TURNING MOVEMENTS

DHV 1975

GENERAL NOTES

This project is to be constructed in conformity with the Standard Specifications of the Colorado Department of Highways adopted JUNE 1, 1952.

All quantities on preliminary plans are to be considered approximate only.

~~All concrete used on this project shall be "Air Entrained Concrete" Class "A".~~

All curves are to be superelevated and widened as provided by the standard Superelevation sheet included with the plans.

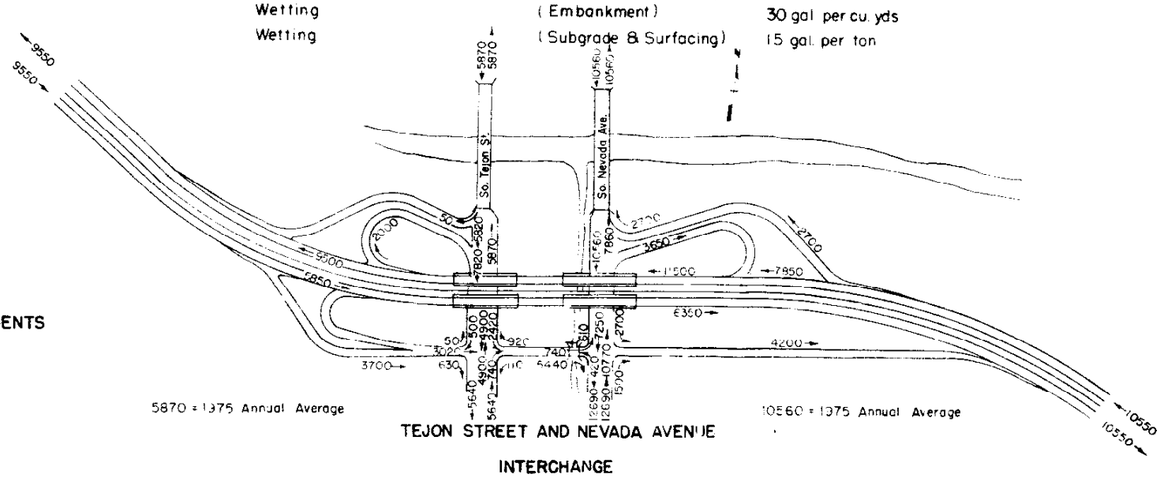
For preliminary plan quantities of asphaltic road materials, asphaltic concrete pavement, asphalt & stone screenings, the following rates of application were used

Prime Coat (over concrete) R.C.	at	.10 gal. per sq. yd.
Prime Coat (over other areas) M.C.	at	.40 gal. per sq. yd.
Asphaltic Concrete Pavement	at	110.00 lbs. per sq. yd. per 1" thickness
Asphalt ([illegible] - 100 penetration)	at	6.50 lbs. per sq. yd. per 1" thickness
Seal Coat R.C.	at	.25 gal. per sq. yd.
Stone Screenings (type I)	at	25.00 lbs. per sq. yd.

Rate of application and grade of oil shall be as determined by the engineer at the time of application.

Rolling Quantities estimated as follows.

Rolling with Flat Wheeled Roller (Oil Mat)	50 tons per hour per unit
~~Rolling with Flat Wheeled Roller (Top Embankment)~~	~~2350 sq. yds. per hour per unit~~
Rolling with Flat Wheeled Roller (Surfacing)	360 tons per hour per unit
Rolling with Rubber Tired Roller (Oil Mat)	500 tons per hour
Rolling with Rubber Tired Roller (~~Subgrade &~~ Surfacing)	240 tons per hour
Wetting (Embankment)	30 gal. per cu. yds.
Wetting (Subgrade & Surfacing)	15 gal. per ton



5870 = 1975 Annual Average

10560 = 1975 Annual Average

DATA REQUIRED TO ACCOMPANY SITUATION PLAN.

GENERAL REMARKS.

Fill out all blanks with care, giving information on all points listed, and supplementary remarks on features not listed. High water and foundation conditions are especially important and should be thoroughly investigated.

PROFILE.

Plot profile of centerline of roadway. Use natural scale, preferably 1″=10′, or multiple of 10′.

At proper locations show section of test pits, noting material encountered, if available at time of survey.

Show present, and if possible, proposed finished grade noting elevations and gradients.

. MAP.

Show present and proposed alignment of bridge and all approaches, as far as affected. Extend Cross sections at least 100-ft. each side of C. L., giving location and elevation of points so that at least 2-foot contours may be accurately plotted. Show edge of water, islands, shoals, other obstructions, and direction of current at high water and at low water. Plot location of test pits, position and pointing of camera for each photo, all buildings, fences, and other features affected. Establish bench marks and give location of same. Reference C. L. and show North point. Give a C. L.-profile of stream-bed for 500 feet up-stream and 500 feet down-stream from center line of survey. Plot proposed structure in soft pencil only. Do not ink.

. REPORT OF EXAMINATION OF BRIDGE-SITE.

Div.________ County________ Route______ Sec.______ Sta.______

Date of survey________ To be built by________

1. Bridge Site________
   Location________
   Sec.____ Twp.____ Range____ Local name________
   Over________ River Creek____
   Distance from nearest shipping point________
2. Source of materials________
   Sand________ Length of haul to site________ miles____
   Gravel________ " " " " "________ "____
   Stone________ " " " " "________ "____
   Falsework Timber________ " " " " "________ "____
   Piling________ " " " " "________ "____
3. Cost Data.—
   Cost of following materials at site________
   Portland Cement________ Per Bbl.
   Sand, coarse and clean________ " Cu. Yd.
   Gravel________ " " "
   Stone________ " " "
   Falsework Timber________ " Ft. B. M.
   Piling________ " Lin. Ft.
   Cost per ton-mile for hauling________
4. Waterway.—
   Drainage area in Sq. Miles (approximate)________
   Character of watershed________
   Elevation of Highest water________ Date________
   Source of information on water elevation________
   Elevation of ordinary high water________
   Elevation of low water________
   Elevation of permanent ground-water________
   Is stream ever dry?________ During what months?________
   Will all flood water pass through recommended structure?________
   Can channel be cleaned to afford more waterway?________
   Is stream-bed cutting or silting up?________
   Is stream stable in its banks?________ Depth of scour?________
   Does stream carry light, medium, or heavy drift?________
   What clearance above high water should be allowed?________
   Is channel change necessary?________
   If channel change is necessary, illustrate location on sketch map.
5. Foundation Data.—
   Character of material________
   Distance from stream-bed to solid foundation________
   Recommended depth of footings________
   Should piles be used?________ What length?________ Pile Shoes?________
6. Old Bridge.—
   If there is no bridge at the present location include here data on nearest bridge over same stream. If possible show location of such bridge or bridges on the map. Photographs if available.
   Type________ Roadway Width________ Number and length of spans________
   Area of waterway provided under old structure________ Sq. Ft., Elev. of Underclearance________
   Has this area proved sufficient at flood times?________ Skew Angle________
   Is it too large?________ Disposition of Existing Structure________
7. Give foundation data on bridges in vicinity. When possible, get pile driving data, logs of borings, etc., for adjoining structures, and where considered advantageous procure plans.
   Sketch profile of Rail Road Crossing if within 1000 ft. of Highway. (Show X-section of entire waterway.)
   Elevation of base of Rail________ Elevation of Rail Road Underclearance________
   Remarks________
8. Recommendations for New Structure.—
   Type________ Width curb to curb________ Number and length of spans________
   What is the least clear span permissible?________
   Are sidewalks desired?________ Lighting conduit?________ Light standards?________
   Angle of Skew recommended________
   Will approaches be desired, or will same be filled?________
   Approximate cost per Cu. Yd. of approach-filling at bridge site?________
   Is it necessary to maintain traffic alongside old structure?________
   If so, how shall it be done?________
   R. R. Siding________ Haul to Bridge Site________ Mi.
   Remarks________

Submitted by________
Engineer.

NOTE.—When bridge is recommended to be left in place, complete structural details shall be procured from the bridge itself or from existing plans of the structure. When possible these plans shall be forwarded with the plans of the project.

GENERAL NOTES

All work shall be done in accordance with the Standard Specifications of the Colorado Department of Highways as adopted June 1, 1952
The soundings and pile data are shown according to the best information available to the Colorado Department of Highways. If essentially different conditions are encountered, the Bridge Engineer will inspect and determine if redesign is necessary. All piles shall be driven to the penetration shown unless in the opinion of the Engineer such penetration cannot be secured without injury to the piles. All piles shall be driven to minimum computed bearing value of 37 tons.
All concrete surfaces exposed to normal view by highway traffic shall receive Class 1 Surface Finish.

All reinforcing steel shall be intermediate grade deformed bars conforming to A.A.S.H.O. Specifications M31 and M137 (A.S.T.M. designations A15 and A305.) All hooks and bends in bars shall conform to ACI Standard 315.51.
All reinforcing bars shall be tagged with structure number and mark.
All steel railings shall receive one shop coat of zinc chromate and a field coat of tinted aluminum paint followed by a coat of aluminum paint.
Expansion Joint Material shall conform to A.A.S.H.O. specification M-153-54 and of the type shown.

DESIGN SPECIFICATIONS

A.A.S.H.O. Series of 1953 and Bureau of Public Roads, "Design Criteria for Prestressed Concrete Bridges," 1954
Design loading H20-S16-44
Unit Stresses
Class A Concrete, f_c = 3000 psi; f_c = 1200 psi
Reinforcing Steel, f_s = 20,000 psi
Concrete in pretentioned girders
Minimum 28 day cylinder strength - 5000 psi
Minimum cylinder strength at time of release of prestress - 4600 psi
Prestressing Steel
7/16" diameter (A_s = .1089 sq. ins.) wire, stress relieved strand
Minimum tensil strength - 250,000 psi
Maximum initial tension of strand - 175,000 psi
Pile Load
37 tons per pile (12 3/4" diameter steel pile)

SUMMARY OF QUANTITIES - REFERENCE NOTES

① - STONE BACKFILL INCLUDED.
② - PRESTRESSING STEEL WITH ANCHORS AND REINFORCING STEEL INCLUDED WITH BID PRICE FOR GIRDERS.
④ - INCLUDES STEEL RAILING, PLATES, ANCHOR BOLTS, ANCHOR BA[illegible] AND BEARINGS.
③ - INCLUDED WITH BID PRICE FOR CLASS "A" CONCRETE.
NOTE ITEM 47 DOES NOT INCLUDE PRESTRESSING STEEL, AND REINFORCING STEEL FOR GIRDERS

GENERAL NOTES

1. ALL WORK SHALL BE DONE ACCORDING TO THE STANDARD SPECIFICATIONS OF THE COLORADO DEPARTMENT OF HIGHWAYS, ADOPTED JUNE , 1952
2. SPACING AND DEPTH OF FOOTINGS SHOWN ACCORDING TO THE BEST AVAILABLE DATA. IF ESSENTIALLY DIFFERENT CONDITIONS ARE ENCOUNTERED THE BRIDGE ENGINEER WILL INSPECT AND DETERMINE IF REDESIGN IS NECESSARY
3. ALL CONCRETE SHALL BE CLASS "A" AND AIR ENTRAINED AS SPECIFIED, EXCEPT OTHERWISE NOTED FOR PRESTRESSED GIRDERS
4. CHAMFER ALL EXPOSED CORNERS ¾", EXCEPT AS NOTED
5. ALL REINFORCING STEEL SHALL BE INTERMEDIATE GRADE DEFORMED BARS CONFORMING TO A.A.S.H.O. SPECIFICATIONS M31 AND M31(A.S.T.M. DESIGNATIONS A15 AND A305).
6. ALL REINFORCING BARS SHALL BE TAGGED WITH THE STRUCTURE NUMBER AND MARK.
7. ALL DIMENSIONS ON BAR DETAILS ARE OUT TO OUT
8. ALL HOOKS AND BENDS IN BARS SHALL CONFORM TO A.C.I. STANDARD 315-51.
2 MINIMUM CLEAR TO STEEL, EXCEPT AS NOTED
9. ALL STRUCTURAL STEEL SHALL RECEIVE ONE SHOP COAT OF ZINC CHROMATE AND TWO FIELD COATS OF ALUMINUM PAINT.
10. WHEN EXCAVATING FOR FOOTINGS THE FINAL ONE FOOT IN DEPTH SHALL BE DONE BY HAND LABOR METHODS.
11. CURB AND MEDIAN DIVIDER ROUNDED 1'-0" RADIUS AT THE END.
12. ALL CONCRETE SURFACES EXPOSED TO NORMAL VIEW BY HIGHWAY TRAFFIC SHALL RECEIVE CLASS "2" SURFACE FINISH.
13. EXPANSION JOINT MATERIAL SHALL BE ACCORDING TO A.A.S.H.O. SPECIFICATION M-153-54 AND OF FILLER TYPE SHOWN.

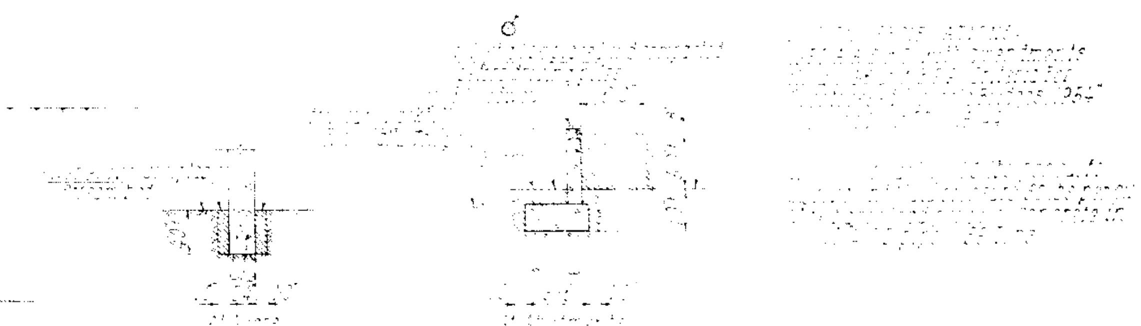
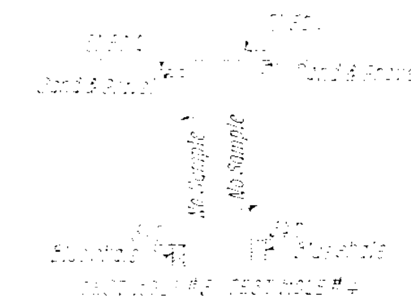
ELEVATION A-A



EXCAVATION AND BACKFILL DIAGRAMS



GENERAL NOTES

All work shall be done according to the Standard Specifications of the Colorado Department of Highways, adopted June 1, 1952. See Special Provisions for prestressed concrete beams.

Soundings and depth of footings shown according to the best available data. If essentially different conditions are encountered the Bridge Engineer will inspect and determine if redesign is necessary.

All concrete, except in the prestressed concrete beams, shall be Class "A" and air entrained as specified.

Chamfer all exposed corners ¾" except as noted.

All concrete surfaces exposed to normal view by highway traffic shall receive Class I surface finish.

Holes for piles shall not be drilled until definitely determined by the Engineer that the piles cannot be driven without them.

All reinforcing shall be intermediate grade deformed bars conforming to A.A.S.H.O. Specifications M31 and M137, ASTM Designations A15 and A305.

All reinforcing bars shall be tagged with the structure number and mark.

All dimensions on bar details are out to out.

All hooks and bends in bars shall conform to A.C.I. Standard 315-51.

Main bars shall not be spliced except where specified on the plans.

Clear distance from surface to reinforcing bars: 3" in footings & pier shafts, 2" in walls & caps, 1" in deck slabs & curbs unless otherwise noted.

All steel railings and deck drains shall receive one shop coat of zinc chromate and two field coats of aluminum paint.

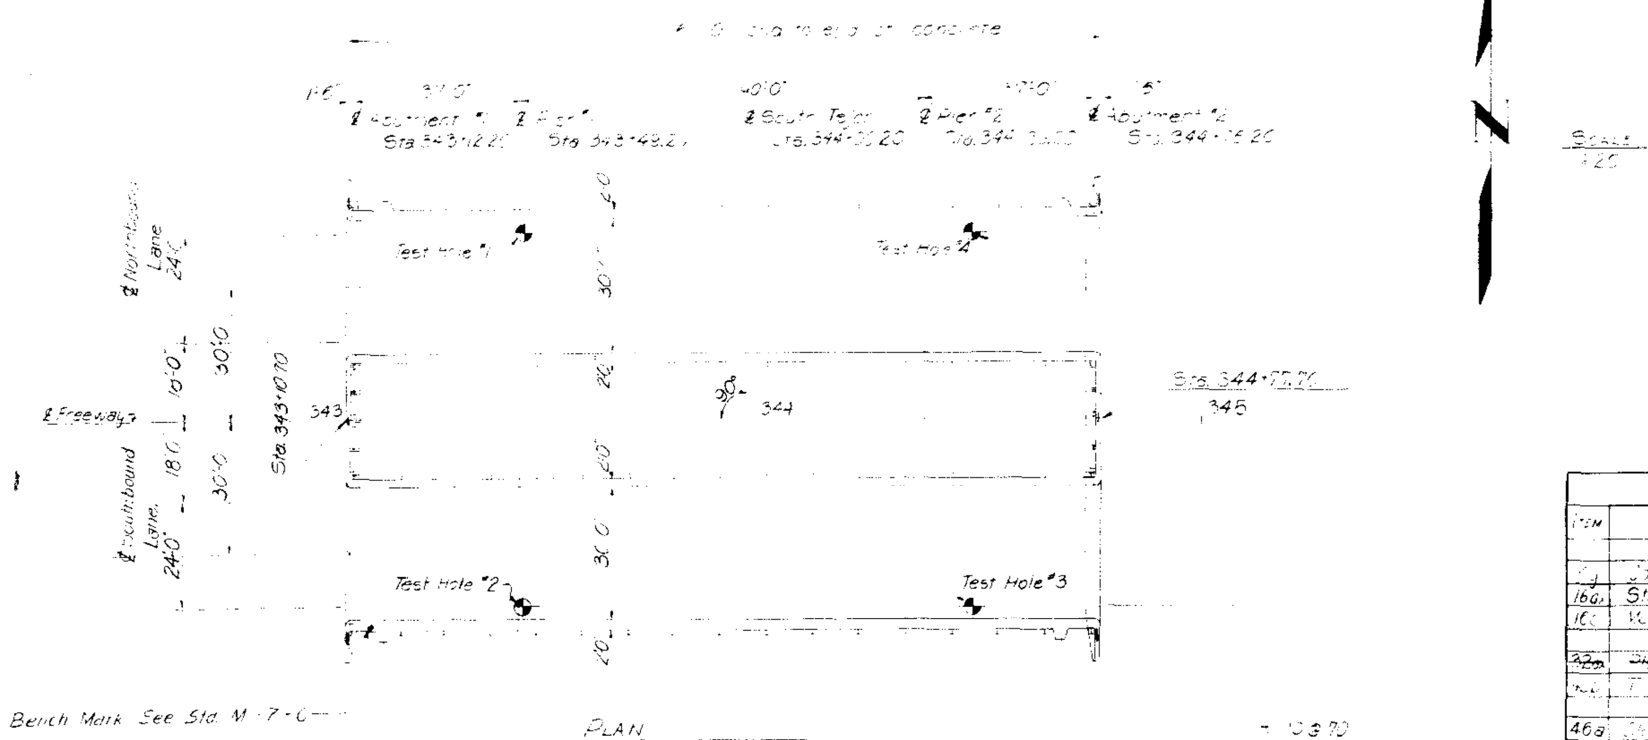
ELEVATION

(Spans - 37'0" 30'0" & 37'0" - Prestressed Beams (70'0") with cast in place spans both ends, Pedestal Type Piers, Pile bent type abutments)



PLAN

GENERAL NOTES:

All work shall be done in accordance with the Standard Specifications of the Colorado Department of Highways as adopted June 1 1952.

The soundings and pile data are shown according to the best information available to the Colorado Department of Highways. If essentially different conditions are encountered, the Bridge Engineer will inspect and determine if redesign is necessary. All piles shall be driven to the penetration shown unless in the opinion of the Engineer such penetration cannot be secured without injury to the piles. All piles shall be driven to minimum computed bearing value of 37 tons.

All concrete shall be air-entrained and shall conform to the unit stresses indicated, as required on each sheet.

All concrete surfaces exposed to view shall receive Class "I" surface finish except the underside of floor slabs and abutment faces between outside girders.

All reinforcing steel shall be intermediate grade deformed bars conforming to A.A.S.H.O. Specifications M.31 and M137 (A.S.T.M. designations A15 and A305). All hooks and bends in bars shall conform to A.C.I. Standard 318-56.

All reinforcing bars shall be tagged with structure number and mark.

All steel railings shall receive one shop coat of zinc chromate and a field coat of tinted aluminum paint followed by a coat of aluminum paint.

Holes for piles shall not be drilled until definitely determined by the Engineer that the piles cannot be driven without them.

All concrete surfaces exposed to normal view by highway traffic shall receive Class I Surface Finish.

Design Specifications:

A.A.S.H.O. Series of 1953 and Bureau of Public Roads, Tentative Design Criteria for Prestressed Bridges, 1954

Design Loading: H20-S16-44

(1) For revised elev. of Abut. see sheet Nº 76a.

NOTES:

All concrete to be Class A.

All dimensions for reinforcing steel are to ℄ of bars unless otherwise indicated. All dimensions shown in bending diagrams are out to out of bars.

Bevel all edges and miter all corners with a 3/4" triangular molding unless otherwise indicated.

Piles shall be pipe 10 3/4" nominal diameter, minimum wall thickness of 0.279" and shall be filled with Class A concrete after driving. Piles may be filled at the same time the abutment is poured at the contractors option. See note on Pier Sheet.

Abutments 1 and 2 are the same except as noted.

See Handrail Sheet for details.

See Cast in Place Girder Sheet for details of beams to be cast with abutment.

See Electrical Sheet for conduit location and size.

Structural Steel (Bearing Plates)		1078#

NOTES:

Design Specification - AASHO 1953 Series and Bureau of Public Roads, Tentative Design Criteria for Prestressed Bridges, 1954.

Concrete in beams to be 5000 psi at 28 days, 4500 psi at time of transfer. Max. size aggregate to be 3/4". All other concrete to be Class A.

Prestressing steel to be high tensile wire strands with a modulus of elasticity of 25,000,000 psi and ultimate strength of 250,000 psi.

End anchorage of post tensioned cables is assumed to be 100% efficient in the above design.

All post tensioned cables to be draped in a parabolic shape. All post-tensioned cables to be grouted as soon as practicable. Provide 3/8" grout tubes with suitable valves and shut-off cocks into each enclosure near the ends. Grout to be pumped into enclosure from one end only under 100 psi pressure until the entire enclosure around the cables is filled and grout flows freely from the exhaust end. Exhaust valve then to be closed and pumping continued until no more grout can be introduced.

Prestressed beams to be supported at the ends only or handled by lifting hooks provided.

Unit price for beams shall include all concrete, reinforcing steel, high-strength steel, bearing devices, pipe sleeves etc. included within the beams.

All dimensions for reinforcing steel are to ℄ of bars unless otherwise noted. All dimensions shown on bending diagrams are out to out of bars.

See Bearing Device details.

Design Loading - H20-S16-44.

GENERAL NOTES (All Sheets)

Ultimate Stress of Wires to be a minimum of 1.43 times the Initial Stress.

Prescon Tendons (i.e. 6-14G1) are identified:
6 = Number of Tendons
14 = Number of ¼" Ø wires per Tendon
G = Wires enclosed in metal conduit for Grouting.
1 = Stressed from one end; 2 = both ends

⅛" has been added to the depth of the Shims to provide for the seating of the Button Heads.

PLAN

GENERAL NOTES:

All work shall be done in accordance with the Standard Specifications of the Colorado Department of Highways as adopted June 1, 1952.

The soundings and pile data are shown according to the best information available to the Colorado Department of Highways. If essentially different conditions are encountered the Bridge Engineer will inspect and determine if redesign is necessary. All piles shall be driven to the penetration shown unless in the opinion of the Engineer such penetration cannot be secured without injury to the piles. All piles shall be driven to a minimum computed bearing value of 47 tons for 12¾" diameter and 37 tons for 10¾" diameter.

All concrete shall be air entrained and conform to the unit stresses indicated as required on each sheet.

All concrete surfaces exposed to normal view by highway traffic shall receive Class "I" Surface Finish.

All reinforcing steel shall be intermediate grade deformed bars conforming to A.A.S.H.O. Specifications M31 and M137 (A.S.T.M. designations A15 and A305). All hooks and bends in bars shall conform to A.C.I. Standard 315-51.

All reinforcing bars shall be tagged with structure number and mark.

All steel railings shall receive one shop coat of zinc chromate and a field coat of tinted aluminum paint followed by a coat of aluminum paint.

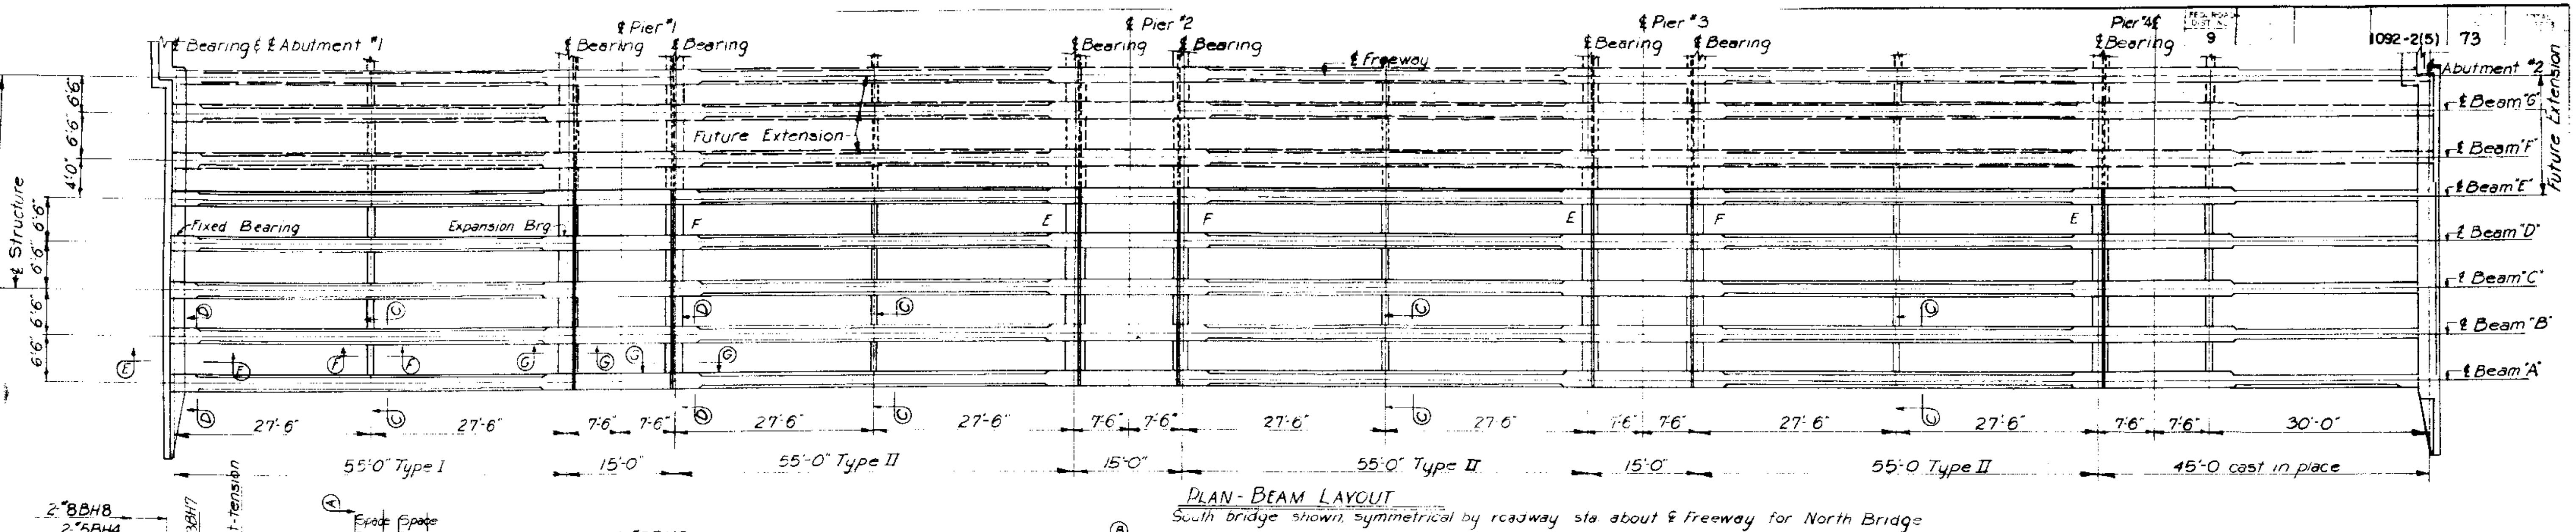
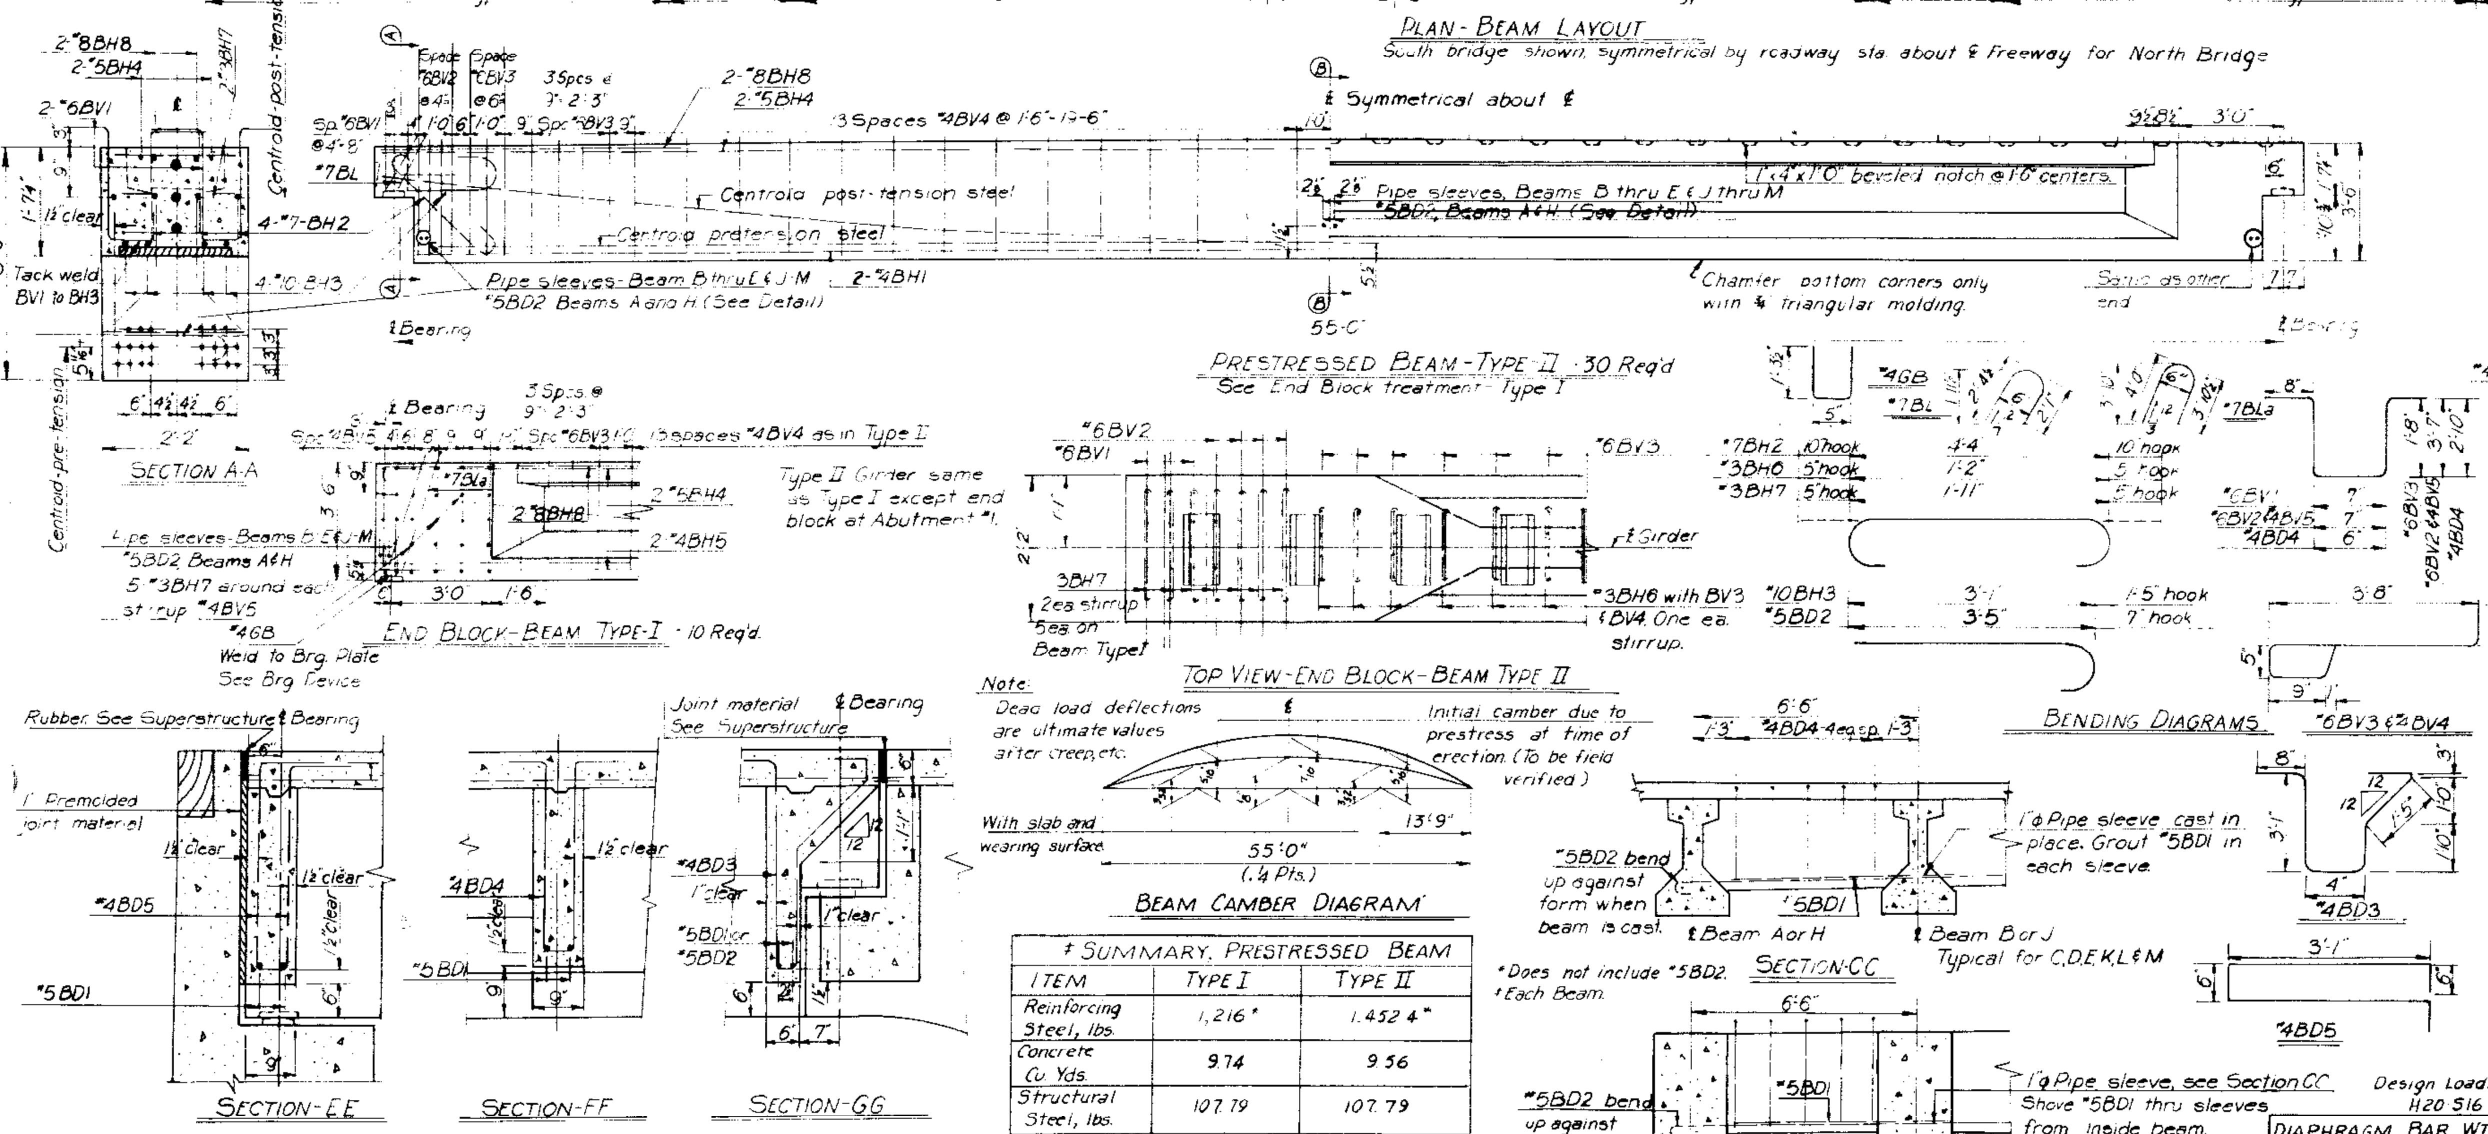
CAST IN PLACE BEAM DETAILS

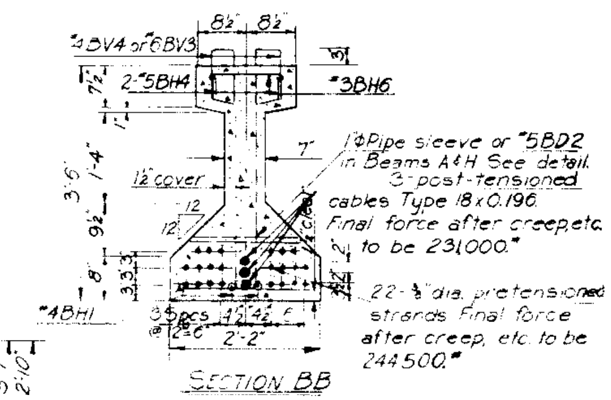
SCALE: 3/8"=1'-0" ¾"=1'-0" | DATE: April 1957

ROBERT L. KOONS CONSULTING ENGINEERS COLORADO SPRINGS, COLO.

DRAWING NO. 15 A 6







NOTES

Design Specifications AASHO 1953 Series and Bureau of Public Roads, Tentative Design Criteria for Prestressed Bridges, 1954.

Concrete in beams to be 5000 psi at 28 days, 4,500 psi at time of transfer. Max size aggregate to be ¾". All other concrete to be Class A.

Prestressing steel to be high-tensile wire strands with a modulus of elasticity of 25,000,000 psi and ultimate strength of 250,000 psi.

All post-tensioned cables to be draped in a parabolic shape. All post-tensioned cables to be grouted as soon as practicable. Provide ⅜" grout tubes with suitable valves and shut-off cocks into each enclosure near the ends. Grout to be pumped into enclosure from one end only under 100 psi pressure until the grout flows freely from exhaust end. Exhaust valve then to be closed and pumping continued until no more grout can be introduced.

Prestressed beams to be supported at the ends only or handled by lifting hooks provided.

Unit price for beams shall include all concrete, reinforcing steel, high-strength steel, bearing devices, pipe sleeves, etc. as shown.

All dimensions for reinforcing steel are to ℄ of bars unless otherwise indicated. All dimensions shown on bending diagrams are out to out of bars.

NOTES

All concrete shall be Class A

All dimensions for reinforcing steel are to ℄ of bars. All dimensions shown in the bending diagrams are out to out of bars.

Slab concrete shall be poured in the sequence shown or other such sequence that the concrete is placed over the piers after the two center spans ahead are poured. All falsework shall be removed before the curb is poured.

Bevel all exposed edges with a 3/4" triangular molding unless otherwise noted.

The finished floor shall be constructed to the theoretical grade by increasing or decreasing the slab thickness over the beams by the amounts shown on the dead load deflection diagram shown on LIGHTING AND SLOPE PAVING SHEET.

See Lighting Sheet for conduit layout.
See Handrail Sheet for details.

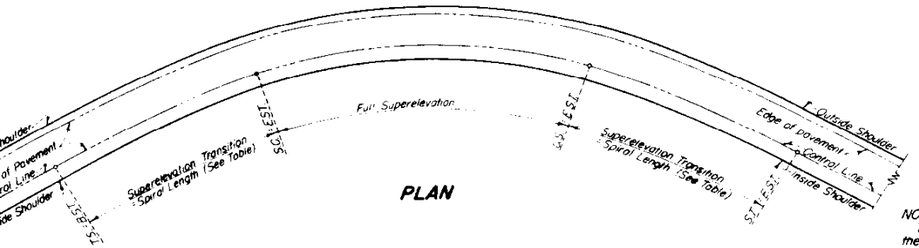
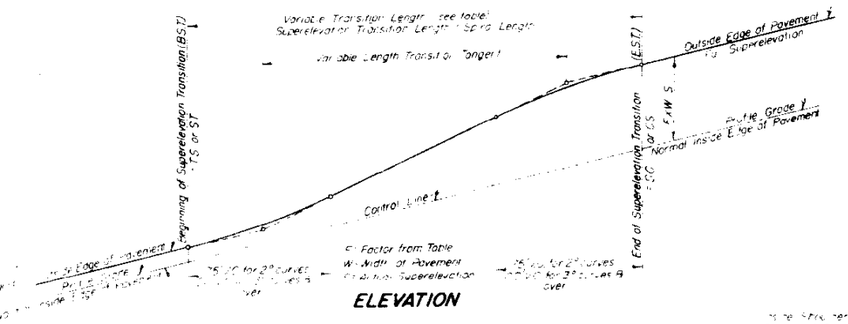
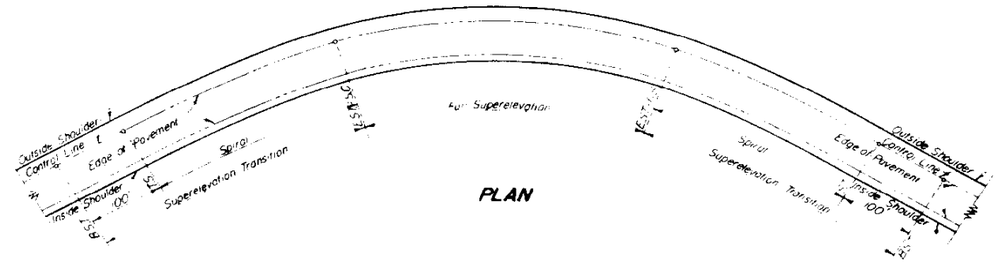
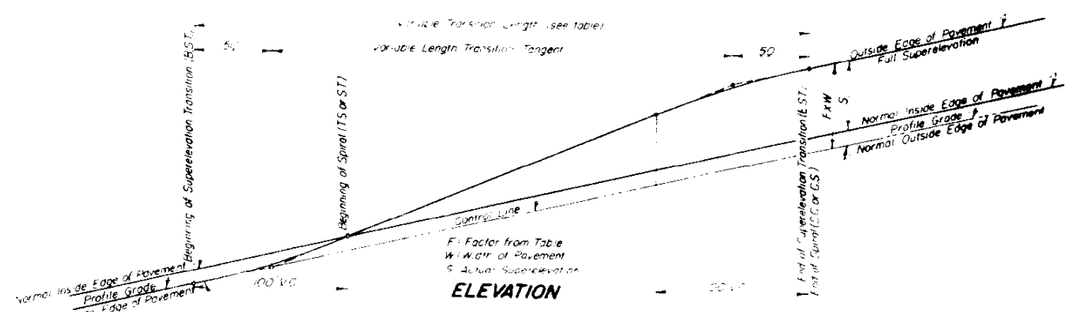
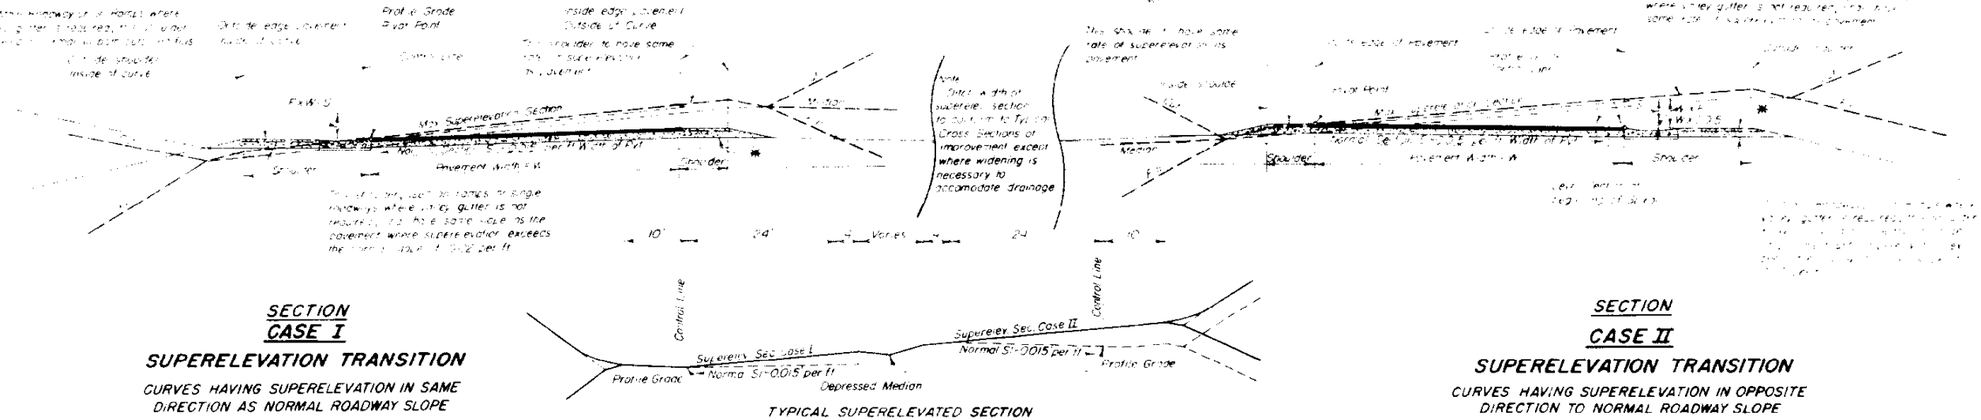
9	COLORADO	1092-2(5)	77	











NOTE CASE I
The normal roadway slope is approximately equal to the superelevation for a 1° curve. Therefore no superelevation is required for 1° curves.
For curves of over 1° the factors shown in the table for Case I include the normal roadway slope of .001 Ft per Ft., thereby giving values of actual superelevation at any point on the transition.

NOTE CASE II
In order that the opposing slope of the normal roadway be eliminated before entering the horizontal curve, Case II, superelevation transitions shall begin on the tangent one hundred feet(100') from the T.S. and/or ST. of the spiral. Case II superelevation, calculated as indicated in the table, is to be added to the normal low edge of pavement.

NOTE CASE I & II
On curves where no spirals are used the superelevation transition shall be on the tangent approaching each end of the curve. Full superelevation to coincide with the PC or PT. of such curve.

* Shoulders having slopes adverse to or greater than normal pavement slope shall be raised to coincide with the pavement slope at beginning of transition. Raising of shoulder to take place gradually over a distance of not less than 50 ft.

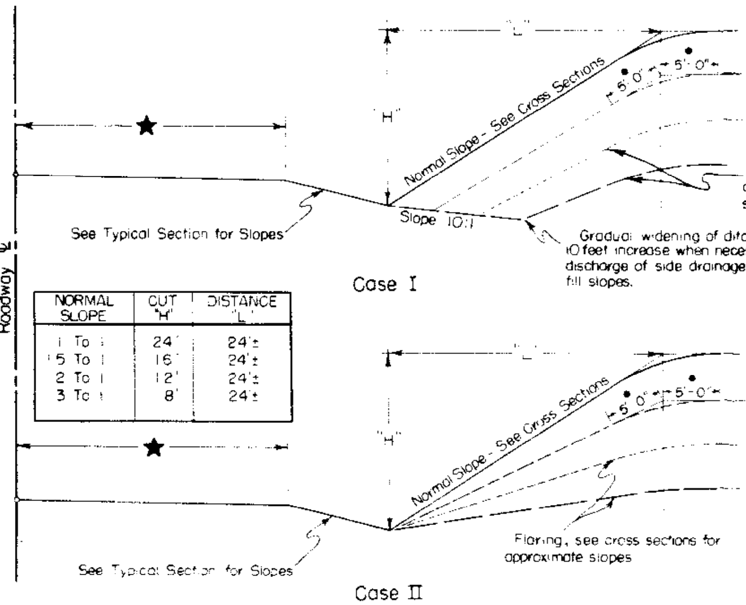
STANDARD SIDE APPROACH ROADS, FLARING, CUT SLOPE TREATMENT & WIDENING AT BRIDGES AND AT CREST OF GRADES

STANDARD M-2-EM

FED. ROAD DIV. NO.	DISTRICT	[redacted]	SHEET NO.	TOTAL SHEETS
9	COLO.	I 092-2(5)	80	[redacted]

Rev. 12-9-53, Details of Road Approaches, J.C.R.
Rev. 10-28-55, Widening at Bridge Approaches Note, S.J.M.

GENERAL DETAILS FOR FLARING OF EARTH CUTS, CUT SLOPE TREATMENT & WIDENING AT BRIDGES



NORMAL SLOPE	CUT "H"	DISTANCE "L"
1 To 1	24'	24'±
1.5 To 1	16'	24'±
2 To 1	12'	24'±
3 To 1	8'	24'±

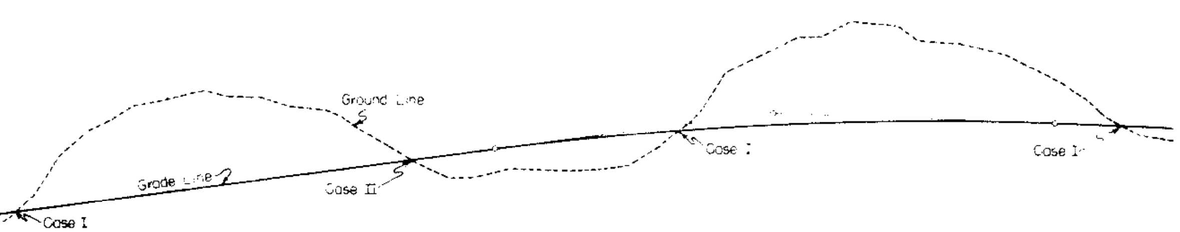
FLARING OF EARTH CUTS: The backslopes at ends of all earth cuts shall be flattened & where necessary the ditch shall be widened gradually to discharge side ditch drainage away from the base of adjacent fill slopes in order to avoid erosion & to improve appearance. The transition of flattened backslopes & widened ditch shall be constructed in such a manner that a uniform appearance of slope & ditch results. Backslopes shall be flared to the approximate "L" distance shown on Slope Table included with this detail. Rock cuts shall not be flared.

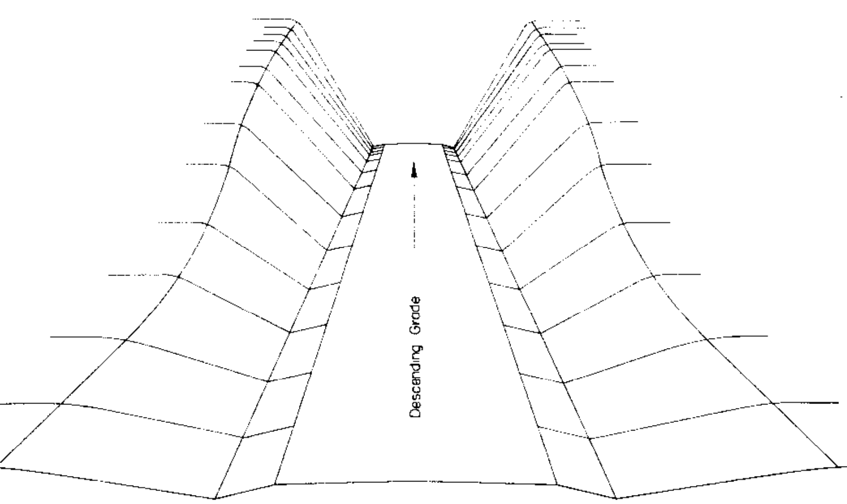
• CUT SLOPE TREATMENT IN EARTH CUTS: The intersection of cut slopes with the existing ground shall be rounded in earth cuts, beginning 5 ft outside the slope stake and extending 5 ft. down the cut slope. Where the cut slope is less than 5 ft. reduce each of the above widths of slope treatment to the actual slope distance. Quantities shall be included in "Unclassified Excavation".

★ WIDENING AT BRIDGE APPROACHES: Roadway embankment at bridge approaches shall be so constructed that base of surfacing at shoulder point is a Min. of 2 ft. beyond the outside edge of bridge deck. Where widening of the section is necessary to achieve this result it shall take place gradually over a distance of 300 ft. This is done to accomodate guard fence and/or guard posts at bridge approaches. (See additional requirements for Guard Fences below.)

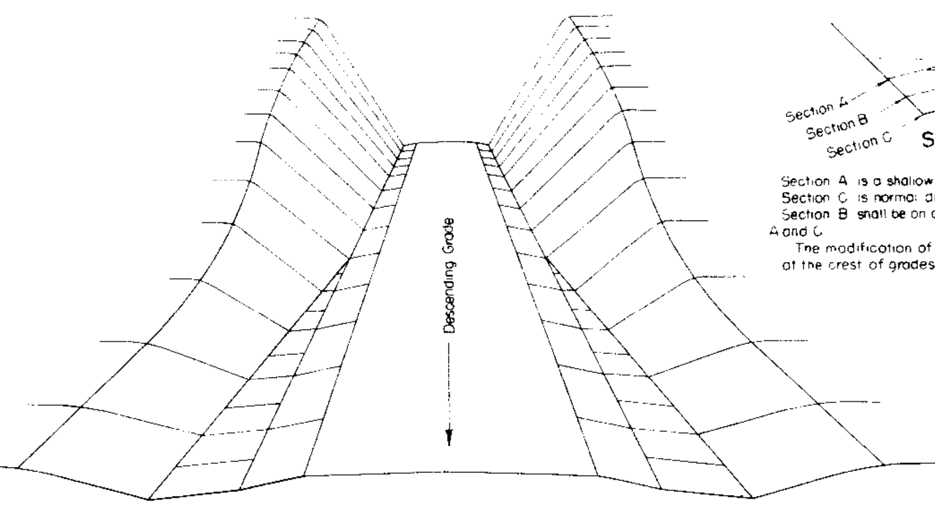
WIDENING TO ACCOMODATE GUARD FENCES: At all locations on the project (except as provided above for bridge approaches) where guard fence is to be constructed the shoulders shall be widened 2 ft. to provide additional lateral support for guard fence posts.

PLAN OF FLARING IN EARTH CUTS



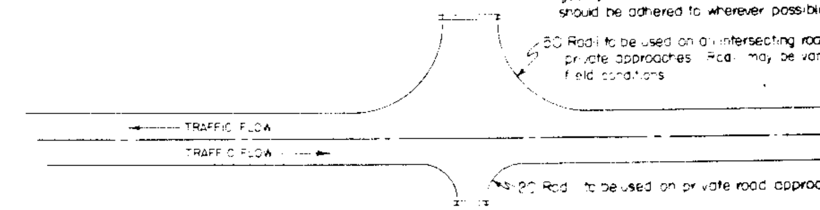


Case II



Case I

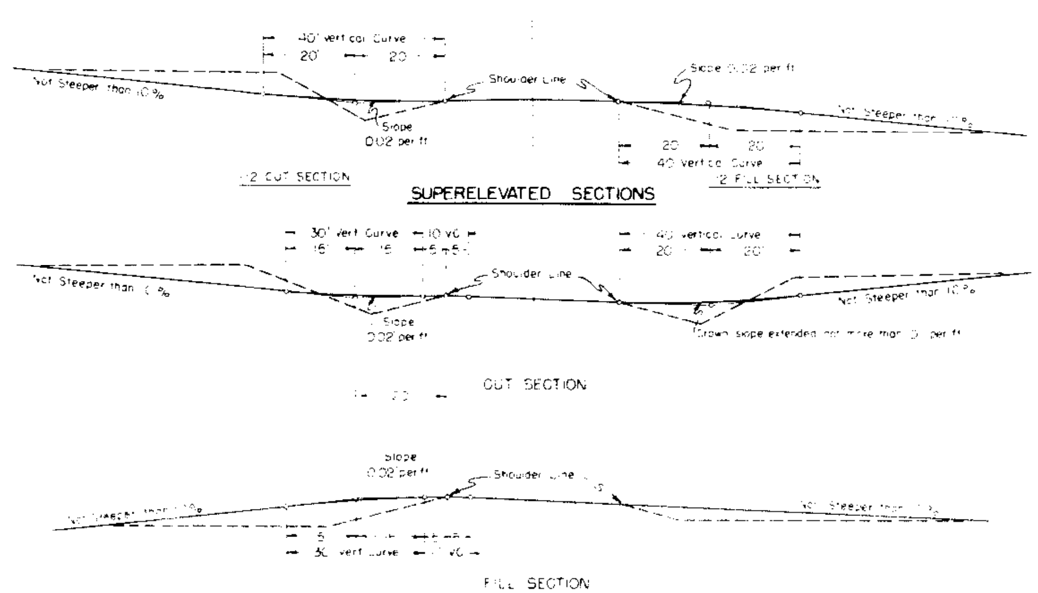
TYPICAL PLANS FOR SIDE APPROACH ROADS



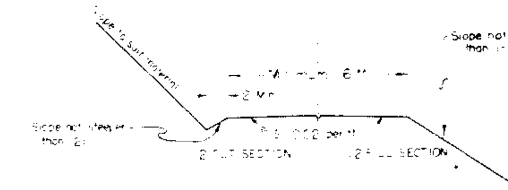
SIDE DRAINS: To be placed at greatest feasible distance from the roadway shoulder consistent with good practice. A minimum of 20 ft. from shoulder should be adhered to wherever possible.

50' Radii to be used on all intersecting roads except private approaches. Radii may be varied to suit field conditions.

20' Rad. to be used on private road approaches.



TYPICAL SECTION FOR APPROACH

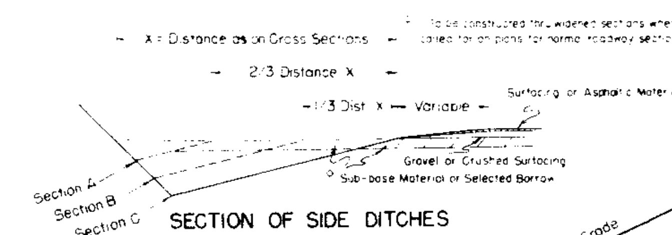


NOTE

ROAD APPROACHES ... conform to the above details unless otherwise ... shown on plans or Special Details. The width of the crowned section should ... and in no case shall the new construction be less than sixteen (16) feet in width.

DETAILS FOR DITCH & WIDENED SHOULDERS AT CREST OF GRADES

(TO BE USED ONLY WHERE SIGHT DISTANCE AT CREST OF GRADE IS 600 FT. OR LESS)



SECTION OF SIDE DITCHES

Section A is a shallow ditch section.
Section C is normal ditch section.
Section B shall be on a uniform transition between Sections A and C.

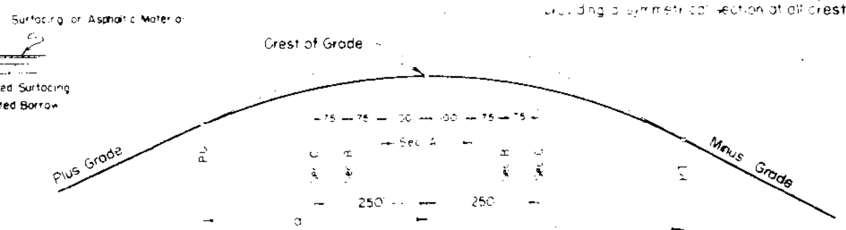
The modification of the ditch indicated shall be used only at the crest of grades from which drainage breaks both ways.

Formula for finding the Crest of Grade

$$= \frac{\text{Plus Grade}}{\text{Algebraic Diff}}$$

NOTE

Where section is in embankment at crest of grade, the shoulders shall be widened an amount equivalent to that used in ditch sections, thus providing a symmetrical section at all crests.



PROFILE VIEW SHOWING DISTANCES AND RELATIVE POSITIONS OF DITCH-TREATMENT SECTIONS

GENERAL NOTES

All work shall be done in accordance with the Standard Specifications of the Colorado Department of Highways applicable to the Project.

All side approach roads to the Project shall be Gravel Surfaced with a four (4) inch thickness of "Gravel or Crushed Rock Surfacing" extending approximately to the Right of Way Line. Estimated tonnage & type of material required for this operation are shown in the Surfacing Plan.

The maximum grades shown are to be the limiting grades for all road approaches. Modifications of grades will be permitted where adherence to the grades as shown would cause damage to property or create other unsatisfactory conditions. Grades less than the maximum shown are to be used wherever feasible.

COLORADO DEPARTMENT OF HIGHWAYS

STANDARD SIDE APPROACH ROADS, FLARING, CUT SLOPE TREATMENT, AND WIDENING AT BRIDGES AND AT CREST OF GRADES

Designed by J.C.R.	Approved by A. Julian
Made by S.J.M. 8-43	
Checked by C.R.S.	Date: November 1, 1953

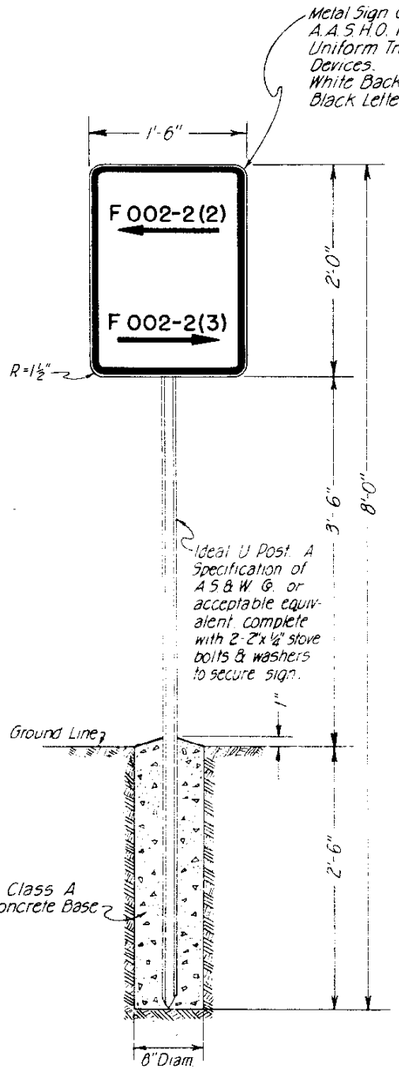
9	COLORADO	F 002-2(5)	8.1	

STANDARD M-7-C

Rev 4-4-56, Added Bridge Bench Mark, J.C.R.

PROJECT MARKER POST



NOTES FOR PROJECT MARKER POSTS

All work shall be done in accordance with the Standard Specifications of the Colorado Department of Highways applicable to this project

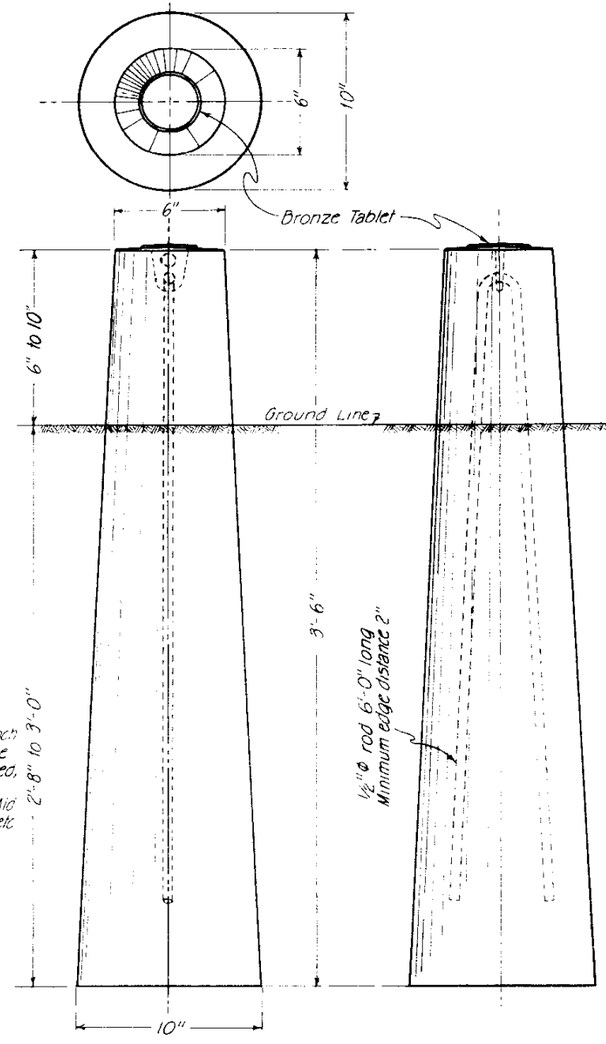
Numbers and arrows shall show the proper numbers and directions of the projects each way from where the post is placed. Post is to be set with sign facing the road at the end of the project, two feet inside the R.O.W. line or at a point amply protected from traffic in such a position that the sign will indicate properly the projects to which it refers.

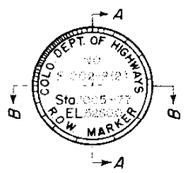
NOTES FOR R.O.W. MARKER POSTS

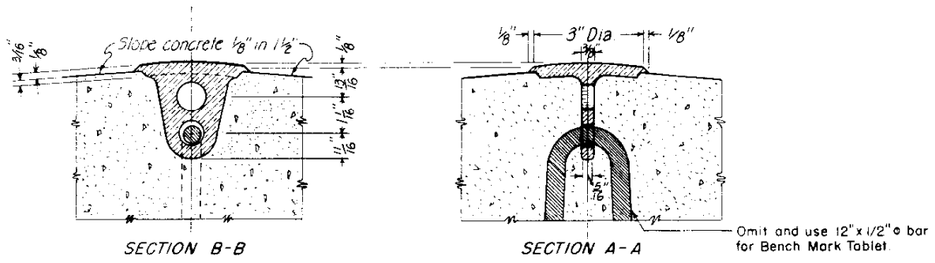
All work shall be done in accordance with the Standard Specifications of the Colorado Department of Highways applicable to the project. Posts shall be made of Class 'A' Concrete. The upper 12 inches of marker posts shall be rubbed free of form marks, and the top surface of the post must be constructed to drain thoroughly.

All exposed surfaces of the bronze tablet are to be ground to a smooth surface. All letters are to be depressed a minimum of 1/16 inch. Information on the bronze tablet indicated by pin lines is to be stamped in field by the engineering party after post is placed, 3/16 inch letters and figures to be used. Project designations on tablets shall be properly shown (i.e., I for Fed Aid Interstate, F for Fed Aid Primary, S for Fed Aid Secondary, etc & C for State Projects, see detail below.)

RIGHT OF WAY MARKER POST







DETAIL OF BRONZE TABLET FOR RIGHT OF WAY MARKER POST AND BENCH MARK

BENCH MARK

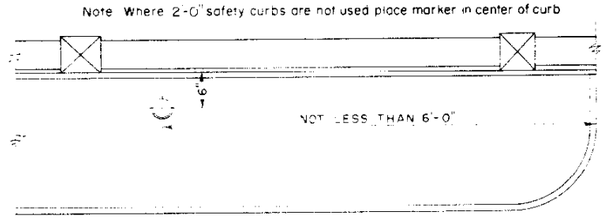
All work shall be done in accordance with Standard Specifications of the Colorado Department of Highways applicable to the project

All exposed surfaces of the bronze tablet are to be ground to a smooth surface. All letters are to be depressed a minimum of 1/16 inch. Information on the bronze tablet indicated by pin lines is to be stamped in field by the engineering party after marker is placed. 3/16 inch letters and figures to be used. Project designation on tablets shall be properly shown (i.e., I for Fed Aid Interstate, F for Fed Aid Primary, S for Fed Aid Secondary, etc & C for State Projects. See details below).

Bronze Bench Mark Tablets will be furnished by the Department at no expense to the Contractor

Installation of Bronze Bench Mark Tablets will not be paid for directly, but shall be included in the price bid for Concrete

Note Where 2'-0" safety curbs are not used place marker in center of curb



PLAN

ELEVATION

One marker to be placed on Bridges as shown. The station shown on marker shall be the centerline stationing directly opposite the marker

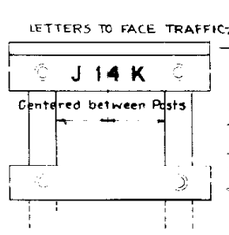
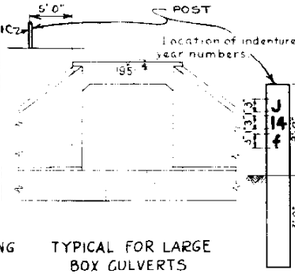
TYPICAL FOR STEEL HANDRAIL END POST

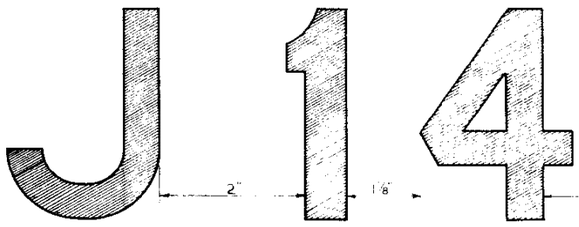


TYPICAL FOR TIMBER WING HANDRAIL

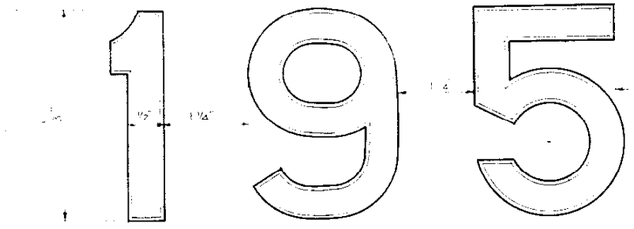


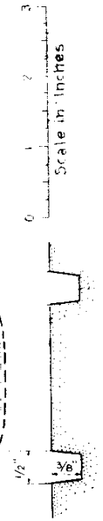
TYPICAL FOR LARGE BOX CULVERTS

SAMPLE BRIDGE NUMBER



SAMPLE YEAR NUMBER





SECTION

General Notes

ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS OF THE COLORADO DEPARTMENT OF HIGHWAYS APPLICABLE TO THE PROJECT.

COMPENSATION FOR THIS WORK SHALL BE INCLUDED IN THE ORIGINAL CONTRACT ITEMS AND WILL NOT BE PAID FOR AS A SEPARATE ITEM.

THE SIZE, SHAPE AND SPACING OF THE LETTERS AND FIGURES SHALL BE IN ACCORDANCE WITH THE FULL SIZE SHOWN ON THIS SHEET.

ADDITIONAL COPIES OF THIS FULL SIZE SHEET CAN BE OBTAINED FROM THE DEPARTMENT WITHOUT CHARGE.

THE YEAR NUMBERS ARE RECESSED IN CONCRETE 3/8" MINIMUM AS SHOWN INTO THE PANEL OF THE ENDPOST ON THE RIGHT HAND SIDE OF EACH BRIDGE END AND INTO THE FACE OF THE DOWNSTREAM HEADWALL OF CULVERTS AS SHOWN ON PLAN DETAILS.

NUMBERS TO BE MADE OF WOOD, METAL OR OTHER SUITABLE MATERIAL AND ATTACHED TO THE FORMS BEFORE CONCRETE IS POURED.

THE YEAR NUMBER OF EACH STRUCTURE SHALL CORRESPOND WITH THE YEAR IN WHICH THE CONCRETE IS POURED.

THE STRUCTURE NUMBER SHALL BE STENCILED ON THE RIGHT HAND SIDE OF EACH BRIDGE END AS SHOWN ON THIS STANDARD AND AS SPECIFIED. FOR MAJOR STRUCTURES OVER 20'-0" CLEAR SPAN.

THE CORRECT NUMBER FOR EACH BRIDGE IS SHOWN IN THE LOWER RIGHT HAND CORNER OF THE DETAIL SHEETS FOR THAT BRIDGE.

A PROPER WHITE BACKGROUND RECTANGULAR IN SHAPE AND EXTENDING THREE INCHES BEYOND THE LIMITS OF THE NUMBER SHALL BE PAINTED WITH TWO COATS OF ACCEPTABLE WHITE PAINT, UNLESS AN APPROVED WHITE CONCRETE PAINT IS USED. BEFORE PAINTING, THE SURFACE MUST BE THOROLY DRIED, CLEANED AND PROPERLY SIZED. ON TIMBER HANDRAILS THE WHITE PAINT USED ON THE BRIDGE WILL BE SATISFACTORY.

AFTER THE WHITE BACKGROUND HAS DRIED SUFFICIENTLY, THE CORRECT STRUCTURE NUMBER SHALL BE CAREFULLY STENCILED ON IT WITH TWO COATS OF SECOND FIELD COAT-DARK OR EXTERIOR BLACK PAINT (MAINT.) AS SPECIFIED UNDER ITEM 38 PAINTS AND PAINTING. THE BRACES OF THE STENCILED LETTERS AND FIGURES SHALL BE CAREFULLY FILLED IN BY HAND TO MAKE SOLID FIGURES.

SUFFICIENT TIME BETWEEN SUCCESSIVE COATS SHALL BE ALLOWED TO PERMIT THOROUGH DRYING.

MINOR STRUCTURES WITH CLEAR SPANS 12 TO 20 FEET INCLUSIVE SHALL BE STENCILED WITH STRUCTURE NUMBER THUS: W-18-S ON 4"x4"x6' TIMBER POST TO BE FURNISHED AND PLACED BY THE CONTRACTOR. POST SHALL BE PLACED 4 FT ± OUTSIDE THE ROADWAY SHOULDER. THIS SHALL BE CONSIDERED SUBSIDIARY WORK AND WILL NOT BE PAID FOR AS A SEPARATE ITEM.

SPECIFICATIONS

(Work By Contractor)

Rev. 5-13-53, Specifications, J.C.R.
Rev. 12-4-53, Date Nails Deleted, D.L.V.
Rev. 2-1-54, Delineation by State Forces, J.C.R.

POSTS - Lodgepole Pine, Southern Yellow Pine or West Coast Douglas Fir, not less than six (6) inches in diameter. All posts shall be pressure treated with Pentachlorophenol as provided under paragraph 42.2.20 of the specifications, after being peeled and shaved in accordance with specifications.

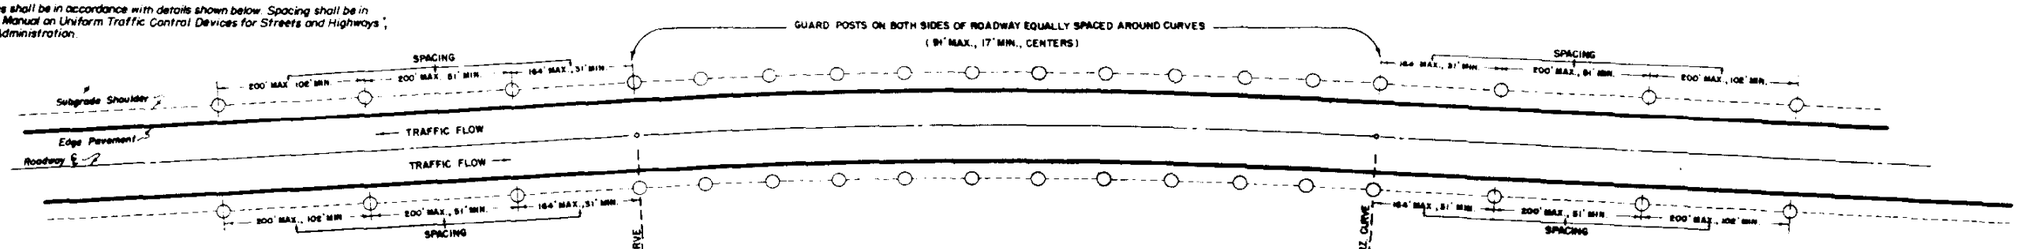
PAINTING - Posts shall be painted with aluminum paint and a black band placed around each post as per details on this sheet. Number of coats and type of paint applied shall be in accordance with specifications

(Work By State Forces)

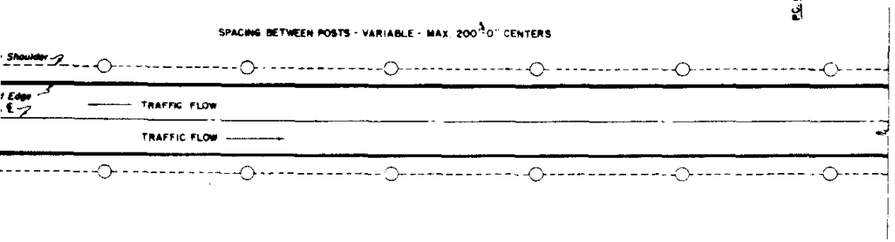
REFLECTIVE SHEETING - In accordance with the details hereon, State Forces will furnish and place the required 2"x 6" smooth surfaced reflective delineators fabricated from 3s - H14 aluminum alloy, minimum thickness 0.025", reflectorized with reflective sheeting strips or other approved reflective materials. Strips shall be suitable for placement around a curved surface.

Typical Installation on Curves

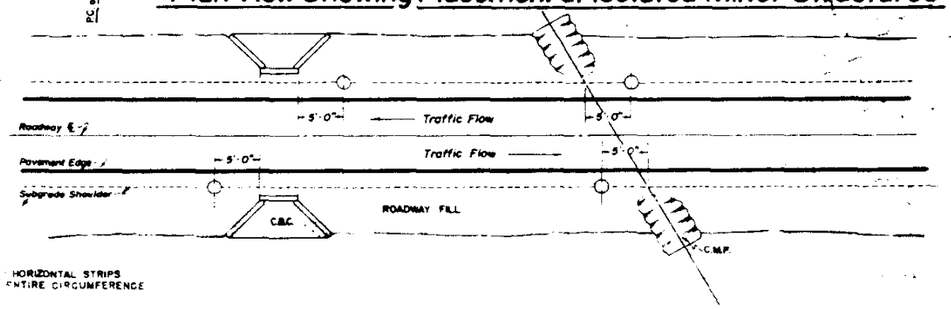
TION of guard posts on curves shall be in accordance with details shown below. Spacing shall be in th Section 157, Table I of "Manual on Uniform Traffic Control Devices for Streets and Highways", 1948 by the Public Roads Administration.



Method of Placement on Tangents



Plan View Showing Placement at Isolated Minor Structures



Typical Installation at Bridge Approaches

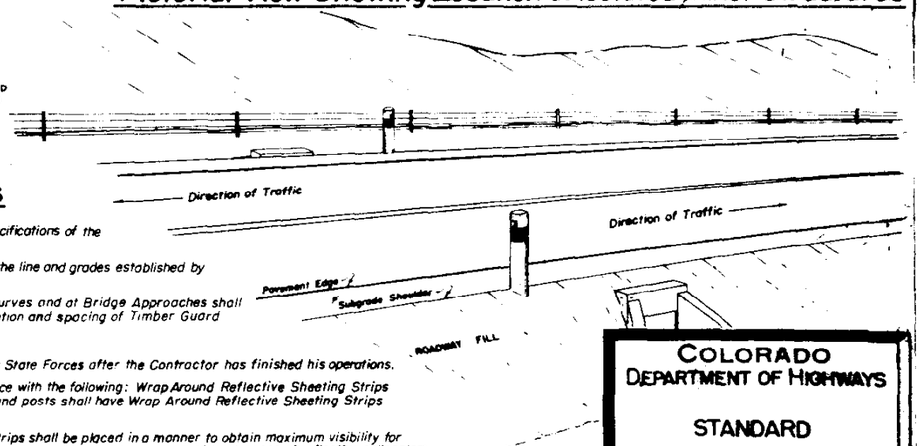
(Work By State Forces)

INSTALLATION DETAILS OF REFLECTORIZED STRIPS

Pictorial View Showing Location at Isolated Minor Structures



GENERAL NOTES

(Work By Contractor)

All work shall be done in accordance with the Standard Specifications of the Colorado Department of Highways applicable to the project.

All posts shall be set and tamped in, plumb and firm, to the line and grades established by the Engineer.

INSTALLATION of Timber Guard Posts on Tangents, Curves and at Bridge Approaches shall be in conformity with details on this sheet. The number, location and spacing of Timber Guard Posts is shown on plans.

(Work By State Forces)

Reflective delineators shall be furnished and installed by State Forces after the Contractor has finished his operations.

Installation of reflective delineators shall be in accordance with the following: Wrap Around Reflective Sheeting Strips shall be installed horizontally one (1) sheet on all posts. Island posts shall have Wrap Around Reflective Sheeting Strips placed horizontally to cover entire circumference of Post.

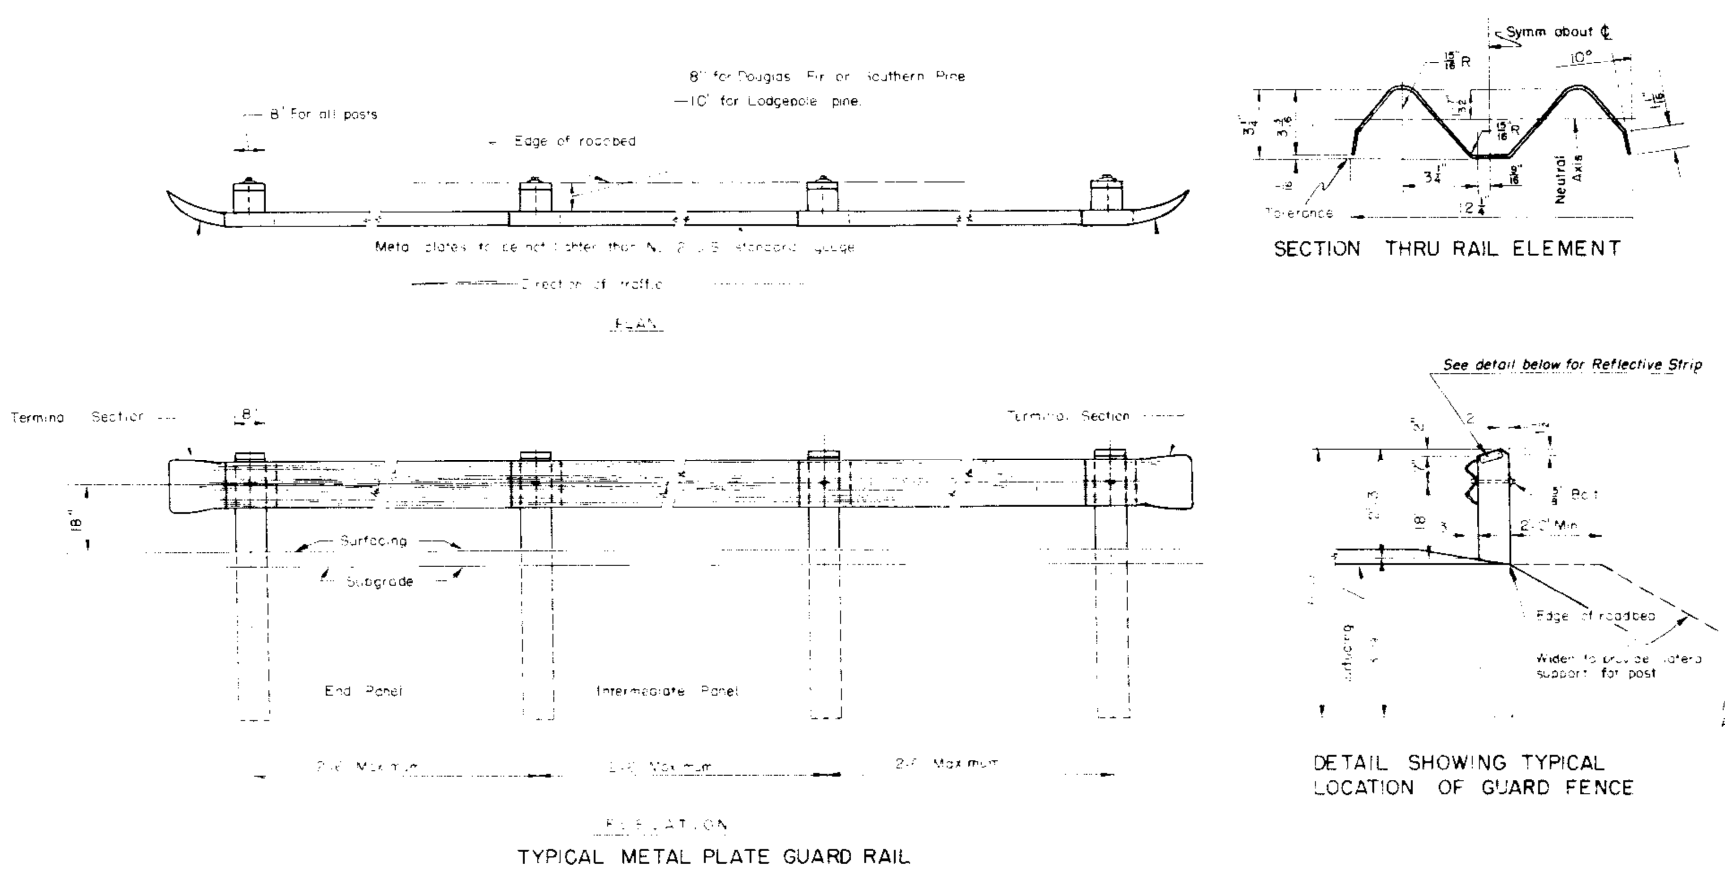
On Divided Highways and Islands, Reflective Sheeting Strips shall be placed in a manner to obtain maximum visibility for the primary direction of travel. In all instances tests shall be made to insure the maximum effectiveness of reflective delineators.

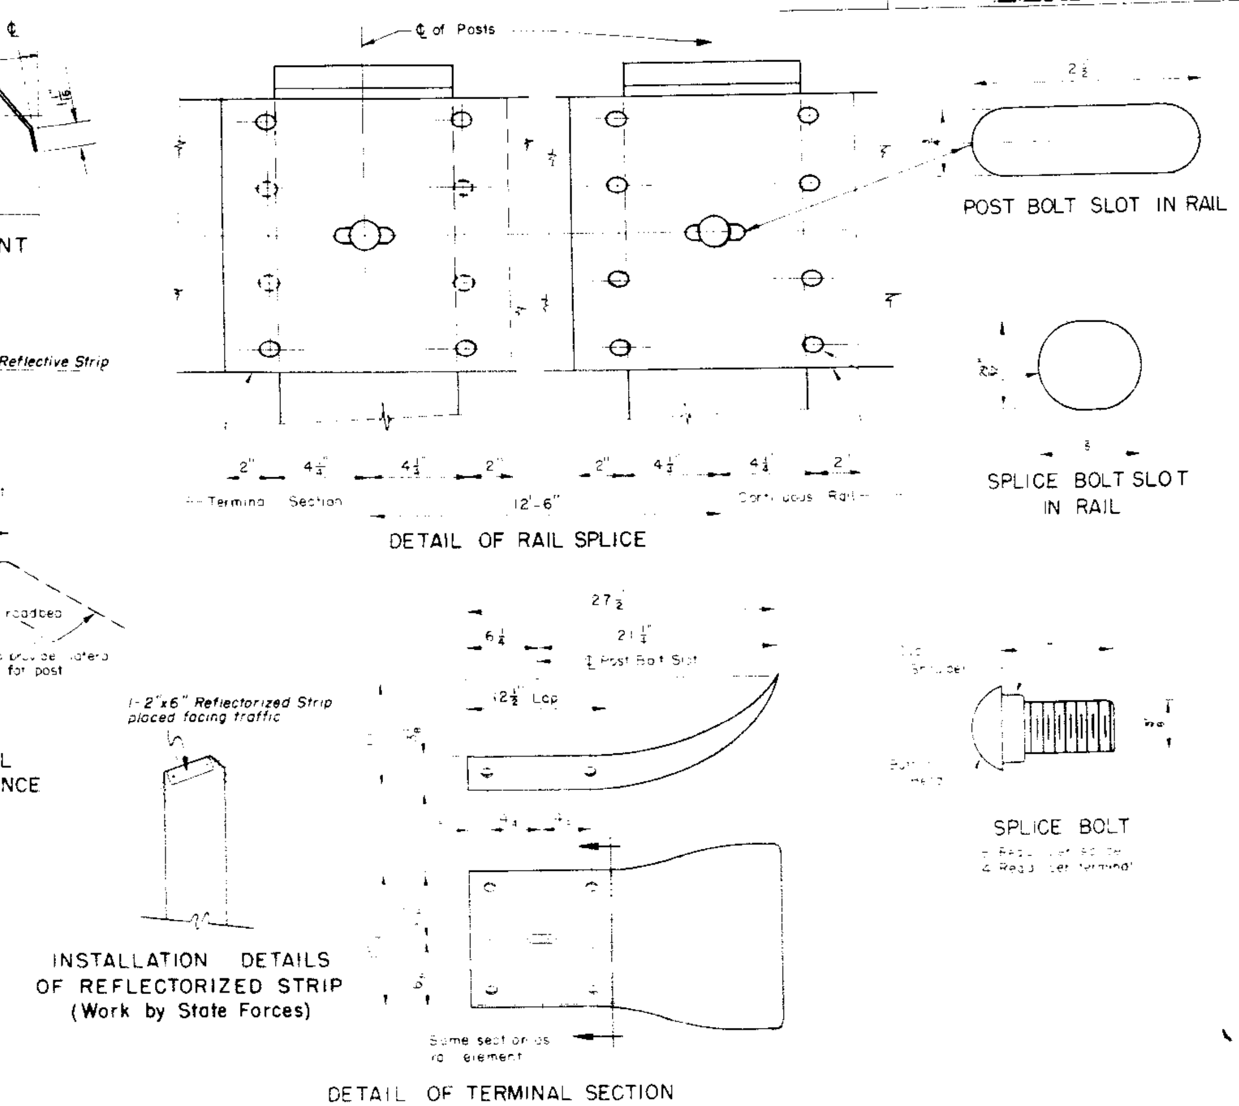
All Traffic Islands shall be marked with Island Posts as indicated hereon

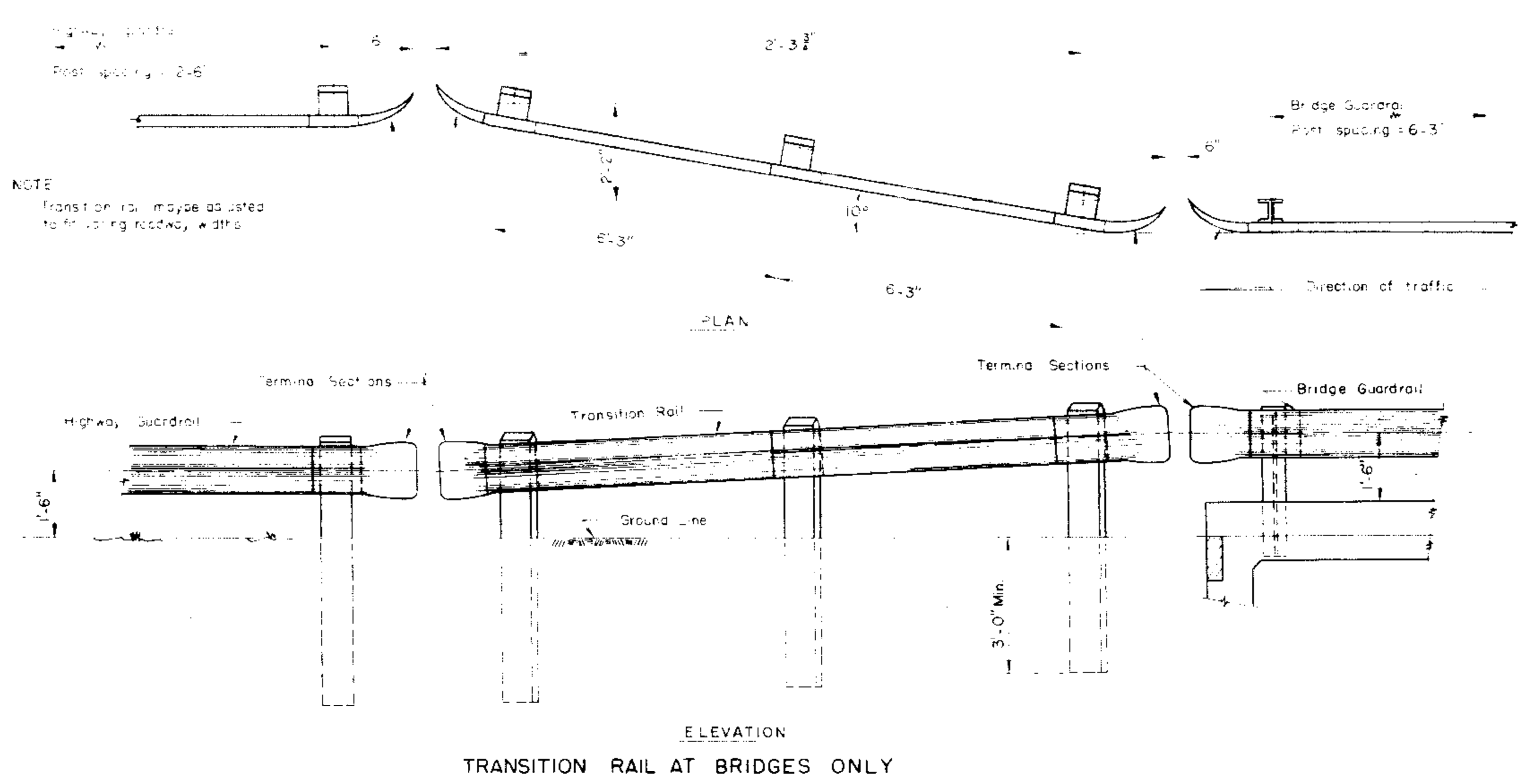
COLORADO
DEPARTMENT OF HIGHWAYS

STANDARD
TIMBER GUARD POSTS

Designed by	Approved by C. Paulsen
Made by	Engineer, Surveys & Plans
Checked by	Date: March 25, 1953







GENERAL NOTES

All work shall be done according to the Standard Specifications of the Colorado Department of Highways applicable to the project.

All wood posts shall be close grained Douglas Fir of the Coast Region, Dense Long Leaf or Short Leaf Southern Pine or Lodgepole Pine.

All wood posts shall be square edged, full sawn, with tops beveled as shown. All bolt holes are to be drilled 1/16 inch larger than diameter of bolt before treatment is applied. All wood posts shall be pressure treated for the full length of the posts as provided for in the specifications.

Timber posts fabricated from Douglas Fir or Southern Pine shall be 8"x8" square. Timber posts fabricated from Lodgepole Pine shall be 8"x10" and shall be installed with the 8" face parallel to the center line of the roadway.

All wood posts shall be set and tamped in plumb and firm to the lines and grades as directed by the Engineer.

Metal plates shall not be galvanized, but shall be painted as provided for in the specifications.

Metal plates shall not be lighter than No. 12 U.S. standard gauge.

Standard galvanized cast iron O.G. or galvanized malleable cast washers shall be used under all bolt heads and nuts coming in contact with wood posts.

Where sidewalks are constructed adjacent to the lane for traffic, guard fence shall be placed in such a manner that the fence lies on the line between the sidewalk area and the normal roadway shoulder.

Where guard fences are constructed on the approaches to bridges with sidewalks, the fence at bridge shall be placed in line with the face of the curbing on the bridge.

(Work by State Forces)

Reflective delineators shall be furnished and installed by State Forces after the Contractor has finished his operations.

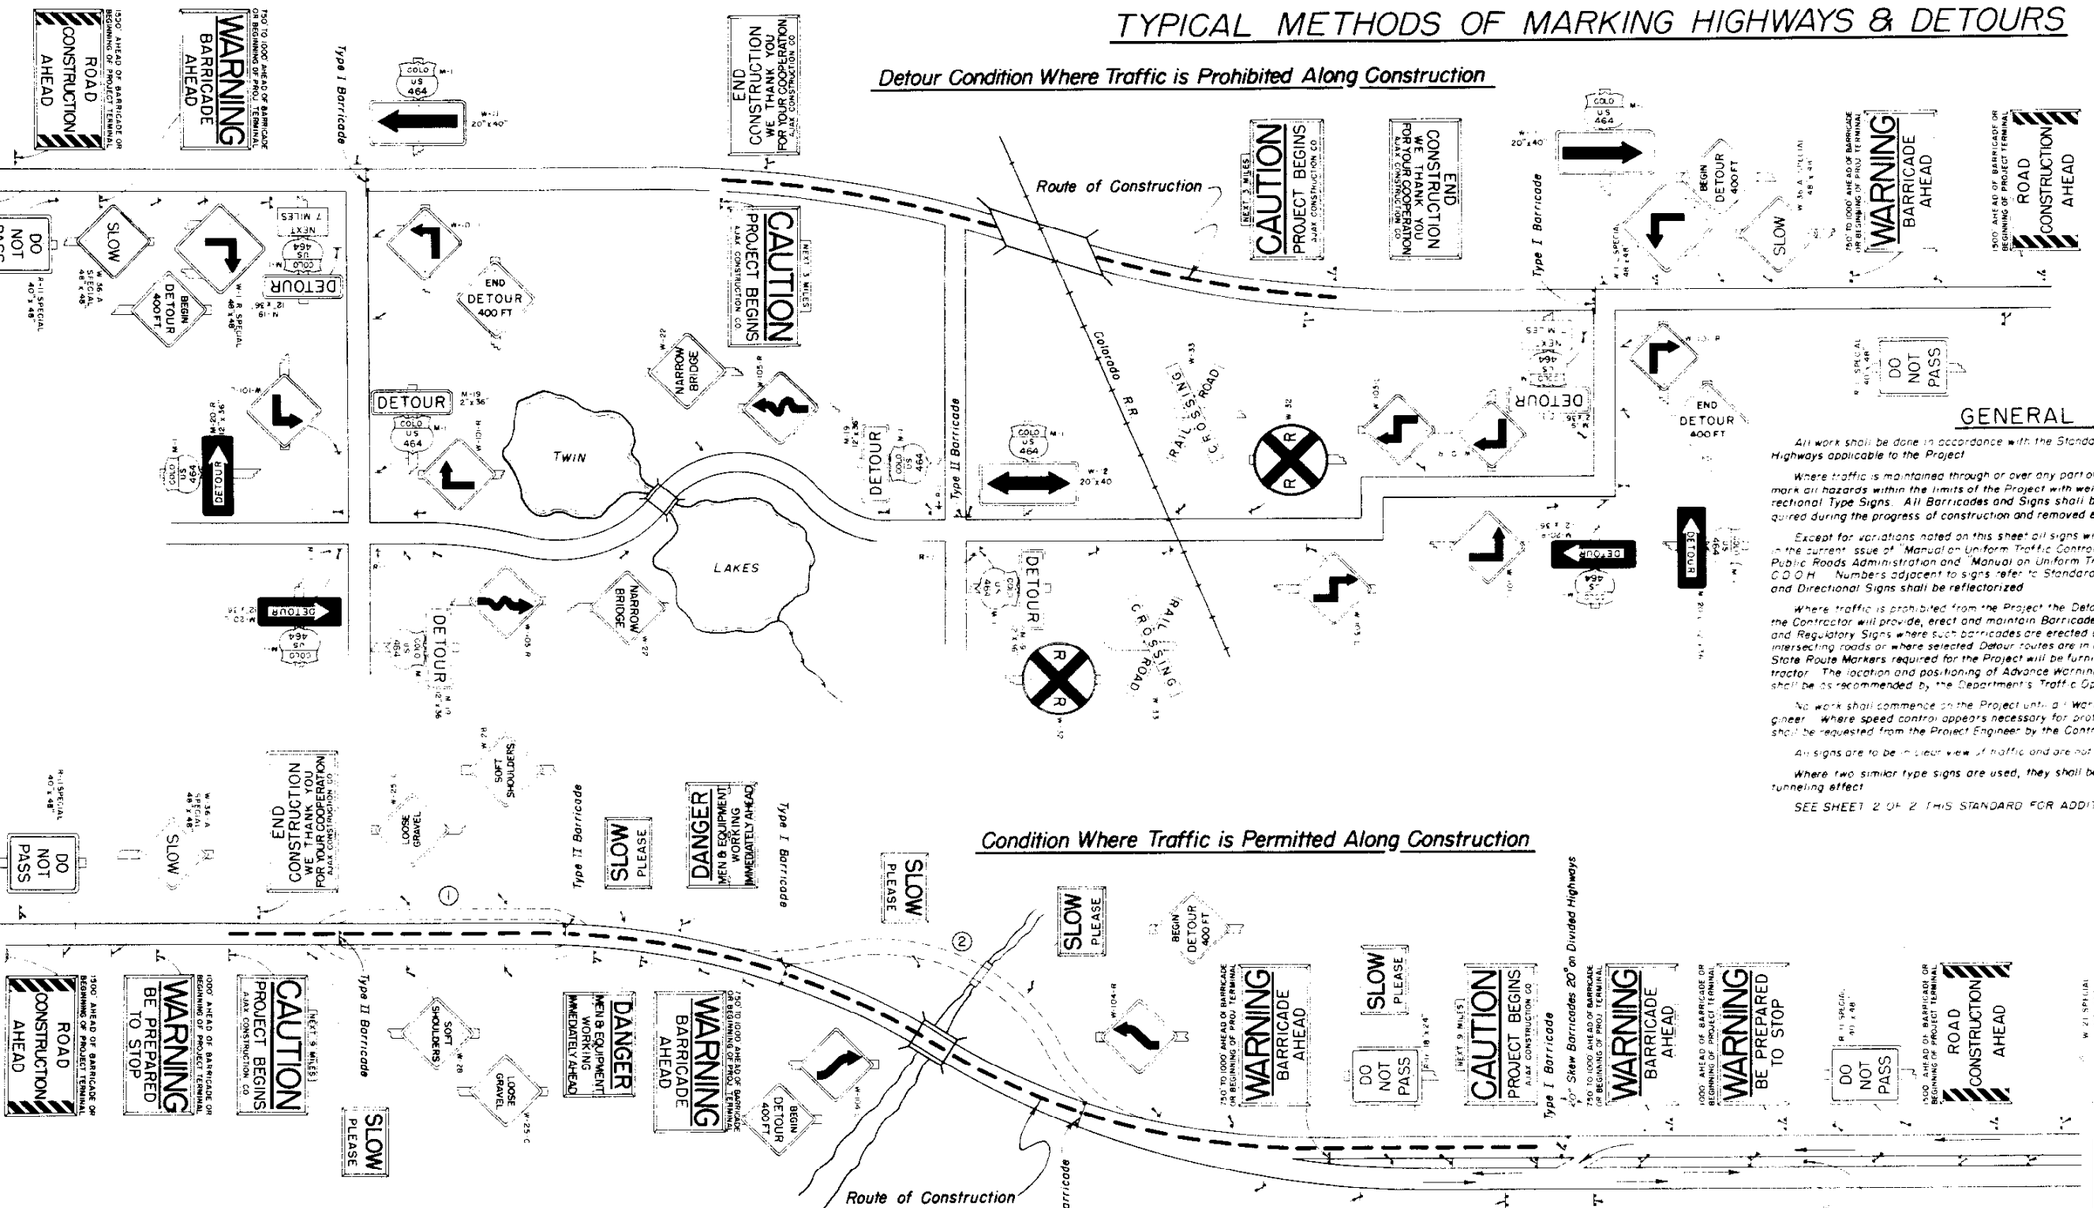
STANDARD ROADWAY CONSTRUCTION TRAFFIC SIGNS

STANDARD M-29-B
(SHEET 1 OF 2 SHEETS)

FED. ROAD DIV. NO.	DISTRICT	SHEET NO.	TOTAL SHEETS
8	COLO.	Lo 2-2(5)	87

TYPICAL METHODS OF MARKING HIGHWAYS & DETOURS

Detour Condition Where Traffic is Prohibited Along Construction



Condition Where Traffic is Permitted Along Construction

GENERAL NOTES

All work shall be done in accordance with the Standard Specifications of the Colorado Department of Highways applicable to the Project.

Where traffic is maintained through or over any part of the Project, the Contractor will be required to mark all hazards within the limits of the Project with well maintained Barricades, Warning Signs and Directional Type Signs. All Barricades and Signs shall be moved, added to, changed or removed as required during the progress of construction and removed entirely when project is completed.

Except for variations noted on this sheet all signs will be in conformity with the specification outlined in the current issue of "Manual on Uniform Traffic Control Devices for Streets & Highways" by the U.S. Public Roads Administration and "Manual on Uniform Traffic Control Devices for Streets and Highways," C.D.O.H. Numbers adjacent to signs refer to Standards in the manual. Standard Warning, Regulatory and Directional Signs shall be reflectorized.

Where traffic is prohibited from the Project the Detour will be marked by the Department except that the Contractor will provide, erect and maintain Barricades complete with approved Directional Arrows and Regulatory Signs where such barricades are erected and maintained at the ends of the Project and intersecting roads or where selected Detour routes are in advance of the actual project terminal. U.S. or State Route Markers required for the Project will be furnished by the Department and installed by the Contractor. The location and positioning of Advance Warning Signs, Barricades and Speed Control Signs shall be as recommended by the Department's Traffic Operations Section.

No work shall commence on the Project until all Warning Signs are in place and approved by the Engineer. Where speed control appears necessary for protection of the traveling public, such speed control shall be requested from the Project Engineer by the Contractor.

All signs are to be in clear view of traffic and are not to be obstructed by equipment, weeds or otherwise.

Where two similar type signs are used, they shall be placed approximately 75 feet apart to avoid a tunneling effect.

SEE SHEET 2 OF 2 THIS STANDARD FOR ADDITIONAL NOTES AND DETAILS.

NOTE

Typical examples for marking Projects as shown hereon constitute a minimum of signs required and is subject to alteration to fit actual conditions encountered in the field. Additional markings and any special signs required for the guidance and protection of traffic will be placed as required on the project at the Contractor's expense.

All Signs and Barricades must be maintained in good condition and kept clean and free of dirt at all times to give the appearance of new signing. Contractor's and Engineers' equipment must be parked so that signs and barricades are visible to traffic at all times.

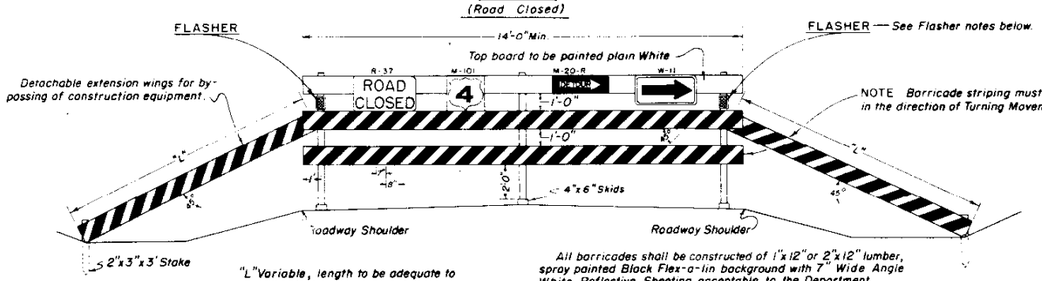
FED. ROAD DIV. NO. 8 | DISTRICT | COLO. | SHEET NO. 7092-26 | TOTAL SHEETS 88

Rev. 7-10-56, Reflective Materials, L.N.P.

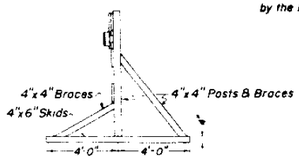
DETAILS OF BARRICADES

Type I
(Road Closed)



"L" Variable, length to be adequate to provide closing of borrow pit and shoulder.

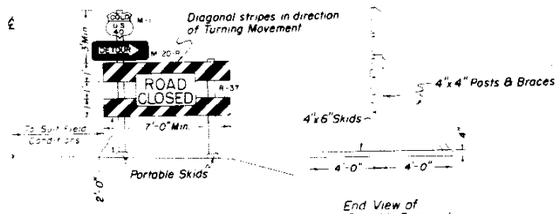
All barricades shall be constructed of 1"x12" or 2"x12" lumber, spray painted Black Flex-a-lin background with 7" Wide Angle White Reflective Sheeting acceptable to the Department.
Boards may be painted on reverse side with opposite slant on reflective stripes for opposite direction use.
Barricades may be either portable as shown or fixed with posts set into the ground.
All skids, braces & posts to be painted White & nailed together with No. 20d nails.
Bases to be weighted where necessary to provide stability.



End View of
Type I Portable Barricade
(Optional)

NOTE
The various types & combinations of approved signs for barricades required for each project will be governed by field conditions and subject to approval by the Engineer.

Type II
(Beg. of Detour, By-Pass Areas within Proj., Extreme Hazards, etc.)



End View of
Type II Portable Barricade
(Optional)

NOTE: Alternate materials or other reflecting elements on Construction Traffic Signs and Barricades will be permitted only after approval of such material by the Department.

DETAILS OF CONSTRUCTION SIGNS

SIGN MARKINGS

Construction Signs "A" through and including "G" shall be made of 3/8" Plywood or other material after approval by the Department, and as per details above. Signs shall be reflectorized with reflective sheeting or other reflective materials of types approved by the Department.

CONSTRUCTION SIGN "A" - Wide Angle White background with painted Black lettering. Barricade stripes of 4" Wide Angle White placed over Black painted vertical strips spaced as shown above. This sign is the First advance warning sign and shall be placed 1500 feet ahead of barricade or beginning of project terminal and on both sides of the travelled way in all cases.

CONSTRUCTION SIGN "B" - The word "WARNING" and 1" underline shall be painted White on a 23" strip of Wide Angle Flat Top Red. Balance of lettering painted Black on a 22" strip of Wide Angle White. This sign is the Second advance warning sign and shall be placed 1000 feet ahead of barricade or beginning of project terminal and on both sides of the travelled way on divided highways and singly on two-lane highways.

CONSTRUCTION SIGN "C" - The word "WARNING" and 1" underline shall be painted White on a 23" strip of Wide Angle Flat Top Red. Balance of lettering painted Black on a 22" strip of Wide Angle White. This sign is the Third advance warning sign in cases where barricades are used and shall be placed 750 to 1000 feet ahead of barricade or beginning of project terminal and on both sides of the travelled way on divided highways and singly on two-lane highways.

REVERSE SIDES OF SIGNS "A", "B" and "C" - The word "SLOW" shall be painted Black and superimposed over a Yellow miniature W-36-A background panel. Balance of lettering shall be painted Black on a White background.

CONSTRUCTION SIGN "D" - The word "CAUTION" and 1½" underline shall be painted White on a 24½" strip of Wide Angle Flat Top Red. Balance of lettering painted Black on a 20½" strip of Wide Angle White. This sign will be provided with a detachable 1" material board mounted on back of sign with 2-¼"x2" bolts. This board shall be painted White with Black lettering. (Indicate to the nearest Mile). This sign shall be placed to mark the Beginning of the Project. To be placed singly and may be placed opposite barricade if desirable.

CONSTRUCTION SIGN "E" - The word "DANGER" and 1" underline shall be painted White on a 17½" strip of Wide Angle Flat Top Red. Balance of lettering painted Black on a 27½" strip of Wide Angle White. The sign is of the hinged and fold type to facilitate the closing down of sign when the need is not prevalent. This sign shall be placed 500 feet ahead of the situation on hand.

CONSTRUCTION SIGN "F" - The words "END CONSTRUCTION" and "CONTRACTORS NAME" shall be painted Black on strips 22" and 6½" respectively of Wide Angle White. Balance of lettering shall be painted White on a 16½" strip of Wide Angle Flat Top Red. This sign shall be placed to mark the Ending of the Project. To be placed singly and may be placed opposite barricade if desirable.

CONSTRUCTION SIGN "G" - The words "SLOW" and "PLEASE" shall be painted Black on a background of Wide Angle Yellow. This sign shall be used frequently within the limits of the Project.

All of the preceding signs shall be fastened to 2-4"x4" posts set 4 feet in the ground with a minimum of 3-1"x4" nailing strips on the back. Bottom of sign to be not less than 36" above ground.

FLAGMAN WARNING SIGN "H" - This sign shall be made of Plastic or other light-weight material, painted Red background with White lettering on the "STOP" side and painted Green background with White lettering on the "GO" side. Handle to be grooved on one side to indicate reading of sign to flagman. This sign will be used whenever flagmen are necessary. Sign to be reflectorized if used to stop traffic at night.

DETOUR WARNING SIGN "I" - To be of 3/8" (Minimum) plywood or No 16 (Minimum) gauge metal with Black painted letters on a Wide Angle Yellow background.

CONSTRUCTION SIGN "J" - ¾"x 9" metal slides to be placed between "NEXT" — MILES", spaced so as to accommodate appropriate size numerals. Required numerals to be furnished by the Department and to be installed by the Contractor. Numerals calculated to the nearest Mile.

All material shall be sound and durable. Barricades, signs, symbols and lettering conforming to styles noted hereon will be of good workmanship and well maintained. Uneven lettering will not be accepted.

Flares and Torches shall be of the oil burning type approved by the Department and shall be placed 3 feet to 5 feet ahead of the object to be illuminated. Particular care shall be taken to protect all signs and barricades from smoke and smudge arising from the use thereof.

Flashers used on Type I Barricade shall be of the Battery or Electrical Type. The illuminating element in a flashing amber beacon or signal shall be flashed continuously at a rate between 50 or 60 flashes per minute which will be clearly distinguishable to traffic. The duration in which Flashers will be left in operation will be governed by field conditions and subject to approval by the Engineer.

Alternate methods of processing signs or the substitution of pressure sensitive symbols or other reflecting elements for painted symbols will be permitted only after approval of such methods or materials by the Department.

The Department shall furnish and install the following as required outside the limits of the Project:

1.	"ROAD CONSTRUCTION AHEAD"	Minimum 4
2.	"WARNING BE PREPARED TO STOP"	Minimum 2
3.	"WARNING BARRICADE AHEAD"	As Required
4.	Standard Warning & Directional Signs	As Required

The Contractor shall furnish and install the following as required within the limits of the Project:

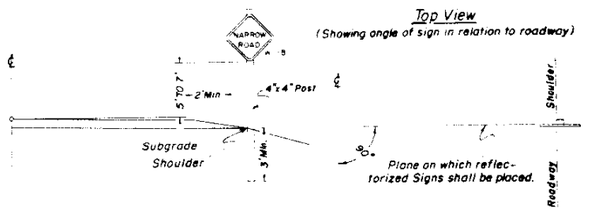
1.	All Barricades	As Required
2.	"CAUTION PROJECT BEGINS"	Minimum 2
3.	"DANGER MEN & EQUIPMENT WORKING IMMEDIATELY AHEAD"	As Required
4.	"END CONSTRUCTION WE THANK YOU FOR YOUR COOPERATION"	Minimum 2
5.	"SLOW PLEASE"	As Required
6.	Standard Warning & Directional Signs	As Required
7.	Approved Directional Arrows & Regulatory Signs for Barricades	As Required
8.	Torches and Flares as follows: Type I Barricade	Minimum 3
	Type II Barricade	Minimum 1
9.	Flashers - Type I Barricade	2 Required

Details of Reflectorized Arrows

MARKINGS - A Wide Angle White Reflectorized Arrow of Reflective Sheeting acceptable to the Department to be placed on a Black background. Letters to be 4" in height.

MARKINGS - A Black Arrow on a Wide Angle Yellow background of Reflective Sheeting acceptable to the Department.

Position of Signs Relative to Roadbed & Hazards



NOTE:
Warning Signs to be made of 3/8" (Min.) plywood or No 16 Gauge (Min.) metal and shall be reflectorized.
Location to be governed by field conditions. Exact location to be staked by the Engineer. In all cases warning signs are to be placed well in advance of hazard, the distance depending on topography, and existing approach speeds.

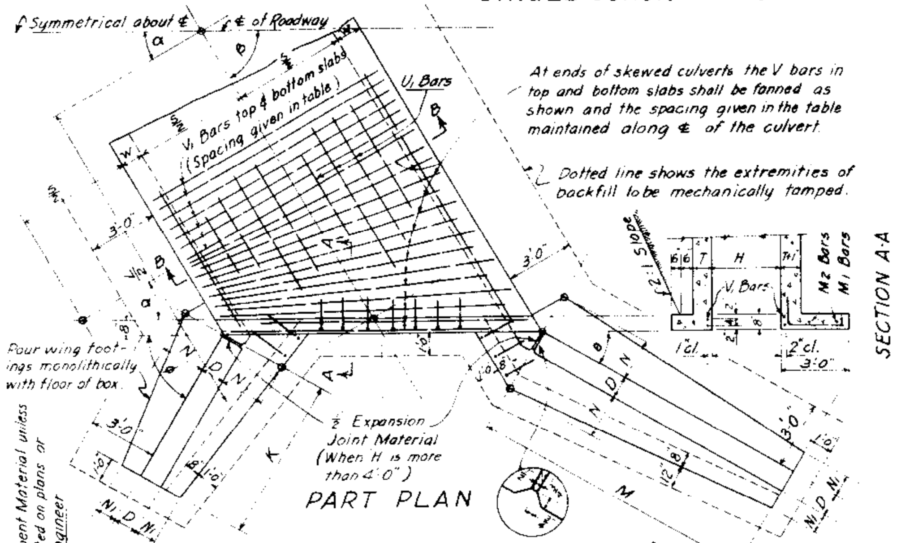
Quantities for one culvert shall be (quantity for one lin. ft. of box times L) plus (quantity for two Head Walls) plus (quantities for four wings).



Bar List for Culvert & Headwalls (See Standard M-50-AW for Wings)

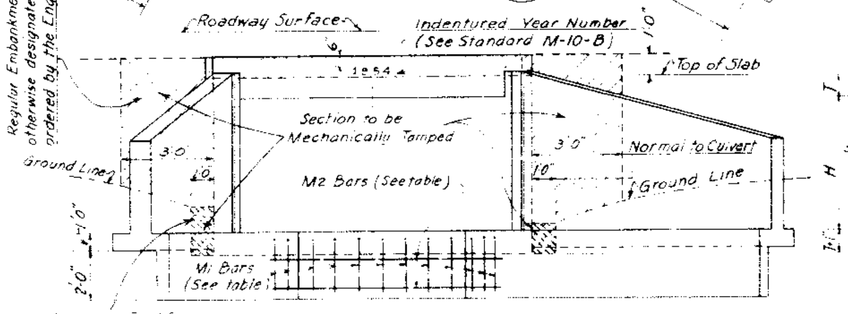
Mark	Size	No. Req'd.	Type	Length
V1	See table	10 + 24L/Spa.	I	S+2w-6"
W1	See table	6 + 24L/Spa.	I	H+2T-5"
U1	1/2"ϕ	See table	I	L+1'0"
M1	1/2"ϕ	See table	II	3'6"
M2	1/2"ϕ	4	I	(S+2w-6")/Cos α

Straight — Type I; Type II (2'6", 1'0")

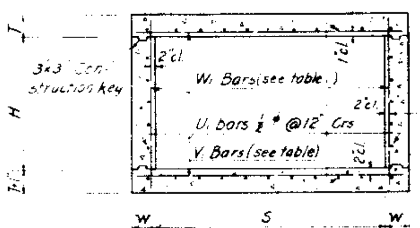
(Bar dimensions are out to out of bar)

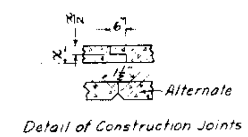
Possible Combinations (Span & Height)

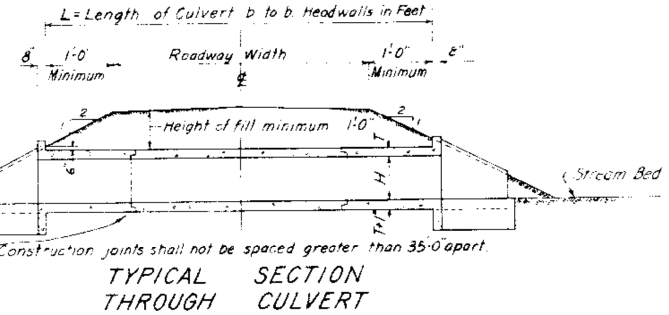
2×2	5×5	9×5	10×7	11×8	11×10
3×2	7×4	8×6	9×8	10×9	14×8
4×2	6×5	7×7	12×6	13×7	13×9
3×3	8×4	9×6	11×7	12×8	12×10
4×3	7×5	8×7	13×6	14×7	14×9
5×3	6×6	10×6	10×8	11×9	13×10
4×4	8×5	9×7	9×9	10×10	14×10
5×4	6×7	8×8	12×7	13×8	
6×4	7×6	11×6	14×6	12×9	



Bar dimensions are to ℄ of bar unless marked cl' (clear).







Note: K, M, N, N1 and D are dimensioned on Standard M-50-AW for the various heights of culverts.

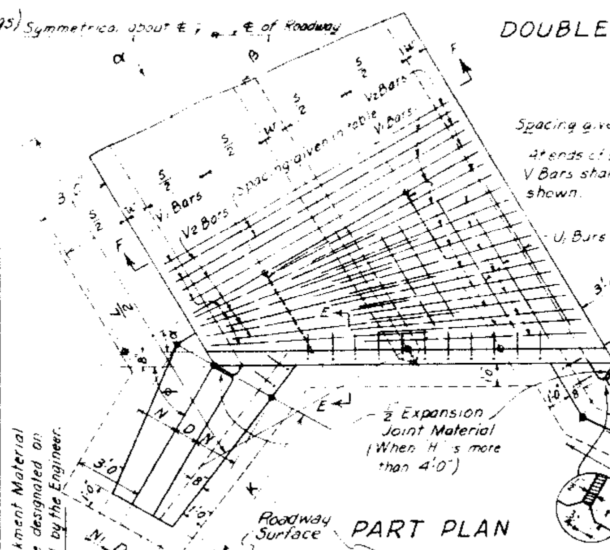
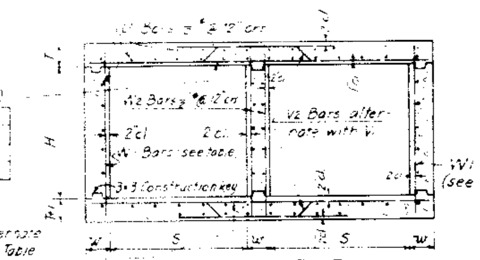
Quantities for one culvert shall be (quantity for one lin. ft. of box times L) plus (quantity for two head walls) plus (quantities for four wings).

Note: This design not to be used when height of fill exceeds the allowed amount tabulated.



Possible Combinations (Span & Height)

6×3	8×3	10×4	12×6	14×6
6×4	8×4	10×6	12×8	14×8
6×5	8×5	10×8	12×10	14×10
6×6	8×6	10×10		



Bar List for Culvert and Two Headwalls (See Standard M-50-AW for Wings)

Mark	Size	Number Required	Type	ℓ	Total Length

β EQUALS THE ANGLE BETWEEN ℄ OF CULVERT AND ℄ OF ROADWAY. α EQUALS THE ANGLE BETWEEN ℄ OF CULVERT AND A NORMAL TO ℄ OF ROADWAY.
φ AND θ ARE ANGLES BETWEEN THE WINGWALL AND A LINE PARALLEL WITH THE CENTER LINE OF ROADWAY.
EXAMPLE FOR USING THE ABOVE TABLE: SUPPOSE A STREAM MAKES AN ANGLE OF β = 65° WITH THE CENTER LINE OF ROADWAY, THEN, FROM THE TABLE, SELECT THE NEAREST ANGLE β = 60°, THEN α, φ AND θ EQUAL 30°, 60° AND 30° RESPECTIVELY. IF THE DESIRED HEIGHT "H" OF CULVERT IS 8'-0", THEN K AND M WILL BE 9'-3" AND 16'-0". LOCATE THE WING DETAIL WHEN H = 8'-0" ON THIS SHEET.

WING DETAIL WHEN H = 10'-0"

GENERAL NOTES

ALL WORK SHALL BE DONE ACCORDING TO THE STANDARD SPECIFICATIONS OF THE COLORADO DEPARTMENT OF HIGHWAYS APPLICABLE TO THE PROJECT.
ALL CONCRETE SHALL BE CLASS "A" AND AIR ENTRAINED AS SPECIFIED.

WALLS, FOOTINGS AND FLOOR OF BOX SHALL BE POURED MONOLITHICALLY.
FORMS FOR CONCRETE SURFACES EXPOSED IN THE FINISHED WORK SHALL BE CONSTRUCTED OF SHIPLAP OR TONGUE AND GROOVE LUMBER S4S UNLESS FACED WITH PANEL BOARD.
FOOTINGS IN ROCK SHALL BE POURED OUT TO ROCK AND NOT FORMED.
SOUNDINGS AND DEPTH OF FOOTING SHOWN ARE IN ACCORDANCE WITH THE AVAILABLE DATA AND WHEN DIFFERENT CONDITIONS ARE ENCOUNTERED THE BRIDGE ENGINEER WILL [illegible] AND DETERMINE IF REDESIGN IS NECESSARY.
ALL REINFORCING STEEL SHALL CONFORM TO ASTM SPECIFICATION A 305 [illegible] OR THE LATEST REVISION THEREOF AND SHALL BE INTERMEDIATE GRADE STEEL OF A DEFORMED TYPE. EACH BAR SHALL BE TAGGED WITH THE NUMBER DESIGNATION AND THE STATION NUMBER OF THE [illegible]. PRIMARY BARS SHALL NOT BE SPLICED AND SECONDARY BARS WHEN SPLICED SHALL LAP [illegible] DIAMETERS OF THE BAR. DIMENSIONS FOR REINFORCING STEEL NOT SHOWN AS CLEAR SHALL BE TO THE CENTER LINE OF THE BAR. OUT TO OUT DIMENSIONS SHALL BE USED ON BAR BENDING DETAILS.
SUPPORTING SOILS FOR ALL CULVERTS MUST BE COMPOSED OF FIRM AND UNIFORM MATERIAL THROUGHOUT.
HORIZONTAL CONSTRUCTION KEYS ARE NOT REQUIRED WHEN FOOTINGS AND WALLS ARE POURED MONOLITHICALLY.
ALL CONSTRUCTION KEYS SHOWN BETWEEN FOOTINGS AND WALLS ARE 3" X 3".

WHEN EXCAVATING FOR FOOTINGS THE FINAL ONE FOOT IN DEPTH SHALL BE DONE BY HAND LABOR METHODS.

ALL BACKFILLING IN APPROACHES TO AND OVER CULVERTS SHALL BE LAID IN LAYERS NOT EXCEEDING SIX (6) INCHES IN DEPTH. EACH LAYER SHALL BE COMPACTED IN ACCORDANCE WITH THE ILLUSTRATION OF MECHANICAL TAMPING BACKFILL SHOWN ON STANDARD M-50-A. THE CONTRACTORS ATTENTION IS CALLED TO SPECIFICATIONS COVERING MECHANICAL TAMPING. SPECIAL CARE SHALL BE TAKEN TO PREVENT DEFLECTION OF WING WALLS BY WEDGING ACTION.

STEEL WEIGHTS INCLUDE 1% ± FOR OVERRUN.
EXPANSION JOINT MATERIAL IS TO BE INCLUDED IN THE PRICE OF CLASS "A" CONCRETE AND SHALL CONFORM TO AASHO SPECIFICATION M-153-52 TYPE III.
FOR CULVERTS REQUIRED AND GOVERNING DIMENSIONS SEE "LIST OF STRUCTURES".

LOADING DATA

LIVE LOAD: AASHO H20-S16-44
DEAD LOAD: CONCRETE 150 POUNDS PER CUBIC FOOT
EARTH 84 POUNDS PER CUBIC FOOT

DESIGNING DATA

[illegible] THESIS EXCEPT AS NOTED
Reinforcing Steel fs = 20000 lbs per sq in
[illegible] Steel fs = 18000 lbs per sq in
[illegible] = 1000 lbs per sq in
n = 10

COLORADO DEPARTMENT OF HIGHWAYS

WINGWALLS FOR VARIOUS TYPES OF CONCRETE BOX CULVERTS

Designed by W.W.D.	Approved by [signature]
Made by W.W.D.	Bridge Engineer
Checked by T.J.M.	Date Aug 30, 1954

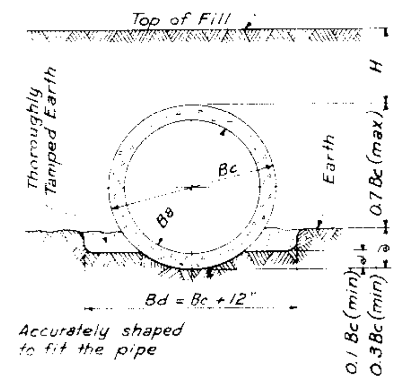
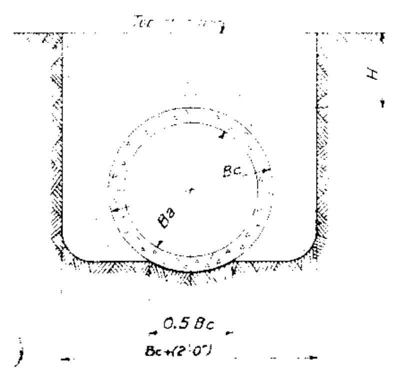
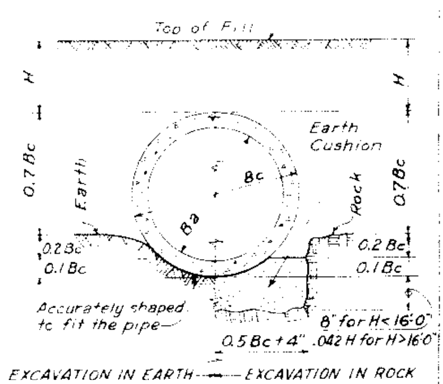
FIRST CLASS BEDDING IN TRENCHES



FIRST CLASS BEDDING IN FILLS

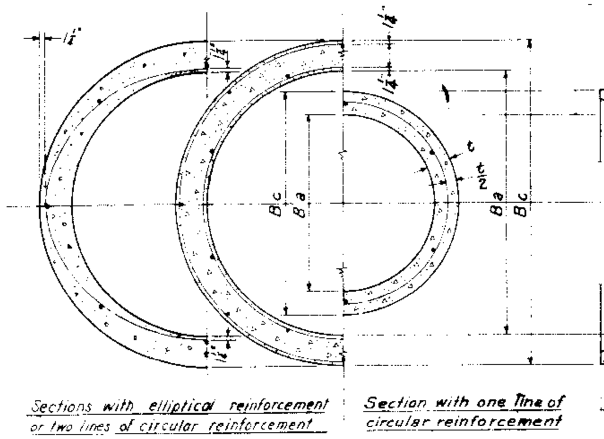


ORDINARY BEDDING IN TRENCHES



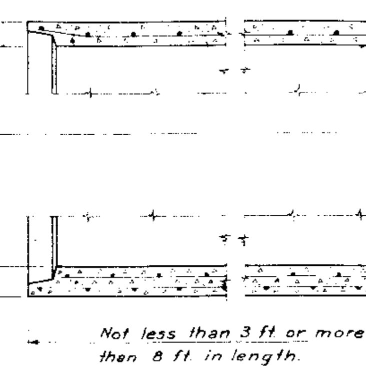
ORDINARY BEDDING IN FILLS

Backfill to conform to the requirements shown under "Structure Backfill and Mechanical Tamping Diagram."



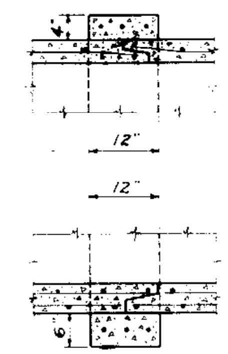
PIPE CROSS SECTIONS

Where two lines of steel are contemplated a single line placed elliptically may be used, and the area of this shall be at least 60 % of the total steel area required for two lines of reinforcement. Pipe with elliptical reinforcing shall have the word "Top" or "Bottom" clearly stenciled on the inside of the pipe at the correct place to indicate the proper position when laid.



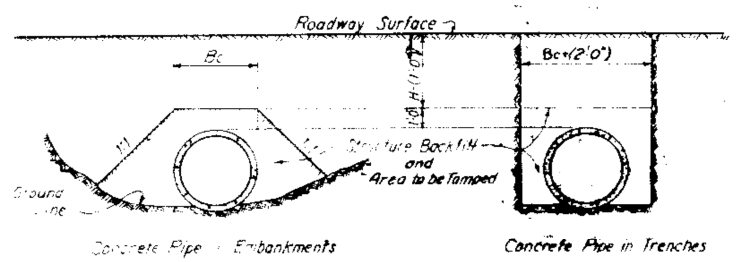
LONGITUDINAL SECTIONS

If machine made pipe is used a modified bell will be acceptable to the department.



CONCRETE COLLAR

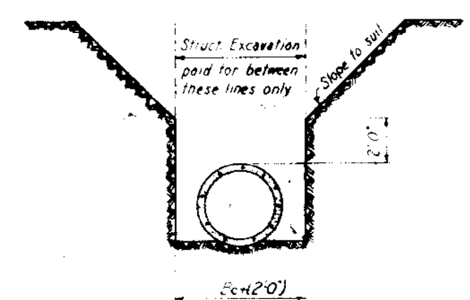
Where the flow line grade of the pipe is 10% or greater, all pipe shall be the bell and spigot type or shall be tongue and groove pipe with concrete collars as detailed above or a type approved in writing by the Engineer.



STRUCTURE BACKFILL AND MECHANICAL TAMPING DIAGRAM

All material that is to be mechanically tamped shall be placed in horizontal layers not more than 6 inches in depth and tamped before the next layer is placed.

Backfill for all types of bedding shall be brought up uniformly on each side of the pipe to maintain equal lateral pressures against the pipe. All Structure Backfill shall conform to the specification for Class 1 Backfill.



Where it is necessary to bed the pipe in a deep trench the contractor may, for his own convenience and at his own expense, slope the cut from a point 2'-0" above the top of the pipe as shown above.
Note: For Concrete Sewer Pipe Structural Excavation is not a separate pay item.

Max. depth of fill "H" in ft. for 3 types of bedding.

* Note: External diameter of pipe shown in the table is approximate only, having been determined by using 3000 lbs per sq. in. concrete. If greater strength concrete is used this diameter may be decreased accordingly.

Where a firm foundation is not encountered, due to soft spongy or other unsuitable material all such unsuitable material under the pipe for a width of (2 Ba + Bc) shall be removed and the area backfilled with suitable material approved by the Engineer, and compacted at optimum moisture to a relative density not less than 90% to provide additional support for the pipe.

Where suitable material is encountered in place in the foundation but the relative compaction does not meet the minimum requirements this material shall be removed and recompacted at optimum moisture and to at least 90% relative density.

GENERAL NOTES

All work shall be done according to the Standard Specifications of the Colorado State Highway Department applicable to the project.

Reinforced Concrete Culvert Pipe shall conform to A.A.S.H.O. M41-49.
Reinforced Concrete Sewer Pipe shall conform to A.A.S.H.O. M87-49.
Unreinforced Concrete Sewer Pipe shall conform to A.A.S.H.O. M86-49.

The type of Pipe Joint used and the field construction thereof to make the joint reasonably water-tight shall be submitted to the Department for approval.

Unless otherwise noted the type of bedding shall be Ordinary Bedding. When the maximum fill height as noted hereon, for this type of bedding, is exceeded then that type of bedding which is indicated by the allowable fill height shall be used.

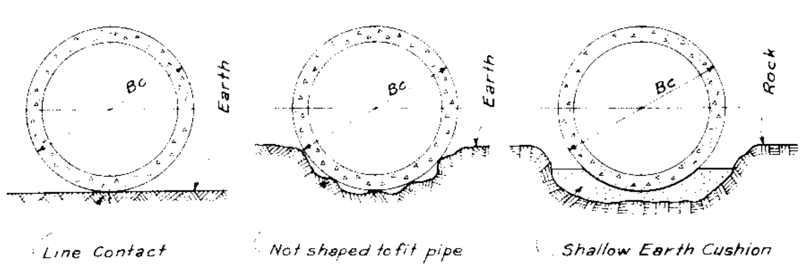
All culverts shall have headwalls or flared end sections if and as shown on the plans in accordance with Department Standards.

For size, type and location of pipe see plan sheets for project.

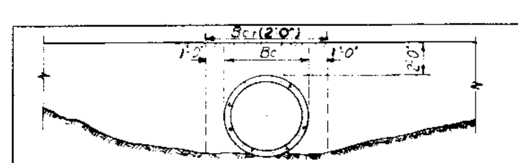
Supporting soils shall be composed of firm and uniform material throughout the entire length of Culvert. The soil shall be accurately shaped to fit the Pipe in accordance with the bedding conditions shown.

The Pipe shall be laid with the Bell or Groove end placed upstream.

Minimum Depth of Fill over Concrete Pipe
Main Roadways 2 Foot
Approach Roadways 1 Foot



IMPERMISSIBLE BEDDINGS IN TRENCHES OR FILLS
THESE THREE TYPES SHALL NOT BE USED



If the desired fill height for pipe in a fill exceeds that given in the table, new embankment may be constructed to an elevation of two feet above the top of the pipe; a trench may then be excavated in the embankment and the pipe installed in accordance with a pipe in a trench. This work shall conform to the requirements for "Embankments" as shown in the specifications.

A, B, C and D apply to Tongue and Groove type of Joint only and can be varied for other types of Joints.

GENERAL NOTES

Joints other than Tongue and Groove may be used for Flared End Sections, 7°30' Angle and for the Copper Expansion Joint but all Joints for any one pipe structure must be uniform.

Concrete, wall thickness and reinforcing steel in Flared End Sections and 7°30' Angle Sections must conform with the requirements of the pipe with which they are used.

Alternate types of expansion joints may be substituted for the expansion joint shown on this sheet after approval by the Department.

Flared end sections are to be furnished with tongue or groove, and/or bell or spigot as required, in order that joints may be laid with the bell or groove end upstream.

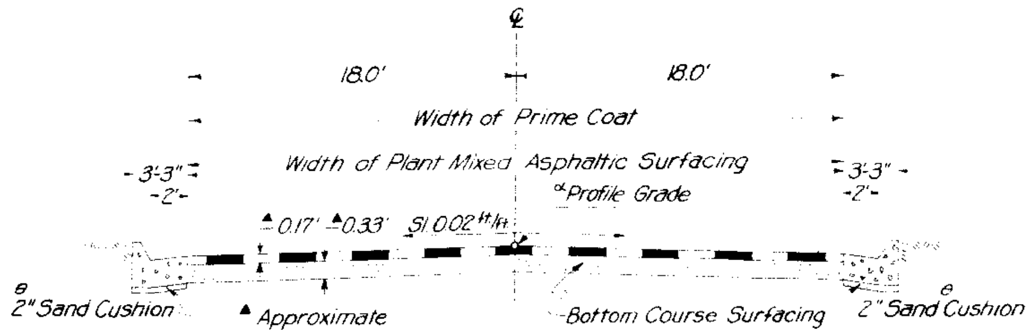
New Sheet – 2-5-59 – G.R.L.

WORK ORDER NO. 14276

TYPICAL SECTION



Approximate 0.50' compacted thickness of Gravel or Crushed Rock Surfacing shall be placed in separate courses at the following rates per 100 lin ft. of roadway:

Asphaltic Concrete Pavement .... 44 tons

Bottom Course Surfacing .... 80 tons

α Sta. 0+00 to 9+00 the Profile Grade shall be the same as the Existing Grade. Sta 9+00 to 15+23.8 the Profile Grade shall be the thickness of the Bottom Course Surfacing and Asphaltic Concrete above the present grade.

θ Sand Cushion to be used at locations designated by the Engineer.
