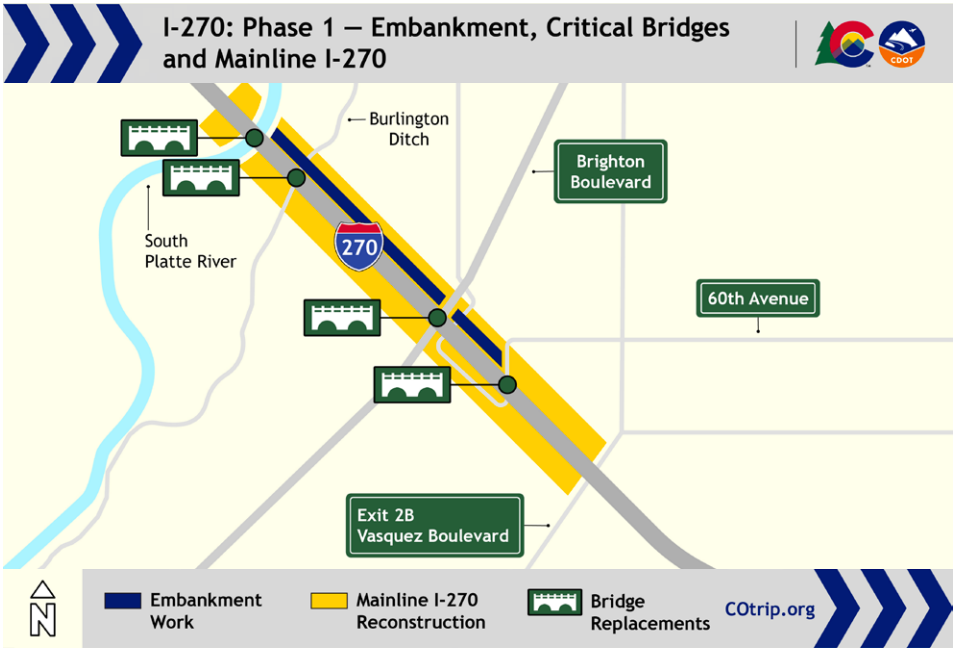
I-270 Corridor Improvements

Phase 1 - Embankment, critical bridges and mainline I-270

October 2026 - Early 2030

The Colorado Department of Transportation began construction on the I-270 Corridor Improvements project in late October 2026 by elevating the roadway on the northern edge on westbound I-270 between 60th Avenue and the South Platte River Trail to support the addition of future travel lanes. In spring 2027, crews will begin reconstructing eight bridges with the most critical repair and replacement needs on I-270, which have had 225 bridge repairs over the last decade. These bridges are located on eastbound and westbound I-270 over the South Platte River, Burlington Ditch, Brighton Boulevard/Union Pacific and BNSF Railroads and 60th Avenue/BNSF Railroad. Phase 1 will also reconstruct mainline I-270 from the South Platte River to west of the Vasquez Boulevard interchange. Four additional bridges and the remaining mainline I-270 improvements will occur in subsequent project phases.



What to expect - October 2026 through spring 2027:

- Crews will begin mobilizing in the area in late October 2026.
- Overnight, single-lane closures along westbound I-270 between the South Platte River and 60th Avenue from 9 p.m. to 5 a.m. for construction work.
- Daytime flagging operations on Brighton Boulevard, just north of I-270, for trucks to enter and exit the work zone. Do not follow trucks into the work zone.
- Right shoulder closures along westbound I-270 between the South Platte River and 60th Avenue.
- No daytime impacts along mainline I-270.
