

Edwards Spur Road

Crews have completed the Edwards Spur Road Project! CDOT, Eagle County and the Edwards Metro District partnered to make improvements to Edwards Spur Road, an approximate 0.6-mile-long stretch that connects I-70 to US 6 in the unincorporated town of Edwards. After two years of construction, crews widened roads and bridges, installed a roundabout and improved pedestrian mobility. Here's a look at some of the impressive behind-the-scenes project numbers:

OVER 5,000 TONS
of asphalt placed

NEARLY **2 miles**

of curb and gutter installed

OVER 300+ WORKERS

of various trades worked on the project

A half-mile of water main was installed

WITH 7
separate waterline connections

Existing three-span Eagle River Bridge was removed and replaced with single-span river bridge along with removing existing piers from the river. This was accomplished at a lower cost than the original budget to just widen the existing bridge, which would have expanded on existing piers in the river.

NEARLY 5 MILES

of various utility improvements

Each pedestrian bridge **SPANS OVER 137 feet**

and weighs more than **60,000 POUNDS**

OVER 15,000

hours spent on traffic control, protecting workers and the public

Each structural concrete girder for Eagle River Bridge weighs nearly

150,000 POUNDS

and stretches more than half a football field
