Description of the product: (Include specific quantifiable details from the tech data sheet. Advertising generalities are not appropriate.)

CrackMaster 3405-CPT is a premium crack and joint sealant for portland cement and asphaltic pavements. As an economical and effective preventative maintenance treatment, CrackMaster 3405-CPT prolongs pavement life by sealing cracks and joints from water penetration, which causes base failure and pot holes. CrackMaster 3405-CPT is a hot-applied, one part material that provides excellent results in cold weather and throughout repeated freeze/thaw cycles. CrackMaster 3405-CPT offers high resiliency, ductility and resistance to weathering. CrackMaster 3405-CPT forms a long-lasting seal which resists tracking in warm temperatures and remains flexible in cold temperatures.

Restrictions, (installation and/or use):

CrackMaster 3405 - CPT is recommended for sealing cracks and joints in portland cement and asphaltic pavements. It is designed to seal expansion and contraction joints, longitudinal and transverse cracks, joints between shoulders and random cracks.

Use of the product, and Benefit to CDOT (be specific to CDOT highway activities only):

CrackMaster 3405 - CPT is recommended for sealing cracks and joints in portland cement and asphaltic pavements. It is designed to seal expansion and contraction joints, longitudinal and transverse cracks, joints between shoulders and random cracks.
