## Cutleaf Teasel

(Dipsacus laciniatus)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Cutleaf teasel is biennial or sometimes perennial forb. It grows for a minimum of one year then sends up a flowering stalk up to 7 feet tall and dies after flowering. The flowers are almost white or white with spiny, awned bracts at the base. Flowering plants have large, oblong, opposite leaves that form cups and are prickly.

For control, dig at the rosette stage, getting most of the root, or cut the plant near the flowering stage. More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
