**Description of the product:** (Include specific quantifiable details from the tech data sheet. Advertising generalities are not appropriate.)

Dura-Fill Mastic T2 is a hot-applied repair mastic comprised of a black, asphalt-based, polymer-modified binder and a select aggregate. This material is self adhesive. Dura-Fill Mastic T2 resists cracking, delamination, and spalling. It is a flexible material that can withstand heavy loads, weather, traffic and thermal movement. Mastic T2 provides a high-friction surface to ensure driver safety. Compaction equipment is not necessary with Dura-Fill Mastic T2. This repair system is formulated to provide a feathered edge. It is designed for large cracks and distressed surface areas too small for re-paving yet too large for traditional hot-applied crack sealants.

**Restrictions, (installation and/or use):**

Dura-Fill Mastic T2 is recommended for sealing wide cracks and joints, as well as repairing a large variety of distresses in cement and asphalt pavements.

**Use of the product, and Benefit to CDOT (be specific to CDOT highway activities only):**

Dura-Fill Mastic T2 is recommended for sealing wide cracks and joints, as well as repairing a large variety of distresses in cement and asphalt pavements.

**Specifications: (listing those applicable is required.)**
