

State Highway 7 Lower Jct. SH 72 to Lyons

- Embankment Protection Areas
- ▬ Road Construction Areas
- 4f Section 4(f) Recreation Areas
- ▬ River Rehabilitation Work Areas
- ▬ Rock Scaling Areas
- ▬ Residential Areas
- ▬ National Forest Land
- ▬ Boulder County Open Space
- ▬ Milepoints

CM/GC Project Goals

- Build a resilient roadway that facilitates the evacuation of as many residents as possible while working in harmony with the river and environment.
- Build a safe system that best meets the needs of motorists, bicycles, and other stakeholders by installing rock catchment, improving sight distance, installing strategically placed pull-outs while maximizing usage of available flood recovery dollars.
- Easily add or remove scope based upon prioritization among and within the six main project disciplines. (Roadway/safety, hydraulics/drainage, river rehabilitation, embankment protection/resiliency, environmental, geotechnical).
- Minimize inconvenience to the public and maximize safety of workers and traveling public during construction.
- Provide a quality product that minimizes life cycle maintenance requirements.
- Commit to the CM/GC process.
- Optimize project development activities in response to COVID-19 based upon State and agency limitations on in-person meetings and field work by evaluating the field work constraints and impacts to the schedule critical path, coordinating the revising the schedule, and establishing communication and documentation protocols
