BMP Training Facility

Next to the CDOT headquarters building in Denver, there is a one-acre lot with an unusual assortment of water tanks, stream channels, ponds, and mounds of dirt. This unique facility was created by CDOT to train its employees, contractors, and others in the design, installation and use of Best Management Practices (BMPs) for water quality. Training at the facility began in 2010.

It is CDOT's responsibility to ensure that the construction and maintenance of State Highways meet various legal requirements pertaining to the Clean Water Act. A wide variety of BMPs are available to help avoid, minimize and mitigate adverse effects to water quality.
