

WHAT ARE THE EXIT 241 INTERCHANGE ALTERNATIVES?

Exit 241 Interchange Alternatives

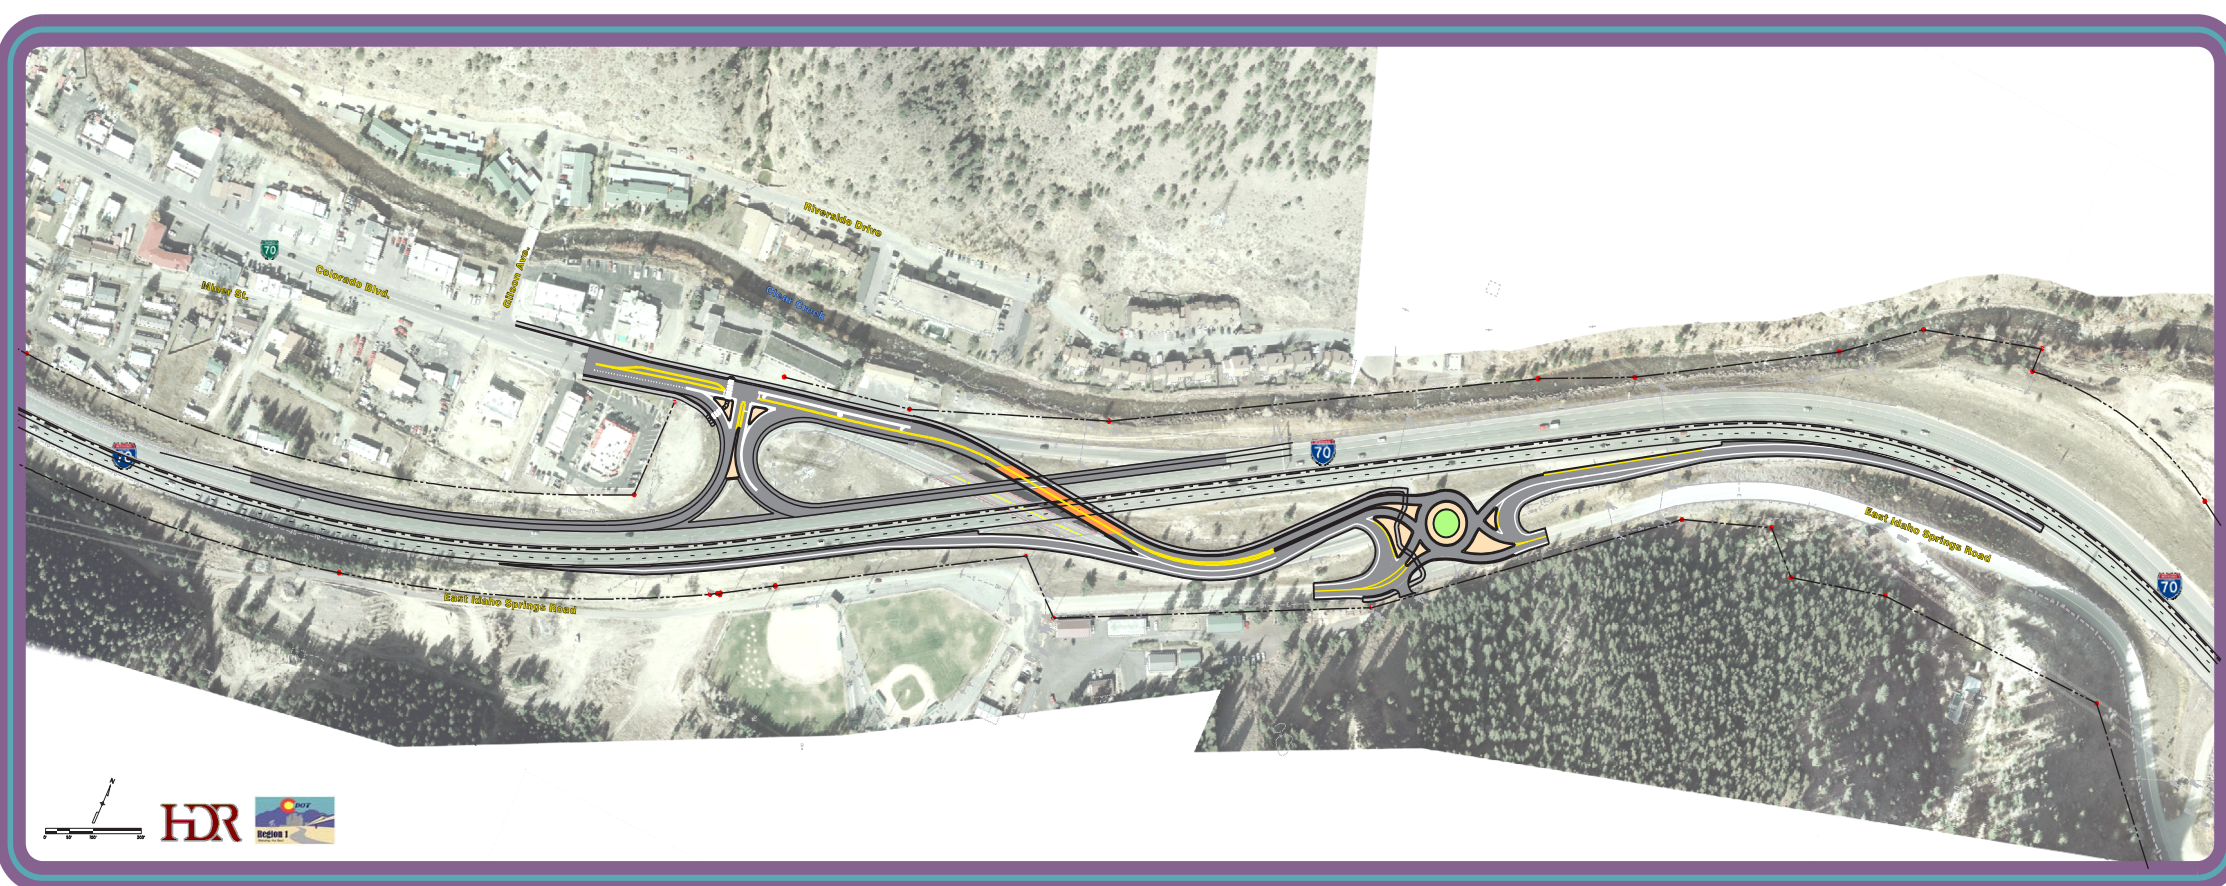

1. Roundabout with a direct westbound ramp

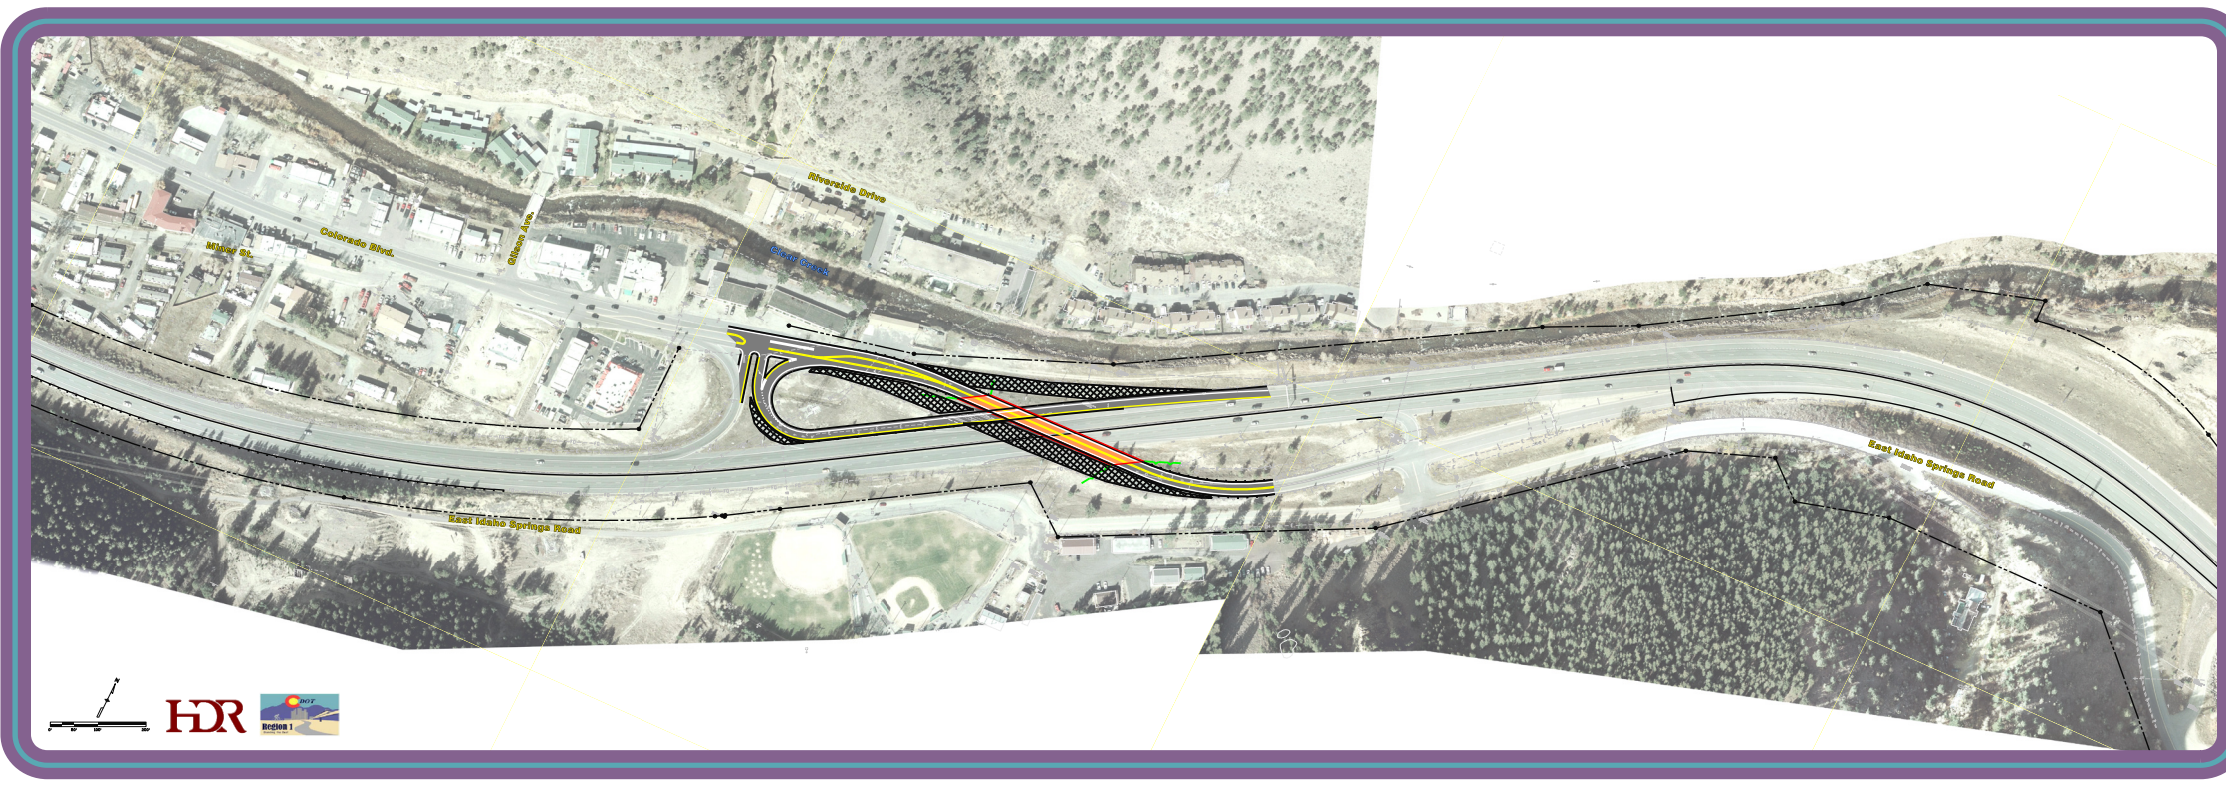

2. Roundabout with a hook westbound ramp (preferred)

3. T intersection

4. No action

Each Alternative was evaluated for safety, operations, efficiency, environmental impacts, and aesthetics, among others.

Configurations were evaluated during:

- Normal weekday operations
- Normal peak period operations (with PPSL)

A roundabout with a hook westbound ramp (#2) is recommended because:

- It does not create a potentially unsafe sight distance problem.
- It does not need a large wall along the creek.
- It does not create access problems to adjacent businesses.
- Residents and stakeholders, including business owners whose businesses are accessed from Exit 241, agreed with this roundabout option with a hook westbound ramp.
