Moth Mullein

(Verbascum blattaria)

The Colorado Noxious Weed Act requires every landowner to **eradicate, contain or suppress this weed** wherever it is found on his or her property. The Colorado Department of Transportation controls these weeds on its right-of-way.

Moth mullein is a biennial forb that grows 2 to 4.5 feet tall. The flowers occur on the ends of erect stems that are produced during the second year of growth. The flowers are yellow to white with 5 petals that have purple centers and are an inch in diameter. Leaves in the first year are oval with wavy margins. In the second year, they are oblong and have toothed margins. They are 4 to 10 inches and 1 to 8 inches wide.

Mechanical control practices should focus on preventing seed production or collecting viable seed. More details about this species and herbicides to control it are available online at <http://www.colorado.gov/ag/weeds>.
