Wild Proso Millet

(*Panicum miliaceum*)

The Colorado Department of Agriculture (CDA) encourages, but does not require, landowners to stop the continued spread of this invasive plant. The Colorado Department of Transportation controls these weeds on its right-of-way.

Wild proso millet is an annual grass that grows 3 to 4 feet tall. It has coarse, woody, hollow stems that are thick at the base and covered with hairs. The stem and outer chaff are green or sometimes yellowish- or reddish-green when the seed is ripe. This plant is widely grown as a grain for food in many countries. It has a number of other common names.

Check with the CDA and local weed control authorities for herbicide recommendations.
