CDOT Wetland Program Cheat Sheet

Wetland Delineation	- Required on all projects with aquatic resources within the study area
Wetland Impact Assessment	- Always required for all wetlands, regardless of Clean Water Act jurisdiction
Wetland Finding	- Required for projects with 500 ft^2 or more of permanent impacts or 1,000 ft^2 or more of temporary and permanent combined impacts
Wetland Finding FHWA signature (non-programmatic Wetland Finding)	- Required for projects with 1 acre or more of impacts – temporary and permanent combined - Required for projects authorized under an individual 404 permit
FACWet (Functional Assessment of Colorado Wetlands)	- A FACWet analysis is only required for projects that will incur 0.1 acre of permanent wetland impact or greater if the mitigation strategy is permittee-responsible (onsite or offsite). - FACWet is not required when wetland impacts will be mitigated at a wetland bank or in-lieu fee program, regardless of the acreage of impact. - Analysis results should be used in mitigation planning and monitoring
Wetland Mitigation	- Mitigation required for wetland impacts regardless of CWA jurisdiction - Avoidance and minimization measures always required - Compensatory replacement required on 1:1 basis unless functional assessment shows lower replacement is sufficient
