

Colorado Highway 7 Lower Paving Operations

What Work is Being Done?

As crews continue work on the CO 7 project, the project team will begin permanent asphalt paving operations in June. The milling operations will be daily from 8 a.m. to 5 p.m., and paving operations from 9 a.m. to 7 p.m., Sunday through Saturday. Crews will first start by milling the current roadway. A few days later, crews will move to laying asphalt on the roadway. This work will be conducted under single lane closures - motorists can expect 20 minute travel delays during this work.

- Milling operations - beginning the week of Tuesday, May 31, and lasting approximately 25 days
- Asphalt paving - beginning as early as Monday, June 13, and lasting approximately 25 days

During milling operations, the public can expect increased construction noise and increased vibrations in the area and residents can expect brief altered access to their driveway while milling passes. During asphalt paving, CO 7 corridor residents will temporarily lose driveway access for a minimum of one hour, while the hot asphalt cools and is compacted. Flaggers will be on-site.

Note for residents living along the CO 7 corridor - The project team will be in touch one day before paving in front of driveways so residents can prepare ahead of schedule. In addition, if driveway access is inside of a single lane closure, watch for signs telling you to wait for a pilot car to get you in and out of your driveway safely.

All work is weather-dependent and subject to change. Please contact the project team if you have any questions.
