

## US160 East of Monte Vista

### What Work is Being Done?

Crews have completed paving on CO 370. This week crews will continue paving eastbound on US 160, once we reach the end of the project at mile point 226, we turn our operations around and head west. Crews will also be doing work at the Rectangular Rapid Flashing Beacon (RRFB) Pedestrian Crosswalk Systems at Lyell Street in Monte Vista on US 160 and will be returning to CO 370 to install guardrail. Motorists will encounter alternating single-lane closures as they travel through the work area. Work hours will be 7:00 AM to 7:00 PM. Speed reductions down to 40 mph can be expected as motorists come into project work areas. Flagging Personnel will be onsite due to alternating single lane closures. Expect up to 10-minute traffic delays. **Please remember we use a long lane closure to protect workers and travelers. While these closures limit access, they do not prohibit access unless there are flag crews there directing you. While access may be temporarily altered, crews are working quickly and will allow you through as quickly as operations allow. Thanks for your patience!**

### Why is the work being completed?

This project is part of CDOT's "Whole System. Whole Safety." initiative aimed at enhancing safety for Colorado's traveling public. Once the resurfacing work is

completed, drivers will find a smoother roadway surface with new guardrail, new signage, high visibility markings and stabilized shoulders. These enhancements will make the highway safer for residents, visitors and commercial truck traffic.

**When will crews be working?** Work will take place during daylight hours, 7am to 7pm, Monday through Friday. Night work and weekend work are not anticipated at this time and **all business and residence access may be temporarily altered but will remain open.**

### Travel Impacts

- Alternating single lane closures on US 160 in the Town of Monte Vista as crews work to pave the roadway.
- Flagging personnel be on sight to direct travelers as the speed limit will be reduced to 40 mph while working in in town during daylight hours.
