Graffiti

Public facilities are constantly being “tagged” with graffiti, which is normally a misdemeanor crime in Colorado. Graffiti removal costs are an unwelcome financial burden on budget-strapped agencies. For the Colorado Department of Transportation, spending money on graffiti removal means that less money is available for actual highway improvements. Also, taggers sometimes risk their own safety to deface hard-to-reach signs or structures on CDOT right-of-way.

A sociological concept known as the “broken window theory” suggests that signs of decay or neglect tend to attract vandalism. Thus, failure to remove the first graffiti can lead to more graffiti. For this reason, CDOT endeavors to remove or cover up graffiti promptly after they appear, especially in locations visible to motorists. CDOT also monitors national research regarding construction methods, designs and materials that facilitate cost-effective graffiti removal.
