considering a proposed amendment to the Statewide Transportation Plan from a requesting RPC or MPO or on its own initiative.

6.01.3 The process to consider amendments to the 10-Year Plan shall be carried out by CDOT in coordination with the rural RPCs and the MPOs.

**7.00 Transportation Improvement Programs (TIPs) and Statewide Transportation Improvement Program (STIP).**

7.01 TIP development shall occur in accordance with 23 C.F.R. Part 450, Subpart C. The Department will develop the STIP in accordance with 23 C.F.R. Part 450, Subpart B.

7.02 The Department will work with its ~~planning~~Planning partners-Partners to coordinate a schedule for development and adoption of TIPs and the STIP.

7.03 A TIP for an MPO that is in a ~~non-attainment~~Nonattainment or Maintenance Area must first receive a conformity determination by FHWA and FTA before inclusion in the STIP pursuant to 23 C.F.R. Part 450.

7.04 MPO TIPs and Colorado's STIP must be ~~fiscally~~Fiscally constrainedConstrained. Under 23 C.F.R. Part 450, each project or project phase included in an MPO TIP shall be consistent with an approved metropolitan RTP, and each project or project phase included in the STIP shall be consistent with the long-range ~~statewide~~Statewide transportation-Transportation planPlan. MPO TIPs shall be included in the STIP either by reference or without change upon approval by the MPOs and the Governor.

**8.00 GHG Emission Requirements**

8.01 Establishment of Regional GHG Transportation Planning Reduction Levels

8.01.1 The GHG emission reduction levels within Table 1 apply to MPOs and the Non-MPO area within the state of Colorado as of the effective date of these Rules. Baseline values are specific to each MPO and CDOT area and represent estimates of GHG emissions resulting from the existing transportation network and implementation of the most recently adopted RTP for all MPOs and the 10-Year Plan in non-MPO areas as of the effective date of these Rules. Table 2 reflects the difference in Baseline levels from year to year assuming a rapid growth in electric vehicles across the State (940,000 light duty electric vehicles in 2030, 3.38 million in 2040 and a total of 97% of all light duty vehicles in 2050). Values in both tables take into account include estimates of population and employment growth as provided by the state demographer.

8.01.2 Regional GHG Transportation Planning Reduction Levels

Table 1: GHG Transportation Planning Reduction Levels in MMT of CO<sub>2</sub>e

Regional Areas	2025 Baseline Projections (MMT)	2025 Reduction Level (MMT)	2030 Baseline Projections (MMT)	2030 Reduction Level (MMT)	2040 Baseline Projections (MMT)	2040 Reduction Level (MMT)	2050 Baseline Projections (MMT)	2050 Reduction Level (MMT)
<u>DRCOG</u>	<u>14.9</u>	<u>0.27</u>	<u>11.8</u>	<u>0.82</u>	<u>10.9</u>	<u>0.63</u>	<u>12.8</u>	<u>0.37</u>
<u>NFRMPO</u>	<u>2.3</u>	<u>0.04</u>	<u>1.8</u>	<u>0.12</u>	<u>1.9</u>	<u>0.11</u>	<u>2.2</u>	<u>0.07</u>
<u>PPACG</u>	<u>2.7</u>	<u>N/A</u>	<u>2.2</u>	<u>0.15</u>	<u>2.0</u>	<u>0.12</u>	<u>2.3</u>	<u>0.07</u>
<u>GVMPO</u>	<u>0.38</u>	<u>N/A</u>	<u>0.30</u>	<u>0.02</u>	<u>0.30</u>	<u>0.02</u>	<u>0.36</u>	<u>0.01</u>
<u>PACOG</u>	<u>0.50</u>	<u>N/A</u>	<u>0.40</u>	<u>0.03</u>	<u>0.30</u>	<u>0.02</u>	<u>0.4</u>	<u>0.01</u>
<u>CDOT/Non-MPO</u>	<u>6.7</u>	<u>0.12</u>	<u>5.3</u>	<u>0.36</u>	<u>5.2</u>	<u>0.30</u>	<u>6.4</u>	<u>0.17</u>
<u>TOTAL</u>	<u>27.4</u>	<u>0.435</u>	<u>21.8</u>	<u>1.5</u>	<u>20.6</u>	<u>1.2</u>	<u>24.2</u>	<u>0.7</u>

8.01.3 Baseline Emissions Due to Projected Number of Light Duty Electric Vehicles

**Table 2: Baseline Emissions Due to Projected Number of Light Duty Electric Vehicles**

	<u>2025 Projections (MMT)</u>	<u>2030 Projections (MMT)</u>	<u>2040 Projections (MMT)</u>	<u>2050 Projections (MMT)</u>
<u>TOTAL</u>	<u>27.0</u>	<u>20.0</u>	<u>14.0</u>	<u>8.0</u>

8.02 Process for Determining Compliance

8.02.1 Emissions Analysis Requirements When Adopting or Amending an Applicable Planning Document - Each MPO and CDOT shall conduct a GHG emissions analysis using MPO Models or the Statewide Travel Model, and the MOVES Approved Air Quality Model, to estimate total CO2e emissions. Such analysis shall include, at a minimum the existing transportation network, and implementation of Regionally Significant Projects, and the GHG Mitigation Measures contained in the Applicable Planning Document. The emissions analysis must estimate total CO2e emissions in million metric tons (MMT) for each compliance year in Table 1 as long as the compliance year is not in the past and compare these emissions to the Baseline specified in Table 1. When adopting a TIP, the required emissions analysis will apply to one year corresponding with the last year of the TIP, using interpolation between Table 1 years if the last year of the TIP does not correspond to a designated year in Table 1. This provision shall not apply to MPO TIP amendments.

8.02.2 Agreements on Modeling Assumptions and Execution of Modeling Requirements. Prior to the adoption of the next RTP for any MPO, CDOT, CDPHE, and each MPO shall enter into an Intergovernmental Agreement which outlines CDOT, CDPHE, and MPO

responsibilities for development and execution of MPO Models or the Statewide Travel Model, and MOVES Approved Air Quality Model.

8.02.3 The State Interagency Consultation Team shall meet as needed to address any questions on the classification of projects as Regionally Significant, modeling assumptions, and projects that reduce GHG emissions.

8.02.3.1 At minimum, once every five years the State Interagency Consultation Team will reassess and improve the models, Induced Travel Elasticity assumptions, the scoring rubric for mitigations, and the methodology to track and verify GHG reductions from mitigations, based on how well they aligned with real world conditions, results of completed projects and past Induced Travel and GHG emissions data. Third-party experts will be invited to evaluate the reassessment and improvements, and share those findings publicly.

8.02.4 The localized GHG mitigation co-benefits must be commensurate with the localized harmful air pollution impacts of highway capacity projects in Disproportionately Impacted Communities.

8.02.5 Only the GHG emissions reductions from the approved list of GHG Mitigation Measures shall be counted toward compliance with the GHG reduction targets.

8.02.6 ~~3~~ By April 1, 2022, CDOT in consultation with the MPOs shall establish an ongoing administrative process and guidelines, through a public process, for selecting, measuring, confirming, and verifying GHG Mitigation Measures. The selected GHG Mitigation Measures will be incorporated, so that they can be incorporated into each of their plans in order to reach to assist in meeting the Regional GHG Planning Reduction Levels in Table 1. Such a process and guidelines shall include, but not be limited to, how CDOT and MPOs should determine the relative benefits impacts of GHG Mitigation Measures, and measuring and prioritizing localized benefits impacts to communities and Disproportionately Impacted Communities in particular. The mitigation credit awarded to a specific solution shall consider both aggregate and community impact.

#### 8.02.7 Timing for Determining Compliance

8.02.7.1 By October 1, 2022, CDOT shall update their 10-Year Plan and DRCOG and NFRMPO shall update their RTPs pursuant to § 43-4-1103, C.R.S. and meet the reduction levels in Table 1 or the requirements pursuant to § 43-4-1103, C.R.S and restrictions on funds.

8.02.7.2 After October 1, 2022

8.02.7.2.1 CDOT must for each Applicable Planning Document adopted or amended after October 1, 2022, meet either the reduction levels within Table 1 for Non-MPO areas or the requirements as set forth in Rule 8.02.6.1.18-05.

8.02.7.2.2 MPOs must for each Applicable Planning Document adopted or amended after October 1, 2022, meet either the corresponding reduction levels within Table 1 for each Applicable Planning Document adopted or amended after October 1, 2022, or the relevant MPO and CDOT each must meet the requirements as set forth in Rule 8.02.6.1.1 or Rule 8.02.6.1.2, as applicable This provision shall not apply to MPO TIP Amendments.

8.02.8 Demonstrating Compliance. At least thirty (30) days prior to adoption or amendment of any Applicable Planning Document except amendments to MPO TIPs, CDOT for Non-MPO areas and the MPOs for their areas shall provide to the Commission a GHG Transportation Report containing the following information:

8.02.8.1 GHG emissions analysis ~~and, if applicable, a GHG Mitigation Action Plan~~ demonstrating that the Applicable Planning Document is in compliance with the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1 or that the requirements in Rules 8.02.5.1.1 or 8.02.5.1.2., as applicable, have been met.

8.02.8.1.1 In non-MPO areas or for MPOs that are not in receipt of federal suballocations pursuant to the CMAQ and/or STBG programs, the Department utilizes 10-Year Plan funds anticipated to be expended in MPO areas and on 10-Year Plan funds anticipated to be expended on Regionally Significant Projects in non-MPO areas ~~these areas~~ on projects or approved GHG Mitigation Measures that reduce GHG emissions as necessary to achieve the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1.

8.02.8.1.2 In MPO areas that are in receipt of federal suballocations pursuant to the CMAQ and/or STBG programs, the MPO utilizes ~~shall award~~ those funds anticipated to be expended on projects or approved GHG Mitigation Measures that reduce GHG emissions, and CDOT ~~utilizes shall award~~ 10-Year Plan funds anticipated to be expended on Regionally Significant Projects in that MPO area, on projects or approved ~~that reduce~~ GHG emissions or approved Mitigation Measures, as necessary to achieve the GHG Reduction Levels in MMT of CO<sub>2</sub>e for each compliance year in Table 1.

8.02.8.1.3 The restrictions in 8.02.6.1.1 and 8.02.6.1.2 do not apply to projects which have been advertised for construction with funding identified prior to the adoption of the Applicable Planning Document.

8.02.8.2 Identification and documentation of the MPO Model or the Statewide Travel Model and the MOVES Approved Air Quality Model used to determine GHG emissions in MMT of CO<sub>2</sub>e.

8.02.8.3 An analysis of harmful air pollutant emissions and co-benefits showing how projects that reduce emissions were prioritized in Disproportionately Impacted Communities and how project-specific emissions reduction measures benefitted communities that were impacted by projects. This analysis must incorporate an evaluation of the level of community engagement in proposed projects and expected effect on Disproportionately Impacted Communities, including but not limited to answers to the “key questions” posed by Colorado’s Climate Equity Framework or a comparable framework that may succeed it.

8.02.8.4 ~~If Mitigation Measures are needed to count toward the reduction levels in Table 1,~~ the MPO or CDOT shall submit a Mitigation Action Plan that includes at the discretion of the MPO or CDOT, ~~submission of a~~ Mitigation Action Plan that identifies GHG Mitigation Measures, ~~if any, needed to mee~~ that will count toward the reduction levels within Table 1. The Mitigation Action Plan shall include:

8.02.8.4.1 The anticipated start and completion date of each measure.

8.02.8.4.2 An estimate, where feasible, of the annual GHG emissions reductions in MMT of CO<sub>2</sub>e achieved per year by any GHG Mitigation Measures.

- 
- 8.02.8.4.3 Quantification of specific co-benefits ~~where feasible~~ including reduction of harmful air pollutants ~~co-pollutants (PM2.5, NOx, etc.)~~ as well as travel impacts (changes to VMT, pedestrian/bike use, transit ridership numbers, etc. as applicable).
- 8.02.8.4.4 Description of benefits to Disproportionately Impacted Communities and a demonstration that the percentage of total investment for GHG mitigation measures in these communities was at least equivalent to the percentage of residents living in Disproportionately Impacted Communities within each MPO region. Colorado's Data Viewer for Disproportionately Impacted Communities should be used to retrieve this data, and the Colorado EnviroScreen tool currently being developed should take over this function when complete. For transportation projects that span multiple communities, CDOT or the MPO shall calculate the percentage of the project investment located within each community when determining compliance with the investment requirement.
- 8.02.9 Reporting on Compliance- ~~Following the submission of a GHG Transportation Report containing a Mitigation Action Plan, Annually by April 1, CDOT and MPOs must provide a status report to the Commission annually by April 1 on an approved form with the following items for each GHG Mitigation Measure identified in their most recent GHG Transportation Report:~~
- 8.02.9.1 The implementation timeline;
- 8.02.9.2 The current status;
- 8.02.9.3 For measures that are in progress or completed, quantification of the benefit or impact of such measures; and
- 8.02.9.4 For measures that are delayed, cancelled, or substituted, an explanation of why that decision was made.
- 8.03 GHG Mitigation Measures. When assessing compliance with the GHG Reduction Levels, CDOT and MPOs shall have the opportunity to utilize approved GHG Mitigation Measures as set forth in Rules 8.02.3 and 8.02.5.3 to offset emissions and demonstrate progress toward compliance. Illustrative examples of GHG Mitigation Measures include, but are not limited to:
- 8.03.1 The addition of transit resources in a manner that can displace VMT ~~including in rural areas where the public may travel to a community for work but live outside that area due to affordability of housing.~~
- 8.03.2 Improving pedestrian and bike access, particularly in areas that allow individuals to reduce multiple daily trips.
- 8.03.3 Encouraging local adoption of more effective forms of vertical development and zoning plans that integrate mixed use ~~and~~ in a way that links and rewards transportation project investments with the city making these changes.
- 8.03.4 Improving first-and-final mile access to transit stops and stations that make transit resources safer and more usable by consumers.
- 8.03.5 Improving the safety and efficiency of crosswalks for pedestrians, bicyclists, and
-

- other non-motorized vehicles, including to advance compliance with the ADA.
- 8.03.6 Adopting or encouraging the adoption of locally driven changes to parking policies and physical configuration that encourage more walking and transit trips.
- 8.03.7 Incorporating medium/heavy duty vehicle electric charging and hydrogen refueling infrastructure -- as well as upgrading commensurate grid improvements -- into the design of key freight routes to accelerate truck electrification.
- 8.03.8 Establishing policies for clean construction that result in scalable improvements as a result of factors like lower emission materials, recycling of materials, and lower truck emissions during construction.
- 8.03.9 ~~Adoption of~~Implementing or encouraging the adoption of transportation demand management practices that reduce VMT.
- 8.03.10 Encourage local adoption or expansion of school bus programs or school carpool programs to reduce private vehicle trips
- 8.03.11 Electrify loading docks to allow transportation refrigeration units and auxiliary power units to be plugged into the electric grid at the loading dock instead of running on diesel.
- 8.04 Air Pollution Control Division (APCD) Confirmation and Verification
- 8.04.1 At least forty-five (45) days prior to adoption of any Applicable Planning Document, CDOT for Non-MPO areas and the MPOs for their areas shall provide to APCD for review and verification of the technical data contained in the draft GHG Transportation Report required per Rule 8.02.65. If APCD has not provided written verification within thirty (30) days, the document shall be considered acceptable. The APCD shall submit any written verification to the agency adopting the Applicable Planning Document and to the Commission.
- 8.04.2 At least ~~forty-five (45)~~ thirty (30) days prior to adoption or amendment of policies per Rule 8.02.43, CDOT shall provide APCD the opportunity to review and comment. If APCD has not provided written comment within ~~thirty (30)~~ forty five (45) days, the document shall be considered acceptable.
- 8.05 Compliance Enforcement. The Commission, within thirty (30) days of receipt of a GHG Transportation Report or at the next regularly scheduled Commission Meeting, whichever is later, shall review all GHG Transportation Reports to determine whether the applicable reduction targets in Table 1 have been met and the sufficiency of any GHG Mitigation Measures needed for compliance.
- 8.05.1 If the Commission determines the requirements of Rule 8.02.65 have been met, the Commission shall, by resolution, accept the GHG Transportation Report.
- 8.05.2 If the Commission determines, by resolution, the requirements of Rule 8.02.65 have not been met, the Commission shall restrict the use of funds pursuant to Rules 8.02.65.1.1 or 8.02.65.1.2, as applicable, to projects and approved GHG Mitigation Measures that reduce GHG. Prior to the implementation enforcement of such restriction, an MPO, CDOT (upon concurrence with the applicable MPO) or a TPR in a non-MPO area, may, within sixty (60) ~~thirty (30)~~ days of Commission action, pursue issue one or both of the following actions: opportunities to seek a waiver or to ask for reconsideration accompanied by an opportunity to submit additional information:

8.05.2.1 Request a waiver from the Commission imposing restrictions on specific projects not expected to reduce GHG emissions.

8.05.2.1.1 By April 1, 2022, CDOT staff in consultation with the MPOs shall develop a waiver form for use by CDOT, MPOs or TPRs when requesting a waiver.

8.05.2.1.2 A waiver may be requested at any time, including concurrently with the submission of a GHG Transportation Report. The Commission may waive the restrictions on specific projects when applicants use CDOT's waiver form that specifies on the following basis:

8.05.2.1.34 The GHG Transportation Report reflected significant effort and priority placed, in total, on projects and GHG Mitigation Measures that reduce GHG emissions; and

8.05.2.1.42 In no case shall a waiver be granted if such waiver results in a substantial increase in GHG emissions when compared to the required reduction levels in this Rule.

8.05.2.2 Request reconsideration of a non-compliance determination by the Commission and provide a written explanation of how the requirements of Rule 8.02.65 have been met. A request for reconsideration must be submitted within thirty (30) days of Commission action.

8.05.2.3 The Commission shall act, by resolution, on a waiver or reconsideration request within thirty (30) days of receipt of the waiver or reconsideration request or at the next regularly scheduled Commission Meeting, whichever is later. If no action is taken within this time period, the waiver or reconsideration request shall be deemed to be denied.

8.05.3 Notwithstanding any other provision of this Rule, CDOT, DRCOG and NFRMPO must meet the requirements of § 43-4-1103, C.R.S.

## 8.06 Reporting

8.06.1 Beginning July 1, 2025, and every 35 years thereafter, the Executive Director on behalf of CDOT shall prepare for the Transportation Commission and Air Quality Control Commission a and make public a comprehensive publicly released report on the statewide GHG reduction accomplishments.

8.06.2 Beginning September 1, 2022, and annually thereafter, CDOT shall provide to the Transportation Commission a VMT report. The report shall provide total VMT per capita within the MPO areas and statewide for the past calendar year.

8.06.2.1 If three consecutive years of reports find that the observed and expected VMT per capita reductions are insufficient to achieve the GHG reduction targets established in Table 1, demonstrate no decrease in VMT per capita in one or more areas, the Commission shall consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this

8.06.3 Beginning September 1, 2022, and annually thereafter, CDOT shall provide to the Transportation Commission a Transportation Equity Report for Disproportionately Impacted Communities. The report will include:

[8.06.3.1](#) [Total mitigation investments in DI Communities for CDOT, each MPO, and statewide.](#)

[8.06.3.2](#) [A list of the individual mitigation projects.](#)

[8.06.3.3](#) [Quantification of the pollution impacts and co-benefits delivered to DI Communities. The Mitigation Policy Directive shall establish a list of qualitative and quantitative metrics to measure the impacts and benefits in DI Communities](#)

SIERRA CLUB, AND SOUTHWEST ENERGY EFFICIENCY PROJECT  
(COLLECTIVELY, THE “ENVIRONMENTAL COALITION”**

---

IN THE MATTER OF PROPOSED REVISIONS TO 2 CCR 601-22, RULES GOVERNING  
STATEWIDE TRANSPORTATION PLANNING PROCESS AND TRANSPORTATION  
PLANNING REGIONS

---

**November 18, 2021**

We want to thank the CDOT staff for their hard work on this rulemaking. The new draft is a marked improvement on the first draft and has addressed some of the issues raised by stakeholders over the past few months. We especially appreciate the outreach conducted by the staff and their willingness to set hearings throughout Colorado to receive feedback from the public on this important policy.

We believe the message the public has delivered to staff has been loud and consistent: There are still fundamental problems with the current draft. If these issues are not addressed, the regulations will fail to meet the greenhouse gas (GHG) reduction targets and will allow our current transportation policies and practices to continue to fail disproportionately impacted communities - leaving those communities with even worse air quality, and fewer and poorer transportation options.

We endorse the concerns raised by CC4CA in its November 11<sup>th</sup> letter. We have included a redlined version of their proposed changes to the rules as well as some additions that we have made that are discussed in this letter. (Exhibit 1.)

There are two issues we want to draw your attention to. The first is the failure to require mitigation measures in the rule. We believe the three-step process of (1) working on an Applicable Planning Document, (2) modeling the GHG emissions, then (3) adding the mitigation measures to come into compliance with the rule is overly complicated and may not lead to the real change in transportation planning that is contemplated by legislation and required by the climate crisis.

The second concern has been stated countless times in nearly every public hearing and in hundreds of comment letters received by CDOT: The draft does not adequately account for and prevent additional harm to disproportionately impacted communities.

## **DISCUSSION**

### **SIMPLIFY THE RULE IMPLEMENTATION BY REQUIRING CDOT AND THE MPOS TO SUBMIT A MITIGATION ACTION PLAN AS A PART OF EACH APPLICABLE PLANNING DOCUMENT.**

#### **Concern:**

The proposed rule separates compliance into three steps: (1) Preparing each Applicable Planning Document (8.02.1), (2) Preparing a GHG Transportation Report that contains modeling to determine if those plans fall short of meeting the GHG reduction targets (8.02.6), and (3) Preparing a Mitigation Action Plan (8.02.6.3) to close any remaining gap with a pre-approved list of GHG Mitigation Measures established in the forthcoming [Mitigation Policy Directive](#). This compliance structure overcomplicates the process, creates a double standard for GHG mitigation measures, and fails to implement the equity principles described in the rule's preamble.

According to the proposed rule language, the use of GHG Mitigation Measures and the Mitigation Action Plan are *optional*. Section 8.02.5 suggests that CDOT and MPOs *may* incorporate one or more GHG Mitigation Measures into their plans to reach the GHG reduction targets. Section 8.02.7.4 starts, “*If* Mitigation Measures are needed to count toward the reduction levels in Table 1, the MPO or CDOT shall submit a Mitigation Action Plan that includes at the discretion of the MPO or CDOT, submission of a Mitigation Action Plan that identifies GHG Mitigation Measures, *if any*, that will count toward the reduction levels within Table 1.”

The proposed rule requires a 1.5 MMT reduction in transportation GHG emissions reductions by 2030, an ambitious goal that is impossible to meet without significant investment in GHG mitigation measures. The rule should require the use of a common set of GHG Mitigation Measures to comply with the proposed GHG reduction targets.

The three-step compliance process creates a double standard for GHG mitigation measures with a lower bar for the Applicable Planning Document versus the Mitigation Action Plan.

The draft Mitigation Policy Directive “outlines the main categories of mitigation that will initially be allowable under the rule – transit improvements, pedestrian and bicycle access, land use, medium/heavy duty ZEV charging and fueling, parking management, transportation demand management, and clean construction.”

Notably, the Policy Directive specifically omits traffic system improvements:

“Traffic improvements that focus on improving traffic flow through either capacity expansion or technology measures that primarily benefit the flow of vehicular traffic without improving alternatives to driving single occupancy vehicles are not allowable for the purposes of approved mitigation. These types of improvements include lane capacity expansion, improvements to highway entrances and exits (e.g. ramp metering), intersection reconstructions for the purposes of improving the flow of traffic (e.g. roundabouts/diverging diamond intersections), signal timing improvements, and similar traffic technologies.”

The GHG impacts of these projects are unverifiable and according to [studies](#), the improved traffic flow from these projects is likely to induce *more* vehicle travel and the pollution that comes with it. In the draft Mitigation Policy Directive, CDOT takes a firm position on traffic system improvements and excludes them from consideration as GHG Mitigation Measures. However, these strategies remain eligible as GHG reduction strategies in the Applicable Planning Document evaluation, when CDOT and MPOs will use their travel demand model to calculate the systemwide GHG impacts of their plans. As a result, it is entirely possible for CDOT and MPOs to use a combination of ramp metering, roundabouts, and traffic signals improvements to demonstrate compliance with the rule.

The draft Mitigation Policy Directive includes important GHG mitigation strategies that are not traditionally included in the transportation planning process, like land use and parking management. As demonstrated by the DRCOG Scenario Planning and the CDOT Cost-Benefit Analysis compliance scenario, strategies like infill development are critical to reducing GHG emissions and vehicle miles traveled (VMT). This rule is a big opportunity to integrate transportation and land use planning. Such strategies must be a central part of the transportation planning process and not optional strategies to be considered only as a last resort.

In addition, the Mitigation Policy Directive describes a scoring system for projects with an “equity multiplier” to reward projects that deliver benefits to disproportionately impacted communities (“DI Communities.”) This is the only provision in the rule that directly improves equity, mobility access, and health outcomes in DI Communities. Therefore, it cannot be left as an afterthought in the case of noncompliance.

To give an example of how this might play out in practice – according to the proposed rule, DRCOG must demonstrate a 0.82 MMT reduction in GHG emissions by 2030. In a scenario where DRCOG models their plan and finds a 0.5 MMT reduction by 2030, they are then required to develop a Mitigation Action Plan with GHG Mitigation Measures to address the remaining 0.32 MMT. However, only the 0.32 MMT remaining gap is subject to the rigorous standards and

equity scoring put forth in the Mitigation Policy Directive. To improve equity and ensure consistency, CDOT and MPOs should use the same set of standards for all GHG reductions.

**Comparing the Mitigation Action Plan to the Applicable Planning Documents:**

	<b>Mitigation Policy Directive / Mitigation Action Plan</b>	<b>Applicable Planning Document</b>
<b>GHG Mitigation Measures</b>	Assigns a “GHG Working Group” to define and verify a set of GHG Mitigation Measures	Combines all projects and relies on travel demand model to calculate GHG reductions from the plan or program
<b>Traffic system improvements</b>	Excluded from GHG Mitigation Menu	Included in system wide travel demand modeling
<b>Co-benefits (co-pollutants, VMT reductions, transit, bike/ped use, etc)</b>	Must be quantified in the Mitigation Action Plan	No requirement
<b>Benefits to DI Communities</b>	Must be described in the Mitigation Action Plan	No requirement
<b>Equity</b>	Applies an “equity multiplier” to GHG Mitigation Measures to prioritize projects that deliver benefits in DI Communities.	No requirement
<b>Transportation / Land Use Nexis</b>	Includes calculators to measure the VMT and GHG impacts of transportation projects with certain land use characteristics.	Not considered

*Solution:*

To simplify implementation, ensure consistency, and clarify intent, the rule should:

- Require the use of GHG Mitigation Measures to comply with the GHG reduction targets in Table 1.
- Limit the allowable GHG reductions to the GHG Mitigation Measures listed and verified in the Mitigation Policy Directive. For example, CDOT and MPOs may not use traffic system improvements to reduce GHG emissions at any stage of the compliance determination.
- Require CDOT and MPOs to submit a Mitigation Action Plan alongside each Applicable Planning Document, with an overview of projects that increase GHGs and VMT, as well as projects that decrease GHGs and VMT.

- The Mitigation Action Plan must also include an Equity Report to quantify the mitigation investment, pollution impacts, and benefits delivered to DI Communities. The Mitigation Policy Directive shall include a list of qualitative and quantitative metrics to measure the impacts and benefits in DI Communities.
- Use the scoring criteria established in the Mitigation Policy Directive to prioritize GHG Mitigation Measures that maximize GHG reductions and deliver co-benefits, especially to DI Communities.

**See proposed redlines at Sections 8.02.1, 8.02.5**

## **IMPROVING EQUITY AND ACCESS IN DISPROPORTIONATELY IMPACTED COMMUNITIES (DI COMMUNITIES)**

In the latest draft of the rule, CDOT acknowledges the existing inequities in our transportation system and takes positive steps to address them by requiring a “geographic nexus” between project-level pollution impacts and mitigation, and by assigning an “equity multiplier” to GHG mitigation measures located in DI Communities. However, the rule does not do enough to guarantee benefits for DI Communities or to minimize the additional harm caused by new transportation capacity projects. Improving equity must be a top priority for this rule and better outcomes must be guaranteed.

Air pollution from highways impacts Black, Latinx, Indigenous, and low-income neighborhoods the most. When we look at reducing pollution from the transportation sector, the communities that have been hardest hit must directly benefit from any policies moving forward. Targeted investment in DI Communities is a precedent that has been clearly established on the state and national levels by initiatives like the Biden Justice40 Initiative, Denver’s 2A ballot measure, and Xcel Energy’s Transportation Electrification Plan.

To improve equity, reduce pollution, and expand mobility access in DI Communities, the rule must 1) Establish and a minimum GHG mitigation investment in DI Communities that is proportionate to the percentage of residents living in DI Communities and, 2) Require regionally significant projects in DI Communities to, at the very least, “do no harm.”

- 1) Establish a minimum GHG mitigation investment in DI Communities that is proportionate to the percentage of residents living in DI Communities.**

### **Concern:**

Applying an equity lens and “geographic nexus” to new transportation projects is absolutely critical, but is not enough to rectify the existing racial, health, and economic inequities in our transportation system. We are not starting with a clean slate, but rather one that has systematically prioritized the air quality, safety, and mobility needs of wealthier and whiter

communities at the expense of low-income communities and communities of color. As stated by the Northern Front Range MPO, the goal of environmental justice is to ensure

“disadvantaged populations do not face higher and more adverse impacts of public programs or projects than the rest of the population. Throughout history, low income and minority populations have endured discrimination, been excluded from the decision-making process, and have often faced more neighborhood and localized impacts, worse air quality, and fewer services.”<sup>1</sup>

Therefore, it’s not enough to “soften the blow” of new highway projects in DI Communities; we must also take concrete steps to measurably improve conditions in DI Communities. Without a minimum level of investment in DI Communities, this policy will continue to perpetuate the tradition of environmental racism in our transportation system, in which negative externalities like pollution continue to be discharged in low-income communities and communities of color.

Colorado’s Environmental Justice Act (HB21-1266) finds that, “the state government has a responsibility to achieve environmental justice, health equity, and climate justice for all communities by avoiding and mitigating harm.” In other words, climate policy is not exempt from perpetuating environmental racism, and the State of Colorado is responsible for imbuing all climate policy with environmental justice -- the urgent practice of rectifying disparities in pollution burdens, infrastructure, and access.

In the draft Mitigation Policy Directive, CDOT proposes a multiplier (value TBD) for GHG mitigation measures that “cross through or are in close proximity to a DIC”. We agree with this approach as a means to uplift and prioritize projects that improve equity. However, the multiplier does not guarantee a minimum investment in DI Communities and only applies to planned projects already in the pipeline. By requiring GHG Mitigation Measures in every applicable planning document (see above), and assigning a minimum threshold to DIC mitigation investment, the rule would secure measurable benefits for DI Communities and force CDOT and the MPOs to engage with local communities to understand their mobility needs and to develop new projects that reduce emissions and improve access.

*Solution:*

For Mitigation Action Plans submitted by CDOT or an MPO, the share of GHG mitigation investment in DI Communities must be equal to or greater than the share of the population living in DI Communities within the region. For GHG mitigation projects that span multiple communities within a region, CDOT and the MPOs shall calculate the percentage of the project investment located within each community when determining compliance.

---

<sup>1</sup> Northern Front Range MPO website: <https://nfrmpo.org/environmental-justice/> visited on 11/17/21.

CDPHE's [Data Viewer for Disproportionately Impacted Communities](#) displays the census block groups where 40% of households 1) are low income, 2) are housing cost-burdened, or 3) include people of color. According to the Data Viewer, 1,339,032 residents in the DRCOG region live in DI Communities, about 48% of the total population in the 8-county region. An equity-neutral transportation GHG planning policy would direct at least 48% of the GHG mitigation spending in both the Applicable Planning Documents and the associated Mitigation Action Plan toward these communities to guarantee a proportionate amount of climate, air quality, public health, safety, and mobility access benefits to all residents of our state. A policy that aims to improve equity and address historic disparities in health and transportation access, would direct an even greater share of the investment into DI Communities. We ask for at least a proportionate investment to avoid making a bad situation worse by inflicting additional harm on DI Communities.

*See proposed redlines at Section 8.02.8.4.4*

**2) Require regionally significant projects in DI Communities to, at the very least, “do no harm”**

Concern:

The second guiding principle in the updated rule states, “where regionally significant projects are projected to increase net greenhouse gas emissions, those emissions should be offset with project-specific mitigation measures that benefit communities that will be impacted by the project.” This language is well-intended, but the offset requirement is unclear. For example, it might be possible for CDOT to construct a highway capacity project that would increase pollution by 2%, but include mitigation measures like transit infrastructure or a bike lane that offsets only a fraction of that additional pollution, resulting in a net negative impact on local communities.

Solution:

For regionally significant projects in DI Communities, the emissions reductions from the mitigation measures must be commensurate with the pollution impacts. CDOT and MPOs should work diligently and authentically with local communities to determine the appropriate GHG mitigation measures and proximity to the new capacity projects. If a regionally significant project is expected to increase GHG emissions and the associated co-pollutants within a community already disproportionately exposed to air pollution, CDOT or the MPO must modify the project design and/or include project-specific mitigation measures to offset at least 100% of the additional pollution burden. Any lower percentage would only exacerbate existing health and pollution disparities.

*See proposed redlines at Section 8.02.4*

## CONCLUSION

We appreciate that CDOT has committed to building an Environmental Justice Branch within the agency and will be adopting a transportation equity framework.<sup>2</sup> We also understand that some of the benefits to disproportionately impacted communities are contemplated through the implementation of the Mitigation Policy Directive that may give additional weight or credit to those projects that benefit disproportionately impacted communities. However, we believe that the rule can and must do more. We offer these proposed changes in the hope that the goals of reduced GHG and addressing systemic inequities can and will be addressed in this rule and in the projects planned and built throughout the state of Colorado in the next 30 years.

Subject: GHG Reduction Planning Standard  
To: <theresa.takushi@state.co.us>

This is a legitimate public comment that was forwarded by a member of the CDOT staff to [dot\\_rules@state.co.us](mailto:dot_rules@state.co.us)

To the Colorado Transportation Commission,

I am writing today to express my enthusiastic support for the GHG Transportation Planning Standard. Our state and planet are at a tipping point, and nothing short of extraordinary measures will provide the course correction needed. Every summer our skies fill with wildfire smoke mixed with ground level ozone. Our dependence on automobile travel fuels sprawling and inefficient development patterns, long commutes, and a dependency on expensive metal boxes to live our lives. Many of the benefits of this rule will come from a reduction in driving (whatever the energy source of the vehicle), and for this reason I strongly support the additional focus on VMT reduction.

I lived for 10 years in Colorado without owning a car, and as a young single person with a tolerance for biking in all conditions, it was doable- but not easy. However, I have many friends who scoff at the idea of getting around without a private car, and for very legitimate reasons. Biking often requires taking chances with your life on dangerous roads with no bike facilities. Walking in our suburban cities is like a game of hop-scotch between fragments of sidewalks. Taking transit usually takes two to three times as long to get anywhere. How anyone could do this with kids or a disability stretches the imagination.

It pains me to see how much this state continues to spend on highway capacity expansion, and then lament the state of our air, our climate. The solution is obvious: we need a transformational shift in our spending away from roadway expansion and towards walking, biking and transit. I am hoping this rule will deliver.

The draft is strong, but could be stronger. Granting waivers for capacity projects if we are in a non-compliant state is preposterous. If we are failing to meet our targets, such a use of waivers would only dig us further in the hole. Waivers must be reserved for safety projects that will not increase emissions. If this change is not incorporated, at a minimum "significant increase in emissions" must be defined for the waiver process. If we are in a compliant state, and continuing to build roadway capacity projects, all such projects should be required to set aside a percentage (how about 10%) of their total cost for GHG reducing mitigation measures.

I urge you to adopt the strongest rule possible for the sake of our planet. Nothing less will do.

Thank you,

[REDACTED]

--  
Aloha,

Theresa

## Comments regarding the proposed Transportation Planning Process to reduce Greenhouse Gas Emissions

1 message

Thu, Nov 18, 2021 at 11:16 AM

Reply- to:

To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

Cc Governor Poli GOVOffice governorpoli @ tate co u , " hana lew@ tate co u " hana lew@ tate co u , "herman.stockinger@state.co.us" <herman.stockinger@state.co.us>

Dear Commissioners:

There needs to be a stop to the ongoing stream of rules and regulations created by government agencies under the Polis administration that are based on fraud

It is inexcusable, but not at all surprising, that the UPDATED RULE DRAFT 10/19/21 does not state explicitly what the benefits of the rule will be for the people of Colorado.

Instead, the draft rule contains a four-page, single-spaced preamble that is clearly written to create the implication that the draft rule will provide several idealistic benefits

However, as explained below, there is no question that

- The rule will do nothing to reduce global warming or climate change
- The rule will do nothing to reduce ozone levels in Colorado.
- The rule will provide no benefit whatsoever to Disproportionately Impacted (DI) Communities.

As written, the draft rule will make it difficult or even impossible to build projects that will improve traffic flow, reduce congestion, and improve the safety of our roadways.

As written, the draft rule will exacerbate congestion, which will cause a significant increase in greenhouse gas (GHG) emissions, a significant increase in emissions of ozone precursors, and a

significant degradation in the quality of life in Colorado.

As written, the draft rule will waste thousands of man-hours and tens of millions of dollars forcing agencies to jump through hoops with no benefit to the people of Colorado whatsoever.

The draft rule is a sham and should not even be considered for adoption by the Colorado Transportation Commission (Commission).

### **State the Benefits Directly and Clearly**

The preamble of the draft rule makes several references to legislation that claims to reduce climate change and improve air quality, such as HB19-1261 and Governor Polis's Roadmap. The preamble implies that the draft rule will address the issues it raises, but there is no statement in the draft rule anywhere that clearly defines what the benefits of the rule will be for the people of Colorado.

The preamble is deliberately deceptive. The people of Colorado do not need any more fraud in our government. If there are any benefits for the people of Colorado, the rule must state the benefits clearly, such as:

The Commission represents that the rule will achieve the following benefits for the people of Colorado:

- The rule will increase the snowpack by \_\_\_\_\_%
- The rule will reduce days of drought by \_\_\_\_\_%
- The rule will reduce the number of days over 90 degrees by \_\_\_\_\_%
- The rule will reduce the risk of wildfire by \_\_\_\_\_%
- The rule will reduce the occurrences of "more-frequent and severe flooding" by \_\_\_\_\_%
- The rule will reduce ozone levels in the non-attainment area by \_\_\_\_\_ parts per billion.

If the Commission cannot present what the benefits of the rule would be in clear, explicit detail, then the Commission should not adopt the rule.

### **Take personal responsibility**

Every person in a position of management at CDOT, every member of the Commission, and every other government official who supports this rule should be required to sign a statement that declares that they personally guarantee that the rule, if adopted, will provide the benefits listed above, and that they are prepared to accept any and all consequences personally if the benefits are not achieved

### **Quit lying about the benefit of reducing Greenhouse Gas Emissions**

The draft rule claims that legislation already adopted, such as HB19-1261 and the Governor's Roadmap, gives the Commission the authority to create the rule to achieve reductions in greenhouse gas (GHG) emissions. However, the basis for both HB19-1261 and the Roadmap is pure fraud

As written into HB19 1261, and repeated in the Roadmap, the entire premise for reducing GHG is shown as follows:

(Preamble)

Colorado is already experiencing harmful climate impacts, including declining snowpack, prolonged drought, more extreme heat, elevated wildfire risk and risk to first responders, widespread beetle infestation decimating forests, increased risk of vector borne diseases, more frequent and severe flooding, more severe ground-level ozone pollution causing respiratory damage and loss of life, decreased economic activity from outdoor recreation and agriculture, and diminished quality of life.

(Questionable Opinion)

Many of these impacts disproportionately affect rural communities, communities of color, youth and the elderly, and working families.

(Justification of the Bill and the Roadmap)

**Reducing statewide greenhouse gas pollution as outlined in this subsection (2) will protect these frontline communities, first responders, and all Colorado residents from these and other climate impacts.**

Anyone who believes that reducing GHG emissions within the state of Colorado will have any effect on reducing climate impacts within the state has no business having a job in state government, and certainly has no business being involved in any way in writing rules, regulations, or laws about emissions.

It is called “global warming.” We do not live in a bubble. Climate change is caused by global emissions raising CO2 levels in the atmosphere around the world.

In 2019, annual [global GHG emissions](#) were 57.4 Billion metric tons of CO2 equivalents. According to APCD, [Colorado produces](#) only about 120 million tons of CO2e. That means that Colorado produces only about 0.21% of the global total.

The single most objective measurement of global warming is the level of carbon dioxide (CO2) in the atmosphere. Due to man-made emissions, [CO2 levels have risen](#) about 137 parts per million from pre-industrial levels to about 415 parts per million in 2019.

If we eliminate all GHG produced in Colorado, we might reduce the level of CO2 in the atmosphere by 0.21% of 137, or about 0.3 parts per million. That means that if we spend tens of billions of dollars to eliminate all GHG in Colorado, CO2 in the atmosphere might drop from 415 to 414.7 parts per million.

Perhaps environmental extremist groups, and the Colorado Energy Office, can explain exactly what the effect would be to global warming if we eliminate 100% of GHG in Colorado.

This is Table 1 from the draft rule:

<u>Regional Areas</u>	<u>2025 Baseline Projections (MMT)</u>	<u>2025 Reduction Level (MMT)</u>	<u>2030 Baseline Projections (MMT)</u>	<u>2030 Reduction Level (MMT)</u>	<u>2040 Baseline Projections (MMT)</u>	<u>2040 Reduction Level (MMT)</u>	<u>2050 Baseline Projections (MMT)</u>	<u>2050 Reduction Level (MMT)</u>
<u>DRCOG</u>	<u>14.9</u>	<u>0.27</u>	<u>11.8</u>	<u>0.82</u>	<u>10.9</u>	<u>0.63</u>	<u>12.8</u>	<u>0.37</u>
<u>NFRMPO</u>	<u>2.3</u>	<u>0.04</u>	<u>1.8</u>	<u>0.12</u>	<u>1.9</u>	<u>0.11</u>	<u>2.2</u>	<u>0.07</u>
<u>PPACG</u>	<u>2.7</u>	<u>N/A</u>	<u>2.2</u>	<u>0.15</u>	<u>2.0</u>	<u>0.12</u>	<u>2.3</u>	<u>0.07</u>
<u>GVMPO</u>	<u>0.38</u>	<u>N/A</u>	<u>0.30</u>	<u>0.02</u>	<u>0.30</u>	<u>0.02</u>	<u>0.36</u>	<u>0.01</u>
<u>PACOG</u>	<u>0.50</u>	<u>N/A</u>	<u>0.40</u>	<u>0.03</u>	<u>0.30</u>	<u>0.02</u>	<u>0.4</u>	<u>0.01</u>
<u>CDOT/Non-MPO</u>	<u>6.7</u>	<u>0.12</u>	<u>5.3</u>	<u>0.36</u>	<u>5.2</u>	<u>0.30</u>	<u>6.1</u>	<u>0.17</u>
<u>TOTAL</u>	<u>27.4</u>	<u>0.436</u>	<u>21.8</u>	<u>1.5</u>	<u>20.6</u>	<u>1.2</u>	<u>24.2</u>	<u>0.7</u>

According to this table, the draft rule will achieve a TOTAL reduction of only 3.83 million metric tons of CO<sub>2</sub>e through 2050, which amounts to only about 0.006% of the global total of 57.4 Billion metric tons.

In terms of reducing CO<sub>2</sub> in the atmosphere, the draft rule might reduce CO<sub>2</sub> levels by 0.006% of 137 parts per million, or by 0.008 parts per million. That means the rule might reduce CO<sub>2</sub> levels in the atmosphere from 415 to 414.992 parts per million.

If the Commission is going to represent that the rule will have any effect on reducing climate change, the Commission needs to provide some sort of scientific evidence to show exactly what effect reducing CO<sub>2</sub> levels from 415 to 414.992 parts per million will have.

Any claim that the draft rule will help reduce the effects of climate change, and especially that the draft rule will reduce the effects of climate change in Colorado, is pure fraud.

### Explain the difference between the Draft Rule and APCD's GHG inventory update

The draft rule claims that it will reduce GHG emissions from transportation by a whopping 3.83 MMT between 2020 and 2050.

Explain how the rule relates to the [APCD Greenhouse Gas Inventory Update](#), which shows that GHG emissions from transportation are supposed to drop by 25.2 MMT of CO<sub>2</sub>e from 2020 to 2050, as shown in the table below:

#### Exhibit ES 2: Projected Colorado GHG Emissions by Sector 2020 - 2050 (MMTCO<sub>2</sub>e)

Emissions by Sector (MMTCO <sub>2</sub> e)	2020	2025	2030	2035	2040	2045	2050
Electric Power	24.039	21.000	8.000	6.177	4.295	3.243	2.192
Transportation	25.483	23.000	18.000	9.287	5.245	2.406	0.206
Residential, Commercial & Industrial Fuel Use	27.582	26.000	20.000	13.886	8.492	4.934	2.597
Natural Gas and Oil Systems*	20.767	11.600	7.100	7.109	5.259	3.409	1.559
Agriculture	10.661	10.641	9.673	8.588	7.639	6.690	5.741
Coal Mining & Abandoned Mines	1.819	1.786	0.536	0.197	0.188	0.180	0.173
Industrial Processes	4.694	3.500	2.900	2.602	2.206	1.695	1.057
Waste Management	4.459	3.072	2.031	2.412	2.436	2.454	2.463
Negative Emissions Technologies	0.000	0.000	0.000	-1.056	-1.744	-2.431	-3.119
<b>Grand Total</b>	<b>119.504</b>	<b>100.598</b>	<b>68.241</b>	<b>49.200</b>	<b>34.015</b>	<b>22.579</b>	<b>12.869</b>

The draft rule should explain whether the projected reduction of 3.83 MMT represents part of the reduction shown by APCD, or the reduction of 3.83 MMT is supposed to represent additional reductions above and beyond what APCD shows.

APCD claims that GHG emissions from transportation are going to drop by 25.2 MMT even without the rule. Why do we need this rule?

### **State clearly how the Rule will reduce Ozone**

The draft rule claims that the rule will reduce GHG by a total of 1.93 MMT through 2030. That amounts to 7.6% of the total current emissions from the transportation sector, according to APCD.

Assuming all the numbers are correct, then presumably the rule will also reduce ozone precursors from the transportation sector by the same 7.6% by 2030.

According to the RAQC, on-road vehicles produced 48 tons per day (tpd) of NO<sub>x</sub> and 32 tpd of VOC in 2020. If the rule achieves a 7.6% reduction in ozone precursor emissions, that means that the rule will reduce NO<sub>x</sub> by 3.6 tpd and VOC by 2.4 tpd by 2030.

According to the RAQC, from 2011 to 2020, we reduced anthropogenic NO<sub>x</sub> by 156.3 tpd and VOC by 226.5 tpd, but ozone levels have not dropped at all.

Since reducing NO<sub>x</sub> by 156 tpd over the past ten years did nothing to reduce ozone, explain how much the rule is going to reduce ozone levels by reducing NO<sub>x</sub> by 3.6 tpd over the next ten years.

Since reducing VOC by 226 tpd over the past ten years did nothing to reduce ozone, explain how much the rule is going to reduce ozone by reducing VOC by 2.4 tpd over the next ten years.

Any representation that the rule is going to have any effect whatsoever on reducing ozone levels is pure fraud.

## Quit lying about helping Disproportionately Impacted Communities

Just like every other document coming out of the Liberal Left, the draft rule makes reference to providing extra benefits to Disproportionately Impacted (DI) Communities.

While the preamble of the draft rule implies that the rule will provide some benefit to DI Communities, the draft rule makes no commitments to do anything that will actually provide any benefit whatsoever to DI Communities. Again, the preamble is deliberately deceptive.

It is Politically Correct these days to suggest that climate change and air pollution affect DI Communities, such as Globeville, more than other (read “middle-class and affluent white”) communities, such as Golden. As part of the rule, the Commission needs to define exactly the following:

- How does a declining snowpack affect people in Globeville more than people in Golden?
- How does prolonged drought affect people in Globeville more than people in Golden?
- How does the “more-frequent and severe flooding” (???) that we are supposed to be experiencing (along with the prolonged drought, no less) affect people in Globeville more than people in Golden?
- There has been a representation that wildfire smoke affects people in Globeville more than people in Golden because people of color are inherently less healthy than white people, which means that any additional health impact has more of an effect on them. This position is incredibly racist. Does the Commission believe that people of color are inherently less healthy than white people?
- There has been a representation that people in Globeville are affected more by the number of high-heat days than people in Golden because they have less access to air conditioning. That is probably true.

Explain how the rule is going to reduce the number of high-heat days in order to provide a special benefit to DI Communities and, especially, Globeville.

- There has been a representation that DI Communities are more affected by higher levels of ozone than other communities, again because people of color are inherently less healthy than white people. This representation is pure fraud.

The ozone monitor at La Casa is directly adjacent to Globeville, and it is about 9 miles upwind of the monitor at NREL, in Golden. The ozone levels at La Casa are routinely 5 to 10 parts per billion (ppb) less than the levels at NREL. So, are the “unhealthy” people in Globeville impacted more by an ozone level of, say, 68 ppb than the people in Golden when they are exposed to ozone levels of 78 ppb?

There are higher ozone levels all along the foothills than in Denver. Areas such as Roxborough Park, Lakewood, Boulder, Longmont, Loveland, and Ft. Collins all experience much higher ozone levels than Globeville and Elyria-Swansea. How many of these areas are considered DI Communities?

Any representation that the rule is going to provide special and additional benefits to DI Communities is pure fraud.

## Enforcement is impossible

The preamble of the draft rule includes this statement:

...it is declared to be in the national interest to promote transportation systems that accomplish a number of mobility objectives “**while minimizing transportation related fuel consumption and air pollution** through metropolitan and statewide transportation planning processes...”

The draft rule includes the following article:

4.03.3 Transportation systems planning by Regional Planning Commissions **shall include operational and management strategies to improve the performance of existing transportation facilities to relieve vehicular congestion and maximize the safety and mobility** of people goods, and services.

How exactly does the Commission expect to enforce any of the directives included in the draft rule when CDOT has been adamantly opposed to this obligation for years, with the direct support of the Commission?

CDOT has known for at least the past six years that it is possible to reduce congestion on I-25 through Denver and on I-70 in the mountains in a very short time and at a very low cost. CDOT management has been adamantly opposed to accepting the obligation in this article for at least the past six years, and the Commission has allowed CODT to take no action to reduce congestion.

If CDOT is going to oppose this article in the draft rule, how can the Commission expect CDOT to obey any article in the rule?

Any representation that CDOT will obey the rule once it is enacted is pure fraud.

The congestion on I-25 through Denver can be cut dramatically in a matter of weeks using simple traffic management techniques, such as improved signage, new striping, and additional ramp meters. The congestion on I-70 in the mountains can be improved in only a few weeks with just new signage.

Paul Jesaitis, the Director of CDOT Region 1, sent me an email stating very clearly that CDOT is not willing to use any “unproven” techniques, such as improved signage, new striping, and new ramp meters to reduce congestion on I-25 through Denver or on I-70 in the mountains.

Never mind that Jesaitis has wasted more than \$15 million on the so-called Smart 25 project by installing new ramp meters.

Three years ago I had a 45-minute conversation with Andy Karsian. He stated categorically that even if CDOT had the funds to implement simple improvements such as new signage, new striping, and additional ramp meters, CODT would never do anything to reduce congestion on I-25 through Denver or on I-70 in the mountains.

The managers at CDOT have abrogated their responsibility, and they have done so with the complete support of the Commission. Why should anyone support a new rule that is guaranteed to make traffic worse when CDOT and the Commission have already guaranteed that they will make traffic worse without the new rule?

**Stop lying about “induced demand”**

The single fastest way to reduce GHG and ozone precursor emissions is to reduce congestion on our highways. The window sticker on every car shows that cars have better fuel economy, and thus create lower emissions, when driving at steady highway speeds instead of in stop-and-go conditions similar to driving in a city.

Since CDOT refuses to reduce congestion using simple traffic management techniques, another alternative is to improve areas on roadways that cause congestion, such as poorly-designed interchanges, or to add capacity by adding another lane for traffic.

The draft rule opposes any action that reduces congestion by taking the position that improving the flow of traffic and increasing capacity will cause an increase in GHG emissions because the reduced congestion will result in "induced demand."

The concept that reduced congestion causes induced demand is pure fraud, and both CDOT and the Commission have already acknowledged that fact. If the addition of new capacity results in an immediate increase in traffic volume, that is because the demand already exists. The demand is not induced.

If I-70 in the mountains had three lanes in each direction, there would be higher traffic volume. There is existing demand for trips to the mountains that is not realized because people choose not to sit in congestion. Adding capacity would not induce new demand. The demand already exists.

CDOT and the Commission have both signed off on the fact that demand increases in spite of how bad congestion is, not because congestion is reduced. This table is from the I-25 GAP project between Castle Rock and Monument. It shows the projected traffic volumes for 2017, 2021, and 2040 based on different scenarios.

I-25 ENVIRONMENTAL ASSESSMENT TRAVEL DEMAND FORECASTING

A. Traffic Volumes

Table 6 presents forecasts of average daily volumes for 2021 and 2040 across each scenario. Volumes for scenarios including express lanes are broken down by general purpose (GP) versus Express Lane (EL) usage for the count location on I-25 north of Greenland Road.

I-25 Location	2017	2021			2040		
		No Action	3 GP Lanes	2 GP + Express Lane	No Action	3 GP Lanes	2 GP + Express Lane
I-25 S/O Plum Creek Pkwy	79,000	84,730	87,430	86,950	146,170	153,030	149,980

Note that volumes on I-25 for a given forecast year are highest for the 3 GP scenario, followed by the 2 GP + 1 express lane scenario, and finally the No Action scenario. Volumes on the parallel routes exhibit the opposite trend, i.e. they are higher when there is less capacity on I-25.

This document, created by CDOT and accepted by the Commission, shows that even if CDOT took no action in the GAP area, traffic volumes would increase from 79,000 vehicles per day to 146,170 vehicles per day, or an increase in traffic volume of 85%.

So, even if CDOT took no action, CDOT and the Commission believed that traffic would increase by 85%. Is that induced demand?

Demand increases as the population increases. The population of Colorado increased by 750,000 people from 2010 to 2020. Did 750,000 people move to Colorado because CDOT is doing such a great job of managing our roadways?

The representation that emissions will increase if congestion is reduced is pure fraud.

### **Do not adopt a new rule that cannot achieve any benefit whatsoever**

There is now way for the rule to achieve any benefit for the people of Colorado. A minimal reduction of GHG emissions, which will do nothing to reduce global warming or the effects of climate change, is not a justification for creating a rule to make it more difficult to reduce congestion.

The Commission should have stopped any consideration of this rule months ago.

In any event, the Commission must refuse to adopt the rule as written.

Sincerely,

STATE OF COLORADO

Subject: Support for GHG Reduction Planning Standard  
To: <theresa.takushi@state.co.us>

This is a legitimate public comment that was forwarded by a member of the CDOT staff to dot\_rules@state.co.us

CDOT Transportation Commission,

I would like to see our state make meaningful progress on climate change. It is frustrating to have our skies full of smog and wildfire smoke all summer long, and to see our winters and water supplies dwindling.

For these reasons, I support the GHG Reduction Planning Standard. Due to the transportation options available in Jefferson County, where I live and work, I have to drive to most places. I bike or ride RTD when I can, but for many trips this isn't feasible because there isn't a good bike route or taking transit would take three (or more) times as long. I would like to see more funding shifted towards walking, biking, and transit facilities so travel via these modes is more feasible.

I support making the GHG Planning Standard as strong as possible, including limiting the use of waivers to safety projects only. Thank you for your leadership in this area, and I look forward to your adoption of this rule next month.

Thank you,

[REDACTED]

143K

November 18, 2021

Colorado Transportation Commission  
2829 W Howard Pl  
Denver, CO 80204

VIA EMAIL SUBMITTAL to [dot\\_rules@state.co.us](mailto:dot_rules@state.co.us)

Dear Chair Hall and Commissioners,

The Colorado Department of Transportation (CDOT) recently announced a new transportation planning rulemaking to curb existing and future greenhouse gas (GHG) emissions based upon the recommendations of House Bill 19-1261 and Senate Bill 21-260. The Denver Regional Council of Governments (DRCOG) has also been tracking the proposed rules and has been meeting with CDOT related to such. DRCOG issued a letter to CDOT regarding the rules on October 7. There are several key provisions within this ruling, as well as potential mitigation measures that would be determined by CDOT through a process in the spring/summer of 2022. It is unclear at this time how these mitigation measures will be selected, measured, and managed overall by CDOT and DRCOG.

Arapahoe County certainly understands the issues associated GHG and environmental impacts of such. From that perspective, Arapahoe County plans for and delivers a variety of projects that are largely emission-reducing and multimodal-focused (congestion reduction, operational improvements, supported transit enhancement, pedestrian, bicycle, ITS) and fully supports increasing choices and options for the movement of people, goods, and services through our community and region. While fully supporting the goal of reducing gas emissions, this rulemaking and decision process causes some concern, mainly focused upon the overall management, administration of this process, and what the long-term goal of CDOT might be. The following is a list of our comments and items that require additional information regarding this Rulemaking for your consideration:

- GHG mitigation measures need to include consideration of various sub-regions as it relates to maturity of the transportation network and growth potential. This is of particular concern given the projected populations growth by demographers in high growth areas.
- The rule making process and then pursuit of mitigation measures after adoption is similar to ordering a car then when it shows saying you want a sunroof. The two elements really need to occur at the same time so that one can see how they are integrated together. If the process does not change, local jurisdictions should be included the development process for the “standards allowed for selection of GHG Mitigations” measures. This would allow valuable feedback in the development process for this new standard. These two elements, (rulemaking and establishing the mitigation criteria), really needs to occur at the same time so all parties involved can see how they are integrated.

- Colorado has an extensive backlog of transportation needs throughout the state, including CDOT as well as local jurisdictions. This of major concern as the proposal could mean less spending on roadways in need of improvements which could very well be the unintended or at worst the intended consequences of the rule making. The result of such policies could include additional congestion and less efficient use of the transportation system and increase in GHG emissions. Adopting a policy of forced congestion in the hopes of forcing mode shift has proven not to be a successful strategy.
- Clarifications on which projects would qualify for this ruling and support focusing on large “regionally significant” projects vs smaller operations and maintenance type projects. Exemptions should be granted to safety, operational and maintenance projects. Mitigation measures should focus on large “regionally significant” projects while the smaller operational improvement projects should also be exempt.
- Current/past investments in GHG reducing projects within a jurisdiction near future transportation projects should be factored into future funding applications as mitigations, as the cumulative effect of additional TDM-oriented and multi-modal investments can increase mode shift and provide a complete transportation option instead of single occupant vehicles. This is of particular concern within 8.02.6.3 of the proposed rule and the need for clarification.
- The major concern with GHG is focus in the Denver MPO area. With the goals and mitigation requirements shown to be significantly higher for this area, additional increase in the share of funding should be considered to assist these MPO’s ability to meet these higher goals and mitigations requirements. If this type of funding shift occurs, it will likely be a problem for the rural counties and mountain communities, (in non-congested areas), that are already facing limited funding concerns.
- The largest change in GHG reduction comes from the electrification of vehicles per CDOT’s reports. SB21-260 takes steps forward in jump starting that transition, but if this is the change necessary, CDOT should drive this change occurring as a primary mitigation measure and strategy to meet the goals expressed in this rule making.
- The most recent proposed rule has included provisions associated with vehicle miles traveled. (VMT). Starting September 1, 2022 and then annually, CDOT must provide a report to the TC documenting VMT/capita for MPO areas and statewide for previous years. If VMT/capita does not decrease for three consecutive years in any one area, the Transportation Commission shall consider revisions to the rules to achieve reductions in VMT consistent with the intent of the rule.

We are concerned the rule assumes an artificially low VMT year due to the global pandemic. While there can be a correlation between VMT and GHG emissions, GHG emissions are most directly related to fuel consumption, so improved vehicle operations that reduce congestion and delay will reduce GHG emissions even if VMT per capita does not go down. For example, traveling 20 miles on Parker Road from Arapahoe County to Denver has greater GHG than the same 20-mile trip in rural Arapahoe County. As a result, we would like the rule to remain focused on reducing GHG emissions as VMT is affected by many factors and not a good annual measure to trigger rulemaking. From these perspectives, we recommend striking this VMT requirement from the rule.

In closing, we want to thank you for allowing us the opportunity to provide this information to CDOT; and we look forward to working with you in moving forward to address our concerns regarding GHG rulemaking.

Sincerely,  
**ARAPAHOE COUNTY**

 **CSI Comments CDOT planning process rule 11.18.21 FINAL.pdf**  
142K

**Public Comment Submitted to the Colorado Department of Transportation  
Regarding the Proposed Rules Governing Statewide Transportation Planning  
Process and Transportation Planning Regions**

DATE SUBMITTED: November 18<sup>th</sup>, 2021

Dear Transportation Commissioners and CDOT Executive Director Lew,

Continued public investment in transportation infrastructure in Colorado is essential to meet the demands of a growing population and economy. A surface transportation system that facilitates the movement of goods and people decreases “friction,” lowers mobility costs, and, in particular, is vital to maintaining the economic viability of rural Colorado. Bolstered by both recent state and federal funding increases, the outlook for a more efficient and effective state transportation network should be brighter than ever.

Unfortunately, the recent cost/benefit analysis related to the proposed change in rules governing the Statewide Planning Process and Transportation Planning Regions indicates the exact opposite. Though the details are sparse, the summary results indicate that the proposed planning process and alternative selection process for new projects will cause additional traffic delays and decrease mobility.

The state recently passed laws requiring aggressive greenhouse gas emission reductions but meeting these requirements does not need come at the expense of the expanded capacity and diverse mobility needs across every region of the state. Implemented in the way outlined in the proposed rule may have the unintended impact of increasing GHGs.

Recent federal policy changes regarding the future of the vehicle fleet brings the current assumptions of emission from the transportation sector into question.

According to the Center for Climate and Energy Solutions (C2ES) <https://www.c2es.org/content/regulating-transportation-sector-carbon-emissions/>) there are dramatic decreases in the GHG emissions of new vehicles entering the market today, and even those vehicles in use today produce fewer emissions than those of 20 years ago. Specifically:

*In August 2021, the Environmental Protection Agency (EPA) proposed new greenhouse gas emission standards for new passenger cars and light-duty trucks. The proposed rule<sup>1</sup> requires automakers to improve average fuel efficiency by 10 percent from model years 2022 to 2023, followed by 5 percent annual increase from model years 2024 to 2026.*

*In addition to the proposed vehicle greenhouse gas emission standards, the National Highway Traffic Safety Administration (NHTSA) proposed new fuel economy standards<sup>2</sup> for new passenger cars and light trucks for model years 2024–2026. The standards would*

---

<sup>1</sup> <https://www.epa.gov/system/files/documents/2021-08/ld-ghg-stdnds-nprm-2021-07-29.pdf>

<sup>2</sup> <https://www.nhtsa.gov/laws-regulations/corporate-average-fuel-economy#40466>

*increase in stringency by about 8 percent each year, reaching a fleetwide average of 48 miles per gallon (mpg) by 2026.*

If you account for the changes in vehicle fleet mix (EVs/PHEV as an increasing share, and improved mileage) overall GHG emissions from motor vehicles are already on a downward trend. The one thing that can jeopardize this trend is increased congestion and enforced idling of vehicles. This situation decreases fuel efficiency, and increases people's reluctance to purchase EVs, since sitting in congestion is a significant contributor to "range anxiety."

The challenge facing regions across the state to meet these new restrictive planning requirements is affirmed by comments from the North Front Range MPO submitted earlier in the process:

*"The principles identified in the Preamble to the Rule could require much more extensive modeling efforts during the long-range planning process and overly restrict the types of projects eligible for reducing GHG emissions."*

The cost/benefit analysis of the Floyd Hill project reflects just how important large new capacity projects are both to improving the state's economic future and ensuring that road congestion does not become a policy objective.

The cost/benefit analysis associated with this proposed rule does not provide the certainty or a detailed understanding of how new capacity and efficiency improvements will be valued across the full spectrum of benefits they may provide. In particular, it is not clear exactly how fundamental changes in the mix of vehicles on our roads is being factored into infrastructure investment decisions.

Until many of the critical and precise questions raised by stakeholders have been addressed, and assurances that types of projects that the public expects will move forward so that people can recreate, get to work, ship goods, and visit family members, it is unclear why the rule as proposed should move forward given its potential for large unintended consequences.

Sincerely,

██████████

Subject: Green House Gas Emissions Rulemaking – Recommendations for a more equitable process

The undersigned members of the Denver-based Land Use Work Group (LUWG), including nonprofit advocacy organizations, nonprofit developers, Business Improvement Districts (BIDs), and residents tracking and amplifying local efforts while advocating for policy change to reflect the nexus of housing and transportation and ensure that investments in the built environment reduce racial disparities, maintain community, build a culture of health, and respond to the climate crisis.

Thank you CDOT for undertaking the project on Rules Governing Statewide Transportation Planning Process and Planning Regions and providing the opportunity for public comment. We appreciate the changes that have been incorporated into the revised rule and for the chance to further improve the rule to ensure we remain on track to meet the state's climate goals and address the needs of communities who have been disproportionately impacted by climate change.

The rule thoughtfully addresses the importance of multi-agency modeling, ensures mitigating measures stay local among road projects, explicitly acknowledges the role of induced demand, and many other modifications to mitigate transportation pollution. Nevertheless, the current rule still fails to adequately promote climate-friendly land use policies and center people and environmental justice.

The following recommendations seek to create a more equitable approach to reducing greenhouse gas emissions while centering the needs of Colorado's most disproportionately impacted communities (DICs):

**Center People and Climate Justice:** It is imperative that the rule is centered around communities that have been the most disproportionately impacted by the effects of transportation pollution. While the revised rule acknowledges the importance of mitigation investments that provide localized benefits to DICs, it fails to directly provide explicit measures for community benefit and does not emphasize the need for public engagement within decision-making processes. To strengthen climate justice and advance equity the rule should incorporate the following:

- Immediate adoption of a transportation equity framework must be a priority for CDOT. The framework should be vetted by community, modifiable to meet the unique needs of different communities, and equity measures should address community-voiced needs. Equity assessments should be used to inform the transportation equity framework by collecting and

analyzing community-shared information related to harmful transportation project development and pollution.

- Establishment of a Community Advisory Committee or Steering Committee comprised of community residents, organizations, youth, etc. charged with reviewing equity assessments submitted by community.
- Increased opportunities for community engagement and outreach to identify disparities among community. Community input should shape the specific equity metrics and outcomes used to measure the direct/project benefits related to improve air quality and mobility options and access among DICs.
- Resources for community informed processes to assess and co-create solutions that mitigate the health impacts of GHG emissions in DICs.
- Consider funding opportunities for Community Benefit Agreements among DICs based on project location and potential impact. OR provide funding for building capacity amongst community benefits groups.
- Elevated needs and benefits of equitable transit-oriented development, prioritizing projects that increase access to transportation, education work, food, goods, and services, etc.

**Reduction targets for VMT:** Reducing VMT serves as one of the best ways to permanently reduce transportation pollution. To meet the state’s climate goals, the rule should include explicit and measurable VMT reduction levels required by each planning region. Allowing three consecutive years of non-VMT reduction among MPO areas prior to conducting revisions, will not achieve VMT reductions that are necessary to meet state goals. Furthermore, we cannot consider VMT reductions without including smart land use strategies. To increase knowledge of the undoubtable connection between smart land use strategies and VMT reduction CDOT should:

- Consider local land use and development patterns and the extent to which they contribute to VMT per capita reductions for the proposed transportation project.
- Prioritize projects that incorporate additional smart growth strategies such as up zoning, mixed-use infill development, adaptive re-use, and transit-oriented development.
- Create a bonus for projects that advance equity by incorporating affordable housing and TDM programs that lower the combined housing and transportation costs for low-income households.
- Act swiftly to expand mitigation measures should any region fail to achieve the 2025 GHG or 2030 reduction targets. The reductions are cumulative – the lessons of climate change indicate that early action is the cheapest action.
- Ensure that RTD and other regional transit authorities are explicitly funded by name to guarantee certainty in service delivery going forward.

We appreciate your commitment and efforts to reduce greenhouse gas emissions from the transportation sector, improve air quality, and provide more travel options throughout Colorado, and your consideration of these recommendations.

Sincerely,

## CDOT Rule Making

1 message

Thu, Nov 18, 2021 at 11:56 AM

to: dot\_rules@state.co.us

Hello,

My name is [REDACTED] and I am a Northglenn City Councilmember.

I see the effect of climate change every day and I'm sure you have too. You turn on the news and you see other natural disasters ravaging a part of our world. Every year the fire season gets longer, the air gets thicker, and leaves now fall. This is a devastating reality for all of us.

The city of Northglenn has a Sustainability Action Plan which includes 97 existing sustainability initiatives. But the actions are not enough, we need to work with the state to ensure we reach the goal set by SB19-1261 and SB21-260 which establish statewide greenhouse gas emissions targets.

In order to follow-up on the work that has already been done, I am asking that we include added tracking and reporting of Vehicle Miles Traveled (VMT). This was avoided entirely in the original proposal, and the addition is important. There is also a major loophole that needs to be closed. We need to make sure that a highway capacity project (e.g., adding lanes) cannot be done and claim it as air pollution mitigation by saying that reducing congestion through capacity addition means less pollution because vehicles stop less. This is not the type of infrastructure work Colorado needs.

Some other key concerns include:

- The overall pollution reduction target (up to 15MMT) is too small. That isn't adequate because it still leaves a sizable gap that CDOT must figure out how to fill. This proposal would be stronger if a target is set at a level closer to the actual gap.
- The addition of VMT tracking and reporting is great, but there should be an actual VMT target.
- The provisions intended to protect at-risk communities (which CDOT refers to as "disproportionately impacted communities") need strengthening. In order for the rule to meet the equity intent of HB21-1266, it needs to specify how benefits and investments will be prioritized for Colorado's most impacted communities.
- CDOT may need to clarify that you can't double-count emissions reductions from EVs, which is a potential loophole that needs to be addressed.
- GHG mitigation measures should be required if a plan fails to meet GHG reduction targets. These measures absolutely should not be optional.
- The proposed waiver process should be limited to safety projects.

This proposal should result in significant progress towards meeting the GHG Roadmap's transportation sector emissions reduction targets.

The cost savings for Coloradans from adoption of this rule are conservatively estimated at a total of \$9.4 billion by 2030, and a total of \$40.3 billion by 2050. The three largest sources of cost savings come from reduced vehicle operating costs, safety, and traffic delay. And the two largest sources of safety (reduced

vehicle crashes) and traffic delay - make up over 2/3 of these savings, largely due to reductions in Vehicle Miles Traveled. VMT should be a primary goal of this rule and these economic benefits will be a win for all Coloradans, in particular for disproportionately impacted communities.

Northglenn is a city of families, of people, my constituents who want to ensure their children will have a livable planet for generations to come. As the mother of three young children I also share this sentiment as the work we do today will determine the quality of their lives.

There is a large push across the metro area to address our ongoing ozone non compliance status. In the next 10 years we'll see more electric vehicles on the road and we need to prepare our community for that large shift. Northglenn will continue to advocate regionally for solutions and take responsibility for electrifying our own fleet to set the example of good stewardship.

My constituent urgently demand aggressive action to reduce GHG emissions and avoid the worst impact of climate disruption. If we want a livable and vibrant planet to last we have to act now and that starts in my small community of Ward 3 and extends to all of Colorado.

Thank you to CDOT and the Transportation Commission for their leadership on this GHG planning rulemaking. This is an opportunity for Colorado to be a leader on climate friendly transportation planning.

Sincerely,

STATE OF COLORADO

**Re:** Comments on CDOT Proposed Transportation Planning Modifications to Address Transportation Sector GHG Emissions – Proposed Revisions to 2 CCR 601-22

**Date:** November 18, 2021

Passage of Senate Bill 21-260 and its environmental provisions encompassed within its Section 30 set in motion an expedited rulemaking process intended to dramatically change the infrastructure investment priorities of Colorado’s Department of Transportation from roadway safety and congestion improvements to multi-modal transportation modes with the purpose of significantly reducing vehicle miles traveled.

The operative one size fits all approach of the rule, taken with the desires and pressure of the environmental community as articulated in public testimony and written comment and the GHG Reduction Roadmap, present a myriad of avenues to threaten an ongoing investment in congestion relief, capacity improvements and operational strategies of critical regionally significant corridors across Colorado. Left unfunded, the resulting

flow of traffic will be impeded, safety will be compromised, and air quality will be impacted from heightened emissions from congestion.

Rule change and mission shift are the prerogative of the state's political leaders and administration officials. It is incumbent upon our leaders, however, to be intellectually honest with Coloradoans about the intent of the rule, the methodologies and data used to substantiate the rule requirements, assure the rule requirements are attainable, and that the costs of the rule – financial, cultural, social and quality of life – are fairly and accurately estimated and considered.

The North Front Range MPO<sup>1</sup> and Weld County<sup>2</sup> have done remarkable work bringing to the fore the significant shortcomings of the proposed rule and its revisions. We commend and concur firmly in their detailed analysis, feedback, and recommendations for modifications to the rule. We strongly urge your careful and thoughtful consideration of their work that is done with the intent to be constructive, practical, and pragmatic in achieving the goal of reducing GHG from the transportation sector.

Below we highlight a number of challenges with the rule that the Commission should consider as you move forward with a new planning process to reduce GHG emissions from the transportation sector.

### **Include Capacity Improvements and Operations Strategies in the GHG Mitigation Measures**

- Under the rule revisions, roadway capacity improvements to address congestion and operational strategies that can include technology improvements that improve the flow of traffic are specifically disallowed despite no technical basis provided in the rule. Capacity improvements and operational strategies should be allowed mitigation measures for regionally significant projects.<sup>3</sup>

### **Remove the requirement to require CDOT to measure Vehicle Miles Traveled (VMT)<sup>4</sup>**

- The revisions to the rule that require CDOT to measure VMT is an unsubstantiated expansion of the rule provisions. There is not a 1:1 correlation between GHG emissions and VMT and any requirement to reconsider the provisions of the rule should be solely tied to GHG reductions.
- Data modeling associated with the proposed rules focus on vehicle miles traveled and do not incorporate other pertinent factors. In response to a report by RMI, Executive Director Lew noted the importance of other necessary factors when applying modeling data, arguing, "The [RMI] report appears to look only at a simple calculation of lane mileage, omitting a broad range of other factors pertinent to traffic modeling that affect vehicle miles traveled, mitigations, and the geographic nuances of individual projects. Taking

---

<sup>1</sup> North Front Range MPO, November 5, 2021 [Written Comments](#)

<sup>2</sup> Weld County Board of County Commissioners, November 18, 2021 Written Comments

<sup>3</sup> Id. NFRMPO, page 7

<sup>4</sup> Id. NFRMPO, page 11

any single variable out of context tends to lead to misleading conclusions that fail to reflect the full costs and benefits of a more comprehensive project."<sup>5</sup>

- VMT reduction strategies often rank among the costliest and least efficient options to reduce GHG. In contrast, less intrusive policy approaches such as improved [fuel efficiency](#) and traffic signal optimization are more likely to directly reduce GHGs than behavioral approaches such as increasing urban densities to promote higher public transit usage. As a general principle, policymakers should begin addressing policy concerns using the least intrusive and costly approaches first. Climate change policy should focus on directly targeting [greenhouse](#) gas emissions (e.g., through a carbon tax) rather than using the blunt instrument of VMT reduction to preserve the economic and social benefits of mobility in modern, service-based economies.<sup>6</sup>

### **Overall Costs in Cost Benefit Analysis are too low by \$14 Billion**

- The Cost Benefit Analysis goes to great lengths to demonstrate the economic benefits of the rule. The overall costs, however, are poorly calculated and are too low by a factor of four – \$14 billion. We urge you to pay particular attention to NFRMPO's very thorough critique of the Cost Benefit Analysis<sup>7</sup>. Using the same methodology used in the CBA, the NFRMPO estimates the costs of the rule at \$18.8B, a four-fold difference from the final number of only \$4.5B in the CBA. A fair question is why does the CBA severely underestimate the costs of the rule? An answer or modification to the CBA should be secured before passage of the rule.

### **SB 260 Accelerates Electric Vehicle Adoption and Reduction in GHG Emissions from Sector**

- To accelerate the shift in electric vehicles, newly inaugurated Governor Polis signed his first executive order in January 2018 to accelerate the electrification of cars, buses, trucks, and other vehicles in Colorado. The Governor set a goal of 940,000 electric vehicles on the road by 2030.<sup>8</sup>
- The funding, enterprise structures, and policy directives encompassed within SB 21-260 work to realize the goals of Executive Order B 2019 002 and the GHG Roadmap. An analysis of SB 21-260 published by the Southwest Energy Efficiency Project (SWEET) finds that "we can expect about 75% of 2030 [GHG] reductions to come from more energy-efficient and electric vehicles."<sup>9</sup>
- SB 21-260's EV provisions were structured to lower the upfront cost of EVs, increase model availability, and expand EV charging infrastructure. The bill's funding components will raise \$734 million for EVs, the largest investment in EVs of any state outside California.

### **Rule will have Negative Economic Impacts upon Disproportionately Impacted Communities (DICs)**

- The Rules and their intended and consequential reduction of investment in congestion relief and capacity improvements will negatively impact and place unequal burdens on disproportionately impacted communities, particularly low income workers, and conflict with the intent of [HB21-1266](#), the Environmental Justice Act.
- Low income and hourly employees are more likely to hold positions that must be performed in person at the worksite. Positions in the service industry and those that involve manual labor usually cannot be performed remotely. White collar and professional employees can often perform their work remotely and may reduce their time spent commuting by doing so. Low income and hourly employees would instead increase their time spent commuting. Commuting by mass transit, carpool, or vanpool takes more time than driving directly from home to work with no stops. Consequently, these employees would lose time out of their day, with their families and other activities.
- Various mitigation measures to reduce VMTs, in particular, from parking fees to other mandated inconveniences, will burden low-income workers disproportionately. Low income and hourly employees are more susceptible to parking charges because they have less ability to work remotely, may live in neighborhoods with less access to transit, and are less able to afford the parking charges when they drive to work.
- The rule impacts economic opportunities, making it more difficult for those in DICs to travel from their communities to places of work. For example, a construction worker living in Adams County (identified as [DIC per the State's Data Viewer](#)) will face more challenges to retain that job with increased transportation costs and the time necessary to travel to work. Compared to the executive-level person living in Fort Collins, that will more easily absorb the increased cost and time requirements to travel to their job in downtown Denver.
- CDPHE is engaged in extensive outreach and development of the [Environmental Justice Action Task Force](#). This task force aims to develop state agency-wide EJ strategies that consider key definitions, including defining "disproportionately impacted community".

### **Women, Quality of Life and Equal Job Opportunities Impacted by Proposed Rule**

- Studies show that women are more likely to link different trips, or "trip chain," on the way to and from work. This is especially true for women with younger children. Yet restricting an individual's ability to drive to work makes trip chaining difficult or impossible. Mitigation measures intended to reduce VMTs would likely increase commute time, while at the same time limiting an individual's flexibility to combine trips to accomplish other tasks, e.g., pickup from daycare. Limitations in travel flexibility may significantly burden women, who are more likely to trip chain, and therefore impose a disparate impact.
- Mitigation measures and requirements and reduction of investments in congestion mitigation/capacity improvements could diminish work and advancement opportunities for women and compound the current "She-Cession." The pandemic's economic upheaval created disproportionate negative impacts

for women, and policies that result in hindered travel will greatly impede women's recovery as their job opportunities could be limited due to required commute considerations. Despite the unfolding economic recovery from the pandemic, the impacts on women continue. In the U.S., over 2.1 million women left the labor market entirely since the beginning of the pandemic and are not yet looking to return to work.<sup>10</sup>

- The ability and decision for these women to re-enter the workforce is dependent upon their accessibility to jobs that consider their ongoing responsibilities and their time constraints. Research from the UK suggests a gender commuting gap is a reality that may impact women's wages and work opportunities. According to the study by the Office for National Statistics (ONS), women are more likely than men to commute for 15 minutes or less. Men, on the other hand, made two-thirds (65%) of the commutes lasting an hour or more.<sup>11</sup>
- Working closer to home due to parental responsibilities may limit women's chances of finding a high-paying job, or one that offers the best prospects for developing their careers, and it may be yet another of the many factors that contribute to the gender pay gap.
- The prospect for women under the proposed rule in the workplace environment, in consequence, will have a compounding detrimental impact upon women emerging from the pandemic, reentering the workforce, career advancement, and accelerating economic conditions.

### **Induced Demand Theory Inconclusive and Misapplied**

- The theory of "Induced Demand" is not universally agreed upon by transportation planning experts. In response to RMI<sup>12</sup>, CDOT Director Lew stated "Induced demand is not a one-size-fits-all [theory] and the actual use patterns along the corridor must be considered."<sup>13</sup>
- Weld County, in their comments, "believes that CDOT misapplied the phenomenon of induced travel", explaining, "The majority of research reviewed and used by CDOT to support the rationale of induced travel in the Proposed Rule is based on roadways in California and, particularly, those that exist in an urban context."
- The higher concentration of cars idling will negatively impact our emissions. Director Lew identified this concern as well in her response letter to RMI in early 2021 stating, "Models that include induced demand should also factor pollution from sitting in traffic to have accurate pros/cons..." She continued, "we fully agree that induced demand needs to be modeled on capacity projects and, again, CDOT is taking the lead on building out these models (an area in which we are well ahead of many of our counterpart agencies). However, it is also true that sitting in traffic creates pollution. Both need to

---

<sup>10</sup> <https://www.bls.gov/bls/newsrels.htm> #latest-releases

<sup>11</sup> The commuting gap: men account for 65% of commutes lasting more than an hour, Office for National Statistics, November 7, 2018.

<sup>12</sup> [If You Build It, the Cars \(and Pollution\) will Come](#), RMI, April 21, 2021

<sup>13</sup> Id. CDOT.

be included to accurately assess net impact. For us to assess the accuracy of the new model, we would need to fully understand how it incorporates sensitivities that are key to accurate traffic modeling."<sup>14</sup>

### **Lack of Clarity Throughout Rule Ripe for Litigation**

- The rule is permeated by ambiguous terms, expectations, and modeling. The lack of clarity around key questions will only create questions during implementation and likely inconsistency of application or interpretation. Such ambiguity leaves the rule – and projects – ripe for litigation, further impeding forward progress on important transportation projects across the state. We only look to water storage projects and the extended litigation that has interfered with the building of water projects over the years to appreciate the challenge of ambiguity.

### **The rules fail to consider the impacts of COVID on Commuting and Workforce.**

- The natural occurrences resulting from the pandemic have decentralized the workforce, changed commuting behaviors and residential living, and have reduced transit ridership.
- The way of work is changing and the rule doesn't reflect the future. Today's employer is sensitive to the needs of its workforce. In a post-pandemic era, employers, where possible, are offering flexible work schedules with an appreciation for the productivity of its workforce without the in-office oversight. Gone are the days of 9-5 and welcome are the days of get your work done on your schedule. This new quality of life will bring with it a complete shift in traffic patterns, vehicle use, transit needs and congestion relief.
- Similarly, rehiring of employees comes with it the pursuit by potential employees of flexible work schedules, work from home/remote work options. Through the experience of the last 17 months, employees gained clarity around what they want and what their employer is willing to provide. At least 70% of U.S. workers say they would prefer to switch to a hybrid [work-from-home schedule](#) or stay remote full time, a recent survey by the Society for Human Resource Management found.
- Job recruiters are adjusting their counsel to employers to consider the new expectations, advising that "whereas remote work used to be seen as a perk, it's become an everyday reality for many – and they're not going back to commuting."<sup>15</sup>
- Many companies' policies have shifted to reflect that permanent remote work is the future of work—pandemic or not. By 2025, an estimated [70% of the workforce will be working remotely](#) at least five days a month.<sup>16</sup>
- The percentage of workers permanently working from home is expected to double in 2021, [according to a survey from Enterprise Technology Research \(ETR\)](#). "The productivity metric is proving that remote work is working," said Erik Bradley, chief engagement strategist at ETR. "So, we all thought that there

---

<sup>14</sup> Id. CDOT

<sup>15</sup> Forbes Human Resource Council, [The Return To Office And Return To Job Hopping: What Recruiters Need To Know Now](#), Forbes, July 8, 2021

<sup>16</sup> Rani Molla, [How remote work is quietly remaking our lives](#), Recode

would be some increase in permanent remote work, but we didn't expect that to double from pre-pandemic levels."<sup>17</sup>

- [Another recent Gartner CFO survey](#) revealed that over two-thirds (74%) plan to permanently shift employees to remote work after the Covid-19 crisis ends.<sup>18</sup> [Big Tech companies are paving the way. 30 major companies](#), many with a presence in Colorado, have switched to long-term remote work.<sup>19</sup> As the trend continues to build – and the competition for employees intensifies - other large employers will follow suit.
- Most large employers across the state and MPO have begun to shift their expectations of their workers where possible. This response to the pandemic, this experience, is still unfolding. The final look at how our traffic and commutes will change won't be a factor of mitigation measures but natural market forces.
- Commuter behavior has already begun to change with the pandemic experience as more folks will continue to work from home and/or have a blended, more flexible schedule for work.
- New traffic hours that more closely reflect errands and work from home habits in which your days are managed on your time and convenience, not that of the employers.
- Indeed, congestion relief will result in air quality improvements. This type of behavior modification and air quality benefit is desired by the ruleset. It's coming. Not by the imposition of a government mandated behavior change but by the natural unfolding of an experience in which productivity wasn't harmed by work from home, in many cases it was improved.

### **One-Size Fits All Approach Creates Greater Challenges for Rural Colorado**

- The revised GHG mitigation measures present even more challenges for rural Colorado and disproportionately impacted communities since non-MPO or TPA mitigation measures will no longer qualify or be counted toward mitigation.
- Commitments made to rural Colorado are still important, yet these rules redirect those commitments. CDOT Executive Director, in a letter earlier this year, noted, "integrating intercity transit into key corridors like I-25 and I-70, expanding our Bustang outliner system to rural areas that are underserved by transit, supporting main streets throughout the state through a first of its kind effort to support active transportation and outdoor commerce on state and local roads that anchor communities... [these projects] integrate these priorities into our governance of Colorado's roadway system as the state grows"<sup>20</sup>. With capacity limitations, these projects will be difficult to get approved.

## Comment on Greenhouse Gas Emissions Reduction Opportunities

1 me age

Thu, Nov 18, 2021 at 11:59 AM

To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

Hello,

I work for the Town of Breckenridge as the Sustainability/Alternative Transportation Administrator, tasked with helping the Town reach our sustainability goal of reducing greenhouse gas emission (GHG) 50% by 2030 and 80% by 2050 (relative to a 2005 baseline).

The only way we can reach these goals is with support from the State, by having CDOT include Greenhouse Gas Emissions Reductions baked into their transportation planning standard. This will help our community improve quality of life and air quality, provide opportunities for improving active transportation options, and provide a necessary positive impact on how Coloradan are able to travel

Here in Breckenridge, we are committed to taking action to help curb climate change, but we cannot do it alone. Our town is very interested in expanding sidewalks, bike paths, bringing online an e-bike share program, "complete streets" efforts, and expanding public transit service to reduce the need for people to drive in our town. We have state Highway 9 that runs right through the middle of our community, and having CDOT incorporate greenhouse gas emissions reductions as part of its planning process will be key to our sustainability goal moving forward, and helping us provide a multitude of transportation options besides just putting more vehicles on the road.

Thank you for hearing our comments and for your consideration.

Kind regards,

November 17, 2021

Colorado Transportation Commissioners  
Colorado Department of Transportation  
2829 West Howard Place  
Denver, CO 80204

Colorado Transportation Commission:

Thank you for your service to the state of Colorado.

As you no doubt have seen, the CDOT rulemaking effort to reduce GHG emissions has been met with intense interest and apprehension. It is vital that the Department view the rulemaking exercise while taking the widest possible view of the needs of the people of Colorado. As leading proponents of Senate Bill 260, we are concerned about the direction of this rulemaking due to the unintended consequences for future road-building projects. We offer the following comments to realign this process in a way that better reflects the intention of bill supporters and CDOT's historic purpose as spelled out both in the original legislative declaration and CDOT's current website.

During the months long debate on SB 21-260 a reduction in Vehicle Miles Traveled (VMT) was not stated as a goal and yet, it has reared its head in this rulemaking. Colorado is a growing state that has not dedicated the resources necessary to its highways system to meet that growth, let alone the coming growth. The state demographer's office projects a 49% increase in the Colorado population between now and 2050, as it expects our 5.8 million to swell to 8.7 million. Our infrastructure is not ready for this growth and SB 21-260 was passed, in part, to prepare for this future. Colorado needs more capacity in its highway system, not less. The rule, as proposed, could slow down or even prohibit the very projects we so desperately need.

Shutting down projects that allow people to travel in their vehicles through less congestion will decrease both mobility and economic freedom. The rallying cry from the business community for Senate Bill 260 was to deliver *safer roads and less traffic congestion*. At no point was removing people from their cars on the table. Rather, SB 21-260 significantly invested in multimodal projects as well as alternative transportation. These investments are nudges that incentivize people away from single-occupancy vehicle travel. A rule that requires the tracking and year-over-year reduction in vehicle miles traveled is not a nudge, it is a requirement. Furthermore, reduced VMT is plainly not necessary for GHG reduction and therefore has no place in this rulemaking.

An increase in VMT, which might be expected from our rapidly growing population, will not necessarily translate into an increase in GHG and other emissions. As technology improved and older higher-emitting vehicles cycled out of service, the Denver Metro region saw a 50% decrease in GHG and other emissions alongside a 25% increase in VMT over the past 10 years, according to data collected by the RAQC. Clearly, a reduction in VMT is not necessary to reduce GHG and other emissions. Therefore, it is surprising to see a VMT report detailing a year-over-year reduction goal included in this rulemaking.

Colorado Concern, an alliance of more than 130 CEOs representing every sector of the Colorado economy, strongly advises that sections 8.06.2 and 8.06.2.1, within Reporting, be removed from the Greenhouse Gas Pollution Reduction for Transportation Planning Proposed Standards.

~~*8.06.02 Beginning September 1, 2022, and annually thereafter, CDOT shall provide to the Transportation Commission a VMT report. The report shall provide total VMT per capita within the MPO areas and statewide for the past calendar year.*~~

~~*8.06.2.1 In three consecutive years of reports demonstrate no decrease in VMT per capita in one or more areas, the Commission shall consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this rule.*~~

In 2019, the Colorado Department of Public Health and Environment promulgated the Colorado Low Emissions Automobile Regulation, which required automakers to increase the percentage of Zero Emissions Vehicles (ZEV) available for sale. Even without additional federal or state mandates, vehicles will continue to get cleaner, no matter their power source. Thus, it is likely that GHG reductions naturally occur through innovation, technology, and rising consumer demand for lower-emitting vehicles. Therefore, we urge the Commission not to get sidetracked creating what is likely to become a predicate for VMT reduction mandates that would restrict CDOT's ability to meet its most basic obligation, as stated on its website:

*The Colorado Department of Transportation (CDOT) exists to ensure that Colorado has a safe and efficient highway system by building and maintaining interstates, U.S. highways and state highways.*

Reducing VMT is not the role of government, it is not the role of CDOT, and it is not the role of employers as seen from the failed Employer Trip Reduction Program rulemaking process. There is no appetite among the business community for government mandates that restrict the mobility options of Coloradans. We strongly discourage CDOT from getting into the business of tracking and altering VMT. This kind of governmental overreach is unnecessary to achieve the primary goal of this rulemaking, which is to reduce GHG and other emissions. Please remain focused on the top line goal of GHG reductions.

Finally, the leaders at Colorado Concern recommend that all GHG and other emissions reduction targets be measured against population. Our rapidly growing population could easily distort real emissions reduction

progress and unnecessary stall or sideline much needed capacity projects if the GHG goals are not considered on a per capita basis. We are confident in our state's ability to achieve per capita GHG reductions, especially in light of the newly established low emissions vehicle (LEV) and ZEV standards established by the state in 2019.

If total removal of VMT is not possible, we advise the following in-line edits to the previously mentioned sections.

*8.06.02 Beginning September 1, 2022, and **biennial** thereafter, CDOT shall provide to the Transportation Commission a **per capita GHG reduction report** which it may obtain from data derived by CDPHE and may include a summary of VMT per capita within the MPO areas and statewide for the past calendar year; if a VMT per capita report is prepared it shall include a report citing the ratio of public tax dollars spent on new public transportation spending to VMT per capita reduced.*

*~~8.06.2.1 In three consecutive years of reports demonstrating no decrease in VMT per capita in one or more areas, the Commission shall consider revisions to these rules in order to achieve reductions in VMT consistent with the intent of this rule.~~*

Colorado Concern appreciates the opportunity to share feedback on this proposed rule and is committed to remaining an engaged partner with CDOT as we address our infrastructure backlog.

Sincerely,

President & CEO  
Colorado Concern

CC: Executive Director Shoshana Lew

Department of Transportation and Transportation Planning Commission

RE: Comments from Teller County Board of County Commissioners on Greenhouse Gas Rulemaking

November 18, 2021

Honorable members of the Transportation Department and the Transportation Commission,

The Teller County Commissioners have significant concerns over the proposed rules for the reduction of Greenhouse Gas emissions pursuant to 2 CCR 601-22

Regional travel demands are a by-product of our environment in Teller County and our culture of outdoor recreation in our beautiful state. Under the proposed rules, Teller County projects would be forced to mitigate the increased capacity of highways going through Teller County to accommodate the hundreds of thousands of cars that annually travel US Hwy 24 to connect Colorado's southern front range to the mountainous recreational areas to the West. The assumption by the rule-makers that people will simply not drive if capacity is not increased and becomes inconvenient does not reflect the reality of what is currently happening on Interstate 70 and US Hwy 285. People will not be dissuaded from going to the mountains for recreation and a failure to not increase capacity due the costs of mitigation will result in even more traffic congestion, stop and go traffic and actually increased greenhouse gas emissions from excessive (and unnecessary) idling.

Teller County projects would be forced to mitigate expanding capacity for a population which does not reside in the county, but uses it as a travel corridor to reach the mountains. The pandemic has shown a significant increase in traffic to reach healthy outdoor areas. Our ability to mitigate GHG as a small county is extremely limited and to create unused multimodal projects would be a waste of taxpayer money and make needed capacity projects unattainable. It is our position that rural areas in identified recreation transportation corridors need to have a clear, defined and attainable access to waivers from the Transportation Commission, something which is not currently clear, defined or attainable. Saddling small-county projects with unreasonable and likely unattainable mitigation is simply not fair and will negatively impact the quality of life for the residents of Teller County. It is our belief that failure to provide clear, defined and attainable waivers in rural counties will result in more traffic congestion, and more greenhouse gas emissions coming from travelers from outside Teller County. We urge the Commission to adopt rules that make mitigation attainable for rural counties and waivers that are attainable in rural areas that must accommodate capacity projects for travel originating outside our borders.

With Respect,

Teller County Board of County Commissioners

Martin Luther King Jr.

**Letter To CDOT Commissioner.docx**  
14K

Dear Commissioner,

Thank you for your work on the Greenhouse Gas (GHG) Pollution Standards Rulemaking.

This rulemaking is a chance to clean up the dirty air that is harming our health, especially our kids, the elderly, friends and family. Many of the aforementioned community members also live near busy highways, for this reason I am asking you to stand up for clean air, safe streets, and healthy neighborhoods.

As the Colorado Department of Transportation (CDOT) revises the draft GHG Pollution standard over the next few months, we are asking CDOT to:

1. Include the voices of those communities that are most impacted by poor air quality.
2. Include those community voices in the decision making process. Be mindful of what the community needs are, in order to participate at this level.
3. Providing information about the public hearings directly to these communities.
4. Language translation and targeted outreach a must.

This is Colorado's opportunity to do right by the communities that are most impacted to follow through on its commitment to environmental justice and to prioritize public transportation. Most importantly center the process around the families and kids that are most impacted by transportation pollution. This isn't just the right thing to do it is the ethical thing to do.

Sincerely,

A black rectangular redaction box covering the signature of the sender.

## GHG Transportation Planning Rules

1 message

Thu, Nov 18, 2021 at 2:17 PM

  
to: dot\_rules@state.co.us

The GHG Rules as written are far too confusing, cumbersome, bureaucratic, and based on invalid theoretical assumptions and poor analytic methods.

I want to reduce GHGs, and I also want people to drive less, but I fear this rule will create more inefficient bureaucratic, compliance and reporting procedures, and will have very little, if any, positive impact. It may actually go so far as to bring anti climate change back into political power. We must work together to find politically mutual agreement on truly effective GHG strategies - not bureaucratically wasteful procedures.

The only mathematical ways to truly reduce GHG emissions in Colorado in a **meaningful amount** would be to do 3 things:

Raise the fuel tax significantly (which I support); Greatly increase and subsidize the increase of electric vehicle (I support); Halt the growth in population and employment in Colorado (not politically possible).

We must stop putting so much emphasis on public transit. I fully support the benefits of transit for personal mobility. But remember, it makes up a tiny amount of the state's travel. Even if the number of transit trips triples, that would have a tiny impact on GHG.

The draft rules as written go too far down the path of bureaucracy and will be ineffective, or potentially detrimental, to GHGs in the end.

Transportation Commission of Colorado  
Colorado Department of Transportation Headquarters  
2829 W. Howard Place  
Denver, CO 80204-2305

**Subject:** Transportation Greenhouse Gas Rulemaking

Dear Commissioners,

On behalf of the PeopleForBikes Coalition, we write to thank you for improving the proposed rule governing the statewide transportation planning process and transportation planning regions (2 CCR 601-22) by highlighting the need for multimodal transportation projects such as bicycle and pedestrian infrastructure and outlining the importance of reducing vehicle miles traveled (VMT) as the key metric in reducing harmful pollution from transportation projects.<sup>1</sup>

PeopleForBikes is the national bicycle advocacy group and industry association that works for better policies and infrastructure for bike riding. We strive to make bike riding a safer and more inclusive activity for everyone, including our 36,000 individual supporters and 1,700 bicycle retailers, suppliers, and distributors in Colorado.

What the bicycle industry has long known to be true is now growing in popularity in cities across the country: bicycles are part of a broader climate solution and Americans nationwide are increasingly choosing bicycles to meet their transportation needs. Given our current air quality and climate crisis, our collective need to combat climate change requires bold action now.

We appreciate the Colorado Department of Transportation for prioritizing this need through this rulemaking process. The recent improvements to this rule will help ensure that the transportation projects that we plan, fund, and build will create new mode options, such as bicycle and pedestrian infrastructure, access to transit and shared ride and electric bicycle options that shift transportation behaviors and reduce the need for everyday car trips – a positive change that will give Coloradans practical, non-polluting, and affordable transportation options. Two final ways in which the proposed rule could be strengthened is by outlining a requirement to directly target efforts and set aside funds to benefit disproportionately impacted communities and further clarify the timeline and details for compliance by Metropolitan Planning Organizations.

This rule will allow Colorado to stand as a proactive leader in our fight to combat climate change. Thank you for undertaking this critical rulemaking process and highlighting the important role that bikes and bike infrastructure plays in the climate solution.

Sincerely,

  
Deputy Director of State + Local Policy  
PeopleForBikes Coalition

**Date:** November 18, 2021

**To:** Director Shoshana Lew, Hearing Officers Andrew Hogle and Christine Reece, and Transportation Commissioners (via email to [dot\\_rules@state.co.us](mailto:dot_rules@state.co.us))

**From:** Colorado Association of Transit Agencies (CASTA)

**Re:** CASTA Comments on the Updated GHG Rule

Thank you for the opportunity to submit comments on the Colorado Department of Transportation's (CDOT) proposed rule to 2 CCR 601-22.

The Colorado Association of Transit Agencies (CASTA) represents approximately 55 transit agencies around the state. This includes RTD in the Denver metro area, as well as systems serving resort areas like Breckenridge Transit, and smaller rural systems like Dolores County Senior Services in Dolores County, Colorado.

Colorado transit agencies are pleased to have been included in the bill and are looking forward to the new funding opportunities. Agencies are watching the GHG rulemaking process closely, with the expectation of partnering with either their MPO's or CDOT to help provide new mobility options, mitigate GHG emissions and provide better access to jobs and medical appointments.

With the intent of being good partners, CASTA would like to bring up some concerns that seem to put transit agencies in a precarious position. We want to be and should be, a part of the mitigation solution. We feel that the baselines and parameters in the current GHG rule set up many agencies to fail.

For example, the transit expansion strategy does not account for reduced transit service and ridership due to COVID. RTD is currently seeing about 50% of its pre-pandemic ridership. That is not a surprise as employers figure out how to manage their workforce in the midst of the continuing pandemic. Other agencies around the state reported a 40-70% decrease in ridership during the first half of this year. CDOT itself is encouraging its employees to work from home as we watch the Delta variant impact our communities.

Other areas in Colorado are experiencing the opposite. They are providing more rides than ever before, as more people are vacationing and relocating to Colorado mountain towns. Obviously, the workforce is in transition and there are no indicators that in the near future we will be back to “normal,” or 2019 ridership levels.

Decreased fares and increased frequency can help but even these strategies are unlikely to allow agencies to meet the ridership baseline in the near future. Realistic assumptions about service and ridership will position transit agencies and communities to be successful in reaching the GHG reduction targets.

Other data points contribute to CASTA’s concerns, such as the 6% annual vehicle revenue miles increase over the next 8 years and a 2% ridership increase for the following twenty years. Even if the ridership returns to 2019 levels, agencies in the state are not able to fund this level of expansion. In 2019 we saw a statewide ridership increase of 1.7%. As we look forward to sustained growth at a higher rate, it is unlikely that transit funding will keep pace.

There is a driver shortage in segments of the US market and unfortunately, transit salaries lag behind the salaries of other driving jobs. In hopes of filling open positions, agencies are increasing wages and benefits packages, but are still having trouble competing for employees. With the salary line item being the largest in most agencies, their budgets are increasing at an unsustainable rate. Between the driver shortage and the increased operational costs, some agencies are already making hard decisions about how long they can continue providing their current level of service.

Although there are some funding possibilities noted in the GHG Rule, they are not the most appropriate solutions for addressing today’s ongoing transit operations issues, in particular the current difficulty of hiring and retaining drivers. For instance, CMAQ funding can go towards transit operations but must be used for new transit service, and for three to five years only, or for transit fare subsidies during Ozone Action days. The STBG funds noted in the rule cannot be used for transit operations.

Other transit funding sources at the state and federal levels have not grown at a rate to support the desired transit expansion over the last 5-10 years either. Those of us in the transit industry hope that the increased federal funding through the Infrastructure bill will be enough that transit agencies can not only begin requesting additional funds for operational expansion but can meet the expectations of the transit expansion strategy in the GHG bill.

Meeting the regional or state GHG reductions is only one goal many agencies strive to achieve. Agencies have expressed concern that meeting the GHG goals may come at the expense of serving the transportation disadvantaged groups in their communities and that focusing on the

GHG goals would put them in the precarious position of possibly not meeting equitable service provisions, required by Title VI of the Civil Rights Act, which is necessary to maintain funding eligibility.

Colorado has one of the fastest-growing elderly populations in the country. Transit agencies in both urban and rural communities around the state are seeing their ridership grow in this population segment. Transit provides aging populations with mobility options and greater flexibility that may prove to be more cost-effective and offer an improved quality of life. For example, these rides allow people to age in place rather than making a costly move to a facility in order to maintain access to medical care and other life necessities. However, these rides result in minimal increases in ridership; increase agency salary line items substantially, and are expensive to provide.

Disproportionately Impacted (DI) communities, defined as areas that are 40% or more minority, low-income, or housing cost-burdened or that face other systemic socioeconomic or health inequities, are more likely to rely on transit as their primary mode of transportation to access economic opportunity and social mobility. The current GHG provisions concerning DI communities currently only pertain to the mitigation plans after emissions targets are not met. To live up to the equity intent of HB19-1261, HB21-1266, and SB21-260, investments, and benefits for DI communities should be central to the project prioritization process.

In addition, we request that the rulemaking protect the MMOF funding in the bill and allow it to maintain its original purpose to support transit statewide, and that meeting GHG goals would not be its first best use, but that the MMOF would continue funding projects that provide resources and increased access in communities around the state.

Transit agencies ask that the implementation of the rule keep in mind the goals beyond GHG mitigation as we continue to piece together a transit network that connects Coloradans to their communities, their regions, and beyond, providing access to healthcare, education, employment, shopping, and recreation.

Sincerely,

A solid black rectangular box used to redact the signature of the Board President.

Board President

## Public Comment: Greenhouse Gas (GHG) Transportation Planning Standard

1 message

Thu, Nov 18, 2021 at 4:37 PM

Reply-to: [REDACTED]  
To: dot\_rule @ state.co.us

November 11, 2021

To: Colorado Department of Transportation

RE: Public Comment: Greenhouse Gas (GHG) Transportation Planning Standard

As the CDOT revises the draft GHG Pollution standard I am asking CDOT to:

1. Center EQUITY in all decision-making processes,
2. Elevate COMMUNITY VOICES through robust public participation processes that include language translation, targeted outreach, and early publication of hearings,
3. Set MORE AMBITIOUS pollution reduction target

This is Colorado's opportunity to make good on our climate and environmental justice commitments, prioritize investments in public transit, and include a public engagement process that centers communities most impacted by transportation pollution

### Rationale and Context:

- Colorado's transportation sector is the leading source for greenhouse gas pollution.
- There are more cars and trucks in Colorado than ever before and the record setting air quality alerts from this summer illustrate just how much of a crisis we have on our hand. And as more and more people continue to move to Colorado, this crisis unfortunately won't fix itself. We simply can't continue doing what we've always done -- build new lanes and roads. That only worsens congestion and air quality. We have to think about transportation differently. We need to address this crisis in a way that not only reduces air pollution, but does so in a manner that prioritizes our disproportionately impacted communities that have long been forced to live with the pollution, noise and other hazards from our transportation systems.
- Colorado's Department of Transportation (CDOT) is the state agency that manages, fixes and builds state roads and bridges across the state, plows the roads, fixes the potholes and seems to have an endless supply of orange cones. We don't usually think of CDOT as a beacon for creativity in addressing climate change. That is until now.
- Under the direction of Gov. Jared Polis and Executive Director Shoshana Lew, CDOT is currently working on a new set of rules -- called the Greenhouse Gas Pollution Standard or GPS -- that will begin to solve some of our transportation problems and also help the state meet its GHG emissions reduction goals. The rules will basically require that transportation planning take into account impact on climate and air quality. This is the first time any state transportation agency anywhere in the US has attempted this sort of planning and rulemaking and CDOT deserves a lot of credit for thinking outside of roads and bridges. The state's GHG reduction goals, established by law in 2019, require statewide emissions from all sources be reduced 26% by 2030, 50% by 2040 and 90% by 2050. Cut in pollution from our cars and trucks will be a big part of that reduction.
- CDOT and other state agencies are pursuing several strategies to cut GHG emissions, including electrification of more cars, trucks and other fossil-powered engines, increased transit so that Coloradans will have more choices getting where they need to be, bike lanes and more pedestrian friendly ways of getting around. All of these strategies will be critical in cleaning up our air. My organization, along with dozens of allies and partners from the conservation, health and business communities have been providing input to CDOT on the GPS proposed rules. CDOT has shown a willingness to consider many ideas for meeting these goals.
- However, there is one area where we believe they have fallen short: the impact of emissions on our most vulnerable communities. Frontline communities in our cities and suburbs have for years borne the brunt of pollution from cars and trucks. Interstate highways were built dividing neighborhoods, for example, and residents of those communities suffer from higher rates of respiratory diseases, cancer and even more serious impacts from COVID.
- As we plan for new ways to move people and goods in the face of a growing population and economy, our state must recognize the long term impact of transportation decisions that were made in the past, and commit to not making the same ones in the future. Let's not waste the opportunity to bring real change to the way Coloradans move around.

Thank you,

"I am a human being, nothing human can be alien to me ' That' one thing I'm learning " Dr Maya Angelou

## Public Comment on Proposed Rule (GHG Reductions)

1 message

Thu, Nov 18, 2021 at 4:42 PM

[REDACTED]  
To: "dot\_rules@state.co.us" <dot\_rules@state.co.us>

Hi,

Please see my comment, unless it is too late. I just noticed the time change between the original submission date (midnight on Oct 15<sup>th</sup>) and the noon cutoff today.

Thanks,

**Public Comment.pdf**

193K

To: Colorado Department of Transportation (CDOT)

From: [REDACTED]

Date: October 14<sup>th</sup>, 2021

Subject: Public Comment on “Rules Governing Statewide Transportation Planning Process and Transportation Planning Regions” (2 CCR 601-22)

---

My name is Patrick Duffy, and just over two years ago I graduated with a masters degree in wind energy engineering from the Technical University of Denmark and moved to Colorado for a wind energy research position at the National Renewable Energy Laboratory (NREL). In that time, I have seen wildfires and drought impact livelihoods and reduced the quality of life of Colorado residents. Transportation related emissions are some of the largest greenhouse gas sources, and we must act with urgency and intentionality to mitigate the worst effects of a changing climate.

This proposed rule (2 CCR 601-22) is exciting because it puts Colorado at the forefront of advancing meaningful climate policies at a crucial moment, but I think it must go further. The rule would be more effective if it:

- Included **specific and measurable** targets for reducing vehicle miles traveled (VMT)
- Provided **strict enforcement** mechanisms to ensure emissions reductions targets are met
- **Frontloads emissions** reductions targets and includes a **margin of error** in the targets

Colorado Energy Office’s *Greenhouse Gas (GHG) Pollution Reduction Roadmap*<sup>1</sup> emphasizes that transportation is the single largest source of GHG emissions in Colorado, with the bulk of those emissions coming from light-duty vehicles (everyday Coloradans driving). **Specific and measurable** VMT reductions goals are needed to track progress in overall emissions reductions and quantify success. I recommend starting with at least the 10% reduction that the *GHG Pollution Reduction Roadmap*<sup>2</sup> calls for in the HB 1261 Targets Scenario over its reference scenario. While zoning policies are not up to CDOT, forming partnerships promoting transit-oriented development, increase walkability, and invest in multimodal transit are key to bring about the wide array of societal, health, and economic benefits highlighted in the *Cost Benefit Analysis for Rules Governing Statewide Transportation Planning*<sup>3</sup>.

With clearly defined goals and the ability to measure progress against those goals, this rule also needs **strict enforcement mechanisms** to ensure Colorado stays on track in reducing emissions. Without enforcement, there is not much to guarantee the goals of the state will be met. I appreciate the proposed rule’s efforts to equitably share the burden of emissions reductions between the front range and other Colorado communities for which low density development precludes large public transit systems. Perhaps

---

<sup>1</sup> <https://energyoffice.colorado.gov/climate-energy/ghg-pollution-reduction-roadmap>

<sup>2</sup> Ibid.

<sup>3</sup> <https://www.codot.gov/business/rules/documents/cdot-cost-benefit-analysis-for-ghg-rule-sept-2021.pdf>

utilizing ideas from the economic oriented transit development model in Hong Kong can increase social support and utilization of public transit options where they make the most sense<sup>4 5 6 7</sup>.

Finally, the rule should **frontload emissions reductions set with a margin of error** to make sure that even some other categories of emissions reductions miss their original targets, the statewide emissions reductions are significant enough to achieve the goal established in HB 1261. The *GHG Pollution Reduction Roadmap*<sup>8</sup> calls for transitioning to nearly 100% electric vehicles by 2050. This is very aggressive given the lifetimes of vehicles can be well over 200,000 miles (decades)<sup>9</sup>. That means that we need a step-change in the deployment of electric cars to be remotely close to achieving a 100% electric vehicle fleet. On top of that the particulate matter emissions from automobile breaks do not disappear for electric cars. Frontloading emissions reductions buys the state time and flexibility later. Including a margin of error in targets mean there is higher probability of accomplishing what is needed.

Overall, I support this rule and advocate that it goes further to develop specific and measurable targets, use strict enforcement mechanisms, and frontload emissions reductions while accounting for a margin of safety.

Sincerely,

[REDACTED]
