

# Hazardous Materials

PREPARED FOR: CDOT Region 6

PREPARED BY: Pinyon Environmental Engineering Resources, Inc.

COPIES: File

PROJECT: US 6 and Wadsworth Boulevard Interchange Environmental Assessment

DATE: July 23, 2007

---

## Introduction

The Colorado Department of Transportation (CDOT) is beginning data collection for the US 6 and Wadsworth Boulevard Interchange Environmental Assessment (EA), CDOT Project STU #0062-019 (15215). The proposed project involves the existing interchange at 6<sup>th</sup> Avenue and Wadsworth Boulevard, including Wadsworth Boulevard from 3<sup>rd</sup> Avenue to 13<sup>th</sup> Avenue in Lakewood, Colorado (Figure 1).

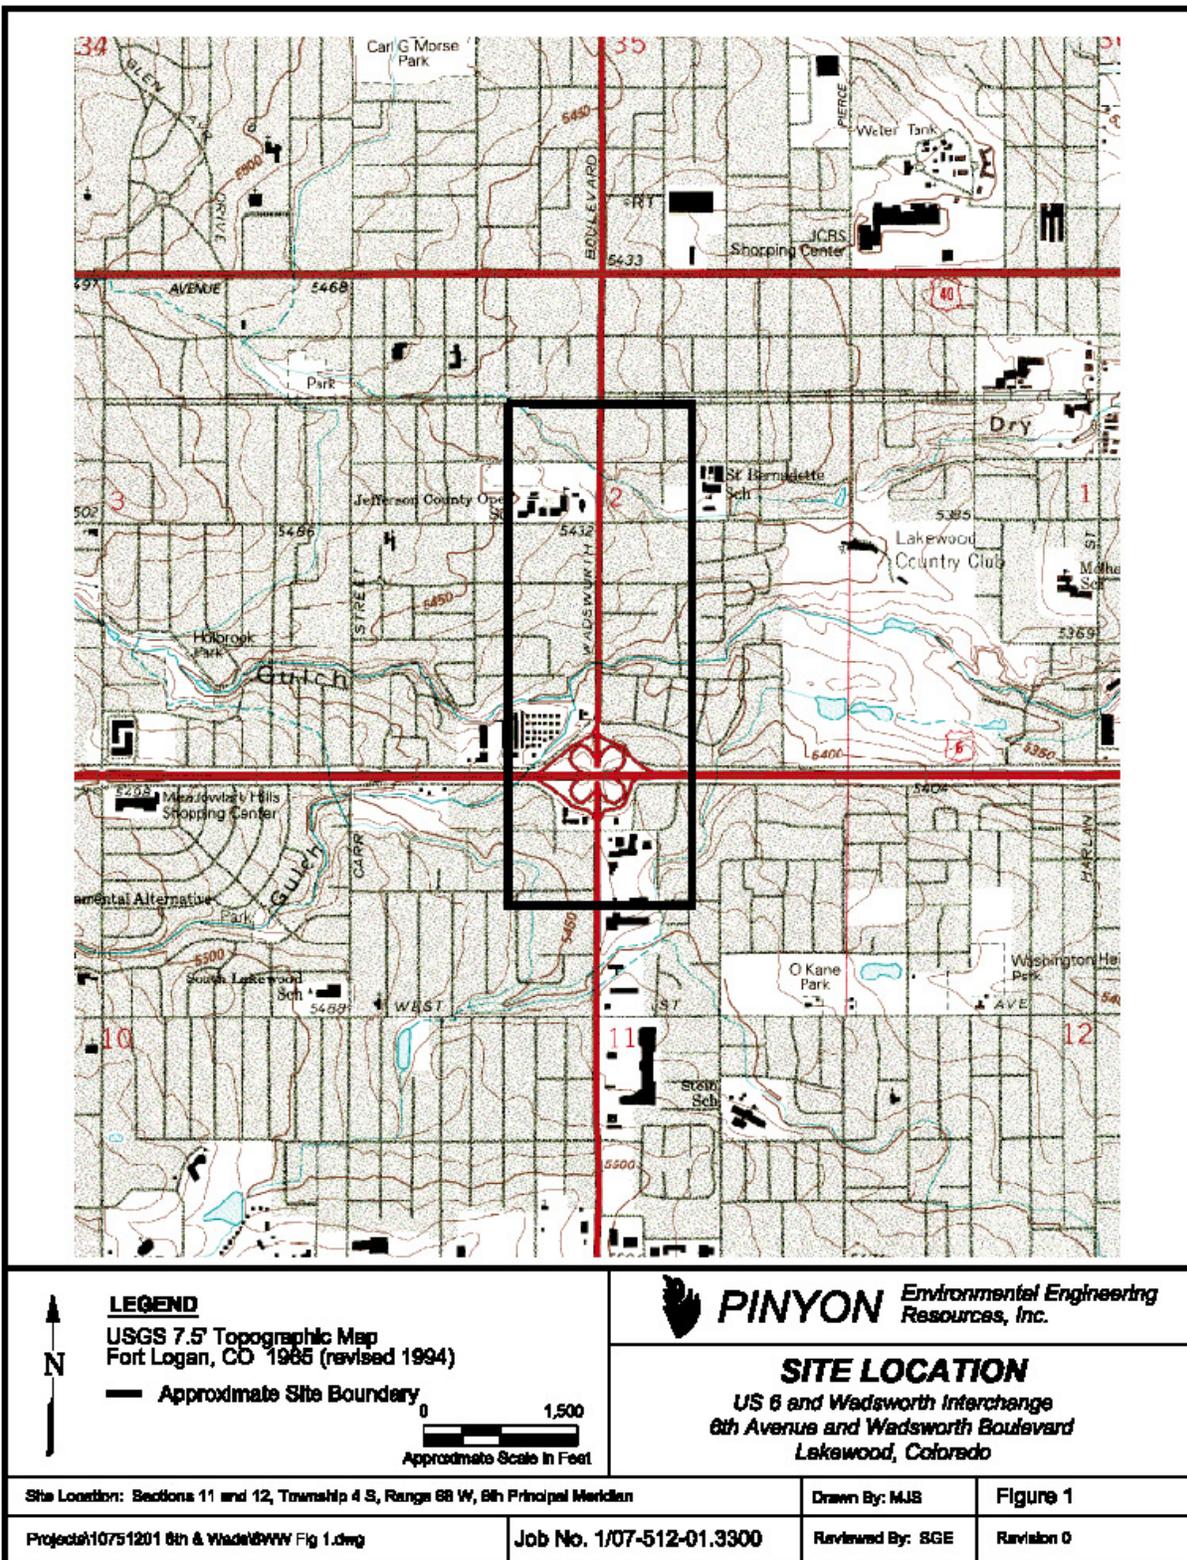

The CDOT has contracted with CH2M HILL to complete the EA for the proposed project. Pinyon Environmental Engineering Resources, Inc. (Pinyon) has been retained by CH2M HILL to evaluate hazardous materials in the project area. This technical memo addresses potential constraints to the project resulting from the presence of hazardous materials.

## Methods

Pinyon has completed a preliminary Environmental Site Assessment of the project area to evaluate the potential for hazardous waste and or hazardous substances to impact the project. The preliminary assessment is not to ASTM or CDOT MESA standards. The following was conducted for the project:

- A reconnaissance survey of the Site and surrounding area on July 2, 2007, to evaluate present conditions;
- An evaluation of historical Site use, by reviewing historical United States Geological Survey (USGS) topographic and city planning maps;
- A review of the compliance history of the Site, and of any adjacent sites, as identified by a regulatory database search; and
- A review of records reasonably available from appropriate federal, state and local regulatory agencies for documented soil and/or ground-water contamination investigations conducted at the Site and the vicinity.

FIGURE 1  
Site Location

## Results

### *Project Area:*

The project area is a mixture of light industrial, residential, and commercial properties located along and adjacent to Wadsworth Boulevard. The majority of properties along Wadsworth Boulevard are light industrial and commercial properties; whereas, residential properties are located within one block east or west of Wadsworth Boulevard. The project area runs from approximately 3<sup>rd</sup> Avenue to approximately 13<sup>th</sup> Avenue along Wadsworth Boulevard and extends approximately two blocks east and west along Wadsworth Boulevard (Figure 1). Two gulches, Lakewood Gulch and Dry Gulch, cross the project area in an east-west direction. A third gulch, McIntyre Gulch, enters the project area from the south, just north of 6<sup>th</sup> Avenue, and feeds into Lakewood Gulch.

### *Ground-Water Conditions:*

In general, ground-water flow mimics topography. Based on a review of the topographic map depicting the Site (Figure 1), general ground-water flow on the southern portion of the Site is expected to be to the north/northeast, towards Lakewood Gulch. On the northern portion of the Site, the ground-water flow is to the southeast, with Dry Gulch and Lakewood Gulch. The depth to ground water is anticipated to be between ten and 20 feet (Hillier et al., 1983).

### *Agency Database Information:*

Satisfi identified 68 mappable listings in the agency search (Table 1, Appendix A, Figure 2). The following criteria were used to narrow down the Satisfi report into facilities that have the potential to impact the project and facilities that do not have the potential to impact the project:

- A Site visit by Pinyon on July 2, 2007 to evaluate current conditions;
- Ground-water flow direction, determined from the Site visit and USGS topographic maps of the project area;
- Active or inactive status of the facilities identified in the Satisfi report; and
- Proximity of the facilities to the project area, up-gradient or adjacent with respect to ground-water flow.

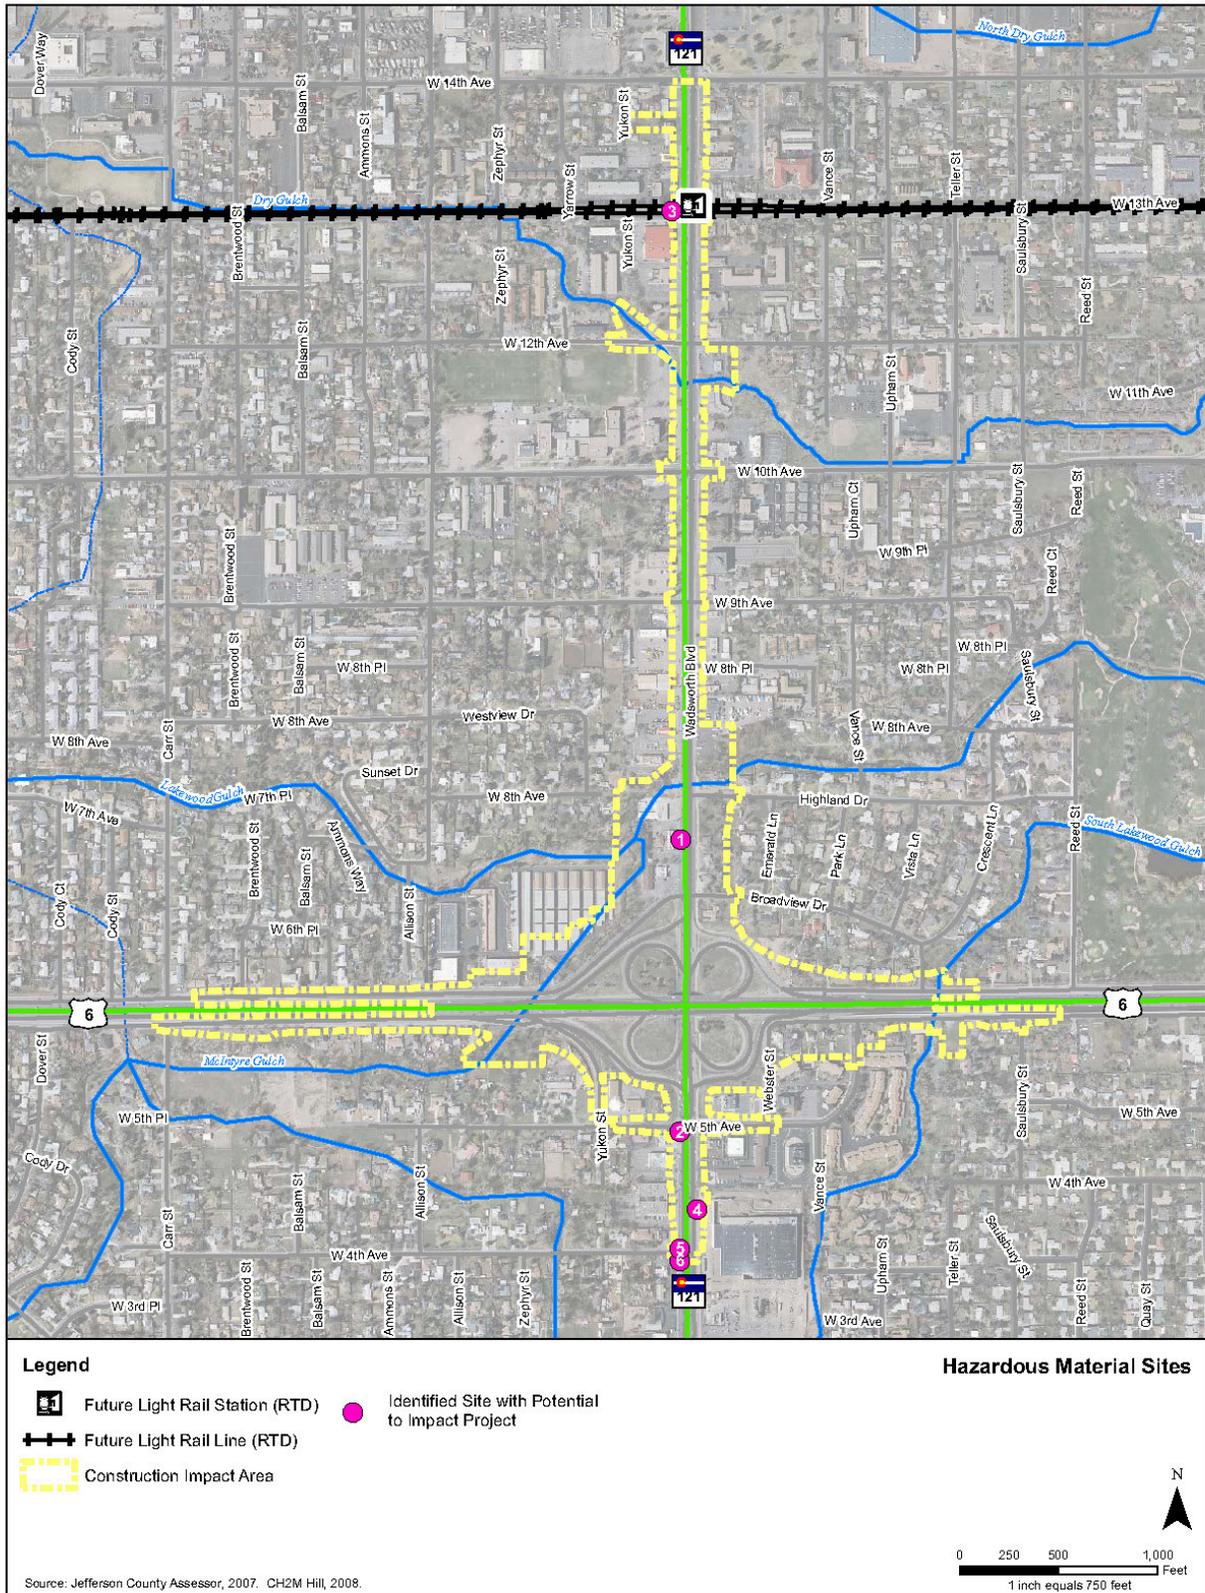

Generally, if the facility identified in the Satisfi report was active with an event that had the potential for contamination, and ground-water flow could cause migration of the contaminants into the project area, then the facility was considered to have the potential to impact the project. Moreover, if a facility was observed to have monitoring wells during the Site reconnaissance, then it was considered a concern.

Based on the above-mentioned criteria, the following six facilities have the potential to impact the project. Further analysis will be completed once additional design and engineering alternatives have been completed.

1. Diamond Shamrock (#4122), located at 715 Wadsworth Boulevard, is an operating gas station and is listed as a "Tank Leak" facility. The Site has two listings of "Tank Leak" events. The first event was a confirmed release on March 7, 2000. Currently, quarterly monitoring sampling events are being completed and a corrective action

- plan is being implemented for this leak. The second release was reported on June 28, 2006 and a site characterization report was completed. According to the Colorado Division of Oil and Public Safety (OPS) and the Satisfi Database Report, this event is closed (OPS, 2007). Ground-water monitoring wells were observed at this facility during the Site visit. Three new tanks were installed on September 1, 2006 and range in size from 10,000 gallons to 15,000 gallons.
2. Circle S Mini Mart/Boonshow Gas, located at 495 Wadsworth Boulevard, is an operating gas station and is listed as a "Tank Leak" facility. The leak was confirmed on October 19, 2001 and current monitoring and corrective action are being completed under the OPS Trust Fund. Ground-water monitoring wells were observed at this facility during the Site visit. The existing two 12,000 gallon tanks were installed on November 10, 2005.
  3. Western Convenience/Diamond Shamrock, located at 7603 West 13<sup>th</sup> Avenue, is an operating gas station and is listed as a "Tank Leak" facility. The Site has two listings of "Tank Leak" events. The first confirmed release was reported on April 10, 1995 and cleanup was completed and the event was closed in May 1996. The second release was confirmed on October 13, 1999. Currently, quarterly monitoring sampling events are being completed and a corrective action plan is being implemented (OPS, 2007). Monitoring wells were observed at this facility during the Site visit. Two tanks were installed on December 7, 1999. One tank is 12,000 gallons, while the other tank is 20,000 gallons.
  4. Wal-Mart, located at 440 Wadsworth Boulevard, currently has an 800-gallon waste oil tank. There have been no reports of leaks or spills associated with this tank. Historically the facility had an UST that was closed in 1997. The Satisfi Database Report lists a closed "Tank Leak" in July 1997, but no information on this event is listed in Colorado Storage Tank Information System (COSTIS) (OPS, 2007).
  5. Merchants Oil/Bradley, located at 401 Wadsworth Boulevard, is an operating gas station and is listed as a "Tank Leak" facility. Two 3,000 gallon and one 4,000 gallon tanks were installed on May 8, 1966. The Site has two listings of "Tank Leak" events. The first confirmed release was documented on July 13, 1995 and the Site was closed in 2000. The second confirmed release was documented in July 23, 1999 and currently quarterly monitoring events are being completed and a corrective action plan is being implemented (OPS, 2007).
  6. Grease Monkey/USA Auto Tech, located at 395 Wadsworth Boulevard is listed as having two 1,000-gallon ASTs in the Satisfi Database Report. The COSTIS system only lists one 1,000-gallon open tank. A "Tank Leak" was reported in 1998 and a "no further action" letter was sent out on July 14, 1998; however, it is not known if the contaminant from the leak migrated onto the Site and therefore there may be residual contamination from the event.

**FIGURE 2**  
Identified Sites with Potential to Impact Project

## Conclusions

Pinyon concludes the following:

- Based on ground water flow, six sites have the potential to impact the project.
- Conclusions regarding the six above-mentioned Sites will be further analyzed once design and engineering alternatives are developed. Files for the six sites should be reviewed during the EA process.
- A full Phase I Environmental Site Assessment (ESA) according to ASTM 2005 standards will need to be completed prior to any property transactions. Given the possibility of multiple property transactions, more than one ESA may be required. The CDOT will also require a Modified Environmental Site Assessment (MESA) of the project area.

*Notes:*

*1 Zero unmappable facilities were identified.*

*2 Potential assessed is based on depth and direction of ground-water flow, distance from the project area, and Site visit.*

*See Appendix B for definitions of acronyms, and Appendix A for Facility Number.*

Subject Property Buffer  
1.65 mile radius

Outer Ring on Map  
1.00 Mile beyond buffer

The ASTM Standard requires that distance be measured from a property's boundaries (not from a point). Accordingly, the specified buffer (dashed ring) has been drawn around the subject property point to approximate its boundaries. Each site point also has a buffer (0.04 mile is standard). Distance is measured from the subject property buffer to each site buffer.

Subject Property Buffer  
1.65 mile radius

Outer Ring on Map  
0.25 Mile beyond buffer

The ASTM Standard requires that distance be measured from a property's boundaries (not from a point). Accordingly, the specified buffer (dashed ring) has been drawn around the subject property point to approximate its boundaries. Each site point also has a buffer (0.04 mile is standard). Distance is measured from the subject property buffer to each site buffer.

\* Distances and directions are approximate and should be confirmed during the site visit. Although Satisfi uses the best and most current digital street maps available, mapping by address is not an exact science. Sites are seldom mapped right at their centroids, and the buffers used to approximate their boundaries are inherently imprecise. If any site buffer (0.04 mile radius) overlaps the subject property buffer (see map), distance and direction are not reported. **If the location of a site is off by a city block or more, a revised map can be requested at no charge.**

< Tagalong findings are included to provide additional details. For instance, if a Tank Leak is found beyond the search distance for Tanks, the corresponding Tank listing is reported anyway in order to to add useful information about the tank contents, age, etc.

The specific database for each finding (e.g., CERCLIS vs. NFRAP) is identified in the Detailed Findings. Additional information on each database is presented in the Database Sources section.

# Unmapped Sites

**THESE SITES WITHOUT GOOD ADDRESSES DO NOT NEED TO BE TRACKED DOWN.** The ASTM Standard says in Section 8.1.4.3, "Listings in publicly available records which do not have adequate address information to be located geographically are not generally practically reviewable." The only reason for reporting these sites is on the slight possibility that their location might be revealed during the site visit, historical research, through personal knowledge, etc. Each site has some detail (e.g., city, county) in common with the subject property. Please review the Detailed Findings for any additional details that might indicate a site is close enough and significant enough to impact the subject property. If a location can be firmly identified, please call Satisfi and a revised report will be issued accordingly.

**THE PHASE ONE REPORT DOES NOT NEED TO DISCUSS EACH OF THESE SITES.** The ASTM Standard specifically says in section 8.1.9, "the environmental professional may make statements applicable to multiple sites (for example, a statement to the effect that none of the sites listed is likely to have a negative impact on the property except ...)".

| SITE NAME          | ADDRESS |                             |
|--------------------|---------|-----------------------------|
|                    |         |                             |

| <b>CORRACT</b> | <p><b>Source: 145 / RCRIS</b> Corrective Action (CORRACT) sites have hazardous waste problems, often involving contamination. Under the Resource Conservation &amp; Recovery Act (RCRA), the owners or operators of these facilities are responsible for investigating and, as necessary, cleaning up releases. Nationwide, there are approximately 6,500 CORRACT sites. CORRACT sites are a subset of the EPA's Resource Conservation &amp; Recovery Information System (RCRIS).</p> <p>Agency Name: US EPA - United States Environmental Protection Agency, Office of Solid Waste<br/>           Agency Website: <a href="http://www.epa.gov/epaoswer/hazwaste/ca/facility.htm">www.epa.gov/epaoswer/hazwaste/ca/facility.htm</a></p>   |                                    |

| <b>NPL/=</b>   | <p><b>Source: 116 / SPL</b> There is no State Priority List (SPL) for Colorado. However, there are twenty sites that the state seems to place in the same category as NPL sites. Eighteen of them are UMTRA (Uranium Mill Tailing Remedial Action) sites, one is a NRDS site (Natural Resource Damages Site), and one is a Private Cleanup Site (Non-Superfund). Thousands of UMTRA "vicinity properties" have also been identified where mill tailings were used as sand in concrete, roadbase, trenches, bricks, etc. Such properties have been remediated in Durango, Grand Junction, Fruita, Palisade, Gunnison, Maybell, Naturita and Rifle, but some unidentified tailings may still remain in and around these communities. CDPHE's list of vicinity properties is not publicly available and was not searched for this report. Property-specific information is available through the CDPHE Grand Junction office. See <a href="http://www.cdphe.state.co.us/hm/rptailing.html">www.cdphe.state.co.us/hm/rptailing.html</a>.</p> <p>Agency Name: CDPHE - CO Dept of Public Health &amp; Environment, Hazardous Materials &amp; Waste Mgmt Div<br/>           Agency Website: <a href="http://www.cdphe.state.co.us/hm/rp_gen.asp">www.cdphe.state.co.us/hm/rp_gen.asp</a> AND <a href="http://www.cdphe.state.co.us/hm/sf_sites.asp">http://www.cdphe.state.co.us/hm/sf_sites.asp</a></p> |                                    |

| <b>OTHER</b>     | <p><b>Source: 145 / RCRIS</b> These facilities are listed on the Resource Conservation &amp; Recovery Information System (RCRIS) but don't fit into the category of CORRACTS, TSDs, or Generators. Many of these facilities are on the list simply because they notified EPA that they did NOT generate hazardous waste. Others are hazardous waste Transporters, Non-Notifiers (facilities suspected of handling hazardous waste without proper authorization), former Generators, etc.</p> <p>Agency Name: US EPA - United States Environmental Protection Agency, Office of Solid Waste<br/>           Agency Website: <a href="http://www.epa.gov/epaoswer/hazwaste/ca/facility.htm">www.epa.gov/epaoswer/hazwaste/ca/facility.htm</a></p>  |                                    |  |  |
