2035 Traffic Forecasts and the Midland Expressway

In August 2006 we presented the design options for the Midland Expressway. This recommended alternative was based on 2030 traffic forecasts. After the public input process, the Pikes Peak Area Council of Governments released the regional traffic forecasts to the project team in late 2007. We are using those forecasts to determine if the Midland Expressway design requires modifications.

Next Steps

Once we analyze the operations and confirm the required improvements, we will host a series of workshops on what the Midland Expressway should look like – wall treatments, bridges, signage, lighting, gateway features, wayfinding signs and other visuals. The next public meeting will be this summer. We look forward to your input on these important design and feature issues.
