## Corn Chamomile

(Anthemis arvensis L.)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Corn chamomile is an annual forb that grows to a height of 10 to 30 inches. Stems are erect, smooth, and highly branched above. Flowers resemble daisies with white ray flowers and yellow disk centers. The flowers are 0.75 inches in diameter and are borne at the ends of branched stems. Leaves are alternate and finely dissected. There is no odor when leaves are crushed, unlike Mayweed chamomile.

More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
