FOR PLANNING PURPOSES ONLY

The Colorado Division of Aeronautics assumes no responsibility for information contained in this directory nor any action taken by the pilot based on this publication. This publication was produced and printed by the Colorado Division of Aeronautics exclusively with funds from the user-supported Colorado Aviation Fund, and approved by the Colorado Aeronautical Board. No general fund revenues were used to produce this publication.

ON THE COVER:
Kit Carson County Airport (ITR) Manager Daniel Melia departs runway 33 in his freshly-restored 1946 Cessna 140 at his home airport located in Burlington, Colorado. More about Daniel can be found inside. Photo by Daniel Melia.
FOREWORD

Dear Aviators,

Welcome to our wonderful state of Colorado. We live and work in a state blessed with a wide range of beauty from the plains of eastern Colorado to the majestic mountains of the Continental Divide. Our outdoor spirit attracts enthusiasts to our national parks, forests, grasslands, mountains and 42 state parks for skiing, hiking, wildlife watching, hunting, fishing and many more activities that have made our state known worldwide.

Colorado is also known for its multi-modal transportation system which includes Denver International Airport, the fifth busiest commercial service airport in the country, as well as a robust system of general aviation and commercial service airports that provide air access to the four corners of our great state.

The Division of Aeronautics is proud to leverage your state aviation fuel taxes to produce this new edition of the Colorado airport directory, which includes updated information on our 76 public-use airports. As you use the directory for your flights across the state, please bear in mind that changes might have occurred since this printing, so please check with FAA Flight Service for NOTAMs, the FAA Chart Supplement, the National Weather Service (NWS) and the various airport operators in advance of your flight to ensure you have the most accurate and current information available.

To help you in your pre-flight planning, our Division in 2020 entered into a pioneering partnership with the FAA’s Alaska Weather Camera Team to install aviation weather cameras around Colorado, making us the first state outside of Alaska with this valuable weather tool. These cameras provide current images of local weather at our Division’s 13 mountain AWOS locations and at ten mountain airports. In spring 2022, these cameras will be installed at an additional 20 airports statewide, providing you with real-time additional weather context and information. Camera images and other weather and flight planning information can be accessed at WeatherCams.faa.gov.

Lastly, we would also encourage you to visit the Colorado Pilots Association’s website at ColoradoPilots.org. They are a tremendous resource for flying safely in Colorado’s spectacular but challenging high terrain.

Fly safe and have fun!

David Ulane - Aeronautics Director
On The Cover
The cover image of the 2022 Colorado Airport Directory depicts Daniel Melia of Burlington, Colorado departing the Kit Carson County Airport (ITR) in his freshly restored 1946 Cessna 140. Daniel’s love for aviation began at the age of 10 when he began flying model airplanes at the local flying field. Later that year he bummed his first airplane ride in the same airplane he would eventually use to earn his private pilot certificate while he was in high school. Daniel would go on to earn a Bachelor’s degree in Aeronautical Technology with a minor in Aviation Safety from Kansas State University at Salina. While at Salina, Daniel earned Instrument and commercial ratings in both single engine and multi engine aircraft as well as certified flight instructor and instrument instructor ratings. After college, Daniel began flying for a Part 135 aircraft charter company where he earned jet type ratings in Hawker, Citation, and Lear Jet aircraft.

In 2012 Daniel had the opportunity to become manager at the Kit Carson County Airport (ITR) located in Burlington, Colorado. Over the past nine years, Daniel has worked hard to maintain and improve the condition of the airport to get it to the beautiful condition it is in today. Daniel and his staff are proud to provide 24/7 full service to local and transient aircraft at the Kit Carson County Airport. “Charlee” the chock dog is always on duty to provide customer service and receive the occasional belly scratch.

The Kit Carson County Airport (ITR) is located near the Kansas border approximately 160 miles east of Denver. Transient operations account for nearly 60 percent of ITR’s air traffic. According to the 2020 Colorado Airport Economic Impact Study, the Kit Carson County Airport generates over $2 million in annual business revenues, supporting 17 jobs that provide over $930K in annual payroll.

PHOTO: (inset above) Daniel Melia and “Charlee” stand next to Daniel’s freshly restored 1946 Cessna 140. (Top) The sun sets over the Kit Carson County Airport (ITR) in Burlington, CO. Photography by Daniel Melia.

The aerial photography found in this publication is made possible through a strong partnership with the Colorado State Patrol (CSP) Aircraft Section.
The Division of Aeronautics pays special thanks to the entire CSP Aircraft Section staff for their contributions to this publication. Their efforts, dedication, and expertise help make the production of the Colorado Airport Directory possible.
Glossary

**AGL** (Above Ground Level)-Elevation above ground level measured in feet.

**ASOS/AWOS** (Automated Surface Observation System/Automated Weather Observing System)-Electronic device providing 24-hour, real-time weather information to pilots via phone or direct radio frequency.

**ASPH**-Runway surface constructed with asphalt.

**ATIS** (Automatic Terminal Information Service)-Continuous broadcast of local weather and airport conditions utilizing a discrete frequency.

**CLNC DEL** (Clearance Delivery)-Operating position in the control tower responsible for issuing clearances to pilots.

**CONC**-Runway surface constructed of concrete.

**CTAF** (Common Traffic Advisory Frequency)-Frequency designed for airport advisory practices while operating to or from a controlled airport.

**DME** (Distance Measuring Equipment)-Permits pilots to determine aircraft’s distance from a ground station; usually co-located with a VOR or ILS.

**FSS** (Flight Service Station)-Air traffic facility providing pilot briefings, en route communications, and VFR search and rescue missions.

**GRVL**-Runway surface consisting of gravel.

**Heavy Aircraft**-Aircraft weighing more than 12,500 lbs. MGTW.

**HIRL** (High Intensity Runway Lights)-Runway lighting primarily used on instrument runways and having five-step lighting variance capability.

**IFR** (Instrument Flight Rules)-Rules governing conduct of aircraft during instrument flight.

**ILS** (Instrument Landing System)-Precision approach and landing aid.

**Light Aircraft**-Aircraft weighing less than 12,500 lbs. MGTW.

**LIRL** (Low Intensity Runway Lights)-Runway lighting system with a one-step variance capability.

**MALSR** (Medium Intensity Approach Lighting System with Runway Alignment Indicator Lights (RAIL)-Approach lighting system using runway alignment indicator lights with three-step light variance capability.

**MGTW** (Maximum Gross Takeoff Weight)-Maximum weight approved for the start of a takeoff roll.

**MIRL** (Medium Intensity Runway Lights)-Runway lighting system with three-step variance capability.

**MSL** (Mean Sea Level)-Elevation above mean sea level measured in feet.

**NDB** (Non-Directional Beacon)-Radio navigation beacon that transmits a uniform omnidirectional signal using a low or medium frequency band.

**Navaids** (Navigational Aids)-Any electronic device used by pilots for navigational purposes.

**NSTD** Non-Standard

**NWS** (National Weather Service)-Agency charged with collecting, disseminating, and forecasting weather conditions for the public.

**P2L** Two-box PAPI system positioned on the left side of the runway.

**P4L** Four-box PAPI system positioned on the left side of the runway.

**P2R** Two-box PAPI system positioned on the right side of the runway.

**P4R** Four-box PAPI system positioned on the right side of the runway.

**PAPI** (Precision Approach Path Indicator)-Visual navigation device permitting pilots to judge the aircraft position relative to the glide path.

**RCO** (Remote Communications Outlet)-Unmanned communication facility used by controllers to communicate between FSS and pilots.

**TPA** (Traffic Pattern Altitude)-Altitude at which aircraft traffic pattern is to be flown.

**TRIL** - Tricolor visual approach indicator on the left side of the runway.

**UAS** - Unmanned Aerial System

**UNI** (Unicom)-Non-Federal communications facility providing airport information at certain airports.

**VASI** (Visual Approach Slope Indicator)-Airport lighting system providing vertical guidance to the runway.

**V2L** Two-box VASI system located on the left side of the runway.

**V2R** Two-box VASI system located on the right side of the runway.

**VFR** (Visual Flight Rules)-Rules that govern the procedures for conducting flight under visual conditions.

**VORTAC** (VHF Omnidirectional Range Tactical Air Navigation)-Navaid facility providing VOR azimuth, TACAN azimuth, and TACAN DME at one site; can be used by VOR-DME or TACAN equipped aircraft.

Mountain Flying Safety Information

The following information is to provide guidelines for safe flying in the high country during the takeoff, en route, approach and landing phases of flight. These are the guidelines used by flight instructors and pilots with many years of safe mountain flying experience. For information about advanced mountain flying training contact the Colorado Pilots Association www.coloradopilots.org or a Colorado flight school offering mountain flying instruction. Information provided by the Colorado Pilots Association.

THE DON'TS OF MOUNTAIN FLYING

LIGHT TWIN AIRCRAFT
- Do not attempt night flight operations, unless on a single engine the aircraft is capable of maintaining at least 16000 feet MSL.
- Do not attempt IFR operations unless a current and qualified two person crew is on board and they have familiarity with the obstruction departure and destination approach and landing procedures.

SINGLE ENGINE AIRCRAFT
- Do not attempt night operations - EXTREMELY DANGEROUS
- Do not attempt IFR operations

SINGLE OR LIGHT TWIN ENGINE AIRCRAFT
- Do not attempt mountain flying if the 9,000 and 12,000 foot winds are forecast to exceed 30 knots. Winds aloft may be accompanied by severe turbulence, with downdrafts exceeding the climb capability of the aircraft.
- Do not attempt a takeoff unless the loaded aircraft is at least 10% or more below the FAA certified gross weight, and the CG is within limits.
- Do not attempt a mountain flight unless the ceilings are at least 2,000 feet above the highest terrain and visibility is at least 15 miles.

Night and IFR operations are best left to airlines, medical evacuation and corporate crews using fully capable and equipped aircraft. All other pilots should operate in day, VFR conditions if safety is to prevail.

THE DO'S OF MOUNTAIN FLYING

- Do plan the fuel load to arrive at the destination with a minimum one hour fuel reserve. Strong crosswinds or a disabled aircraft on the runway may require a diversion to an alternate airport.
- Do plan a definite altitude to be flown on each segment of the flight. Consult the sectional chart.
- From over a plotted checkpoint, turn the aircraft to the next planned magnetic course and make a mental note of the observed features along that course. Movement form one ridge line to another may be necessary in climbing toward the pass. Some zigging and zagging across the ridge line you are following may be needed to remain in the best updraft along a ridge. Do not lose site of the desired points along the segment being flown.
- Always file a flight plan, keep a flight log and make position reports at every opportunity. Close flight plan after arrival at the destination.
- Do have an operable ELT on board.
- Do have a suitable emergency kit to include a supply of water, signal mirror, whistle and extra clothing as appropriate.
- During the summer, terminate flying activities no later than 1:00 PM MDT.
- Do ask for advice and assistance from FBO, FAA personnel, local mountain qualified flight instructors and pilots. These individuals will be friendly and willing to help.

ITEMS FOR EXTRA ATTENTION IN MOUNTAIN FLYING FLIGHT PREPARATION

- Get a complete weather briefing, including pilot reports for your proposed route. Make note of the winds aloft, altimeter settings, surface winds and NOTAMs for all en route airports and destinations.
- Consult POH for takeoff, climb and ceiling capabilities of the aircraft being flown. When calculated climb rates are less than 200 feet/NM, do not depart.
- A high density altitude may prevent you from reaching the altitude listed in the POH as the service ceiling.

EN ROUTE

- Keeping the CG within limits, do not attempt a takeoff unless the loaded aircraft is at least 10% or more below the FAA certified gross weight, and the CG is within limits.
- Do not attempt takeoff power and the best rate of climb IAS to at least 1,000 feet above the departure airport.
- Monitor the rate of climb when climbing across terrain; shuttle climb if necessary.
- Cross all passes at a 45 degree angle so a turn toward lower terrain can be accomplished with 90 to 120 degrees of turning. (Escape Maneuver)
- Reach pass crossing altitude (1,000 feet above pass terrain) 3 miles before reaching the pass.

APPROACH AND LANDING

- Study the destination airport data before departure.
- Due to the proximity of terrain or obstacles, some mountain airports have: Left hand patterns for one runway and right hand for the other.
- No descent paths in a valley for a straight in approach.
- Preferred landing and departure runways.
- When in doubt ask the tower, if one is in operation, UNICOM or another pilot if one is airborne in the vicinity.
- Identify the planned touchdown point on the runway fly the approach at the appropriate airspeed and aircraft configuration.
- The appropriate IAS is 1.3 times the stall speed in the configuration for the wing. Excessive speed is undesirable.

MOUNTAIN FLYING IN WINTER

- Winds aloft during winter months are frequently too strong for safe mountain flying in general aviation aircraft.
- Mountain top winds of 40 to 60 knots are not uncommon during the period from December though March. Occasionally wind speeds greater than 80 knots may occur and continue for several days.
- The prudent pilot will check in advance to learn whether the desired services are available at the mountain destination airport.
- Winter operations can be pleasant and safe when all operating requirements are met.

RECOMMENDATIONS

- Attend a mountain flying training course which includes a ground school and mountain training flight. Such training is available through the Colorado Pilots Association, Denver, CO, American Bonanza Society, Wichita, KS, and others. Individual training is also available through several highly experienced mountain flying instructors in Colorado. Contact the Colorado Pilots Association (303) 367-0670 or visit www.coloradopilots.org for further information.
- All adverse weather situations are magnified in the mountains.
- Adhere to the weather requirements mentioned previously, or if not possible, park the airplane at an airport at the edge of the high country and continue the trip by automobile.
- Nothing you want to do tomorrow is worth risking your life and the lives of your passengers today!
- If a bad operating situation is encountered, proceed to an alternate. The best alternate may be the airport of departure.
Intensive flight instruction operations Mon-Sun, SR-SS (ocasional night) in depicted training areas 500’ AGL - 8,500’ MSL. Training routes to and from KFNL not depicted.

Position reports are made on 123.3.
USAF Initial Flight Training

DA20-C1 “Tiger” aircraft conduct more than 450,000 operations annually at the following airfields, listed in order of training volume: KPUB, CO80, CO90, KLHX, 1V6, 4V1, KTAD, KLIC, KLAA, KCOS, KAPA, KCFO, KBJC, KFCS, KFLY, KRTN, KGCK, and KGXY. Flight operations Mon–Fri (ocnl Sat), SR–SS. See Chart Supplement Special Notices. Numerous VFR training routes not depicted on this chart.

03 DEC 2021
- After an emergency landing, exit the aircraft and give temporary first aid to permit careful removal of passengers from the aircraft.

- Stay away from the aircraft until engines have cooled and spilled fuel has evaporated.

- When everyone is a safe distance from the aircraft, reevaluate injuries and treat as necessary.

- If weather is adverse, make or find temporary shelter while evaluating dangers of aircraft location (fire, avalanche, terrain, water, etc.)

- Stay close to the aircraft for shelter, warmth and signaling, if possible.

- Make sure ELT is working.

- Signal for help. Try to use the aircraft radio by turning down the squelch, turning up the volume and keying the mike. If the radio is operational, listen on a local or ATC frequency. If you hear a transmission, transmit “Mayday, Mayday”.

- If you hear a jet, transmit on 121.5 (or transmit blindly) only every 15 minutes to save battery power. If ELT and radio are working, you will hear the ELT signal on 121.5. Do not forget to turn the ELT back on, and leave it on. Conserve your energy and do not spend too much time trying to signal in cold or wet weather conditions.

- Use wings, rudders, maps, tarps, etc. to build and insulate a small shelter for your body to heat. Loss of body heat is loss of energy.

- Think basic needs and utilize the aircraft for warmth, shelter, tools and bedding when possible.

- Build a fire if possible. Smoke and fire can be seen for long distances. Aircraft gasoline is a good resource in starting a fire when only wet wood is available, but BE CAUTIONOUS. Soak or pour gasoline on the wood. Ensure gas container is out of reach when igniting the fire. Do not burn paper as it is valuable insulation and bedding source. Gather resources in advance to keep the fire burning for a long period of time.

- Use aircraft insulation and upholstery for over-boots, mittens, bedding, hats and ground insulation.

- Use plastic or waterproof source to melt ice/snow or collect condensation from aircraft surfaces. If it is raining, put plastic in depression in the ground to collect water.

- Rescuers will be looking for smoke, fire, flares, and a downed aircraft. Clear the area around the aircraft, use a mirror for signaling, or form SOS with brush in an open space or in the snow if possible.

- Stay calm, be smart and conserve energy. Survival will depend greatly upon your state of mind.
Pilot’s Guide to Airport Signs and Markings

**Airport Signs**

- **TWY/RWY HOLDING POSITION:** Hold short of intersecting runway
- **RWY/RWY HOLD POSITION:** Hold short of intersecting runway
- **RWY APCH HOLD POSITION:** Hold short of protected area when instructed by ATC
- **ILS HOLD POSITION:** Hold short of ILS critical area when instructed by ATC
- **NO ENTRY:** Identifies paved areas where aircraft entry is prohibited
- **TAXIWAY LOCATION:** Identifies taxiway on which aircraft is located
- **RUNWAY LOCATION:** Identifies runway on which aircraft is located
- **RUNWAY DISTANCE REMAINING:** Identifies runway length remaining
- **RUNWAY BOUNDARY:** Exit boundary from rwy protected area
- **ILS CRITICAL AREA BOUNDARY:** Exit boundary of ILS critical area
- **RUNWAY EXIT:** Defines direction & designation of exit rwy from rwy
- **TWY DIRECTION:** Defines direction & designation of intersecting taxiway(s)
- **OUTBOUND DESTINATION:** Defines direction to take-off runway
- **INBOUND DESTINATION:** Indicates direction of destination, i.e. terminal or military area
- **TAXIWAY ENDING MARKER:** Indicates that twy does not continue beyond this point
- **DIRECTION SIGN ARRAY:** Identifies location in conjunction with multiple intersecting taxiways

**ATCT Light Gun Signals**

- **STEADY GREEN**
  - Color: Green
  - Aircraft on the Ground: Cleared for Takeoff
- **FLASHING GREEN**
  - Color: Green
  - Aircraft on the Ground: Cleared to Taxi
- **STEADY RED**
  - Color: Red
  - Aircraft on the Ground: Stop
- **FLASHING RED**
  - Color: Red
  - Aircraft on the Ground: Taxi Clear of the Runway in Use
- **FLASHING WHITE**
  - Color: White
  - Aircraft on the Ground: Return to Starting Point on Airport
- **ALTERNATING RED/GREEN**
  - Color: Red/Green
  - Aircraft on the Ground: Exercise Extreme Caution

**www.faa.gov/airports/runway_safety**

---

**Line Up and Wait** has replaced “Taxi into Position and Hold”.

The new language permits entry onto the runway to await further instructions, but is not a take-off clearance.

If ever in doubt about a clearance or taxi instruction, do not hesitate to ASK FOR HELP!

Density Altitude Chart
Operational altitude is the altitude of the air at which the aircraft is flown. Aircraft operation, as a result, may be at an altitude greater or less than the actual altitude above sea level.

This crosswind component chart provides at a glance the effect current wind velocity and direction will have upon your take off. For example, a 25 knot wind at a 30 degree angle to either side of the runway heading has the same effect as a 13 knot crosswind. For more details on the effect of wind on your airplane at take off or landing, consult aircraft owner’s manual.
Colorado Mountain Passes

Berthoud Pass
Route: Denver west to Granby/Kremmling (central mountains). Road elevation 11,315' MSL. This pass is part of the Mountain AWOS program. This pass follows I-70 to Highway 40 west from Denver. Expect strong downdrafts and limited climb capability when moderate to high winds aloft exist. East to west flight path will be a blind right turn to cross the pass. Minis Peak AWOS 134.325 (OCO) N39°47.9' W105°46.67'.

Cameron Pass
Route: Fort Collins west to northern mountains (Walden). Road elevation 10,276' MSL. This pass is not visible to any weather reporting stations. N40°31.25'-W105°53.55'.

Cochetopa and North Pass
Route: Located between San Luis Valley and Gunnison area in the center of the state. Road elevations - Cochetopa 10,067' MSL, North 10,149' MSL. The vicinity of these adjacent passes is partially visible from Alamosa and Gunnison weather reporting stations. Elevations and weather often favor these passes over Monarch Pass. N38°10'-W106°36.04'.

Rollins Pass
Route: Denver area to Granby/Kremmling (central mountains). Trail elevation 11,671' MSL. This pass is not visible to any weather reporting stations. This is an open pass with several miles to cross. The trail and that crosses is located on the north side of the pass. Expect strong down drafts with winds aloft over 30kts. N39°56.05'-W104°40.97'.

Cottonwood Pass (Near Buena Vista, CO)
Route: Buena Vista to Taylor Park/Gunnison Area. Trail elevation 12126' MSL. This pass is part of the Mountain AWOS program. Bald Mountain AWOS 132.05(FBM). This pass is a better alternative than Monarch Pass in moderate winds aloft. N37°49.67'-W106°24.55'.

Cottonwood Pass (Near Eagle, CO)
An alternative to following the river over Glenwood Canyon with better options for emergency landing sites. N39°31.83'-W107°3.49'.

Chucah Pass
Route: Southeastern plains (Trinidad) to San Luis Valley and Alamosa. Road elevation 9,941' MSL. This pass is not visible to any weather reporting stations. This pass is located west of the Spanish Peaks and leads to La Veta Pass for crossing into the San Luis Valley. N37°19.22'-W105°4.42'.

Cumbres and La Manga Pass
Route: Alamosa to Durango. Road and track elevations - Cumbres 10,022' MSL, La Manga 10,230' MSL. These passes are located on the Colorado/New Mexico state line and are visible from weather reporting station at Alamosa. Cumbres: N37°1.24'-W106°27', La Manga: N37°4.65'-W106°23.17'.

Douglas Pass
Route: Grand Junction to Northwestern Colorado (Rangely). Road elevation 8,268' MSL. The vicinity of the pass is partially visible to weather reporting station at Grand Junction. N39°35.85'-W108°48.19'.

Fremont Pass
Route: Silverthorne/Dillon to Leadville. Road elevation 11,320' MSL. This pass is part of the Mountain AWOS program. Copper Mountain AWOS 118.075 (CCU). This pass is in an open valley identified by the large Climax Molybdenum Mine N39°21.98'-W106°11.2'.

Hagerman Pass
Route: Leadville to Aspen. Approximate trail elevation 11,960' MSL. This pass is visible to the weather reporting station at Leadville. Elevation, terrain features, and weather often favor this pass over Independence Pass. N39°15.9'-W106°29.03'.

Hayden Pass
Route: East-west pass across the northern Sangre de Cristo Range (Denver to Alamosa). Trail elevation 10,709' MSL. This pass is not visible to any weather reporting stations. Watch for glider and hang-glider activity on the west side of the pass. N38°17.58'-W105°51.04'.

Hoosier Pass
Route: South Park to Breckenridge. Road elevation is 11,539' MSL. This pass is not visible from any airports or weather reporting stations. This pass provides access from the north to South Park. N39°21.7'-W106°3.75'.

Independence Pass
Route: Leadville to Aspen. Road elevation 12,094' MSL. This pass is not visible to any weather reporting stations. This pass is narrow with blind turns. Light to moderate winds aloft can make this pass very turbulent. Highway below is open and passable during summer months only. N39°6.53'-W106°33.83'.

Kenosha Pass
Route: Southwest Denver to South Park and Arkansas Valley. Road elevation 10,001' MSL. This pass follows Hwy 285 from Denver to Buena Vista. N39°6.53'-W106°33.83'.

La Veta Pass
Route: Southwest Colorado and Walsenburg to San Luis Valley and Alamosa. Road elevation 9,380' MSL. This pass is part of the Mountain AWOS program. La Veta AWOS 119.925(VTP). Expect turbulence and up/down drafts during this pass crossing with light to moderate winds aloft. N37°35.59'-W105°12.2'.

Lizard Head Pass
Route: Durango/Cortez to Telluride. Road elevation is 10,222' MSL. Telluride Airport has limited vision of the pass.

Loveland Pass
Route: Denver west to Silverthorne/Dillon (central mountains). Road elevation 11,990' MSL. This pass is not visible to any weather reporting stations. When flying from the east extreme caution should be taken to not continue past HWY 6 when following I-70 due to a box canyon above Eisenhower Tunnel (i-70). Expect strong downdrafts and limited climb capability when light to moderate winds aloft exist. N39°39.82'-W105°52.75'.

Marshall Pass
Route: San Luis Valley and Salida to Gunnison. Trail elevation 10,845' MSL. The vicinity of this pass is partially visible to weather observation in Salida. Weather and terrain often favor this pass over Monarch. N38°23.48'-W106°14.83'.

McCuller Pass
Route: Aspen/ Glenwood Springs to Montrose area. Road elevation 8,755' MSL. N39°7.73'-W107°17.03'.

Milner Pass
Route: North Denver via Estes Park to Granby. Road elevation 10,758' MSL. This pass crosses Rocky Mountain National Park. Moderate winds aloft will produce turbulence on the east side of the pass. N40°25.20'-W105°43.72'.

Monarch Pass
Route: Salida to Gunnison. Road elevation 11,312' MSL. This pass is part of the Mountain AWOS Program. Monarch Pass 124.175 (MYP). Expect strong downdrafts and limited climb capability when light to moderate winds aloft exist. Caution: This pass has had a historically high number of crashes. N38°29.8', W106°19.54'.

Mosca Pass
Route: Pueblo to Alamosa over the Great Sand Dunes National Park. Trail elevation 9,740' MSL. La Veta Pass AWOS 119.925 is located approximately 20 miles to the south. This pass can be used as an alternative to La Veta Pass when winds are moderate. N37°43.97'-W105°27.26'.

Mosquito Pass
Route: Fairplay to Leadville. Trail elevation 13,186' MSL. This pass is not visible to weather reporting stations. High winds aloft will produce turbulence and strong downdrafts. N39°16.88'-W106°11.17'.

North Pass
An alternative to Monarch Pass that is lower with better options for emergency landing sites. N38°13'-W106°31.03'.

Poncha Pass
Route: Salida to Alamosa. Road elevation 9,015' MSL. The pass is visible to Salida weather observations. During moderate winds aloft turbulence can be expected. N38°25.33'-W106°5.22'.

Rabbit Ears Pass
Route: Kremmling to Steamboat Springs. Road elevation 9,426' MSL. This pass is visible from Steamboat Springs Airport. Use caution when trying to climb over the pass from Steamboat Springs Airport without first gaining sufficient altitude. Expect turbulence and up/down drafts during moderate winds aloft. N40°23.08'-W106°36.7'.

Red Mountain Pass
Route: Montrose to Durango. Road elevation 11,120' MSL. This pass is not visible from any weather reporting stations. Use extreme caution when crossing this pass due to long periods of rugged terrain. During light to moderate winds aloft turbulence and up/down drafts can be expected. N37°53.93'-W107°42.72'.

Tennessee Pass
Route: Leadville to Vail/Eagle. Road elevation 10,424' MSL. This pass is visible to Leadville weather observations. This pass is used for a north/ south route through the central mountains of Colorado. N39°39.19'-W106°18.67'.

Toutr Creek Pass
Route: South Park to Buena Vista. Road elevation 9,246' MSL. This pass is visible to Buena Vista weather observations. This is one of the lowest routes into the central mountains. N38°54.6'-W105°58.5'.

Vail Pass
Route: Silverthorne/Dillon to Vail/Eagle. Road elevation 10,606' MSL. This pass is part of the Mountain AWOS program. Vail Pass AWOS 118.075 (CCU). This pass follows Interstate 70, N39°31.83'-W106°13.03'.

Weston Pass
Route: Fairplay to Leadville. Road elevation 11,960' MSL. This pass is visible to Leadville weather observations. During moderate winds aloft expect turbulence and up/down drafts. This pass has blind turns at both ends. N39°7.88'-W106°10.93'.

Wilkerson Pass
Route: Colorado Springs/South Denver to South Park and central mountains. Road elevation 9,507' MSL. This pass is part of the Mountain AWOS program. Wilkerson Pass AWOS 132.3 (48M). Wilkerson pass is the main route into the central mountains from the east. N39°2.28'-W105°3.15'.

Wolf Creek Pass
Route: Alamosa to Pagosa Springs/Durango. Road elevation 10,857' MSL. This pass is part of the Mountain AWOS program. Wolf Creek Pass AWOS 121.125 (CPW). Wolf Creek Pass has a blind turn from north to south. N37°28.95'-W106°47.93'.

**Bald Mountain AWOS (7BM)**

Location: N38°47.95’-W106°13.08’
Elevation: 9825’ MSL
Frequency: 132.050
Phone: 303-512-4419

WeatherCams.faa.gov

The Bald Mountain AWOS is located on Bald Mountain (9825’ MSL), approximately 11 miles east of Cottonwood Pass (12,126 MSL).

**Berthoud Pass - Mines Peak (ØCO)**

Location: N39°47.67’-W105°45.78’
Elevation: 12,493’ MSL
Frequency: 134.325
Phone: 303-512-4416

WeatherCams.faa.gov

The Berthoud Pass AWOS is located at 12,493’ MSL, 1 mile east of the Berthoud Pass summit, at the summit of Mines Peak.
**Copper Mountain (CCU)**

Location: N39°28.50'-W106°9.15'
Elevation: 12,040' MSL
Frequency: 118.075
Phone: 970-968-1715

The Red Cliff area weather is reported from an AWOS at the top of the Copper Mountain Ski Resort, about 1 mile south of I-70. The AWOS was installed on the ski patrol headquarters building.

**Dakota Hill (C99)**

Location: N39°52.13'-W105°33.2'
Elevation: 10,938' MSL
Frequency: 134.175
Phone: 303-512-4421

The Dakota Hill AWOS is located on the summit of Dakota Hill, north-northwest of Central City, Colorado and approximately 7 miles east-southeast of Rollins Pass at an elevation of 10,938' MSL.
Kremmling-McElroy Field (20V)

Location: N40°03.37’-W106°22.23’
Elevation: 7,411’ MSL
Frequency: 118.425
Phone: 970-724-9659

[Website](WeatherCams.faa.gov)

This Mountain AWOS is located at Kremmling-McElroy Field (20V), approximately 1 mile east of the Town of Kremmling at an elevation of 7411’ MSL.

La Veta Pass (VTP)

Location: N37°30.72’-W105°10.23’
Elevation: 10,116’ MSL
Frequency: 119.925
Phone: 719-587-3120

[Website](WeatherCams.faa.gov)

The La Veta Pass AWOS is at the top of La Veta Pass, 4 miles south of Highway 160. It is located at the Colorado State Telecommunications microwave antenna site at 10,116’ MSL.

Monarch Pass (MYP)
Location: N38°29.83’ - W106°19.18’
Elevation: 11,995’ MSL
Frequency: 124.175
Phone: 719-539-4436
[WeatherCams.faa.gov](http://WeatherCams.faa.gov)

The AWOS is located at the top of Monarch Pass on the south side of Highway 50. The AWOS is located at an elevation of 11,995’ MSL. The AWOS is located near the top of the sky tram.

---

Monument Hill / Kelly Air Park (MNH)
Location: N39°13.13’ - W104°38.43’
Elevation: 7025’ MSL
Frequency: 134.375
Phone: 303-648-3479
[WeatherCams.faa.gov](http://WeatherCams.faa.gov)

The Monument Hill AWOS is located at the Kelly Air Park in Elbert County about 12 miles south of Elizabeth. The AWOS is located at an elevation of 7025’ MSL.
**Saguache Municipal Airport (Ø4V)**

Location: N38°05.95' - W106°10.46'
Elevation: 7850' MSL
Frequency: 118.625
Phone: 719-655-2229

[WeatherCams.faa.gov](http://WeatherCams.faa.gov)

This mountain AWOS is located at the Saguache Municipal Airport (04V), approximately 1.5 miles west of the Town of Saguache, at an elevation of 7850' MSL.

**Sunlight Mtn. - Glenwood Spgs. (5SM)**

Location: N39°25.53' - W107°22.75'
Elevation: 10,603' MSL
Frequency: 126.075
Phone: 970-384-3380

[WeatherCams.faa.gov](http://WeatherCams.faa.gov)

The Sunlight Mountain AWOS site is located at 10,603' MSL at the top of Sunlight Mountain, which is southwest of the city of Glenwood Springs.
Walton Peak (CØ7)

Location: N40°21.45'- W106°41.95'
Elevation: 10,577' MSL
Frequency: 127.125
Phone: 970-824-0261
WeatherCams.faa.gov

The Walton Peak AWOS is located at the summit of Walton Peak, 5 miles west of Rabbit Ears Pass. This AWOS is located at 10,577’ MSL.

Wilkerson Pass (4BM)

Location: N39°03.02'- W105°30.87'
Elevation: 11,279’ MSL
Frequency: 132.3
Phone: 303-512-4418
WeatherCams.faa.gov

The Wilkerson Pass AWOS is located at the top of Badger Mountain on a State Telecommunications Microwave site, about 1.5 miles northeast of Wilkerson Pass.
Wolf Creek Pass (CPW)

Location: N37°29.58’- W106°48.06’
Elevation: 11,760’ MSL
Frequency: 121.125
Phone: 719-589-3136

The Wolf Creek Pass AWOS is located about .7 miles north of the Wolf Creek Pass summit and Highway 160, near the Wolf Creek Ski Area. This unit is installed on a microwave communications tower at an elevation of 11,760’ MSL.

Colorado Seaplane Initiative

The Colorado Seaplane Initiative is a grass-roots effort helping to make seaplane activity on certain Colorado waterways a reality. Currently, seaplane operations are prohibited on publicly-owned waterways, however two privately-owned Colorado bodies of water are now open to seaplane activity with prior permission and certain special restrictions. More information can be found at COSeaplanes.org.
