CDOT New Development and Redevelopment Program

The purpose of the CDOT New Development and Redevelopment Program is to reduce the discharge of water pollutants from areas of new highway development and significant redevelopment. This is done through the use of permanent water quality Best Management Practices (BMPs). This CDOT program, also known as the Post-Construction Program, has the following two distinct phases:

Project development, which includes early decision points to determine if permanent water quality BMPs are required, and Design and BMP selection.

The criteria that determine whether or not this program applies to a specific project are detailed in the guidance that is cited below.

Guidance: CDOT Water Quality Program Book
