**DeBeque Phacelia
(Phacelia submutica)**

Federal status: Proposed* as Threatened
Colorado status: Not listed

This tiny plant is a summer annual with white flowers and bright red stems.

Habitat: DeBeque phacelia grows on soil that comes from only a single geologic formation. It is typically found on steep hillsides in the mud cracks on the surface of this clay soil. It grows no farther than ten miles in any direction from the western Colorado town of DeBeque. Thus its range is limited to Garfield and Mesa counties.

* June 23, 2010 Federal Register, p. 35721.
