

October 28, 2010

Mr. Benson M. Stein State of Colorado Department of Transportation Office of Financial Mgmt. & Budget (OFMB) 4201 East Arkansas Avenue Denver, Colorado 80222

#### RE: US 36 Option B Analyses – Indicative Traffic and Revenue Findings

Dear Mr. Stein:

Wilbur Smith Associates (WSA) is pleased to submit this letter containing our revised indicative traffic and revenue forecast for the Option B scenario under both an HOV2+ and HOV3+ free scenario. As with the Base Case submission, these estimates should be viewed as planning level forecasts and are not at a level that is suitable for project financing. Significant data collection and model refinement will be performed during the investment grade portion of this study to support possible project financing.

The overall approach used in analyzing Option B was the same as was used under the Base Case analysis. WSA utilized the latest version of the DRCOG travel demand model and existing traffic count data for an initial calibration of US 36, I-25 and other roadways in the study area. A much more robust calibration effort is planned for the investment grade analysis. A new subarea extraction of the larger DRCOG model was performed to create our market share demand model for the US 36 and I-25 project corridor. This market share model includes multiple morning, midday, and afternoon time slices to reflect the variability in peaking patterns and travel volumes during the day. A detailed calibration effort of this sub area model by time period and direction of travel will be performed using 2010 traffic count data, occupancy surveys, and travel time surveys on US 36 during the investment grade traffic and revenue study.

The assumed project configuration for the full build managed lane project is shown in Figure 1. The Option B configuration used in this analysis extends from the ingress and egress ramps north of West Flatiron Circle to the southern terminus of the existing I-25 Express Toll Lanes. The assumed Option B infrastructure was incorporated into the market-share demand model and traffic matrices were developed for the subarea model and include classifications by truck, single-occupant vehicle, HOV2+ vehicles, and HOV3+ vehicles at an assumed opening year and future (2015 and 2035) year level.

Based on WSA's experience garnered during various projects in the Denver Metro area, preliminary value of time (VOT) and willingness to pay estimates were derived using US Census data and various other available data sources. The average value of time developed and used in our analysis was \$0.21 per minute. Value of time was inflated by 3.0 percent per year to reflect inflation and a small real increase in incomes. Due to the assumed schedule for this initial analysis, a more detailed examination of the willingness-to-pay and an in-depth stated preference survey in the US 36 corridor is included during the investment grade study.

Further sensitivity testing is planned for this Option B forecast, assuming lower and higher traffic growth in the corridor, and lower and higher value of time assumptions. Once you have reviewed the findings included in this letter, these tests will be performed assuming either an HOV2+ or HOV3+ scenario based on your recommendation.

The rest of this letter discusses the Option B analysis and findings for both an HOV2+ and HOV3+ operating scenario and includes the following:

- Selected per mile toll rates by time period, direction of travel, and travel segment;
- Toll rates by specific movement on the managed lanes by time period;
- Estimates of tolled and toll free average weekday traffic and toll revenue by time period and travel direction; and
- Estimates of annual trips and gross toll revenue.

#### Selected Per Mile Toll Rates

At the assumed opening year of 2015 and future year 2035, traffic assignments were made for each analysis time period, at a range of per mile toll rates between 0.05 and 0.60 per mile assuming a minimum toll of 0.25 (2015) to 0.40 (2030) to identify the relative sensitivity of traffic demand in the managed lanes to tolls. Separate assignments were performed under HOV2+ and HOV3+ operating assumptions. The tolling zones assumed in our Option B forecast are depicted in Figure 1. Seven tolling zones were assumed in the southbound direction and six tolling zones in the northbound direction.

Per mile toll rates were selected by time period, direction of travel, and segment that aimed to optimize toll revenue while also ensuring free flow conditions on each segment of the US 36 and I-25 managed lanes. In 2015, selected toll rates range from \$0.05 per mile during off peak time periods to a high of between \$0.30 to \$0.50 per mile during the peaks (Tables B1-1 and B1-2). Toll rates increase over time due to the higher demand, increased time savings provided by the managed lanes, and the increase in value of time. In 2035, the need to manage SOV demand on a smaller amount of available capacity requires selection of toll rates during the peak that are beyond the revenue maximizing point in some locations. By 2035, selected per mile toll rates range from \$0.05 to \$2.10, depending on the time of day, direction of travel, and particular travel segment along the US 36 and I-25 managed lanes.

In addition to per mile toll rates by segment, tolls for eligible travel movements in the managed lanes are also provided in Tables B2-1-1 through B2-1-9 for the HOV2+ free scenario and in Tables B2-2-1 through B2-2-9 for the HOV3+ free scenario. For example, in 2015 under HOV2+Free between 7:00 AM and 8:00 AM in the southbound direction, the toll to travel the entire distance of the US 36 and I-25 managed lanes would be \$4.41. The toll for traveling on the US 36 segment only would be \$2.96, while traveling just on the I-25 managed lanes would be \$2.65. The from\to labeling in these tables are shown in Figure 1 and can be referenced when looking at these tables.

#### Estimated Average Weekday Traffic and Toll Revenue

Tables B3-1-1 and B3-1-2 contain estimates of toll free and tolled average weekday traffic by time period and travel direction for the HOV2+ scenario. Average toll rate, average weekday revenue, and annual estimates of transactions and revenue are also provided. Tables B3-2-1 and B3-2-2 contain this same information for the HOV3+ scenario. The AM (7:00AM-8:00AM) and PM (5:00PM-6:00PM) peak hours are estimated to account for 35.0 to 40.7 percent of the total average weekday revenue.

Under the HOV2+ free scenario, toll-free traffic accounts for 36.9 and 34.7 percent of total usage of the managed lanes in years 2015 and 2035, respectively. Under the HOV3+ scenario, toll-free traffic as a percent of the total is estimated to be 10.9 and 10.0 percent. Overall, average weekday transactions are estimated to grow by 0.75 percent (HOV2+) to 0.83 percent (HOV3+) per year between 2015 and 2035, while annual toll revenue is estimated to grow by 5.1 percent (HOV2+free) and 5.7 percent (HOV3+free) per year.

Tables B4-1-1 through B4-1-4 and Tables B4-2-1 through B4-2-4 show the breakout of average weekday transactions and toll revenue by managed lane segment for the HOV2+ free and HOV3+ scenarios, respectively. In general, 49.6 and 45.8 percent of the year 2015 total estimated revenue is forecasted to be generated on US 36 under the HOV2+ and HOV3+ scenarios, respectively.

#### **Estimated Annual Traffic and Toll Revenue**

Tables B5-1 and B5-2 contain estimates of annual trips and gross toll revenue without ramp-up. In 2015, annual toll revenue is estimated to be \$9.2 million under an HOV2+ free operation and \$12.0 million under an HOV3+ free operation. By 2035, annual revenue is estimated to increase to \$24.7 million for the HOV2+ free scenarios and to \$36.1 million for the HOV3+ free scenario.

#### **Estimated Annual Gross Toll Revenue Per Roadway**

Tables B6-1 and B6-2 present annual gross toll revenue estimates from 2015 through 2035 for I-25 and US 36, separately, for the HOV2+ and HOV3+ scenarios. In 2015, estimated annual toll revenue for the HOV2+ scenario is \$4.6 million on I-25 and \$4.7 million without ramp-up on US 36. Total toll revenue is estimated at \$9.2 million. Including ramp-up on US 36, annual toll

revenue is estimated at \$2.7 million, or a total of \$7.3 million when combined with I-25 revenue. US 36 accounts for 50.4 percent of total annual toll revenue without ramp-up and 37.0 percent with ramp-up.

The annualized transactions and revenue forecasts for years 2015, 2016, and 2017 were adjusted downward to reflect "ramp-up". Ramp-up is the phenomenon experienced on most start-up toll facilities in which high levels of growth may be experienced over the first three years or so of operation as the motoring public gradually becomes aware of and begins using the new facility. WSA has done research on existing managed lane facilities and has developed ramp-up factors spanning a period of 3 years which are being applied to this forecast. Ramp-up has only been applied to US 36 estimates.

Estimated 2015 annual toll revenue for the HOV3+ scenario is \$5.1 million on I-25 and \$6.9 million without ramp-up on US 36. Total toll revenue is estimated at \$12.0 million. Including ramp-up on US 36, estimated annual toll revenue drops to \$4.0 million, or a total of \$9.1 million, including I-25 revenue. US 36 accounts for 57.9 and 44.2 percent of total annual toll revenue without and with ramp-up, respectively.

#### **Estimated Annual Gross and Net Toll Revenue Per Roadway**

Tables B7-1 and B7-2 present annual gross and net toll revenue estimates with ramp-up included for the HOV2+ and HOV3+ scenarios, respectively. The net toll revenue estimates deduct the toll operations and maintenance costs from gross toll revenue and would be what is available for debt service coverage.

#### Next Steps

A series of sensitivity tests will be performed around the Option B estimates. It is recommended that for either the HOV2+ free or HOV3+ scenario that we run sensitivity tests on the following input variables.

- Higher value of time +25 percent
- Lower value of time -25 percent
- Higher traffic growth +30 percent
- Lower traffic growth -30 percent

In addition we will test the traffic and revenue impacts related to the potential implementation of the Northwest Corridor Project, a potential improved connection between the western terminus of the Northwest Parkway in Broomfield County and the SH58, I-70, or C-470 freeway system to the south in Jefferson County.

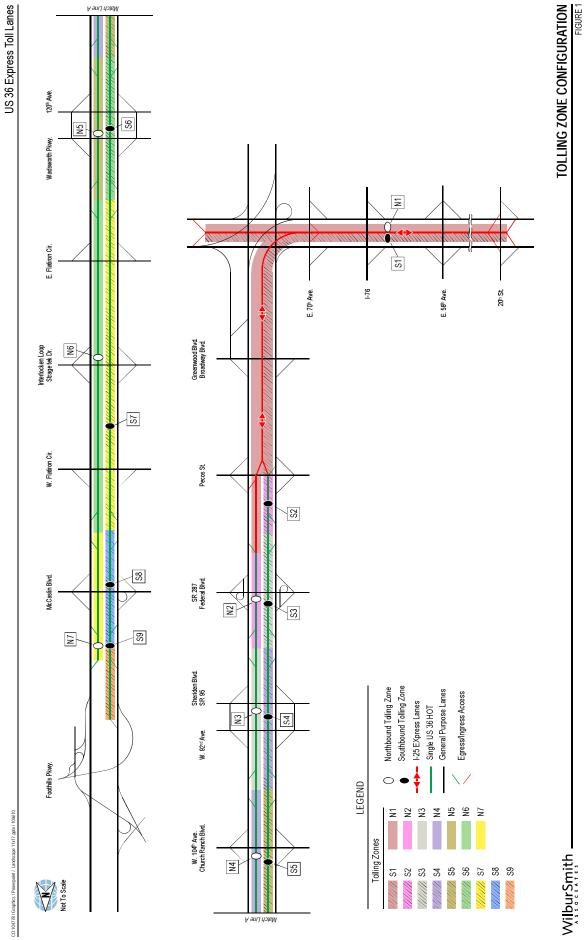

We look forward to discussing these results with you. Please contact us if you have any questions or need further information.

Very truly yours,

WILBUR SMITH ASSOCIATES

Paul m. Marun

Paul M. Marcella Senior Associate

Revenue		\$179,183,000		\$162,523,000	\$150,266,000		\$105,296,000	\$329,449,000	\$61,630,000	\$267,819,000

 Ramp-up adjustment factors are applied to the portion of revenue from US 36 for the first three years of operation. Adjustment factors are as follows: 2015 - 57.8%, 2016 - 89.3% and 2017 - 99.3%.

(2) Net revenue is calculated as diffeence between gros revenue including ramp-up and the toll operations cost. Roadway maintenance and cost for patrols are not included.

Note: All toll revenue is calculated in future dollars.

Cumulati	ive									
Revenue		\$256,517,000		\$239,857,000	\$201,725,000		\$156,755,000	\$458,242,000	\$61,630,000	\$396,612,000

 Ramp-up adjustment factors are applied to the portion of revenue from US 36 for the first three years of operation. Adjustment factors are as follows: 2015 - 57.8%, 2016 - 89.3% and 2017 - 99.3%.

(2) Net revenue is calculated as diffeence between gros revenue including ramp-up and the toll operations cost. Roadway maintenance and cost for patrols are not included.

Note: All toll revenue is calculated in future dollars.
