Bouncingbet

(Saponaria officinalis)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Bouncingbet is a perennial forb that can grow up to 3 feet tall. The flowers are crowded at the ends of branches, and have five petals that are generally light pink to white. The fruits are many-seeded capsules and seeds are dull-black and roundish or kidney-shaped. Leaves are opposite, smooth, narrow, 2 to 4 inches long, with three distinct veins. The stems are erect, sparingly branched and smooth.

Mechanical control is NOT recommended as it is necessary to excavate the entire root system. More details about this species and an herbicide to control it are available online at <http://www.colorado.gov/ag/weeds>.
