U.S. Army Corps of Engineers Districts

When the Colorado Department of Transportation consults on wetland issues with the U.S. Army Corps of Engineers (USACE), any one of three USACE Districts may be involved. This is because USACE regions are geographically-based, according to major river systems. The headwaters for several major rivers are found in Colorado's mountains along the Continental Divide.

The Platte River watershed, flowing through the Denver metro area, is administered by the USACE Omaha District. The Arkansas River watershed through southeastern Colorado is administered by the USACE Albuquerque District. The Colorado and Gunnison Rivers on Colorado's western slope are administered by the USACE Sacramento District. Each District has one or more local offices in Colorado.
