## Resumes

**Lauren E. Evans, PE, ENV SP**  
President

**PROFESSIONAL EXPERIENCE**

Ms. Evans has 31 years of consulting experience, in contaminant assessment and remediation, regulatory compliance, and NEPA studies. She has served as project manager on all phases of these projects. With respect to contamination investigations, she has completed projects for real estate due diligence studies, and under RCRA, CERCLA, Brownfields, and Colorado voluntary clean-up programs.

Ms. Evans has been involved with more than 3,000 Phase I Environmental Site Assessments nationwide and overseen remediation of sites contaminated by releases of petroleum products, chlorinated solvents, and metals. She has been involved during Environmental Impact Statements and Environmental Assessments of highway, transit, rail, and aviation projects, and had collected data and evaluated impacts of numerous resource areas.

Ms. Evans has also provided quality assurance/quality control review of the documents during all stages of the projects. Ms. Evans has assisted legal counsel with the technical aspects of numerous cases, including PRP evaluation at CERLCA sites, and on those involving regulatory compliance, consultant negligence, asbestos in soil, and other contaminant issues.

Pinyon is also a charter member of the Institute for Sustainable Infrastructure and Ms. Evans is a certified Envision™ Sustainability Professional, and a trained verifier. Envision™ is an infrastructure rating system developed to help designers, builders, and infrastructure owners build and direct infrastructure projects toward increasing levels of sustainability. Ms. Evans completed the second verification project in ISI's history. [Please visit ISI's website at [www.sustainableinfrastructure.org](http://www.sustainableinfrastructure.org) for more information.]

Ms. Evans is the Founder and President of Pinyon Environmental, Inc.

**RELEVANT EXPERIENCE**

**Phase I ESAs.** Ms. Evans has extensive experience in performing site assessments for property transfers. She has conducted, managed, or reviewed over 3,000 Phase I ESAs throughout the country. She is familiar with the current ASTM standard for completion of Phase Is, and has been a speaker at numerous seminars and conferences on the topic. She has managed projects involving the completion of over 100 Phase Is in multiple states In a short period of time, with one project completed in approximately three weeks. Projects have ranged from small rights of way to 110,000 acre ranch properties, and from vacant land to large industrial facilities. Ms. Evans has served as an

expert witness on cases where it was alleged that a Phase I had not met the standard, and has assisted clients in developing standard procedures for their due diligence programs. For a Fortune 50 company, she developed a standardized report format for use by consultants on projects nationwide, and has provided training to private companies, and state and municipal agencies.

**Phase II ESAs.** Ms. Evans has conducted numerous Phase II assessments for evaluating soil and groundwater contamination. These projects have involved volatile and semi-volatile organic compounds, pesticides and herbicides, metals, radioactive elements, and biological contaminants. She has completed all aspects of these projects from sampling plan design and implementation through report preparation and closure. Ms. Evans has employed numerous sampling technologies, including multi-port sampling wells and random sampling schemes.

**RCRA Experience.** Ms. Evans has performed corrective measure studies, developed emergency and post-closure monitoring plans, evaluated waste streams to determine if they were hazardous, and performed oversight and certification of closure. She has also assisted in groundwater monitoring under post-closure permit conditions. In 2000, she was appointed by Governor Bill Owens to the Colorado Hazardous Waste Commission (later reorganized as the Hazardous and Solid Waste Commission), where she served until 2007, including three years as Chairperson.

**Remediation.** The remediation projects Ms. Evans has managed have employed free-product removal, excavation with off-site treatment, soil-vapor extraction, enhanced bioremediation, air sparging, two-phase vacuum extraction, and ground-water pump and treat. In addition to the technical aspects of projects, Ms. Evans has been involved with successful negotiation sessions with State regulatory agencies, including agreements with the State to use ground-water modeling results to demonstrate that remediation would not be necessary, given natural biodegradation of petroleum hydrocarbons.

**Brownfields Assessments.** Throughout her career, Ms. Evans has overseen projects which required management of large quantities of scientific data and other types of information. She has designed databases and spreadsheets for these purposes, and has developed word processing templates and forms for the efficient collection of data and preparation of reports. On a large Superfund project, relevant reports were reviewed and coded, with information pertinent to an ongoing legal proceeding tracked in a database for rapid retrieval of data. Project databases have been used to track ongoing monitoring data, asbestos information, hazardous material storage and use, and links to pertinent websites. These techniques have provided the clients with an efficient tool to develop project histories and other project tracking mechanisms.

**CERCLA Experience.** Ms. Evans has worked on numerous sites regulated or evaluated under CERCLA, including Summitville Mine, Lowry Landfill, Rocky Mountain Arsenal, Hill and Sheppard Air Force Bases, Air Force Academy, Riverfront Landfill, Shiprock Uranium Mine, and Wasatch Chemical. She has performed PA/SIs, and participated in RI/FS and remedial design projects. She also assisted the legal staff for one client by evaluating potential liability at three

Colorado sites, which included detailed historic review and technical data research to develop an opinion on contribution by responsible party.

**Cultural Resources.** Ms. Evans has managed projects which required identification and protection of cultural resources. She has documented areas of concern before and after construction activities to demonstrate that resources were not impacted.

**Data Management.** Throughout her career, Ms. Evans has overseen projects which required management of large quantities of scientific data and other types of information. She has designed databases and spreadsheets for these purposes, and has developed word processing templates and forms for the efficient collection of data and preparation of reports. On a large Superfund project, relevant reports were reviewed and coded to key words, with information pertinent to an ongoing legal proceeding tracked in a database for rapid retrieval of data. Project databases have been used to track ongoing monitoring data, asbestos information, hazardous material storage and use, and links to pertinent websites. These techniques have provided the clients with an efficient tool to develop project histories and other project tracking mechanisms.

**Dry Cleaners.** Ms. Evans has managed numerous projects involving the investigation and remediation of dry cleaning sites. During these surveys, various sampling techniques were used to identify the source of the contamination, as well as to delineate the extent of impacts. These techniques included soil vapor, indoor air, soil and groundwater sampling and analysis. Remediation has been completed by a combination of excavation and chemical injection techniques, under both the hazardous waste and voluntary cleanup programs.

**Dry Cleaners.** Ms. Evans has acted as project manager on numerous projects involving the investigation and remediation of dry cleaning sites. She has overseen the investigation of dry cleaners using soil-vapor surveys and soil and groundwater sampling techniques. During these surveys the sewer lines were located, and samples collected along the lines, inside of the building, and near the waste and product storage areas. Ms. Evans has also been involved on several dry cleaner remediation projects, requiring both soil and groundwater remediation. These sites have been cleaned up under both the state corrective action program, and the voluntary cleanup program.

**EIS Cultural/Historical Analysis.** Ms. Evans has managed projects which required identification and protection of cultural resources. She has documented areas of concern before and after construction activities to demonstrate that resources were not impacted.

**Hollywood Moment.** Ms. Evans is a past president of The American Council of Engineering Companies of Colorado (ACEC/CO). Her honors include being named ACEC/CO Outstanding Woman in Engineering, and Colorado Ethics in Business award winner. Lauren also serves as Secretary and Commissioner on the Colorado Water Quality Commission, a Colorado governor appointed position. Additionally, Lauren is a certified Envision™ Sustainability

Professional, and a trained verifier. Envision™ is an infrastructure rating system developed to help designers, builders, and infrastructure owners build and direct infrastructure projects toward increasing levels of sustainability. Ms. Evans completed the second verification project in ISI's history. [Please visit ISI's website at [www.sustainableinfrastructure.org](http://www.sustainableinfrastructure.org) for more information.]

**Mold Investigations.** Ms. Evans has conducted building assessments to identify the presence of mold associated with water intrusion events, and overseen indoor air quality evaluations related to mold, bacteria, chlorinated solvents, and other potential contaminants. She was the project manager for the evaluation of a multi-building townhome complex in Estes Park, in which mold had been identified in the crawlspaces of several units. Ms. Evans conducted the field investigation, and assisted the homeowner's association with evaluating the source of the moisture intrusion. Once the drainage issues had been corrected, the buildings were resurveyed to evaluate the potential for continued mold growth. It was determined that the moisture conditions had been controlled and the potential for ongoing mold growth had been eliminated.

**NEPA Cat Ex.** Ms. Evans has been involved in completing categorical exclusion documentation for more than 30 road and highway projects, with development of data and information, assessment of potential impacts, and quality assurance review of prepared documents. These projects have been located throughout Colorado and in the state of New York, and have involved intersection improvements, bridge replacements, trail development and other transportation enhancements.

**Other Experience.** Other technical experience includes agency negotiations, methane monitoring and migration studies, and the use of surface geophysics for aquifer and permafrost mapping.

**Permitting Assistance.** For removal of 400 miles of AT&T coaxial cable, obtained permits and documented construction activities. Prior to construction, trained crews in permitting requirements and sensitive issues identification.

**QAPP/SAP.** Ms. Evans has acted as project manager on several Brownfields sites in Colorado, with previous uses ranging from industrial to commercial/retail, with a variety of chemicals of concern. On these projects she prepared and reviewed quality assurance project plans (QAPPs) and sampling and analysis plans (SAPs), and oversaw the investigations. She defined the sampling and analysis strategy for soil, water and vapor sampling, and developed standard operating procedures for the sampling techniques. These plans were reviewed and approved by the US EPA prior to field work commencement. Many of these projects also received a No Further Action (NFA) from the Colorado voluntary cleanup program. Finally, she evaluated the data and wrote the final reports for submittal to the client and to the US EPA.

**Radiological.** Ms. Evans participated in the characterization of Yucca Mountain Nevada for development as a nuclear-waste repository, and completed a

subsurface investigation for contaminant delineation at the Nevada Test Site. She has worked on projects at the Rocky Flats Technical Site in Golden, Colorado, and has completed surficial soil sampling along the Front Range of Colorado to assess potential impacts from Rocky Flats activities. Additionally, Ms. Evans has been involved in subsurface investigations to delineate radiological impacts from a Denver Superfund site.

**Radon Testing.** Ms. Evans has designed and implemented radon gas sampling programs at multi-family residential homes, commercial buildings, and on vacant property. These tests have been both short-duration and for a period of a year. Ms. Evans has also researched radon gas occurrence in project areas, and recommended remediation techniques.

**Regulatory Compliance.** Ms. Evans has assisted numerous clients in an evaluation of regulatory compliance, including an on-site mine laboratory, tribal lands, a scrap metal recycler, several large printing facilities, and a furniture manufacturer. Included in the audits were operations regulated under RCRA, SARA Title III, the Clean Air and Clean Water Acts, and several local requirements.

**Subsurface Investigations.** During investigation projects, Ms. Evans has used a variety of techniques, including traditional drilling methods, soil-vapor surveys with on-site data analysis, surface water and sediment sampling, vapor-extraction testing, direct-push sampling systems, on-site laboratory analysis, geophysical surveys, surface and borehole geophysics, and aerial photography interpretation. The studies have been conducted under RCRA, UST regulations, CERCLA, and for non-regulated contamination assessments, as well as under EPA Brownfields grants. On the Brownfields projects, Ms. Evans has been responsible for development of the sampling and analysis plan (SAP), including the delineation of quality assurance/quality control procedures.

**Threatened and Endangered Species Surveys.** Ms. Evans acted as project manager on a 400-mile linear project, which included identification and mitigation of potential impacts to sensitive species along the route. Agency concurrence, including some permitting requirements, was required on the project. Construction activities were documented to demonstrate that there were no long-term impacts, and the contractor's employees were trained in the identification of sensitive species prior to project initiation.

**UST Experience.** Ms. Evans has managed UST projects from tank removal through remediation and closure. She has conducted UST projects in Colorado, Nevada, Texas, and Missouri. Specific services on these projects have included reimbursement assistance, contaminant investigations in unique settings (i.e., fractured bedrock and tidal areas), agency negotiations and compliance assessments. Ms. Evans was the client and project manager on a \$500,000 UST contract for the City and County of Denver.

**VCUP Experience.** Ms. Evans has managed several projects completed in order to obtain a finding of no further action (NFA) under the Colorado Voluntary Cleanup Program (VCUP). The contaminants on these projects included petroleum products, chlorinated solvents, and metals. The properties

had previously been used as auto repair facilities, waste water treatment plants, junk yards and dry cleaners, or were impacted by adjacent industrial facilities. Ms. Evans has completed the subsurface investigations, Phase I ESAs, and the VCUP applications. She has successfully obtained an NFA determination on all of the projects she has worked on.

**Asbestos Surveys.** Ms. Evans has completed asbestos containing building material (ACBM) surveys at apartment complexes and commercial buildings during pre-acquisition assessments, throughout the western United States. She has also provided expert witness services on cases related to asbestos in soils issues and requirements, and managed projects involving asbestos surveys prior to building demolition.

**Brownfields Experience.** Ms. Evans has acted as project manager on several Brownfields sites in Colorado, with previous uses ranging from industrial to commercial/retail, with a variety of chemicals of concern. On these projects she prepared and reviewed quality assurance project plans (QAPPs) and sampling and analysis plans (SAPs), and oversaw the investigations. She defined the sampling and analysis strategy for soil, water and vapor sampling, and developed standard operating procedures for the sampling techniques. These plans were reviewed and approved by the US EPA prior to field work commencement. Many of these projects also received an NFA from the Colorado voluntary cleanup program. Finally, she evaluated the data and wrote the final reports for submittal to the client and to the US EPA.

**SPCC Plans.** Ms. Evans has worked on numerous SPCC plans over the past 20 years, for industrial properties and commercial facilities. She has completed all phases of the projects, from site visit through preparation of the plans and regulatory analysis. She completed an SPCC plan update at a large steel facility, which operated over 80 ASTs and over 300 pieces of regulated electrical equipment.

**Project Management.** Ms. Evans has managed technical projects for almost 30 years. These projects have ranged in size from less than \$100 to in excess of \$500,000, and have been located throughout the lower 48 states and the north slope of Alaska. She has developed skills and processes for tracking budget, tasks and milestones, and subcontractors' activities. Ms. Evans has also developed client-specific procedures and report formats, including the communication of specific requirements to all involved on a project.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 6 RCRA-CESQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

LUST TRUST: Reimbursement application package. The 1989 Colorado General Assembly established Colorado's Petroleum Storage Tank Fund. The Fund reimburses eligible applicants for allowable costs incurred in cleaning up petroleum contamination from underground and aboveground petroleum storage tanks, as well as for third-party liability expenses. Remediation of contamination caused by railroad or aircraft fuel is not eligible for reimbursement. The Fund satisfies federal Environmental Protection Agency financial assurance requirements. Monies in the Fund come from various sources, predominantly the state environmental surcharge imposed on all petroleum products except railroad or aircraft fuel.

A review of the LUST TRUST list, as provided by EDR, and dated 01/28/2013 has revealed that there are 3 LUST TRUST sites within approximately 0.5 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 8 EDR US

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Hazardous Waste Summary:

Waste code: D000  
Waste name: Not Defined

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

permit, compliance, and enforcement status of NPDES facilities.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D000  
Waste name: Not Defined

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. Waste code: D009  
Waste name: MERCURY

Waste code: F027  
Waste name: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT).

Hazardous Waste Summary:

Waste code: D000  
Waste name: Not Defined

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**Environmental Interest/Information System**

Colorado's Department of Public Health & Environment (CDPHE)'s web-based database that allows environmental program managers to edit their facility locations and allows users to view this information read-only.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## ***Federal CERCLIS list***

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site List***

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

## ***Federal RCRA non-CORRACTS TSD facilities list***

### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## ***State- and tribal - equivalent CERCLIS***

### **SHWS: This state does not maintain a SHWS list. See the Federal CERCLIS list and Federal NPL list.**

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

### **TRUST: LUST Trust Sites**

Reimbursement application package. The 1989 Colorado General Assembly established Colorado's Petroleum Storage Tank Fund. The Fund reimburses eligible applicants for allowable costs incurred in cleaning up petroleum contamination from underground and aboveground petroleum storage tanks, as well as for third-party liability expenses. Remediation of contamination caused by railroad or aircraft fuel is not eligible for reimbursement. The Fund satisfies federal Environmental Protection Agency financial assurance requirements. Monies in the Fund come from various sources, predominantly the state environmental surcharge imposed on all petroleum products except railroad or aircraft fuel.

### AUL: Environmental Real Covenants List

Senate Bill 01-145 gave authority to the Colorado Department of Public Health and Environment to approve requests to restrict the future use of a property using an enforceable agreement called an environmental covenant. When a contaminated site is not cleaned up completely, land use restrictions may be used to ensure that the selected cleanup remedy is adequately protective of human health and the environment.

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## UMTRA: Uranium Mill Tailings Sites

There were nine uranium mill tailings sites in Colorado designated for cleanup under the federal Uranium Mill Tailings Radiation Control Act. These nine sites, known commonly as UMTRA sites, were remediated jointly by the State of Colorado and the U.S. Department of Energy during the late 1980's and early 1990's. Mill tailings were removed from 8 of the mill sites and relocated in engineered disposal cells. A disposal cell is designed to encapsulate the material, reduce radon emanation, and prevent the movement of water through the material. At one site, Maybell, CO, the tailings were stabilized in-place at the mill site. After remediation of the tailings was completed, the State and DOE began to investigate the residual impacts to groundwater at the mill sites. The groundwater phase of the UMTRA program is on-going.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

### Investigation of Methane Gas Hazards

The purpose of this study was to assess the actual and potential generation, migration, explosive and related problem associated with specified old landfills, and to identify existing and potential problems, suggested strategies to prevent, abate, and control such problems and recommend investigative and monitoring functions as may be deemed necessary. Eight sites determined to be priorities due to population density and potential hazards to population and property were selected by the Colorado Department of Health.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## **HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Azeltine

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Riparian Vegetation Data

Source: Division of Wildlife

Telephone: 970-416-3360

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Colorado GIS Well Database

Source: Office of State Engineer, Division of Water Resources

Telephone: 303-866-3581

The GIS Well database includes all wells that the Division of Water Resources permits.

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Locations

Radon Study in Colorado

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.
