

## **Addendum to the Technical Memorandum “U.S. 287 at Lamar: Noxious Weeds Management Plan” dated June 20, 2003**

**PREPARED FOR:** U.S. 287 at Lamar - CDOT Region 2  
**PREPARED BY:** Laura Dreher/CH2M HILL  
**COPIES:** CH2M HILL Project File  
**DATE:** June 1, 2007

A project site visit was conducted in April 2007 to determine if changes had occurred to the presence and distribution of noxious weeds within the project area since the 2002 field survey. The site reconnaissance concluded that habitat composition and locations within the study area remain essentially unchanged since the original site reconnaissance in August 2002. It was determined that conditions as documented in the July 3, 2003 Technical Memorandum still accurately reflect the presence and distribution of noxious weeds within the project area. Updates to the Technical memorandum are not needed and the findings in the Environmental Assessment remain valid.
