Central 70	C 0704-241	Bridge Rail	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside surfaces of forms were cleaned.	Conformance	8/3/2020 11:28:04 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were clean prior to concrete placement.	Conformance	4/26/2021 3:20:54 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the the forms were cleaned of any deleterious materials.	Conformance	12/29/2020 8:58:21 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the forms are clean of any kind of deleterious materials.	Conformance	2/8/2021 2:25:18 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside surfaces of forms were cleaned.	Conformance	11/11/2020 1:33:11 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of all forms were clean of any deleterious materials.	Conformance	10/7/2020 5:28:59 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside surfaces of forms were clean.	Conformance	11/3/2020 1:13:00 PM -07:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside formed surfaces were clean.	Conformance	10/27/2020 4:54:53 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside surfaces were clean.	Conformance	11/3/2020 2:29:32 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Some groundwater was present within the placement but not enough to be considered detrimental to the placement. Dewatering the placement area was constant task.	Conformance	11/5/2020 11:35:09 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were clean and free of debris prior to concrete placement.	Conformance	7/15/2021 1:28:57 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The form surfaces were clean of any deleterious materials.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were free of foreign material.	Conformance	6/10/2021 2:37:47 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of forms were cleaned of all dirt, mortar and foreign material- no dirt, chips, sawdust, water and other foreign material were present.	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were clean prior to concrete placement.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside form surfaces were mortar tight.	Conformance	6/7/2021 7:45:14 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		I looked at the forms prior to placement and observed no deleterious materials on the form surfaces.	Conformance	7/19/2021 7:17:52 AM -06:00	C		Closed

Central 70	C 0704-241	Emergency Power	Cover		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		The exposed edges were chamfered in accordance with the plans and specifications.	Conformance	1/4/2021 5:28:52 PM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM -06:00	Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		Small chamfers were used appropriately. Large chamfers were used at areas with masonry. The locations were in conformance with the RFC plans.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		Edges were chamfered.	Conformance	6/3/2020 12:20:18 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM - 07:00	Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		The forms were chamfered at shown on the plans.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM - 06:00	Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		The appropriate chamfer was installed for door openings and masonry walls in accordance with the plans.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		Forms were chamfered to assure easy removal, and appeared to located where needed per plan.	Conformance	2/27/2020 6:45:07 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		All edges and pier 2 cap steps were chamfered appropriately.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		All forms had the correct size chamfer placed in the correct locations.	Conformance	2/13/2020 2:53:35 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		Forms are chamfered as shown on the plans.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		Forms were adequate.	Conformance	4/24/2020 8:50:43 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM -06:00	Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		All of the appropriate chamfer was used during the placement.	Conformance	4/20/2020 2:39:18 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¼ inch by ¼ inch at all exterior corners.		All chamfer was placed.	Conformance	2/13/2020 1:34:53 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Metal ties or anchorages within the forms shall be so constructed as to permit their removal to a depth of at least ½ inch from the face without injury to the concrete. When wire ties are used the wires shall be cut back at least ¼ inch from the face of the concrete upon removal of the forms.		Anchorage were constructed to permit proper removal.	Conformance	7/14/2020 12:10:41 PM -06:00	C		Closed

Central 70	C 0704-241	UPRR	Railroads		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		The contractor sprayed the forms thoroughly with water immediately prior to placing concrete.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Forms were moistened prior to concrete placement.	Conformance	6/10/2021 2:37:47 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Wood forms were thoroughly moistened with water immediately before placing the concrete.	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Forms were moistened prior to concrete placement.	Conformance	4/26/2021 3:19:09 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM -07:00	All falsework drawings, including revisions, shall be prepared by the Contractor's Engineer, shall meet the requirements of subsection 601.11, and shall be provided by the Contractor to the Engineer for record purposes only. The drawings shall be signed and sealed by the Contractor's Engineer.		Falsework was approved for the Clayton and Columbine Bridges and not for the span between the bridges. (Please see attached) The construction loads of the pier cap are the same as each Cover Bridge. The falsework is just duplicated for the entire run between bridges. Please adjust the Safety Critical to ensure this falsework was approved for the entire pier cap of the Cover.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		The formwork will be removed once the appropriate maturity meter readings are met.	Conformance	2/13/2020 1:34:53 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		Falsework remained in place until compressive strength as determined by maturity meters reached 0.80f 'c.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		Concrete forms/falsework remained in place until the concrete attained a minimum compressive strength of 0.80f 'c according to the maturity meters placed inside.	Conformance	12/29/2020 8:58:21 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		The forms were in place until the concrete reached the required compressive strength as determined with maturity meters.	Conformance	2/3/2021 8:11:33 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		Falsework remained in place until the maturity meters indicated that the concrete strength exceeded the minimum of 0.80f 'c.	Conformance	8/5/2021 2:37:16 PM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		The concrete attained a minimum compressive strength of 0.80f 'c and the falsework was removed.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Railroad Grading	Earthwork		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		All form falsework remained in place and was not stripped until the concrete attained a minimum compressive strength of 0.80f 'c as determined by maturity meters.	Conformance	7/30/2021 8:02:12 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Girders shall not be erected onto such pier caps until the concrete in the cap has attained the compressive strength of at least 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		Girders have not been placed yet.	Conformance	4/26/2021 3:20:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Girders shall not be erected onto such pier caps until the concrete in the cap has attained the compressive strength of at least 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		.80f 'c was met before the Girders were erected on the Abutment.	Conformance	12/3/2020 9:10:01 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Girders shall not be erected onto such pier caps until the concrete in the cap has attained the compressive strength of at least 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		Reference comment #6.	Conformance	2/13/2020 1:34:53 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		No embedded materials or block outs were present in this placement.	Conformance	2/13/2020 1:34:53 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		conduits were located in proper location	Conformance	4/24/2020 8:58:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embedded utility conduit was properly secured.	Conformance	7/14/2020 12:10:41 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embeds were placed and adequately secured before the pour.	Conformance	5/4/2020 10:27:12 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embedded materials and blockouts (dowels, dowel formers) are placed accurately and are secured.	Conformance	4/27/2020 3:36:42 PM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures	4/23/2020 12:00:00 AM -06:00	Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The blockouts for the two utility chases and drain pipe were present and in accordance with the plans.	Conformance	4/23/2020 3:01:47 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embedded anchor bolts were placed in position at proper depth and adequately secured during concrete placement and finishing operations.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM -06:00	Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The appropriate blockouts and ground wire was installed in the placement. Reference the shop drawings in Aconex and the pictures attached.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Building	Cover	8/12/2020 4:56:29 PM - 06:00	Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The quantity of sleeves was field fit for the Normal Power Lighting Conduits. (2) sets of (4) 2" penetrations were place initially for a total of 8. PC was notified the conduits penetrations were the wrong size. So instead of placing (2) sets of (4) 3" conduit penetrations called out on plan sheet EL-120. (2) additional sets of (4) 2" penetrations were added for a total of (16) 2" conduit penetrations. Additional conduits should be captured in as-builts. The electrical room penetrations were also inspected with no issues. Please see attached pictures and plan sheets.	Field Resolved	8/10/2020 8:36:32 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	8/31/2020 12:00:00 AM - 06:00	Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		block out was placed in accordance with plans	Conformance	9/2/2020 7:49:39 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Emergency Power	Cover		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The anchor bolts were placed in accordance with the manufacturer's installation manual and RFC-710 Low Voltage Anchoring Requirements which includes the foundations in the equipment yard. The anchor bolts were placed by Sturgeon before the concrete was placed.	Conformance	1/4/2021 5:28:52 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		There were no block out present in this placement. The 54" storm line will be represented on plans sheet DLP3-02 will be cored out at a later date.	Conformance	5/4/2020 8:55:08 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM - 06:00	Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The block outs were addressed in NDC-510 which was approved through a restricted activity. An embed issue was addressed through NDC-534 with wall adjustments. All utility block outs were present. All structural steel embeds were present. All items cast into the placement were supported appropriately. Please see attached pictures for embeds. 6" block out for sanitary on West wall was moved 3.5 ft higher by plumber. 4" block out for waterline on East wall was not present in the shop drawings. Both piping block outs will be captured in the as-builts.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		dowel bars were secured by 2X4 lumber on each side.	Conformance	12/3/2020 9:10:01 AM -07:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The fire supply line block out was present.	Conformance	10/27/2020 4:54:53 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Imbedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) were placed and adequately secured.	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls	6/25/2020 1:37:08 PM - 06:00	Drainage and weep holes at proper locations and elevations		the wall possesses one weep hole and it was place in accordance with the plans	Conformanc e	6/25/2020 11:34:18 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Drainage and weep holes at proper locations and elevations		all weep holes were installed at proper elevation and location	Conformanc e	7/17/2020 2:02:48 PM -06:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		A grooved pattern surface finish as designated on the plans shall be used on the designated portions of concrete walls. For all walls or panels requiring a grooved pattern on the exposed surface which are less than 10 feet in height, the form liner producing the pattern shall be one continuous piece extending the full height of the wall or panel.		it was observed that the form liner used for the noise wall pour was one continuous piece.	Conformanc e	5/5/2021 9:22:20 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		A grooved pattern surface finish as designated on the plans shall be used on the designated portions of concrete walls. For all walls or panels requiring a grooved pattern on the exposed surface which are less than 10 feet in height, the form liner producing the pattern shall be one continuous piece extending the full height of the wall or panel.		Surface pattern form liners were applied to forms.	Conformanc e	11/3/2020 2:29:32 PM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM - 06:00	Horizontal joints in adjacent form liner sections shall be offset by no less than one foot vertically. The form liners shall be properly aligned to limit visible horizontal and vertical joints in the concrete.		Horizontal and vertical joints were placed at the appropriate locations.	Conformanc e	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	8/31/2020 12:00:00 AM - 06:00	Horizontal joints in adjacent form liner sections shall be offset by no less than one foot vertically. The form liners shall be properly aligned to limit visible horizontal and vertical joints in the concrete.		Forms were offset in compliance.	Conformanc e	9/2/2020 7:49:39 AM -06:00	C		Closed
Central 70	C 0704-241	Substructu re	Structures		Horizontal joints in adjacent form liner sections shall be offset by no less than one foot vertically. The form liners shall be properly aligned to limit visible horizontal and vertical joints in the concrete.		All horizontal joints were within conformance of the specifications.	Conformanc e	2/13/2020 1:34:53 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were placed at the appropriate areas within the placement.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		A maturity meter was present in the placement.	Conformance	3/19/2020 2:47:44 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were installed the day of the placement.	Conformance	6/4/2020 7:40:13 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM -06:00	The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were present in the placement.	Conformance	4/20/2020 2:39:18 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		maturity meters were used for the CIP wall pour and the contractor provided all necessary wires and connectors.	Conformance	10/1/2020 10:38:40 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided and placed maturity meters before the pour.	Conformance	5/4/2020 10:27:12 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were provided by PC.	Conformance	6/16/2020 11:55:51 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided and placed the maturity meters.	Conformance	5/6/2020 1:16:15 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Kiewit supplied and installed maturity meters.	Conformance	4/24/2020 9:00:43 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meter and all required wires and connectors have been provided.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Contractor providing necessary maturity meters and all wires and connectors.	Conformance	3/4/2020 8:11:06 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM -07:00	The Contractor shall provide maturity meters and all necessary wires and connectors.		Three maturity meters were cast into the placement.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Cover		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were present in the placement during my inspection.	Conformance	8/25/2020 9:22:10 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		I verified that maturity meters were present in the placement.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were present in the placement.	Conformance	8/27/2020 2:07:04 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM -06:00	The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were present in the placement.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		PC provided maturity meters.	Conformance	6/1/2020 11:17:51 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were present in the placement.	Conformance	5/4/2020 8:55:08 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were provided and placed by PC.	Conformance	7/14/2020 12:13:41 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		A maturity meter was provided with everything necessary for the meter.	Conformance	6/1/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were installed.	Conformance	4/26/2021 3:20:55 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor (Ben Changnon) provided and placed maturity meters, wires and connectors.	Conformance	12/29/2020 8:58:21 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		it was observed that the contractor placed 2 maturity meters at the third points on the footing.	Conformance	5/5/2021 9:21:41 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were used.	Conformance	4/26/2021 3:19:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were placed in pour.	Conformance	3/9/2021 3:56:12 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided maturity meters and all necessary wires and connectors.	Conformance	2/3/2021 8:12:41 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided maturity meters and all necessary wires and connectors.	Conformance	2/3/2021 8:12:13 AM -07:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		PC supplied and installed the maturity meters and all necessary wiring.	Conformance	2/19/2021 7:59:32 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided maturity meters and all necessary wires and connectors.	Conformance	2/8/2021 2:25:48 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The Contractor shall provide maturity meters and all necessary wires and connectors.		The Contractor provided maturity meters and all necessary wires and connectors.	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor supplied and installed maturity meters and all necessary wiring and connectors.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were used.	Conformance	5/17/2021 8:50:08 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor supplied and placed (Ben Changnon) the maturity meters, wiring and connectors.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor supplied maturity meters and all necessary wiring and connectors. I observed the meters being installed.	Conformance	7/19/2021 7:17:52 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided and installed maturity meters and all related components.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor supplied maturity meters and all necessary wires and connectors. These were installed by Ben Changnon (PC).	Conformance	8/3/2021 3:53:09 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were used.	Conformance	8/31/2021 9:37:42 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status	
Central 70	C 0704-241	Bridge Deck	Structures		<p>The forms for any portion of the structure shall not be removed until the concrete is strong enough to withstand damage when the forms are removed. Concrete compressive strength shall be determined by maturity meters in accordance with CP 69.</p> <p>Below are the elements with required compressive strengths for form removal.</p> <ul style="list-style-type: none"> -Members which resist dead load bending: 80 percent of the required 28 day compressive strength, 0.80f 'c. -Columns: compressive strength of at least 1,000 psi -Sides of beams, walls or other members that do not resist dead load bending: 500 psi -Cast-in-place concrete box culverts spans not larger than 12feet shall reach compressive strength of 0.6f 'c; -Cast-in-place concrete box culverts spans over 12 feet but not over 20 feet shall reach compressive strength of 0.67f 'c -Cast-in-place concrete box culverts spans larger than 20 feet shall not be removed until after all concrete has been placed in all spans and has attained a compressive strength of at least 0.80f 'c 		Concrete strength was achieved prior to form removal.	Conformance	5/17/2021 8:50:08 AM -06:00	C			Closed

Central 70	C 0704-241	Railroad Grading	Earthwork		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete compressive strength was determined by maturity meters (Ben Changnon) prior to stripping forms.	Conformance	7/30/2021 8:02:12 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete compressive strength was determined by using maturity meters in accordance with CP 69.	Conformance	8/5/2021 2:37:16 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Maturity meters were used.	Conformance	7/15/2021 1:28:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Maturity meters were used.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Maturity meters were used.	Conformance	4/27/2021 8:32:56 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Maturity meters used.	Conformance	2/5/2021 9:39:01 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Acceptable.	Conformance	1/18/2021 8:56:25 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Maturity meters were used.	Conformance	1/18/2021 8:56:25 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		IQC verified maturity meter data.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Maturity meters were used and forms were removed after concrete strength was achieved.	Conformance	7/15/2021 1:28:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Forms were not removed until concrete strength was approved.	Conformance	5/17/2021 8:50:08 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Maturity meters were used and forms were removed after IQC approval.	Conformance	6/28/2021 9:23:12 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Maturity meters used.	Conformance	2/5/2021 9:39:01 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Maturity meters were installed and used, and the concrete has the required compressive strength.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Forms were removed after acceptable maturity meter results.	Conformance	8/31/2021 9:37:42 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		In conformance	Conformance	4/24/2020 8:58:16 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

The cavities shall be filled with cement mortar and the surface left sound, smooth, even and uniform in color.		Metal ties were acceptable.	Conformance	4/27/2021 8:32:56 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	2/1/2020 5:38:31 PM - 07:00	Forming materials shall be removed when permanent access is available to portions of structures.		Forms of the inlet risers were not stripped prior to placement of barrier adjacent to inlets. As a result formwork has now been wedged between structures.	See NCR 1979	5/9/2020 12:28:54 PM -06:00	NC-2	NCR 1979 was written to address this issue	Closed
Central 70	C 0704-241	F/P/S Wall	Walls	7/9/2020 4:55:22 PM - 06:00	Forming materials shall be removed when permanent access is available to portions of structures.		No forming materials were seen.	Conformance	6/30/2020 1:57:29 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		Foam material was used at the expansion joint to segregate the placement from Pour #1. Pour #3 will be placed on Friday, June 5th against the Pour #2 placement from today.	Conformance	6/1/2020 5:30:04 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		All construction joints were adequately cleaned before the rebar installation began.	Conformance	8/27/2020 2:07:04 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The adjacent construction joint was cleaned appropriately before placement.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Cover		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The construction joint against the Cover knee wall was free of laitance concrete and foreign materials. Reference knee wall and approach slab depth on plan sheet B050.122.	Conformance	8/25/2020 9:22:10 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The construction joints were clean and free of laitance concrete.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM - 07:00	Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The crew poured through the construction joint between P2-14 and P2-15. The construction joint had the appropriate expansion material across the entire surface area.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The construction joints were adequately cleaned. A concrete water stop was placed for the vault lid cold joint. Reference pictures in comment #4.	Conformance	10/27/2020 4:54:53 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The contractor adequately cleaned the construction joint at the previous phase of the CBC.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The construction joint at the next section of the CBC was cleaned of laitance, loose concrete, curing compound, etc. prior to concrete placement.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		All construction joints to the previous phase of the CBC were cleaned and free of deleterious materials and loose concrete.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM - 07:00	Construction joints are at approved locations on the plans or placing schedule.		The expansion joint was at the approved location on the plans. Please see the attached picture.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Construction joints are at approved locations on the plans or placing schedule.		The construction joint was in accordance with the plans and shop drawings.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures	4/23/2020 12:00:00 AM - 06:00	Construction joints are at approved locations on the plans or placing schedule.		The construction joints for the diaphragm were in conformance with RFC-000352. Please see attached RFC and concrete placement pictures.	Conformance	4/23/2020 3:01:47 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	8/31/2020 12:00:00 AM - 06:00	Construction joints are at approved locations on the plans or placing schedule.		Spacing was per plan.	Conformance	9/2/2020 7:49:39 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Construction joints are at approved locations on the plans or placing schedule.		The joints were approved and verified with the plans.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Construction joints are at approved locations on the plans or placing schedule.		The joints were lined up with the joints in the sidewalk.	Conformance	6/3/2020 7:41:35 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	7/9/2020 4:55:22 PM - 06:00	Construction joints are at approved locations on the plans or placing schedule.		CJ's are located every 30'.	Conformance	6/30/2020 1:57:29 PM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Cover		Construction joints are at approved locations on the plans or placing schedule.		The construction joints are approved through FDC-000370.	Conformance	5/14/2020 1:34:09 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Construction joints are at approved locations on the plans or placing schedule.		The construction joints were placed at the approved locations on the plans. A water stop was used at each joint as well. Please see the attached pictures.	Conformance	5/4/2020 8:55:08 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures	5/14/2020 12:00:00 AM - 06:00	When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		Concrete was wetted down.	Conformance	5/14/2020 4:38:21 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		The contractor wet the joint prior to concrete placement and by the time that concrete was placed, the joint was in a SSD condition.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		The contractor wet the adjacent hardened concrete surface to a SSD condition.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		The contractor sprayed water onto the construction joint from the previous phase and there was not standing water.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		Concrete shall not be placed on frozen ground.		The contractor heated the forms and ground prior to placement of concrete.	Conformance	2/19/2021 7:59:32 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen grade.	Conformance	3/9/2021 3:56:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	11/11/2020 1:33:11 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	11/3/2021 1:07:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be placed on frozen ground.		Heaters were used to heat the entire placement to the appropriate temperature before concrete began. Frozen sub-grade was not present.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	3/4/2020 8:11:06 AM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:18:30 PM - 06:00	Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	3/24/2020 3:45:56 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall not be placed on frozen ground.		the ground was not froze during the placement	Conformance	11/3/2020 1:14:03 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	11/11/2020 1:33:51 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		All ice was removed from grade and mold prior to slipforming.	Conformance	11/11/2020 1:33:51 PM -07:00	C		Closed
Central 70	C 0704-241	Emergency Power	Cover		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		There was no snow or ice present during the placement.	Conformance	1/4/2021 5:28:52 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		no snow and ice was present during the placement	Conformance	11/3/2020 1:14:03 PM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:18:30 PM - 06:00	Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		No ice, snow, or frost was within formwork / placement area.	Conformance	3/24/2020 3:45:56 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		Before concrete placement, no snow, ice, or frost was within forms.	Conformance	3/4/2020 8:11:06 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		Before concrete placement, no snow, ice, or frost was present.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Cap	Walls		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		No snow or ice was present within formwork during concrete placement.	Conformance	2/27/2020 6:45:07 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		The forms were covered and placement area was heated so no ice or snow was present.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		All ice and frost was removed from forms prior to placement.	Conformance	11/11/2020 1:33:11 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		All ice and snow was removed from formwork prior to pour.	Conformance	3/9/2021 3:56:12 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Salt shall not be used to thaw ice, snow, or frost.		During my visual inspection, no salt or de-icing materials were present.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Salt shall not be used to thaw ice, snow, or frost.		No salt was needed or used to thaw placement surface. Area was protected by blankets and heated to keep warm prior to placement.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in accordance with the approved placing sequence		Concrete placed in accordance with approved placement sequence.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM -06:00	Concrete placed in accordance with the approved placing sequence		Concrete was placed in accordance with the approved placement plan.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:18:30 PM -06:00	Concrete placed in accordance with the approved placing sequence		Concrete placed per approved placement plan.	Conformance	3/24/2020 3:45:56 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM -07:00	Concrete placed in accordance with the approved placing sequence		The placement was in accordance with the specifications.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete placed in accordance with the approved placing sequence		The concrete was placed in accordance with the placing sequence.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	6/12/2020 12:26:29 PM -06:00	Concrete placed in accordance with the approved placing sequence		The lobato Superintendent was complaining about how IQC waited until PC got a weight for the concrete before starting their test, saying that it was taking IQC 20 - 30 minutes to perform the test, delaying the operation. there was then a large argument between IQC Tony and Lobato, with Lobato not talking to Tony and going straight to Ox.	Discussions have been made.	7/2/2020 7:59:31 AM -06:00	Audit Comment	20-30 minutes seems like too long for any concrete testing. The process on C-70 is PC tests to ensure the concrete is adjusted prior to acceptance . Lobato will be informed to plan for the quality process to take place.	Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM -06:00	Concrete placed in accordance with the approved placing sequence		The duration and appropriate loading of the forms was adequate.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Concrete placed in accordance with the approved placing sequence		The concrete was placed in accordance with the approved placing plan.	Conformance	8/27/2020 2:07:04 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in accordance with the approved placing sequence		it was observed that concrete was deposited into the forms in an approved method.	Conformance	3/25/2021 11:09:55 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		it was observed that a concrete pump truck was used and concrete was not dropped from a height of more than 5 feet.	Conformance	3/25/2021 11:09:55 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Noise Walls	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was placed by pump and was not dropped more than five feet.	Conformance	2/19/2021 7:59:32 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Point of discharge was never more than 5 feet above area of impact.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was confined in a pump truck tremie.	Conformance	2/15/2021 3:19:54 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		it was observed that the footing was poured using a conveyor belt with a chute attached at the end making it to where concrete was not dropped more than 5'.	Conformance	5/5/2021 9:21:41 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Pump truck was used and concrete was not dropped more than 5 feet.	Conformance	6/28/2021 9:23:12 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet from the conveyor.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Pump truck was used and concrete was not dropped more than 5 feet.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet, unless confined by closed chutes or pipes.	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete placement was acceptable.	Conformance	6/10/2021 2:37:47 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	6/7/2021 7:45:14 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was placed using a pump and was confined.	Conformance	7/19/2021 7:17:52 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	10/7/2021 1:27:52 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was dropped more than five feet but was enclosed in a pipe/tremie.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	11/11/2020 1:33:11 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	11/5/2020 3:11:12 PM -07:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The pump truck was used to ensure the concrete was placed as close to the final positions as possible within the 5ft drop.	Conformance	10/27/2020 4:54:53 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	11/3/2020 1:13:00 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than five feet as it was enclosed by a tremie pipe.	Conformance	2/8/2021 2:25:18 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was pumped and was enclosed in a pipe.	Conformance	12/29/2020 8:58:21 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	11/3/2021 1:07:57 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was chuted out of the truck and was not dropped more than five feet.	Conformance	8/3/2021 3:53:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete placement was acceptable.	Conformance	8/31/2021 9:37:42 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		A tremie tube was utilized to ensure this specification was followed.	Conformance	8/27/2020 2:07:04 PM -06:00	C		Closed
Central 70	C 0704-241	Electrical	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The drop was minimized by using the concrete truck chute. The following spec was followed.	Conformance	1/4/2021 5:27:29 PM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		concrete was placed directly from the concrete truck chute at a height less then 5'.	Conformance	11/2/2020 3:48:01 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	10/8/2020 11:21:40 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		during the pour the crew member directing the concrete pump chute did a great job making sure to not drop concrete from higher then 5' above the ground.	Conformance	9/30/2020 10:12:25 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Proper placement	Conformance	11/11/2020 1:32:38 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		a tremie pipe and funnel head was used doing the placement until the concrete level was that of where concrete would be dropped from less then a 5' height.	Conformance	10/1/2020 10:39:41 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		REFER TO THE PHOTOS CONCRETE WAS DROPPED LESS THEN 5 FEET.	Conformance	6/25/2020 11:40:12 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		see attached pictures, concrete was dropped from no further then shown.	Conformance	7/27/2020 5:30:51 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		a pump truck was used to pour the lower slab of the building and was not dropped from more then 5' above the ground.	Conformance	7/12/2020 2:43:48 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM - 06:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The tremie pipe was inserted into the forms to ensure the concrete was placed as close as possible to its final location.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		for placement of the concrete it was directed deposited from the chute of the concrete truck at no higher off the ground then 3', which is well below the 5' maximum.	Conformance	11/2/2020 4:13:14 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The pump truck utilized a smaller tremie pipe to account for the space between the rebar. The tremie pipe was able to reach the bottom of the placement to ensure this standard was followed. Please see the attached pictures.	Conformance	5/4/2020 8:55:08 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		concrete was pour at a height of 3.5 feet along the whole pour.	Conformance	6/1/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was dropped under 5 feet throughout whole pour.	Conformance	5/20/2020 9:34:54 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		A pumper truck was utilized to ensure the concrete was placed at the appropriate height and location.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures	5/14/2020 12:00:00 AM -06:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was tailgated.	Conformance	5/14/2020 4:38:21 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was dropped less then 5 feet through out the flatwork.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was not dropped more then 5 feet when being poured into the curb and gutter.	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped over 5 feet.	Conformance	4/2/2020 6:51:18 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was tailgate dumped.	Conformance	4/24/2020 8:58:16 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		concrete pump truck was used for placement, which allowed the concrete to be dropped from no higher then 5 foot.	Conformance	1/4/2021 1:17:43 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		A tremie pipe was used to reach the bottom of the placement to minimize the fall distance to within the specification.	Conformance	6/4/2020 7:40:13 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		concrete was poured from the concrete trucks chute and dropped no higher than 5 foot above the ground.	Conformance	11/3/2020 1:28:58 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was dropped more than 5 feet but it was confined in a chute.	Conformance	5/6/2020 1:16:15 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was dropped at a height less than 5 feet for each layer poured.	Conformance	5/28/2020 2:26:17 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped out of end of pump tube more than 5 feet.	Conformance	7/14/2020 12:10:41 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was being dropped from less than 5'.	Conformance	4/24/2020 8:50:43 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was placed through hoppers and chutes at the beginning of the pour as the fall height was over 5 feet.	Conformance	5/4/2020 10:27:12 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not being dropped more than five feet.	Conformance	4/27/2020 3:36:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM -07:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		A concrete pump truck was used so concrete fall was minimized.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:18:30 PM - 06:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet. Truck was backed up and placed using back of truck chute.	Conformance	3/24/2020 3:45:56 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	5/11/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Closed concrete chutes were used to deposit concrete to the lowest portion of column until concrete depth was brought up and placement was more easily reachable.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		A pump truck was used to ensure the concrete was placed as close to the final position as possible. Please see the attached pictures.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete deposited at or near to its final position and was not vibrated into place.	Conformance	2/27/2020 6:45:07 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Care was taken during placement to deposit concrete as close to final position as possible.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM - 06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		The concrete pump truck was used during the placement. During my observation this specification was followed.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Moment Slab	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		concrete was poured in a manner that each section was poured near finish grade before moving to the next section.	Conformance	6/1/2020 7:33:10 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed as near to final position as possible.	Conformance	5/11/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:18:30 PM - 06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed as near to final position as possible using the back of truck chute.	Conformance	3/24/2020 3:45:56 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM - 07:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Due to high rebar congestion in the top mat of the cap, the vibrator was used to vibrator the concrete through the steel which was then deposited in the bottom of the formwork.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed as close to final position as possible.	Conformance	6/16/2020 11:55:51 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed no concrete being moved with vibrators as it was placed near the final position.	Conformance	5/4/2020 10:27:12 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		In conformance	Conformance	4/24/2020 8:50:43 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed in as near to final position as possible.	Conformance	7/14/2020 12:10:41 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		The concrete was deposited near its final location and was not moved using vibrators.	Conformance	5/6/2020 1:16:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Diaphragms	Structures	4/23/2020 12:00:00 AM - 06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		A pump truck was used to ensure this specification was followed.	Conformance	4/23/2020 3:01:47 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		In conformance	Conformance	4/24/2020 8:58:16 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed in as near to final position as possible.	Conformance	4/2/2020 6:51:18 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		When placing the concrete it filled every section of the form throughout the pour.	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures	5/14/2020 12:00:00 AM - 06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was tailgated.	Conformance	5/14/2020 4:38:21 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed in as near to final position as possible.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Reference comment #16	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		the concrete was place in a manner that was equally filled to as close to final position as possible in multiple lifts.	Conformance	7/17/2020 2:02:48 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM - 06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		The tremie pipe was inserted into the forms to ensure the concrete was placed as close as possible to its final location.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		concrete was placed most nearly to finish grade, refer to the pictures	Conformance	6/25/2020 11:38:55 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		No segregation was witnessed	Conformance	6/3/2020 12:20:18 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed as near to final position as reasonably possible.	Conformance	10/8/2020 11:21:40 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		the slab was poured near finished grade for the slab.	Conformance	11/2/2020 3:48:01 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		all concrete was placed in the forms as close to final position as possible	Conformance	11/3/2020 2:15:54 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete placement was acceptable.	Conformance	8/31/2021 9:37:42 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed the contractor placing the concrete as near as possible to the final position and not using vibrators to drag the concrete into place.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed in as near to final positions as possible.	Conformance	11/3/2021 1:07:57 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited as near to final position as possible.	Conformance	11/3/2020 1:13:00 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed in as near to final position as possible.	Conformance	11/5/2020 3:11:12 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed in as near to final position as possible.	Conformance	11/3/2020 2:29:32 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed the contractor placing concrete as near as possible to the final position and did not observe the concrete being dragged into position with vibrators.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete placement was acceptable.	Conformance	6/10/2021 2:37:47 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete placement was acceptable.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed near the final position and was not dragged into place using vibrators.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete placement was acceptable.	Conformance	6/28/2021 9:23:12 AM -06:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		it was observed that concrete was deposited in the forms in 18" lifts until they reached near final position.	Conformance	5/5/2021 9:22:20 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete placement was acceptable.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed the contractor depositing the concrete as close as possible to the final position and not using vibrators to move the concrete.	Conformance	2/19/2021 7:59:32 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		Pump truck was used.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No aluminum chutes were used.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		I observed no aluminum materials used in the placing of the concrete.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No aluminum parts were used for pumping and placing the concrete.	Conformance	1/14/2021 9:46:34 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		Pump truck was used and concrete placement was acceptable.	Conformance	8/31/2021 9:37:42 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		The tremie tube was steel.	Conformance	8/27/2020 2:07:04 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		From visual inspection, no aluminum materials were present.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		the tremie pipes were fabricated out of a none aluminum metal and the funnel head was fabricated out of plastic.	Conformance	10/1/2020 10:38:40 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No aluminum materials were used in the placement of the concrete for the pier cap.	Conformance	5/4/2020 10:27:12 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		From visual inspection, the tremie pipe was free of hardened concrete.	Conformance	6/4/2020 7:40:13 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All placement devices were clean of hardened concrete.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Chutes were free of hardened concrete.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chutes were kept clean throughout the pipes and not concrete was hardened.	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Truck chutes were clean	Conformance	4/24/2020 8:58:16 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chutes were kept clean and free from hardened concrete coating.	Conformance	10/8/2020 11:21:40 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		the concrete camlever bucket was free of any hard coated concrete.	Conformance	9/30/2020 10:13:29 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		the concrete tank used to pour the concrete was cleaned free of any hardened concrete before the concrete was placed	Conformance	7/17/2020 2:02:48 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		before concrete arrived the crew scraped the concrete chute free of old hardened concrete.	Conformance	7/14/2020 12:16:24 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Chutes were clean prior to placement.	Conformance	8/31/2021 9:37:42 AM -06:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		The pipes was free of hardened concrete.	Conformance	10/27/2020 4:54:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Pump truck was used and chutes were clean.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All tools, chutes, and troughs were clean of hardened concrete.	Conformance	6/7/2021 7:45:14 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All equipment was free of debris.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in acceptable 18 inch lifts.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete placement was acceptable.	Conformance	6/28/2021 9:23:12 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete placement was acceptable.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Uniform horizontal layers were placed.	Conformance	10/7/2021 1:27:52 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Due to access issues, I was not able to stand at the CBC wall but it appeared that the contractor was not placing in layers more than 18 inches thick.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		18" maximum lifts were used.	Conformance	11/3/2020 2:29:32 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete placed in acceptable layers.	Conformance	8/31/2021 9:37:42 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in layers less than 18" which were then consolidated with the previous layer using vibrators that penetrated into the previous layer.	Conformance	8/3/2021 3:53:09 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Layers of not more than 18" thick were placed.	Conformance	11/3/2021 1:07:57 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Due to the placement height, a concrete placement height of 4ft per hour was used to ensure loading the forms was equal and uniform.	Conformance	5/4/2020 8:55:08 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in horizontal layers and poured in 18" lifts	Conformance	5/20/2020 9:34:54 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Drainage		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		the concrete pour was approximately 4' in depth and they crew poured the concrete in 4 layers making each layer roughly 12" thick.	Conformance	9/30/2020 10:12:25 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		During my observation, the concrete was placed in lifts in accordance with this spec.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		In conformance	Conformance	4/24/2020 8:58:16 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		The concrete was observed to be placed in 18 inch lifts.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		The pace of the placement was approximately 4ft per hour to ensure the forms were uniformly loaded and form displacement was minimized. Each layer was adequately consolidated before the next lift was placed.	Conformance	6/4/2020 7:40:13 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM - 06:00	Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		The concrete was placed using 2 equal lifts with a 3rd small lift to ensure the slope from the front to the back was maintained. Reference plan sheet WS204 - Wall Cap.	Conformance	4/20/2020 2:39:18 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in 18 inch lifts.	Conformance	6/16/2020 11:55:51 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		the concrete was poured in layers that was acceptable from the west to east.	Conformance	5/28/2020 2:26:17 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM - 07:00	Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Horizontal lifts were utilized throughout placement. Each layer was placed and consolidated in a timely manner to ensure a construction joint did not form.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in less than 18 inch thick lifts.	Conformance	5/11/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		The crew used 3 equal lifts to place the pier cap.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in horizontal layers not exceeding the allowable 18 inches thick. Each layer was then consolidated so as to avoid a construction joint between layers of placement.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		External surfaces were thoroughly worked to have a well finished and smooth surface.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		they used a concrete roller screed to work the surface of the concrete.	Conformance	10/21/2020 7:42:51 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM -07:00	The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		The crew utilized vibrators at the appropriate spacing to ensure an adequate surface finish was attained.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		Concrete was properly screed and floated to work coarse aggregate below surface.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		The external surface of the concrete was worked with the correct tools with a smooth finish no water or air pockets.	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		The external surface was properly worked to get a smooth finish.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		Concrete was thoroughly creed and worked with proper tools.	Conformance	4/2/2020 6:51:18 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		concrete racks were used to bring mortar to the forms and worked with vibrators for consolidation.	Conformance	11/2/2020 3:48:01 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		No segregation was witnessed	Conformance	6/3/2020 12:20:18 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Moment Slab	Walls		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		concrete was work properly during concrete placement, refer to the pictures	Conformance	6/25/2020 11:38:55 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		Girder seats were finished to what appeared to be a level surface.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Vibrators were acceptable and used properly.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The contractor used suitable mechanical vibrators to consolidate the concrete being placed.	Conformance	2/19/2021 7:59:32 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was vibrated.	Conformance	10/7/2021 1:27:52 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Approved vibration equipment was used.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Contractor consolidated concrete with approved vibration equipment.	Conformance	6/10/2021 2:37:47 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated with suitable mechanical vibrators operating within the concrete. Hand spading was not required to assure proper and adequate consolidation.	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was vibrated properly.	Conformance	6/7/2021 7:45:14 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was properly vibrated.	Conformance	11/3/2020 2:29:32 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was vibrated properly.	Conformance	11/5/2020 3:11:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was adequately vibrated.	Conformance	11/11/2020 1:33:11 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was properly vibrated.	Conformance	11/3/2021 1:07:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Vibrators were used to consolidate the concrete.	Conformance	8/31/2021 9:37:42 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover	6/12/2020 12:26:29 PM - 06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The crew used Needle Vibrators for consolidation, also drug vibrator equipment to get a level surface along pipes set for at least 5" of total depth with at least 2" of cover for reinforcements.	Conformance	6/9/2020 11:03:28 AM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The placement was poured with a grout and pea gravel. No mechanical vibration was required by the manufacturer's recommendations. Please see attached pictures.	Conformance	5/14/2020 1:34:09 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		needle vibrators were used to consolidate the concrete during the pour	Conformance	11/3/2020 2:15:54 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The mechanical vibrators were used at the appropriate spacing and duration.	Conformance	8/27/2020 2:07:04 PM -06:00	C		Closed
Central 70	C 0704-241	Electrical	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The consolidation was adequate for the placement and in accordance with the following specification.	Conformance	1/4/2021 5:27:29 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Mechanical vibrators were used at the appropriate frequency.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed

Central 70	C 0704-241	F/P/S Wall	Walls	8/31/2020 12:00:00 AM -06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		no consolidation issues.	Conformance	9/2/2020 7:49:39 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		see attached pictures, needle vibrators were used in the manner they were intended to be used for.	Conformance	7/27/2020 5:30:51 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Vibration was acceptable	Conformance	11/11/2020 1:32:38 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		portable needle vibrators were used to consolidate the concrete during the pour.	Conformance	7/16/2020 10:38:00 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Vibrator was used properly during pour.	Conformance	4/2/2020 6:51:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated by mechanical vibrators. The vibration frequency and depth was adequate.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		pencil vibrators where used during the pour to insure that the concrete was consolidated properly.	Conformance	10/1/2020 10:38:40 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was properly vibrated in forms.	Conformance	7/14/2020 12:10:41 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM -06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Mechanical vibrators were used at the appropriate depth and frequency throughout the placement.	Conformance	4/20/2020 2:39:18 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		mechanical needle vibrators were used for consolidation during the pour.	Conformance	11/3/2020 1:28:58 PM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		needle vibrators were used properly during the placement of the concrete.	Conformance	1/4/2021 1:17:43 PM -07:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures	4/23/2020 12:00:00 AM -06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Two mechanical vibrators were present. The consolidation around and under the utility blockouts and deck drain pipe blockout was in accordance with the specifications.	Conformance	4/23/2020 3:01:47 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM -07:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Only mechanical vibrators were used during the placement.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:18:30 PM - 06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated with suitable mechanical vibrators operating within the concrete.	Conformance	3/24/2020 3:45:56 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was properly consolidated.	Conformance	5/11/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated using a suitable and adequate vibrator.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Two mechanical concrete vibrators were used throughout the placement.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM - 06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		During my observation, the vibrators were used at the adequate frequency for consolidation.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM - 06:00	Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		This requirement was followed during my observation.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means of causing concrete to flow or run into position. Concrete was deposited as close to final position as possible.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM - 07:00	Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Reference comment #24.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Needle vibrators were only used for compaction.	Conformance	5/28/2020 2:26:17 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were being used appropriately.	Conformance	4/24/2020 8:50:43 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		A pump truck was utilized during the placement. Vibrators were not used to flow or run the concrete.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Needle vibrators were used with the correct technique.	Conformance	6/25/2020 11:38:18 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		In conformance	Conformance	4/24/2020 8:58:16 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibration was acceptable	Conformance	11/11/2020 1:32:38 PM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		needle vibrators were used properly in a manner to help consolidate the concrete in-between the reinforcement bars.	Conformance	7/12/2020 2:43:48 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Conformance	Conformance	9/23/2020 12:42:36 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The concrete was placed in the forms at a uniform depth. The vibrators were inserted at equal and consist time intervals. This mitigated the issue of vibrators causing the concrete to flow.	Conformance	5/4/2020 8:55:08 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The vibration of the concrete was adequate.	Conformance	6/3/2020 7:41:35 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM -06:00	Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Proper vibrating techniques were used during my observation.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means to cause concrete to flow or run into position but only as a means for consolidation.	Conformance	8/3/2021 3:53:09 PM -06:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The vibration technique that was utilized was in accordance with this specification.	Conformance	10/27/2020 4:54:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Concrete placement was acceptable and vibration equipment was not used to move concrete.	Conformance	9/28/2021 9:50:30 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The contractor used proper vibration techniques.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were acceptable and used properly.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		it was observed that vibrators were used in a manner to consolidate the concrete around the reinforcement, not to help flow concrete into position.	Conformance	5/5/2021 9:22:20 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		No water was being added at the time of inspection.	Conformance	4/24/2020 8:50:43 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		The Contractor shall provide fogging equipment and keep the concrete surface moist at all times by fogging with an approved atomizing nozzle until the curing material is in place.		The fogging equipment was appropriate for the operation.	Conformance	6/1/2020 5:30:04 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	6/12/2020 12:26:29 PM -06:00	The Contractor shall provide fogging equipment and keep the concrete surface moist at all times by fogging with an approved atomizing nozzle until the curing material is in place.		IQC Tony and Myself noticed that when fogging the placed concrete that they were sometimes directly spraying the concrete with the fogger. IQC Tony addressed the issue with the foremen and it didn't happen again afterwards.	Field Resolved	6/9/2020 11:03:28 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Concrete mix temperature is between 50 and 90 degrees F		IQC and PC both measured the temperature of the concrete for a minimum of 2 minutes, the temperatures were 78 degrees F, and 77 degrees F.	Conformance	7/16/2020 10:38:00 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Concrete mix temperature is between 50 and 90 degrees F		the concrete temperature was taken during when the concrete was tested by PC and IQC, the temperature was read to be in the low 70's	Conformance	11/3/2020 2:15:54 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		The concrete was tested and was 79 degrees F.	Conformance	5/28/2020 2:26:17 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		Concrete mix temperature is between 50 and 90 degrees F		concrete temperature was recorded to be in the low 70's to high 60's when tested before placement.	Conformance	1/4/2021 1:17:43 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Cap	Walls		Concrete mix temperature is between 50 and 90 degrees F		concrete temperature after arrival and testing was 83 degrees F.	Conformance	7/14/2020 12:14:54 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		The concrete was tested to be within the tolerance during the concrete testing and placement.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix was an acceptable temperature.	Conformance	4/2/2020 6:51:18 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete mix temperature is between 50 and 90 degrees F		Concrete was tested by IQC and PC and feel within range.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:18:30 PM - 06:00	Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was within the allowable temperature requirements of 50 and 90 degF.	Conformance	3/24/2020 3:45:56 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete temperatures between the allowable range of 50 to 90 deg F.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete mix temperature is between 50 and 90 degrees F		All concrete placed was in the required temperature range.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete mix temperature is between 50 and 90 degrees F		The concrete mix temperature is between 50 and 90 degrees.	Conformance	1/14/2021 9:46:34 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		The concrete appeared to be placed in a manner that avoided segregation and displacement of reinforcement.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner that avoids segregation and displacement of reinforcement.	Conformance	2/15/2021 3:19:54 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete was placed using a conveyor belt and the contractor used methods to avoid segregation and displacement of reinforcement.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		The concrete placement and consolidation were adequate to ensure segregation was minimized.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete placed in a manner which avoids segregation and displacement of reinforcement.	Conformance	2/27/2020 6:45:07 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete placed in a manner to best avoid segregation and displacement of any reinforcement.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:18:30 PM - 06:00	Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete was placed in manner which best avoids segregation and displacement to dowel and tie bar reinforcement.	Conformance	3/24/2020 3:45:56 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures	5/14/2020 12:00:00 AM - 06:00	Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		No segregation was found after forms were removed.	Conformance	5/14/2020 4:38:21 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete placed in a manner which to avoid segregation and displacement of reinforcement.		The concrete was placed in conformance with the placement sequence to avoid segregation and rebar displacement.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Electrical	Cover		Concrete placed in a manner which to avoid segregation and displacement of reinforcement.		Concrete segregation was minimized by placing the concrete as close to the final position as possible and using proper consolidation techniques	Conformance	1/4/2021 5:27:29 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	8/31/2020 12:00:00 AM - 06:00	Concrete placed in a manner which to avoid segregation and displacement of reinforcement.		No segregation was witnessed.	Conformance	9/2/2020 7:49:39 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	7/9/2020 4:55:22 PM - 06:00	Concrete placed in a manner which to avoid segregation and displacement of reinforcement.		No segregation was seen in the wall.	Conformance	6/30/2020 1:57:29 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM - 06:00	Concrete placed in a manner which to avoid segregation and displacement of reinforcement.		Since a pump truck with a tremie pipe was used. The possibility of reinforcing displacement was minimized.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in a manner which to avoid segregation and displacement of reinforcement.		Concrete was placed to avoid segregation and displacement of reinforcing steel.	Conformance	7/14/2020 12:13:41 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All surfaces have been finished properly		for finishing the surface of the moment slab a bull float was used to get a smooth even finish. shortly afterwards when the concrete was still wet an approved curing compound was used to coat the moment slab for curing purposes.	Conformance	11/2/2020 4:13:14 PM -07:00	C		Closed

At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump was properly primed prior to beginning placement.	Conformance	7/14/2020 12:13:41 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was properly primed before the placement operation began.	Conformance	5/4/2020 8:55:08 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Before the concrete was poured into the forms . They pumped 0.25 cubic yards out to prime the pump and clean out any oils that where inside the pump.	Conformance	5/20/2020 9:34:54 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		No water added after commencement.	Conformance	11/11/2020 1:32:38 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM - 07:00	Water shall not be added directly into the concrete pump hopper after placement has commenced.		During the discharge of Truck #3, the mix was relatively stiff. The Aggregate Concrete Truck driver used the concrete truck water hose to aid in the movement of mix from the chute into the pump truck hopper. The truck was then rejected by Jose Sosa. Approximately 2 cyd was discharged. Less than a 0.25 of concrete was affected by the actions of the driver.	Response was acknowledged	12/18/2019 10:26:12 AM -07:00	Audit Comment	Acknowledged. Our PC representatives on the crew did what we have trained them to do. They know water cannot be added directly to the mix. Rejecting the truck was the right thing to do.	Closed
Central 70	C 0704-241	Approach Slabs	Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into hopper.	Conformance	6/10/2021 2:37:47 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the hopper.	Conformance	7/15/2021 1:28:57 PM -06:00	C		Closed

Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		Pump truck was used and concrete placement was acceptable.	Conformance	7/15/2021 1:28:57 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		Continuous stream of concrete was produced.	Conformance	10/7/2021 1:27:52 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		The pump operator operated the pump so that a continuous stream of concrete was produced.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Continuous stream on concrete was produced from pump.	Conformance	3/9/2021 3:56:12 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The pump shall be operated so that a continuous stream of concrete is produced.		Concrete was pumped with a continuous stream.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	1/14/2021 9:46:34 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	12/29/2020 8:58:21 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM -07:00	The pump shall be operated so that a continuous stream of concrete is produced.		Any gap in the placement was due to concrete truck arrival. This was a continuous operation otherwise.	Conformance	11/21/2019 11:14:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		The pump truck was operated in a continuous manner.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Pump was operated with a continuous stream of concrete.	Conformance	6/16/2020 11:55:51 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Acceptable.	Conformance	11/11/2020 1:32:38 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls	8/31/2020 12:00:00 AM - 06:00	The pump shall be operated so that a continuous stream of concrete is produced.		Concrete was pumped adequately.	Conformance	9/2/2020 7:49:39 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Conformance	Conformance	9/23/2020 12:42:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Continuous stream of concrete was produced from end of pump.	Conformance	7/14/2020 12:13:41 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced from the pump.	Conformance	6/1/2020 11:17:51 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The pump shall be operated so that a continuous stream of concrete is produced.		The pumping operation was smooth and continuous during my observation.	Conformance	6/1/2020 5:30:04 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Lines not on epoxy coated rebar.	Conformance	11/11/2020 1:32:38 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		The pump truck had a rubber hose.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Lines did not rest on epoxy steel.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Point of discharge was never more than 5 feet above area of impact.	Conformance	2/5/2021 10:49:10 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Pump truck position was acceptable.	Conformance	7/15/2021 1:28:57 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Point of discharge was as close as possible. Pump truck used.	Conformance	6/10/2021 2:37:47 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		End of pump tube was placed as close as practically possible to abutment.	Conformance	6/16/2020 11:55:51 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Acceptable.	Conformance	11/11/2020 1:32:38 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Excavating staged lifts in accordance with the plans and approved submittals.		Lifts were being constructed in accordance with the plans.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Excavating staged lifts in accordance with the plans and approved submittals.		Lifts were excavated appropriately.	Conformance	5/14/2020 4:46:37 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Excavating staged lifts in accordance with the plans and approved submittals.		Excavation was completed in accordance with plans.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Excavating staged lifts in accordance with the plans and approved submittals.		Lifts were done in accordance to plans.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Excavating staged lifts in accordance with the plans and approved submittals.		Lifts were done in accordance to plans.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Providing and installing bearing plates, washers, nuts, couplers, and other required miscellaneous materials.		Bearing plates, washers, and nuts were all provided and installed.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Providing and installing bearing plates, washers, nuts, couplers, and other required miscellaneous materials.		Bearing plates, washers, and nuts were all provided and installed.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Providing and installing bearing plates, washers, nuts, couplers, and other required miscellaneous materials.		Bearing plate, washers, and nuts were installed.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Concrete shall be Class D, conforming to the requirements of Section 601.		Concrete was class D. IQC and PC achieved passing tests on mix.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Reinforcing Steel shall conform to the requirements of Section 602.		Waler bars and W4 mat were in accordance with 602.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Reinforcing Steel shall conform to the requirements of Section 602.		Waler bars and W4 mat were in conformance with Section 602.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		Reinforcing Steel shall conform to the requirements of Section 602.		Waler bars and W4 mat were in conformance with Section 602.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Shotcrete shall conform to the requirements of Section 641.		Shotcrete mix was submitted, approved, and tested by IQC.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Shotcrete shall conform to the requirements of Section 641.		Shotcrete mix was submitted, approved, and tested by IQC.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Shotcrete shall conform to the requirements of Section 641.		Shotcrete mix was submitted and approved by IQC	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Geocomposite strip drains shall comply with Section 712.12.		Strips drains used were approved by IQC. Lapping was also performed appropriately.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Geocomposite strip drains shall comply with Section 712.12.		Geocomposite strip drains were used and approved by IQC. Lapping was performed correctly.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Geocomposite strip drains shall comply with Section 712.12.		Geocomposite strip drains were used and approved by IQC. Lapping was performed correctly.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		Solid Bar Soil Nail. Bars shall conform to AASHTO M31 for Grade 75 or ASTM A 722 for Grade 150. Bars shall be threaded, continuous without splices or welds, new, straight, undamaged, epoxy-coated or encapsulated as shown on the plans. Bars shall be threaded a minimum of 6 inches on the wall anchorage end to allow proper attachment of the bearing plate and nut. Threading may be continuous spiral deformed ribbing provided by the bar deformations (continuous threaded bars) or may be cut into a reinforcing bar. If threads are cut into a reinforcing bar, the next-larger bar number designation from that shown on the plans shall be provided at no additional cost.		Soil nail bars were epoxy coated and in conformance.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Solid Bar Soil Nail. Bars shall conform to AASHTO M31 for Grade 75 or ASTM A 722 for Grade 150. Bars shall be threaded, continuous without splices or welds, new, straight, undamaged, epoxy-coated or encapsulated as shown on the plans. Bars shall be threaded a minimum of 6 inches on the wall anchorage end to allow proper attachment of the bearing plate and nut. Threading may be continuous spiral deformed ribbing provided by the bar deformations (continuous threaded bars) or may be cut into a reinforcing bar. If threads are cut into a reinforcing bar, the next-larger bar number designation from that shown on the plans shall be provided at no additional cost.		Soil nail bars were epoxy coated and in conformance.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		Solid Bar Soil Nail. Bars shall conform to AASHTO M31 for Grade 75 or ASTM A 722 for Grade 150. Bars shall be threaded, continuous without splices or welds, new, straight, undamaged, epoxy-coated or encapsulated as shown on the plans. Bars shall be threaded a minimum of 6 inches on the wall anchorage end to allow proper attachment of the bearing plate and nut. Threading may be continuous spiral deformed ribbing provided by the bar deformations (continuous threaded bars) or may be cut into a reinforcing bar. If threads are cut into a reinforcing bar, the next-larger bar number designation from that shown on the plans shall be provided at no additional cost.		Epoxy coated bars were in conformance. COC's were submitted to BNSF for approval/records.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Solid Bar Soil Nail. Bars shall conform to AASHTO M31 for Grade 75 or ASTM A 722 for Grade 150. Bars shall be threaded, continuous without splices or welds, new, straight, undamaged, epoxy-coated or encapsulated as shown on the plans. Bars shall be threaded a minimum of 6 inches on the wall anchorage end to allow proper attachment of the bearing plate and nut. Threading may be continuous spiral deformed ribbing provided by the bar deformations (continuous threaded bars) or may be cut into a reinforcing bar. If threads are cut into a reinforcing bar, the next-larger bar number designation from that shown on the plans shall be provided at no additional cost.		Bar conformed to specifications.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Encapsulation. Encapsulation shall be a sheathing of either corrugated HDPE tube with a minimum 0.06-inch thickness conforming to AASHTO M252 or corrugated PVC tube with a minimum 0.04-inch thickness conforming to ASTM D1784, Class 13464-B. The level of corrosion protection shall be as shown on the plans.		Encapsulation is well documented and within conformance of the specification, and is per plan.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		Centralizer. Centralizers shall be manufactured from Schedule 40 PVC pipe or tube, or other materials not detrimental to soil nail steel or corrosion protection. Wood shall not be used. Centralizers shall be:		Schedule 40 PVC was used as centralizers.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Centralizer. Centralizers shall be manufactured from Schedule 40 PVC pipe or tube, or other materials not detrimental to soil nail steel or corrosion protection. Wood shall not be used. Centralizers shall be:		Schedule 40 PVC was used as centralizers.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Centralizer. Centralizers shall be manufactured from Schedule 40 PVC pipe or tube, or other materials not detrimental to soil nail steel or corrosion protection. Wood shall not be used. Centralizers shall be:		Schedule 40 PVC was used as centralizers.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Centralizers securely attached to the soil nail bar.		Centralizers were securely attached.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Centralizers securely attached to the soil nail bar.		Centralizers were securely attached.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Centralizers securely attached to the soil nail bar.		Securely attached to meet requirements	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Centralizers securely attached to the soil nail bar.		Centralizers are securely attached to the soil nail bar prior to installation.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Centralizers securely attached to the soil nail bar.		Centralizers were securely attached to soil nail bar.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Centralizers sized to position the soil nail bar within 1 inch of the center of the drill hole.		Centralizers brought bar to center of drill hole within tolerances.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Centralizers sized to position the soil nail bar within 1 inch of the center of the drill hole.		Centralizers are sized to best center the soil nail within 1 inch of the center of the drilled hole.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		Centralizers sized to allow tremie pipe, grout tube, or casing insertion along the full length of the drill hole.		Adequately sized centralizers to allow for grout tube insertion along full length of drilled hole.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Centralizers sized to allow tremie pipe, grout tube, or casing insertion along the full length of the drill hole.		Centralizers allowed grout tube to insert full length of hole.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Centralizers sized to allow grout to freely flow up the drill hole.		Size allows grout to freely flow up the drill hole.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil Nail Grout. The minimum compressive strength for grout should be 1,500 pounds per square inch (psi) at 3 days, and 3,000 psi at 28 days, as tested in accordance with ASTM C109. If sand is used in the grout mixture, it shall meet the requirements of subsection 703.02.		Quikcrete (sack crete) is being used to meet this requirement.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		If grout is mixed on site, all materials shall be weighed and recorded prior to mixing or incorporation into the mixer. The water/cementitious ratio and specific gravity may be used as a primary quality control of the neat cement grout mix if the Contractor can demonstrate the materials and mix design consistently produce a grout of the minimum specified strength. Neat cement grout cubes shall be molded and tested on the grout used in production soil nails and the adjacent test soil nail.		Grout is mixed on site, and the water/cementitious ratio is documented, as well as grout cubes made to demonstrate quality control.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Protection and Cleanup. During work operations, the Contractor shall take such precautions as may be necessary to prevent shotcrete overspray, drill cuttings, equipment exhaust, oil, wash water, and other materials from defacing or damaging private and public property including adjacent landscaping in accordance with subsections 107.12 and 107.25.		Contractor taking precautions to provide protection and cleanup of operations of soil nail wall activities.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		Protection and Cleanup. During work operations, the Contractor shall take such precautions as may be necessary to prevent shotcrete overspray, drill cuttings, equipment exhaust, oil, wash water, and other materials from defacing or damaging private and public property including adjacent landscaping in accordance with subsections 107.12 and 107.25.		All construction was completed in a manner to protect private and public property from damage.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Protection and Cleanup. During work operations, the Contractor shall take such precautions as may be necessary to prevent shotcrete overspray, drill cuttings, equipment exhaust, oil, wash water, and other materials from defacing or damaging private and public property including adjacent landscaping in accordance with subsections 107.12 and 107.25.		No overspray was witnessed	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Protection and Cleanup. During work operations, the Contractor shall take such precautions as may be necessary to prevent shotcrete overspray, drill cuttings, equipment exhaust, oil, wash water, and other materials from defacing or damaging private and public property including adjacent landscaping in accordance with subsections 107.12 and 107.25.		Contractor cleaned up job site after each daily operation. No overspray was witnessed during operation.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Protection and Cleanup. During work operations, the Contractor shall take such precautions as may be necessary to prevent shotcrete overspray, drill cuttings, equipment exhaust, oil, wash water, and other materials from defacing or damaging private and public property including adjacent landscaping in accordance with subsections 107.12 and 107.25.		Contractor cleaned up job site after each daily operation. No overspray was witnessed during operation.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The contractor shall furnish all equipment as necessary to handle waste water and material from operations, and clean up all waste resulting from the operations.		Necessary equipment was on site at all times.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		Bars were properly stored.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		Soil nail bars are stored on dunnage and handled in a manner to avoid damage of any type.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		They were properly handled and stored.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		Soil nail bars were properly stored and handled.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		Soil nail bars were properly stored and handled.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		During construction of the soil nail wall, excavation not associated with the soil nail wall construction shall not be performed within a horizontal distance equal to the total height of the final soil nail wall face excavation.		Excavation performed was only associated for soil nail wall construction.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		During construction of the soil nail wall, excavation not associated with the soil nail wall construction shall not be performed within a horizontal distance equal to the total height of the final soil nail wall face excavation.		Excavation performed was only associated for soil nail wall construction.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		During construction of the soil nail wall, excavation not associated with the soil nail wall construction shall not be performed within a horizontal distance equal to the total height of the final soil nail wall face excavation.		Excavation was not being performed within the "no zone" as identified in the plans.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		During construction of the soil nail wall, excavation not associated with the soil nail wall construction shall not be performed within a horizontal distance equal to the total height of the final soil nail wall face excavation.		No other excavation was performed in the area during soil nail operations.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		The height of the exposed unsupported final excavation face cut shall not exceed the vertical soil nail spacing plus the required reinforcing lap or the short-term stand-up height of the ground, whichever is less.		Height of exposed face was conformed to plans and submittals.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The height of the exposed unsupported final excavation face cut shall not exceed the vertical soil nail spacing plus the required reinforcing lap or the short-term stand-up height of the ground, whichever is less.		Excavation was completed in proper heights.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The height of the exposed unsupported final excavation face cut shall not exceed the vertical soil nail spacing plus the required reinforcing lap or the short-term stand-up height of the ground, whichever is less.		Excavation was done in proper sequence, with acceptable exposed vertical heights.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The height of the exposed unsupported final excavation face cut shall not exceed the vertical soil nail spacing plus the required reinforcing lap or the short-term stand-up height of the ground, whichever is less.		The exposed final face of each lift was the proper height.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		The height of the exposed unsupported final excavation face cut shall not exceed the vertical soil nail spacing plus the required reinforcing lap or the short-term stand-up height of the ground, whichever is less.		This was being met.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Each lift excavation shall be completed to the final wall excavation line and shotcrete applied in the same work shift, unless otherwise approved by the Engineer. Application of the shotcrete may be delayed up to 24 hours if the Contractor can demonstrate that the delay will not adversely affect the excavation face stability.		Lifts were excavated and shotcrete applied within proper timeframes.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		Each lift excavation shall be completed to the final wall excavation line and shotcrete applied in the same work shift, unless otherwise approved by the Engineer. Application of the shotcrete may be delayed up to 24 hours if the Contractor can demonstrate that the delay will not adversely affect the excavation face stability.		Final excavation of wall and shotcrete were completed within a timely manner.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Each lift excavation shall be completed to the final wall excavation line and shotcrete applied in the same work shift, unless otherwise approved by the Engineer. Application of the shotcrete may be delayed up to 24 hours if the Contractor can demonstrate that the delay will not adversely affect the excavation face stability.		Final lift excavation and shotcrete were performed within 24 hours.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The Contractor shall modify excavation procedures and soil nail wall installation procedures to prevent the loss of material from the excavation face or from behind the previously installed shotcrete lift (chimneying). This may require adjustments to the sequencing between excavation, soil nail drilling and shotcreting to shorten the time the excavation lift is unsupported, drilling and installing the soil nails through temporary berms prior to final excavation and/or installing the initial shotcrete prior to drilling the soil nails. All voids that develop behind the shotcrete shall be filled with grout at no additional cost to the Department.		Wall was excavated in alternating sections after the third lift to prevent loss of material from the face of the wall.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		The Contractor shall modify excavation procedures and soil nail wall installation procedures to prevent the loss of material from the excavation face or from behind the previously installed shotcrete lift (chimneying). This may require adjustments to the sequencing between excavation, soil nail drilling and shotcreting to shorten the time the excavation lift is unsupported, drilling and installing the soil nails through temporary berms prior to final excavation and/or installing the initial shotcrete prior to drilling the soil nails. All voids that develop behind the shotcrete shall be filled with grout at no additional cost to the Department.		After meeting, wall excavation was modified and successfully implemented.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Excavation of the next-lower lift shall not proceed until soil nail installation, initial shotcrete face placement, attachment of bearing plates and nuts, and soil nail testing have been completed and accepted per subsection 504.17 in the current lift. Soil nail grout and shotcrete shall have achieved a compressive strength of at least 1000 psi before excavation of the next underlying lift.		Excavation of next lift did not occur until current lift was completed.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Excavation of the next-lower lift shall not proceed until soil nail installation, initial shotcrete face placement, attachment of bearing plates and nuts, and soil nail testing have been completed and accepted per subsection 504.17 in the current lift. Soil nail grout and shotcrete shall have achieved a compressive strength of at least 1000 psi before excavation of the next underlying lift.		Excavation of next lift did not occur until current lift was completed.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Excavation of the next-lower lift shall not proceed until soil nail installation, initial shotcrete face placement, attachment of bearing plates and nuts, and soil nail testing have been completed and accepted per subsection 504.17 in the current lift. Soil nail grout and shotcrete shall have achieved a compressive strength of at least 1000 psi before excavation of the next underlying lift.		All work on lowest lift was completed prior to excavation of the next lift.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		Excavation of the next-lower lift shall not proceed until soil nail installation, initial shotcrete face placement, attachment of bearing plates and nuts, and soil nail testing have been completed and accepted per subsection 504.17 in the current lift. Soil nail grout and shotcrete shall have achieved a compressive strength of at least 1000 psi before excavation of the next underlying lift.		Excavation did not proceed to the next lower-lift until soil nail installation, shotcrete placement, and all soil nail testing was completed and accepted, within minimum compressive strength having been reached.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil nail length and drill hole diameter used shall be those necessary to develop the specified load capacity to satisfy the acceptance criteria, but not less than the lengths or diameters shown on the plans.		Nails were being installed according to plan.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil nail length and drill hole diameter used shall be those necessary to develop the specified load capacity to satisfy the acceptance criteria, but not less than the lengths or diameters shown on the plans.		Soil nails were installed per plan.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil nail length and drill hole diameter used shall be those necessary to develop the specified load capacity to satisfy the acceptance criteria, but not less than the lengths or diameters shown on the plans.		Soil nail were installed per plans.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were drilled according to plans.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were drilled according to plans.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were being drilled according to plan.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were drilled according to plans.	Conformance	5/19/2020 2:34:58 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes drilled for soil nail wall at locations set forth in plans, and installed at proper elevations, orientations, and with adequate minimum lengths, as denoted on plans.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were drilled according to plans.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were drilled per plan.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	2/1/2020 5:41:28 PM -07:00	Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes drilled for soil nail wall at locations set forth in plans, and installed at proper elevations, orientations, and with adequate minimum lengths, as denoted on plans.	Conformance	1/28/2020 4:00:35 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were drilled at proper locations.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	2/1/2020 5:41:28 PM -07:00	Drilling equipment and methods shall be suitable for the ground conditions and conform to the installation methods submitted by the soil nailing Contractor.		Drilled equipment and methods are sufficient and suitable for the ground conditions, and conform to methods submitted.	Conformance	1/28/2020 4:00:35 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Drilling equipment and methods shall be suitable for the ground conditions and conform to the installation methods submitted by the soil nailing Contractor.		Drilled equipment and methods are sufficient and suitable for the ground conditions, and conform to methods submitted.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Drilling equipment and methods shall be suitable for the ground conditions and conform to the installation methods submitted by the soil nailing Contractor.		No issues with drilling equipment. Rocksol was onsite to witness drilling.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		Drilling equipment and methods shall be suitable for the ground conditions and conform to the installation methods submitted by the soil nailing Contractor.		There were no issues with the drilling equipment.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Drilling equipment and methods shall be suitable for the ground conditions and conform to the installation methods submitted by the soil nailing Contractor.		there were no issues with the drilling equipment.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Drilling muds or other fluids shall not be used to removed cuttings.		No fluids or muds were used in cutting removals.	Conformance	5/19/2020 2:34:58 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Drilling muds or other fluids shall not be used to removed cuttings.		No fluids were used to remove cuttings.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be as shown on the plans.		Bars were installed according to plans.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Soil nail bars shall be as shown on the plans.		Soil nail bars are as shown on the plans.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be as shown on the plans.		Bars were installed per plan.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be as shown on the plans.		Bars were set as planned.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be as shown on the plans.		Bars were as shown on plans.	Conformance	5/19/2020 2:34:58 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Provide centralizers per Section 504.03 (e).		Centralizers provided per specifications.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	2/1/2020 5:41:28 PM - 07:00	Provide centralizers per Section 504.03 (e).		Centralizers installed as set forth within specifications.	Conformance	1/28/2020 4:00:35 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be grouted after installation of the soil nail bar and within 2 hours of completion of drilling.		Holes were grouted within 2 hours of drilling.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be grouted after installation of the soil nail bar and within 2 hours of completion of drilling.		Drill hole was grouted within acceptable timeframes.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be grouted after installation of the soil nail bar and within 2 hours of completion of drilling.		Drill hole was grouted within 2 hours of drilling.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be grouted after installation of the soil nail bar and within 2 hours of completion of drilling.		Hole was drilled and grouted within timely manner.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be grouted after installation of the soil nail bar and within 2 hours of completion of drilling.		Hoels were grouted within 2 hours of drilling.	Conformance	5/19/2020 2:34:58 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		The drill hole shall be grouted after installation of the soil nail bar and within 2 hours of completion of drilling.		grout was installed within the 2 hour time frame after drilling was complete, refer to pictures.	Conformance	6/26/2020 8:44:45 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected at lowest point of hole.	Conformance	5/19/2020 2:34:58 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout tube was being used.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected at lowest point of hole.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected at lowest point of drill hole.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected to bottom of hole with grout tubes.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected through tube to lowest point of drill hole.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected through the grout tube.	Conformance	5/25/2021 2:59:06 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected through the grout tube.	Conformance	11/9/2020 4:40:20 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The outlet end of the grout tube or casing shall be kept below the surface of the grout as the conduit is withdrawn to prevent the creation of voids.		Outlet end was kept below surface for entire grouting sequence.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be completely filled in one continuous operation. Cold joints in the grout column are not allowed except at the top of the test bond length of proof tested production soil nails.		Grout was filled in 1 operation.	Conformance	4/13/2020 1:14:04 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be completely filled in one continuous operation. Cold joints in the grout column are not allowed except at the top of the test bond length of proof tested production soil nails.		Drill hole was grouted in a continuous operation.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be completely filled in one continuous operation. Cold joints in the grout column are not allowed except at the top of the test bond length of proof tested production soil nails.		Drill hole was filled in 1 continuous operation.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be completely filled in one continuous operation. Cold joints in the grout column are not allowed except at the top of the test bond length of proof tested production soil nails.		Grouting was completed in 1 continuous operation.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be completely filled in one continuous operation. Cold joints in the grout column are not allowed except at the top of the test bond length of proof tested production soil nails.		Grouting was filled in 1 operation.	Conformance	5/19/2020 2:34:58 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Geocomposite Strip Drains. Geocomposite strip drains shall be centered between the columns of soil nails as shown on the Plans. The strip drains shall be at least 12 inches wide and placed with the geotextile side against the ground. The strips shall be secured to the excavation face and shotcrete shall be prevented from contaminating the geotextile.		Strip drains were being installed according to plans.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Geocomposite Strip Drains. Geocomposite strip drains shall be centered between the columns of soil nails as shown on the Plans. The strip drains shall be at least 12 inches wide and placed with the geotextile side against the ground. The strips shall be secured to the excavation face and shotcrete shall be prevented from contaminating the geotextile.		Strip drains were installed per plans.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		Geocomposite Strip Drains. Geocomposite strip drains shall be centered between the columns of soil nails as shown on the Plans. The strip drains shall be at least 12 inches wide and placed with the geotextile side against the ground. The strips shall be secured to the excavation face and shotcrete shall be prevented from contaminating the geotextile.		Strip drains were installed according to plans and specifications.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Geocomposite Strip Drains. Geocomposite strip drains shall be centered between the columns of soil nails as shown on the Plans. The strip drains shall be at least 12 inches wide and placed with the geotextile side against the ground. The strips shall be secured to the excavation face and shotcrete shall be prevented from contaminating the geotextile.		Geocomposite strips drains were installed and are atleast 12 inches wide.	Conformance	1/28/2020 4:00:08 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	2/1/2020 5:41:28 PM -07:00	Geocomposite Strip Drains. Geocomposite strip drains shall be centered between the columns of soil nails as shown on the Plans. The strip drains shall be at least 12 inches wide and placed with the geotextile side against the ground. The strips shall be secured to the excavation face and shotcrete shall be prevented from contaminating the geotextile.		Geocomposite strips drains were installed and are atleast 12 inches wide.	Conformance	1/28/2020 4:00:35 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	2/1/2020 5:41:28 PM -07:00	Initial Shotcrete Facing. The initial shotcrete facing shall be installed in accordance with Section 641. Membrane curing compound shall not be used. Maturity meters shall be used to monitor all shotcrete in accordance with subsection 641.05.		Initial shotcrete facing was installed adequately and per specification. Maturity meters were installed to monitor all shotcrete.	Conformance	1/28/2020 4:00:35 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Initial Shotcrete Facing. The initial shotcrete facing shall be installed in accordance with Section 641. Membrane curing compound shall not be used. Maturity meters shall be used to monitor all shotcrete in accordance with subsection 641.05.		Shotcrete facing was installed per plan.	Conformance	5/11/2020 10:50:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		Initial Shotcrete Facing. The initial shotcrete facing shall be installed in accordance with Section 641. Membrane curing compound shall not be used. Maturity meters shall be used to monitor all shotcrete in accordance with subsection 641.05.		Shotcrete facing was installed properly.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Initial Face Finish. Shotcrete finish shall be either an undisturbed gun finish as applied from the nozzle or a rod, broom, wood float, rubber float, steel trowel or rough finish as shown on the Plans.		Face finish was in conformance with specifications.	Conformance	5/11/2020 10:55:29 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Initial Face Finish. Shotcrete finish shall be either an undisturbed gun finish as applied from the nozzle or a rod, broom, wood float, rubber float, steel trowel or rough finish as shown on the Plans.		Shotcrete was applied with gun, and left with an undisturbed finish.	Conformance	3/24/2020 8:01:56 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	2/1/2020 5:41:28 PM - 07:00	Initial Face Finish. Shotcrete finish shall be either an undisturbed gun finish as applied from the nozzle or a rod, broom, wood float, rubber float, steel trowel or rough finish as shown on the Plans.		Initial face finish was applied from wood float/ rough finish, as shown on the plans.	Conformance	1/28/2020 4:00:35 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Initial Face Finish. Shotcrete finish shall be either an undisturbed gun finish as applied from the nozzle or a rod, broom, wood float, rubber float, steel trowel or rough finish as shown on the Plans.		Shotcrete finish is appropriate. Wall panels to be used as aesthetics.	Conformance	6/3/2020 12:15:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	2/1/2020 5:41:28 PM - 07:00	Attachment of Soil Nail Head Bearing Plate and Nut. Bearing plate, washers, and nut shall be attached to each soil nail head as shown on the plans. While the initial shotcrete facing is still plastic and before its initial set, the plate shall be uniformly seated on the shotcrete by hand-wrench tightening the nut. Where uniform contact between the plate and teh shotcrete cannot be provided, the plate shall be set in a bed of grout. After grout has set for 24 hours, the nut shall be hand-wrench tightened. Bearing plates and headed studs shall be located within tolerances shown on the Plans.		Audit comment being generated to document that IQC documentation denotes that the bearing plates, washers, and nuts were to be installed on another day, and not while the initial shotcrete facing was still plastic and before initial set. Is this sufficient?	Noted	2/13/2020 1:38:51 PM -07:00	Audit Comment	If the Bearing plate isn't installed in the shotcrete during the plastic state. The plate will be installed using the grout method.	Closed

The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Compaction was completed within 2% of OMC.	Conformance	6/28/2021 1:57:18 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Compaction was achieved within range for OMC.	Conformance	6/28/2021 7:57:01 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Compaction was achieved within 2% of OMC.	Conformance	7/30/2021 3:46:05 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Moisture conditioning was performed at stockpile yard.	Conformance	4/27/2021 8:29:23 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Moisture conditioning was performed uniformly.	Conformance	10/1/2020 10:37:49 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Moisture conditioning was performed during compaction, and moisture was maintained after compaction until paving operations began.	Conformance	9/16/2020 11:12:12 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each reclaimed asphalt pavement aggregate layer shall continue until a wet density of atleast 95% of the maximum wet density when determined with a one point AASHTO T 180, Method D test has been achieved.		95% compaction was achieved.	Conformance	12/1/2020 12:23:26 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Base course may have been tested with a 10 foot straightedge, however in the NW corner of the grade, a deviation was observed. When stringlined, the base elevation varied 2" over approximately 5'. This was not identified during IQC straightedge inspection.	Field Resolved	11/23/2020 4:35:33 PM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface was smooth.	Conformance	2/11/2021 1:41:42 PM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface was straightedged and any deviations were corrected prior to paving.	Conformance	11/19/2020 2:15:15 PM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface course was tested with a 10 foot straightedge.	Conformance	2/3/2021 8:09:21 AM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface of ABC was witnessed being tested with a 10' straightedge by PC.	Conformance	4/5/2021 10:30:28 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface was tested with a 10 foot straightedge.	Conformance	4/27/2021 8:30:49 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface was tested with 10 foot straightedge.	Conformance	4/27/2021 8:29:23 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface of base course was tested with a 10 foot straightedge.	Conformance	7/30/2021 3:46:05 PM -06:00	C		Closed

Forms were straight metal forms and braced properly to prevent distortion during pour.	Conformance	8/31/2021 8:36:57 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(a) Set to proper line and elevation?		all elevations matched the plans	Conformance	11/3/2020 1:26:28 PM -07:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		(a) Set to proper line and elevation?		The forms were all set to the proper line of elevation before pouring concrete.	Conformance	6/22/2020 8:57:19 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(a) Set to proper line and elevation?		Curb and gutter was set to the proper line and elevation.	Conformance	6/18/2020 6:19:40 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(a) Set to proper line and elevation?		The curb and gutter was set to the correct line and elevation.	Conformance	6/18/2020 6:17:48 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(a) Set to proper line and elevation?		the curb was set to the right line and elevation.	Conformance	6/15/2020 5:11:34 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(a) Set to proper line and elevation?		Grade appeared to be set to proper line and elevation prior to placement.	Conformance	3/11/2020 10:56:58 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(a) Set to proper line and elevation?		Proper line and elevation set	Conformance	10/1/2020 10:34:11 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Set per grade stakes?		all forms were set according to the grad stakes	Conformance	11/3/2020 1:26:28 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		(d) Correct dimensions?		Several sections were found where the forms were the Subgrade was high resulting in the depth of the curb was short short by 0.5-1". This was brought up to IQC and the issue was addressed. IQC has had on going issues with Jalisco on this item.	Field Resolved	8/25/2020 9:31:07 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(d) Correct dimensions?		The dimensions were correct throughout the forms.	Conformance	6/15/2020 5:11:05 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(d) Correct dimensions?		The curb and gutter had correct dimensions throughout the curb and gutter.	Conformance	6/18/2020 6:17:48 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(d) Correct dimensions?		The curb was set to the correct dimensions.	Conformance	6/15/2020 5:11:34 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(d) Correct dimensions?		Curb and gutter had the correct dimensions.	Conformance	6/18/2020 6:19:40 AM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		(d) Correct dimensions?		The forms of the slope paving had the correct dimensions.	Conformance	6/22/2020 8:57:19 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(d) Correct dimensions?		Dimensions were correct	Conformance	10/1/2020 10:34:11 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(d) Correct dimensions?		The dimensions were correct we measured approximately every 20 feet. At the end of the pour we checked the depth and got 6".	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		(d) Correct dimensions?		Depth and widths of curb and gutter, as well as slopes were verified on formwork with IQC and CCD.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		(d) Correct dimensions?		Confirmed that dimensions matched the CCD STD DWG 5.2 called out in the plans	Conformance	2/5/2021 3:20:04 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Lightly oiled for concrete release?		Observed that forms had been oiled prior to start of pour	Conformance	2/5/2021 3:20:04 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		(e) Lightly oiled for concrete release?		Form oil was used on forms prior to concrete placement.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(e) Lightly oiled for concrete release?		Forms were oiled	Conformance	10/1/2020 10:34:11 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Lightly oiled for concrete release?		Form were lightly oiled for the concrete release.	Conformance	6/18/2020 6:19:40 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Lightly oiled for concrete release?		Form were lightly oiled for the concrete release.	Conformance	6/18/2020 6:17:48 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Lightly oiled for concrete release?		The forms were lightly oiled for the concrete release.	Conformance	6/15/2020 5:11:04 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Lightly oiled for concrete release?		Forms were lightly oiled for the concrete release.	Conformance	6/15/2020 5:11:34 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		(e) Lightly oiled for concrete release?		Forms were oiled.	Conformance	8/25/2020 9:31:07 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(f) Correctly set for inlet sections, handicap ramps and driveways?		all forms were set properly for the ADA ramp sections. no inlets or driveways were in the section inspected.	Conformance	11/3/2020 1:26:28 PM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(f) Correctly set for inlet sections, handicap ramps and driveways?		Set correctly	Conformance	10/1/2020 10:34:11 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		(f) Correctly set for inlet sections, handicap ramps and driveways?		ADA ramp, as well as adjacent inlet, were formed to correct slopes.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(g) Correctly set to handle all drainage per plan typical section?		No drainage issues have been noted	Conformance	10/1/2020 10:34:11 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(b) Correctly placed?		Placed correctly	Conformance	10/1/2020 10:34:11 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Correctly placed?		The curb was correctly placed throughout the pour.	Conformance	6/15/2020 5:11:34 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		Curb was in sections of 10 feet with 1/8 joints.	Conformance	6/18/2020 6:17:48 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		All curb was in sections of 10 feet with a 1/8 inch wide joint.	Conformance	6/10/2020 7:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		All curb was constructed in sections of 10 feet with joints of 1/8 inch wide.	Conformance	6/10/2020 7:22:24 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		Curb was placed at proper sections. Joints will line up with PCCP.	Conformance	7/1/2020 5:01:03 PM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		Joints for this slope protection matched the plans and specs. 10'	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		The curb had joints every 10 feet throughout the curb length.	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		Joints were constructed in concrete at a maximum of 10 feet.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		Joints were cut at appropriate lengths.	Conformance	2/27/2020 6:47:20 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		Curbs were jointed every 10 feet.	Conformance	12/1/2020 12:25:57 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Sections. Curb shall be constructed in sections having a uniform length of 10 feet, unless otherwise ordered. Sections shall be separated by open joints 1/8 inch wide except at expansion joint.		Curb was jointed at 10 foot intervals.	Conformance	7/23/2021 3:05:50 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Expansion joints. Expansion joints shall be formed at the intervals shown on the plans using 1/2 inch preformed expansion joint filler. When the curb is constructed adjacent to or on concrete pavement, expansion joints shall be located opposite the expansion joints in the pavement.		Approved expansion joint material was placed in correct locations, including inlets and at intervals specified in CCD standards.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Expansion joints shall be installed between concrete curb and any fixed structure or bridge. Expansion joint material shall extend the full depth of contact surface.		Expansion joints extended the full depth	Conformance	7/1/2020 5:01:03 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Expansion joints shall be installed between concrete curb and any fixed structure or bridge. Expansion joint material shall extend the full depth of contact surface.		Expansion joints were installed for each inlet structure in the C&G paved as seen in the picture	Conformance	2/5/2021 3:20:04 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Expansion material the correct type and placed where required?		The expansion material was the correct type.	Conformance	6/15/2020 5:11:05 PM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		(b) Expansion material the correct type and placed where required?		Expansion was placed between the concrete gutter and slope protection	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		(d) Types and locations match joints in adjacent concrete?		Joints in the concrete gutter matched the slope protection.	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Slope Paving	Roadway		Mixing and Placing. Concrete shall be proportioned, mixed and placed in accordance with the requirements for the class of concrete specified. Compaction of concrete curb, gutters, or combination curb and gutter, placed in forms shall have thorough consolidation which shall be achieved by tamping and spading, vibrating, or other acceptable methods. Forms shall be left in place until the concrete has set sufficiently that they can be removed without injury to the curb. Upon removal of the forms, the exposed curb face shall be immediately finished to a uniform surface. For the purpose of matching adjacent concrete finishes or for other reasons, the Engineer shall approve methods for finishing. Plastering will not be permitted.		Fiber was added to mix in lieu of WW mesh per plan. PC/IQC was on site to test and approve mix.	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Mixing and Placing. Concrete shall be proportioned, mixed and placed in accordance with the requirements for the class of concrete specified. Compaction of concrete curb, gutters, or combination curb and gutter, placed in forms shall have thorough consolidation which shall be achieved by tamping and spading, vibrating, or other acceptable methods. Forms shall be left in place until the concrete has set sufficiently that they can be removed without injury to the curb. Upon removal of the forms, the exposed curb face shall be immediately finished to a uniform surface. For the purpose of matching adjacent concrete finishes or for other reasons, the Engineer shall approve methods for finishing. Plastering will not be permitted.		Conformance	Conformance	8/25/2020 9:31:07 AM -06:00	C		Closed

Concrete was mixed and placed in accordance with specifications.	Conformance	7/23/2021 3:05:50 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Mixing and Placing. Concrete shall be proportioned, mixed and placed in accordance with the requirements for the class of concrete specified. Compaction of concrete curb, gutters, or combination curb and gutter, placed in forms shall have thorough consolidation which shall be achieved by tamping and spading, vibrating, or other acceptable methods. Forms shall be left in place until the concrete has set sufficiently that they can be removed without injury to the curb. Upon removal of the forms, the exposed curb face shall be immediately finished to a uniform surface. For the purpose of matching adjacent concrete finishes or for other reasons, the Engineer shall approve methods for finishing. Plastering will not be permitted.		Concrete was mixed, tested, and placed in accordance with specifications.	Conformance	8/31/2021 8:36:57 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(a) Approved mix design?		prior to placement IQC verified that the correct mix design was used	Conformance	11/3/2020 1:26:28 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		(a) Approved mix design?		Mix design was approved through Aconex.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		(a) Approved mix design?		Approved mix was used.	Conformance	2/27/2020 6:47:20 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Test requirements met?		PC and/or IQC achieved passing unit weight and air content tests on mix.	Conformance	2/27/2020 6:47:20 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		(b) Test requirements met?		IQC and PC tested concrete, both tests met minimum and maximum range for air content. IQC performed a slump test with results within acceptable range.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Test requirements met?		Concrete was tested by IQC and PC they had passing results.	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Test requirements met?		both PC and IQC's test results were within the standards.	Conformance	11/3/2020 1:26:28 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Test requirements met?		IQC and PC met the correct test requirements.	Conformance	6/15/2020 5:11:04 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Test requirements met?		IQC and PC met the correct test requirements.	Conformance	6/15/2020 5:11:34 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Test requirements met?		IQC and PC met the correct test requirements.	Conformance	6/18/2020 6:19:40 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Test requirements met?		IQC and PC met the correct test requirements.	Conformance	6/10/2020 7:22:24 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(b) Test requirements met?		IQC and PC met the correct test requirements.	Conformance	6/10/2020 7:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		(b) Test requirements met?		IQC and PC met the correct test requirements.	Conformance	6/22/2020 8:57:19 AM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		(e) Finish accomplished without use of water?		When finishing the pour there was no water used.	Conformance	6/22/2020 8:57:19 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Finish accomplished without use of water?		There was no water used throughout the pour.	Conformance	6/10/2020 7:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Finish accomplished without use of water?		When finished there was no water sprayed on the concrete.	Conformance	6/10/2020 7:22:24 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Finish accomplished without use of water?		No water was witnessed during finishing	Conformance	1/20/2021 6:16:18 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Finish accomplished without use of water?		There was no water added when finishing the pour.	Conformance	6/15/2020 5:11:04 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Finish accomplished without use of water?		This inspector witnessed PC add additional water to the concrete mix (via remixing in the concrete truck). This was discussed with IQC (J. Green via text message) and PC (Devon). Devon rejected the truck prior to discharge into the forms.	Field Resolved	7/1/2020 5:01:03 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Flatwork	Roadway		(e) Finish accomplished without use of water?		Spoke with IQC since the Jalisco crew was blessing the concrete with water from a curing can. The crew did not have an atomizer tip to create a fog. IQC has had on going issues with Jalisco on blessing the concrete and continually has to remind them.	Field Resolved	8/25/2020 9:31:07 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Flatwork	Roadway		(e) Finish accomplished without use of water?		Water was not used to finish concrete. Finishing aid was used minimally to finish concrete.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		(g) Cold weather protection necessary?		Tarps were used to cover concrete and insulate work from night temperatures.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curb was sprayed evenly with curing compound upon finishing of concrete.	Conformance	11/27/2019 9:26:35 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curing compound was applied after curb was finished.	Conformance	2/27/2020 6:47:20 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		After the concrete was poured the concrete was moistened and cured with the membrane forming curing compounded.	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curing compound applied	Conformance	8/25/2020 9:31:07 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curing began immediately after finishing	Conformance	1/21/2021 12:46:19 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Cure was applied immediately after finishing.	Conformance	7/1/2020 5:01:03 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curb and gutter was moistened and kept moist for three days after completion.	Conformance	6/18/2020 6:17:48 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curing began immediately after finishing	Conformance	1/20/2021 6:16:18 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curb and gutter was cured with a membrane curing compound.	Conformance	8/31/2021 8:36:57 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curing compound was applied directly after finishing.	Conformance	7/23/2021 3:05:50 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Cure was applied immediately after finishing.	Conformance	12/1/2020 12:25:57 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Cast-in-Place Concrete Curb. All required hand finishing shall be performed in conformance with subsection 610.12(a).		Hand finishing was in conformance.	Conformance	7/1/2020 5:01:03 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Cast-in-Place Concrete Curb. All required hand finishing shall be performed in conformance with subsection 610.12(a).		all hand finishing was in conformance with section 610.12 (a)	Conformance	11/3/2020 1:26:28 PM -07:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		(f) Curing compound approved by Engineer, an approved type, applied at appropriate time and rate?		clear cure compound was used.	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		(f) Curing compound approved by Engineer, an approved type, applied at appropriate time and rate?		After the concrete was finished being poured it was cured with the correct curing compound.	Conformance	6/10/2020 7:22:24 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(f) Curing compound approved by Engineer, an approved type, applied at appropriate time and rate?		The curing compound was approved by the engineer at the appropriate time and rate.	Conformance	6/10/2020 7:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(f) Curing compound approved by Engineer, an approved type, applied at appropriate time and rate?		The correct curing compound was used at the right tie and rate.	Conformance	6/18/2020 6:17:48 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(f) Curing compound approved by Engineer, an approved type, applied at appropriate time and rate?		The correct curing compound was used at the right time and rate.	Conformance	6/18/2020 6:19:40 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(f) Curing compound approved by Engineer, an approved type, applied at appropriate time and rate?		The curing compound was approved by the engineer.	Conformance	6/15/2020 5:11:04 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(f) Curing compound approved by Engineer, an approved type, applied at appropriate time and rate?		The correct curing compound was used at the correct time and rate.	Conformance	6/15/2020 5:11:34 PM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		(f) Curing compound approved by Engineer, an approved type, applied at appropriate time and rate?		The curing compound was approved by the engineer with the appropriate time and rate.	Conformance	6/22/2020 8:57:19 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(d) Electronic controls set per grade line?		Controls were set per grade line.	Conformance	2/27/2020 6:47:20 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Pan constructed to spill or catch per typical section?		Pan was constructed as catch, per plans.	Conformance	2/27/2020 6:47:20 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Pan constructed to spill or catch per typical section?		The curb and gutter was built per plan.	Conformance	6/10/2020 7:22:57 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Pan constructed to spill or catch per typical section?		All curb was catch throughout the curb section.	Conformance	6/10/2020 7:22:24 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(g) Extruded sections meet plan typical?		The extruded sections met the plan throughout the curb and gutter.	Conformance	6/10/2020 7:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(g) Extruded sections meet plan typical?		The extruded was built per plan.	Conformance	6/10/2020 7:22:24 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(g) Extruded sections meet plan typical?		Extruded section met typical curb section.	Conformance	2/27/2020 6:47:20 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Surface Tolerance. The Engineer may determine that the exposed surfaces of the concrete curb, gutters, or combination curb and gutter shall be tested with a 10 foot straightedge laid along the exposed surfaces in a longitudinal direction. The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surfaces shall be measured in a longitudinal direction. Deviation of any exposed surfaces in excess of that specified shall be corrected at the Contractor's expense.		After the concrete was done being poured and it was test by a 10 foot straightedge laid along the exposed surface in a longitudinal direction.	Conformance	6/10/2020 7:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Surface Tolerance. The Engineer may determine that the exposed surfaces of the concrete curb, gutters, or combination curb and gutter shall be tested with a 10 foot straightedge laid along the exposed surfaces in a longitudinal direction. The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surfaces shall be measured in a longitudinal direction. Deviation of any exposed surfaces in excess of that specified shall be corrected at the Contractor's expense.		All curb and gutter was tested with a 10 foot straightedge laid along side the curb and gutter longitudinal direction.	Conformance	6/10/2020 7:22:24 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		This work consists of the construction of bituminous or concrete sidewalks, bikeways, and curb ramps in accordance with these specifications and in conformity with the lines and grades shown on the plans or established.		The dimensions of the placement matched the lines and grades on the plans.	Conformance	5/26/2020 1:58:12 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		This work consists of the construction of bituminous or concrete sidewalks, bikeways, and curb ramps in accordance with these specifications and in conformity with the lines and grades shown on the plans or established.		main concern with the sidewalk on the flared ends at Filmore was to be in accordance with ADA standards, these standards were met.	Conformance	7/14/2020 8:39:09 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete for sidewalks, bikeways, and curb ramps shall be Class B, and meet the requirements of Section 601.		Concrete was approved B/D/P Mix design.	Conformance	7/27/2021 3:02:41 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Concrete for sidewalks, bikeways, and curb ramps shall be Class B, and meet the requirements of Section 601.		Class B concrete used and verified with the batch ticket.	Conformance	5/26/2020 1:58:12 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Concrete for sidewalks, bikeways, and curb ramps shall be Class B, and meet the requirements of Section 601.		Class BD concrete mix design 945662MF was used for the sidewalk.	Conformance	1/14/2021 9:55:07 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Concrete and bituminous mixes will be subject to inspection and tests as required to assure compliance with quality requirements.		the first three trucks were tested by PC with the first truck being tested by IQC. then a random every 50 yards for PC.	Conformance	1/14/2021 9:55:07 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Excavation shall be made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation shall be shaped and compacted to a firm even surface conforming to the section shown on the plans or as staked. When the Engineer determines that material is uncompactable, the material shall be removed and replaced in accordance with subsection 206.03.		Excavation and surface preparation were in conformance with specifications.	Conformance	7/27/2021 3:02:41 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Slope Paving	Roadway		Excavation shall be made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation shall be shaped and compacted to a firm even surface conforming to the section shown on the plans or as staked. When the Engineer determines that material is uncompactable, the material shall be removed and replaced in accordance with subsection 206.03.		Excavation was in conformance.	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Excavation shall be made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation shall be shaped and compacted to a firm even surface conforming to the section shown on the plans or as staked. When the Engineer determines that material is uncompactable, the material shall be removed and replaced in accordance with subsection 206.03.		Conformance	Conformance	1/21/2021 12:46:45 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Excavation shall be made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation shall be shaped and compacted to a firm even surface conforming to the section shown on the plans or as staked. When the Engineer determines that material is uncompactable, the material shall be removed and replaced in accordance with subsection 206.03.		Excavation was made to grade and width necessary for sidewalk construction.	Conformance	2/11/2021 3:38:11 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Excavation shall be made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation shall be shaped and compacted to a firm even surface conforming to the section shown on the plans or as staked. When the Engineer determines that material is uncompactable, the material shall be removed and replaced in accordance with subsection 206.03.		Area for driveways were excavated and embanked according to the 203 specification. Class 6 material was placed according to CCD Specifications.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		Subgrade graded and compacted properly?		Subgrade was graded and compacted. IQC achieved a passing density test on subgrade.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Subgrade graded and compacted properly?		Conformance	Conformance	1/21/2021 12:46:45 PM -07:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		Subgrade graded and compacted properly?		IQC was onsite to inspect pour prior to concrete. Compaction was inspected via probe rod.	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Subgrade graded and compacted properly?		Subgrade graded and compacted properly	Conformance	3/15/2021 1:21:25 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Soft spots identified and corrected?		No soft spots were identified	Conformance	1/21/2021 12:46:45 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Soft spots identified and corrected?		No soft spots were identified.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Cross-slope, elevation, and alignment correct?		Cross slope and alignment of sidewalk was verified by field superintendent and IQC.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Cross-slope, elevation, and alignment correct?		The cross-slope, elevation and the alignment meet the correct requirement. We measured with a 4 foot smart level and it came out to 1.3% the minimum is 1.5% with a 2.0% max but its allowed with the ADA compliance.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		Cross-slope, elevation, and alignment correct?		Conformance	Conformance	1/21/2021 12:46:45 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Ground conditions suitable?		conformance	Conformance	1/21/2021 12:46:45 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Ground conditions suitable?		The sidewalk was placed on a bridge deck.	Conformance	5/26/2020 1:58:12 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Ground conditions suitable?		Ground conditions were suitable for concrete placement.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Ground conditions suitable?		Ground conditions good. Not frozen, not soft spots seen, and not deformation	Conformance	3/15/2021 1:21:25 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		Both metal and wood forms used, extended the full depth of the concrete and braced properly so no warping	Conformance	3/15/2021 1:21:25 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		All forms were full depth of concrete, straight /unwarped, and made of metal and wood	Conformance	3/12/2021 1:17:37 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		Metal forms were used.	Conformance	5/25/2021 2:57:28 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		wood forms were used. there was no deformations of the forms during or after the pour.	Conformance	1/14/2021 9:55:07 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		Straight metal and wood forms were used.	Conformance	4/5/2021 10:35:19 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		Full depth wooden forms were used and were free of warping and braced properly	Conformance	2/26/2021 12:57:16 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		Wood and metal forms were used. Wood was not warped, and metal forms were in working condition. Adequate bracing was used to prevent forms from bowing or shifting under concrete placement.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		The contractor used wood forms to the full depth of the concrete.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		Metal and wood forms were used. Forms were straight and braced properly.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		The forms were wood and not warped. The form bracing was adequate to ensure there was no form displacement during the placement and the dimensions were maintained.	Conformance	5/26/2020 1:58:12 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		Forms were made from either unwarped suitable wood, or metal.	Conformance	7/27/2021 3:02:41 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Set to proper line and elevation?		Forms were set to proper line and elevation.	Conformance	2/11/2021 3:38:11 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Set to proper line and elevation?		The forms were set to the proper line and elevation before concrete was poured.	Conformance	1/20/2021 6:17:08 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Set to proper line and elevation?		Form were set to the proper line and elevation before concrete was poured.	Conformance	6/18/2020 6:19:07 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Set to proper line and elevation?		The sidewalk was set to the proper elevation.	Conformance	6/15/2020 5:12:05 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Set per grade stakes?		Forms were set per grade stakes and survey.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Correct dimensions?		The dimensions were all correct through out the flatwork. Measured approximately every 20 feet the width was 5 feet. At the end of the pour the depth was 6".	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Correct dimensions?		The sidewalk had correct dimensions throughout the pour.	Conformance	6/15/2020 5:12:05 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Correct dimensions?		Forms were correct dimensions.	Conformance	2/11/2021 3:38:11 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Correct dimensions?		prior to the pour all dimensions were checked by IQC and verified by myself to match with what was shown on the plans.	Conformance	1/14/2021 9:55:07 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Lightly oiled for concrete release?		Forms were oiled for release.	Conformance	2/11/2021 3:38:11 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Lightly oiled for concrete release?		Form were lightly oiled for the concrete release.	Conformance	6/15/2020 5:12:05 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Lightly oiled for concrete release?		Forms were lightly oiled before concrete was poured.	Conformance	6/18/2020 6:19:07 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Lightly oiled for concrete release?		The forms were lightly oiled for the concrete released.	Conformance	1/20/2021 6:17:08 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Lightly oiled for concrete release?		Forms were oiled prior to placement.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Correctly set for inlet sections, handicap ramps and driveways?		The inlets sections were set correctly also the handicap ramps and driveways were set correctly.	Conformance	1/20/2021 6:17:08 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Correctly set to handle all drainage per plan typical section?		Sidewalk was sloped to prevent water from pooling on surface.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Is the reinforcing correctly placed if required?		All of the rebar was in accordance with the plans and epoxy coated.	Conformance	5/26/2020 1:58:12 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Is the reinforcing correctly placed if required?		all reinforcements matched the plans and were in the correct locations with correct spacings.	Conformance	1/14/2021 9:55:07 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		Placing Concrete. The foundation shall be thoroughly moistened immediately prior to the placing of concrete. The proportioning, mixing and placing of the concrete shall be in accordance with the requirements for the class of concrete specified.		All forms were moistened before concrete was poured into forms.	Conformance	6/18/2020 6:19:07 AM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		Placing Concrete. The foundation shall be thoroughly moistened immediately prior to the placing of concrete. The proportioning, mixing and placing of the concrete shall be in accordance with the requirements for the class of concrete specified.		subgrade material was moistened by crew prior to concrete.	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Placing Concrete. The foundation shall be thoroughly moistened immediately prior to the placing of concrete. The proportioning, mixing and placing of the concrete shall be in accordance with the requirements for the class of concrete specified.		Concrete and surface were prepared and placed in conformance with specifications.	Conformance	7/27/2021 3:02:41 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Placing Concrete. The foundation shall be thoroughly moistened immediately prior to the placing of concrete. The proportioning, mixing and placing of the concrete shall be in accordance with the requirements for the class of concrete specified.		Subgrade was moistened prior to placement. Concrete was mixed and placed in accordance with mix design.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Approved mix design?		Mix design used was approved by IQC.	Conformance	4/5/2021 10:35:19 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Test requirements met?		Concrete passed PC and IQC testing procedures.	Conformance	4/5/2021 10:35:19 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Test requirements met?		PC and IQC tested concrete, both tests were within acceptable range for air content. IQC also casted test cylinders.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Test requirements met?		Concrete was tested by IQC and PC and feel within range.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		Test requirements met?		IQC and PC achieved passing tests on the concrete mix. PC cast cylinders to determine strength.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Test requirements met?		after PC's test failed on air %, 2 ounces of air was added, bringing the air % to 5.4% for PC's test and IQC acceptance test.	Conformance	7/14/2020 8:39:09 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Test requirements met?		IQC and PC met the correct test requirements.	Conformance	6/18/2020 6:19:07 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Test requirements met?		IQC and PC met the correct test requirements.	Conformance	6/15/2020 5:12:05 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Test requirements met?		IQC and PC met the correct test requirements.	Conformance	1/20/2021 6:17:08 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Properly consolidated?		Vibrator was used to consolidate concrete.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Properly consolidated?		needle vibrators were used during the placement to consolidate the concrete.	Conformance	1/14/2021 9:55:07 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		a magnesium bull float was used for finishing the concrete. shortly after a broom was used to give the sidewalk its broom finish.	Conformance	1/14/2021 9:55:07 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		Surface was finished properly.	Conformance	4/5/2021 10:35:19 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		A float was used and concrete received a broom finish.	Conformance	5/25/2021 2:57:28 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		Contractor used a wooden float and hand finishing according to 601.12	Conformance	3/12/2021 1:17:37 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		Concrete was given a proper finish.	Conformance	2/27/2020 6:45:41 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		The concrete surface was finished with the correct finishing tools.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		Concrete was floated with wood and then magnesium floats, and a transverse broom finish was applied to surface.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		The sidewalk was floated with a magnesium float and was give a transverse broom finish in accordance with this specification.	Conformance	5/26/2020 1:58:12 PM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		Floating and broom finish was in conformance.	Conformance	10/5/2020 7:02:46 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		Concrete was properly finished.	Conformance	7/27/2021 3:02:41 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Finishing. The surface shall be floated with a wooden or magnesium float and given a transverse broom finish. Plastering of the surface will not be permitted. All required hand finishing shall be performed in conformance with subsection 601.12(a).		Proper finishes were applied to surface.	Conformance	2/11/2021 3:38:11 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		All outside edges of the slab and all joints shall be edged with a 1/4 inch radius edging tool.		Edges were tooled with appropriate radius tool.	Conformance	7/27/2021 3:02:41 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		All outside edges of the slab and all joints shall be edged with a 1/4 inch radius edging tool.		everywhere that required a 1/4" edge was performed and done correctly during the finishing process.	Conformance	7/14/2020 8:39:09 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		All outside edges of the slab and all joints shall be edged with a 1/4 inch radius edging tool.		All outside edges of the concrete were edged with a 1/4 inch radius edging tool.	Conformance	6/18/2020 6:19:07 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		All outside edges of the slab and all joints shall be edged with a 1/4 inch radius edging tool.		All edges and joints were edged with tool.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		All outside edges of the slab and all joints shall be edged with a 1/4 inch radius edging tool.		The outside edges were edged with the correct edging tool.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		All outside edges of the slab and all joints shall be edged with a 1/4 inch radius edging tool.		the correct radius edging tool was used for all joints that were marked out at 5', along with all edges of the sidewalk.	Conformance	1/14/2021 9:55:07 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Finish accomplished without use of water?		There was no water sprayed on the concrete throughout the pour.	Conformance	6/18/2020 6:19:07 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Finish accomplished without use of water?		There was no water added when finishing the pour.	Conformance	6/15/2020 5:12:05 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Finish accomplished without use of water?		There was no water added to finish the concrete.	Conformance	1/20/2021 6:17:08 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Acceptable finish achieved?		Acceptable finish was achieved.	Conformance	11/27/2019 9:26:08 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Edged where required?		The appropriate edging was provided.	Conformance	5/26/2020 1:58:12 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Joints. Expansion joints, at intervals of not more than 500 feet, shall be filled with 1/2 inch thick full depth, preformed expansion joint filler. The sidewalk or bikeway shall be divided into sections by dummy joints formed by a jointing tool or other acceptable means as directed. These dummy joints shall extend into the concrete for at least 1/4 of the depth and shall be approximately 1/8 inch wide. Dummy joints shall be spaced at intervals approximately equal to the width of the sidewalk or bikeway.		The joints were set every 250 feet with a 1/2 thick depth.	Conformance	1/20/2021 6:17:08 PM -07:00	C		Closed

Central 70	C 0704-241	Flatwork	Roadway		Curing. Immediately upon completion of the finishing, sidewalks and bikeways shall be moistened and kept moist for three days, or they shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Curing compound was sprayed on immediately upon finishing the pour	Conformance	3/12/2021 1:17:37 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Curing. Immediately upon completion of the finishing, sidewalks and bikeways shall be moistened and kept moist for three days, or they shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		After pouring and hand finishing the sidewalk. Curing compound was used along with the membrane cover.	Conformance	4/13/2020 6:43:04 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		During the curing period all traffic, both pedestrian and vehicular, shall be excluded. Vehicular traffic shall be excluded for such additional time as the Engineer may direct.		All work was protected at the end of the day from Clayton bridge towards CCD building	Conformance	3/12/2021 1:17:37 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		During the curing period all traffic, both pedestrian and vehicular, shall be excluded. Vehicular traffic shall be excluded for such additional time as the Engineer may direct.		All traffic kept off of the concrete during curing period	Conformance	3/15/2021 1:21:25 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		During the curing period all traffic, both pedestrian and vehicular, shall be excluded. Vehicular traffic shall be excluded for such additional time as the Engineer may direct.		Traffic was not permitted during curing.	Conformance	5/25/2021 2:57:28 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		During the curing period all traffic, both pedestrian and vehicular, shall be excluded. Vehicular traffic shall be excluded for such additional time as the Engineer may direct.		All traffic, pedestrian/otherwise, was prevented from using this section of sidewalk during curing process	Conformance	2/26/2021 12:57:16 PM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing compound an approved type, applied at appropriate time and rate?		The curing compound was the approved type and applied a the correct time and rate.	Conformance	6/15/2020 5:12:05 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		Curing compound an approved type, applied at appropriate time and rate?		The curing compound was the correct type and applied at the appropriate time and rate.	Conformance	1/20/2021 6:17:08 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM -06:00	This works consists of constructing pneumatically applied concrete onto designated surfaces at locations and thicknesses with lines and dimensions shown on the plans or as designated by the Engineer.		The shotcrete was applied to the 1st lift from Clayton Bridge along the East Bookend and the Fillmore to Fire Protected room wall cap (Sta 22+00 to Sta 23+00).	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		This works consists of constructing pneumatically applied concrete onto designated surfaces at locations and thicknesses with lines and dimensions shown on the plans or as designated by the Engineer.		Work consisted of applying shotcrete at designated location for wall cap portion of 302-W2 (East of Monroe).	Conformance	3/2/2020 9:56:07 AM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	1/2/2020 9:47:42 AM -07:00	This works consists of constructing pneumatically applied concrete onto designated surfaces at locations and thicknesses with lines and dimensions shown on the plans or as designated by the Engineer.		Thorcon has been installing a nail to ensure the clear cover is shot to 2in over the last bar. The placement of the nail will depend on the total depth of the bay and not from the last bar. Most of the shotcrete placed at the cover abutment 3 will be a minimum required depth of 8 inches. I talked to Alex Chapman (Kiewit IQC) about the concern.	Noted	2/13/2020 1:40:11 PM -07:00	Audit Comment	This is a means and methods for Thorcon. Inspection to meet the requirements is being conducted by their process control and witnessed by IQC on site. If the clear cover required is not met and witnessed during inspection, a non-conformance will need to be issued.	Closed

Central 70	C 0704-241	Shotcrete	Walls		General. Shotcrete shall be applied at the locations and to the thicknesses shown on the plans. The thickness of shotcrete shall not be less than the dimensions shown on the plans.		The shotcrete was applied at the locations and the thicknesses show on the plans.	Conformance	3/9/2021 1:19:44 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		General. Shotcrete shall be applied at the locations and to the thicknesses shown on the plans. The thickness of shotcrete shall not be less than the dimensions shown on the plans.		Concrete was applied at the proper locations and to the proper minimum thickness	Conformance	7/23/2021 3:07:15 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		The shotcrete applied consisted of a dense and uniform mixture without rebound, inclusions, segregation or discernable weakness of bond.	Conformance	3/9/2021 1:19:44 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		during the operation there was no excess rebound, along with no segregation or weakness of the bond.	Conformance	6/26/2020 8:44:45 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		Shotcrete had little to now rebound. did not show any signs of segregation, of weakness of the bond.	Conformance	6/3/2020 7:42:04 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	1/2/2020 9:47:42 AM - 07:00	Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		During the application, the mix was uniform throughout placement and free of any discernable weakness.	Conformance	1/2/2020 9:41:42 AM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		The mix was uniform and was free of rebound, inclusions and segregation.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	For rock and soil cuts, surfaces shall be prepared to the line and grade shown on the plans. The Contractor shall provide documentation, including survey data, to show that the excavated face conforms to the plans so that the minimum thickness is achieved. If the Engineer determines that irregularities are excessive, additional reinforcing may be required. All costs associated with additional shotcrete required to bring an over excavated cut to the proper line and grade shall be borne by the Contractor.		The soil cuts were not done to the proper depth from center line of the drilled shaft. The shotcrete should be 3" deep on each side of the center line of each shaft. From pictures, the shotcrete was placed to the appropriate depth but not to the appropriate location on the radius of the drilled shaft. Reference detail "Interior Panel (W<6") on plan sheet WS208. Please reference pictures.	This is addressed in RFC 398	4/20/2020 11:46:58 AM -06:00	Audit Comment	A design change through WSP to change the 3 inch minimum. The drilled shaft orientation doesn't allow the 3' minimum. Discussions have taken place with WSP.	Closed
Central 70	C 0704-241	Shotcrete	Walls	1/2/2020 9:47:42 AM - 07:00	For rock and soil cuts, surfaces shall be prepared to the line and grade shown on the plans. The Contractor shall provide documentation, including survey data, to show that the excavated face conforms to the plans so that the minimum thickness is achieved. If the Engineer determines that irregularities are excessive, additional reinforcing may be required. All costs associated with additional shotcrete required to bring an over excavated cut to the proper line and grade shall be borne by the Contractor.		Reference comment #1. Abutment #3 bays #9 to #52 were shot. Bays #9 to #67 were ready at time of placement.	Conformance	1/2/2020 9:41:42 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	1/2/2020 9:47:42 AM - 07:00	The Contractor shall fill all voids, holes or pits created during the excavation process. Where additional shotcrete is in excess of the plan thickness is required to make the final shotcrete face conform to the plans, the Contractor shall provide a plan and method statement for applying the additional shotcrete. The work shall not proceed until the proposed plan and methods have been reviewed and approved by the Engineer.		The crew used stay-form to support the soil. This minimized the sloughing of the soil which made it easier to maintain a consistent depth of shotcrete. Any areas that exceeded the plan depth were shot with shotcrete. This issue was resolved in a previous NCR disposition.	Conformance	1/2/2020 9:41:42 AM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	The Contractor shall fill all voids, holes or pits created during the excavation process. Where additional shotcrete is in excess of the plan thickness is required to make the final shotcrete face conform to the plans, the Contractor shall provide a plan and method statement for applying the additional shotcrete. The work shall not proceed until the proposed plan and methods have been reviewed and approved by the Engineer.		All holes and pits were filled to allow for the proper depth to be shot and minimal excess shotcrete to be applied.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	A light application of water may be used to clean the surface of all dry soil or rock surfaces prior to application of the shotcrete.		No water was used while cleaning the concrete surfaces before application.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	Shotcrete shall not be applied to frozen surfaces. De-icing compounds shall not be used to thaw ice, snow, or frost.		None of the shotcrete surfaces were frozen before the application.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	1/2/2020 9:47:42 AM - 07:00	Shotcrete shall not be applied to frozen surfaces. De-icing compounds shall not be used to thaw ice, snow, or frost.		All surfaces were unfrozen.	Conformance	1/2/2020 9:41:42 AM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Shotcrete shall not be applied to frozen surfaces. De-icing compounds shall not be used to thaw ice, snow, or frost.		The shotcrete was not applied to a frozen surface.	Conformance	3/9/2021 1:19:44 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Shotcrete shall not be applied to frozen surfaces. De-icing compounds shall not be used to thaw ice, snow, or frost.		Shotcrete was no applied to frozen surfaces	Conformance	7/23/2021 3:07:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	1/2/2020 9:47:42 AM - 07:00	Before patching concrete structures, loose material shall be removed, and surfaces shall be dampened to a saturated surface dry condition. Prior to the placement of new shotcrete, the Contractor shall sandblast exposed reinforcing steel clean.		An air compressor was used to remove all loose material.	Conformance	1/2/2020 9:41:42 AM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	Before patching concrete structures, loose material shall be removed, and surfaces shall be dampened to a saturated surface dry condition. Prior to the placement of new shotcrete, the Contractor shall sandblast exposed reinforcing steel clean.		The loose dirt was removed with wire brushes before the application.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Before patching concrete structures, loose material shall be removed, and surfaces shall be dampened to a saturated surface dry condition. Prior to the placement of new shotcrete, the Contractor shall sandblast exposed reinforcing steel clean.		all loose materials were clean away from where the shotcrete was being placed, the conditions were not dry so no wetting of the surface was needed.	Conformance	6/26/2020 8:44:45 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	Rebound shall be removed and disposed of by the Contractor. Rebound shall not be worked back into the surface, and shall not be salvaged and included in later batches.		There was only one bay that included rebar in the placement areas All of the other areas had no reinforcement steel so rebound was minimized.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	1/2/2020 9:47:42 AM - 07:00	Rebound shall be removed and disposed of by the Contractor. Rebound shall not be worked back into the surface, and shall not be salvaged and included in later batches.		The rebound was removed from the placement area and disguard. Since this was the last lift of shotcrete, the drainage board extends past the bottom lift and will terminate behind the wall panel. The left over concrete on the drainage board extension was removed before it could harden.	Conformance	1/2/2020 9:41:42 AM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	1/2/2020 9:47:42 AM - 07:00	Weep holes and the drainage system shall be installed as shown on the plans.		The drainage board was installed to manufacturer recommendations.	Conformance	1/2/2020 9:41:42 AM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	Weep holes and the drainage system shall be installed as shown on the plans.		The width between the drilled shafts was small so no drain board was installed.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Weep holes and the drainage system shall be installed as shown on the plans.		Geocomposite Strip Drain material was used as per plan.	Conformance	6/3/2020 7:42:04 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	When multiple layers of shotcrete are to be applied, each layer of shotcrete shall be cleaned. If curing compound is used the curing compound shall be removed by sandblasting or a method approved by the Engineer.		There was only one layer of shotcrete that was applied for the first lift. No curing compound was used.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		When multiple layers of shotcrete are to be applied, each layer of shotcrete shall be cleaned. If curing compound is used the curing compound shall be removed by sandblasting or a method approved by the Engineer.		See attached email chain for contractors means and methods regarding placement of multiple layers of shotcrete, and ensuring that the necessary concrete cover on the front face of wall cap is being achieved.	Field Resolved.	3/2/2020 11:00:17 AM -07:00	Audit Comment		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	Does the shotcrete have deficiencies such as segregation, honeycombing, delamination, or excessive cracking?		No segregation or honeycombing was observed. As mentioned in Comment #5, the planned back face of the wall was not met. So the shotcrete placement did not create the curve around the side radius as the detail shows. Further observation will take place to ensure delamination does not take place.	This is addressed in RFC 398	4/20/2020 11:47:19 AM -06:00	Audit Comment	A design change is being submitted to change the 3' minimum. Phil and WSP are in discussions to release a FDC for the field conditions.	Closed
Central 70	C 0704-241	Shotcrete	Walls		Does the shotcrete have deficiencies such as segregation, honeycombing, delamination, or excessive cracking?		No segregation, honeycombing, delamination, or excessive cracking was observed	Conformance	7/23/2021 3:07:15 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Does the shotcrete have deficiencies such as segregation, honeycombing, delamination, or excessive cracking?		The shotcrete applied does not have deficiencies such as segregation, honeycombing, delamination, or excessive cracking.	Conformance	3/9/2021 1:19:44 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	Polyethylene sheeting shall completely cover the surfaces and the Contractor shall overlap the sheeting edges. Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	The minimum curing period shall be from the time the shotcrete has been placed until the concrete has met a compressive strength of 80 percent of the required field compressive strength. The Contractor shall develop a maturity relationship for the shotcrete mix design in accordance with CP 69. The Contractor shall provide the maturity meter and all necessary thermocouples, thermometers, wires and connectors. The Contractor shall be responsible for the placement, protection and maintenance of the maturity meters and associated equipment. Locations where the maturity meters are placed shall be protected in the same manner as the rest of the shotcrete. The Contractor shall install the thermocouples at locations designated by the Engineer. The Contractor shall monitor the temperature at intervals acceptable to the Engineer. If the maturity meter malfunctions the minimum curing period shall be seven days.		A maturity meter was present in the placement. Readings were done daily to see when the curing blankets maybe removed.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	3/30/2020 5:01:21 PM - 06:00	When the ambient temperature is expected to fall below 35 °F during the curing period the Contractor shall maintain the shotcrete internal temperature above 50 °F during the curing period. The Contractor shall monitor the internal shotcrete temperature by the use of maturity meters or high/low thermocouples. Maturity meter probes or thermocouples shall be located 2 feet from the edge of the final portion of the concrete placed for the day and be located at mid-depth of the layer.		Weather was expected in the following day. Heaters were observed to be onsite.	Conformance	3/28/2020 9:12:01 AM -06:00	C		Closed

The bearing devices were furnished and placed in accordance with the specifications and in conformity with the plan details.	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	UPRR Structures		This work consists of furnishing and placing bearing devices in accordance with these specifications and in conformity with the plan details.		The contractor furnished and placed the disc bearing devices in accordance with specifications and plan details.	Conformance	5/27/2020 11:38:10 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Elastomeric bearing pads shall include plain bearings and laminated bearings. Plain bearings are unreinforced pads, consisting of elastomer only, and laminated bearings are reinforced with steel laminates. The elastomer compound shall be classified as being of low temperature grade 3, 4, or 5. The grades are defined by the testing requirements of subsection 705.06, Tables 705-1 and 705-2. A higher grade of elastomer may be substituted for a lower grade. Elastomer grade, AASHTO Design method (A or B), elastomer shear modulus and elastomer hardness shall be shown in the contract documents. The sheer modulus shall be within 15 percent of the specified value.		The bearings at pier 4 phase 6 are both type II for back and ahead and have steel laminate reinforcing. These are grade 3 elastomer.	Conformance	3/15/2021 8:17:28 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Material requirements for elastomeric bearing pads, sheet lead, polytetrafluorethylene (PTFE) sheets, stainless steel sheets and adhesive material shall conform to the requirements of subsection 705.06.		The bearing pads supplied by the contractor meet the material requirements for elastomeric bearing pads.	Conformance	3/15/2021 8:17:28 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		All metal surfaces of Type III Bearing Devices shall be completely zinc metallized in accordance with AWS C2.2 to a thickness of 8 mils, except the surfaces covered with PTFE and surfaces with stainless steel. The internal pot cavity and bottom surface of the piston for Type III bearings shall be zinc metallized to a thickness of 3 mils and polished to 125 microinches after zinc metallizing.		All surfaces were manufactured according to the contract documents and specifications.	Conformance	5/27/2020 11:38:10 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		All metal surfaces of Type III Bearing Devices shall be completely zinc metallized in accordance with AWS C2.2 to a thickness of 8 mils, except the surfaces covered with PTFE and surfaces with stainless steel. The internal pot cavity and bottom surface of the piston for Type III bearings shall be zinc metallized to a thickness of 3 mils and polished to 125 microinches after zinc metallizing.		All surfaces required to be metallized were done so according to the specifications of AWS C2.2.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Pads 3/4 inch or less in thickness may be either laminated or plain. Pads over 3/4 inch in thickness shall be laminated.		The bearing pads are laminated.	Conformance	3/15/2021 8:17:28 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Laminated pads shall be individually molded and shall consist of alternate laminations of elastomer and metal laminates.		The laminated bearing pads are manufactured according to the specifications of Section 512 and consist of alternate laminations of elastomer and metal laminates.	Conformance	3/15/2021 8:17:28 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Type III Bearing Device. The manufacturer of Type III bearings shall be preapproved and listed in the Contract.		The type III bearing devices were manufactured by a preapproved manufacturer listed in the contract.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		Type III Bearing Device. The manufacturer of Type III bearings shall be preapproved and listed in the Contract.		The manufacturer of the type III bearing devices was preapproved and listed in the contract.	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		Type III Bearing Devices are designed as Pot type or Disc type. Bearing devices shall be fabricated as fixed, guided expansion, or non-guided expansion bearings as designated in the Contract.		The type III bearing devices were designed as disc type and were fabricated as fixed, guided expansion and non-guided expansion types as designated in the contract.	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	UPRR Structures		Type III Bearing Devices are designed as Pot type or Disc type. Bearing devices shall be fabricated as fixed, guided expansion, or non-guided expansion bearings as designated in the Contract.		The Type III bearing devices used are of the disc type and are fabricated as fixed, guided expansion (unidirectional) and non-guided expansion (omnidirectional) types as designated in the Contract.	Conformance	5/27/2020 11:38:10 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Type III Bearing Devices are designed as Pot type or Disc type. Bearing devices shall be fabricated as fixed, guided expansion, or non-guided expansion bearings as designated in the Contract.		The type III bearing devices were designed as disc type. They were fabricated as fixed, guided expansion and non-guided expansion types as designated in the contract and on the plans.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Bearings shall satisfactorily provide for thermal expansion and contraction, rotation, camber changes, and creep and shrinkage of the structural members they support. Bearings shall be designed and fabricated so that they can be readily inspected and easily removed and replaced during the service life of the bridge.		The bearings were designed to satisfactorily provide for thermal expansion and contraction, rotation, camber changes, creep and shrinkage of the structural members they support. Bearings were designed and fabricated so they can be readily inspected and easily removed and replaced during the service life of the bridge.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	UPRR Structures		Bearings shall satisfactorily provide for thermal expansion and contraction, rotation, camber changes, and creep and shrinkage of the structural members they support. Bearings shall be designed and fabricated so that they can be readily inspected and easily removed and replaced during the service life of the bridge.		<div>Bearings satisfactorily provide for thermal expansion and contraction, rotation, camber changes, creep and shrinkage of the structural members they support. Bearing were designed and fabricated so they can be readily removed and replaced during the service life of the bridge.</div>	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		Bearings shall satisfactorily provide for thermal expansion and contraction, rotation, camber changes, and creep and shrinkage of the structural members they support. Bearings shall be designed and fabricated so that they can be readily inspected and easily removed and replaced during the service life of the bridge.		The bearings were designed to provide for thermal expansion and contraction, rotation, camber changes, creep and shrinkage of the structural members supported. The bearings were also designed to be readily inspected and easily removed and replaced during the service life of the bridge.	Conformance	5/27/2020 11:38:10 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		This shall include provisions to allow removal and replacement of all components of the bearing device, excluding sole plates, by lifting the superstructure no more than 1/4 inch.		This included provisions to allow removal and replacement of all components of the bearing device by lifting the superstructure no more than 1/4".	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	UPRR Structures		This shall include provisions to allow removal and replacement of all components of the bearing device, excluding sole plates, by lifting the superstructure no more than 1/4 inch.		The bearings can be removed and replaced, excluding sole plates, by lifting the superstructure no more than 1/4".	Conformance	5/27/2020 11:38:10 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		This shall include provisions to allow removal and replacement of all components of the bearing device, excluding sole plates, by lifting the superstructure no more than 1/4 inch.		Replacement of all components of the bearing device can be accomplished by lifting the superstructure no more than 1/4".	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Disc Bearings. The bearing shall consist of the system outlined in CDOT Standard Specification Section 512.05 (e).		Disc bearings consist of the system outlined in CDOT Standard Specification Section 512.05 (e).	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		Disc Bearings. The bearing shall consist of the system outlined in CDOT Standard Specification Section 512.05 (e).		The disc bearings consist of the system outlined in CDOT Standard Specifications Section 512.05 (e).	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		The bearings shall be completely factory-produced assemblies and shall include all directly connected or welded anchorage hardware. The bearings shall adequately provide for the amount of movement due to temperature changes, post tensioning offsets, or girder rotation as shown on the plans.		The bearings are completely factory-produced assemblies and include all directly connected or welded anchorage hardware. The bearings adequately provide for the amount of movement due to temperature changes, and girder rotation as shown on the plans.	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		The concrete on which the bearings are to be placed shall be free of honeycomb.		The concrete on which the bearings were set was free on honeycomb.	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		The concrete on which the bearings are to be placed shall be free of honeycomb.		The concrete on which the bearings are placed was free of honeycomb.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The concrete on which the bearings are to be placed shall be free of honeycomb.		The concrete on which the bearings were placed was free of honeycomb.	Conformance	3/15/2021 8:17:28 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The concrete bearing contact surface shall be finished to a level plane with a flatness tolerance of 1/16 inch for bearing seats up to 30 inches, 3/32 inch for bearing seats over 30 inches and under 45 inches, and 1/8 inch for bearing seats over 45 inches as measured using a straight edge placed in any direction across the area.		The concrete bearing contact surface is 34" wide (sheet B020.158) and met the 3/32 inch flatness tolerance.	Conformance	3/15/2021 8:17:28 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The concrete bearing contact surface shall be finished to a level plane with a flatness tolerance of 1/16 inch for bearing seats up to 30 inches, 3/32 inch for bearing seats over 30 inches and under 45 inches, and 1/8 inch for bearing seats over 45 inches as measured using a straight edge placed in any direction across the area.		I observed the contractor grinding the bearing surfaces and all were within the tolerances specified for the size of the bearing seats.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Type II and Type III Bearing Devices shall not be disassembled during installation unless otherwise permitted. The Contractor shall protect all bearings from contamination and damage due to paint overspray or when placing concrete or other materials.		The type III devices were not disassembled.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		Type II and Type III Bearing Devices shall not be disassembled during installation unless otherwise permitted. The Contractor shall protect all bearings from contamination and damage due to paint overspray or when placing concrete or other materials.		The type III bearing assemblies were not disassembled during installation.	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	UPRR Structures		The Contractor shall submit shop drawings, design calculations and load data for review of Type III Bearing Devices as specified in subsection 105.02. The shop drawings shall include installation procedures and address storage, handling, disassembly, placement, alignment, offsets, protection during welding to steel girders, protection during painting of structure, and removal of banding or retaining clamps.		The shop drawings, including design calcs, load data, installation procedures, storage, handling, placement, alignment, offsets, protection, and removal of banding/clamps, were submitted and approved.	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The Contractor shall submit shop drawings, design calculations and load data for review of Type III Bearing Devices as specified in subsection 105.02. The shop drawings shall include installation procedures and address storage, handling, disassembly, placement, alignment, offsets, protection during welding to steel girders, protection during painting of structure, and removal of banding or retaining clamps.		The shop drawings were submitted and included all of the necessary items- design calcs, load data, installation procedures, storage, handling, offsets, and removal of banding/retainers.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		Type of bearing device designated by plans?		The type III bearings set were the type designated in the plans.	Conformance	6/30/2020 1:19:09 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Shop drawings approved?		The shop drawings were approved.	Conformance	6/30/2020 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The entire deck and the sides of the curbs for a height of 2 inches above the plan thickness of the hot mix asphalt shall be free of all foreign material such as dirt, grease, old pavement and primer.		it was observed that after blasting the deck and cleaning it off prior to waterproofing going down that the deck was free of all foreign materials.	Conformance	5/5/2021 9:20:58 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The entire deck and the sides of the curbs for a height of 2 inches above the plan thickness of the hot mix asphalt shall be free of all foreign material such as dirt, grease, old pavement and primer.		Deck was clear of debris.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		All decks shall be sandblasted or shot blasted.		Deck was shot blasted prior to application.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Waterproofing	Structures		All decks shall be sandblasted or shot blasted.		after grinding of high spots the approach slabs were sandblasted.	Conformance	1/7/2021 7:38:48 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		All decks shall be sandblasted or shot blasted.		it was observed that shot blasting was used on the deck.	Conformance	5/5/2021 9:20:58 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	UPRR Structures		All decks shall be sandblasted or shot blasted.		I observed the contractor sandblasting the deck span to the required profile.	Conformance	8/31/2021 8:57:23 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		All decks shall be sandblasted or shot blasted.		All the deck surface was sandblasted.	Conformance	9/16/2020 8:07:45 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		All decks shall be sandblasted or shot blasted.		I observed the subcontractor shot blast the deck surface.	Conformance	5/18/2020 8:38:31 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Immediately prior to the application of primer or any type of membrane, all dust and loose material shall be removed.		Prior to the application of the primer, the subcontractor removed all dust and loose material.	Conformance	5/18/2020 8:38:31 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		Immediately prior to the application of primer or any type of membrane, all dust and loose material shall be removed.		The subcontractor blew off any dust and loose materials and mopped the surface, which was allowed to dry.	Conformance	9/16/2020 8:07:45 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		Immediately prior to the application of primer or any type of membrane, all dust and loose material shall be removed.		I observed the contractor placing the waterproofing every day of the operation and observed the workers blowing off all dust and material, and mopping the deck with water to remove any deleterious materials.	Conformance	9/8/2020 9:29:42 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	UPRR Structures		Immediately prior to the application of primer or any type of membrane, all dust and loose material shall be removed.		I observed the contractor removing all dust and loose material by sweeping and then wet mopping the deck span.	Conformance	8/31/2021 8:57:23 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Immediately prior to the application of primer or any type of membrane, all dust and loose material shall be removed.		It was observed that prior to any waterproofing application that the deck was free of all loose material.	Conformance	5/5/2021 9:20:58 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Immediately prior to the application of primer or any type of membrane, all dust and loose material shall be removed.		minutes prior to waterproofing going on the approach slabs they were swept and blown off to make sure they were free of all loose materials	Conformance	1/7/2021 7:38:48 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Immediately prior to the application of primer or any type of membrane, all dust and loose material shall be removed.		Deck was clear of debris and dust.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The deck condition will be approved before application of the membrane.		Deck was acceptable.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The deck condition will be approved before application of the membrane.		IQC approved the condition of the approach slabs immediately prior to waterproofing.	Conformance	1/7/2021 7:38:48 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The deck condition will be approved before application of the membrane.		it was observed that the deck condition was aboved before the application of the waterproofing membrane.	Conformance	5/5/2021 9:20:58 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	UPRR Structures		The deck condition will be approved before application of the membrane.		IQC approved the deck span prior to application of the membrane.	Conformance	8/31/2021 8:57:23 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		The deck condition will be approved before application of the membrane.		IQC inspected and approved the deck (cleanliness and blast profile) before the application of the membrane.	Conformance	9/8/2020 9:29:42 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		The deck condition will be approved before application of the membrane.		IQC (Sean Gilman) approved the deck condition before the application of the membrane.	Conformance	9/16/2020 8:07:45 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The deck condition will be approved before application of the membrane.		IQC approved the deck condition prior to application of the membrane.	Conformance	5/18/2020 8:38:31 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Weather and Moisture Limitations for Application of Waterproofing Membrane. Application of primer or membrane shall not be done during inclement weather conditions, or when deck and ambient air temperatures are below 50 °F.		The subcontractor applied the primer and membrane during suitable weather conditions.	Conformance	5/18/2020 8:38:31 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		Weather and Moisture Limitations for Application of Waterproofing Membrane. Application of primer or membrane shall not be done during inclement weather conditions, or when deck and ambient air temperatures are below 50 °F.		The weather conditions were satisfactory before the application of primer and membrane.	Conformance	9/16/2020 8:07:45 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		Weather and Moisture Limitations for Application of Waterproofing Membrane. Application of primer or membrane shall not be done during inclement weather conditions, or when deck and ambient air temperatures are below 50 °F.		No application of primer or membrane was done during inclement weather or when deck/air temperatures were below 50 degrees Fahrenheit.	Conformance	9/8/2020 9:29:42 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	UPRR Structures		Weather and Moisture Limitations for Application of Waterproofing Membrane. Application of primer or membrane shall not be done during inclement weather conditions, or when deck and ambient air temperatures are below 50 °F.		All primer and membrane was applied during weather that was dry with none being applied during inclement conditions.	Conformance	8/31/2021 8:57:23 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Waterproofing	Structures		Weather and Moisture Limitations for Application of Waterproofing Membrane. Application of primer or membrane shall not be done during inclement weather conditions, or when deck and ambient air temperatures are below 50 °F.		it was observed during the waterproofing application the temperatures were above 50 degrees and no inclement weather occurred.	Conformance	5/5/2021 9:20:58 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Weather and Moisture Limitations for Application of Waterproofing Membrane. Application of primer or membrane shall not be done during inclement weather conditions, or when deck and ambient air temperatures are below 50 °F.		Moisture was acceptable at placement.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The deck surface shall be dry at the time of application of primer and membrane.		Deck was dry.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The deck surface shall be dry at the time of application of primer and membrane.		it was observed that the deck was and maintained being dry during the waterproofing application.	Conformance	5/5/2021 9:20:58 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	UPRR Structures		The deck surface shall be dry at the time of application of primer and membrane.		The span 1 deck surface was dry at the time of primer and membrane application.	Conformance	8/31/2021 8:57:23 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		The deck surface shall be dry at the time of application of primer and membrane.		The deck surface was always dry before primer and membrane application.	Conformance	9/8/2020 9:29:42 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		The deck surface shall be dry at the time of application of primer and membrane.		The deck surface was dry at the time of application of primer and membrane.	Conformance	9/16/2020 8:07:45 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The deck surface shall be dry at the time of application of primer and membrane.		The subcontractor waited until the deck moisture was within specifications and the deck surface was dry.	Conformance	5/18/2020 8:38:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Waterproofing	Structures		The entire membrane shall be essentially free of wrinkles, air bubbles and other placement defects.		The entire membrane is essentially free of wrinkles, bubbles and other placement defects.	Conformance	5/18/2020 8:38:31 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Protective covering shall be laid parallel to the centerline of the bridge.		Covering was laid parallel to bridge CL.	Conformance	11/2/2020 3:50:45 PM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The protective covering shall be butted together at longitudinal and transverse joints.		Covering was butted together at joints.	Conformance	11/2/2020 3:50:45 PM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The protective covering shall be butted together at longitudinal and transverse joints.		it was observed that no gapping between transverse joints were present and no more than 1/8 in gap fro longitudinal joints were present.	Conformance	5/5/2021 9:20:58 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The protective covering shall be butted together at longitudinal and transverse joints.		Covering was butted together properly.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Overlapping will not be permitted.		No overlapping was allowed.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Overlapping will not be permitted.		it was observed that 0 overlapping occurred during the wpplication of the waterproofing membrane.	Conformance	5/5/2021 9:20:58 AM -06:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		Overlapping will not be permitted.		No overlapping occurred.	Conformance	11/2/2020 3:50:45 PM -07:00	C		Closed
Central 70	C 0704-241	Waterproofing	Structures		The maximum allowable space between adjoining sections of protective covering shall be 1 inch.		Joint specs did not exceed 1 inch.	Conformance	12/21/2020 10:39:26 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		This work consists of constructing a Concrete Panel Facing Mechanically Stabilized Earth (MSE) Retaining Wall System at the locations and to the lines and grades shown on the plans.		all panels were place in conformance with the plans.	Conformance	11/2/2020 12:31:20 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		This work consists of constructing a Concrete Panel Facing Mechanically Stabilized Earth (MSE) Retaining Wall System at the locations and to the lines and grades shown on the plans.		The wall is being constructed to the lines and grades shown on the plans as staked.	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The retained structure backfill zone is the structure backfill retained by the reinforced structure backfill zone as shown on the plans.		Backfill zone constructed matched zone detailed in shop drawings.	Conformance	1/20/2020 7:56:23 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	1/6/2020 4:04:30 PM - 07:00	The Contractor shall submit six sets of shop drawings for review prior to construction of the wall.		624-W1 MSE Wall Construction Drawings remain in Revise and Resubmit Status according to Aconex. (Aconex Document Number C70-PCPJ-WLS-SHD-000002).		1/23/2020 9:18:54 AM -07:00	Audit Comment	Acknowledged. KIC is updating all revise and resubmit submittals during the month of January.	Closed
Central 70	C 0704-241	Facing Panels	Walls		The Contractor shall submit six sets of shop drawings and certified material test reports for review prior to construction of the wall.		Shop drawings submitted	Conformance	6/15/2021 7:42:21 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The shop drawings shall provide the details necessary to demonstrate compliance with the Contract, including the items listed in 504.02 (a) through (m).		The shop drawings provide all the details necessary to demonstrate compliance with the Contract, including the items listed in 504.02 (a) through (m).	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		The shop drawings shall provide the details necessary to demonstrate compliance with the Contract, including the items listed in 504.02 (a) through (m).		Shop drawings provide all necessary details to comply with contract, and to build the work in conformance.	Conformance	6/10/2020 7:15:02 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless otherwise specified on the plans, wall backfill material in the reinforced structure backfill zone and the associated trapezoidal retained structure backfill zone shall conform to the requirements for Structure Backfill (Class 1) of Section 206.		The wall backfill material in the reinforced structure backfill zone and the associated trapezoidal retained structure conform to the requirements for Structure Backfill (Class 1) of Section 206.	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Concrete for the leveling pad shall be Concrete (Class D) conforming to the requirements of Section 601.		Concrete poured for the leveling pad was Class D, conforming to the requirements of Section 601.	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Concrete for the leveling pad shall be Concrete (Class D) conforming to the requirements of Section 601.		The concrete for the leveling pad is class D and conforms to the requirements of Section 601.	Conformance	2/8/2021 2:24:22 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		I spot checked some of the precast panels and they conform to the requirements shown on the plans and specifications, including the color, texture, dimensions and pattern.	Conformance	2/8/2021 2:24:22 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		The precast panels conform to the requirements shown on the plans and the specifications including the color, texture, dimensions and pattern.	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Lowered Section Wall Panels	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		12 wall panels were installed along abutment 3. (#148 to #161). Panel 158 was not placed since the panel was cast incorrectly. All other panels were in conformance with the shops and specifications. Please see the attached pictures. Electrical IQC was onsite to inspect the conduits on panel #161 before the panel was installed.	Conformance	4/4/2020 4:01:05 PM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		All panels that were placed were in conformance of the plans and shop drawings. Conduits were installed by Sturgeon Electric in Panel 101. A separate audit was generated for the SS316 conduits and hardware. These conduits are for the Fire Telephone near the barrier. The block out was found to be foot low. This was an error in the KMP calculations. Since the conduits penetrate the NEMA 4x cabinet from the bottom. This is not considered an issue.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Fabricate MSE Panels	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		Pre-cast concrete panels conform to the requirements shown on plans and shop drawings, including color, texture, dimensions, and pattern.	Conformance	6/10/2020 7:15:02 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		it was observed that the panels installed matched the plans color, texture, dimensions, and pattern.	Conformance	5/5/2021 9:23:41 AM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		Panel thickness shall be a minimum of 6 inches plus the depth of rustication.		Panel thickness within conformance, including the depth of rustication on front face of panel.	Conformance	6/10/2020 7:15:02 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Panel thickness shall be a minimum of 6 inches plus the depth of rustication.		I spot checked some panels and all were a minimum of 6 inches thick plus the depth of rustication.	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		Soil reinforcement attachment devices shall be within 1 inch of shop drawing locations.		Reinforcement attachment devices within conformance in relation to shop drawing locations.	Conformance	6/10/2020 7:15:02 AM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		All unit dimensions shall be within ¼ inch of plan.		All dimensions that were measured were in conformance of the plans and shop drawings.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		All unit dimensions shall be within ¼ inch of plan.		I spot checked some of the panels and the dimensions were within 1/4 inch of the plans.	Conformance	2/8/2021 2:24:22 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Lowered Roadway Dry Standpipe	Cover		All unit dimensions shall be within ¼ inch of plan.		Panel Type 44 and 45 were not cast in accordance with the plans. The panel invert was measured in the field to be 3'4" while the shop drawing dimension is 2' 7 3/8" since the level pad was raise 8" due to ground water (201-W1 Full Height Wall Panel Shops). Please see the attached pictures and reference calculations attached to comment #1. Shop Drawings will be adjusted accordingly.	Field Resolved	2/10/2021 1:19:25 PM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Facing Panels	Walls		Squareness determined by the difference between two diagonals, shall not exceed ½ inch.		All panels that I checked were square as determined by diagonal measurements.	Conformance	2/8/2021 2:24:22 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Squareness determined by the difference between two diagonals, shall not exceed ½ inch.		Squareness difference did not exceed 1/2 inch panels 100 - 108 wall 204 W2	Conformance	6/15/2021 7:42:21 AM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		Squareness determined by the difference between two diagonals, shall not exceed ½ inch.		The squareness of the panels were verified.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Squareness determined by the difference between two diagonals, shall not exceed ½ inch.		I spot checked a few panels and the squareness of the two diagonals was less than 1/2 inch.	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Wall Facing	Aesthetics		Surface defects on the front face textured surface, shall not exceed 3/16 inch when measured with a 5 foot straight edge, except when intentionally roughened.		There were no surface defects found during the placement of walls panels from Monday, March 16th to Wednesday, March 18th.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		The foreman shall be on the site for 100 percent of the time during which the work is being done.		The foreman and superintendent were onsite during the installation that occurred between Monday, March 16th to Wednesday, March 18th. Cover Abutment 3, Panel 94 to Panel 108, East of Columbine Bridge.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Lowered Section Wall Panels	Walls		The foreman shall be on the site for 100 percent of the time during which the work is being done.		The foreman was onsite the entire time panels were installed.	Conformance	4/4/2020 4:01:05 PM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		The wall test segment shall be the first segment of the wall constructed.		The first 4 panel were set on Monday, March 16th. Panels 94 to 97. We had a field walk the following morning (Tuesday, March 17th) with Elizabeth Kraft and Phil Mazzarella.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		Before the start of wall construction, the Contractor shall provide a panel-placing plan and shall supply daily placement logs to the Engineer weekly and at the completion of the wall.		The Full Wall Panel Pre-Construction meeting was held on March 6th. The placement plan was provided in the Hold Point Meeting on March 5th.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		The daily placement log shall consist of an elevation view of the wall showing the dates, number of panels placed, and the serial numbers of the panels placed.		The crew has been managing placement logs with their inspection checklists.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The daily placement log shall consist of an elevation view of the wall showing the dates, number of panels placed, and the serial numbers of the panels placed.		Panel placement logs were kept.	Conformance	6/16/2020 11:48:18 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The daily placement log shall consist of an elevation view of the wall showing the dates, number of panels placed, and the serial numbers of the panels placed.		the field engineer presented the logs for all the panels set for this section of wall.	Conformance	5/5/2021 9:23:41 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The daily placement log shall consist of an elevation view of the wall showing the dates, number of panels placed, and the serial numbers of the panels placed.		Production crews and IQC kept daily placement logs.	Conformance	9/14/2020 7:37:59 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The daily placement log shall consist of an elevation view of the wall showing the dates, number of panels placed, and the serial numbers of the panels placed.		Daily placement log was kept by production and IQC.	Conformance	2/5/2021 10:39:02 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		To avoid panels with random cracks, the Contractor shall install vertical slip joints as shown on the shop drawings for tight curved corners (8 foot radius or less) and dissimilar foundations such as bridge abutments.		Vertical slip joints were installed at acute corner and at edge of abutment line as detailed on shops drawings.	Conformance	1/20/2020 7:56:23 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		Level pad area was compacted and tested by IQC prior to pad pour.	Conformance	4/24/2020 9:02:54 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		Base of level pad was compacted and tested in accordance with specifications.	Conformance	4/30/2020 2:13:58 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/16/2019 4:19:11 PM -07:00	The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		Subgrade for the leveling pad was compacted to at least 95% of maximum dry density at a moisture content within the acceptable limits of the optimum moisture.	Conformance	12/16/2019 3:42:31 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		Base of leveling pad received same compaction as strap zone.	Conformance	9/16/2020 11:14:02 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Structure Exc	Walls		The Contractor shall report to the Engineer in writing density test results for any unsatisfactory bearing material that does not meet the minimum 90 percent compaction for walls less than 16 feet high and 95 percent compaction for walls higher than 16 feet when tested in accordance with AASHTO T 180.		Subgrade was compacted to at least 95% of maximum density.	Conformance	12/16/2020 11:50:26 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall report to the Engineer in writing density test results for any unsatisfactory bearing material that does not meet the minimum 90 percent compaction for walls less than 16 feet high and 95 percent compaction for walls higher than 16 feet when tested in accordance with AASHTO T 180.		No failing densities were recorded in reworked subgrade.	Conformance	6/16/2020 11:58:10 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		If the excavation for the placement of the leveling pad exposes an unsatisfactory bearing material, the Engineer may require removal and replacement of that material. The removed material shall be replaced with Structure Backfill (Class 1) compacted in conformance with subsection 206.03. The Engineer with the assistance of the geotechnical engineer of record will provide the limits including the depth of removal.		All unsuitable material was removed, and an approved subgrade repair procedure with geofabric and a geogrid was installed.	Conformance	6/16/2020 11:58:10 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		If the excavation for the placement of the leveling pad exposes an unsatisfactory bearing material, the Engineer may require removal and replacement of that material. The removed material shall be replaced with Structure Backfill (Class 1) compacted in conformance with subsection 206.03. The Engineer with the assistance of the geotechnical engineer of record will provide the limits including the depth of removal.		All unsatisfactory material was removed, and suitable material was replaced.	Conformance	9/16/2020 11:14:02 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		If the excavation for the placement of the leveling pad exposes an unsatisfactory bearing material, the Engineer may require removal and replacement of that material. The removed material shall be replaced with Structure Backfill (Class 1) compacted in conformance with subsection 206.03. The Engineer with the assistance of the geotechnical engineer of record will provide the limits including the depth of removal.		Suitable material was used to create subgrade for pad.	Conformance	4/24/2020 9:02:54 AM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		If the excavation for the placement of the leveling pad exposes an unsatisfactory bearing material, the Engineer may require removal and replacement of that material. The removed material shall be replaced with Structure Backfill (Class 1) compacted in conformance with subsection 206.03. The Engineer with the assistance of the geotechnical engineer of record will provide the limits including the depth of removal.		There was a field meeting with all associated parties to discussed the pumping soil under the wall footer from the Eastern edge of Columbine Abutment 3 moving West. Paul Macklin from Shannon & Wilson was onsite to confirm that what was constructed is adequate. The plan was remove any areas that are considered problematic and replace them with stone to the prescribed depth.	Field Resolved	3/20/2020 3:36:27 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Foundation of wall was not graded to proper width, however after discussing with IQC, the production crews were notified, and foundation was cut to proper width.	Field Resolved	4/24/2020 9:03:57 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Foundation was graded to proper length.	Conformance	4/30/2020 2:13:58 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls	12/16/2019 4:19:11 PM - 07:00	The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Foundation of bottom of wall was graded to the Reinforcement length plus 2 feet as per shop drawings.	Conformance	12/16/2019 3:42:31 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Cut and compacted area of foundation was equal to Reinforcement length plus 18 inches.	Conformance	9/16/2020 11:14:02 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Wall foundation was cut to Reinforcement length plus at least 18".	Conformance	12/16/2020 11:50:26 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Wall cut section was proper dimensions.	Conformance	6/16/2020 11:58:10 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Foundation was graded to proper dimensions.	Conformance	1/18/2021 9:03:42 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		This graded area shall be compacted with an appropriate vibratory roller weighing a minimum of 8 tons for at least five passes or as directed by the Engineer.		Graded area was compacted with approved equipment, and satisfactory compaction was achieved.	Conformance	6/16/2020 11:58:10 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/16/2019 4:19:11 PM - 07:00	Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		All steps were constructed according to plan sheets, no steps exceeded 36 inches.	Conformance	12/16/2019 3:42:31 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		Steps were constructed per plan.	Conformance	4/24/2020 9:02:54 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		Vertical steps were constructed per plans.	Conformance	5/11/2020 11:13:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Wall Facing	Aesthetics		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		The steps of the footer are in conformance of the plans and specifications.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		it was observed that in this area a step of 12", no reinforcement was used at this step.	Conformance	5/5/2021 9:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The foundation of the leveling pads shall meet the requirement of subsection 504.11.		it was observed at another time then the panels were et that the leveling pad met the requirements of subsection 504.11	Conformance	5/5/2021 9:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		The foundation of the leveling pads shall meet the requirement of subsection 504.11.		Please reference the "Field Resolved" issue above.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The foundation of the leveling pads shall meet the requirement of subsection 504.11.		Level pad foundation met requirements.	Conformance	5/11/2020 11:13:35 AM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		The leveling pad shall be level within the tolerance of ? inch for any two points along the length of a panel, and within ¼ inch for any two points 10 feet apart.		The footer was level. This was verified by survey and the visual inspection of the shims that were used for each panel.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Lowered Section Wall Panels	Walls		The leveling pad shall be level within the tolerance of ? inch for any two points along the length of a panel, and within ¼ inch for any two points 10 feet apart.		A straightedge was used to ensure the leveling pad met the following specification.	Conformance	4/4/2020 4:01:05 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The leveling pad shall be level within the tolerance of ? inch for any two points along the length of a panel, and within ¼ inch for any two points 10 feet apart.		After dewatering and reworking wall area, leveling pad was found to be level, and no deviations were observed.	Conformance	6/16/2020 11:58:10 AM -06:00	C		Closed

Central 70	C 0704-241	Facing Panels	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shim material was used between the leveling pad and wall panel.	Conformance	11/30/2020 3:02:17 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shimming material was used between the panel and the leveling pad.	Conformance	9/17/2020 5:23:05 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shims were used to support panels on level pad.	Conformance	5/11/2020 11:15:27 AM -06:00	C		Closed
Central 70	C 0704-241	Lowered Section Wall Panels	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shims were used to support the wall panel off the leveling pad.	Conformance	4/4/2020 4:01:05 PM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Varying height shims are being used. Survey is there to verify the placement and the shims are adjusted to the appropriate height on behalf of the survey.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shims were used to support first course of panels.	Conformance	4/24/2020 9:03:57 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Lowered Section Wall Panels	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		The expansion material and coping anchors were installed in accordance with Detail B & 1. Silicone sealant on top of the expansion material will be installed at a later date.	Conformance	4/4/2020 4:04:08 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shims were placed underneath first course of panels.	Conformance	4/24/2020 9:02:54 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/16/2019 4:19:11 PM -07:00	Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shims were placed below bottom panels.	Conformance	12/16/2019 3:42:31 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	11/25/2019 3:03:45 PM -07:00	No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		I observed no more than 2 shims being used to level panels on the leveling pad.	Conformance	11/25/2019 2:49:40 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		Proper shimming was used.	Conformance	4/24/2020 9:02:54 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		Appropriate shims were used.	Conformance	4/24/2020 9:03:57 AM -06:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		This specification is superseded by Plan Sheet WS504. The shims for the bottom of the panel have a necessary 1/4" min and 3/4" max. These tolerances were followed during my observation. Please see the attached tolerances that will be followed.	Conformance	3/20/2020 3:36:27 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Lowered Section Wall Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		Shims were used. The amount of shims were in conformance with the specifications developed for this operation. " Shim bottom of panels as necessary. 1/4" min to 3/4" max.	Conformance	4/4/2020 4:01:05 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		There were too many shims used on the leveling pad due the issue in comment #6. After the leveling pad was re-poured within tolerance. The appropriate amount of shims was used. Reference the pictures in comment #6.	Field Resolved	9/17/2020 5:23:05 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Facing Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		it was observed that now more the 2 shims were used on the leveling pad to level the panel.	Conformance	11/2/2020 12:31:20 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		The tolerances for a full height wall panel were follows. 1/4" min to 3/4" max.	Conformance	11/30/2020 3:02:17 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		No more than 2 shims used for panels 100 - 108 wall 204 W2	Conformance	6/15/2021 7:42:21 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		it was observed that shims did not exceed more then 3/4".	Conformance	5/5/2021 9:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		in most cases one shim was used that was 3/16" to level the panel on the leveling pad. there were a few panels that needed two shims.	Conformance	11/2/2020 12:29:52 PM -07:00	C		Closed

Central 70	C 0704-241	Construct MSE Wall	Walls		An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		I observed no overall negative batter and IQC didn't report finding any.	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/16/2019 4:19:11 PM - 07:00	An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		Negative batter was found on the second panel of column 133, however it has been addressed and corrected. See NCR 1766.	Conformance	12/16/2019 3:42:31 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	11/25/2019 3:03:45 PM - 07:00	An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		In column 133, the second panel from the bottom is obviously at negative batter and in particular at the top left corner. IQC had previously observed that this panel was out and did not write a NCR and also did not have the Contractor repair this panel, and now the Contractor has placed another panel on top of it.	NCR 1766 was written to track this issue.	12/12/2019 12:00:52 PM -07:00	NC-2	NCR 1766 was written to track this issue. The statement about IQC not writing the NCR is not a true statement. IQC notified PC and the panel was corrected. during compaction of the second panel the bottom panel push out again. See NCR for further action to prevent occurrence.	Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		During inspection with IQC, one panel was noted to have negative batter. This was brought up to the foreman, and corrected by end of shift. Central 70	C 0704-241	Facing Panels	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		The wall panel face was level in accordance with this specification.	Conformance	9/17/2020 5:23:05 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		Final wall face was vertical.	Conformance	1/18/2021 9:03:42 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		No batter observed for panels 100 - 108 wall 204 W2	Conformance	6/15/2021 7:42:21 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls	6/29/2021 2:00:46 PM -06:00	Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		No negative batter observed	Conformance	6/29/2021 1:32:49 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		I spot checked some panels with a level and all were vertical or had a slight batter within specifications.	Conformance	2/8/2021 2:24:22 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		Final wall face was vertical.	Conformance	2/5/2021 10:39:02 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		Panels were either vertical or had slight, positive batter (Panels 69A through 78A)	Conformance	7/29/2021 2:12:54 PM -06:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		Batter of panels is either vertical or within tolerance for positive banner	Conformance	7/29/2021 1:32:51 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Facing Panels	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		The panels did not have significant concave or convex deviations	Conformance	7/29/2021 2:12:54 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		No panels on wall exceeded 1/2" deviations.	Conformance	2/5/2021 10:39:02 AM -07:00	C		Closed
Central 70	C 0704-241	Lowered Roadway Dry Standpipe	Cover		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		Panels 44 and 45 of Wall 201-W1 do not adhere to the following straight edge requirement. Please see the attached pictures.	Field Resolved	2/10/2021 1:19:25 PM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Facing Panels	Walls	6/29/2021 2:00:46 PM -06:00	The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		No significant deviation observed	Conformance	6/29/2021 1:32:49 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		Wall face surface within tolerances for panels 100 - 108 wall 204 W2	Conformance	6/15/2021 7:42:21 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Facing Panels	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		it was observed that with a 10' straightedge there was no more then a 1/2" deviation.	Conformance	5/5/2021 9:22:57 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		a 10' straight edge was used to check the front face of the panels. everything was within the tolerances allowed.	Conformance	11/2/2020 12:29:52 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		Panel #198 was bowed and not conforming to the tolerances for full height wall panels. A meeting with Pacheco was held in the field at 10:00 am on Wednesday, Sept. 16th. Chris Merrifield wrote ENCR #0442 to address the issue. A meeting will be held on Friday, Sept. 18th with the aesthetics team (CDOT - Tim Buntrock and Desing Workshop - Chris Geddes) for the path moving forward for ENCR disposition. Central 70	C 0704-241	Construct MSE Wall	Walls		To avoid leaking or soil erosion through the joint, a filter fabric at least 12 inches wide shall be glued to the panels behind all vertical joints.		Filter fabric at least 12 inches wide was glued to the panels behind all vertical joints.	Conformance	11/16/2020 7:36:09 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		To avoid leaking or soil erosion through the joint, a filter fabric at least 12 inches wide shall be glued to the panels behind all vertical joints.		Filter fabric was placed behind all vertical joints.	Conformance	1/18/2021 9:03:42 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		To avoid leaking or soil erosion through the joint, a filter fabric at least 12 inches wide shall be glued to the panels behind all vertical joints.		Filter fabric measuring 12 inches wide was glued to the panels behind all vertical joints.	Conformance	1/21/2021 12:45:23 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		The reinforcement (straps) were not be connected to the wall until the compacted fill was at or slightly higher than the location of the connector.	Conformance	3/29/2021 1:06:37 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Reinforcement was not connected until fill was at or slightly above connector.	Conformance	9/2/2020 7:51:04 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Straps were not connected until fill was at or above connector.	Conformance	9/14/2020 7:37:59 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Soil reinforcement was not connected until fill was at or above connector elevation.	Conformance	7/7/2020 9:19:05 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Reinforcing was connected when backfill was at or slightly above strap height.	Conformance	5/11/2020 11:15:27 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Reinforcement was not connected until fill was at or slightly above connector.	Conformance	6/16/2020 12:00:39 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Reinforcement was not connected to wall until fill was at proper height.	Conformance	6/16/2020 11:49:30 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Reinforcement was not connected until compacted fill was at or above clip location.	Conformance	5/19/2020 1:39:03 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Reinforcing was not connected until backfill was at or slightly above strap height.	Conformance	5/11/2020 11:13:35 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		reinforcement was not placed and connected until compacted fill was at or above connector location.	Conformance	1/20/2020 7:56:23 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Reinforcing straps were not placed until backfill was at or above strap level.	Conformance	4/24/2020 9:02:54 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		I observed no reinforcing straps being connected until the compacted fill was at or slightly higher than the location of the connector.	Conformance	12/4/2019 6:20:23 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		The reinforcing straps were not connected to the wall until the compacted fill was at or slightly higher than the location of the connector.	Conformance	11/20/2019 8:30:53 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		The material being placed in the reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall was Structure Backfill (Class 1). I did not notice IQC on site during the entire backfilling operation but PC was there running moisture/density tests for each lift. I spoke to the IQC inspector (Tommy Harmon) and he said with their frequencies that they did not need a moisture density test yet.	Conformance	11/20/2019 8:30:53 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/16/2019 4:19:11 PM - 07:00	The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Class 1 material was placed within the structure backfill zone.	Conformance	12/16/2019 3:42:31 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Class 1 was placed appropriately in zones detailed on plans.	Conformance	4/24/2020 9:02:54 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		2-4 inches of Class 2 native backfill was found in sections of the structure backfill zone, from the back edge of the cut extending approximately 6-8 feet. After discussing with IQC, the production crews were notified, and the native material was removed from the backfill.	Field Resolved	4/24/2020 9:03:57 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Reinforced structure backfill zone was all class 1 material.	Conformance	6/16/2020 11:48:18 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		All fill in reinforced structure backfill zone was class 1 material.	Conformance	5/19/2020 1:39:03 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Only class 1 material was placed in structure backfill zone.	Conformance	5/11/2020 11:15:27 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Class 1 backfill was being placed	Conformance	6/30/2020 1:19:45 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Class 1 backfill was used	Conformance	6/26/2020 8:43:18 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	6/25/2020 1:35:41 PM -06:00	The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Class 1 material was used	Conformance	6/24/2020 8:15:49 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Structure backfill zone detailed in plans was all Class 1 material.	Conformance	9/2/2020 7:51:04 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Reinforced backfill zone was Class 1.	Conformance	9/14/2020 7:37:59 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans was Class 1 Structure Backfill.	Conformance	3/29/2021 1:06:37 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans was Structure Backfill (Class 1).	Conformance	1/21/2021 12:45:23 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Reinforced backfill zone was class 1.	Conformance	1/18/2021 9:03:42 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the walls as defined on the plans was backfilled with Class 1.	Conformance	11/16/2020 7:36:09 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels shall not exceed 4 inches. (Plate compaction zone)		Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels did not exceed 4 inches	Conformance	11/16/2020 7:36:09 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels shall not exceed 4 inches. (Plate compaction zone)		Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels did not exceed 4 inches, plate tamper used for compaction.	Conformance	1/21/2021 12:45:23 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels shall not exceed 4 inches. (Plate compaction zone)		Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels did not exceed 4 inches, plate tamper was used.	Conformance	3/29/2021 1:06:37 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels shall not exceed 4 inches. (Plate compaction zone)		4" lifts were observed in this area	Conformance	6/30/2020 1:19:45 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels shall not exceed 4 inches. (Plate compaction zone)		Plate compaction zone lift thickness was appropriate.	Conformance	5/11/2020 11:13:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Waterproofing	Structures		All concrete surfaces to be waterproofed shall be free of loose material and dirt and shall be reasonably smooth and free of projections or holes. Waterproofing shall not be started without approval in wet weather or when the temperature is below 35 °F.		to conform with smoothness and the 10 foot straight edge all surfaces were grinded to be in conformance. temperatures were in the 50's during the waterproofing placement.	Conformance	1/7/2021 7:38:48 AM -07:00	C		Closed
Central 70	C 0704-241		IAT Materials Testing		Gradation - Sieve Analysis per CP 31 - 1-1/2" to #8		There were 4 Sieves (1/2", 3/8", #4, #8) in which there was a difference that far exceeded even doubled the allowable difference of 5%. Because these differences were so large I moved to confirm my results by comparing other gradations of the same material that were split with IQC. It confirmed that IAT's Gradation results fall within the minor difference category. I met with Lev Bekker & George Medved to discuss what could have caused such a large difference on so many sieves. The only clear differences were in the moisture content and the size of the sample. IAT Moisture Content 6.7% and OVT Moisture Content 8.9% It is important to note that both samples were split and washed on the same day. The second difference was in that OVT's	Field Resolved	6/26/2020 1:34:15 PM -06:00	Field Resolved		Closed

						<p>sample was considerably large and far exceeded the minimum sample size of 2000g for 3/4". OVT Sample size 3493.1g and IAT sample size 2356.8g. In principle this difference should not cause a difference at all if properly split however I have noticed fluctuations in the larger particle sizes when exceeding the minimum sample sizes by a large margin. The meeting with OVT could not yield a clear reason for the Significant Differences but it was agreed that more care would be taken to keep the sample size more reasonable as well as care in recording weights and tares.</p> <p>A retest was performed on 6/16/2020 on a split sample of Aggregate Base Course Class 6 that yielded only minor differences. Both reports are attached.</p>				
Central 70	C 0704-241	IAT Materials Testing		Gradation - Sieve Analysis per CP 31 - #16 to #50	<p>All 3 sieves (#16, #30, #50) were discovered to far exceed the max allowable difference of 4%. Central 70	C 0704-241		IAT Materials Testing		Asphalt Content - Ignition Method per CP-L 5120	<p>During a qualification of IQC Technician Philip Banks a Significant Difference was detected during the Asphalt Content (CP-L 5120) portion of the IAT. The difference exceed the maximum allowable difference of 0.35% with 0.39%. Despite the difference in AC content there were no other differences in Voids/VMA/Rice. After discovering the difference the IQC Lab manager Rebecca Sedlacek (Cochran) and I sat down to brain storm what could have caused the difference. A short discussion yielded a possible answer for the difference, being that the sample was not properly split at the IQC lab before handing off to IAT for</p>	Field Resolved	10/12/2020 2:21:12 PM -06:00	Field Resolved		Closed

						<p>testing. In this case it several cans of mix were obtained on grade from the pavers' auger screws. No remixing and splitting of the multiple cans was performed.</p> <p>Later in the same week an additional sample of the same mix used as detour paving was sampled in the field in order to resolve this matter in the field. The sample was obtained in the same manor as previously described but then properly mixed and split prior to IAT Testing. During this retest there were no significant differences in any of the AC/Rice/Voids/VMA results. It was discussed that upon performing testing with other labs or entities proper mixing and splitting techniques will be utilized to prevent possible Significant Differences in the future.</p>					
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		This work consists of the excavation, and backfill or disposal of all material required for the construction of structures. The excavation and disposal of excavated material for ditches and channels shall be accomplished in accordance with Section 203.	The excavation was performed as required and the excavated material was hauled offsite.	Conformance	1/7/2021 7:38:10 AM -07:00	C		Closed

Structure excavation includes removing all necessary material in place to reach the proper elevation for abutment work to continue. Any pumping or draining will be performed as needed.	Conformance	1/2/2020 4:38:21 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		206.02 (a) 1. Structure Backfill (Class 1) and (Class 2).		Class 1 backfill was used.	Conformance	1/14/2021 9:43:25 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		206.02 (a) 1. Structure Backfill (Class 1) and (Class 2).		The backfill material used was structure backfill Class 1.	Conformance	9/23/2020 10:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		Unsuitable foundation material shall be removed and wasted in a manner acceptable to the Engineer, and the excavated material will be paid for as structure excavation.		Unsuitable material was removed.	Conformance	8/21/2020 4:29:17 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unsuitable foundation material shall be removed and wasted in a manner acceptable to the Engineer, and the excavated material will be paid for as structure excavation.		No unsuitable foundation material was witnessed	Conformance	9/16/2020 11:15:32 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unsuitable foundation material shall be removed and wasted in a manner acceptable to the Engineer, and the excavated material will be paid for as structure excavation.		There was no unsuitable material found during the excavation.	Conformance	9/17/2020 5:21:23 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Unsuitable foundation material shall be removed and wasted in a manner acceptable to the Engineer, and the excavated material will be paid for as structure excavation.		No unsuitable material observed	Conformance	9/16/2020 11:09:34 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unsuitable foundation material shall be removed and wasted in a manner acceptable to the Engineer, and the excavated material will be paid for as structure excavation.		Material was excavated, and unsuitable material was not used.	Conformance	8/12/2020 12:34:44 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unsuitable foundation material which is suitable for embankments and suitable surplus excavated material shall be used in the construction of embankments.		Unsuitable material was removed.	Conformance	9/16/2020 11:14:30 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unsuitable foundation material which is suitable for embankments and suitable surplus excavated material shall be used in the construction of embankments.		The material was hauled of to another construction project outside the Central 70 Project limits.	Conformance	9/17/2020 5:21:23 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unsuitable material removed below designed elevation shall be replaced with approved material.		The area was excavated to the appropriate elevation behind the SOE wall for Abutment 1 low overhead drilled shaft installation.	Conformance	9/17/2020 5:21:23 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		Unsuitable material removed below designed elevation shall be replaced with approved material.		Approved Class 2 material was replaced.	Conformance	8/21/2020 4:29:17 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		Unsuitable material removed below designed elevation shall be replaced with approved material.		All unsuitable material was removed.	Conformance	4/30/2020 2:13:58 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Rock, hardpan, or other unyielding material encountered in trenches for culvert pipe or conduit shall be removed below the designed grade for a minimum depth of 12 inches.		No unyielding material was witnessed	Conformance	9/16/2020 11:15:32 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Electrical	Cover	8/12/2020 4:58:22 PM - 06:00	The base of structure backfill shall be scarified to a depth of 6 inches and compacted with moisture and density control prior to placement of any structural element or structure backfill.		The manhole backfill underneath the structure was brought up to the appropriate elevation by shoveling native material against aluminum stay-form material on Friday, July 24th. The backfill prior to placing stone was compact with the excavator bucket. The type of compaction shall be the same as required for Structure Backfill (Class 2) which is 95% of maximum dry density. IQC came out on Monday, July 27th and was able to get a passing test.	Field Resolved	7/27/2020 12:58:52 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		The base of structure backfill shall be scarified to a depth of 6 inches and compacted with moisture and density control prior to placement of any structural element or structure backfill.		The base of structure backfill was scarified to the depth of six inches and compacted with moisture and density control prior to the structural backfill being placed as the base for the CBC floor.	Conformance	2/3/2021 8:09:49 AM -07:00	C		Closed
Central 70	C 0704-241	Electrical	Cover	8/12/2020 4:58:22 PM - 06:00	The type of compaction shall be the same as that required for Structure Backfill (Class 2), as specified below.		Tied to comment #2 above.	Resolved	10/19/2020 10:28:55 AM -06:00	Audit Comment	Passing density was obtained as stated in item 2	Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		The type of compaction shall be the same as that required for Structure Backfill (Class 2), as specified below.		Compaction operation was conducted in the same manner as Class 2 backfill.	Conformance	8/21/2020 4:29:17 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The type of compaction shall be the same as that required for Structure Backfill (Class 2), as specified below.		Material was compacted, and proof roll was done prior to CIP Wall operations beginning in area.	Conformance	8/12/2020 12:34:44 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		All backfill material was moisture conditioned off-site, no water was used onsite.	Conformance	5/11/2020 10:44:01 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		Excessive water was not used	Conformance	9/3/2020 3:24:52 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The excessive use of water during backfilling operations will not be permitted.		I did not observe the contractor using excessive water during the backfilling operation.	Conformance	9/23/2020 10:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The excessive use of water during backfilling operations will not be permitted.		I did not observe the contractor using too much water during the backfill operation and the moisture content was within specification on the nuclear density gauge tests.	Conformance	9/11/2020 9:59:07 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		I did not observe excess water being used during the backfilling operation.	Conformance	2/3/2021 8:10:16 AM -07:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		The excessive use of water during backfilling operations will not be permitted.		Excess water was not used during the backfilling process.	Conformance	2/3/2021 8:09:49 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		Limited water was used only when necessary	Conformance	3/15/2021 1:19:29 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		The contractor used flowfill for the abutment 5 phase 5A backfill.	Conformance	1/26/2021 9:08:54 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		Excessive use of water was not observed during the backfill of the wall.	Conformance	2/26/2021 10:19:25 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		I did not observe the contractor using equipment or methods that caused excessive displacement or damage to the wall.	Conformance	2/26/2021 10:19:25 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		I observed proper equipment and compaction methods being used during backfilling of wall 202-W1.	Conformance	2/3/2021 8:10:16 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		Compaction equipment was adequate for structure.	Conformance	4/27/2021 8:38:07 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		Compaction was completed without excessive horizontal or vertical earth pressures against structures.	Conformance	3/9/2021 3:54:45 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		Proper compaction equipment was used, so that no excessive displacement or overturning was observed.	Conformance	5/11/2020 10:44:01 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		Excessive equipment was not used.	Conformance	11/2/2020 3:51:12 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		The backfill material was not placed against newly constructed concrete structure until it developed the specified compressive strength of 0.8fc.	Conformance	6/22/2020 8:56:23 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Abutment was allowed to reach compressive strength prior to backfill.	Conformance	6/16/2020 12:02:09 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Backfill was not placed until concrete had developed proper strength.	Conformance	5/11/2020 10:44:01 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Strength was meet	Conformance	9/3/2020 3:24:52 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		The abutment and the CBC were not recently cast so the concrete had developed 100% of compressive strength.	Conformance	9/11/2020 9:59:07 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		it was verified that the CIP wall structure was above .80f'c before backfilling was started.	Conformance	1/14/2021 9:43:25 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		The backfill material was not deposited against newly constructed masonry or concrete structures.	Conformance	9/23/2020 10:17:11 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Backfill was not completed until structure gained strength.	Conformance	3/9/2021 3:54:45 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Abutment was cured to proper strength prior to backfill operation beginning.	Conformance	3/29/2021 1:07:35 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Abutment achieved 80% strength prior to backfill beginning.	Conformance	4/27/2021 8:38:07 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Compressive strength of 0.8f'c as determined by maturity meters was achieved prior to backfill placement.	Conformance	2/3/2021 8:10:16 AM -07:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		The CBC had already achieved full strength as determined by maturity meters and sat for over a month prior to backfilling operations.	Conformance	2/3/2021 8:09:49 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		The abutment footing had achieved full strength before placement of the flowfill.	Conformance	1/26/2021 9:08:54 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		The concrete wall sat for at least two weeks prior to backfilling operations and had developed a compressive strength of at least 0.8f'c.	Conformance	2/26/2021 10:19:25 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Concrete compressive strength for structures supporting lateral earth pressure shall conform to subsection 601.12(o). Concrete compressive strength shall be determined by maturity meters.		The concrete had achieved full compressive strength determined by maturity meters before the placement of the flowfill against the structure.	Conformance	1/26/2021 9:08:54 AM -07:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		Concrete compressive strength for structures supporting lateral earth pressure shall conform to subsection 601.12(o). Concrete compressive strength shall be determined by maturity meters.		Concrete strength had achieved 100% as determined by maturity meters prior to backfilling.	Conformance	2/3/2021 8:09:49 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill at the inside of bridge wingwalls and abutments shall be placed before curbs or sidewalks are constructed over the backfill and before railings on the wingwalls are constructed.		Backfill was placed prior to any other work progressing around area.	Conformance	5/11/2020 10:44:01 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill at the inside of bridge wingwalls and abutments shall be placed before curbs or sidewalks are constructed over the backfill and before railings on the wingwalls are constructed.		Backfill was placed prior to other items being constructed.	Conformance	11/2/2020 3:51:12 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unless otherwise indicated in the Contract or directed, all sheeting and bracing used in making structure excavation shall be removed by the Contractor prior to backfilling.		The contractor followed the sequence in the shop drawings prior to backfilling the abutment.	Conformance	6/22/2020 8:56:23 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		Backfill was uniformly distributed.	Conformance	11/2/2020 3:51:12 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		Backfill was comprised of Class 1 material.	Conformance	6/16/2020 12:02:09 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		Materials were approved and properly graded	Conformance	9/3/2020 3:24:52 PM -06:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		backfilled appropriately	Conformance	3/20/2020 12:40:44 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		Backfill consisted of approved Class 1 material that was uniformly distributed in layers.	Conformance	9/23/2020 10:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		the backfill process was to uniformly backfill the entire wall at the same time in uniform lifts.	Conformance	1/14/2021 9:43:25 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		The backfill consists of an approved backfill material that was uniformly distributed in layers that were brought up on all sides of the structure.	Conformance	9/11/2020 9:59:07 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		Material properly distributed in layers throughout equally before adding more materials	Conformance	3/15/2021 1:19:29 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		Uniform layers were placed.	Conformance	3/29/2021 1:07:35 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		Backfill was placed in 6" lifts.	Conformance	3/9/2021 3:54:45 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		Backfill layers were done in proper lifts and rolled until density was met	Conformance	3/15/2021 1:19:29 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		I did not observe the contractor placing layers in excess of 6 inches and did observe the contractor compacting the fill to the required density prior to adding a layer.	Conformance	2/26/2021 10:19:25 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		I did not observe the contractor placing layers that exceeded 6 inches in depth and all were compacted to the required density before the next layer was placed.	Conformance	9/11/2020 9:59:07 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		loose backfill lifts were measured to be 8" in depth and after compaction and meeting 95% density the lift was 6" in depth.	Conformance	1/14/2021 9:43:25 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		Each layer of backfill did not exceed 6 inches and was compacted to the required density before successive layers were placed.	Conformance	9/23/2020 10:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		The drainage crew performing the backfill of the structure was observed placing the lift of class 1 at 1'. IQC was contacted and the issue was addressed.	Field Resolved	8/12/2020 12:35:07 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		proper lift placement	Conformance	3/20/2020 12:40:44 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		Backfill was properly placed	Conformance	9/3/2020 3:24:52 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		Backfill was placed in 6 inch lifts, and compacted prior to next lift being placed.	Conformance	6/16/2020 12:02:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Structure backfill (Class 1) shall be compacted to a density of not less than 95 percent of maximum dry density determined in accordance with AASHTO T 180 as modified by CP 23.		Class 1 material was compacted to proper density.	Conformance	11/2/2020 3:51:12 PM -07:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	12/9/2019 12:15:53 PM - 07:00	Slump Cone per AASHTO T 119		The technician failed to perform the Slump test(AASHTO T119) during his random acceptance testing of the 3rd load. Due to this his estimate of the slump (3") was wildly inaccurate. My testing of the concrete slump was yielded a measurement of 0.75", typical of slip form paving mixes. This difference of 2.25" exceeds the maximum allowable difference of 0.5".	IAT is working closely with IQC to get this individual retested on the both air content (AASHTO T152) as well as Slump (AASHTO T119). IAT will be switching to night shift to get this accomplished.	1/14/2020 1:48:38 PM -07:00	Audit Comment	Alpha is not going to be testing concrete until he get trained and talk to about basic ACI testing. At this time he is doing something else in the project.	Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241		IAT Materials Testing		Slump Cone per AASHTO T 119		During the slump (AASHTO T119) portion of a random IAT, a Significant differences >0.5 inches was discovered. Aaron Vong the IQC representative was asked about his result and if he could think of any reason for the difference. He informed IAT that due to the nature of the crowded testing area he was unable to find a level spot and was forced to perform the test on a slant. This seems like a very plausible reason for the difference. A retest was performed on AASHTO T119 1 week later which yielded and acceptable difference. The technician was reminded of the importance of setting up equipment properly to ensure consistent and reliable acceptance results.	Field Resolved	1/7/2021 1:35:32 PM -07:00	Field Resolved		Closed
Central 70	C 0704-241		IAT Materials Testing	6/24/2021 2:09:58 PM - 06:00	Slump Cone per AASHTO T 119		While qualifying Chris Barry (Kleinfelder) a difference of 1.0" was observed during the Slump (AASHTO T119) portion of the test. IAT & IQC personnel used concrete from the same wheelbarrow and with no visible segregation of the	concur	10/1/2021 1:17:16 PM -06:00	Audit Comment	After it came to our attention, IQC removed Chris Barry from the schedule for one day and scheduled a meeting with Chris	Closed

mix. Chris Barry was informed that the difference was large to deem it significant and a retest on AASHTOT 119 would need to be performed in the near future.

During the retest of Chris Barry approx.. 1 week later a sample was obtained and shared much in the same manner as the previous test. This time a significant difference was observed on the Air Content portion.
 IQC Air Content : 7.8%
 IAT Air Content : 6.4%
 Chris was observed insufficiently filling his air meter after filling and striking off the concrete from the measure prior to reaching initial pressure. Since there were air bubbles that were not removed the Air content rose causing the significant difference. Once Chris opened his petcocks the usual spray of water was not present. This led me to confirm my suspicion that all the air was not removed per the specification. IAT asked Chris if he would mind rerunning the test from this failed step forward. He obliged

for Training and also second meeting with Chris and IAT for talking about the field result. I asked IAT to reschedule an IAT Test the next day. after that everything went well.

and this time results were exactly the same @ 6.4%. However when reporting his results he failed to report his new number of 6.4% instead opting for his original number causing an addition significant difference. The importance of reporting the correct result was explained to Chris by IAT. And then relayed to IQC Lab managers Mike Moore & Mahdi Almahasnah, which was reiterated. The reporting as well as the failure to perform the test properly warrant further retesting.

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241		IAT Materials Testing	12/23/2019 9:22:44 AM - 07:00	Air Content - Air Meter per AASHTO T 152		A significant difference exceeding the allowable 0.5% differences was detected during the testing of air content of 608 sidewalk concrete. The Technician, Matt Lorenz was observed performing the air content test per AASHTO T152 but a significant difference of 0.7% was discovered. Due to eliminating variables in sampling and observations of the testing the air meter is thought to be out of calibration. Similiar unit weights were observed by PC, IQC & IAT. This supports this theory. A retest will be completed as soon as possible.	IAT performed a retest on the technician. There were only minor differences observed during this test. IAT is working with IQC to take a closer look at individual air meters in the future. The retest report is attached.	1/14/2020 1:45:37 PM -07:00	Audit Comment	IQC Tech mistakenly took Equipment were not calibrated at that time. Therefore, IQC took steps to prevent this from happening. The air meter was calibrated afterward, Equipment now are assigned to each tester and they will calibrate them every 3 months or if needed.	Closed
Central 70	C 0704-241		IAT Materials Testing	12/9/2019 12:15:53 PM - 07:00	Air Content - Air Meter per AASHTO T 152		A Significant difference exceeding the max allowable difference of 0.5% (IAT - 6.0% & IQC - 6.8%) during the air content(AASHTO T152) portion of the qualification. This difference could be attributed to several factors: First, and what i feel to be the most important is that during my observation of Alpha's testing methods during his second fixed test, I observed his lift	IAT is working closely with IQC to get this individual retested on the both air content (AASHTO T152) as well as Slump (AASHTO T119). IAT will be switching to night shift to get this accomplished.	1/14/2020 1:48:32 PM -07:00	Audit Comment	Alpha is not going to be testing concrete until he get trained and talk to about basic ACI testing. At this time he is doing something else in the project.	Closed

thicknesses varied greatly while filling the air meter. His rodding was sporadic and he struck the bottom of the meter forcefully several times. On his 3rd and last lift he under-filled the pot and rodded all the way to 25. Realizing that he was short he simply added an additional scoop of concrete and rodded 6 or 7 more times. This differs from AASHTO T152 in that each lift shall only be rodded 25 times. In this case Alpha should have started over or added more material before reaching the 25 rod limit. I informed Alpha that what he had just done was not the correct way to perform this test.

Second, is that sampling during the testing of the 3rd (Random Acceptance) load, was not a true split sample due to us sampling in tandem fashion one right after another. I don't believe this was sufficient enough to cause such a large 0.8% difference because OVT's George Medved was on site and also tested the truck sampling just after me. Our numbers

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241		IAT Materials Testing	3/5/2020 8:41:00 AM - 07:00	Air Content - Air Meter per AASHTO T 152		were much closer just 0.1% difference.						
							<p>A significant difference of greater than 0.5% (6.4% IQC & 5.6% IAT) was detected during a qualification of Noe Avitia on 601 Concrete. Noe and I both pulled our samples from the same wheelbarrow while PC sampled independently but just seconds before ours. We both performed our tests quickly as we were planning on fabricating our cylinders back at the IQC lab and were concerned about the 15min time limit. In the rush to complete the test quickly the filling of the air pot with concrete and then water seemed to be the cause of the difference. By filling the pot with less of the rock and more of the cement/slurry material it can cause a difference in unit weight and subsequently air content. Noe's lighter unit weight of 35.3 compared to PC & IAT's value of 36.1 & 36.2 respectively contributed to the significant difference. It was also observed that Noe failed to top off the petcocks with water after pumping</p>	<p>A retest was performed and only minor differences were detected. The report is attached.</p>	5/16/2020 8:03:18 AM -06:00	Audit Comment	<p>after the Audit on Noe, IQC Manger had meeting with Noe about it to go through training and expectation from him to follow the ASSHTO & CDOT spec. Jesse did audit on Noe in the field and he passed the internal competency evaluation. Later on CDOT, IAT, AND IQC had meeting with Noe explaining the importance of IAT. After the meeting Ben H, Rebecca, Jesse witness IAT audit on Noe, result passed. From now on IQC Mangers will work with IAT for requesting the yearly IAT Audit</p>	Closed	

							<p>up to initial pressure. By failing to remove and air bubbles trapped in the top of the meter it can cause an inaccurate reading with a higher result.</p> <p>I ruled out the air meters calibration being the cause of the difference after Mahdi informed me that the air meter was calibrated sometime in January and was checked with a 5% air "bomb". To avoid this kind of issue in the future the tester should slow down the process and insure the proper selection of material from the sample. This extra step of ensuring that all of the air is removed from the airpot after reaching initial pressure is often overlooked by technicians in a hurry but can cause inaccurate results and may even be the difference between accepting and rejecting a load of concrete.</p>				on testers.

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing		Air Content - Air Meter per AASHTO T 152		<p>It was observed during a qualification of Tedele G on 601 concrete that his air meter receptacle was caked with dried concrete. This would cause the unit weights being reported to be incorrect. It may or may not cause inaccurate results during the AASHTO T152 portion of the test. In this case there was no Significant Difference. However do to the caked on concrete the air meter would not calibrate properly. IAT assisted the technician in cleaning his air meter and fixing a slow leak in the pressure chamber. Unfortunately the meter could not be cleaned all the way and a new one was given to the tech. An up to date calibration form was provided to IAT and a Retest was performed. Only minor differences were detected. The importance of cleaning and proper care as well as calibration was relayed to all technicians by their managers.</p>	Field Resolved	5/26/2020 9:21:57 AM -06:00	Field Resolved		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241		IAT Materials Testing		Air Content - Air Meter per AASHTO T 152	<p>A significant differences >0.5% was observed during the AASHTO T152 portion of a 601 concrete qualification. One sample was obtained with IAT's wheelbarrow, remixed and tested by both parties. A difference of 0.9% was observed. Both IQC and PC had very similar results. Both tests were passing so the pour proceeded. I immediately took a look at my air pots calibration while in the field. I performed a 5%, 10% and 15% displacement while in the field with passing results. After cleaning up our gear Feras was asked to take a look at his Air meter's calibration. The following day a newly performed calibration sheet was provided to IAT. A retest of 601 concrete was performed with Feras on 5/19/2020 with passing results. Both reports are attached.</p>	Field Resolved	5/27/2020 1:05:11 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241		IAT Materials Testing		Compressive Strength - Compressive Strength per ASTM C 39	<p>During a random qualification test of IQC lab representative Leo Rodriguez, a significant difference greater than 10% of IAT's avg 28-day strength was</p>	Field Resolved	6/8/2020 10:19:34 AM -06:00	Field Resolved		Closed

detected. The difference exceeded the allowable by a large margin at 20.9%. After speaking to IQC's lab manager Mahdi it was concluded that the cause was due to each groups compressive strength specimens being stored in different locations in conjunction with the IQC cylinders not being picked up for 3 full days being left over the weekend. 3 days exceeds the limit in which specimens are supposed to be stripped of their molds and into a temperature controlled water bath. In this case there was cold weather and may have been negatively affected by low temperatures. IQC representative Landon Pentland could not accommodate IAT's specimens and they had to be brought to our field lab and cast. IAT and IQC continue to work at keeping the initial cure as close to the same as possible. In addition to the continued work of keeping initial cure the same there has been an increased effort to hold the testers who make

							<p>this specimens accountable for their stripping and logging in a timely fashion. A retest of both Leo on Compressive Strength and Landon on fabricating cylinders was performed with only minor differences.</p>					
Central 70	C 0704-241	IAT Materials Testing	9/21/2020 12:00:00 AM - 06:00	Compressive Strength - Compressive Strength per ASTM C 39			<p>The Significant Differences discovered during the Round Robin testing appeared to be from possible sampling issues as well as actual fabrication of cylinders. It was discovered that a true split of the sample was not performed by the IQC and IAT individual. This in addition to rushing during the fabrication process may have caused such a significant difference. A retest was performed on on the next available set of Compressive strength Specimens with only minor differences. A retest on the IQC individual who fabricated will be performed as soon as possible. Addition Round Robin testing will also be performed where careful adherence to the spec will be followed.</p>	Field Resolved	9/22/2020 8:26:39 AM -06:00	Field Resolved		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241		IAT Materials Testing	3/30/2020 4:58:08 PM - 06:00	Compressive Strength - Compressive Strength per ASTM C 39		The difference between the average 28-day strength of IAT's(7760psi) & IQC's(6620psi) compressive strength specimens exceeded the max allowable difference of 10% at 13.6%. Mahdi Almahasnah was the tech who physically broke the cylinders however after discussion it seems unlikely that the difference was caused by the cylinder breaking equipment or initial curing/handling. Both sets of cylinders were fabricated at the IQC lab and had virtually identical curing conditions until the break date on 3/21/2020. Because these cylinders were fabricated during a qualification with Noe Avitia, where a significant difference was also discovered the 2 are very likely related. After sampling with IAT's wheelbarrow the sample was mixed and Noe obtained his sample. The portions of concrete obtained by Noe may have had a smaller portion of aggregate and more of the concrete slurry mixture. After testing, the remainder of the sample was used to	Several Retests have been performed with Mahdi on Compressive strength with only minor differences. IAT & IQC will continue to monitor that the process of fabricating and curing cylinders is being followed.	5/16/2020 8:08:07 AM -06:00	Audit Commen t	by comparing 7 days break to 28 days break, we see 7 days break were low to make what IAT got at 28 days. Cylinders were cured and broke per the spec. Unfortunat ely we can not tell if cylinders were cast correctly or maybe sample was not mixed but we believe this could have been the issue. on the same day Mahdi Broke another cylinders and matched with IAT on different field tester. Project Construction Assessments Overview as of September, 2022

						fabricate these cylinder which would also have less aggregate and a lower compressive strength.					
Central 70	C 0704-241		IAT Materials Testing		Aggregate Base Compaction - M/D Gauge per CP 80	<p>During the qualification of Dan Cannan on 304 Class 6 the technician was observed to not follow CP80 during the acceptance test. Upon arrival the Technician had already completed their testing and I was unable to observe. This was not ideal but I proceeded with the test to verify the gauge was accurate. Upon questioning Can about his test results he informed me that he only performed two, 1 minute tests to get his average. CP80 requires Four, 1-minute tests and an average. He indicted that this was his standard procedure. At this time we decided that it was best for him to find a new place to test, allowing his procedure to be observed properly. This time the test was completed per CP 80.</p> <p>During qualifications of other testers I have heard questions such as</p>	Field Resolved	7/8/2020 8:25:06 AM -06:00	Field Resolved		Closed

						<p>"You want me to run 4 tests, Right?" or "should I turn the guage 90 degrees?" That indicated to me that maybe some individuals were not performing acceptance testing per CP80 every single time. My concerns were brought to the attention of Billy Swanson after the test with Dan Cannan. We talked about where the confusion may have come from and what to do about it. Since WAQTC is a requirement to perform CP80 acceptance testing and it requires only two, 1-minute tests; some individuals may be following WAQTC instead of CP80. He then issued an email to each one of the technicians in the field with a statement about following CP 80 and attached a copy of the specification. At this time a retest was already performed on Dan Cannan so no further action is needed.</p>

Central 70	C 0704-241	ITS	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Installed as required	Conformance	10/1/2020 1:21:52 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Conduit used is HDPE as required.	Conformance	8/24/2020 12:37:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Electrical conduit is HDPE as required.	Conformance	8/24/2020 11:59:11 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Conduit within bore is HDPE	Conformance	7/24/2020 8:58:53 AM -06:00	C		Closed
Central 70	C 0704-241	Electrical	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Conduit was bored in and keep as a bundle. Seven 2" and two 6" conduits were installed per plan.	Conformance	7/9/2020 11:11:57 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Conduit that was used in bore is HDPE	Conformance	4/2/2020 10:38:57 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Conduit was bored from Josephine St east and west toward York and Columbine.	Conformance	7/7/2020 8:58:47 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Conduit within ITS boreshot is HDPE	Conformance	3/20/2020 8:43:01 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		During construction operations, the Contractor shall maintain boring logs that include the depth at specific distances along the bore. Boring logs shall be submitted on a weekly basis.		Bore logs submitted to KMP	Conformance	4/2/2020 10:38:57 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		During construction operations, the Contractor shall maintain boring logs that include the depth at specific distances along the bore. Boring logs shall be submitted on a weekly basis.		Bore logs submitted into Aconex	Conformance	7/24/2020 8:58:53 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		During construction operations, the Contractor shall maintain boring logs that include the depth at specific distances along the bore. Boring logs shall be submitted on a weekly basis.		Boring log submitted within ACONEX	Conformance	8/24/2020 11:59:11 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		During construction operations, the Contractor shall maintain boring logs that include the depth at specific distances along the bore. Boring logs shall be submitted on a weekly basis.		Bore logs submitted into ACONEX on a weekly basis. Bore logs kept during operation on site.	Conformance	8/24/2020 12:37:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		During construction operations, the Contractor shall maintain boring logs that include the depth at specific distances along the bore. Boring logs shall be submitted on a weekly basis.		Bore Logs submitted within ACONEX	Conformance	10/1/2020 1:21:52 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Conduit splices shall be kept to a minimum and all such locations shall be Approved and inspected by the Engineer and the authority having jurisdiction.		Two conduit splices approved by CDOT representation.	Conformance	8/24/2020 12:37:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit splices shall be kept to a minimum and all such locations shall be Approved and inspected by the Engineer and the authority having jurisdiction.		Splices were kept to a minimum and GPS before being backfilled.	Conformance	7/28/2020 4:17:54 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit splices shall be kept to a minimum and all such locations shall be Approved and inspected by the Engineer and the authority having jurisdiction.		Splices at each end of bore approved by the department	Conformance	7/24/2020 8:58:53 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit splices shall be kept to a minimum and all such locations shall be Approved and inspected by the Engineer and the authority having jurisdiction.		Conduit Spliced together to minimize area of possible future fault. Splices inspected and passed.	Conformance	4/2/2020 10:38:57 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed.		Conduit plugs installed immediately upon completion	Conformance	4/2/2020 10:38:57 AM -06:00	C		Closed
Central 70	C 0704-241	Electrical	Electrical		Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed.		Conduit plugs were installed immediately after bore shot was complete.	Conformance	7/9/2020 11:11:57 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed.		Conduit plugs were installed immediately after conduit was bored in.	Conformance	7/7/2020 8:58:47 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed.		Conduit plugs were installed after conduit was installed.	Conformance	7/28/2020 4:17:54 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed.		Conduit plugs installed as required	Conformance	8/24/2020 12:37:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed.		Installed as required	Conformance	10/1/2020 1:21:52 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed.		Conduit plugs installed as required.	Conformance	8/24/2020 11:59:11 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All conduits shall use sweeps to elevate the buried conduits to the final grade within a pull box or manhole.		Conduit is swept to final grade.	Conformance	8/24/2020 11:59:11 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All conduits shall use sweeps to elevate the buried conduits to the final grade within a pull box or manhole.		Conduit swept into final confirmation of pullboxes on east side of Steele BLVD.	Conformance	8/24/2020 12:37:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All conduits shall use sweeps to elevate the buried conduits to the final grade within a pull box or manhole.		Installed as required	Conformance	10/1/2020 1:21:52 PM -06:00	C		Closed

Central 70	C 0704-241	ITS	Electrical		All conduits ends shall be free from sharp edges and burrs.		All conduits are free from Burrs and sharp edges.	Conformance	8/24/2020 12:37:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		All conduits ends shall be free from sharp edges and burrs.		Field resolved with SECO. Because conduits are not yet in their final configuration(within pullboxes), the conduit ends are not free of sharp ends/burrs. Once conduits are cut to be placed within pullboxes they will be free of sharp edges/burrs. SECO has been good thus far with their conduit installation into pullboxes so I have no doubt this will be completed correctly.	Field Resolved	8/24/2020 11:59:11 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	ITS	Electrical		All conduits ends shall be free from sharp edges and burrs.		Conduits were cleaned up before plugged and sharp edges were removed.	Conformance	7/7/2020 8:58:47 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All conduits ends shall be free from sharp edges and burrs.		Conduit is free from sharp edges/burrs	Conformance	4/2/2020 10:38:57 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull box removable lids shall be provided with a skid-resistant surface and have the words "CDOT COMM", or "CDOT POWER", as well as "EMS MARKER EMBEDDED IN COVER" and the tier level rating cast into the surface.		Pull box lid has "CDOT COMM" and "EMS MARKER EMBEDDED IN COVER" cast into it	Conformance	2/6/2020 2:51:36 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull box removable lids shall be provided with a skid-resistant surface and have the words "CDOT COMM", or "CDOT POWER", as well as "EMS MARKER EMBEDDED IN COVER" and the tier level rating cast into the surface.		Pull box lid is labeled "CDOT COMM" and also labeled "EMS MARKER EMBEDDED IN COVER"	Conformance	2/6/2020 2:49:12 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A minimum of 12 inches of ¾ inch granite-gravel shall be installed as a base for the pull box. The granitegravel shall be free of dirt and debris and spread evenly to facilitate a level base for the pull box.		Granite installed per specifications	Conformance	2/6/2020 2:51:36 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		A minimum of 12 inches of ¾ inch granite-gravel shall be installed as a base for the pull box. The granitegravel shall be free of dirt and debris and spread evenly to facilitate a level base for the pull box.		Granite installed per specifications	Conformanc e	2/6/2020 2:49:12 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Wire mesh shall be installed in to completely surround the box.		Wire mesh installed	Conformanc e	2/6/2020 2:49:12 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Wire mesh shall be installed in to completely surround the box.		Wire mesh installed per specifications	Conformanc e	2/6/2020 2:51:36 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Three sides of the concrete apron shall measure 12 inches wide by 6 inches deep and one side shall measure 18 inches wide by 6 inches deep.		Correct apron installed per specifications	Conformanc e	2/6/2020 2:51:36 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Three sides of the concrete apron shall measure 12 inches wide by 6 inches deep and one side shall measure 18 inches wide by 6 inches deep.		Concrete apron is per specifications	Conformanc e	2/6/2020 2:49:12 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The apron side measuring 18 inches wide by 6 inches deep shall be located on the edge of the pull box furthest from the roadway, and shall contain a 4 inch diameter round knockout for fiber optic location marker installation.		Concrete apron is installed correctly in association to the roadway	Conformanc e	2/6/2020 2:49:12 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	UPRR Structures		Structural Carbon Steel. Structural carbon steel for bolted or welded construction shall conform to AASHTO M 270 (ASTM A 709) Grade 36. Material supplied for main members in tension as designated in the Contract shall meet a longitudinal Charpy V-notch (CVN) value of 15 foot-pounds at 40 °F. Testing shall be in accordance with AASHTO T 243 (ASTM A 673). The H frequency of heat testing shall be used.		The steel deck plates used for the bridge deck conform to AASHTO M 270 (ASTM A 709) Grade 36.	Conformanc e	7/30/2021 8:03:07 AM -06:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		Structural Tubing. Steel base metal to be used for tubular structures, including bridge rail, shall conform to the plans or AWS D1.1 section 5.2.1. The grade and specification to be used shall be specified in the Contract.		Steel base metal to be used for tubular structures conforms to AWS D1.1 section 5.2.1 and to the M-S Standards.	Conformanc e	12/10/2019 2:04:39 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Sign Structures	Signing & Striping		Bolts. Bolts not otherwise specified in the Contract shall be zinc plated and meet the requirements of ASTM A 307 for Grade A Bolts. Bolts shall have single self-locking nuts or double nuts unless otherwise specified in the Contract. Beveled washers shall be used when bearing surfaces have a slope exceeding 1:20 with respect to a plane normal to the bolt axis.		All bolts used meet the requirements of ASTM A307/A325 and have self locking or double nuts.	Conformance	12/10/2019 2:04:39 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		Bolts. Bolts not otherwise specified in the Contract shall be zinc plated and meet the requirements of ASTM A 307 for Grade A Bolts. Bolts shall have single self-locking nuts or double nuts unless otherwise specified in the Contract. Beveled washers shall be used when bearing surfaces have a slope exceeding 1:20 with respect to a plane normal to the bolt axis.		Bolts are zinc plated and meet the requirements of ASTM A 307 for Grade A bolts. Bolts have single self-locking nuts.	Conformance	3/3/2021 1:17:50 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		Galvanized and Metallized Steel. When shown in the Contract, structural steel shall be galvanized in accordance with AASHTO M 111. Steel surfaces to be metallized shall be coated in accordance with AWS C2.2, Recommended Practice for Metallizing with Aluminum and Zinc for Protection of Iron and Steel. When the Contract specifies galvanizing, metallizing may be substituted.		The conduits and hardware are all galvanized in accordance with AASHTO M 111.	Conformance	3/3/2021 1:17:50 PM -07:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		Galvanized and Metallized Steel. When shown in the Contract, structural steel shall be galvanized in accordance with AASHTO M 111. Steel surfaces to be metallized shall be coated in accordance with AWS C2.2, Recommended Practice for Metallizing with Aluminum and Zinc for Protection of Iron and Steel. When the Contract specifies galvanizing, metallizing may be substituted.		The structural tubing used in the sign structures is galvanized according to AASHTO M111.	Conformance	12/10/2019 2:04:39 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	UPRR Structures		Mill Test Reports. The fabricator shall furnish the quality assurance inspector with copies of the certified mill test reports on all material that will be used. Mill test reports shall be furnished prior to cutting of the steel or any other fabrication. The fabricator may furnish, with the approval of the Engineer, material from stock, provided it can be identified by rolling direction (where orientation is specified), heat number, and mill test reports.		Mill test reports were supplied by the fabricator for all materials used for the deck plates.	Conformance	7/30/2021 8:03:07 AM -06:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		Material which has been used elsewhere shall not be used in any part of this work without written approval or unless specifically provided for in the Contract.		All materials used in the sign structures is new material.	Conformance	12/10/2019 2:04:39 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes	UPRR Structures		(h) Certified Mill Test Reports for all mill steel used in the manufacture of the bolts, nuts, and washers. The mill test report shall indicate where the material was melted and manufactured.		CMTR's were supplied with all bolts, nuts and washers.	Conformance	3/3/2021 1:17:50 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		Written Practice and Records. The fabricator's Process Control Plan shall detail the nondestructive testing procedures, including the weld identification and location system. It shall also include the fabricator's Written Practice for the Administration of Personnel Qualification and Certification Program in accordance with The American Society for Nondestructive Testing SNT-TC-1A. The written practice shall indicate the specific requirements of the fabricator. Qualification records of all nondestructive testing personnel shall be included in the written practice. Each fabricator's written practice shall be subject to the approval of the QA inspector. All nondestructive test results shall be available for review during fabrication and forwarded to the QA inspector prior to the acceptance of the assembly.		This girder failed the initial MT and was repaired using a D1.5 approved procedure (attached to the traveler papers), and subsequently passed MT testing. Later MT was performed on 100% of the flange/web fillet welds for this girder and it passed, and the documentation is attached to this traveler package.	Conformance	5/8/2020 4:18:42 PM -06:00	C		Closed

Magnetic particle testing shall be conducted in accordance with ASTM E 709 and AWS D1.5, except as amended herein. Alternating current shall be used. The yoke spacing shall be between 2 and 4 inches. The minimum lifting power shall be 10 pounds. Red dry particles shall be used. The light intensity shall meet ASTM E 709, Section 7.		This girder initially failed MT, but a D1.5 repair procedure (attached in the traveler papers) was performed and the girder subsequently passed MT. Later MT was performed on 100% of the flange/web fillet welds for this girder and it passed, and the documentation is attached to this traveler package.	Conformance	5/5/2020 4:07:23 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures	5/11/2020 7:54:38 AM - 06:00	Magnetic Particle Testing. Magnetic particle testing shall be performed on areas defined in AWS D1.5 and this subsection. Magnetic particle testing shall be conducted in accordance with ASTM E 709 and AWS D1.5, except as amended herein. Alternating current shall be used. The yoke spacing shall be between 2 and 4 inches. The minimum lifting power shall be 10 pounds. Red dry particles shall be used. The light intensity shall meet ASTM E 709, Section 7.		MT was performed on 100% of the flange/web fillet welds for this girder and it passed, and the documentation is attached to this traveler package.	Conformance	5/6/2020 1:44:29 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	UPRR Structures		Magnetic Particle Testing. Magnetic particle testing shall be performed on areas defined in AWS D1.5 and this subsection. Magnetic particle testing shall be conducted in accordance with ASTM E 709 and AWS D1.5, except as amended herein. Alternating current shall be used. The yoke spacing shall be between 2 and 4 inches. The minimum lifting power shall be 10 pounds. Red dry particles shall be used. The light intensity shall meet ASTM E 709, Section 7.		MT was performed on 100% of the flange/web fillet welds, 100% of the bearing stiffeners, 25% of the bent stiffeners, 25% of the straight stiffeners, 25% of the intermediate stiffeners, the bolster and the ends of the girder and it passed, and the documentation is attached to this traveler package.	Conformance	6/10/2020 8:39:51 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		Magnetic Particle Testing. Magnetic particle testing shall be performed on areas defined in AWS D1.5 and this subsection. Magnetic particle testing shall be conducted in accordance with ASTM E 709 and AWS D1.5, except as amended herein. Alternating current shall be used. The yoke spacing shall be between 2 and 4 inches. The minimum lifting power shall be 10 pounds. Red dry particles shall be used. The light intensity shall meet ASTM E 709, Section 7.		T was performed on 100% of the flange/web fillet welds, 100% of the bearing stiffeners, 25% of the bent stiffeners, 25% of the straight stiffeners, 25% of the intermediate stiffeners, the bolster and the ends of the girder and it passed, and the documentation is attached to this traveler package.	Conformance	6/9/2020 10:01:22 AM -06:00	C		Closed

Central 70	C 0704-241	UPRR	Railroads		Magnetic Particle Testing. Magnetic particle testing shall be performed on areas defined in AWS D1.5 and this subsection. Magnetic particle testing shall be conducted in accordance with ASTM E 709 and AWS D1.5, except as amended herein. Alternating current shall be used. The yoke spacing shall be between 2 and 4 inches. The minimum lifting power shall be 10 pounds. Red dry particles shall be used. The light intensity shall meet ASTM E 709, Section 7.		MT was performed on 100% of the flange/web fillet welds, 100% of the bearing stiffeners, 25% of the bent stiffeners, 25% of the straight stiffeners, 25% of the intermediate stiffeners, the bolster and the ends of the girder and it passed, and the documentation is attached to this traveler package.	Conformance	1/20/2021 3:15:04 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Magnetic Particle Testing. Magnetic particle testing shall be performed on areas defined in AWS D1.5 and this subsection. Magnetic particle testing shall be conducted in accordance with ASTM E 709 and AWS D1.5, except as amended herein. Alternating current shall be used. The yoke spacing shall be between 2 and 4 inches. The minimum lifting power shall be 10 pounds. Red dry particles shall be used. The light intensity shall meet ASTM E 709, Section 7.		MT was performed on 100% of the flange/web fillet welds, 100% of the bearing stiffeners, 25% of the bent stiffeners, 25% of the straight stiffeners, 25% of the intermediate stiffeners, the bolster and the ends of the girder and it passed, and the documentation is attached to this traveler package.	Conformance	1/26/2021 9:57:16 AM -07:00	C		Closed

Central 70	C 0704-241	Girders	UPRR Structures	5/11/2020 7:53:33 AM - 06:00	Fillet welds. Each design weld size on main member to main member and secondary member to main member weldments. All stop-starts and weld termini. All linear indications shall further be evaluated with 10x or 30x magnification. Verification shall be resolved by excavation.		This girder had MT field testing performed on it, and there was an indication of incomplete fusion. A D1.5 approved repair procedure (included in the traveler package) was used and the girder subsequently passed MT. Later MT was performed on 100% of the flange/web fillet welds for this girder and it passed, and the documentation is attached to this traveler package.	Conformance	5/6/2020 1:41:11 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Process. Welding of steel structures shall conform to AWS D1.5 as amended herein. All web and flange butt joints and web to flange welds shall be made using the submerged arc welding process (SAW). Alloy 'active' fluxes shall not be used in groove welds or fillet welds with more than three passes. Repairs may be made using submerged arc welding or shielded metal arc welding (SMAW). Flux core arc welding (FCAW) will be permitted on secondary to main member attachments when performed in the flat or horizontal positions. Vertical or overhead FCAW shall be limited to only that work approved by the QC inspector.		The FCAW-G welding process used on the UPRR span 2 deck plates conforms to AWS D1.5 amended.	Conformance	7/16/2020 3:26:45 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	UPRR Structures		Temporary Tack Welds. Temporary tack welds will not be permitted on splice plates to facilitate stack drilling. All temporary tack welds not incorporated into the final weld, shall be submitted to the Engineer for approval. Temporary tack welds that are approved shall be removed by grinding such that the plate thickness is not reduced by more than five percent, and tested in accordance with subsection 509.18(c).		Some temporary tack welds were performed and were removed by grinding such that the plate thickness was not reduced and was inspected by the IQC CWI (Eric Drobney).	Conformance	7/30/2021 8:03:07 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		General. Repairs made to correct undercut, craters, undersized welds, porosity, excessive roughness on oxygen cut gouges, and cracks shall not be performed without the knowledge of the PC inspector. Undercut may be prepared by contour grinding when approved by the Engineer. Areas repaired shall be recorded in accordance with AWS D1.5, paragraph 6.5.8. Surfaces that are air carbon arc gouged shall be preheated to a temperature of 200 to 300 °F prior to welding. Cracks removed prior to welding shall be penetrant tested or magnetic particle tested to assure their complete removal before welding. All repairs shall be penetrant or magnetic particle tested for soundness. This requirement applies equally to tack welds.		it was observed that some undercutting was present, the repair procedures highlighted in AWS D1.5 paragraph 6.5.8 were followed.	Conformance	5/5/2021 9:18:14 AM -06:00	C		Closed

Central 70	C 0704-241	UPRR	Railroads		Gas Certification. The Contractor shall furnish certification that the gas or gas mixture is suitable for the intended application in accordance with AWS D1.5 and the manufacturer's recommendations.		it was observed that the contractor had the certification highlighting that the gas mixture is suitable for the intended application.	Conformance	5/5/2021 9:18:14 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Gas Certification. The Contractor shall furnish certification that the gas or gas mixture is suitable for the intended application in accordance with AWS D1.5 and the manufacturer's recommendations.		The contractor furnished certification that the gas mixture used is suitable for the intended application in accordance with AWS D1.5 and the manufacturer's recommendations.	Conformance	7/16/2020 3:26:45 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Stud welding in the field. Automatic stud welding guns shall be used to weld studs to girders. The operator shall be qualified per AWS D1.5 Subsection 7.7.4. The base metal where the stud is to be welded shall be ground to bright metal immediately prior to the weld being made. Manual welding will not be allowed except to make repairs. Stud welding shall be in accordance with subsection 509.20 (h).		Automatic stud welding guns are being used and the operators and the operators are qualified to AWS D1.5 Subsection 7.7.4. Base metal was ground to bright metal immediately prior to the weld being made.	Conformance	4/7/2020 2:54:34 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		At least two steel girders shall be erected when girders are initially placed in any span, unless the Engineer provides a written waiver to this requirement. Diaphragms and cross frames between girders shall be connected to the girders and all diaphragm or cross frame connection bolt holes filled with bolts that are at least snug tight during erection. The Contractor's Engineer shall specify bolt torque requirements, if any, prior to releasing girders from the crane. Steel box girders need not be erected in pairs.		At least two girders were erected when initially placed in the span.	Conformance	4/7/2020 2:54:34 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Guardrail	Roadway	10/15/2020 11:37:39 AM - 06:00	All end terminals/transitions have been installed per manufacturer's recommendations/instructions have been inspected by IQC prior to being opened to traffic.		Hinge on the hinge post for the guardrail end treatment at 4 locations (WB Stations 2209+10, 2203+50 and EB Stations 2226+13 & 2338+40) are embedded in the SMA and do not follow manufacturer and M&S Details. Due to safety reasons the department was unable to measure the height of the rail. But based on the bearing plate being embedded in the asphalt it appeared the top of surface to center of rail does not match the height of 21-5/8" shown in the manufacturer drawings.	ENCR transferred to a Kietrac NCR 2225.	10/9/2020 10:10:03 AM -06:00	NC-2	ENCR 317 was written to address this issue	Closed
Central 70	C 0704-241	Guardrail	Roadway	10/15/2020 11:37:39 AM - 06:00	All end terminals/transitions have been installed per CDOT M&S Standard Plans when applicable.		The department has concerns this is not the only terminal installed incorrectly since it was observed at another terminal as well. All terminals should be checked to confirm they are installed correctly to operate as intended by the mfg. and CDOT M&S.	ENCR transferred to a Kietrac NCR 2225.	10/9/2020 10:10:11 AM -06:00	NC-2	ENCR 317 was written to address this issue	Closed
							For all items listed below the department check 5 random locations (WB Stations 2229+35, 2209+10, 2203+50 and EB Stations 2226+13 &					

2338+40) and all locations had the below issues. All terminals shall be checked to determine the extent of this issue and included with this NCR. (Attached are the M&S sheets for this item and an example photo).

(1) The department found that a flared paved approach to the end treatment has not been installed per M606-1 sheet 6. See photo 1 of an example of the paved approach.

(2a) It was also found that the SMA did not run the length of the terminal providing a smooth uniform surface for impact. Section A-A shows a typical section for the terminal with a cross slope not greater than 10:1.

(2b) The SMA was stopped abruptly both longitudinally and transversely at the terminal resulting in a vertical drop off during impact. As noted above Section A-A shows a smooth surface with a cross slope no greater than 10:1 and a longitudinal slope no greater than 20:1 is not being met.

(Note) For the end treatment being

Project Construction Assessments Overview as of September, 2022

							utilized (FLEAT 350/FLEAT-SP) there shall be a 15:1 taper from the edge of shoulder leading up to a 10' tangent prior to the terminal. The 10' Tangent can be found on Sheet 5 of M606-1. For pavement limits sheet 6 is utilized.					
Central 70	C 0704-241	Guardrail	Roadway	10/15/2020 11:37:39 AM - 06:00	All end terminals/transitions have been installed per CDOT M&S Standard Plans when applicable.		At several of the 5 terminals (WB Stations 2229+35, 2209+10, 2203+50 and EB Stations 2226+13 & 2338+40) the department found that top soil had not been placed to the top of SMA matching the 10:1 (max) cross slope. (see attachment to Item 1) All terminals shall be checked to determine the extent of this issue and included with this NCR.	ENCR transferred to a Kietrac NCR 2225.	10/9/2020 10:10:06 AM -06:00	NC-2	ENCR 317 was written to address this issue	Closed

Central 70	C 0704-241	Guardrail	Roadway		All end terminals/transitions have been installed per CDOT M&S Standard Plans when applicable.		End cable to FLEET was over tightened, causing the cable to become unbonded. After discussing with crew, field engineer, and IQC, this was corrected.	Field Resolved	11/16/2020 7:38:36 AM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Guardrail	Roadway	11/25/2020 12:14:11 PM - 07:00	All end terminals/transitions have been installed per CDOT M&S Standard Plans when applicable.		CDOT M&S requires a short stretch of Type 6 Section M curb to be installed under the three beam section of 3G Terminals from 8" before post 6 to the end of the concrete bridge rail. (Attached is the CDOT M&S Standard requiring this curb.) This curb has not been installed at terminals in the east segment and appears to be a project wide issue. All terminals will need to be evaluated to identify those which are missing the curb and if any washouts have occurred around bridge rail transitions or approach slabs due to the missing curb.		12/21/2020 9:24:04 AM -07:00	Audit Comment	KIC started installing the type 6 curb on 11/15/2020 on night shift. This item was identified in the PC punch list walks	Closed

Central 70	C 0704-241	Guardrail	Roadway		All end terminals/transitions have been installed per CDOT M&S Standard Plans when applicable.		At the 3G listed above the department identified that the wrong length of post was installed for posts 5 & 6 of the 3G terminal. Posts 5 & 6 were 6ft posts while the M-606-1 standard calls for posts 1-6 to be 7ft posts. This was brought up to IQC and an ENCR has been generated (ENCR-723). The department also identified that the terminal specified on the plans may be the wrong type and instead may need to be 3H terminal. PC has submitted an RFC to the designer. Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Slip forms were used.	Conformance	2/5/2021 10:47:02 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Type 7 bridge rail poured as cast in place	Conformance	2/26/2021 12:58:01 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	2/10/2021 2:04:19 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		it was observed that the bridge barrier was constructed by CIP method.	Conformance	5/5/2021 9:19:55 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Slip form was used.	Conformance	1/18/2021 9:13:46 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Slipform method used for barrier placement	Conformance	2/16/2021 8:47:52 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	12/10/2020 2:28:52 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slip formed.	Conformance	11/11/2020 1:36:25 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		barrier was cast-in-place	Conformance	3/12/2021 1:13:47 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway	11/5/2020 3:17:35 PM -07:00	Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		The barrier was placed using slip form methods	Conformance	11/5/2020 11:37:20 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was Cast in Place.	Conformance	7/23/2021 3:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed in conformance with specifications.	Conformance	6/10/2021 2:37:09 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier transitions were cast in place.	Conformance	6/7/2021 7:45:14 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	7/30/2021 3:45:41 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slip formed.	Conformance	7/1/2021 8:49:36 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Concrete Barrier was constructed by slipform	Conformance	4/30/2021 10:50:13 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Concrete was constructed by slipform.	Conformance	4/14/2021 9:11:59 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Concrete barrier was cast-in-place	Conformance	4/26/2021 1:20:27 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Concrete was poured as cast-in-place.	Conformance	4/21/2021 3:05:39 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier and glare screen were non-monolithically slipformed per field meeting conducted early January between KMP and CDOT.	Conformance	5/11/2021 11:36:29 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Slip form was used.	Conformance	1/18/2021 9:13:20 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	10/1/2020 10:37:20 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Slipform method was utilized	Conformance	1/11/2021 8:18:07 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	11/2/2020 3:51:46 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		slipform method was utilized	Conformance	1/11/2021 8:17:36 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		the barriers constructed type was cast-in-place.	Conformance	9/30/2020 10:13:29 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Concrete was slipformed.	Conformance	11/11/2020 1:33:51 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier wall was slipformed.	Conformance	8/12/2020 12:33:07 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway	9/21/2020 1:44:59 PM -06:00	Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	9/21/2020 11:47:56 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		slipform method was utilized	Conformance	12/11/2020 11:49:48 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		slipform method was utilized	Conformance	12/11/2020 11:48:48 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Concrete barrier was slipformed.	Conformance	10/1/2020 10:42:18 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Slipform method was utilized	Conformance	12/11/2020 11:48:22 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway	6/22/2020 2:20:03 PM -06:00	Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed. Slipform template was checked for dimensions prior to pour.	Conformance	6/21/2020 4:07:53 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier end section was cast in place per specifications.	Conformance	6/4/2021 9:43:51 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	9/16/2020 11:11:27 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The trench for the base of the cast-in-place reinforced barrier end anchorages shall be excavated to the lines and grades shown on the plans or established. The bottom of the trench shall be completed to the density specified in subsection 203.07(a)		Per plans.	Conformance	1/18/2021 9:13:20 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		The trench for the base of the cast-in-place reinforced barrier end anchorages shall be excavated to the lines and grades shown on the plans or established. The bottom of the trench shall be completed to the density specified in subsection 203.07(a)		Base of CIP Barrier was set to proper grade.	Conformance	6/7/2021 7:45:14 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The trench for the base of the cast-in-place reinforced barrier end anchorages shall be excavated to the lines and grades shown on the plans or established. The bottom of the trench shall be completed to the density specified in subsection 203.07(a)		Trench for barrier was excavated and compacted properly.	Conformance	7/23/2021 3:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The trench for the base of the cast-in-place reinforced barrier end anchorages shall be excavated to the lines and grades shown on the plans or established. The bottom of the trench shall be completed to the density specified in subsection 203.07(a)		Per plans.	Conformance	1/18/2021 9:13:46 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The trench for the base of the cast-in-place reinforced barrier end anchorages shall be excavated to the lines and grades shown on the plans or established. The bottom of the trench shall be completed to the density specified in subsection 203.07(a)		Install elevations were verified by contractor prior to placement.	Conformance	2/5/2021 10:47:03 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The trench for the base of the cast-in-place reinforced barrier end anchorages shall be excavated to the lines and grades shown on the plans or established. The bottom of the trench shall be completed to the density specified in subsection 203.07(a)		Trench for base was excavated and compacted properly.	Conformance	1/18/2021 8:54:24 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was minimally used, and completed within specifications.	Conformance	1/18/2021 8:54:24 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finish appeared acceptable.	Conformance	2/5/2021 10:47:03 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finish was acceptable.	Conformance	1/18/2021 9:13:46 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was performed in conformance with spec.	Conformance	12/10/2020 2:28:52 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was minimized, and performed in conformance with specifications.	Conformance	6/10/2021 2:37:09 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was minimized.	Conformance	7/1/2021 8:49:36 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was performed in accordance with specifications.	Conformance	7/30/2021 3:45:41 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Contractor will hand finish when forms are removed.	Conformance	5/11/2021 11:39:42 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was minimized, and performed in conformance.	Conformance	5/11/2021 11:36:29 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Finish work appears acceptable.	Conformance	1/18/2021 9:13:20 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was in conformance with 601.12	Conformance	10/1/2020 10:37:20 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway	12/10/2019 2:19:17 PM -07:00	When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Concrete median barrier does not meet the specifications for a Class 1 finish.	The section with the construction joint was removed and replaced.	12/19/2019 9:16:30 AM -07:00	Audit Comment	This barrier has not received the dry finish. and due to the construction joint was removed and replaced.	Closed
Central 70	C 0704-241	Barrier Walls	Roadway	7/9/2020 4:49:39 PM -06:00	When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was in conformance.	Conformance	5/20/2020 9:38:05 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway	7/9/2020 4:49:39 PM - 06:00	Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		The concrete was completed with a broom finish.	Conformance	5/20/2020 9:38:05 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		All exposed surfaces recieved a broom finish.	Conformance	9/16/2020 11:11:27 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Vertical faces recieved a broomed finish.	Conformance	2/7/2020 6:45:00 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		All exposed vertical surfaces received a broom finish.	Conformance	10/1/2020 10:37:20 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Broom finish performed.	Conformance	1/18/2021 9:13:20 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		vertical broom finish was applied	Conformance	1/11/2021 8:18:07 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		vertical broom finish was applied	Conformance	1/11/2021 8:17:36 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces recieved a broom finish.	Conformance	11/2/2020 3:51:46 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a broom finish.	Conformance	11/11/2020 1:33:51 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		vertical broom finish was applied	Conformance	12/11/2020 11:48:48 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		vertical broom finish as applied	Conformance	12/11/2020 11:49:48 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway	9/21/2020 1:44:59 PM - 06:00	Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed vertical faces recieved a broom finish.	Conformance	9/21/2020 11:47:56 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces of barrier received a broom finish.	Conformance	8/12/2020 12:33:07 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a broom finish.	Conformance	6/4/2021 9:43:51 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway	6/22/2020 2:20:03 PM - 06:00	Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Broom finish was applied.	Conformance	6/21/2020 4:07:53 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		vertical broom finish was applied	Conformance	12/11/2020 11:48:22 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces recieved a broom finish.	Conformance	10/1/2020 10:42:18 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed vertical surfaces received a vertical finish.	Conformance	5/11/2021 11:36:29 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Contractor will finish when forms removed.	Conformance	5/11/2021 11:36:57 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Surfaces were broom finished	Conformance	4/14/2021 9:11:59 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Concrete Barrier was broom finished	Conformance	4/30/2021 10:50:13 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		broom finish observed	Conformance	5/25/2021 2:56:23 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed vertical surfaces received a vertical broom finish.	Conformance	7/30/2021 3:45:41 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a broom finish.	Conformance	7/1/2021 8:49:36 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed vertical surfaces of barrier were given a broom finish.	Conformance	6/7/2021 7:45:14 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a vertical broom finish.	Conformance	6/10/2021 2:37:09 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a vertical broom finish.	Conformance	7/23/2021 3:05:12 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed vertical faces of barrier received a vertical broom finish.	Conformance	12/10/2020 2:28:52 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Broom finish completed .	Conformance	1/18/2021 9:13:46 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway	11/5/2020 3:17:35 PM -07:00	Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		The vertical broomed finish was present.	Conformance	11/5/2020 11:37:20 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Vertical broom finish was applied.	Conformance	11/11/2020 1:36:25 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Broom finish was acceptable.	Conformance	2/5/2021 10:47:03 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a broom finish.	Conformance	2/10/2021 2:04:19 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		Barrier was checked and corrected with 10 foot straightedge.	Conformance	1/18/2021 8:54:24 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		Straightedge was used.	Conformance	2/5/2021 10:47:03 AM -07:00	C		Closed

The pre-pour conference was held on Thursday, April 9th 2020	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	Concrete shall be placed in such manner as to require as little handling as possible being, as near to final location as practical, placed in such a manner that lateral flow will be minimized, and at sufficient depth to provide adequate material for screeding and finishing operations.		Three different pump trucks were use to deposit the concrete to its final position. No lateral movement of concrete was observed.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Concrete shall be placed in such manner as to require as little handling as possible being, as near to final location as practical, placed in such a manner that lateral flow will be minimized, and at sufficient depth to provide adequate material for screeding and finishing operations.		The concrete was placed at its final position. Lateral flow was not observed.	Conformance	6/1/2020 5:30:03 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Concrete shall be placed in such manner as to require as little handling as possible being, as near to final location as practical, placed in such a manner that lateral flow will be minimized, and at sufficient depth to provide adequate material for screeding and finishing operations.		Concrete placed within conformance of placement sequence. Was placed to require as little handling as possible, and as near to final position. Sufficient depth was provided to allow for screeding and finishing operations.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Concrete shall be placed in such manner as to require as little handling as possible being, as near to final location as practical, placed in such a manner that lateral flow will be minimized, and at sufficient depth to provide adequate material for screeding and finishing operations.		Pump truck was used and concrete placement was acceptable.	Conformance	5/11/2021 11:41:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		When the evaporation rate is equal to or above 0.2 pounds per square foot per hour, the Contractor shall take actions (such as cooling the concrete, installing wind breaks, sun screens, etc.) to create and maintain an evaporation rate less than 0.2 pounds per square foot per hour on the entire bridge deck.		The ACI Evaporation Nomograph was used during my observation. No excess evaporation was observed.	Conformance	6/1/2020 5:30:03 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	When the evaporation rate is equal to or above 0.2 pounds per square foot per hour, the Contractor shall take actions (such as cooling the concrete, installing wind breaks, sun screens, etc.) to create and maintain an evaporation rate less than 0.2 pounds per square foot per hour on the entire bridge deck.		The ACI Nomograph for Estimating Surface Water Evaporation was used throughout the day to ensure the evaporation rate did not exceed 0.2 lbs per square foot per hour.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		When the evaporation rate is equal to or above 0.2 pounds per square foot per hour, the Contractor shall take actions (such as cooling the concrete, installing wind breaks, sun screens, etc.) to create and maintain an evaporation rate less than 0.2 pounds per square foot per hour on the entire bridge deck.		The ACI Evaporation Nomograph was used throughout the placement. It started to get windy towards the end of the placement. Curing compound was applied as soon as appropriate so minimize rapid evaporation.	Conformance	5/26/2020 1:57:37 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		If fogging is required by the Engineer, the Contractor shall not allow water to drip, flow, or puddle on the concrete surface during fogging, placement of absorptive material, or at any time before the concrete has achieved final set.		The crew member was notified to not spray the surface of the concrete using the power washer with the atomizing nozzle multiple times by IQC. After leaving the placement, I received a phone call from CCD observing the same problem. Additional water was observed to be on the surface and finished into the deck. Please see the attached photos.	Addressed	6/12/2020 2:27:42 PM -06:00	NC-2	Expedited NCR 0166 was written to address this issue	Closed
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	If fogging is required by the Engineer, the Contractor shall not allow water to drip, flow, or puddle on the concrete surface during fogging, placement of absorptive material, or at any time before the concrete has achieved final set.		Fogging equipment was provided during the placement. The sprayer had the appropriate atomizing head and was cast into the air across the concrete. No drips, flow or puddles were observed throughout the placement.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		If fogging is required by the Engineer, the Contractor shall not allow water to drip, flow, or puddle on the concrete surface during fogging, placement of absorptive material, or at any time before the concrete has achieved final set.		A large amount of curing compound was spilled on the girders when the curing compound nozzle was removed. Excess water was used to clean up the curing compound. A gap was cut in the backer rod between the girders to allow the excess water to drip into the lowered section. The girders were clean before the concrete was placed.	Conformance	6/1/2020 5:30:03 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		If fogging is required by the Engineer, the Contractor shall not allow water to drip, flow, or puddle on the concrete surface during fogging, placement of absorptive material, or at any time before the concrete has achieved final set.		I pressure washer with an atomizing tip was used for fogging the concrete during pour, all connections were water tight and leaks weren't an issue at anytime during the pour.	Conformance	7/16/2020 10:11:32 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		If fogging is required by the Engineer, the Contractor shall not allow water to drip, flow, or puddle on the concrete surface during fogging, placement of absorptive material, or at any time before the concrete has achieved final set.		during the fogging process the power washer being used with the atomizing nozzle was allowed to drip excessively on the concrete after placement. once again the foreman was talked to about it and it didn't happen again once he started to only be the one fogging the concrete. see attached pictures.	Field Resolved	7/27/2020 1:02:15 PM -06:00	Field Resolved		Closed

Central 70	C 0704-241	Bridge Deck	Cover	5/19/2020 11:36:46 AM - 06:00	If the surface of the deck slab becomes dry immediately following finishing operations, due to an excessive evaporation rate, it shall be covered with wet burlap or fogged with water covering the entire deck surface using pneumatic atomizing nozzles. The fog spray shall be just enough to retard surface evaporation and shall not change the water-cement ratio. During periods of excessive drying, a cover of wet burlap or plastic sheeting shall be maintained on the slab at all times until final cure is placed.		Due to overcast conditions and low winds, the deck maintained moisture.	Conformance	5/18/2020 8:36:21 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	For the final finish a seamless strip of plastic turf shall be dragged longitudinally over the full width of bridge deck after a seamless strip of burlap or other approved fabric has been dragged longitudinally over the full width of bridge deck to produce a uniform surface of gritty texture.		Burlap attached to the bid well was drug longitudinally over the bridge deck width. A concrete broom was used at edges were the bid well did not reach. This allowed for a uniform surface gritty texture. Please see the attached photos.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	The drags shall be mounted on a bridge other than the bridge to be furnished for Department use. The dimensions of the drags shall consist of sufficient material and be maintained in such a condition that the resultant surface finish is of uniform appearance and reasonably free from grooves over 1/16 in depth. Where more than one layer of burlap drag is required, the bottom layer shall be approximately 6 inches wider than the layer above. Drags shall be maintained clean and free from encrusted mortar. Drags that cannot be cleaned shall be discarded and new drags installed.		The drags that were used produced a uniform and reasonably free from grooves over 1/16th in depth.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	The concrete surface shall be kept moist at all times by fogging with an approved atomizing nozzle or applying a monomolecular film coating to retard evaporation until the curing material is in place.		Fogging equipment with atomizing nozzles were provided. A monomolecular film coating was not used. The evaporation rate before the curing compound was placed was not a concern.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The concrete surface shall be kept moist at all times by fogging with an approved atomizing nozzle or applying a monomolecular film coating to retard evaporation until the curing material is in place.		The fogging operation was adequate for the placement.	Conformance	6/1/2020 5:30:03 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/19/2020 11:36:46 AM - 06:00	The concrete surface shall be kept moist at all times by fogging with an approved atomizing nozzle or applying a monomolecular film coating to retard evaporation until the curing material is in place.		The deck was fogged with an approved atomizing nozzle as the pour progressed. A curing compound was applied after the final finishing occurred. Please see the attached pictures.	Conformance	5/18/2020 8:36:21 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/19/2020 11:36:46 AM - 06:00	Decks placed from May 1 to September 30 shall be cured by the membrane forming curing compound method followed by the water cure method as follows:		A curing compound was applied after final finishing. Burlap and plastic was applied once the crew could walk on the deck.	Conformance	5/18/2020 8:36:21 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	1. Membrane Forming Curing Compound Method. A volatile organic content (VOC) compliant curing compound conforming to ASTM C 309, Type 2 shall be uniformly applied to the surface of the deck, curbs, and sidewalks at the rate of 1 gallon to 100 square feet. The curing compound shall be applied as a fine spray using power operated spraying equipment. The power operated spraying equipment shall be equipped with an operational pressure gage and a means of controlling the pressure. Before and during the application the curing compound shall be kept thoroughly mixed by recirculation or a tank agitator. The application shall be within 20 feet of the deck finishing operation. When the finishing operation is discontinued, all finished concrete shall be coated with curing compound with 1/2 hour. The curing compound shall be thoroughly mixed within one hour before use.		The membrane curing application and equipment were in conformance with this specification.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	2. Water Cure Method. The water cure method shall be applied as soon as it can be without marring the surface. The surface of the concrete, including bridge curbs and bridge sidewalks, shall be entirely covered with wet burlap and polyethylene sheeting. Prior to being placed, the burlap shall be thoroughly saturated with water. The wet burlap and polyethylene sheeting shall extend beyond the edges of the slab and shall be weighted to remain in contact with the surface. The wet burlap and polyethylene sheeting shall remain in contact and be kept wet for the entire curing period.		Wet burlap and polyethylene sheets were placed as soon as the surface allowed.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed

Central 70	C 0704-241	Bridge Deck	Cover		2. Water Cure Method. The water cure method shall be applied as soon as it can be without marring the surface. The surface of the concrete, including bridge curbs and bridge sidewalks, shall be entirely covered with wet burlap and polyethylene sheeting. Prior to being placed, the burlap shall be thoroughly saturated with water. The wet burlap and polyethylene sheeting shall extend beyond the edges of the slab and shall be weighted to remain in contact with the surface. The wet burlap and polyethylene sheeting shall remain in contact and be kept wet for the entire curing period.		The water curing method was implemented after the deck was sufficiently hard to walk on.	Conformance	6/1/2020 5:30:04 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/19/2020 11:36:46 AM - 06:00	2. Water Cure Method. The water cure method shall be applied as soon as it can be without marring the surface. The surface of the concrete, including bridge curbs and bridge sidewalks, shall be entirely covered with wet burlap and polyethylene sheeting. Prior to being placed, the burlap shall be thoroughly saturated with water. The wet burlap and polyethylene sheeting shall extend beyond the edges of the slab and shall be weighted to remain in contact with the surface. The wet burlap and polyethylene sheeting shall remain in contact and be kept wet for the entire curing period.		The entire placement was covered with wet burlap under plastic.	Conformance	5/18/2020 8:36:21 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		2. Blanket Method. Curing blankets with a minimum R-Value of 0.5 shall be placed on the deck as soon as they can be without marring the surface. Blankets shall be loosely laid (not stretched) and adjacent edges suitably overlapped with continuous weights along the lapped joints. The blankets shall remain in place for a minimum of five days after placement.		Blankets were also used in addition to curing compound to ensure temperature requirements were maintained throughout entirety of curing period.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		<p>When the ambient temperature is expected to fall below 40 °F during the curing period, the Contractor shall maintain the internal concrete temperature above 50 °F during the curing period. The Contractor shall maintain the internal concrete temperature above 50 °F during the curing period. The Contractor shall provide suitable measures such as straw, additional burlap, or other suitable blanketing materials, and/or housing and artificial heat to maintain the concrete temperatures between 50 °F and 75 °F as measured on the upper and lower surfaces of the concrete. The Contractor shall enclose the area underneath the deck and heat it so that the temperature of the surrounding air is as close as possible to the temperature of the concrete and between 50 °F and 75 °F. When artificial heating is used to maintain the concrete, adequate ventilation shall be provided to limit exposure to carbon dioxide. The Contractor shall maintain the wet burlap and polyethylene cover during the curing period. Heating may be stopped after the first 72 hours if the time of curing is lengthened to account for periods when the ambient air temperature is below 40 °F. For every day the ambient temperature is below 40 °F, an additional day of curing with a minimum ambient air temperature of 50 °F will be required. After completion of the required curing period, the Contractor shall remove the curing and protection so that the temperature of the concrete during the first 24 hours does not fall more than 25 °F.</p>		Concrete was adequately protected during the cure period.	Conformance	5/14/2020 4:34:45 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	During the curing period, the Contractor shall monitor the enclosure at intervals acceptable to the Engineer. The Contractor shall monitor concrete temperature, and the structural integrity of the enclosure. Artificial heat sources shall not be placed in such a manner as to endanger formwork or expose any area of concrete to drying due to excessive temperatures.		Maturity meters were placed throughout the diaphragms and deck placement.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		During the curing period, the Contractor shall monitor the enclosure at intervals acceptable to the Engineer. The Contractor shall monitor concrete temperature, and the structural integrity of the enclosure. Artificial heat sources shall not be placed in such a manner as to endanger formwork or expose any area of concrete to drying due to excessive temperatures.		Contractor monitored the enclosure at needed intervals to ensure excessive drying of concrete within the forms was not occurring.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Acceptability of the deck surface will be determined as follows: The Contractor shall furnish a 10 foot straightedge or other approved device. When the concrete is sufficiently hard, the Contractor shall test the bridge deck surface with the 10 foot straight edge or other approved device. Areas showing high spots of more than 1/8 inch but not exceeding 1/2 inch in 10 feet shall be marked. The marked areas shall be immediately ground with an approved grinding tool so that the surface deviation will not be in excess of 1/8 inch in 10 feet. Grinding shall not reduce the concrete cover on reinforcing steel to less than 1 3/4 inches, (2 3/4 inches for bare decks without an overlay). Decks that require additional corrective action shall be corrected with a concrete overlay approved by the Engineer.		Screed rails were not removed prior to concrete finish. QCAT Field Issue Conversation sent out, see attached, and Expedited NCR 1047 was created.	Field Resolved	5/11/2021 11:41:45 AM -06:00	Field Resolved		Closed

Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	Movable bridges or platforms shall be provided by the Contractor and moved as directed to allow the inspectors to work over the freshly placed plastic concrete. A movable bridge shall be kept as close to the finishing screed as practical. The deck of the movable bridge shall be a minimum of 24 inches wide and no more than 24 inches above the surface of the concrete and shall be capable of supporting two people. The Contractor shall provide additional movable bridges as appropriate for the work.		A movable bridge platform was provided to finish the surface and apply curing compound.	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM - 06:00	Reinforcing steel checked prior to deck placement?		The rebar was checked and approved by IQC the day before the placement. (Monday April, 27th)	Conformance	5/5/2020 7:51:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Reinforcing steel checked prior to deck placement?		The remaining rebar couplers were completed by 8:30 pm the night before and checked off upon by IQC.	Conformance	5/26/2020 1:57:37 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Reinforcing steel checked prior to deck placement?		PC / IQC reviewed and approved all deck reinforcement.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Reinforcing steel checked prior to deck placement?		Approach slab reinforcement was signed off on by IQC.	Conformance	4/24/2020 8:53:19 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/19/2020 11:36:46 AM - 06:00	Reinforcing steel checked prior to deck placement?		I conducted a rebar audit of the diaphragms and deck before the dry run. The height of the supports were adjusted periodically to ensure the deck a minimum of 5" thick.	Conformance	5/18/2020 8:36:21 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Reinforcing steel checked prior to deck placement?		IQC performed inspection and all appeared acceptable prior to concrete placement.	Conformance	5/11/2021 11:41:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Required thickness and clearance maintained during dry run of finishing machine?		IQC verified cover and thickness throughout concrete placement.	Conformance	5/11/2021 11:41:45 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/19/2020 11:36:46 AM -06:00	Required thickness and clearance maintained during dry run of finishing machine?		The dry run was conducted with Labato, PC and IQC on Thursday, May 14th. The required thicknesses were met or adjusted to meet the appropriate tolerances.	Conformance	5/18/2020 8:36:21 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Required thickness and clearance maintained during dry run of finishing machine?		Minimum required thickness and clearance was maintained during the dry run of finishing machine (bidwell).	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Required thickness and clearance maintained during dry run of finishing machine?		The deck thickness and clearance were appropriate during the dry run on Friday, May 15th.	Conformance	5/26/2020 1:57:37 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	5/7/2020 10:09:06 AM -06:00	Required thickness and clearance maintained during dry run of finishing machine?		The deck thickness was an issue during the dry run. It was highlighted by IQC and an NCR should have been generated. This should have stopped the placement. The WSP engineer said it was okay to proceed without department approval. NCR 2073 addressed the failure to follow the process.	Addressed in Corrective Action 20.	5/12/2020 4:14:13 PM -06:00	Audit Comment	Corrective action 20 was written to address.	Closed
Central 70	C 0704-241	Bridge Deck	Cover		Required thickness and clearance maintained during dry run of finishing machine?		The dry run was conducted on Saturday, May 30th. The clearances were adjusted to meet the 2" minimum cover.	Conformance	6/1/2020 5:30:04 PM -06:00	C		Closed

Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Hand finishing shall not be allowed after concrete has been in-place for more than 30 minutes or when initial set has begun.		No hand finishing was performed after the concrete had been in place for 30 minutes.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures	4/23/2020 12:00:00 AM - 06:00	Hand finishing shall not be allowed after concrete has been in-place for more than 30 minutes or when initial set has begun.		Hand finishing started right after the final lift was placed.	Conformance	4/23/2020 3:01:47 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Hand finishing shall not be allowed after concrete has been in-place for more than 30 minutes or when initial set has begun.		Finishing was completed within proper timeframe.	Conformance	5/11/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Hand finishing shall not be allowed after concrete has been in-place for more than 30 minutes or when initial set has begun.		Hand finishing started right after the final concrete was placed.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Hand finishing shall not be allowed after concrete has been in-place for more than 30 minutes or when initial set has begun.		see attached pictures, hand finishing occurred shortly after placing and was performed no more than 30 minutes after placing.	Conformance	7/27/2020 5:30:51 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Finishing tools made of aluminum shall not be used.		Finishing tools are made of magnesium.	Conformance	2/13/2020 2:53:35 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Finishing tools made of aluminum shall not be used.		No aluminum tools were used.	Conformance	5/11/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Finishing tools made of aluminum shall not be used.		Proper finishing tools were used.	Conformance	4/24/2020 8:53:19 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Finishing tools made of aluminum shall not be used.		Concrete finishing tools being used are made of magnesium.	Conformance	12/9/2019 1:38:50 PM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Finishing tools made of aluminum shall not be used.		Finishing tools being used are made of magnesium.	Conformance	4/27/2020 3:36:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Finishing tools made of aluminum shall not be used.		All finishing tools being used are made of magnesium.	Conformance	5/4/2020 10:27:12 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Finishing tools made of aluminum shall not be used.		Concrete finishing tools being used are made of magnesium.	Conformance	8/10/2020 8:37:30 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		Finishing tools made of aluminum shall not be used.		The contractor used finishing tools made of magnesium.	Conformance	7/20/2020 8:17:07 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Finishing tools made of aluminum shall not be used.		After the concrete was poured into the forms. They came back and did hand work with the correct finishing tools.	Conformance	6/1/2020 7:32:55 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Finishing tools made of aluminum shall not be used.		No aluminum tools were used during operation.	Conformance	4/2/2020 6:51:18 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Finishing tools made of aluminum shall not be used.		Finishing tools being used are made of magnesium and not aluminum.	Conformance	7/27/2021 3:02:12 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Finishing tools made of aluminum shall not be used.		All finishing tools used are made of magnesium.	Conformance	6/29/2021 1:31:43 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Finishing tools made of aluminum shall not be used.		I observed only finishing tools of magnesium being used.	Conformance	6/19/2021 11:20:26 AM -06:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		Finishing tools made of aluminum shall not be used.		The concrete was screeded off with 2x4's.	Conformance	2/19/2021 7:59:32 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Finishing tools made of aluminum shall not be used.		No aluminum tools were used.	Conformance	11/11/2020 1:33:11 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Finishing tools made of aluminum shall not be used.		None of the finishing tools used were made of aluminum.	Conformance	8/3/2021 3:53:09 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		blankets were used to maintain temperatures during the curing process.	Conformance	12/3/2020 9:10:01 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		The contractor used sufficient equipment (heater, blankets) to continuously maintain the temperature uniformly in all parts of the enclosure.	Conformance	12/29/2020 8:58:21 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		The contractor used blankets and a heater to maintain the specified temperature uniformly throughout the enclosure/forms.	Conformance	2/3/2021 8:10:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Forms were protected with insulated blankets.	Conformance	2/5/2021 9:32:10 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		The contractor wrapped the column in blankets and used a heater to maintain the required temperature.	Conformance	2/3/2021 8:11:33 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Sufficient equipment has been supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure.	Conformance	1/14/2021 9:46:34 AM -07:00	C		Closed
Central 70	C 0704-241	Noise Walls	Walls		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		The contractor used concrete blankets and a heater to protect the concrete and maintain a uniform curing temperature.	Conformance	2/19/2021 7:59:32 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	UPRR Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Blankets and a heater were supplied to continuously maintain the specified temperature uniformly in all parts of the column enclosure.	Conformance	2/3/2021 8:12:13 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Sufficient equipment (blankets and heater) were supplied to continuously maintain the specified temperature throughout the enclosure.	Conformance	2/8/2021 2:25:48 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Sufficient equipment (blankets/heater) shall be supplied to continuously maintain the specified temperature uniformly throughout the enclosure.	Conformance	2/15/2021 3:19:54 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Blankets and a heater were supplied to continuously maintain the specified temperature uniformly in all parts of the column enclosure.	Conformance	2/3/2021 8:12:41 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		The contractor supplied concrete curing blankets and heated enclosures for the columns.	Conformance	3/3/2021 1:18:17 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Insulated concrete tarps were used and a heater was provided to ensure the temperature was maintained throughout curing.	Conformance	2/13/2020 1:34:54 PM -07:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures	4/23/2020 12:00:00 AM - 06:00	Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Insulated concrete blankets were used along with a heater to ensure the concrete could get strength in a timely manner.	Conformance	4/23/2020 3:01:47 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM - 07:00	Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Insulated concrete blankets were used to cover the placement after it was finished. Freezing rain/Snow is expected at 3:00pm this afternoon.	Conformance	11/21/2019 11:14:48 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Blankets were added to the approach slab after placement.	Conformance	4/24/2020 8:53:19 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		The abutment was wrapped in blankets and the contractor supplied a heater.	Conformance	2/13/2020 2:53:35 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		The abutment cap had sufficient insulation blankets to maintain the specified temperature.	Conformance	3/3/2020 7:23:57 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Sufficient equipment supplied to continuously maintain required temperatures during curing timeframe.	Conformance	3/4/2020 8:11:06 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		all concrete that was to be cured was completely covered free of rain and other atmospheric climates that stunts curing. All burlap sacks were held down by 4x4 wood post, and kept in place for 7 days.	Conformance	8/10/2020 8:35:56 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Sufficient equipment was supplied to continuously maintain the specified temperature uniformly.	Conformance	5/4/2020 10:26:01 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Sufficient equipment shall be supplied to continuously maintain the specified temperature uniformly in all parts of the enclosure. Insulated blankets on top of the bridge deck and freely circulated artificial heat below the deck will be permitted.		Proper equipment was supplied to cure concrete.	Conformance	6/24/2020 9:55:05 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete is being cured in accordance with section 601.13		The concrete was cured in accordance with section 601.13.	Conformance	5/4/2020 10:26:01 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	6/12/2020 12:26:29 PM -06:00	Concrete is being cured in accordance with section 601.13		curing compound was used after concrete pouring then covered with burlap and tarps in accordance with the spec.	Conformance	6/9/2020 11:03:28 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Cover		Concrete is being cured in accordance with section 601.13		The North approach was cured in accordance with 601.13	Conformance	8/25/2020 9:22:10 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Concrete is being cured in accordance with section 601.13		In conformance	Conformance	10/7/2020 7:49:43 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete is being cured in accordance with section 601.13		Concrete being cured within conformance of specifications.	Conformance	3/4/2020 8:11:06 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete is being cured in accordance with section 601.13		The concrete is being cured in accordance with section 601.13.	Conformance	3/3/2020 7:23:57 AM -07:00	C		Closed

Central 70	C 0704-241	Substructure	Structures		Concrete temperature maintained in accordance with the Specifications for the curing period		The concrete temperature is being maintained in accordance with the specifications for the curing period.	Conformance	3/3/2020 7:23:57 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete temperature maintained in accordance with the Specifications for the curing period		Concrete temperature being maintained for curing period.	Conformance	3/4/2020 8:11:06 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Concrete temperature maintained in accordance with the Specifications for the curing period		In conformance	Conformance	10/7/2020 7:49:43 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete temperature maintained in accordance with the Specifications for the curing period		Concrete temperature was maintained in accordance with specifications for the curing period.	Conformance	5/4/2020 10:26:01 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete cured by an approved method		The concrete was cured with an approved method.	Conformance	5/4/2020 10:26:01 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete cured by an approved method		Abutment was water cured with proper materials	Conformance	6/24/2020 9:55:05 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete cured by an approved method		Concrete was cured with approved blanket method.	Conformance	7/14/2020 12:20:25 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete cured by an approved method		curing compound and method was approved by IQC prior to being used.	Conformance	9/16/2020 11:16:07 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Concrete cured by an approved method		The cover deck was cured by an approved method. Burlap sacks with plastic over the top of them.	Conformance	8/10/2020 8:35:56 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete cured by an approved method		Concrete cured by approved method.	Conformance	3/4/2020 8:11:06 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete cured by an approved method		warm weather curing method was used.	Conformance	10/21/2020 7:42:51 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete cured by an approved method		The concrete is being cured by an approved method.	Conformance	3/3/2020 7:23:57 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete cured by an approved method		The concrete was sprayed with curing compound, wrapped with blankets and heated.	Conformance	2/13/2020 2:53:35 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete cured by an approved method		The concrete was cured by an approved method and was covered for the correct amount of time before uncovering.	Conformance	6/22/2020 8:57:58 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete cured by an approved method		The concrete was cured by an approved method.	Conformance	7/22/2020 8:11:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete cured by an approved method		The concrete is being cured by an approved method.	Conformance	5/4/2020 10:27:12 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Concrete cured by an approved method		Concrete was cured by an approved method as forms covered the concrete except at the top, where wet burlap and plastic were placed.	Conformance	8/10/2020 8:37:30 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		Concrete cured by an approved method		heating blankets were used to keep the concrete temperature at the specified temperatures during the curing process.	Conformance	1/4/2021 1:17:43 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete cured by an approved method		The concrete was cured by an approved method.	Conformance	3/3/2021 1:18:17 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete cured by an approved method		The concrete was cured by an approved method.	Conformance	2/3/2021 8:12:41 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete cured by an approved method		The concrete is being cured by an approved method.	Conformance	2/15/2021 3:19:54 PM -07:00	C		Closed

Central 70	C 0704-241	HMA	Roadway		In every pavement layer the longitudinal joints shall not be constructed in the wheel paths.		Longitudinal joints were placed within 6 inches of lane lines.	Conformance	9/16/2020 11:01:55 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		In every pavement layer the longitudinal joints shall not be constructed in the wheel paths.		Longitudinal joints were outside the wheelpath.	Conformance	4/24/2020 8:46:09 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		In every pavement layer the longitudinal joints shall not be constructed in the wheel paths.		On every lift/ layer, the longitudinal joints were not in the wheelpath.	Conformance	8/3/2020 11:29:50 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		In every pavement layer the longitudinal joints shall not be constructed in the wheel paths.		Longitudinal joints were not constructed in wheelpaths.	Conformance	8/21/2020 4:22:58 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		In every pavement layer the longitudinal joints shall not be constructed in the wheel paths.		Longitudinal joints were not constructed in the wheel paths.	Conformance	6/14/2021 1:43:10 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		The Contractor shall use a continuous string line to delineate every longitudinal joint during paving operations.		Paving crew string lined to delineate all longitudinal joints during paving operation.	Conformance	2/15/2021 3:19:21 PM -07:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	11/22/2019 12:21:18 PM - 07:00	The Contractor shall use a continuous string line to delineate every longitudinal joint during paving operations.		All longitudinal joints were not delineated with string line.		12/10/2019 8:15:53 AM -07:00	Audit Comment	The Paving crew was paving additional width to catch the curb and gutter locations due to inclement weather. The additional width changed the paving width and layout was not used, This was discussed with the foreman and superintendent. The foreman will string line and paint lines prior to pavement operations starting.	Closed

Central 70	C 0704-241	HMA	Roadway	2/7/2020 7:37:50 AM - 07:00	The Contractor shall use a continuous string line to delineate every longitudinal joint during paving operations.		Area was string lined before paving operations began. I don't know what happened after. See Pics		2/10/2020 8:11:20 AM -07:00	Audit Comment	Due to the ML and Ramp gore coming together the paving crew had to "draw" the screens to accommodate. KIC, IQC and the department walked this area and the joint does not cross a wheel path.	Closed
Central 70	C 0704-241	HMA	Roadway	4/2/2020 1:36:28 PM - 06:00	The Contractor shall use a continuous string line to delineate every longitudinal joint during paving operations.		Contractor layed out longitudinal joints prior to placing HMA on each lift.	Conformance	4/1/2020 7:39:06 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		The joints in the top layer of pavement shall be located as follows unless otherwise approved in writing by the Engineer: (1) For 2-lane roadways, offset 6 to 12 inches from the center of pavement and from the outside edge of travel lanes. (2) For roadways of more than 2 lanes, offset 6 to 12 inches from lane lines and outside edge of travel lanes.		Joints were offset per specifications.	Conformance	6/7/2021 8:12:43 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		The joints in the top layer of pavement shall be located as follows unless otherwise approved in writing by the Engineer: (1) For 2-lane roadways, offset 6 to 12 inches from the center of pavement and from the outside edge of travel lanes. (2) For roadways of more than 2 lanes, offset 6 to 12 inches from lane lines and outside edge of travel lanes.		Joints were offset from lane lines by 6".	Conformance	6/14/2021 1:43:10 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Structures		Construction Plan		Construction plan was followed to include a safety critical meeting with all applicable parties, sequence of operations for placement of girders at Span 2, equipment to be used, etc.	Conformance	11/27/2019 12:40:18 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Erection Plan		Erection plan was followed to include, sequence of operations, crane details, lift loads and rigging, equipment locations, and traffic handling during girder delivery.	Conformance	11/27/2019 12:40:18 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Girder Delivery		Truck route and staging of girders for Span 2 followed girder delivery plan.	Conformance	11/27/2019 12:40:18 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Rigging Plan		Rigging plan was approved prior to use during erection, and all rigging was inspected prior to use. Set-up of rigging to be used followed the approved plan to safely place all girders at Span 2.	Conformance	11/27/2019 12:40:18 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Crane Set-Up and Lift Plan		Girder Crane Plan set-up was followed per the approved Phase 1 and Phase 2 locations for crane set-up.	Conformance	11/27/2019 12:40:18 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Girder Bracing Plan		Girder bracing installed per the bracing details set forth in safety critical plan.	Conformance	11/27/2019 12:40:18 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Steel Reinforcing Visual Inspection - Daily during Production		Visual inspection (IQC) was performed.	Conformance	1/11/2021 8:19:08 AM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The Drilling and Grouting installation procedure was followed		I observed the drilling of Micropile 60 (MP60). I observed the grouting of MP60, MP59 and MP58. All drilling and grouting operations followed the Micropile Installation Plan.	Conformance	2/18/2020 1:20:48 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The equipment used in the operation matches what is provided in the Installation Plan		All equipment that was used during the operation matched what was provided in the installation plan.	Conformance	2/18/2020 1:20:48 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Drilling Procedure (Micropile Design Sheet 1 of 3. Gen Notes 7.C)		The drilling procedure that was submitted and approved by the engineer was used in the field for the test micropile and production micropiles. This was provided in the Micropile Installation Plan, Mix Design, Jack Calibration document.	Conformance	2/18/2020 1:20:48 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		Grouting Procedure (Micropile Design Sheet 1 of 3. Gen Notes 8)		All grouting operations were in conformance with the plan general note 8. The hole was drilled and grouted in the same day. The hole depth was verified after drilling. The holes were clean before the grouting began. The grout was visually inspected to be homogeneous. The grout injected from the lowest point of the drilled hole.	Conformance	2/18/2020 1:20:48 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Grout Mix Design (Micropile Design Sheet 1 of 3. Gen Notes 8.F and 9)		The grout material was the same as the test micropile. A mud balance was used to ensure the grout specific gravity was in accordance with the mix design.	Conformance	2/18/2020 1:20:48 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The threaded rod is in compliance with submittal plan sheets		The thread rod was inspected to be in compliance with the plans and specs. The MRR and attachments were used to verify the material. The MRR was submitted to the department after the micropile work began. It was caught in a workflow but was approved before the work began. This would normally be an NCR. But the documents making it through Aconex workflows have been a positive trend.	Conformance	2/18/2020 1:20:48 PM -07:00	C		Closed

Central 70	C 0704-241	Sign Installation	Signing & Striping	1/3/2020 1:39:25 PM - 07:00	Verify that highway signs are installed in accordance with the Contract and the Manual of Uniform Traffic Control Devices. Ensure that removal and installation of signs follow a logical sequence to maintain traffic safety.		EB I-70 Mainlane signage from Quebec to I-225 does not match the plans for the MOT phase. Temporary signs are still in place that should be in there permanent condition.	Verified there is no conflicting signage and temp signs are being removed as permanent signs are being installed.	4/13/2020 2:18:03 PM -06:00	Audit Comment	Temporary signs will be removed as the permanent signs are placed. However the temporary signs are correct and are not conflicting with the current road alignment.	Closed
Central 70	C 0704-241	Sign Installation	Signing & Striping		2. Posts. Check for correct type and size of posts. Verify if modifications to existing posts are required.		Post type was per plan.	Conformance	6/14/2021 1:45:16 PM -06:00	C		Closed
Central 70	C 0704-241	Sign Installation	Signing & Striping	3/5/2021 11:03:54 AM - 07:00	2. Posts. Check for correct type and size of posts. Verify if modifications to existing posts are required.		SS-087.01 the bottom zee of the sign is not bolted correctly to the post. It appears the holes in the zee were drilled in the wrong location because the bolts are angled and are bearing on edges. (ENCR-857)	Field Resolved	3/5/2021 7:07:07 AM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Sign Installation	Signing & Striping		3. Plate Bolts. Check torque on breakaway plate bolts and fuse plate bolts.		Plate bolts on SS-161.03 were not completely installed, which was necessary to keep sign turned away from traffic.	Field Resolved	6/14/2021 1:43:59 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Sign Installation	Signing & Striping		4. Breakaway Assembly. Check ground level with reference to the top of the footing. Clearance of the breakaway assembly is critical. Check breakaway holes for spacing and diameter on six inch by six inch timber posts.		Extra washers were installed on breakaway foundation assemblies. This is being resolved with NCR 2652.	Field Resolved	6/14/2021 1:43:59 PM -06:00	Field Resolved		Closed

Central 70	C 0704-241	Sign Installation	Signing & Striping	3/9/2021 9:28:16 AM - 07:00	614.04- Sign Panels- Sign panel materials shall conform to Section 713 and to the details shown on the plans. Sign panels shall be produced in accordance with the retroreflective sheeting manufacturers recommendations. Layout and font design shall conform to the "Standard Highway Signs' published by FHWA.		Sign Panels- Sign panels shall be produced in accordance with the retroreflective sheeting manufacturers recommendations. Performed visual inspections of all signs in Airport Rd. yard that are visible. Noted several signs that had lettering that appears beginning to peel/delaminate (edges and corners) from panel.	ENCR written	5/17/2021 9:27:20 AM -06:00	Audit Comment	ENCR 0968 was written to address this issue	Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Sign Installation	Signing & Striping	3/1/2021 4:33:54 PM - 07:00	614.04- Sign Panels- Sign panel materials shall conform to Section 713 and to the details shown on the plans. Sign panels shall be produced in accordance with the retroreflective sheeting manufacturers recommendations. Layout and font design shall conform to the "Standard Highway Signs" published by FHWA.		The department has found several permanent guide & recreation signs on the project on which the letters are peeling away from the sign. Many of these signs were fabricated on 03/2020 and the white letters are already peeling away from the back ground sheeting. In talking with several inspectors with past experience of manufacturing signs the 3M 4000 series being used for the white and green/brown is too thick to be applied to the front of a sign which is appears to be the cause of the letters peeling away from the sign panel. Based on the discussion it was also discovered that the correct material for the letters would be using the 3M 1170 series Electrocut film with the 4000series as the base layer. The 4000 series is meant to be a base layer. Attached are typical failure photos of some of the delaminated signs found in the 270 sign yard but all signs on the project should be inspected to determine the extent of this issue.	0968 written	5/5/2021 9:24:47 AM -06:00	NC-2	ENCR 0968 was written to address this issue	Closed

Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety	4/16/2021 11:51:27 AM - 06:00	3.2 Installation		Part C. Where panelboards are not mounted to a structural wall, the panelboard shall be mounted on structural channel framing assembly. The masonry inside the Fire Protected Room is not considered a structural wall so a structural framing assembly is required. Reference plan sheet EL-209 for Panelboard #UL-PP-03. Reference attached photos.	Adequate	5/25/2021 12:42:39 PM -06:00	Audit Comment	The specification referenced is typically for panelboards installed in locations without walls (i.e. similar to the pump station) that require a structure to physically connect the panelboard to. In the FCC room application, the panelboard is installed on strut that has been anchored to the CMU wall. The CMU wall is tied to the CIP wall with CMU veneer ties and the FCC CIP roof with an angle anchor.	Closed

Central 70	C 0704-241	Building	Cover		3.3 Installation		F. Installation of Boxes - MCC/Emergency Power Room (Plan Sheet EL-109), Associated Junction Box Schedule (Plan Sheet EL-090). Reference Aconex # C70-SECO-SYC-ML-000034. The following submittal includes Boxes and Gutters that will be utilized instead of the Junction boxes depicted on Plan Sheet EI-109. Conduits and Junction Box placement are diagrammatical according to the spec. So the gutters can be substituted for junction boxes. NEMA 1 Junction Boxes and Gutters were approved through NDC-000684.	Conformance	1/26/2021 9:07:56 AM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover		3.3 Installation		C. Bends - Parts #1 thru #4 requirements were followed throughout the installation.	Conformance	1/26/2021 9:07:56 AM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover		3.3 Installation		Ground bars were installed in accordance with the following specification as well as 260526 Grounding and Bonding of Electrical Systems Part 3.3 Installation.	Conformance	1/26/2021 9:07:56 AM -07:00	C		Closed
Central 70	C 0704-241	Electrical	Cover	4/12/2021 1:53:36 PM - 06:00	3.3 Installation		Part A. 5. In Wet or Damp locations, terminate conduits entering conduits	Adequate	4/14/2021 7:38:57 AM -06:00	Audit Comment	EOR Response - The Specification	Closed

						sheet-metal boxes or sheet-metal equipment enclosures with gaskets. The conduits terminating within the limits of the deluge risers are not terminated into junction boxes or sealed in anyway. Please see attached photos. Reference comment #6 for more information.				n section referenced applies to field conduits routed outside of enclosures and/or cabinets, requiring gaskets for the sealing of conduit penetrations into the enclosure/cabinet. The subject conduits (photos) are sealed at their penetration through the fire rated panel that makes up top of the deluge valve cabinet (DVC). Once inside the DVC, these conduits are extended down to the deluge valves to facilitate control and monitoring cable whips on to devices and instruments. All wiring within the

Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety		3.1 Installation		Part L - The drainage piping following the routing provided on FS-008. All 4 deluge valves are tied into one network of piping instead of WB & EB deluge valve drainage being seperated. Reference shop draining FP005 of 21. A sleeve was present for the masonry wall installation. The deluge assembly water will be discharged to the Eastbound roadway (South Half) (Following Detail Note #19 of the Shop Drawings).	Conformance	2/23/2021 9:44:39 AM -07:00	C		Closed
Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety		3.1 Installation		Part E - The valve assemblies will be accessible for operation and servicing in accordance with this specification. Another inspection will have to be conducted to ensure the final configuration of the Deluge Valve Cabinets/Doors follow this accessibility requirement.	Conformance	2/23/2021 9:44:39 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety		3.1 Installation		Part K- The piping was allowed to expand and contract without stressing the pipe, joints, or connected equipment. Horizontal brackets will be attached to the adjacent masonry walls at a later date so not springing forces were present at the time of inspection.	Conformance	2/23/2021 9:44:39 AM -07:00	C		Closed
Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety	2/25/2021 9:59:23 AM -07:00	3.1 Installation		Part D. The sprinkler piping was installed to be free draining at the western most sprinkler head.	Conformance	2/25/2021 9:54:03 AM -07:00	C		Closed
Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety	2/25/2021 9:59:23 AM -07:00	3.1 Installation		G. Orient directional heads were provided at the piping along abutment 3 and pier 2. The directional heads were properly installed.	Conformance	2/25/2021 9:54:03 AM -07:00	C		Closed
Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety	2/25/2021 9:59:23 AM -07:00	3.3 Identification		Deluge pipe identification complies with NFPA 13 and WSP Spec Section 200553 for Piping Labels. The labels shows the flow direction, has the appropriate letter height and the color in accordance with ASME A13.1.	Conformance	2/25/2021 9:54:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Structures	4/14/2020 8:05:50 AM - 06:00	Josephine - Sequence of Operations		The showering tower use on the first day of girder erection was brought to the project the day before but wasn't set up until the morning of the girder erection. The shoring tower was too tall for the girder erection. The grade was not cut to the appropriate grade before the shoring tower was erect. A hole was dug approximately 4ft deep to account for the height of the tower. A level was used to ensure the grade was level and shovels were used to remove loose soil. The operation of altering the soil condition right before the girder is considered extremely unsafe. Please see attache pictures.	Addressed	5/30/2020 12:42:50 PM -06:00	Audit Comment	Acknowledged. The changes were addressed with KIC crews and followed KIC's TSCD designee.	Closed
Central 70	C 0704-241	Girders	Structures	4/14/2020 8:05:50 AM - 06:00	Josephine - Erection Sequence & Rigging Plan		The configuration was not provided in the plan.(Josephine Girder Erect...2020 - Winslow - IQC)The rigging arrangement for picking from the shoring tower while the other end of the girder was on the goldhofer. Please reference the attached picture in comment #1.	Addressed	5/30/2020 12:43:01 PM -06:00	Audit Comment	Acknowledged see comment #1.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Structures	4/14/2020 8:05:50 AM - 06:00	Josephine - Temporary Works		The girders were supported with temporary bracing after each girder was set in accordance with the plan.	Conformance	4/10/2020 1:30:02 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures	4/14/2020 8:05:50 AM - 06:00	Contingencies: 1) Unplanned event (Storms, Traffic Accidents, Etc.)		There were no unforeseen events. A 2 hour delay was caused from the shoring tower height in Comment #1.	Conformance	4/10/2020 1:30:02 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures	4/14/2020 8:05:50 AM - 06:00	Contingencies: 2) Structural Elements that do not fit or line up		All elements lined up.	Conformance	4/10/2020 1:30:02 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures	4/14/2020 8:05:50 AM - 06:00	Contingencies: 3) Replacement of workers who do not perform work safely		All of their workers performed their duties safely.	Conformance	4/10/2020 1:30:02 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures	4/14/2020 8:05:50 AM - 06:00	Contingencies: 4) Equipment Failure		There was no equipment failure observed.	Conformance	4/10/2020 1:30:02 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All work was completed in accordance with the appropriate Plans and Specification		The slope was not cut to a 2H:1V. This work will be tracked as incomplete. The utilities that will be installed across this area in the coming days will be problematic which will make it harder to come back and fix it later. Please see the attached email chain and pictures. The bottom of pipe was measure to be 1'3" from the bottom of the abutment. The underdrain was originally 3ft from the abutment but was moved to 4ft away after IQC inspection.	Field Resolved	4/16/2020 4:04:21 PM -06:00	Field Resolved		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		All work was completed in accordance with the appropriate Plans and Specification		The underdrain matched the crown of the roadway/structure.	Conformance	4/24/2020 8:59:53 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	5/11/2020 7:46:01 AM - 06:00	All work was completed in accordance with the appropriate Plans and Specification		The work for the Josephine Abutment 3 Structural Underdrain was not constructed in accordance with BS011. If other details are required. They must be approved through the appropriate project processes.	Addressed	5/30/2020 12:41:08 PM -06:00	NC-2	ENCR 0130 was written to address this issue	Closed
Central 70	C 0704-241	Substructure	Structures		The orientation of the underdrain pipe was in accordance with the Manufacturers specification (In Submittal)		The orientation of the under drain was incorrect in comparison to the submittal. The crew was notified and it was fixed right away. Please see attached pictures.	Field Resolved	4/16/2020 4:04:21 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Substructure	Structures		The orientation of the underdrain pipe was in accordance with the Manufacturers specification (In Submittal)		Orientation was correct.	Conformance	4/24/2020 8:59:53 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Class B Filter Material was tested in accordance with CDOT Std Spec 206		Class B Filter Material was placed in lifts with a compacted effort.	Conformance	4/24/2020 8:59:53 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Class B Filter Material was tested in accordance with CDOT Std Spec 206		Class B backfill meet appropriate grading requirements for filter material.	Conformance	4/16/2020 4:04:21 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		No girders were placed before the Cellular Concrete was placed. (If girders are installed, flowfill maybe used in lieu of cellular concrete)		Flowfill was used as backfill over the underdrain burrito wrap. Girder were installed before the placement of flowfill.	Conformance	4/16/2020 4:04:21 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		No girders were placed before the Cellular Concrete was placed. (If girders are installed, flowfill maybe used in lieu of cellular concrete)		Flowfill was placed on 4/17/2020. IQC was onsite to witness the wrap prior to the flow fill.	Conformance	4/24/2020 8:59:53 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		All work was completed in accordance with the appropriate Plans and Specifications		The work was completed in accordance with the appropriate plans and specifications.	Conformance	6/22/2020 8:56:23 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		All work was completed in accordance with the appropriate Plans and Specifications		Backfill observed was completed according to plans.	Conformance	6/16/2020 12:02:09 PM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Precast Type 7 Concrete Barrier, the cast-in-place barrier sections shall be constructed compete with connecting hardware (conforming to Standard Plan M-606-14) may be formed upside down to minimize air pockets and improve surface finish.		Connecting hardware was installed	Conformance	11/3/2020 4:09:33 PM -07:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Each segment of the precast barrier shall not have spalls, corner breaks, and bottom spalls totaling more than 5 square feet of surface area which includes the base.		no sections had more than 5 square feet of spalls	Conformance	11/3/2020 4:09:33 PM -07:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Each segment of the precast barrier shall not have spalls, corner breaks, and bottom spalls totaling more than 5 square feet of surface area which includes the base.		Barrier installed was in proper working condition.	Conformance	7/14/2020 12:17:16 PM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Each segment of the precast barrier shall not have spalls, corner breaks, and bottom spalls totaling more than 5 square feet of surface area which includes the base.		Barrier is not damaged.	Conformance	5/11/2020 11:00:49 AM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Each segment of the precast barrier shall not have spalls, corner breaks, and bottom spalls totaling more than 5 square feet of surface area which includes the base.		Conformance	Conformance	1/18/2021 8:51:55 AM -07:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Connecting loops shall not be frayed, stretched, or deformed.		Connecting loops were in acceptable condition.	Conformance	4/27/2021 8:36:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Connecting loops shall not be frayed, stretched, or deformed.		No hooks or loops were damaged.	Conformance	7/14/2020 12:17:16 PM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Gaps between units shall not exceed the dimensions shown in the plans.		conformance	Conformance	6/2/2021 1:29:10 PM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Gaps between units shall not exceed the dimensions shown in the plans.		Gaps were per plan.	Conformance	4/27/2021 8:36:31 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		Gaps between units shall not exceed the dimensions shown in the plans.		J-hooks were noted as not being engaged and were brought up to the team which was addressed prior to opening the new configuration.	Conformance	6/7/2021 7:43:47 AM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Gaps between units shall not exceed the dimensions shown in the plans.		Barriers with gaps were brought up to team in a proactive approach and they were addressed immediately	Conformance	6/7/2021 7:43:20 AM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Care shall be taken during fabrication, storage, handling and transporting to prevent cracking, twisting, or other damage. Minor chips on edges may be patched with the approval of the Engineer. Breakage and chipping may be cause for rejection. Units damaged in such a way as to impair their appearance or suitability, in the opinion of the Engineer, shall be replaced at the Contractor's expense.		A cracked barrier was noticed and brought up to KIC management who replaced the barrier.	Conformance	6/7/2021 7:43:20 AM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		****All Items moved to MOT/Traffic Control Devices/Concrete Barrier****		Barrier placement appears acceptable.	Conformance	1/18/2021 8:46:41 AM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		"The height of the reinforced concrete base is 1'-1"" minimum."		concrete base for bridge railing is in conformance having a 1'-2" height.	Conformance	1/4/2021 1:18:32 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		"The height of the reinforced concrete base is 1'-1"" minimum."		Areas measured were in conformance	Conformance	5/14/2020 4:40:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		"The height of the reinforced concrete base is 1'-1"" minimum."		Concrete reinforced base was measured and was within spec 1.3" throughout.	Conformance	5/31/2020 3:50:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Dimensions of the reinforced concrete base match those shown on BS044.		The reinforced concrete base had the correct dimensions that were shown in BS044 throughout the whole bridge.	Conformance	5/31/2020 3:50:57 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Dimensions of the reinforced concrete base match those shown on BS044.		railing base is in conformance with the plans.	Conformance	1/4/2021 1:18:32 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Mid run posts are spaced at 10'-0" Maximum (measured center of post to center of post). When post spacing needs to be reduced to maintain the spacing from the expansion joint the spacing shall be 6'-8" Minimum.		mid run posts were spaced out and the maximum of 10'-0" spacing.	Conformance	1/4/2021 1:18:32 PM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway	6/17/2021 11:40:40 AM -06:00	Mid run posts are spaced at 10'-0" Maximum (measured center of post to center of post). When post spacing needs to be reduced to maintain the spacing from the expansion joint the spacing shall be 6'-8" Minimum.		Mid run posts are spaced 10' Max.	Conformance	6/15/2021 7:21:13 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Mid run posts are spaced at 10'-0" Maximum (measured center of post to center of post). When post spacing needs to be reduced to maintain the spacing from the expansion joint the spacing shall be 6'-8" Minimum.		Post spacing was measured to be 10' on center on March 30, as the concrete placement.	Conformance	5/14/2020 4:40:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Posts shall be perpendicular to the longitudinal roadway grade.		Posts are perpendicular to roadway grade.	Conformance	5/14/2020 4:40:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Posts shall be perpendicular to the longitudinal roadway grade.		All post were perpendicular to the longitudinal to the roadway grade throughout the bridge.	Conformance	5/31/2020 3:50:57 PM -06:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway	6/17/2021 11:40:40 AM - 06:00	Posts shall be perpendicular to the longitudinal roadway grade.		Posts are set perpendicular to the roadway grade	Conformance	6/15/2021 7:21:13 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Posts shall be perpendicular to the longitudinal roadway grade.		railing post are perpendicular to the roadway	Conformance	1/4/2021 1:18:32 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		The tube splice dimensions match those shown on the Tube Splice Detail shown on BS044.		tube splice dimensions are in compliance.	Conformance	5/14/2020 4:40:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		The tube splice dimensions match those shown on the Tube Splice Detail shown on BS044.		The tube splice dimensions are the correct ones shown on the tube splice detail BS044.	Conformance	5/31/2020 3:50:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Reflector tabs are installed at each post between the top and bottom rail per M606 -1 using a 5/8" diameter bolt with hex nut and lock washer.		The reflector tabs where installed at each post with the correct bolts with a hex nut and a lock washer.	Conformance	5/31/2020 3:50:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Reflector tabs are installed at each post between the top and bottom rail per M606 -1 using a 5/8" diameter bolt with hex nut and lock washer.		Tabs are installed	Conformance	5/14/2020 4:40:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Structures		Reflector tabs are installed at each post between the top and bottom rail per M606 -1 using a 5/8" diameter bolt with hex nut and lock washer.		reflector tabs are installed to spec with the correct hardware.	Conformance	1/4/2021 1:18:32 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Center to top rail to center of bottom rail is 11.25"		the vertical spacing of the two rails are 11.25"	Conformance	1/4/2021 1:18:32 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Center to top rail to center of bottom rail is 11.25"		From center to center on both rails is 1 foot.	Conformance	5/31/2020 3:50:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Connection of the rail to post is made using a 2.75" diameter by 2" threaded anchor stud with hex nut, hardened washer, & lock washer.		The rail was connected to the post with the correct nuts and washer.	Conformance	5/31/2020 3:50:57 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Connection of the rail to post is made using a 2.75" diameter by 2" threaded anchor stud with hex nut, hardened washer, & lock washer.		all the correct hardware was used for the rail to post connection.	Conformance	1/4/2021 1:18:32 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		The distance from the top of the top rail to the top of sidewalk is 2'-11" minimum.		the distance from the top of the rail to the sidewalk was measured to be at or above 3'-0".	Conformance	1/4/2021 1:18:32 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		The distance from the top of the top rail to the top of sidewalk is 2'-11" minimum.		From the top of the rail to the top of the sidewalk is 3 feet	Conformance	5/31/2020 3:50:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		The distance from the top of the top rail to the top of sidewalk is 2'-11" minimum.		Verified, see attachment	Conformance	5/14/2020 4:40:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway		1. Verify that the Contractor's Process Control Plan has been submitted and approved. The Process Control Plan will document the Contractor's proposed sampling and testing procedures for quality control of pavement thickness. It shall address the sampling and testing method and frequency for traffic lanes, shoulders, intersections, entrances, and crossovers. Use the Process Control Plan to verify conformance of quality control by the Contractor.		Submitted.	Conformance	10/1/2020 10:30:41 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		1. Check that the subgrade/base has been constructed to the required grade and crosssection and compacted to the required density.		IQC approved placement	Conformance	10/1/2020 10:30:41 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		1. Check that the subgrade/base has been constructed to the required grade and crosssection and compacted to the required density.		The grade was constructed in conformance of the plans.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		2. Proof rolled?		A proof roll was conducted at this location the previous day by Dan Cannon.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		2. Proof rolled?		Proofroll was performed by IQC	Conformance	10/1/2020 10:30:41 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		3. The final grade must be in a smooth and non-frozen condition.		Grade was smooth and not frozen	Conformance	10/1/2020 10:30:41 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		3. The final grade must be in a smooth and non-frozen condition.		The grade was smooth and not frozen.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		4. Properly referenced for line and grade?		The pavement grade was appropriate to match each edge of the concrete pavement already installed.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		2. Check that longitudinal construction joints are properly located, especially with respect to lane lines.		The longitudinal joints match the Bridge Jointing Plan that was approved.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway		3. Verify the correct installation of keyways. It is preferable to construct female keyways.		Keyways with the appropriate projection steel was installed in accordance with the plans. Please see attached pictures for this placement.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		3. Verify the correct installation of keyways. It is preferable to construct female keyways.		Pre-formed key ways used	Conformance	10/1/2020 10:30:41 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		4. Where tie bars are specified, verify the diameter and length of the epoxy coated bars for conformance. Observe the insertion operation for proper location and spacing of bars. Ensure that the Contractor demonstrates, by testing, the required pullout resistance where tie bars are stabbed or drilled and epoxied into place. (2) Epoxy coated? (3) Correct size?(5) Correct spacing?		The approved tie bars were installed at each end of the placement from the previous pours. Tie bars were also installed throughout the placement at the transverse joint.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		5. Verify that transverse construction joints are properly located and constructed. Check to ensure the location of joints for conformance with minimum spacing requirements.		The transverse joints match the Bridge Jointing Plan that was approved.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		5. Verify that transverse construction joints are properly located and constructed. Check to ensure the location of joints for conformance with minimum spacing requirements.		CCD/CDOT/KMP meet to discuss joints.	Conformance	10/1/2020 10:30:41 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		1. The concrete should be vibrated across the full width of the slab.		Vibrators were used	Conformance	10/1/2020 10:30:41 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		1. The concrete should be vibrated across the full width of the slab.		A mechanical vibrator was used to consolidate the concrete. It was observed that consolidation was consistent across the entire placement width.	Conformance	5/18/2020 8:37:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Structures		Girders will arrive on site from Plum Creek via I-70. Girder haul trucks will be staged in parallel to the rail road tracks. LCCO personnel will install the fall protection lifeline system to each girder. Once the lifeline system is in place it will be moved into erection position		all girders arrived at the same time and during the staging time all lifeline systems and fall protection was installed during this time.	Conformance	7/14/2020 12:12:17 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Girder J will be lifted off of the haul truck with the 230TN Crane. Girder will be swung parallel to bridge. Crane will walk to setting position and set girder. Girder will be braced to Abutment 1 and Abutment 2 per the Bracing Details. Once the bracing is complete, the crane will release the girder		all girders were swung parallel to the bridge and walked into place. see attached pictures	Conformance	7/14/2020 12:12:17 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Girders I – A will be set subsequently after J, and will be braced to each other per the Bracing Details		per the bracing plan each girder was braced to the girder next to it on the sides with extra bracing in the center. see attached photos	Conformance	7/14/2020 12:12:17 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		100% tie off will be in effect for any workers 6 feet above ground level or operating/working in a manlift		all workers working in an area above the ground 6' maintained 100% tie off at all times.	Conformance	7/14/2020 12:12:17 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		For the safety of the traveling public, I-70 will be subject to lane closures during parts of the girder erection. We will work with the DRIRR to set girders within their train movements. Proper signage and traffic control will be set up prior to any erection activities starting. All vehicle traffic will follow approved MHT plans for any closure that has been set in place. The contractors engineer will inspect all girders before giving their approval to open the area		during the first 2 girders to be set, the right WB lane on I-70 was closed	Conformance	7/14/2020 12:12:17 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Fire Suppression System	Fire & Life Safety	3/15/2021 8:37:40 AM - 06:00	4. The lower section fire suppression systems shall conform to the requirements of NFPA 502 and NFPA 14 and NFPA 25. The fire standpipe system shall be installed, inspected and tested as a Class 1 system as defined per NFPA 14.		The FHV-WB01 is installed and tested in accordance with the following specifications.	Conformance	3/12/2021 1:12:55 PM -07:00	C		Closed
Central 70	C 0704-241	Fire Suppression System	Fire & Life Safety		7. Coordination with the finishes drawings for signage details for the standpipe system. Standpipe system signage shall conform to the requirements of NFPA 502 and NFPA 14. Signage shall be provided for the fire hose valve stations, fire department connections, and all valves. All standpipe system components shall be identified with signage and shall included the asset identification number.		Signs were provided in the correct locations with the correct dimensions.	Conformance	6/2/2021 1:28:41 PM -06:00	C		Closed
Central 70	C 0704-241	Fire Suppression System	Fire & Life Safety		8. The entire installation shall be inspected, thoroughly cleaned, and damaged finishes touched up after final completion and prior to commissioning. All surfaces and equipment damaged in the course of the work shall be restored to the original condition.		All installations are clean, and no damage was observed.	Conformance	6/2/2021 1:28:41 PM -06:00	C		Closed
Central 70	C 0704-241	Fire Suppression System	Fire & Life Safety		8. The entire installation shall be inspected, thoroughly cleaned, and damaged finishes touched up after final completion and prior to commissioning. All surfaces and equipment damaged in the course of the work shall be restored to the original condition.		The entire installation was free of damage.	Conformance	3/17/2021 1:49:09 PM -06:00	C		Closed
Central 70	C 0704-241	Fire Suppression System	Fire & Life Safety		9. All dry standpipe and fittings shall be so installed such that the system drains to low point fire hose valve. All required drains are shown. Provide additional drains as necessary. All drains shall be accessible. Drains shall not be located underground		The standpipe and fittings was installed to allow drainage to the low point at the ball drip which was installed. Please reference the photos attached to this audit.	Conformance	3/17/2021 1:49:09 PM -06:00	C		Closed
Central 70	C 0704-241	Fire Suppression System	Fire & Life Safety		9. All dry standpipe and fittings shall be so installed such that the system drains to low point fire hose valve. All required drains are shown. Provide additional drains as necessary. All drains shall be accessible. Drains shall not be located underground		The system drains to the low point fire hose valve.	Conformance	6/2/2021 1:28:41 PM -06:00	C		Closed

Conformance	2/3/2022 7:16:22 AM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		Wire or fencing of the size and type required shall be firmly attached to the posts and braces in the manner indicated		Wire and fencing was firmly attached to the posts and braces	Conformance	9/21/2021 3:08:36 PM -06:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		Wire or fencing of the size and type required shall be firmly attached to the posts and braces in the manner indicated		Wire attached firmly.	Conformance	1/18/2021 9:01:57 AM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		Wire or fencing of the size and type required shall be firmly attached to the posts and braces in the manner indicated		Fencing was firmly attached to posts.	Conformance	1/18/2021 8:52:45 AM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		All wire shall be stretched taut and be installed to the required spacing		All wire was stretched taut.	Conformance	1/18/2021 8:52:45 AM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		All wire shall be stretched taut and be installed to the required spacing		Wire was taught.	Conformance	1/18/2021 9:01:57 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Fencing	Roadway		All wire shall be stretched taut and be installed to the required spacing		All wire stretched taut	Conformance	9/21/2021 3:08:36 PM -06:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		All wire shall be stretched taut and be installed to the required spacing		All wire was stretched taut and be installed to the required spacing.	Conformance	2/3/2022 7:16:22 AM -07:00	C		Closed
Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety	12/18/2020 4:00:48 PM - 07:00	1.5 Performance requirements		1.5H Mock-up: A meeting was held to approve the Mock-up Cover Sliding Cross Passage Door on 12/11/2020 at 8:30am. Peter Moran (Kiewit Sup), Eric Drobney (IQC) and Vortex (Technical Rep) were present. Testing in accordance with requirements under this specification are still required. The Engineer or Designee is still required for review and acceptance of the mock-up.	Adequate	2/17/2021 3:16:08 PM -07:00	Audit Comment	A complete mock up and required testing will be scheduled with the EOR/designee and communicated at a future date.	Closed
Central 70	C 0704-241	Block Walls	Walls		2.2 Reinforcing, Ties and Anchors		The approved thermal concrete wingnut anchors were used at each tie elevation. Submittal C70-MB12-ARC-ML-000055	Conformance	1/20/2021 6:19:33 PM -07:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		3.2 Installation		Part A.4 The foundation was free of dirt and debris before installing the first course.	Conformance	1/20/2021 6:19:33 PM -07:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		3.2 Installation		Part A.3 The units were plumb and true to line and level courses as required.	Conformance	1/20/2021 6:19:33 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Building	Cover	4/26/2021 10:34:37 AM - 06:00	2.3 Sheet Metal Materials		2.3 Sheet metal duct materials follow the requirements in this specification.	Conformance	4/15/2021 7:47:24 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	4/26/2021 10:34:37 AM - 06:00	3.1 Duct Installation		3.1 Duct Installation, Part A - Ducts are in accordance with the following specification. Reference plan sheets CAM-100 & CAM -101 for related routing.	Conformance	4/15/2021 7:47:24 AM -06:00	C		Closed
Central 70	C 0704-241	Ventilation	Fire & Life Safety		3.1 General		The following color identification is as follows. 480V Brown (Phase A), Orange (Phase B), Yellow (Phase C), Green (Phase D). The ground was present. A white (neutral) was not visible. Please reference pictures from MCC and Jet Fan. Reference the attached photos.	Conformance	4/2/2021 1:19:28 PM -06:00	C		Closed
Central 70	C 0704-241	Ventilation	Fire & Life Safety		3.2 Installation		Part N Circuit Identification - A label was provided at each termination point at the Jet Fan and MCC (Plastic, pre-printed sleeve wi	Conformance	4/2/2021 1:19:28 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		2.2 Requirements		Part #1-#4 under the following spec section were followed for the LCC Cabinets (Lighting Control Cabinets). Reference the attached pictures.	Conformance	2/8/2021 2:04:51 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Building	Cover		2.3 Tunnel Lighting Control Components		Part 3 LCC, section B - A touch screen is provided in the following Lighting Control Cabinets. Additional audits will be conducted on the LCCs to ensure proper connections and functionality in accordance with the spec.	Conformance	2/8/2021 2:04:51 PM -07:00	C		Closed
Central 70	C 0704-241	Lighting	Electrical	2/8/2021 2:30:06 PM -07:00	3.4 Installation of Control System		Part 1 - All components are in accordance with manufacturers supplied cut sheets 10451, 10460 & 10461. Reference Aconex Submittal #C70-SECO-SYC-SHD-000012. (SECO Cover Systems - Tunnel Lighting Control R4)	Conformance	2/8/2021 2:10:06 PM -07:00	C		Closed
Central 70	C 0704-241	Lighting	Electrical	2/8/2021 2:30:06 PM -07:00	3.4 Installation of Control System		Part 2 - The equipment was installed in accordance with the plans and RFC 495. Final height and angle of the photometer will be verified at a later date.	Conformance	2/8/2021 2:10:06 PM -07:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Installation Sequence Phase 2		Erection sequence followed the safety critical plan.	Conformance	4/27/2021 8:38:32 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Equipment for Girder Erection		Equipment was per safety critical plan.	Conformance	4/27/2021 8:38:32 AM -06:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		Before the start of each wall construction, the Contractor shall provide a block-placing plan and shall supply daily placement logs to the Engineer weekly and at the completion of the wall.		Shop drawings with a block placing plan and placement logs were supplied prior to construction.	Conformance	5/11/2021 11:38:23 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Block Walls	Walls		If the excavation for the placement of the leveling pad exposes an unsatisfactory bearing material, the Engineer may require removal and replacement of that material.		All unsatisfactory material was removed and replaced.	Conformance	5/11/2021 11:38:23 AM -06:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Retained backfill portion was Class 1 in areas per plan.	Conformance	5/11/2021 11:38:23 AM -06:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		Only power operated roller or plate compaction equipment weighing less than 1,000 pounds is allowed within 3 feet of the front face of the wall.		Small walk behind compaction equipment was used as necessary.	Conformance	5/11/2021 11:38:23 AM -06:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		For walls that support a roadway, the wall layout line at the leveling pad shall be set back and pre-measured with appropriate batter (5 to 8 percent) from the top of the blocks according to the offset with respect to the centerline of the road.		Appropriate batter was kept in wall.	Conformance	5/11/2021 11:38:23 AM -06:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in the horizontal and vertical directions.		Wall surface was checked with a straightedge.	Conformance	5/11/2021 11:38:23 AM -06:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		Unless otherwise noted, all blocks shall be dry-stacked and placed with each block spanning the joint in the row below (running bond).		All blocks were dry-stacked and placed with a running bond.	Conformance	5/11/2021 11:38:23 AM -06:00	C		Closed
Central 70	C 0704-241	Block Walls	Walls		The top of blocks shall be tested with a 3 foot or longer straight edge bubble level. All high points identified by the straight edge shall be ground flat.		Top of block were tested with a 4 foot level.	Conformance	5/11/2021 11:38:23 AM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		This work consists of the construction of slope and ditch paving in accordance with these specifications and in conformity with the lines and grades shown on the plans or established		Install was per plans.	Conformance	5/3/2021 2:44:45 PM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		507.02 Concrete Slope and Ditch Paving. Concrete shall conform to the requirements of Section 601. Concrete shall be Macro Fiber-Reinforced Class B Concrete.		Concrete was approved mix and was acceptable prior to placement.	Conformance	5/3/2021 2:44:45 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Slope Paving	Roadway		Paving thickness shall be as specified on the plans.		Install was per plans.	Conformance	5/3/2021 2:44:45 PM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		In ditch construction, the excavated areas adjacent to the paving which are not occupied by the paving shall be refilled to the level of original ground with acceptable material and thoroughly tamped.		Compaction efforts were acceptable.	Conformance	5/3/2021 2:44:45 PM -06:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		Excavation for toe or cut-off walls shall be made to the neat lines of the wall.		Toe was placed within neat lines.	Conformance	5/3/2021 2:44:45 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		The travelling roadway has been protected by temporary barrier	Conformance	6/11/2021 12:33:17 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		The section of the viaduct that I observed being demolished has no permanent structures to protect.	Conformance	6/14/2021 9:27:36 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		Structures have been adequately protected	Conformance	6/15/2021 7:41:43 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		Structures were adequately protected.	Conformance	6/21/2021 4:24:31 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		The permanent structures have been adequately protected	Conformance	6/24/2021 3:30:24 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		Clayton Bridge was adequately protected.	Conformance	6/14/2021 9:27:02 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		The permanent structure (UPRR bridge) was adequately protected with the methods approved by Union Pacific railroad.	Conformance	9/15/2021 4:13:03 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		Permanent structures were protected from debris	Conformance	6/29/2021 1:32:13 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The permanent structures have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		The permanent Structures were adequately protected.	Conformance	7/23/2021 3:04:29 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The utilities have been adequately protected with the methods discussed in Table 1: Permanent Structure & Utility projection summary.		The utilities were adequately protected although a fiber split duct was grazed when a single girder rolled over and folded.	Conformance	9/15/2021 4:13:03 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The vertical barrier has been installed in accordance with the demolition plan as discussed and shown in section 3.		Vertical barrier in place	Conformance	6/29/2021 1:32:13 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The vertical barrier has been installed in accordance with the demolition plan as discussed and shown in section 3.		Vertical barrier was installed correctly	Conformance	6/21/2021 4:24:31 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The temporary barrier rail and fence panels have been placed at the toe of slopes were needed.		Temporary barrier rail was placed at the toe of slopes	Conformance	6/21/2021 4:24:31 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The temporary barrier rail and fence panels have been placed at the toe of slopes were needed.		Barrier was placing in the lowered section to protect the lowered section from rolling debris.	Conformance	6/14/2021 9:27:02 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The temporary barrier rail and fence panels have been placed at the toe of slopes were needed.		The temporary barrier had been installed at the toe of slopes	Conformance	6/24/2021 3:30:24 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The temporary barrier rail and fence panels have been placed at the toe of slopes were needed.		The temporary barrier rail was present at the bottom of slopes	Conformance	6/29/2021 1:32:13 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Viaduct Demo	Removal		The temporary barrier rail and fence panels have been placed at the toe of slopes were needed.		Temporary barrier rails were placed at the toe of slopes	Conformance	6/15/2021 7:41:43 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		The temporary barrier rail and fence panels have been placed at the toe of slopes were needed.		The temporary barrier rail were placed at the toe of the slope due to proximity to eastbound I-70.	Conformance	6/14/2021 9:27:36 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Demolition	Removal		The temporary barrier rail and fence panels have been placed at the toe of slopes were needed.		Temporary barrier rails and fence panels have been placed at the toe of the slope	Conformance	8/3/2021 3:53:43 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Demolition	Removal		Dust control was managed by the direct wetting method.		Dust Control was managed by the direct wetting method	Conformance	8/3/2021 3:53:43 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control was managed by the direct wetting method.		Dust was controlled by direct wetting	Conformance	7/23/2021 3:04:29 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control was managed by the direct wetting method.		Dust Control was managed by direct wetting	Conformance	6/15/2021 7:41:44 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control was managed by the direct wetting method.		Dust control was managed by water trucks	Conformance	6/11/2021 12:33:17 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control was managed by the direct wetting method.		Dust control was managed by the direct wetting method	Conformance	6/29/2021 1:32:13 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control was managed by the direct wetting method.		Dust was controlled by direct wetting method	Conformance	6/24/2021 3:30:24 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control was managed by the direct wetting method.		Dust control was managed by the direct wetting method	Conformance	6/21/2021 4:24:31 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control was managed by the direct wetting method.		Dust has been controlled throughout the demo.	Conformance	6/14/2021 9:27:02 AM -06:00	C		Closed

Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were in place during the entirety of the demolition operation.		Water trucks were in place during demolition.	Conformance	6/11/2021 12:33:17 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were in place during the entirety of the demolition operation.		Dust control measures were in place during the entirety of the demolition operation	Conformance	6/15/2021 7:41:44 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were in place during the entirety of the demolition operation.		Dust Control measures were in place during the entirety of the operation	Conformance	7/23/2021 3:04:29 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Demolition	Removal		Dust control measures were in place during the entirety of the demolition operation.		Dust Control Measures were in place during the entirety of the observation	Conformance	8/3/2021 3:53:43 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Demolition	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Dust was kept within project limits	Conformance	8/3/2021 3:53:43 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Dust was kept within project limits	Conformance	7/23/2021 3:04:29 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Dust was kept within project limits	Conformance	6/15/2021 7:41:44 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		I observed the contractor using and adjusting water as necessary to limit dust from exiting the project limits.	Conformance	6/14/2021 9:27:36 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Dust was kept within project limits where possible	Conformance	6/11/2021 12:33:17 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Dust was kept within construction limits	Conformance	6/29/2021 1:32:13 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Dust exiting the site was limited as best as possible	Conformance	6/24/2021 3:30:24 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Dust control measures were adequate	Conformance	6/21/2021 4:24:31 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Conformance	Conformance	6/14/2021 9:27:02 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Dust control measures were adjusted and added as necessary to limit the dust exiting the project limits.		Dust control measures were adequate to limit dust exiting the project limits during the substructure removal.	Conformance	9/15/2021 4:13:03 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		No excess water was ponding. If ponding occurred, the water was properly handled/treated before entering the drainage system.		Excess water was collecting in the lowered section. The water is being caught in a Cover section inlet which discharges to the FFFS wet well.	Conformance	6/14/2021 9:27:02 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		No excess water was ponding. If ponding occurred, the water was properly handled/treated before entering the drainage system.		Ponding water was not present	Conformance	6/21/2021 4:24:31 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Viaduct Demo	Removal		No excess water was ponding. If ponding occurred, the water was properly handled/treated before entering the drainage system.		No ponding water was observed	Conformance	6/29/2021 1:32:13 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		No excess water was ponding. If ponding occurred, the water was properly handled/treated before entering the drainage system.		The contractor used snow machines to mist and water trucks with hoses for spot dust control. I saw no water ponding.	Conformance	9/15/2021 4:13:03 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		No excess water was ponding. If ponding occurred, the water was properly handled/treated before entering the drainage system.		No ponding water was observed	Conformance	6/11/2021 12:33:17 PM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		No excess water was ponding. If ponding occurred, the water was properly handled/treated before entering the drainage system.		I did not observe the contractor using excessive water that would cause ponding.	Conformance	6/14/2021 9:27:36 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		No excess water was ponding. If ponding occurred, the water was properly handled/treated before entering the drainage system.		No ponding water was observed	Conformance	6/15/2021 7:41:44 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Viaduct demolition took place during the allowable hours, creating noise only between 7:01am to 8:59PM on weekdays and 8:01am to 4:59pm on weekends. Any construction outside of those timeframes were performed in accordance with the requirements of the noise variance.		Viaduct demolition took place during allowable hours	Conformance	6/15/2021 7:41:44 AM -06:00	C		Closed
Central 70	C 0704-241	Viaduct Demo	Removal		Viaduct demolition took place during the allowable hours, creating noise only between 7:01am to 8:59PM on weekdays and 8:01am to 4:59pm on weekends. Any construction outside of those timeframes were performed in accordance with the requirements of the noise variance.		Viaduct demolition took place during the allowable hours. Central 70	C 0704-241	Roadway Finishes	Roadway	9/1/2021 4:59:29 PM - 06:00	AASHTO Guide for Development of New Bicycle Facilities		The completed Quebec sidewalk to Sand Creek Trail connection should adhere to AASHTO Guidelines for Bicycle and Trail Design and Construction per Schedule 10A. A segment of the trail connection was finished with a 3:1 side slope extending only 6 to 7 feet before it drops off vertically into a 4 to 4.5 foot deep washout. AASHTO Guidelines say a 5' wide trail shoulder should be provided when side slopes of 3:1 or greater are used when a drop of 6' or more or hazard within 10' of the edge of trail exists. Otherwise a safety railing should be provided. The constructed side slope measures approximately 3:1 for roughly 6.5' at the worst condition. See attachments. Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		CDOT assessment team was on site to verify 1411 information for acceptance and came across a mouse nest and droppings in the 332D cabinet and noticed the issue could have been prevented by plugging the conduit. This has been an issue that has been discussed in the past and now we have moved to a field Resolution status before submitting an NCR2 status on these and any future cabinets. The other two cabinets on site (332D, 332 and Type M-Stretch) all have similar issues where conduit that are not being used currently as well as conduit with cabling installed are not correctly plugged. Any rodent infestation issues can be prevented and at the very least minimized by making an effort to correctly plug the conduit.	Field Resolved	6/24/2022 2:02:37 PM -06:00	Field Resolved		Closed

Central 70	C 0704-241	Pavement/Surface Removals	Removal		All material or debris has been disposed of at an approved location.		Material is being taken offsite to an approved location	Conformance	9/3/2021 11:56:06 AM -06:00	C		Closed
Central 70	C 0704-241	Pavement/Surface Removals	Removal		The removal of the existing bridge is being performed in a safe manner.		Removal of rowdy chunks is being performed in a safe manner	Conformance	9/3/2021 11:56:06 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Saw cutting has been performed where required with a vertical face unless otherwise specified to the minimum depth of 2" or the depth of reinforcing steel.		Concrete was sawcut full depth on full panel replacement	Conformance	10/18/2021 7:39:29 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Existing concrete is being removed according to the following: -as shown on the plans -as directed by the Engineer -in the event additional removal of unsound concrete is required it has been included in the work		Existing concrete was removed according to the following: as shown on plans, as directed by the Engineer, and in the event of unsound concrete was required and it has been included in the work.	Conformance	10/18/2021 7:39:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway		Removal of the substructure has been taken down to at least 1ft below the natural existing or future ground which ever is lower unless otherwise approved by the Engineer.		Areas of full depth panel replacement were excavated at least 1' below existing bottom of existing, base course was placed/ compacted prior to concrete.	Conformance	10/18/2021 7:39:29 AM -06:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		Shaft was drilled according to the Approved Drilled Shaft Plan, Plans and Specifications	Conformance	2/17/2022 4:32:05 PM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		Shaft was drilled according to the Approved Drilled Shaft Plan	Conformance	2/16/2022 3:01:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		The Contractor controlled operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Selected construction methods and procedures were used that prevented excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the drilling of the shaft.	Conformance	1/10/2022 8:22:29 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Signal Foundations	Electrical		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Shaft was drilled within Conformance to Plans and Specifications.	Conformance	2/2/2022 12:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		The Contractor controlled operations to prevent damage to existing structures and recently drilled hole, utilities, roadways and other facilities. Construction methods and procedures were selected that prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the drilling of the shaft.	Conformance	1/28/2022 8:28:11 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The location for the drilled shaft have been adequately staked with the correct information.		The location of the drilled shaft was adequately staked with the correct information.	Conformance	1/28/2022 8:28:11 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The location for the drilled shaft have been adequately staked with the correct information.		The location for the drilled shafts were adequately staked with the correct information.	Conformance	1/10/2022 8:22:29 AM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		The location for the drilled shaft have been adequately staked with the correct information.		Location is off by approx 1ft from the surveyed mark due to pull box location.	Conformance	2/16/2022 3:01:39 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The location for the drilled shaft have been adequately staked with the correct information.		The locations for the drilled shafts were adequately staked with correct information and templates placed on the ground.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The location for the drilled shaft have been adequately staked with the correct information.		Survey stakes were placed prior to excavation.	Conformance	9/1/2021 10:23:47 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The location for the drilled shaft have been adequately staked with the correct information.		The location for the drilled shaft(s) were adequately staked with the correct information.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The location for the drilled shaft have been adequately staked with the correct information.		The locations for the drilled shafts were adequately staked with the correct information and templates were installed.	Conformance	12/14/2021 1:29:41 PM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		The location for the drilled shaft have been adequately staked with the correct information.		Drilled shaft was observed to be staked.	Conformance	4/27/2022 11:44:25 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The shaft location has been check for potential underground utility conflicts.		The shaft location was checked for potential underground utility conflicts.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The shaft location has been check for potential underground utility conflicts.		Contractor has update underground utilities locations.	Conformance	9/1/2021 10:23:47 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The shaft location has been check for potential underground utility conflicts.		The shaft locations were checked for potential underground utility conflicts.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		The shaft location has been check for potential underground utility conflicts.		No Potential Underground Utility Conflicts were found prior to Foundation Placement	Conformance	2/16/2022 3:01:39 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft was plumb, diameter was correct, & the excavated material was compared with geological information to ensure that adequate bearing material has been reached.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		The drilled shaft is plumb and the diameter is correct, and the excavated material was compared to the plan geological information to ensure that adequate bearing material has been reached (Shannon & Wilson).	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft was plumb, diameter is correct, & the excavated material was compared with geological information to ensure that adequate bearing material has been reached.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft was plumb, diameter was correct and excavated material was compared with geological information to insure adequate bearing was reached.	Conformance	12/21/2021 7:41:22 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb, diameter is correct, & the excavated material was compared with geological information to ensure that adequate bearing material has been reached.	Conformance	1/10/2022 8:22:29 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft was plumb, correct diameter, and the excavated material was compared to the geological information to insure that bearing material was reached.	Conformance	1/28/2022 8:28:11 AM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Shaft appeared plumb 36" in diameter and 13LF Deep	Conformance	7/27/2022 7:41:22 AM -06:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft was observed to be plumb.	Conformance	4/27/2022 11:44:25 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation, and minimum embedment obtained and documented.	Conformance	1/28/2022 8:28:11 AM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled according to the Approved Drilled Shaft Plan, Plans and Specifications	Conformance	2/17/2022 4:32:05 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation, and minimum embedment obtained and documented by IQC.	Conformance	1/10/2022 8:22:29 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation, and minimum embedment into bearing material obtained and documented.	Conformance	12/21/2021 7:41:22 AM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled in conformance to Specifications and Plans	Conformance	2/16/2022 3:01:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		I QC verified shaft elevation.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation, and minimum embedment into bedding material was obtained and documented by IQC.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation, and minimum embedment obtained and documented by IQC.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation with minimum embedment obtained/ documented by IQC.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shaft was not left open overnight, protected from sidewall instability.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		The drilled shaft excavations were not left open overnight.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		The drilled shaft excavations were not left open overnight	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		The drilled shaft excavations were left overnight but were cased full depth and protected.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Shaft was drilled in conformance to Specifications and Plans	Conformance	2/16/2022 3:01:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drill shaft excavation was not left open overnight.	Conformance	12/21/2021 7:41:22 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		The drilled shaft excavations was not left open overnight.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		All casings being used are watertight and clean.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		Casing was acceptable.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		Casing was acceptable.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		All temporary casing is smooth wall structural steel.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		The temporary casing was smooth wall structural steel.	Conformance	1/28/2022 8:28:11 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		Temporary casing is capable of being installed and removed without deforming and causing damage to the completed shaft without disturbing the surrounding soil.	Conformance	1/28/2022 8:28:11 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		All temporary casing being used is capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		Casing was removed without causing damage.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		All temporary casings are of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.	Conformance	12/14/2021 1:29:41 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		The temporary casing was of ample strength to resist damage and deformation from transportation and handling, installation stresses, and all forces and pressures acting on the casing.	Conformance	1/28/2022 8:28:11 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Temporary casing shall be completely removed, unless otherwise shown on the Plans or approved by the Engineer. As the temporary casing is withdrawn, sufficient head of fluid concrete must be maintained to ensure that water or slurry outside the temporary casing will not breach the column of freshly placed concrete. Casing extraction shall be at a slow, uniform rate with the pull in line with the shaft axis. Excessive rotation of the casing shall be avoided to limit deformation of the reinforcing steel cage.		Temporary casing was completely removed, and a sufficient head of fluid concrete was maintained to ensure that water outside the casing did not breach the column of freshly placed concrete. Casing extraction was maintained at a slow and uniform rate with the pull in line with the shaft axis. No rotation of the casing needed.	Conformance	1/28/2022 8:28:11 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Prior to concrete placement the CSL tubes have been filled with water and the watertight caps have been installed.		Prior to concrete placement, the CSL tubes were filled with water and watertight caps were installed.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		IQC verified and accepted.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		Prior to rebar and concrete placement the drilled shaft met the following criteria: For wet drilled shaft excavation in soils, the base of the excavation was covered with less than 3 inches of sediment or loose or disturbed material.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		Prior to rebar and concrete placement the drilled shaft met the following criteria: Wet drilled shaft excavation in soils, the base of the excavation was not covered with more than 3 inches of sediment or loose or disturbed material prior to placing concrete.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		The drilled shaft meets the following criteria: drilled shaft excavation was in soil, the base of the excavation was not covered with more than 3 inches of sediment or loose or disturbed material just prior to placing concrete.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		Prior to rebar and concrete placement the drilled shaft met the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation was not covered with more than 3 inches of sediment or loose or disturbed material just prior to placing concrete.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, and was rigidly braced to retain its configuration during handling and construction, and was suspended off the bottom of the hole.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		Rebar cage was 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, no loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		Reinforcing cage was tied 100%.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cages were tied 100% at all intersections and double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		Tie placement was acceptable. All intersections were tied.	Conformance	10/19/2021 2:45:25 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		Rebar ties were acceptable. Cage was tied 100%.	Conformance	10/27/2021 7:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Splices appeared acceptable and were made prior to placement.	Conformance	10/27/2021 7:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Splices were verified by IQC and were acceptable.	Conformance	10/19/2021 2:45:25 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Splices appeared acceptable.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Steel reinforcing cage was spliced prior to placement into the shaft.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Reinforcing cage was spliced prior to placement into the shaft.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Reinforcing cages were spliced prior to placement into the shaft.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Reinforcing cage was spliced prior to placement into the shaft.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Reinforcing cage was spliced prior to placement into the shaft as shown on the plans.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Reinforcing cage was spliced prior to placement into the shaft.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		The steel reinforcing cage was securely held in position throughout the concrete placement operation & supported from the top.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		The steel reinforcing cage was securely held in position throughout the concrete placement operation & supported from the top.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed

Central 70	C 0704-241	Signal Foundations	Electrical		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		Shaft was drilled and concrete placed within Conformance to Plans and Specifications.	Conformance	2/2/2022 12:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		The steel reinforcing cage was held securely in position throughout the concrete placement and supported from the top.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		The steel reinforcing cage was securely held in position throughout the concrete placement operation & supported from the top.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		The steel reinforcing cage was securely held in position throughout the concrete placement operation & supported from the top.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		Reinforcing cage was securely held in position throughout the concrete placement operation and supported from the top.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		Reinforcing cage was securely held during concrete placement.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		Reinforcing cage was securely held in position.	Conformance	10/19/2021 2:45:25 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		Rebar cage was securely held throughout concrete placement.	Conformance	10/27/2021 7:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		Steel cage appeared tight nd securely held in position	Conformance	7/27/2022 7:41:22 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete spacers were installed and acceptable.	Conformance	10/27/2021 7:31:52 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete spacers were placed per specifications.	Conformance	10/19/2021 2:45:25 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete spacer wheels were installed using uniform spacing for the entire cage and did not exceed 10' intervals vertically and used 5 spacers for a 42" shaft.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Spaces and boot placement was acceptable.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Plastic concrete spacers were installed at uniform spacing for the entire length of the cage, did not exceed 10' intervals vertically and a minimum of 4 spacers horizontally	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete spacers or other non corrosive spacing devices were installed to provide uniform spacing for the entire cage which did not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete spacers or other non corrosive spacing devices was installed to provide uniform spacing for the entire cage and did not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete plastic spacers were installed to provide uniform spacing for the entire cage, did not exceed 10 ft. intervals vertically, and a minimum of 4 spacers per 1 ft. of shaft diameter horizontally.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete placed within Conformance to Plans and Specifications.	Conformance	2/2/2022 12:29:39 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete spacers or other non corrosive spacing devices were installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete spacers or other non corrosive spacing devices were installed to provide uniform spacing for the entire cage which did not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Minimum concrete cover is compliant with values shown in the table of Section 503.18		Minimum concrete cover is compliant with values shown in Section 503.18.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Minimum concrete cover is compliant with values shown in the table of Section 503.18		Concrete cover appeared acceptable prior to concrete placement.	Conformance	10/19/2021 2:45:25 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Minimum concrete cover is compliant with values shown in the table of Section 503.18		Concrete cover appeared to be acceptable.	Conformance	10/27/2021 7:31:52 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		For any portion of the caisson socketed in fine grained bedrock susceptible to slaking and degradation such as, but not limited to, claystone, siltstone, or shale and provided the proper slurry properties have been achieved. If the concrete is not placed within four hours of drilling, the Contractor shall drill into the bedrock an additional 1/3 of the plan specified rock socket prior to placing the concrete		Rock socket was inspected and acceptable to IQC prior to cage placement. Boots were placed on cage.	Conformance	10/27/2021 7:31:52 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		For any portion of the caisson socketed in fine grained bedrock susceptible to slaking and degradation such as, but not limited to, claystone, siltstone, or shale and provided the proper slurry properties have been achieved. If the concrete is not placed within four hours of drilling, the Contractor shall drill into the bedrock an additional 1/3 of the plan specified rock socket prior to placing the concrete		Socket was inspected by IQC and was acceptable. Boots were placed on rebar cage prior to placement into shaft.	Conformance	10/19/2021 2:45:25 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		Reinforcing cage was placed immediately prior to concrete placement.	Conformance	10/19/2021 2:45:25 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The steel reinforcing cage has been placed immediately prior to placing concrete.		The reinforcing steel cages were placed immediately before placing concrete.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		Rebar cage was placed immediately prior to concrete placement.	Conformance	10/27/2021 7:31:52 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		The steel reinforcing cage was placed immediately prior to concrete placement.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		The steel reinforcing cage was placed immediately prior to placing concrete.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		The steel reinforcing cage was placed immediately prior to placing concrete.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		The steel reinforcing cage was placed immediately prior to placing concrete.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		The steel reinforcing cage was placed immediately prior to placing concrete.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		The steel reinforcing cage has been placed immediately prior to placing concrete.		Shaft was drilled and concrete placed within Conformance to Plans and Specifications.	Conformance	2/2/2022 12:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		The steel reinforcing cage was installed immediately prior to concrete placement.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		The steel reinforcing cage has been placed immediately prior to placing concrete.		Cage was placed prior to concrete placement	Conformance	7/27/2022 7:41:22 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drill shaft concrete was Class BZ with a 6" to 9" slump.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete was Class BZ Special, with has been approved for the project.	Conformance	12/21/2021 7:41:22 AM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Concrete placed within Conformance to Plans and Specifications.	Conformance	2/2/2022 12:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete used was class BZ mix which has been approved for the project (6-9" slump).	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete used was Class BZ mix which has been approved for the project (6-9" slump).	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete used was a class BZ mix which has been approved for the project.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete used was Class BZ mix which has been approved for the project (6-9" slump).	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Class BZ concrete mix was used, approved for project.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete used for the shafts is a BZ mix approved for the project.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Concrete slump was verified and acceptable to IQC.	Conformance	10/20/2021 9:11:56 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		For underwater placement is the contractor meeting the criteria & methods of 503.19.		Concrete placement was acceptable.	Conformance	10/20/2021 9:11:57 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Concrete was placed with tremie tube. Pump truck used.	Conformance	10/20/2021 9:11:57 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Tremie/ pump truck was used to place concrete.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		The shaft met the criteria for wet placement, slurry is being used and concrete was placed with a tremie.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		The drilled shaft meets the criteria for wet placement, slurry was being used and concrete was placed with a tremie/ pump truck.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		The shaft met the criteria for wet placement slurry is being used and concrete is placed with a tremie.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		The shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Shaft met the criteria for wet placement-slurry was used and concrete was placed with a tremie.	Conformance	12/21/2021 7:41:22 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Shaft meets the requirement for wet placement slurry and concrete was placed with a tremie.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		The drilled shaft steel rebar cage did not exceed 2" upward displacement, and did not exceed downward displacement more than 6" during concrete placement.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement the steel rebar did not exceed upward displacement more than 2 inches, or downward displacement by more than 6 inches.	Conformance	12/21/2021 7:41:22 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement the drilled shaft steel did not exceed upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement the drilled shaft steel did not exceed upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		Concrete placed within Conformance to Plans and Specifications.	Conformance	2/2/2022 12:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement the drilled shaft steel did not exceed upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement the drilled shaft steel did not exceed upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement, no upward or downward displacement of the rebar cage was observed.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		Rebar cage displacement was acceptable.	Conformance	10/20/2021 9:11:56 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		Pump truck was used and tube was submerged during concrete placement.	Conformance	10/20/2021 9:11:57 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		The discharge end of the tremie remained submerged in the concrete for at least five feet and always contained enough concrete to prevent water from entering.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		Concrete placement was acceptable.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement was one continuous operation.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement continued in one operation and did not exceed the time in the Drilled Shaft Installation Plan.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement was a continuous operation.	Conformance	10/20/2021 9:11:56 AM -06:00	C		Closed

Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement was continuous in one operation and did not exceed the time in the Drilled Shaft Installation Plan.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement continued in one operation and did not exceed the time in the Drilled Shaft Installation Plan.	Conformance	12/7/2021 11:50:43 AM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placed within Conformance to Plans and Specifications.	Conformance	2/2/2022 12:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement continued in one operation and did not exceed the time in the Drilled Shaft Installation Plan.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement continued in one operation and did not exceed the time in the Drilled Shaft Installation Plan.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement continued in one operation, and did not exceed the time in the Drilled Shaft Installation Plan.	Conformance	12/21/2021 7:41:22 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement was in one continuous operation and did not exceed the time in the Drilled Shaft Installation Plan.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed without hitting the sides of the reinforcing cage or holes.	Conformance	12/16/2021 7:13:34 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed without hitting the sides of the rebar cage or holes.	Conformance	12/21/2021 7:41:22 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed without hitting sides of reinforcing cage or holes.	Conformance	1/11/2022 7:30:51 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed without hitting sides of reinforcing cage or holes.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed without hitting sides of reinforcing cage or holes.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete placement was acceptable. Pump truck was used.	Conformance	10/20/2021 9:11:57 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed using a tremie and did not hit the sides of the reinforcing cage.	Conformance	12/20/2021 7:46:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed with pump truck and did not hit sides of cage during placement.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The concrete at the top of the shaft is properly cured.		Concrete was cured properly.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The concrete at the top of the shaft is properly cured.		Concrete was properly cured.	Conformance	10/20/2021 9:11:56 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The concrete at the top of the shaft is properly cured.		The concrete at the top of the shaft was properly cured.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The concrete at the top of the shaft is properly cured.		Concrete at top of shaft was blanketed, properly cured.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Recently poured drilled shafts have been allowed to cure for 24hrs and achieve 1800 psi prior to commencing pile driving or casing installation within a 20ft radius of the shaft, and drilled shaft operations within 3 shaft diameters.		Poured drilled shafts were allowed to cure for 24 hours, no drilled shaft operations were done within 3 shaft diameters.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Recently poured drilled shafts have been allowed to cure for 24hrs and achieve 1800 psi prior to commencing pile driving or casing installation within a 20ft radius of the shaft, and drilled shaft operations within 3 shaft diameters.		Recently poured drilled shafts were allowed to cure, and drilled shaft operations did not occur within 3 shaft diameters.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		Recently poured drilled shafts have been allowed to cure for 24hrs and achieve 1800 psi prior to commencing pile driving or casing installation within a 20ft radius of the shaft, and drilled shaft operations within 3 shaft diameters.		No Pile driving or casing installation was preformed within the area.	Conformance	2/2/2022 12:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		The drilled shaft meets the tolerances outlined in 503.20		Shaft was drilled in conformance to Specifications and Plans	Conformance	2/16/2022 3:01:39 PM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		The drilled shaft meets the tolerances outlined in 503.20		Drilled Shaft Meets the Tolerances outlined in Spec 503.20	Conformance	2/17/2022 4:32:05 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft meets the tolerances outlined in 503.20		The drilled shaft met the tolerances outlined in 503.20	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		For shafts placed with slurry the top of shaft was cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		Shafts were placed with slurry, all scum, laitance, loose gravel, and sediment were removed on the surface, elevation of top of poured shaft was checked with survey to prevent incorrect installation of reinforcing steel.	Conformance	11/10/2021 7:28:53 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		Slurry was vacuumed from top of shaft.	Conformance	9/1/2021 10:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		For shafts placed with slurry the top of shaft was cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.	Conformance	1/17/2022 8:29:20 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Projecting reinforcing steel is cleaned of excess concrete (i.e.. splatter)		Projecting reinforcing steel was cleaned of excess concrete.	Conformance	12/2/2021 12:39:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Precast panel deck forms shall be stored and transported in a horizontal position and shall conform to the requirements of subsections 618.14(c) and 618.15		Panels were observed transported in a horizontal position and lifted in a horizontal Position.	Conformance	5/19/2022 8:42:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		When precast panels are erected, the fit of mating surfaces shall have no more than a 1/8 inch gap to prevent concrete leakage. If such fit cannot be provided, the joint shall be filled with grout or sealed with an acceptable caulking compound prior to the placing of the cast-in-place portion of the slab.		No large gaps were observed between the Deck Panels.	Conformance	5/19/2022 8:42:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Precast panels and their accessories, including components to set grade, shall not be attached by welding to steel girders or other structural steel elements or reinforcing steel.		No welding was observed.	Conformance	5/19/2022 8:42:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Lifting of more than one panel at a time shall not cause panel cracking. Methods for multiple lifting of panels shall be shown on the working or shop drawings.		No lifting of multiple panels was observed.	Conformance	5/19/2022 8:42:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Panel products shall be stacked in such a manner that damage does not occur.		No damage was observed on deck panels,	Conformance	5/19/2022 8:42:15 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		Steel was protected from debris.	Conformance	11/11/2021 7:36:37 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		Steel was protected from dirt or other contaminants.	Conformance	11/5/2021 7:18:34 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel was protected from damage and is free of any refuse material	Conformance	7/29/2021 2:12:15 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel and its epoxy coating has been protected	Conformance	8/5/2021 2:38:01 PM -06:00	C		Closed

Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Clear space was maintained.	Conformance	11/11/2021 7:36:37 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement has a clear cover of 2 inches.	Conformance	11/5/2021 9:37:21 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcing had at least 2" of clear cover	Conformance	8/20/2021 12:13:46 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement had appropriate spacing	Conformance	7/29/2021 2:12:15 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement had clear cover in conformance with the plans	Conformance	8/5/2021 2:38:01 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Rebar had 2 inch cover.	Conformance	9/21/2021 9:06:35 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Rebar had 2 inches of cover.	Conformance	9/21/2021 9:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Rebar had 2 inch cover.	Conformance	9/21/2021 1:45:49 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement had clearance/ cover of 2 inches.	Conformance	11/15/2021 2:08:11 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		On the day of the pour vertical reinforcement on the overhand was observed to not meet 2" Clearance on Deck. See Picture #1. Rebar Clearance issue was mentioned to IQC (Cayetano) and PC (Adwardo) several times. Rebar clearance issue was resolved after concrete arrived on site.	Field Resolved	6/13/2022 2:46:37 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		On the day of the pour It was observed that Transverse bars along the overhang did not have 2" of Clearance and were touching the Drip Strip at the bottom and the west edge forms. It was mentioned to IQC (Chris) and it was adjusted.	Field Resolved	6/13/2022 2:46:37 PM -06:00	Field Resolved		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		On the day of the pour it was observed that the Top Deck reinforcement near the overhang had undulations along the longitudinal direction with the concern of not meeting Rebar clearance to top of Concrete. The concern was brought to IQC (Chris) and they verified that there were clearance issues and adjusted some of the top of mat reinforcement on the overhang.	Field Resolved	6/13/2022 2:46:37 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Rebar	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Concrete cover appeared that it would acceptable.	Conformance	1/26/2022 8:38:12 AM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Concrete cover appeared acceptable at time of dry run.	Conformance	1/13/2022 9:03:48 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement (including splices) had a clear cover of 2 inches.	Conformance	12/27/2021 7:43:08 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement, including splices, had a clear cover of 2 inches.	Conformance	12/22/2021 7:48:06 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Reinforcing had proper clear cover.	Conformance	1/26/2022 8:39:23 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.	Conformance	2/14/2022 10:53:37 AM -07:00	C		Closed

Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The Department was observing the seating pod at N=456069.51 & S=654077.91 on 4/21. It was observed that the horizontal rebar was placed at 12" spacing but keynote 6.1A references TLD-007 detail one for the rebar spacing which calls for #4 @ 6" OC each face. I spoke with the crew and asked about the rebar spacing. They thought it was supposed to be 12" spacing. So I called IQC and asked about the rebar spacing and they agreed the horizontal bar should at 6" spacing. IQC called Brian Armstrong to confirm with him and he agreed as well. The crew then agreed on the 6" spacing and began fixing the rebar before the pour.	Field Resolved	4/22/2022 12:26:32 PM -06:00	Field Resolved		Closed

Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		On 5/18 after IQC had signed the checklist for the first pour for Planter D in the Community space and before the pour I was inspecting the rebar. I noticed that the rebar at the expansion joint did not match sheet LSC-401. Wall reinforcing is supposed to stop 2" before the expansion joint and the rebar did not stop within 2". I told Alex Milyard about what I was seeing and he went and talked to the crew. At this time the concrete truck was already on site and testing was occurring. The crew removed the forms and trimmed the rebar that was incorrect and then reinstalled the forms. Once this was complete the wall was poured. See attached for images of the rebar. Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Upon initial inspection of the 6 CF2 counterforts in the Central Plaza Space I noticed that all of them were missing one of the L bars required on sheet LSC-301. I notified IQC representative Stoaan Bush while he was inspecting the rebar that a L bar was missing. He told me that only one L bar was required and told me to look at LSC-201 because there was a different detail for these counterforts. When I looked at that sheet with him I disagreed that that sheet had a different detail for the L bars in the counterforts. He did not have his ipad with him while he was inspecting and did not appear to be using the plans to check the rebar detail. I showed him the counterfort detail I was seeing on my ipad. He then agreed that the regular CF2 detail needed to be followed and the second L bar needed to be added. He told the crew to add the bar and it was added. Central 70	C 0704-241	Rebar	Cover		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated ties were placed at alternating intersections and appeared acceptable.	Conformanc e	1/13/2022 9:03:48 AM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Rebar, supports and ties were epoxy coated.	Conformanc e	1/26/2022 3:40:26 PM -07:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated rebar was used, all supports, ties, and splicers used are plastic or epoxy coated.	Conformanc e	5/2/2022 8:46:59 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated rebar was used for all supports, ties, and splicers used were plastic or epoxy coated.	Conformanc e	5/2/2022 8:47:53 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated rebar was used- all supports, ties, and splicers used are plastic or epoxy coated.	Conformanc e	6/27/2022 8:30:12 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All rebar, supports, ties and splicers appeared to be epoxied.	Conformanc e	6/14/2022 4:21:02 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy Coating appeared in acceptable condition.	Conformance	6/14/2022 4:21:02 PM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		It was observed that all Epoxy coated rebar was free from damage.	Conformance	5/9/2022 7:43:26 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated bars were free from damage to the epoxy coating- no cracks, flaking, chips, etc.	Conformance	5/2/2022 8:47:53 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated bars were free from damage to the epoxy coating- no cracks, flaking, chips, etc.	Conformance	6/27/2022 8:30:12 AM -06:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated bars were free from damage to the epoxy coating, no cracks, flaking, chips, etc.	Conformance	5/2/2022 8:46:59 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated rebar was free of major damage and minor damage was repaired with approved epoxy spray.	Conformance	1/26/2022 3:40:26 PM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated rebar was free of major damage. The minor repairs were made with approved epoxy spray.	Conformance	1/13/2022 9:03:48 AM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Rebar was in acceptable condition prior to concrete placement.	Conformance	1/26/2022 8:38:12 AM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Rebar was free of major damage and minor damage was repaired.	Conformance	12/13/2021 8:34:58 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Dowel baskets set in alignment on transverse joints, in middle portion of slab, oiled prior to concrete placement, epoxy coated.	Conformance	12/13/2021 8:36:14 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated rebar was free from damage and minor damage was repaired with epoxy spray.	Conformance	12/3/2021 2:43:50 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		On the day of the pour rebar was observed to have damage to the Epoxy Coating. It was mentioned to IQC (Cayetano) and it was resolved.	Field Resolved	6/13/2022 2:46:37 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Substructure	Structures		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated bars were free from damage	Conformance	7/29/2021 2:12:15 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated rebar was clean prior to concrete placement.	Conformance	9/21/2021 9:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Epoxy coated rebar was clean and free of damage prior to concrete placement.	Conformance	9/21/2021 1:45:49 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Epoxy coated bars are free from damage to the epoxy coating. (ie. cracks, flaking, chips, etc.)		Rebar placed appeared acceptable.	Conformance	9/21/2021 9:06:35 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Epoxy coated bars shall be placed on plastic supports or steel supports fully coated with plastic or epoxy & prevented from coming in contact with other steel items.		Rebar placement was acceptable.	Conformance	9/21/2021 9:23:48 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Epoxy coated bars shall be placed on plastic supports or steel supports fully coated with plastic or epoxy & prevented from coming in contact with other steel items.		Approved supports were placed.	Conformance	9/21/2021 1:45:49 PM -06:00	C		Closed

Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wire installed per plan on sheet ITS_033 and in more detail on sheet ITSID-11. Installation is in accordance with all CDOT standards and specifications. 1411 submitted.	Conformance	9/8/2022 12:40:48 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wire were installed on OHSS per plan sheets ITS-033 & SSTR-60.	Conformance	6/22/2022 9:03:04 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices at STA2405+00 installed per plan on ITS-039 and in more detail on SSTR-73. All devices wire installed in accordance with all CDOT standards and specifications. Devices installed on SIGN-E-70-118.	Conformance	4/1/2022 1:30:51 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wiring installed per plan on Sheet ITS-035 and in more detail on sheet SSTR-65. All work performed in accordance with all CDOT standards and specifications.	Conformance	9/1/2022 2:31:31 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Device and wiring where installed per plan sheets ITS-023, SSTR-46 and ITSIDT-29. Testing and integration of devices will be completed at a later date.	Conformance	11/2/2021 7:35:47 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All CSL tests met the required specifications and were approved by Benesch. See Aconex Reference Number KIE-TRN-028827.	Conformance	11/5/2021 9:37:55 AM -06:00	C		Closed
Central 70	C 0704-241	Pavement/Surface Removals	Removal		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All milling was performed to end extents of temporary ramp.	Conformance	4/18/2022 3:19:11 PM -06:00	C		Closed
Central 70	C 0704-241	Pavement/Surface Removals	Removal		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work performed conforms to the lines, grades, cross sections, and dimensions shown in the Contract.	Conformance	10/19/2021 8:36:09 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The UP track gang completed all work for constructing track and turn-outs off-line for Phase 5B Alt and all work appears to conform to the lines, grades, cross sections, dimensions and material requirements, including tolerances, shown in the Contract.	Conformance	11/12/2021 1:39:29 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Work was observed to conform to B030.123 and shops.	Conformance	5/19/2022 8:42:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Cap	Walls		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work performed and all materials furnished conformed to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.	Conformance	2/18/2022 7:33:17 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Channel was placed per plan.	Conformance	11/3/2021 1:06:59 PM -06:00	C		Closed
Central 70	C 0704-241	Signals Poles and Wire	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work observed (Location, Signs, Mast Arm Length, Signals, Light) was conforming to Plan Sheet SGNL-15 and SNG-015.	Conformance	4/13/2022 9:36:08 AM -06:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Ped Pole foundation was 18" wide and 6LF long.	Conformance	3/23/2022 1:20:12 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work completed in accordance with all CDOT standards and specifications. All work completed in reference to plan sheet RMP-004.	Conformance	6/22/2022 9:39:36 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wire have been installed and tested. Seven(7) Lane Usage Signs, One(1) Full color DMS have all been installed per plan sheet ITS-030 and in more detail on sheet SSTR-55. All device have been installed in accordance with all CDOT standards and specifications.	Conformance	3/10/2022 12:44:34 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wire installed in accordance with all CDOT standards and specifications. Installed per plan sheet ITS-031 and in more detail on SSTR-58	Conformance	10/29/2021 8:29:00 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		CDOT ITS Full-Color DMS installed and tested. DMS installed per plan sheet ITS-028 and in more detail on SSTR-53. DMS has been installed in accordance with all CDOT standards and specifications.	Conformance	3/10/2022 2:30:44 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All ITS devices and wiring installed per plan on sheet ITS-033 and in more detail on SSTR-61. All devices installed in accordance with all CDOT standards and specifications.	Conformance	3/22/2022 3:16:10 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		CDOT ITS EFS installed per plan on sheet ITS-048 and in more detail on sheet ITS-048 and in more detail on sheet ITS-048 and in more detail on sheet ITS-048. All devices and wire installed in accordance with all CDOT standards and specifications.	Conformance	4/11/2022 11:43:37 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Fiberglass conduit was installed on the existing viaduct from Washington St to 44Ave per spec and plan sheets ITS-008, ITS-009 and ITSBD-04 through ITSBD -14.	Conformance	11/9/2021 7:42:10 AM -07:00	C		Closed
Central 70	C 0704-241	Lighting Conduit	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Conduit was placed in barrier prior to pour according to plans.	Conformance	10/29/2021 9:48:21 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		During walk of newly construction detour paving for the EB Steele off ramp, it was noted that the cross slope of the pave road did not appear to be constructed per the temp pavement drawings. The ramp was to be sloped to the south at 2%, and it was actually paved to the north at a of approximately 7.5-8%. This was brought up to team and address immediately before the ramp was opened to traffic. The plans did not include cross-slopes or transitions.	Field Resolved	10/21/2021 11:58:08 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Signals Poles and Wire	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work observed conformed with plan sheet SNG-015 and SGNL-15. Sturgeon is waiting on the Clayton St Sign.	Conformance	4/11/2022 3:41:42 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cap Beams	Walls		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Conformance because the rebar was #4 place at 1' spacing. Lapping met the 2' minimum. The piano wire was placed correctly to match the proper depth of 1' 2" and height of 2' 3". Both concrete truck were tested the air entrapment in the first truck was 7.4% and 8% for the second truck. Shotcrete was placed to the proper thickness and matched to the already poured cap.	Conformance	1/11/2022 12:16:36 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wiring installed per plan sheet ITS-046 & ITSXS-57. All devices installed in accordance with all CDOT standards and specifications.	Conformance	2/2/2022 1:53:37 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All ITS conduit installed per plan on sheet ITS-007 and in accordance with all CDOT standards and specifications.	Conformance	1/21/2022 3:20:04 PM -07:00	C		Closed
Central 70	C 0704-241	Signal Foundations	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wiring installed per plan sheet ITS-004. All devices installed in accordance with all CDOT standards and specifications. 1930+90	Conformance	4/11/2022 11:44:24 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wiring installed per plan sheet SSTR-46 and ITS-023. All devices installed in accordance with all CDOT standards and specifications. Not all tolling equipment specified on sheet ITSTP-03 installed yet. 2180+54	Conformance	4/12/2022 5:39:04 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wiring installed per plan sheet SSTR-60 and ITS-033. All devices installed in accordance with all CDOT standards and specifications. Not all tolling equipment specified on sheet ITSTP-05 installed yet. 2316+28	Conformance	4/20/2022 8:42:07 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Bridge finishes installed to date of completion were installed per plan. A preliminary walk was conducted with PC, Benesch, RailPros, and QCATs to create a punch list for structure completion.	Conformance	6/1/2022 9:47:01 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wiring installed per plan sheets ITS-033, ITSID-11, ITSXS-44. All devices installed in accordance with CDOT standards and specifications.	Conformance	9/2/2022 3:06:06 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices and wiring installed per plan sheets ITS-017 & ITSID-07. All devices installed in accordance with all CDOT standards and specifications.	Conformance	9/2/2022 3:04:32 PM -06:00	C		Closed
Central 70	C 0704-241	Remove Temporary Barrier	Maintenance of Traffic (MOT)		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work was completed prior to removal of barrier.	Conformance	7/19/2022 2:12:16 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work performed and all materials furnished conformed to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, as shown in the Contract.	Conformance	6/30/2022 7:50:04 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Concrete material was batched and tested in accordance with specifications.	Conformance	5/19/2022 8:36:54 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Concrete placed was tested and met specifications.	Conformance	5/20/2022 8:01:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Rebar in Type 7 Style CA was observed to be conforming to CDOT standards.	Conformance	4/28/2022 9:09:57 AM -06:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Light Foundation was surveyed out and installed in the Correct Location. Correct Light (CCD Pedestrian Light) is intended to be installed.	Conformance	4/27/2022 11:44:25 AM -06:00	C		Closed
Central 70	C 0704-241	Lighting Conduit	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Conduit was observed to be 1" in Diameter. Conduit was observed being routed into the lighting foundation and into the Pull Box	Conformance	4/27/2022 11:46:09 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Barrier type 7 style CA Dimensions were observed to be conforming to CDOT Standards	Conformance	4/28/2022 9:09:57 AM -06:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The Department sent a Field Issue Conversation Email on 4/15 (see attached) asking if the southern ~18 ft of the wall matched the grade on grading plans. The wall did not appear to fully match the grade by visual inspection. On 4/18 IQC and PC verified the top of wall elevation via survey and stated it was within tolerance. See attached for IQC's measurements of the wall.	Conformance	4/19/2022 1:53:23 PM -06:00	C		Closed

Central 70	C 0704-241	F/P/S Wall	Walls		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		The embankment was maintained free of organic and frozen materials and uniformly mixed.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	Ponds/Basins/Swales	Drainage	5/19/2022 8:58:06 AM -06:00	Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment is observed to be free of Organic and frozen material.	Conformance	5/19/2022 8:35:26 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment material was free of organic and frozen material.	Conformance	3/7/2022 12:50:04 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Rocks, concrete, and asphalt chunks larger than allowable dimensions were removed and disposed of properly.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		The embankment material was placed in uniform horizontal lifts that did not exceed the allowable maximum thickness.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Embankment material was placed in uniform lifts and did not exceed maximum thickness.	Conformance	4/20/2022 3:44:57 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Material was placed in uniform horizontal lifts.	Conformance	9/7/2021 9:51:43 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction was completed uniformly.	Conformance	9/7/2021 9:51:43 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Observe the compaction operation for uniformity with respect to moisture content and target density.		The compaction operations were observed for uniformity with respect to moisture content and target density.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Check that the top two feet of embankment is constructed with rock free material.		The top two feet of embankment was constructed with rock free material.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The proof roll was conducted in conformance with the specification?		Proof roll was conducted in conformance with the specification.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		The proof roll was conducted in conformance with the specification?		Proof roll was conducted in conformance with the Spec.	Conformance	4/20/2022 3:44:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		The proof roll was conducted in conformance with the specification?		Proof roll was conducted in conformance with the Spec.	Conformance	3/7/2022 12:50:04 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		The proof roll was conducted in conformance with the specification?		IQC verified that the area passed the proof roll after the soft spot repair was performed in checklist #15308.	Conformance	7/14/2022 1:06:42 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Ensure that embankment material is being placed to avoid damage to adjacent structures.		Embankment material was being placed to avoid damage to adjacent structures.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Ensure that embankment material is being placed to avoid damage to adjacent structures.		Material was placed and no damage to adjacent structures.	Conformance	12/21/2021 12:18:50 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Oversize material should not be used around structures or pile driving locations.		Oversize material was not used around structures or pile driving locations.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Roots, logs, and other unsuitable materials must be disposed of in designated areas outside the fill area.		Roots, logs, and other unsuitable materials were disposed of in designated areas outside the fill area.	Conformance	12/17/2021 9:10:57 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		Subgrade was constructed as shown in the typical section of plans. Width and grade were in conformance with typical section.	Conformance	12/21/2021 12:18:50 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		After construction, verify that the roadway grade and prism are within specified tolerance and that embankment construction meets the density requirements of the Contract.		Roadway grade and prism were within specified tolerance as per plan.	Conformance	12/21/2021 12:18:50 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		The subgrade was shaped to the required grade and free of irregularities. Subgrade was compacted in accordance to Spec.	Conformance	4/20/2022 3:44:57 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		The subgrade was shaped to the required grade per plan. Subgrade was free of ruts and all irregularities prior to placing base material.	Conformance	3/7/2022 12:50:04 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		The subgrade was shaped to the required grade free from ruts and uniformly compacted.	Conformance	4/20/2022 3:45:30 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		The subgrade was compacted properly, density tests were performed and passed.	Conformance	4/20/2022 3:45:30 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade and Base materials were properly compacted and met the required moisture and density requirements.	Conformance	3/7/2022 12:50:04 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to the required moisture and density. Density tests were performed and passed.	Conformance	4/20/2022 3:44:57 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade and base were compacted and both achieved required moisture/density.	Conformance	12/21/2021 12:18:50 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		Proof roll operation was conducted. Major soft spots were identified and corrected.	Conformance	4/20/2022 3:44:57 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		During the proof roll operation two soft spots were identified and corrected prior to base material being placed.	Conformance	4/20/2022 3:45:30 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		Soft spots were identified and marked out on grade during proof roll operations. Soft spots were removed, repaired, and a reproof roll was conducted on repaired areas. Passed.	Conformance	3/7/2022 12:50:04 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		7. Upon approval of the proof rolling, the subbase, base course, or initial pavement course shall be placed within 48 hours.		Grade was paved within 48 hours.	Conformance	3/7/2022 12:50:04 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		7. Upon approval of the proof rolling, the subbase, base course, or initial pavement course shall be placed within 48 hours.		Proof roll was conducted and no soft spots were identified. Paving operation began with 24 hours of completion.	Conformance	12/21/2021 12:18:50 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was asphalt placed on a frozen subgrade or setting bed? Remove and replace unit paver work damaged by frost or freezing.		HMA was not placed on frozen subgrade. Operation did not start until surface temp was within Spec.	Conformance	11/12/2021 1:40:12 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was asphalt placed on a frozen subgrade or setting bed? Remove and replace unit paver work damaged by frost or freezing.		Asphalt was not placed on frozen subgrade. Weather was acceptable for paving.	Conformance	12/10/2021 12:31:33 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SMA	Roadway		Was asphalt placed on a frozen subgrade or setting bed? Remove and replace unit paver work damaged by frost or freezing.		Sub grade was approved by IQC and appeared acceptable. Temperature was acceptable for asphalt placement.	Conformance	8/23/2022 10:48:33 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface appeared acceptable and was at uniformed grade at time of placement.	Conformance	8/23/2022 10:48:33 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		The surface was graded and compacted properly. No irregularities were found.	Conformance	4/20/2022 3:45:30 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		The surface was graded and compacted properly. Irregularities in base course were corrected, brought to uniform grade and cross section .	Conformance	6/13/2022 2:45:37 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Base course was graded and compacted properly.	Conformance	4/22/2022 12:27:58 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded, properly compacted, and density test was performed.	Conformance	12/10/2021 12:31:33 PM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Base surface was brought to uniform grade, cross section, and properly compacted.	Conformance	12/10/2021 12:31:08 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted properly prior to HMA placement.	Conformance	11/12/2021 1:40:12 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Subgrade (Cement Treated) was properly placed, mixed, compacted, and graded. Base was also placed, graded, compacted, and brought to uniform grade and cross section.	Conformance	11/11/2021 2:48:56 PM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		The surface was graded, compacted properly, and produced and uniform texture where aggregates were firmly keyed.	Conformance	4/20/2022 3:43:02 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted properly to uniform grade and cross section prior to HMA placement.	Conformance	3/7/2022 12:49:32 PM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified and corrected.	Conformance	3/7/2022 12:49:32 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified and corrected prior to base placement.	Conformance	11/11/2021 2:48:56 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified during subgrade proof roll. Areas were corrected.	Conformance	11/12/2021 1:40:12 PM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		During proof roll operation soft spots were identified by IQC and Qcat. Areas were corrected, re-proof rolled and passed.	Field Resolved	12/10/2021 12:31:08 PM -07:00	Field Resolved		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		During proof roll operation conducted by IQC, PC, and Qcat. One soft spot was identified prior to paving. Soft spot was repaired, reproof rolled and passed.	Field Resolved	12/10/2021 12:31:33 PM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Base	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified and corrected, no frozen material was present.	Conformance	6/13/2022 2:45:37 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Sub grade was inspected and accepted by IQC. Soft spots were not observed.	Conformance	8/23/2022 10:48:33 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		Proofroll was conducted in accordance with Spec 203.09. Soft spots were identified and corrected. The axle weight of the water truck was recorded by IQC, small areas of deflection were marked and repaired. Date, Stas., general condition, and methods used for correction were recorded.	Conformance	6/13/2022 2:45:37 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		Proof-roll was conducted in accordance to Spec. Soft spots were identified on the Subgrade (Cement Treated) and repaired. Proff-roll was then again conducted on soft spot repairs and passed.	Conformance	11/11/2021 2:48:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SMA	Roadway	9/30/2021 8:49:50 AM - 06:00	Is the surface to be treated properly prepared?		Surface was swept, but rainfall did not allow surface to dry.	Adequate	11/3/2021 2:49:02 PM -06:00	Audit Comment	QC and PC re-inspected the area prior to paving continuing. Weather events trigger a new hold point inspection to continue paving operations	Closed
Central 70	C 0704-241	SX	Roadway		Is the surface to be treated properly prepared?		The surface(s) were properly prepared.	Conformance	6/22/2022 12:08:28 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		The surface was swept to remove accumulations of loose gravel and debris.	Conformance	6/21/2022 7:47:19 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	6/24/2022 9:20:29 AM - 06:00	Was the surface swept to remove accumulations of loose gravel and debris?		The surface was swept to remove accumulations of loose gravel and debris.	Conformance	6/23/2022 4:57:22 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		Surfaces were swept and cleaned.	Conformance	4/22/2022 12:27:58 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		The surface was swept to remove accumulations of loose gravel and debris.	Conformance	6/17/2022 11:38:06 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		The surface was swept to remove accumulations of loose gravel and debris.	Conformance	6/15/2022 11:38:56 AM -06:00	C		Closed

Central 70	C 0704-241	SX	Roadway		Manual operation of the paver is permitted in irregularly shaped and minor areas (e.g., tapers, ramps, manholes, joints and where adverse paving conditions are encountered). Closely monitor these areas for conformance.		Manual operation of the paver was used in irregularly shaped and minor areas (tapers, ramps, manholes, joints.)	Conformance	9/7/2021 9:52:19 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Manual operation of the paver is permitted in irregularly shaped and minor areas (e.g., tapers, ramps, manholes, joints and where adverse paving conditions are encountered). Closely monitor these areas for conformance.		Manual operation of the paver was used when paving occurred on ramps and tapered areas.	Conformance	8/11/2021 7:48:56 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	12/1/2021 10:27:27 AM -07:00	If the automated control system of the paver fails, the equipment may be operated manually for the remainder of the workday, provided specified results are obtained. If the Contractor fails to obtain and maintain the specified surface tolerances, the paving operations shall be suspended until satisfactory corrections, repairs, or equipment replacements are made.		The automatic grade control on the paver did not fail, no manual operation needed.	Conformance	12/1/2021 7:45:09 AM -07:00	C		Closed
Central 70	C 0704-241	SX	Roadway	12/1/2021 10:27:27 AM -07:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		The paver was not operating at a forward speed consistent with uniform and continuous laying of the mixture. The paver operated in a stop and go motion due to the inconsistent truck delivery of the mix.	Understood	12/2/2021 12:41:01 PM -07:00	Audit Comment	Access, traffic and plant variables all play into continuous paving. KIC monitors and remediates stop and go paving as much as possible.	Closed
Central 70	C 0704-241	SX	Roadway	8/16/2021 9:02:22 AM -06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		The paver was operating with a stop and go motion due to lapses in delivery and irregular delivery times.	Adequate	9/15/2021 4:22:20 PM -06:00	Audit Comment	Trucking is monitored nightly and adjusted as needed.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		The paver was operating at a forward speed consistent with uniform and continuous laying of the mixture.	Conformance	9/30/2021 7:23:53 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Paver was operating in a constant forward speed consistent with uniform and continuous placing of the mixture.	Conformance	12/22/2021 7:46:41 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Paver was operated in continuous forward motion.	Conformance	4/22/2022 12:27:58 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was being kept half full during the paving operation.	Conformance	4/20/2022 3:46:12 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material was kept at midpoint of augers, head of material in auger chamber was 1/2 to 2/3 full, and material was placed at cross-slope or crown shown on typical section.	Conformance	6/16/2022 1:38:09 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SX	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material was kept at midpoint of augers, head of material in auger chamber was 1/2 to 2/3 full, and placing material at cross-slope or crown shown on typical section.	Conformance	6/17/2022 11:38:06 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material was kept at midpoint of augers, the head of material in auger chamber was 1/2 to 2/3 full, placing material at cross-slope or crown as shown on typical section.	Conformance	6/15/2022 11:38:56 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	6/24/2022 9:20:29 AM - 06:00	(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material was kept at midpoint of augers, the head of material in auger chamber was 1/2 to 2/3 full, and were placing material at cross-slope or crown shown on typical section.	Conformance	6/23/2022 4:57:22 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SX	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, the material was kept at midpoint of augers, head of material in auger chamber was 1/2 to 2/3 full, and placing material was at cross-slope or crown shown on typical section,	Conformance	6/21/2022 7:47:19 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material was kept at midpoint of augers, and the head of material in auger chamber 1/2 to 2/3 full, material was placed at cross-slope or crown shown on typical section.	Conformance	6/22/2022 12:08:28 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material was kept at midpoint of augers, head of material in auger chamber was 1/2 to 2/3 full, material was placed at cross-slope as shown on typical section.	Conformance	9/30/2021 7:23:53 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/16/2021 9:02:22 AM - 06:00	(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material kept at midpoint of augers, head of material in auger chamber 1/2 to 2/3 full. Material was placed at cross-slope or crown as shown on typical section.	Conformance	8/16/2021 7:31:56 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SMA	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept consistently full during paving operations.	Conformance	8/11/2021 7:48:56 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		Hopper was kept more than half full at all times, material was kept at midpoint of augers, auger chamber was at least half full, material was placed at cross slope as shown on typical sections.	Conformance	9/7/2021 9:52:19 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	12/1/2021 10:27:27 AM - 07:00	(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material was kept at midpoint of augers, the head of material in auger chamber 1/2 to 2/3 full, material was placed at cross-slope or crown shown on typical section.	Conformance	12/1/2021 7:45:09 AM -07:00	C		Closed
Central 70	C 0704-241	SX	Roadway	12/1/2021 10:27:27 AM - 07:00	Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation observed from paver hopper to augers.	Conformance	12/1/2021 7:45:09 AM -07:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation was observed during the movement of material from the paver hopper back to the paver augers.	Conformance	9/7/2021 9:52:19 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation of material was witnessed during movement of material from the hopper to the paving augers.	Conformance	8/11/2021 7:48:56 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SX	Roadway	8/16/2021 9:02:22 AM - 06:00	Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation was observed during the movement of material from the paver hopper back to the paver augers.	Conformance	8/16/2021 7:31:56 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation was observed during the movement of material from the paver hopper back to the paver augers.	Conformance	9/30/2021 7:23:53 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation of mix was observed during the movement of material.	Conformance	12/22/2021 7:46:41 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation of material was witnessed during movement from the hopper to the augers.	Conformance	3/7/2022 12:50:51 PM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation was observed from the paver hopper to the augers	Conformance	8/3/2022 12:30:40 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation was observed.	Conformance	9/8/2022 4:30:55 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No visible segregation was observed during the movement of material from the hopper to the augers.	Conformance	4/20/2022 3:46:12 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation was observed in mix.	Conformance	4/22/2022 12:27:58 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		Paver wings were cycled at a regular interval to prevent large buildups of the material.	Conformance	6/17/2022 11:38:06 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SX	Roadway		Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		Paver wings were cycled at a regular interval to prevent large buildups of the material.	Conformance	6/16/2022 1:38:09 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		Paver wings were cycled at a regular interval to prevent large buildups of the material.	Conformance	6/22/2022 12:08:28 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		The wings of the hopper were dumped throughout the day, Paver wings were cycled at a regular interval to prevent large buildups of the material.	Conformance	6/21/2022 7:47:19 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	6/24/2022 9:20:29 AM - 06:00	Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		Paver wings were cycled at a regular interval to prevent large buildups of the material.	Conformance	6/23/2022 4:57:23 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/16/2021 9:02:22 AM - 06:00	Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		The wings of the hopper were dumped only at end of day.	Conformance	8/16/2021 7:31:56 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		Wings were dumped at end of shift.	Conformance	9/7/2021 9:52:19 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Do the augers extend the full width of the screed? Is the auger two inches above the finished surface of the mat?		The augers extended the full width of the screed, and the auger was two inches above the finished surface of the mat.	Conformance	9/7/2021 9:52:19 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/16/2021 9:02:22 AM - 06:00	Do the augers extend the full width of the screed? Is the auger two inches above the finished surface of the mat?		The augers extended the full width of the screed, and the auger was two inches above the finished surface of the mat.	Conformance	8/16/2021 7:31:56 AM -06:00	C		Closed

Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		519.02 The Developer is responsible for providing the materials required for the Construction Work following industry best practices and the manufacturer recommendations to meet a total Garden Roof Assembly system warranty per		I was observing Alpha gluing down drainboard in the Events Lawn lawn space and noticed that Spinout had not	Field Resolved	5/20/2022 9:35:59 AM -06:00	Field Resolved		Closed

Section 519.18 (*CO-061).

been applied to all seams of the root barrier (RB) protection course. Stoan Bush was standing near the installation and I told him that it looked like drainboard was being applied on RB without spin out applied. And he immediately dismissed my concern and told me that spin out was not needed in that area and that spin out was only required in the planter areas. I told him I don't think that is true and that spin out is necessary on all the seams of the RB. He again ignored my concern and told me that that was not true. I asked him to check if that was true for me. So he went and talked to Corey with Alpha and did not come back or follow up with me about my concerns. The IQC and PC checklists both require spinout to be applied to the RB seams and the integrity test needs to be performed before drainboard is applied. There is a hold point inspection required. So later in the afternoon me and Andy Green approached Stoan and asked him why

drainboard was glued to RB if the Spinout had not been applied. He then told me that the Spinout had been applied. I asked him when did they apply it, was it after I told you about the issue? He ignored my question and did not answer it. He then said lets just go look at it. So the three of us go to the area and lift up the drainboard and the spinout had not been applied to the whole area under the glued down drainboard. Stoan said that that looked like spin out to him. He was very dismissive of the Departments concerns. He also said that the spinout was not applied since that area had not been tested yet. He said it was glued down so the drainboard did not blow away. So I told him that then the drainboard should not have been placed there because there is a hold point and the membrane needs to be tested and spinout needs to be applied before drainboard is allowed to be glued down. He then said what should they do, should they cut off the extra drainboard?

Project Construction Assessments Overview as of September, 2022

							He was not following the hold points of the checklist and he had said he was the one auditing the installation of the drainboard and signing the checklist. He then called Corey with Alpha and discussed the issue with him. Corey verified that that area had been tested. So the crew added the spin out on the protection course and then reglued the drainboard in the area. See attached for images of the drainboard before and after the fix.					
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		519.02 The Developer is responsible for providing the materials required for the Construction Work following industry best practices and the manufacturer recommendations to meet a total Garden Roof Assembly system warranty per Section 519.18 (*CO-061).		On 7/11 crews were placing material around the pipe in the tree trenches along the east side of the cover and the east bookend. I noticed that in multiple of the tree trenches spin out had not been applied to the waterproofing protection course. I notified Suzanne with IQC that material was being placed in the tree trenches even though the waterproofing was not finished. Suzanne notified the crews immediately and had them stop placing fill. The material was then vacuumed out the next day.	Field Resolved	7/18/2022 12:31:04 PM -06:00	Field Resolved		Closed

I originally sent a field resolved email on 3/15 (see attached) discussing the Departments concerns about inadequate protection of the waterproofing. The email noted that the waterproofing membrane, protection course, and the hydrodrain layers were getting dirty and were not being adequately protected from other trades. The cleanliness of the	Field Resolved	4/1/2022 11:52:02 AM -06:00	Field Resolved		Closed

drain board was brought up multiple times in the weekly CCD/CDOT Cover Top Coordination meetings and the Department was assured by IQC and Brian Armstrong that the crews were aware that they needed to keep the drain board clean. The Departments concerns were also brought up to IQC and Brian in the field. In the CCD/CDOT Cover Top Coordination meeting on 3/24 the Department was told that the crews will blow off the drainboard at the end of every day and that a magnet would be run over the board to clear out any nails and ties from the rebar. I have also reminded Brain and Stoan in the field to ask the crews to keep the drain board clean after nails, concrete dust, concrete chunks, and rebar ties were noticed on the drainboard that had not been cleaned up at the end of each day. Burn holes were also observed in the drainboard from other trades working on the board. The Department was assured that these burn holes would be

							found and repaired before backfill was placed on the cover. In the Cover Inspection meeting with IQC on 3/29 the Department brought up concerns about the cleanliness of the drainboard and that the Department felt it should be inspected before soil was placed on it. Backfill was being placed on the drainboard on 3/30 and nails, rebar ties, and burn holes were still present on areas of the drainboard that were about to be covered. IQC and Brian were notified about this issue and they contacted alpha to repair the burn holes and had crew members run a magnet over the area about to be backfilled. But it seems that the drainboard was not inspected before backfill was placed.

Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		H. Chamfer exterior corners and edges of permanently exposed concrete.		Chamfers on edges were observed.	Conformance	6/13/2022 2:40:04 PM -06:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		A. General: Comply with CRSI's "Manual of Standard Practice" for placing reinforcement.		Reinforcement appeared to be conforming to Plans and Spec	Conformance	6/13/2022 2:40:04 PM -06:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.		Reinforcement appeared to be conforming to Plans and Spec	Conformance	6/13/2022 2:40:04 PM -06:00	C		Closed
Central 70	C 0704-241	Jack and Bore/Tunneling	Drainage		603/IQC/Culverts and Sewers/603/Construction Compliance/Visual Inspection/Checklist/Meet contract requirements/Daily during production		603 requirement in the MTIP matrix for Jack and Bore requires that IQC complete daily checklists with a visual inspection during installation of the pipe. Operation began 7 January, and jacking operation completed 10 January. As of 10 January, no IQC checklists have been submitted for this operation.	See ENCR 1438	1/13/2022 8:39:14 AM -07:00	NC-2	ENCR 1438 has been issued to resolve this matter.	Closed
Central 70	C 0704-241	Drainage Structures	Drainage		Where cast-in-place structures are used, check forms and reinforcing steel for proper condition and dimension. Check the Contractor's Bar List.		Cast-in-place structure was used, checked forms and reinforcing steel for proper condition and dimension, correct bar size in place.	Conformance	4/18/2022 7:45:30 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drainage Structures	Drainage		This work consists of the construction of manholes, inlets, and meter vaults in accordance with these specifications, and in conformity with the lines and grades shown on the plans or established		The work consists of the construction of manholes, inlets, and meter vaults in accordance with these specifications, and in conformity with the lines and grades shown on the plans.	Conformance	2/11/2022 8:42:06 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe sections on the inside of manholes or inlets shall be treated as shown on the plans, or as directed, and shall project outside sufficiently for proper connection with next pipe section.		Mud work appeared acceptable at time of grout application.	Conformance	3/31/2022 4:37:55 PM -06:00	C		Closed
Central 70	C 0704-241	Drainage Structures	Drainage		Pipe sections on the inside of manholes or inlets shall be treated as shown on the plans, or as directed, and shall project outside sufficiently for proper connection with next pipe section.		Pipe sections on the inside of manholes or inlets were treated as shown on the plans, and projected outside sufficiently for proper connection with next pipe section.	Conformance	3/25/2022 12:53:23 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe sections on the inside of manholes or inlets shall be treated as shown on the plans, or as directed, and shall project outside sufficiently for proper connection with next pipe section.		Pipe section on the inside of the inlets were treated and also projected outside sufficiently for proper connection with next pipe section.	Conformance	11/11/2021 3:36:34 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe sections on the inside of manholes or inlets shall be treated as shown on the plans, or as directed, and shall project outside sufficiently for proper connection with next pipe section.		Pipe sections on the inside of the inlets were projected sufficiently for proper connection with the next pipe section.	Conformance	11/11/2021 1:47:09 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipes of the proper type and size shall be build into a manhole where future laterals are to be constructed. These pipes shall be sealed at their outer ends and an invert shall be built into each manhole for such lateral connections. When a manhole is located in the pavement area, it shall not be constructed to final grade until the pavement has been completed.		Pipe, joints and structural penetrations appeared acceptable prior to flowable fill placement.	Conformance	3/31/2022 4:37:55 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		1) All bricks shall be thoroughly wetted, before being laid, either by immersion or in a manner satisfactory to the Engineer. Special care shall be taken to make the face of the brick work smooth. All joints on the interior surface of the manholes and appurtenances shall be carefully struck. Brick shall not be laid upon a concrete foundation until the concrete has set. 2) Masonry shall conform to the requirements for the respective type. When specified, the outside face of structures shall be plastered with a 1/2 inch thick cement-sand mortar coat. Unless otherwise provided, exposed surfaces of concrete and masonry shall be cured as defined in subsection 601.13. Masonry shall fit neatly and tightly around the pipe		Bricks were witnessed being thoroughly wetted by immersion prior to placement.	Conformance	2/14/2022 10:52:08 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe elevations and locations properly staked and match plans.		Pipe elevations and locations were properly staked and matched plans	Conformance	2/14/2022 10:52:08 AM -07:00	C		Closed
Central 70	C 0704-241	Drainage Structures	Drainage		Pipe elevations and locations properly staked and match plans.		Pipe/ inlet elevation and location were properly staked and matched plans.	Conformance	4/18/2022 7:45:30 AM -06:00	C		Closed
Central 70	C 0704-241	Drainage Structures	Drainage		Pipe elevations and locations properly staked and match plans.		Pipe elevations and locations properly staked and matched plans.	Conformance	2/11/2022 8:42:06 AM -07:00	C		Closed
Central 70	C 0704-241	Drainage Structures	Drainage		Pipe elevations and locations properly staked and match plans.		Pipe elevations and locations were properly staked and matched plans.	Conformance	3/25/2022 12:53:24 PM -06:00	C		Closed

Pay particular attention to the following: a. correct dimensions in a clean, serviceable condition, b. proper retroreflectorized sheeting or collars, c. correct placement with proper taper lengths and spacing, d. proper and functioning warning lights that are set in the correct mode, and e. weighting by acceptable methods.		The right shoulder closure on EB I-70 west of the Colorado bridge channeling devices conform to the MUTCD requirements	Conformance	7/5/2022 7:34:29 AM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Barrier was properly placed and connected.	Conformance	7/29/2022 8:19:47 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	5/2/2022 9:33:56 AM -06:00	Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Concrete Barrier is observed to Conform to the Contract and Specs. Barrier is observed to be correctly placed.	Conformance	5/2/2022 8:43:32 AM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Barrier was placed per specifications.	Conformance	7/29/2022 8:19:06 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Concrete barrier was placed properly with correct end treatment.	Conformance	12/28/2021 7:47:17 AM -07:00	C		Closed
Central 70	C 0704-241	Temp Barrier	Maintenance of Traffic (MOT)		Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Barrier was placed per plan with proper end treatments.	Conformance	12/7/2021 4:02:24 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		Ensure that impact attenuators are properly located and installed according to the Contract and manufacturer's recommendations including: a. correct weight of proper material placed in each barrel, and b. provisions for preventing filler material from freezing.		Impact attenuators were properly installed.	Conformance	12/28/2021 7:47:17 AM -07:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	5/2/2022 9:33:56 AM - 06:00	Ensure that impact attenuators are properly located and installed according to the Contract and manufacturer's recommendations including: a. correct weight of proper material placed in each barrel, and b. provisions for preventing filler material from freezing.		According to TCR-157, an Impact attenuator is missing on the north side of 46th south at the columbine intersection.	Barrier and Attenuators have been removed	6/16/2022 11:11:37 AM -06:00	Audit Comment	#4 – The barrier team must have missed this attenuator when getting everything into place during the switch. I can't speak to this much more than that without talking to Jake. I can let him know this needs to be added on.	Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		Ensure that impact attenuators are properly located and installed according to the Contract and manufacturer's recommendations including: a. correct weight of proper material placed in each barrel, and b. provisions for preventing filler material from freezing.		Impact attenuators were installed correctly and filled with water.	Conformance	7/29/2022 8:19:47 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		Ensure that signs conform to the Contract, including the CDOT M&S Standards and the Manual of Uniform Traffic Control Devices. Pay particularly attention to compliance of the following: a. size, shape, and color; b. retroreflective sheeting; c. appropriate location.		Signs conformed to the contract and MUTCD.	Conformance	9/14/2021 6:59:03 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		Signs installed properly and in satisfactory condition		The sign were installed in accordance with MHT #488 and plan sheets.	Conformance	8/11/2021 10:17:00 AM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		Signs conform to Traffic Control Plan (TCP) and approved Method of Handling Traffic (MHT)		The signs conform to the TCP and MHT.	Conformance	8/11/2021 10:17:00 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		Signs conform to Traffic Control Plan (TCP) and approved Method of Handling Traffic (MHT)		Signs were placed per plan.	Conformance	9/14/2021 6:59:03 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		Signs conform to Traffic Control Plan (TCP) and approved Method of Handling Traffic (MHT)		Signs installed were in accordance with approved MOT sheets.	Conformance	12/28/2021 7:47:17 AM -07:00	C		Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)		Signs conform to Traffic Control Plan (TCP) and approved Method of Handling Traffic (MHT)		The right shoulder closure on EB I-70 west of the Colorado bridge signs followed MHT 104. W21-501B and W21-5a were present and appropriately spaced.	Conformance	7/5/2022 7:34:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	5/2/2022 9:33:56 AM - 06:00	Signs conform to Traffic Control Plan (TCP) and approved Method of Handling Traffic (MHT)		Stop Signs on 4 way stops need "All Way" signs. Also, additional Street Signs are required on Stop Signs according to TCR-157.	Added.	5/19/2022 4:25:33 PM -06:00	Audit Comment	#5 – We ran out of the small All Way signs and couldn't get them on all the stop signs. They're on order now and we will get them on when the signs come in. I will double check on any other street signs that may be missing.	Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	5/2/2022 9:33:56 AM - 06:00	Signs conform to Traffic Control Plan (TCP) and approved Method of Handling Traffic (MHT)		Shoulder between Clayton and Fillmore has been barreled off. This was not in any plan.	Agreed.	5/11/2022 4:06:39 PM -06:00	Audit Comment	#1 – Yes the shoulder being barreled off is part of a drawing which I reviewed with Karl and Hunter. Both were good with utilizing this phase. Phase 3-1-2A or drawing WMT-3124B which I have attached.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		Water was added at the delivery site and the concrete was mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions were in addition to the minimum revolutions required for mixing at the delivery site.	Conformance	4/18/2022 7:46:17 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		Water was added to the first truck, which was mixed for over 20 revolutions at mixing speed.	Conformance	11/5/2021 9:37:21 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		Water was added at the delivery site- the concrete was mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions were in addition to the minimum revolutions required for mixing at the delivery site.	Conformance	5/25/2022 11:43:33 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		Concrete was properly mixed after water was added.	Conformance	11/10/2021 7:29:46 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cap Beams	Walls		When a batch of concrete delivered to the project does not conform to the minimum specified air content, an air entraining admixture conforming to subsection 711.02 may be added in accordance with subsection 601.17. After the admixture is added, the concrete shall be re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.		Approved admixture was added to concrete, and after proper application of admixture, concrete air entrainment was within specifications.	Conformance	11/5/2021 4:45:24 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		When a batch of concrete delivered to the project does not conform to the minimum specified air content, an air entraining admixture conforming to subsection 711.02 may be added in accordance with subsection 601.17. After the admixture is added, the concrete shall be re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.		Air content of concrete was within specifications.	Conformance	11/3/2021 1:06:59 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		When a batch of concrete delivered to the project does not conform to the minimum specified air content, an air entraining admixture conforming to subsection 711.02 may be added in accordance with subsection 601.17. After the admixture is added, the concrete shall be re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.		Approved air admixture was added to first truck poured. The concrete was thoroughly mixed afterwards.	Conformance	12/22/2021 12:47:21 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		When a batch of concrete delivered to the project does not conform to the minimum specified air content, an air entraining admixture conforming to subsection 711.02 may be added in accordance with subsection 601.17. After the admixture is added, the concrete shall be re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.		When a batch of concrete delivered to the project does not conform to the minimum specified air content, an air entraining admixture conforming to subsection 711.02 was added in accordance with subsection 601.17. After the admixture was added, the concrete was re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.	Conformance	4/18/2022 7:46:17 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	F/P/S Wall	Walls		When a batch of concrete delivered to the project does not conform to the minimum specified air content, an air entraining admixture conforming to subsection 711.02 may be added in accordance with subsection 601.17. After the admixture is added, the concrete shall be re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.		The first batch (truck) batch of concrete delivered to the project did not conform to the minimum specified air content- an air entraining admixture conforming to subsection 711.02 was added in accordance with subsection 601.17. After the admixture was added, the concrete was re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.	Conformance	5/4/2022 12:47:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.	Conformance	5/4/2022 12:47:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.	Conformance	5/2/2022 8:47:53 AM -06:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		On 4/28 Kiewit planned to pour another section of the radius planter wall on the East Side Community Space. The concrete truck arrived on site before the pre-pour checklist for the wall	Field Resolved	5/2/2022 8:45:02 AM -06:00	Field Resolved		Closed

							<p>was completed. On 4/27 in the POD Matthew Giles talked about that concrete should not be released until the pre-pour checklist is completed. And in the Quality Task Force meeting on 4/28 Kiewit reiterated that concrete should not be released until the pre-pour checklist is completed. On 4/28 when the concrete truck arrived Andy Green asked Stoan Bush if he had completed the pre-pour checklist and he had not yet and went to complete it. The truck waited on site for about an hour while the crew fixed some issues with the forms. The top of wall elevation of the forms had to be adjusted. After IQC had signed the pre-pour checklist and before the pour, I looked at the forms and observed they were not mortar tight. IQC had left the pour and I told Alex Milyard that the gap between the forms looked big. Alex told the crew and the crew added some wood blocks to fill the gaps. IQC was made aware of this issue after the crew had closed up the forms. See attached.</p>

Central 70	C 0704-241	Bridge Deck	Structures	6/21/2022 8:48:36 AM - 06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		It was observed at 9:00am that formwork in the Pier Diaphragm is not complete. Formwork was not covering all openings and formwork was not completely tacked down. The forms having openings and not being tacked down were made aware to IQC (Chris), Field Engineer (Abdulla) and Super (Mark Howard). Kiewit is planning on finishing the formwork when the crew arrives tonight (6/2/22) to pour the bridge deck, but after the Dry Run.		6/23/2022 2:32:09 PM -06:00	Audit Comment	This item was address before the pour IQC. Chris M with IQC verified the form work was covering any open areas	Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration. Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) were placed and adequately secured.	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) were placed and adequately secured.	Conformance	4/11/2022 3:44:55 PM -06:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		On 4/18 the Department was observing the pre-pour inspection of the eastern planter on the Columbine extension. The blockout locations had not been fully set and the crew discussed placing some of the blockouts on the ground. The Department spoke with IQC and referenced sheet LDI-004 detail 18 which calls for the sleeves into planters to be 3" above the waterproofing. IQC worked with crew and they were able to move the blockouts to ~3" above the waterproofing. See attached for the final blockout locations. Conformance	5/2/2022 8:46:59 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No aluminum tools or troughs were used.	Conformance	5/24/2022 9:58:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		Pumping equipment was acceptable.	Conformance	1/13/2022 10:44:21 AM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		The Contractor did not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete, steel tremie was used.	Conformance	2/28/2022 7:25:56 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		The Contractor did not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		Pump lines were acceptable.	Conformance	12/13/2021 8:34:30 AM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		The Contractor did not use pipes, fittings, spouts that are fabricated of aluminum materials for pumping and placing concrete.	Conformance	12/6/2021 12:39:49 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		Pump truck was used.	Conformance	10/15/2021 1:53:47 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		The Contractor did not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.	Conformance	5/25/2022 11:43:33 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		The Contractor did not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete	Conformance	11/15/2021 2:08:11 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chutes, troughs and pipes were kept clean and free from coatings of hardened concrete.	Conformance	11/15/2021 2:08:11 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chutes were free of hardened concrete.	Conformance	8/20/2021 12:13:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cap Beams	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chutes, troughs and pipes were kept clean and free from coatings of hardened concrete.	Conformance	5/25/2022 11:43:33 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Chutes were acceptable.	Conformance	10/15/2021 1:53:47 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Chutes were clean and acceptable.	Conformance	10/27/2021 7:31:17 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Chutes were kept clean.	Conformance	11/3/2021 1:08:51 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Pump truck was used and lines were acceptable.	Conformance	12/13/2021 8:34:30 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chute lines appeared to be clean and no pumping issues were observed.	Conformance	12/3/2021 2:44:55 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chutes were free of hardened concrete.	Conformance	12/22/2021 12:47:21 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chutes, troughs and pipes were kept clean and free from coatings of hardened concrete.	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All equipment was kept clean and free of hardened concrete.	Conformance	1/26/2022 8:39:23 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Pumping equipment was clean.	Conformance	1/13/2022 10:44:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Pump truck equipment appeared to be clean and acceptable.	Conformance	1/19/2022 8:55:21 AM -07:00	C		Closed

Central 70	C 0704-241	Bridge Deck	Cover		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		Surfaces were worked with approved tools.	Conformance	12/13/2021 8:34:30 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		Contractor finished with screed and hand floats.	Conformance	12/3/2021 2:44:56 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		External surface of concrete was worked to an acceptable finish.	Conformance	12/22/2021 12:47:21 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		Finishing equipment appeared acceptable.	Conformance	1/19/2022 8:55:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Vibration equipment was acceptable.	Conformance	1/19/2022 8:55:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Vibration equipment was used and appeared acceptable.	Conformance	1/13/2022 10:44:21 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was properly consolidated.	Conformance	2/16/2022 11:11:26 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated with mechanical vibrator operating within the concrete.	Conformance	12/22/2021 7:48:06 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated with suitable mechanical vibrators operating within the concrete.	Conformance	12/27/2021 7:43:08 AM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated with suitable mechanical vibrators operating within the concrete.	Conformance	2/28/2022 7:25:56 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was properly consolidated.	Conformance	2/11/2022 8:43:14 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated with a suitable mechanical vibrator operating within the concrete. Hand spading was not needed or performed.	Conformance	3/31/2022 8:17:41 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drainage Structures	Drainage		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated with suitable mechanical vibrators operating within the concrete. Vibrating was not supplemented by hand spading with suitable tools to assure proper and adequate consolidation, not needed.	Conformance	3/25/2022 12:53:24 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated with suitable mechanical vibrators operating within the concrete.	Conformance	3/4/2022 7:29:19 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated with vibrators.	Conformance	5/24/2022 10:00:42 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Vibrators were used to consolidate concrete.	Conformance	5/24/2022 9:58:29 AM -06:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated with suitable mechanical vibrators operating within the concrete. Hand spading was not used or needed.	Conformance	5/2/2022 8:46:59 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated properly.	Conformance	3/14/2022 8:57:56 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means to cause concrete to flow or run into position.	Conformance	12/22/2021 7:48:06 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibration was not used to move concrete for a pump truck was used.	Conformance	1/13/2022 10:44:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibration was not used to move concrete.	Conformance	1/19/2022 8:55:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water was not added to aid in finishing.	Conformance	1/19/2022 8:55:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		IQC was notified that contractor was applying water to deck to aid in finishing.IQC notified the contractor that this was not acceptable and the contractor complied.	Field Resolved	1/13/2022 10:44:21 AM -07:00	Field Resolved		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water or finishing aids were not added to the surface of the concrete to assist in finishing operations.	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water or finishing aids were not added to the surface of the concrete to assist in finishing operations.	Conformance	2/28/2022 7:25:56 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water or finishing aids were not added to the surface of the concrete to assist in finishing operations.	Conformance	4/4/2022 7:48:14 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water was not used as a finishing aid.	Conformance	2/2/2022 11:25:26 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		It was observed by IQC and myself that water was used to aid in finishing. IQC notified contractor that this was unacceptable and contractor complied.	Field Resolved	12/13/2021 8:34:30 AM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Cap Beams	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water or finishing aids were not added to the surface of the concrete to assist in finishing operations.	Conformance	12/6/2021 12:39:49 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water or finishing aids were not added to the surface of the concrete to assist in finishing operations.	Conformance	5/25/2022 11:43:33 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		No finishing water was used on the surface of the concrete.	Conformance	11/15/2021 2:08:11 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water or finishing aids were not added to the surface of the concrete to assist in finishing operations.	Conformance	4/11/2022 3:44:55 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water or finishing aids were not added to the surface of the concrete to assist in finishing operations.	Conformance	4/27/2022 11:43:20 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water or finishing were not added to the surface of the concrete to assist in finishing operations.	Conformance	5/4/2022 12:47:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	5/10/2022 4:53:29 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	6/13/2022 2:41:08 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	6/13/2022 2:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	4/27/2022 11:43:20 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature is between 50 and 90 degrees F.	Conformance	4/11/2022 3:44:55 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	4/25/2022 12:52:27 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	5/25/2022 11:43:33 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete mix temperature is between 50 and 90 degrees F		First truck on-site failed air content. Air packs were added (x2), 3rd test air was passing, but slump failed. Truck was rejected by Kiewit PC Tyler Lachapell. No other issues for concrete placement.	Field Resolved	11/15/2021 2:08:11 PM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F	Conformance	12/6/2021 12:39:49 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete temperatures were monitored by IQC and were acceptable.	Conformance	10/27/2021 7:31:17 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	2/14/2022 10:53:37 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	2/21/2022 7:39:43 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	2/24/2022 7:44:30 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F	Conformance	3/31/2022 8:17:41 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	4/4/2022 7:48:14 AM -06:00	C		Closed
Central 70	C 0704-241	Drainage Structures	Drainage		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	3/25/2022 12:53:24 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	3/4/2022 7:29:19 AM -07:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F	Conformance	5/2/2022 8:46:59 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F.	Conformance	2/28/2022 7:25:56 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix was between 50 and 90 degrees F.	Conformance	12/22/2021 7:48:06 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F	Conformance	12/27/2021 7:43:08 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between 50 and 90 degrees F	Conformance	3/15/2022 4:10:50 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in acceptable manner.	Conformance	1/19/2022 8:55:21 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner to avoid segregation and displacement of reinforcement.	Conformance	12/22/2021 7:48:06 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which avoided segregation and displacement of reinforcement.	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which avoided segregation and displacement of reinforcement.	Conformance	2/28/2022 7:25:56 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which to avoids segregation and displacement of reinforcement.	Conformance	12/27/2021 7:43:08 AM -07:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which avoided segregation and displacement of reinforcement.	Conformance	5/2/2022 8:46:59 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which avoided segregation and displacement of reinforcement.	Conformance	3/4/2022 7:29:19 AM -07:00	C		Closed
Central 70	C 0704-241	Drainage Structures	Drainage		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner that avoided segregation and displacement of reinforcement.	Conformance	3/25/2022 12:53:24 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which to avoids segregation and displacement of reinforcement.	Conformanc e	3/31/2022 8:17:41 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner to avoid segregation and displacement of reinforcement.	Conformanc e	2/21/2022 7:39:43 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which avoided segregation and displacement of reinforcement.	Conformanc e	2/14/2022 10:53:37 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete placement appeared acceptable.	Conformanc e	2/2/2022 11:25:26 AM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete placement was acceptable and pump truck was used.	Conformanc e	10/27/2021 7:31:17 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner that avoided segregation and displacement of reinforcement.	Conformanc e	12/6/2021 12:39:49 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete placement was acceptable.	Conformanc e	12/3/2021 2:44:56 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which avoids segregation and displacement of reinforcement.	Conformanc e	11/15/2021 2:08:11 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which avoided segregation and displacement of reinforcement.	Conformanc e	4/25/2022 12:52:27 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cap Beams	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete was pumped and discarded to prime the pump.	Conformance	3/21/2022 7:55:10 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM - 07:00	The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		pumping concrete was within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete was pumped and discarded to prime the pump.	Conformance	12/6/2021 12:39:49 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump was primed prior to placement.	Conformance	11/5/2021 4:45:24 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump was primed and primed concrete was properly wasted.	Conformance	12/13/2021 8:36:50 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump was primed prior to placement.	Conformance	2/2/2022 7:15:50 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump was primed prior to concrete placement.	Conformance	8/20/2021 12:13:46 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete were pumped and discarded to prime the pump.	Conformance	5/4/2022 12:47:50 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete was pumped and discarded to prime the pump.	Conformance	6/14/2022 4:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete was pumped and discarded to prime the pump.	Conformance	6/13/2022 2:42:09 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete was pumped and discarded to prime the pump.	Conformance	6/13/2022 2:43:02 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete was pumped and discarded to prime the pump.	Conformance	6/13/2022 2:41:08 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete was pumped and discarded to prime the pump.	Conformance	6/27/2022 8:30:13 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	4/27/2022 11:43:20 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	4/25/2022 12:52:27 PM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not observed being added into the hopper.	Conformance	5/9/2022 7:43:26 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	6/13/2022 2:41:08 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	6/13/2022 2:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	5/4/2022 12:47:50 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		No water was added directly into the concrete pump hopper after placement has commenced.	Conformance	12/6/2021 12:39:49 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added to hopper after placement had commenced.	Conformance	11/5/2021 4:45:24 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM - 07:00	Water shall not be added directly into the concrete pump hopper after placement has commenced.		Concrete was placed within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Concrete was placed within conformance to Specifications and Plans	Conformance	2/8/2022 3:12:20 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	3/21/2022 7:55:10 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	2/21/2022 7:39:43 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	2/24/2022 7:44:30 AM -07:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement had commenced.	Conformance	5/2/2022 8:46:59 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement had commenced.	Conformance	3/4/2022 7:29:19 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	4/4/2022 7:48:14 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement started.	Conformance	12/22/2021 7:48:06 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not be added directly into the concrete pump hopper after placement has commenced.	Conformance	12/27/2021 7:43:08 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete pump hopper after placement has commenced.	Conformance	2/28/2022 7:25:56 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added to the hopper.	Conformance	2/2/2022 11:25:26 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The pump shall be operated so that a continuous stream of concrete is produced.		Concrete placement was acceptable.	Conformance	2/2/2022 11:25:26 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced from pump.	Conformance	3/7/2022 8:47:12 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced from pump.	Conformance	4/20/2022 3:49:22 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	2/28/2022 7:25:56 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced from pump.	Conformance	1/26/2022 8:39:23 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced from pump.	Conformance	2/11/2022 8:43:14 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The concrete pump was operated so that a continuous stream of concrete was produced.	Conformance	12/22/2021 7:48:06 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete is produced.	Conformance	4/4/2022 7:48:14 AM -06:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	5/2/2022 8:46:59 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced from pump.	Conformance	4/4/2022 7:47:13 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	3/21/2022 7:55:10 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The pump shall be operated so that a continuous stream of concrete is produced.		Pumping was observed at a continuous stream of concrete	Conformance	2/8/2022 3:12:20 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM -07:00	The pump shall be operated so that a continuous stream of concrete is produced.		Pumping Concrete was within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		Pump was operated to produce a continuous stream of concrete.	Conformance	11/5/2021 4:45:24 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		The pump shall be operated so that a continuous stream of concrete is produced.		Pump was operated so that a continuous stream of concrete was produced.	Conformance	11/3/2021 1:07:00 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete is produced.	Conformance	12/6/2021 12:39:49 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		The pump shall be operated so that a continuous stream of concrete is produced.		Concrete placement was acceptable and a continuous stream was produced.	Conformance	10/27/2021 8:46:54 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced.	Conformance	2/2/2022 7:15:50 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced from end of pump.	Conformance	12/13/2021 8:36:50 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced from pump.	Conformance	12/15/2021 7:30:26 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The pump shall be operated so that a continuous stream of concrete is produced.		A continuous stream of concrete was produced.	Conformance	12/13/2021 8:34:30 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The pump shall be operated so that a continuous stream of concrete is produced.		Concrete placement was acceptable.	Conformance	12/3/2021 2:44:56 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		Pump was operated so that a continuous stream of concrete was produced.	Conformance	8/20/2021 12:13:47 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete is produced.	Conformance	5/4/2022 12:47:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	6/13/2022 2:41:08 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete is produced.	Conformance	6/13/2022 2:43:02 PM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Concrete Pump was observed pumping at a continuous stream.	Conformance	5/9/2022 7:43:26 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete is produced.	Conformance	4/27/2022 11:43:20 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	6/27/2022 8:30:13 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Metal pump lines or couplings did not rest directly on epoxy coated reinforcing steel.	Conformance	4/27/2022 11:43:20 AM -06:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		It was observed that no lines were resting on Epoxy Steel.	Conformance	5/9/2022 7:43:26 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Metal pump lines or couplings did not rest directly on epoxy coated reinforcing steel.	Conformance	4/25/2022 12:52:27 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Metal pump lines were not used. A trunk line was used.	Conformance	12/3/2021 2:44:56 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Rubber trunk line was used and no metal line rested on epoxy coated steel.	Conformance	12/13/2021 8:34:30 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Pumping operation was acceptable and rubber trunk line was used.	Conformance	10/27/2021 8:46:54 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM - 07:00	Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Pumping concrete was within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Concrete was placed within conformance to Specifications and Plans	Conformance	2/8/2022 3:12:20 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cap Beams	Walls		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Metal pump lines or couplings did not rest directly on epoxy coated reinforcing steel.	Conformance	3/21/2022 7:55:10 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Metal pump lines or couplings did not rest directly on epoxy coated reinforcing steel.	Conformance	3/4/2022 7:29:19 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Metal pump lines or couplings did not rest directly on epoxy coated reinforcing steel.	Conformance	4/4/2022 7:48:14 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Metal pump lines or couplings did not rest directly on epoxy coated reinforcing steel.	Conformance	4/7/2022 12:26:58 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Rubber trunk lines were used and no metal rested on epoxy coated rebar.	Conformance	2/2/2022 11:25:26 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		Rubber trunk line was used.	Conformance	1/13/2022 10:44:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Pump truck was positioned as close as possible.	Conformance	1/13/2022 10:44:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		The point of discharge was as close as possible.	Conformance	1/19/2022 8:55:21 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Pump truck was located as close as possible to point of discharge.	Conformance	2/2/2022 11:25:26 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		End of pump was kept as near to deck as possible.	Conformance	1/26/2022 8:39:23 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Concrete was placed within conformance to Specifications and Plans	Conformance	2/8/2022 3:12:20 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM -07:00	The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Pumping concrete was within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Point of discharge was acceptable	Conformance	12/13/2021 8:34:30 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		Concrete discharge point was acceptable.	Conformance	12/3/2021 2:44:56 PM -07:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		It was observed that the point of discharge was close as possible.	Conformance	5/9/2022 7:43:26 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Solid Bar Soil Nail. Bars shall conform to AASHTO M31 for Grade 75 or ASTM A 722 for Grade 150. Bars shall be threaded, continuous without splices or welds, new, straight, undamaged, epoxy-coated or encapsulated as shown on the plans. Bars shall be threaded a minimum of 6 inches on the wall anchorage end to allow proper attachment of the bearing plate and nut. Threading may be continuous spiral deformed ribbing provided by the bar deformations (continuous threaded bars) or may be cut into a reinforcing bar. If threads are cut into a reinforcing bar, the next-larger bar number designation from that shown on the plans shall be provided at no additional cost.		Bars conformed to AASHTO M31 for Grade 75 or ASTM A 722 for Grade 150. Bars were threaded, continuous without splices or welds, new, straight, undamaged, epoxy-coated or encapsulated as shown on the plans. Bars were threaded a minimum of 6 inches on the wall anchorage end to allow proper attachment of the bearing plate and nut. Threading is a continuous spiral deformed ribbing provided by the bar deformations.	Conformance	5/5/2022 4:02:43 PM -06:00	C		Closed

Central 70	C 0704-241	Shotcrete	Walls		<p>Proof tests shall be conducted according to the loading schedule of Table 504-2. Unless the soil is susceptible to creep per subsection 504.15, each load increment shall be held until readings are stable as defined by three readings within 0.005 inches taken one per minute over three minutes. The Contractor shall record soil nail movements at each load increment and time intervals shown in the table for each load step. Creep tests shall be performed at 1.00 PTL. The alignment load (AL) shall be the minimum load required to align the testing apparatus and shall not exceed 5 percent of the PTL. Set dial gauges to "zero" after applying the alignment load. Following application of the maximum load, reduce the load to the alignment load and record the permanent set.</p>		<p>Proof tests were conducted according to the loading schedule of Table 504-2. the load increment was held until readings are stable as defined by three readings within 0.005 inches taken one per minute over three minutes. The Contractor (IQC) recorded soil nail movements at each load increment and time intervals shown in the table for each load step. Creep tests were performed at 1.00 PTL. The alignment load (AL) shall be the minimum load required to align the testing apparatus and did not exceed 5 percent of the PTL. Dial gauges set to "zero" after applying the alignment load. Following application of the maximum load, the load was reduced to the alignment load and record the permanent set.</p>	Conformance	12/10/2021 7:45:51 AM -07:00	C		Closed

Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Aggregates mixed by method to insure thorough and homogeneous mixture.		Aggregates were mixed by a method to insure thorough and homogeneous mixture.	Conformance	4/20/2022 3:44:16 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Aggregates mixed by method to insure thorough and homogeneous mixture.		Base course aggregate was mixed thoroughly and placed to ensure no segregation.	Conformance	4/28/2022 9:08:56 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Compaction to at least 95% of maximum dry density was achieved.	Conformance	4/28/2022 9:08:56 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Base course was compacted to at least 95% maximum dry density.	Conformance	6/13/2022 2:44:50 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Compaction was done and density was achieved.	Conformance	4/20/2022 3:43:02 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Aggregate base material was graded, compacted, and a 95% maximum density.	Conformance	3/7/2022 12:49:32 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Compaction of each layer continued until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 was achieved.	Conformance	4/20/2022 3:44:16 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		After compaction operation was complete. Density tests were performed and passed per Spec.	Conformance	12/10/2021 12:31:08 PM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Density tests were performed after compaction was complete. Density tests passed.	Conformance	4/20/2022 3:43:34 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Optimum moisture was achieved.	Conformance	4/20/2022 3:43:34 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		The moisture content was at +/- 2% of optimum moisture content. The surface of each layer was maintained during the compaction operations and a uniform texture was produced and the aggregates were firmly keyed.	Conformance	4/20/2022 3:44:16 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Aggregate base material achieved optimum moisture content. The surface looked good and aggregates looked firmly keyed.	Conformance	3/7/2022 12:49:32 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Optimum moisture content was achieved.	Conformance	4/20/2022 3:43:02 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Base course was compacted within acceptable moisture range.	Conformance	4/28/2022 9:08:56 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Base course was compacted within 2% of OMC.	Conformance	6/13/2022 2:44:50 PM -06:00	C		Closed

Central 70	C 0704-241	Curb & Gutter	Roadway		(e) Finish accomplished without use of water?		Finish was accomplished without use of water.	Conformance	3/23/2022 8:33:08 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		(e) Finish accomplished without use of water?		Finish was accomplished without use of water.	Conformance	5/19/2022 8:37:39 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(g) Cold weather protection necessary?		Cold weather protection was necessary, covered with blankets after cure compound applied.	Conformance	3/23/2022 8:33:08 AM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		(g) Cold weather protection necessary?		Cold weather protection was necessary, insulating blankets installed after curing compound applied.	Conformance	3/15/2022 4:10:50 PM -06:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Immediately upon completion of the finishing, the curb was cured by the use of membrane forming curing compound.	Conformance	3/15/2022 4:10:50 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Immediately upon completion of the finishing, the concrete was cured using of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.	Conformance	3/3/2022 7:50:03 AM -07:00	C		Closed
Central 70	C 0704-241	Curb & Gutter	Roadway		Curing. Immediately upon completion of the finishing, the curb shall be moistened and kept moist for three days, or the curb shall be cured by the use of membrane forming curing compound. The method and details of curing shall be subject to the approval of the Engineer.		Concrete was membrane cured after placement.	Conformance	10/26/2021 1:48:02 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Curb & Gutter	Roadway		Cast-in-Place Concrete Curb. All required hand finishing shall be performed in conformance with subsection 610.12(a).		All required hand finishing was performed in conformance with subsection 610.12 (a).	Conformance	3/15/2022 4:10:50 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Cast-in-Place Concrete Curb. All required hand finishing shall be performed in conformance with subsection 610.12(a).		Cast-in-Place Concrete Curb. All required hand finishing was performed in conformance with subsection 610.12(a)	Conformance	5/19/2022 8:37:39 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete for sidewalks, bikeways, and curb ramps shall be Class B, and meet the requirements of Section 601.		Truck 3 of pour arrived without fiber. After identifying, fiber was added, and concrete was tested and met requirements by PC.	Field Resolved	8/29/2022 11:22:03 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete for sidewalks, bikeways, and curb ramps shall be Class B, and meet the requirements of Section 601.		Approved concrete flatwork mix design was used for sidewalk.	Conformance	2/14/2022 10:51:31 AM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete for sidewalks, bikeways, and curb ramps shall be Class B, and meet the requirements of Section 601.		Concrete for sidewalks was Class B, and meet the requirements of Section 601.	Conformance	11/29/2021 1:31:39 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete and bituminous mixes will be subject to inspection and tests as required to assure compliance with quality requirements.		IQC inspected and approved materials.	Conformance	8/31/2022 2:22:07 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Excavation shall be made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation shall be shaped and compacted to a firm even surface conforming to the section shown on the plans or as staked. When the Engineer determines that material is uncompactable, the material shall be removed and replaced in accordance with subsection 206.03.		Excavation was made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation was shaped and compacted to a firm even surface conforming to the section shown on the plans or as staked.	Conformance	11/29/2021 1:31:39 PM -07:00	C		Closed

Central 70	C 0704-241	Shotcrete	Walls		General. Shotcrete shall be applied at the locations and to the thicknesses shown on the plans. The thickness of shotcrete shall not be less than the dimensions shown on the plans.		Application appeared acceptable.	Conformance	9/28/2021 10:45:00 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		Shotcrete applied appeared acceptable.	Conformance	9/28/2021 10:45:00 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		Shotcrete was dense uniform mix.	Conformance	11/29/2021 1:32:36 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		The applied shotcrete consisted of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond.	Conformance	1/12/2022 9:48:24 AM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		The applied shotcrete consisted of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond.	Conformance	2/23/2022 1:54:21 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		The applied shotcrete consisted of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond.	Conformance	1/14/2022 8:13:02 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls		For rock and soil cuts, surfaces shall be prepared to the line and grade shown on the plans. The Contractor shall provide documentation, including survey data, to show that the excavated face conforms to the plans so that the minimum thickness is achieved. If the Engineer determines that irregularities are excessive, additional reinforcing may be required. All costs associated with additional shotcrete required to bring an over excavated cut to the proper line and grade shall be borne by the Contractor.		In soil cuts, surfaces were prepared to the line and grade shown on the plans. The Contractor did provide documentation, including survey data, to show that the excavated face conforms to the plans so that the minimum thickness was achieved.	Conformance	4/13/2022 9:38:03 AM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls		For rock and soil cuts, surfaces shall be prepared to the line and grade shown on the plans. The Contractor shall provide documentation, including survey data, to show that the excavated face conforms to the plans so that the minimum thickness is achieved. If the Engineer determines that irregularities are excessive, additional reinforcing may be required. All costs associated with additional shotcrete required to bring an over excavated cut to the proper line and grade shall be borne by the Contractor.		For rock and soil cuts, surfaces were prepared to the line and grade shown on the plans. The Contractor provided documentation, including survey data, that shows that the excavated face conforms to the plans, the minimum thickness is achieved. The Engineer determined that irregularities were not excessive, no additional reinforcing was required. No costs were associated for additional shotcrete required.	Conformance	5/11/2022 12:39:23 PM -06:00	C		Closed

Conformance	2/18/2022 7:33:17 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		The pre-cast concrete panels conform to the requirements shown on the plans including dimensions and pattern.	Conformance	12/8/2021 7:33:29 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Facing Panels	Walls		The foreman shall be on the site for 100 percent of the time during which the work is being done.		The foreman was on site 100 % of the time during panel installation.	Conformance	12/8/2021 7:33:29 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The foreman shall be on the site for 100 percent of the time during which the work is being done.		The foreman was on the site for 100 percent of the time during which the work is being done.	Conformance	3/31/2022 4:38:34 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The foreman shall be on the site for 100 percent of the time during which the work is being done.		The foreman was on the site for 100 percent of the time during which the work is being done.	Conformance	6/13/2022 2:47:13 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The foreman shall be on the site for 100 percent of the time during which the work is being done.		The foreman was on the site for 100 percent of the time during which the work is being done.	Conformance	2/3/2022 7:18:29 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The job site wall foreman shall have experience in construction of at least five transportation related MSE walls within the last three years.		The job site wall foreman has experience in construction of at least five transportation related MSE walls within the last three years.	Conformance	3/31/2022 4:38:34 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The job site wall foreman shall have experience in construction of at least five transportation related MSE walls within the last three years.		The foreman has experience in construction of at least 5 transportation related MSE walls in the past 3 years.	Conformance	12/8/2021 7:33:29 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The foreman must have prior experience or adequate training on the products that the Contractor elects to use on the project.		The foreman has prior experience and adequate training on the products used on this project.	Conformance	12/8/2021 7:33:29 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The foreman must have prior experience or adequate training on the products that the Contractor elects to use on the project.		The foreman has prior experience or adequate training on the products that the Contractor elected to use on the project.	Conformance	3/31/2022 4:38:34 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Facing Panels	Walls		The foreman must have prior experience or adequate training on the products that the Contractor elects to use on the project.		The foreman has prior experience or adequate training on the products that the Contractor elects to use on the project.	Conformance	2/3/2022 7:18:29 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		Leveling pad installed per plan.	Conformance	10/27/2021 7:32:27 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		The levelling pad had no vertical steps greater than 36" in height, was reinforced at the steps.	Conformance	11/12/2021 1:41:05 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The foundation of the leveling pads shall meet the requirement of subsection 504.11.		Leveling pad appeared acceptable.	Conformance	11/3/2021 2:47:43 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The foundation of the leveling pads shall meet the requirement of subsection 504.11.		Foundation of leveling pad appears acceptable.	Conformance	10/27/2021 7:32:27 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The leveling pad shall be level within the tolerance of ? inch for any two points along the length of a panel, and within ¼ inch for any two points 10 feet apart.		Pad was level within 1/4 inch in 10 foot Straight edge.	Conformance	10/27/2021 7:32:27 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The leveling pad shall be level within the tolerance of ? inch for any two points along the length of a panel, and within ¼ inch for any two points 10 feet apart.		Level pad was level within 1/4 inch on 10 foot straightedge.	Conformance	11/3/2021 2:47:43 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The leveling pad shall be level within the tolerance of ? inch for any two points along the length of a panel, and within ¼ inch for any two points 10 feet apart.		The levelling pad was level within the tolerance of +/- 1/8" for any two points along the length of the panel, and within +/- 1/4 " for any two points 10 ft. apart.	Conformance	11/12/2021 1:41:05 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shimming material (plastic shims) were used to support panels directly founded on the levelling pad.	Conformance	11/12/2021 1:41:05 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Facing Panels	Walls		Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shims were used to place panels.	Conformance	7/13/2022 2:54:06 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		No more than 2 shims (each 3/16" thick) were required to level the panels on the leveling pad.	Conformance	11/12/2021 1:41:05 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		Shim placement was acceptable.	Conformance	11/3/2021 2:47:43 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Leveling pad concrete shall be cured for at least 12 hours before placement of the concrete panels.		Concrete had cured more than 12 hours prior to panel placement.	Conformance	11/3/2021 2:47:43 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls	4/5/2022 9:22:38 AM -06:00	Leveling pad concrete shall be cured for at least 12 hours before placement of the concrete panels.		Leveling Pad had been observed cured for at least 12 hours	Conformance	4/5/2022 7:37:55 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Leveling pad concrete shall be cured for at least 12 hours before placement of the concrete panels.		Concrete level pad was placed and cured properly.	Conformance	1/25/2022 6:54:07 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		For walls that support a roadway, the wall layout line at the leveling pad shall be set back and pre-measured with appropriate batter (5 to 8 percent) from the top of the panels according to the offset with respect to the centerline of the road.		No negative batter was observed in panels placed.	Conformance	1/25/2022 6:54:07 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls	4/5/2022 9:22:38 AM -06:00	An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		No Negative Batter was observed on the wall panels	Conformance	4/5/2022 7:37:55 AM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		Panels installed had a positive batter.	Conformance	11/3/2021 2:47:43 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		No negative batter between the top and the bottom of the panels was noted.	Conformance	11/12/2021 1:41:05 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		No negative batter measured between the bottom and top of the panel.	Conformance	12/8/2021 7:33:29 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Facing Panels	Walls		An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		No negative batter was observed.	Conformance	7/13/2022 2:54:06 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		The final wall face was vertical, no positive or negative batter was measured.	Conformance	12/8/2021 7:33:29 AM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		The final face of the panels was vertical, no positive or negative batter.	Conformance	11/12/2021 1:41:05 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		Unless otherwise noted on the plans for battered walls, the final wall face shall be vertical, or have a positive batter of not greater than 5 percent for construction control purpose.		Wall panels installed with correct batter.	Conformance	11/3/2021 2:47:43 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		Panels placed appeared acceptable.	Conformance	11/3/2021 2:47:43 PM -06:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		The surface of the wall face was checked with a 10' straightedge (Wall Foreman and IQC) laid along the surface in horizontal and vertical directions.	Conformance	11/12/2021 1:41:05 PM -07:00	C		Closed
Central 70	C 0704-241	Facing Panels	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		The surface of the wall face was tested with a 10 ft. straightedge laid on the surface in horizontal and vertical planes, no deviation more than 1/2 inch measured.	Conformance	12/8/2021 7:33:29 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The surface of the wall face shall be tested with a 10 foot straightedge laid along the surface in horizontal and vertical directions. Except as necessary for horizontal alignment of the wall, convex deviation of the wall face from the straightedge (belly wall) shall not be allowed, and concave deviation from the straightedge shall be less than ½ inch.		Surface of wall was tested with 10 foot straightedge. No deviations out of tolerance found.	Conformance	1/25/2022 6:54:07 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Unless otherwise specified, structure excavation shall include all pumping, bailing, draining, and incidentals required for proper execution of the work.		Structure excavation included all pumping, bailing, draining, and incidentals required for proper execution of the work.	Conformance	3/2/2022 7:44:51 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unsuitable foundation material shall be removed and wasted in a manner acceptable to the Engineer, and the excavated material will be paid for as structure excavation.		No unsuitable material was encountered or found for Wall 403 W1.	Conformance	2/2/2022 2:31:53 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Unsuitable foundation material shall be removed and wasted in a manner acceptable to the Engineer, and the excavated material will be paid for as structure excavation.		Unsuitable foundation material was removed and wasted in a manner acceptable to the Engineer, and the excavated material was paid for as structure excavation.	Conformance	3/2/2022 7:44:51 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Unsuitable foundation material which is suitable for embankments and suitable surplus excavated material shall be used in the construction of embankments.		Unsuitable foundation material was not encountered.	Conformance	3/2/2022 7:44:51 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		If asbestos containing material (ACM) is suspected or found, the ACM and the suspected ACM shall be managed in accordance with governing regulations.		No asbestos containing material (ACM) was suspected or found.	Conformance	3/2/2022 7:44:51 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		If asbestos containing material (ACM) is suspected or found, the ACM and the suspected ACM shall be managed in accordance with governing regulations.		No suspected asbestos material was found during excavation.	Conformance	2/2/2022 2:31:53 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rock, hardpan, or other unyielding material encountered in trenches for culvert pipe or conduit shall be removed below the designed grade for a minimum depth of 12 inches.		Rock, hardpan, or other unyielding material was not encountered during excavation.	Conformance	3/2/2022 7:44:51 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The base of structure backfill shall be scarified to a depth of 6 inches and compacted with moisture and density control prior to placement of any structural element or structure backfill.		The base of the structure was scarified to a minimum of 6 inch depth and compacted with moisture and density control and density prior to placement of any structural element (Wall levelling pad).	Conformance	2/2/2022 2:31:53 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The type of compaction shall be the same as that required for Structure Backfill (Class 2), as specified below.		The type of compaction was the same as that required for Structure Backfill (Class 2).	Conformance	2/2/2022 2:31:53 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		Excessive water was not used during backfill.	Conformance	9/30/2021 7:21:58 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		Proper compaction equipment was used.	Conformance	9/30/2021 7:21:58 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		Compaction equipment and methods did not produce pressures causing excessive displacement or overturning.	Conformance	6/14/2022 7:48:18 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Structure was allowed to gain strength prior to backfill.	Conformance	4/4/2022 7:46:38 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		Structure was allowed to gain adequate strength prior to backfill.	Conformance	9/30/2021 7:21:58 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill material shall not be deposited against newly constructed masonry or concrete structures, until the concrete has developed a compressive strength of 0.8f'c, except in cases where the structures support lateral earth pressure.		CIP wall had developed proper strength prior to backfill.	Conformance	2/7/2022 9:53:30 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		Approved materials were placed in uniform layers.	Conformance	2/7/2022 9:53:30 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		6" compacted lifts were placed.	Conformance	2/7/2022 9:53:30 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		6" lifts were placed.	Conformance	9/30/2021 7:21:58 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		Backfill was completed in 6" compacted lifts.	Conformance	4/4/2022 7:46:38 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Each layer of backfill shall not exceed 6 inches and shall be compacted to the required density before successive layers are placed.		6" lifts were placed.	Conformance	6/14/2022 7:48:18 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Structure backfill (Class 1) shall be compacted to a density of not less than 95 percent of maximum dry density determined in accordance with AASHTO T 180 as modified by CP 23.		Class 1 backfill was compacted to at least 95% maximum dry density.	Conformance	6/14/2022 7:48:18 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Structure backfill (Class 1) shall be compacted to a density of not less than 95 percent of maximum dry density determined in accordance with AASHTO T 180 as modified by CP 23.		Backfill was compacted to at least 95% Maximum Dry Density.	Conformance	4/4/2022 7:46:38 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Structure backfill (Class 1) shall be compacted to a density of not less than 95 percent of maximum dry density determined in accordance with AASHTO T 180 as modified by CP 23.		Class 1 backfill was compacted to at least 95% of maximum dry density. IQC and PC tested backfill.	Conformance	2/7/2022 9:53:30 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Class 1 backfill shall be compacted at ± 2 percent of Optimum Moisture Content (OMC).		Class 1 backfill was compacted within acceptable moisture content range.	Conformance	2/7/2022 9:53:30 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Class 1 backfill shall be compacted at ± 2 percent of Optimum Moisture Content (OMC).		Backfill was compacted within OMC limits.	Conformance	4/4/2022 7:46:38 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Class 1 backfill shall be compacted at ± 2 percent of Optimum Moisture Content (OMC).		Class 1 backfill was compacted within 2% of OMC.	Conformance	6/14/2022 7:48:18 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		This work consists of shoring specific areas designated in the Contract.		The shoring is constructed in the specific area designated in the Contract.	Conformance	12/3/2021 3:10:46 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The Contractor shall locate, size, design, and construct shoring which provides all necessary rigidity, and supports the loads imposed to facilitate construction as shown on the plans.		The Contractor located, sized, designed and constructed shoring which provides all necessary rigidity and supports the loads imposed to facilitate construction as shown on the plans.	Conformance	12/3/2021 3:10:46 PM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Shoring shall be constructed in conformity with the shoring drawings provided to the Engineer.		The shoring is constructed in conformity with the shoring drawings provided to the Engineer.	Conformance	12/3/2021 3:10:46 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Electrical conduit that is installed by direct burial methods such as plowing, open trenching, or other excavation methods shall be PVC or HDPE.		The Contractor has installed PVC/HDPE conduit while completing trenching/excavation work as shown on plan sheets RMP-004 & ITS-009. All work completed in accordance with CDOT standards and specifications.	Conformance	9/2/2022 2:59:35 PM -06:00	C		Closed
Central 70	C 0704-241	Lighting Conduit	Electrical		Electrical conduit that is installed by direct burial methods such as plowing, open trenching, or other excavation methods shall be PVC or HDPE.		Conduit was observed to be HDPE.	Conformance	4/27/2022 11:46:09 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull box removable lids shall be provided with a skid-resistant surface and have the words "CDOT COMM", or "CDOT POWER", as well as "EMS MARKER EMBEDDED IN COVER" and the tier level rating cast into the surface.		All removable pull box lids installed per plan sheets ITS-048 & ITS-050 in accordance with CDOT standards and specifications.	Conformance	8/15/2022 11:01:52 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull box removable lids shall be provided with a skid-resistant surface and have the words "CDOT COMM", or "CDOT POWER", as well as "EMS MARKER EMBEDDED IN COVER" and the tier level rating cast into the surface.		The Contractor has provided and installed skid resistant pull box lids including "CDOT COMM" and "CDOT POWER" per plan sheets ITS-017 & ITSID-07.	Conformance	8/17/2022 3:27:34 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull box removable lids shall be provided with a skid-resistant surface and have the words "CDOT COMM", or "CDOT POWER", as well as "EMS MARKER EMBEDDED IN COVER" and the tier level rating cast into the surface.		The Contractor has installed pull box lids with "CDOT COMM" "CDOT POWER" "EMS MARKER EMBEDDED IN COVER" for locations shown on plan sheets ITS-04 & ITSID-02.	Conformance	9/2/2022 3:13:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Pull box removable lids shall be provided with a skid-resistant surface and have the words "CDOT COMM", or "CDOT POWER", as well as "EMS MARKER EMBEDDED IN COVER" and the tier level rating cast into the surface.		The Contractor installed removable lids provided with skid resistant surface and has the words "CDOT COMM" and "EMS Marker Embedded in Cover" with tier level rating cast into the surface. Installed per plan sheet ITS-043 (2465+62.01) and in accordance with all CDOT Standards and Specifications.	Conformance	2/28/2022 7:10:48 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Wire mesh shall be installed in to completely surround the box.		The Contractor has installed wire mesh surrounding pull boxes installed on plan sheets ITS-033, ITSID-11, ITSXS-44, in accordance with CDOT standards and specifications.	Conformance	9/2/2022 3:06:06 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The Contractor shall coil an additional 6 feet of tracer wire inside the pull box to ensure that the tracer wire will not disconnect from test points when the lids are removed.		The Contractor shall coil an additional 6 feet of tracer wire inside the pull box to ensure that the tracer wire will not disconnect from test points when the lids are removed. - A minimum of 6 additional feet of tracer wire has been installed in the ITS pull box on plan sheet ITS-029. Installed in accordance with all CDOT standards and specifications.	Conformance	2/16/2022 1:48:09 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Pull boxes will include base, lid, integrated location disk, integrated test points, arrow symbols, excavation, backfill, concrete apron, wire mesh and 3/4 inch granite-gravel.		All ITS Pull Boxes shown on plan sheets ITS-033 & ITSTP-05 include integrated test points, wire mesh, and 3/4in granite gravel in accordance with CDOT standards and specifications.	Conformance	8/15/2022 11:00:55 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes will include base, lid, integrated location disk, integrated test points, arrow symbols, excavation, backfill, concrete apron, wire mesh and 3/4 inch granite-gravel.		The Contractor has installed pull boxes per plan sheets ITS-033, ITSID-11, ITSXS-44, which include lids, location disk, test points, backfill, wire mesh, and gravel. All work completed in accordance with CDOT Standards and Specifications.	Conformance	9/2/2022 3:06:06 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Concrete for precast or cast-in-place shall conform to the requirements of Section 601.		Concrete used was an approved mix, and conformed to 601 Specifications.	Conformance	4/7/2022 3:48:31 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Concrete for precast or cast-in-place shall conform to the requirements of Section 601.		Concrete was mixed tested and placed in conformance with specifications.	Conformance	4/13/2022 3:26:46 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Reinforcing steel, unless otherwise noted, shall conform to the requirements of Section 602.		Reinforcing steel used was in conformance with specifications.	Conformance	4/13/2022 3:26:46 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was checked with a 10 foot straight edge.	Conformance	4/13/2022 3:26:46 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was observed being checked with a 10ft straightedge.	Conformance	4/7/2022 12:23:20 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was checked with a 10 foot straightedge, and corrected when necessary.	Conformance	4/7/2022 3:48:31 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		The barrier was checked with a straightedge in the longitudinal direction and was not out of tolerance.	Conformance	3/31/2022 8:17:41 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Contractor used a straightedge to verify tolerances.	Conformance	10/27/2021 8:46:54 AM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		A straight edge was used to check tolerances.	Conformance	8/17/2021 10:34:00 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was checked with a straightedge, and corrected when out of tolerance.	Conformance	5/20/2022 8:01:45 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was checked with a straightedge and corrected where out of tolerance.	Conformance	5/19/2022 8:36:54 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was observed checked with a straightedge.	Conformance	4/28/2022 9:09:57 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was checked and corrected with a 10 foot straight edge.	Conformance	5/4/2022 12:46:55 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was checked with a straightedge and corrected where out of tolerance.	Conformance	7/19/2022 2:14:20 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Ensure that the barrier is checked with a straightedge in the longitudinal direction and corrected where out of tolerance.		Barrier was checked with a straightedge, and corrected where out of tolerance.	Conformance	7/18/2022 11:16:53 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		Where paving is removed or damaged due to the Contractor's operations, the Contractor shall furnish an acceptable mix and shall repair the paving as required, at the Contractor's expense.		The pavement was properly removed for the barrier placement.	Conformance	8/17/2021 10:34:00 AM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		The barrier was placed with slip form methods. Please see attached photos.	Conformance	8/17/2021 10:34:00 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Cast in place method was used.	Conformance	10/27/2021 8:46:54 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Permanent concrete barrier was constructed by precast Type 7, cast-in-place method.	Conformance	3/31/2022 8:17:41 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	4/7/2022 3:48:31 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Type 7 Style CD Barrier was constructed via Slipform.	Conformance	4/7/2022 12:23:20 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Concrete was cast in place.	Conformance	4/13/2022 3:26:46 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier Transition was cast in place.	Conformance	2/16/2022 11:11:26 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	7/18/2022 11:16:53 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slip formed.	Conformance	7/19/2022 2:14:20 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	7/29/2022 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed in conformance with specifications.	Conformance	5/4/2022 12:46:55 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was placed using the slipform method	Conformance	4/28/2022 9:09:57 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slipformed.	Conformance	5/19/2022 8:36:54 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Permanent concrete barrier may be constructed by precast Type 7, cast-in-place or slipform methods.		Barrier was slip formed.	Conformance	5/20/2022 8:01:45 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The trench for the base of the cast-in-place reinforced barrier end anchorages shall be excavated to the lines and grades shown on the plans or established. The bottom of the trench shall be completed to the density specified in subsection 203.07(a)		Barrier was slipped on an intermediate lift of asphalt.	Conformance	7/29/2022 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The trench for the base of the cast-in-place reinforced barrier end anchorages shall be excavated to the lines and grades shown on the plans or established. The bottom of the trench shall be completed to the density specified in subsection 203.07(a)		Trench was excavated to proper depth, and compacted properly.	Conformance	4/13/2022 3:26:46 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was completed in accordance with specifications.	Conformance	4/13/2022 3:26:46 PM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was completed in accordance with 601.12a	Conformance	8/17/2021 10:34:00 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was completed in accordance with specifications.	Conformance	5/20/2022 8:01:45 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was completed in accordance with specifications.	Conformance	5/19/2022 8:36:54 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		When hand finishing is allowed, it shall be performed in conformance with subsection 601.12(a)		Hand finishing was performed in conformance with specifications.	Conformance	5/4/2022 12:46:55 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a vertical broom finish.	Conformance	5/4/2022 12:46:55 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a vertical broom finish.	Conformance	5/19/2022 8:36:54 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a broom finish.	Conformance	5/20/2022 8:01:45 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Barrier surface was observed getting a broom finish	Conformance	4/28/2022 9:09:57 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Barrier received a broom finish.	Conformance	7/29/2022 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a vertical broom finish.	Conformance	7/19/2022 2:14:20 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed surfaces received a vertical broom finish.	Conformance	7/18/2022 11:16:53 AM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		A broom finish was placed on the barrier.	Conformance	8/17/2021 10:34:00 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed vertical surfaces were given a broom finish.	Conformance	4/13/2022 3:26:46 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Barrier has a vertical broom surface.	Conformance	4/7/2022 12:23:20 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Exposed vertical surfaces of slipformed barrier shall receive a vertical broom finish.		Exposed vertical surfaces received a broom finish.	Conformance	4/7/2022 3:48:31 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		The Contractor IQC furnished an approved 10 foot straightedge and provided an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances were measured in a longitudinal direction. No deviation of any exposed surface in excess of the tolerance specified were measured.	Conformance	3/31/2022 8:17:41 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		Top edge was checked with a 10 foot straightedge.	Conformance	2/16/2022 11:11:26 AM -07:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		The barrier was installed in accordance with the straightedge requirements. Reference plan sheet RD-018 for area barrier was placed.	Conformance	8/17/2021 10:34:00 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		Contractor used straightedge and corrected surfaces to meet tolerance.	Conformance	10/27/2021 8:46:54 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		10 foot straightedge was furnished, and out of tolerance barrier was corrected.	Conformance	7/29/2022 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		10 Foot straightedge was available on site.	Conformance	4/28/2022 9:09:57 AM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)		Patching will not be allowed to correct out of tolerance barrier.		Patching was not required for the barrier.	Conformance	8/17/2021 10:34:00 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Patching will not be allowed to correct out of tolerance barrier.		Patching was not needed, no out of tolerance barrier was observed or noted.	Conformance	3/31/2022 8:17:41 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Unless otherwise stated in the plans or specifications, tolerances for concrete construction and materials shall be accordance with ACI 117.		Tolerances for concrete construction and materials were in accordance with ACI 117.	Conformance	11/15/2021 2:08:11 PM -07:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Unless otherwise stated in the plans or specifications, tolerances for concrete construction and materials shall be accordance with ACI 117.		Tolerances for concrete construction and materials was in accordance with ACI 117.	Conformance	5/25/2022 11:43:33 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Unless otherwise stated in the plans or specifications, tolerances for concrete construction and materials shall be accordance with ACI 117.		Tolerances for concrete construction and materials were in accordance with ACI 117.	Conformance	12/6/2021 12:39:49 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Pavement/Surface Removals	Removal		CDOT Standard Specification 107.17 - Contractor's Responsibility for Work. The Contractor shall be responsible for and protect the contract work against injury or damage from all causes whether arising from the execution or nonexecution of the work, including but not limited to action of the elements, traffic, fire, theft, vandalism, or third party negligence, until final written acceptance of the project by the Engineer. The Contractor shall rebuild, repair, restore, or replace all contract work that is injured or damaged prior to final written acceptance at no cost to the Department.		Permanent work completed in area was protected during removals.	Conformance	8/22/2022 8:40:52 AM -06:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover	8/17/2022 6:51:17 AM - 06:00	CDOT Standard Specification 107.17 - Contractor's Responsibility for Work. The Contractor shall be responsible for and protect the contract work against injury or damage from all causes whether arising from the execution or nonexecution of the work, including but not limited to action of the elements, traffic, fire, theft, vandalism, or third party negligence, until final written acceptance of the project by the Engineer. The Contractor shall rebuild, repair, restore, or replace all contract work that is injured or damaged prior to final written acceptance at no cost to the Department.		on the South West area of the Cover Top, Excessive rainfall on 8/7/22 came off south 46th and brought dirt and debris to collect on the un-backfilled drainboard. This dirt and debris on the drainboard was noticed by CDOT on 8/10/22 and brought to the attention of Chett (Keiwit) during our cover top coordination walk with DPR. It was observed on 8/15/22 that this area was backfilled with lightweight aggregate without the drainboard being cleaned. The aggregate needs to be removed and the drainboard cleaned. Central 70	C 0704-241	Remove Temporary Barrier	Maintenance of Traffic (MOT)		CDOT Standard Specification 107.17 - Contractor's Responsibility for Work. The Contractor shall be responsible for and protect the contract work against injury or damage from all causes whether arising from the execution or nonexecution of the work, including but not limited to action of the elements, traffic, fire, theft, vandalism, or third party negligence, until final written acceptance of the project by the Engineer. The Contractor shall rebuild, repair, restore, or replace all contract work that is injured or damaged prior to final written acceptance at no cost to the Department.		All work was completed and hazards mitigated prior to removal of barrier.	Conformance	9/8/2022 4:31:33 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM - 07:00	Bridge deck concrete on superelevation or grade that exceeds 2 percent, shall be placed from the low point upward.		Concrete was placed within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Bridge deck concrete on superelevation or grade that exceeds 2 percent, shall be placed from the low point upward.		Concrete was placed within conformance to Specifications and Plans	Conformance	2/8/2022 3:12:20 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Bridge deck concrete on superelevation or grade that exceeds 2 percent, shall be placed from the low point upward.		Concrete was placed from the low point upward.	Conformance	4/20/2022 3:49:22 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The Contractor shall prepare a written Process Control Plan (PCP) which defines the process control measures the Contractor will use to ensure the placing, consolidating, and finishing, curing and weather protection of the bridge deck conforms to the Contract requirements. The Contractor shall submit the PCP to the Engineer for written approval before the Pre-pour Conference.		Deck Placement plan was submitted and approved prior to pour.	Conformance	4/20/2022 3:49:22 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		The Contractor shall prepare a written Process Control Plan (PCP) which defines the process control measures the Contractor will use to ensure the placing, consolidating, and finishing, curing and weather protection of the bridge deck conforms to the Contract requirements. The Contractor shall submit the PCP to the Engineer for written approval before the Pre-pour Conference.		A PCP was submitted prior to deck placement.	Conformance	1/26/2022 8:39:23 AM -07:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		A combination of immersion vibration and surface consolidation shall be used.		Surface Consolidation and Immersion Vibration were observed being used.	Conformance	2/8/2022 3:12:20 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Following consolidation, the concrete shall be struck off and finished by mechanical longitudinal floating, mechanical rolling, surface vibration, or a combination of any of these methods.		Concrete was placed within conformance to Specifications and Plans	Conformance	2/8/2022 3:12:20 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM - 07:00	Following consolidation, the concrete shall be struck off and finished by mechanical longitudinal floating, mechanical rolling, surface vibration, or a combination of any of these methods.		Concrete was placed within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Following consolidation, the concrete shall be struck off and finished by mechanical longitudinal floating, mechanical rolling, surface vibration, or a combination of any of these methods.		Concrete was struck off to plan elevation with approved tools.	Conformance	1/26/2022 8:39:23 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Following consolidation, the concrete shall be struck off and finished by mechanical longitudinal floating, mechanical rolling, surface vibration, or a combination of any of these methods.		A mechanical Roller and Screed for the overhand were observed on site.	Conformance	6/13/2022 2:46:37 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM - 07:00	The drags shall be mounted on a bridge other than the bridge to be furnished for Department use. The dimensions of the drags shall consist of sufficient material and be maintained in such a condition that the resultant surface finish is of uniform appearance and reasonably free from grooves over 1/16 in depth. Where more than one layer of burlap drag is required, the bottom layer shall be approximately 6 inches wider than the layer above. Drags shall be maintained clean and free from encrusted mortar. Drags that cannot be cleaned shall be discarded and new drags installed.		Concrete was placed within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		2. Water Cure Method. The water cure method shall be applied as soon as it can be without marring the surface. The surface of the concrete, including bridge curbs and bridge sidewalks, shall be entirely covered with wet burlap and polyethylene sheeting. Prior to being placed, the burlap shall be thoroughly saturated with water. The wet burlap and polyethylene sheeting shall extend beyond the edges of the slab and shall be weighted to remain in contact with the surface. The wet burlap and polyethylene sheeting shall remain in contact and be kept wet for the entire curing period.		A Plastic sheeting was observed on the concrete surface with water underneath.	Conformance	6/13/2022 2:46:37 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM - 07:00	1. Membrane Forming Curing Compound Method. This method shall be applied in accordance with subsection 601.16(a)1 above.		Concrete was placed within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		1. Membrane Forming Curing Compound Method. This method shall be applied in accordance with subsection 601.16(a)1 above.		Deck was cured according to membrane forming curing compound method.	Conformance	1/26/2022 8:39:23 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	2/2/2022 12:00:00 AM - 07:00	2. Blanket Method. Curing blankets with a minimum R-Value of 0.5 shall be placed on the deck as soon as they can be without marring the surface. Blankets shall be loosely laid (not stretched) and adjacent edges suitably overlapped with continuous weights along the lapped joints. The blankets shall remain in place for a minimum of five days after placement.		Concrete was placed within Conformance to Plans and Specifications	Conformance	2/2/2022 11:26:28 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Concrete Cure	Structures		<p>When the ambient temperature is expected to fall below 40 °F during the curing period, the Contractor shall maintain the internal concrete temperature above 50 °F during the curing period. The Contractor shall maintain the internal concrete temperature above 50 °F during the curing period. The Contractor shall provide suitable measures such as straw, additional burlap, or other suitable blanketing materials, and/or housing and artificial heat to maintain the concrete temperatures between 50 °F and 75 °F as measured on the upper and lower surfaces of the concrete. The Contractor shall enclose the area underneath the deck and heat it so that the temperature of the surrounding air is as close as possible to the temperature of the concrete and between 50 °F and 75 °F. When artificial heating is used to maintain the concrete, adequate ventilation shall be provided to limit exposure to carbon dioxide. The Contractor shall maintain the wet burlap and polyethylene cover during the curing period. Heating may be stopped after the first 72 hours if the time of curing is lengthened to account for periods when the ambient air temperature is below 40 °F. For every day the ambient temperature is below 40 °F, an additional day of curing with a minimum ambient air temperature of 50 °F will be required. After completion of the required curing period, the Contractor shall remove the curing and protection so that the temperature of the concrete during the first 24 hours does not fall more than 25 °F.</p>		Concrete was membrane cured in accordance with specifications.	Conformance	11/5/2021 4:44:43 PM -06:00	C		Closed

Central 70	C 0704-241	Sign Installation	Signing & Striping	8/6/2021 9:01:06 AM - 06:00	4. Height and Clearance. Check for proper height above edge of traveled way and proper vertical and horizontal clearance of sign panel.		Checked sign panel for proper height above edge of traveled way and proper vertical and horizontal clearance, in compliance.	Conformance	8/3/2021 3:54:16 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Signal Conduit	Electrical		The supports for traffic signals have a substructure component constructed of concrete, a superstructure component constructed of structural steel, and an electrical system component. The substructure is designed to provide support from structurally stable soil. It is important to examine the proposed location for acceptability and inspect the soil conditions to ensure they are as described in the notes in the Contract.		Substructure component appeared to have been placed per plans and specifications.	Conformance	9/8/2022 4:30:18 PM -06:00	C		Closed
Central 70	C 0704-241	Signal Conduit	Electrical		2. Mast Arm. In mast-arm installations, the substructure is typically a drilled caisson with anchor bolts projecting from the top of the caisson. It is essential that the anchor bolts are accurately located, have the proper orientation, and project from the top of the caisson the specified length. The pole of the superstructure is connected to the anchor bolts of the substructure using bolted connections. Bolted connections are also used to connect the mast arm to the pole of the superstructure. It is important that all bolts are tightened as specified without over tightening and without gaps or spaces between connection plates.		Mast Arm installation appeared to be acceptable and per plans.	Conformance	9/8/2022 4:30:18 PM -06:00	C		Closed
Central 70	C 0704-241	Signal Conduit	Electrical		4. Utilities. Verify that the Contractor has staked known utility locations, resolved utility conflicts, and coordinated any needed adjustments or relocations.		Existing utilities were located prior to excavation for the foundation.	Conformance	9/8/2022 4:30:18 PM -06:00	C		Closed
Central 70	C 0704-241	Signal Conduit	Electrical		1. Conductors. Verify that the correct number of active and spare conductors has been provided. Ensure that the end of each run is taped until connected. Do not permit the splicing of conductors outside of specified areas (e.g., pull boxes, handhole locations).		Conductors installed appeared to be per plans.	Conformance	9/8/2022 4:30:18 PM -06:00	C		Closed
Central 70	C 0704-241	Signal Conduit	Electrical		2. As-Constructed Plans. Verify that the Contractor has furnished the required As Constructed Plans.		As built data was taken by survey and indicated layout was acceptable.	Conformance	9/8/2022 4:30:18 PM -06:00	C		Closed

Central 70	C 0704-241	Ventilation	Fire & Life Safety		3.3 Installation		Contractor is in compliance with the following requirements: 1. Install exposed raceways parallel or at right angles to walls and ceiling beams. Make changes in directions with bends, elbows, and pull boxes as specified. Space parallel runs uniformly throughout. Secure in place by specified hangers and fasteners. Ground raceways by connection to grounded enclosures or by bonding, to obtain permanent low resistance path to ground throughout installation. Raceway sections in single run and parallel runs must be of same type and finish. 2. All empty conduits shall be provided with pull strings. 3. Conduit Support: Support conduit by pipe straps, wall brackets, hangers, or ceiling trapeze. Fasten by wood screws to wood; by	Conformance	3/31/2022 8:16:55 AM -06:00	C		Closed

toggle bolts on hollow masonry units; by concrete inserts or expansion bolts on concrete or brick; by machine screws, welded threaded studs, or spring-tension Clamps on steel work. Threaded C-Clamps may be used on rigid steel conduit only. Do not weld conduits or pipe straps to steel structures. The load applied to fasteners shall not exceed one-fourth of the proof test load. Fasteners attached to concrete ceiling shall be vibration and shock resistant. Holes cut to a depth of more than 1-1/2 inches in reinforced concrete beams or to a depth of more than 3/4 inch in concrete joints shall not cut the main reinforcing bars. Fill holes that are not used. In partitions of light steel construction, use sheet-metal screws. In suspended-ceiling construction, run conduit above the ceiling. Do not support conduit from the ceiling support system. Spring steel fasteners may be used for lighting branch circuit conduit supports in suspended ceiling in

							dry locations. Where conduit crosses building expansion joints provide a suitable watertight expansion fitting that maintains the conduit electrical continuity by bonding jumpers or other means.					
Central 70	C 0704-241	Electrical	Cover	12/22/2021 1:24:36 PM - 07:00	3.3 Installation		Installation appears to comply with the requirements of this section.	Conformance	12/22/2021 12:40:40 PM -07:00	C		Closed
Central 70	C 0704-241	Electrical	Cover		3.3 Installation		The electrical installation appears to meet the following requirements: 3.3 A. Installation of Fittings 1. Install expansion fittings wherever conduits cross structural expansion joints. Keep fittings in line with conduit. Install fitting with regard to temperature so that full working range of expansion, as indicated, is available, and in accordance with manufacturer's recommendations. 2. Do not install short radius fittings to replace elbows and pull boxes, unless space or other problems make use of fittings necessary. If used, provide oversize fittings in order to maintain proper bending radius of wire or cable.	Conformance	1/27/2022 9:22:49 AM -07:00	C		Closed

3. Terminate ends of floor conduits installed for future use with couplings and removable plugs set flush with finished floor surface. Cap spare wall conduits at wall entrance to building.

4. Equip ends of conduits with matching conduit fittings. Fit conduits terminating at power distribution equipment or in box above or below, with grounding type bushings, or solidly ground by locknuts. Connect each grounding bushing to ground bus by a bare or green- covered copper wire. Do not use ground wire smaller than No. 12 AWG. Install ground wire larger than No. 12 AWG when required by the NEC. Where conduits terminate in unprotected areas or where bonding is required over an expansion joint or flexible conduit, use ground wires No. 6 AWG copper or larger.

5. In wet or damp locations, terminate conduits entering sheet-metal boxes or sheet-metal equipment enclosures with gaskets using connectors and/or

Central 70	C 0704-241	Fire Protection	Fire & Life Safety		3.3 Adjusting, Cleaning, Protection		Contractor is in compliance with the following requirement; D. Install pipe flashing boot on standpipe and temporarily secure with stainless steel clamp. E. When standpipe/fire valve and fire extinguisher cabinets have been anchored, loosen the pipe flashing boot clamp, clean the top of the cabinet and bottom boot surface, install a 3/8 inch bead of sealant around the bottom of the boot and carefully press the boot into contact with the cabinet's top surface so that the sealant exudes from the boot/cabinet joint to ensure 100 percent seal. Tighten the stainless steel clamp and install a 3/8 inch bead of sealant at	Conformance	1/20/2022 7:55:00 AM -07:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		3.3 Adjusting, Cleaning, Protection		Contractor will clean interior of all FHCC after doors are installed.	Conformance	1/20/2022 7:55:41 AM -07:00	C		Closed
Central 70	C 0704-241	Lowered Roadway Dry Standpipe	Cover		2. Verify all locations and measurements in the field as field conditions may vary from design. Contractor shall verify exact locations in the field before commencing fabrication, ordering and material, or performing any work.		All measurements and locations were verified in field prior to performing work.	Conformance	11/29/2021 1:30:27 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Sign Installation	Signing & Striping	8/6/2021 9:01:06 AM - 06:00	Structural steel shall be galvanized in accordance with ASTM A 123. Pole hardware shall be galvanized in accordance with ASTM A 153. All signs must be clean prior to erection. Installation shall be of such sequence as to result in maximum traffic safety. Signs shall be erected in conformity with the plans. Prior to final positioning, the sign shall be inspected at night by the Engineer and adjustments will be made, if necessary, to eliminate specular reflection.		Sign was not clean prior to erection-noted scratches, footprints, and retroreflective sheeting was peeled back from improper storage in the yard. Structural steel was galvanized in accordance with ASTM A 123. Mast arm hardware was galvanized in accordance with ASTM A 153. Installation was of such sequence to result in maximum traffic safety. Signs were erected in conformity with the plans.	Response is adequate.	9/17/2021 6:23:07 PM -06:00	Audit Comment	KIC and IQC have a sign tracking sheet for issues like peeling letters and damage to reflectivity sheeting. These signs will be tracked and punch listed.	Closed
Central 70	C 0704-241	Sign Installation	Signing & Striping	8/6/2021 9:01:06 AM - 06:00	The sequence of erection of new and reset sign installations shall be correlated with the removal of the existing traffic controls. The decision regarding the sequence shall be worked out with the Engineer prior to starting the work.		The sequence of erection of new sign installation was correlated with the removal of the existing traffic controls.	Conformance	8/3/2021 3:54:16 PM -06:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		Anchorage, footings or fence appurtenances shall not extend beyond the limits of the highway right of way without the written consent of the abutting property owner		Anchorage, footings or fence appurtenances did not extend beyond the limits of the highway right of way.	Conformance	11/16/2021 2:44:06 PM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		Anchorage, footings or fence appurtenances shall not extend beyond the limits of the highway right of way without the written consent of the abutting property owner		Anchorage, footings or fence appurtenances do not extend beyond the limits of the highway right of way.	Conformance	3/1/2022 8:50:31 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Fencing	Roadway		When the plans require that posts, braces, or anchors be embedded in concrete, they shall be securely braced to hold the posts in proper position until such time as the concrete has set sufficiently to hold the posts.		Posts, braces, or anchors are embedded in concrete, they are securely braced to hold the posts in proper position, the concrete has set sufficiently to hold the posts.	Conformance	3/1/2022 8:50:31 AM -07:00	C		Closed
Central 70	C 0704-241	Drainage Structures	Drainage		When the plans require that posts, braces, or anchors be embedded in concrete, they shall be securely braced to hold the posts in proper position until such time as the concrete has set sufficiently to hold the posts.		The plans require that posts, braces, or anchors be embedded in concrete, they are securely braced to hold the posts in proper position, the concrete has set sufficiently to hold the posts.	Conformance	4/22/2022 12:25:55 PM -06:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		Unless otherwise permitted, materials shall not be installed on posts, or stress placed on guys and bracing set in concrete until the concrete has set sufficiently to withstand the stress		Materials were not installed on posts, or stress placed on guys and bracing, the concrete has set sufficiently to withstand the stress.	Conformance	3/1/2022 8:50:31 AM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		Unless otherwise permitted, materials shall not be installed on posts, or stress placed on guys and bracing set in concrete until the concrete has set sufficiently to withstand the stress		Materials were not installed on posts, no stress placed on guys and bracing set in concrete, the concrete was set sufficiently to withstand the stress.	Conformance	11/16/2021 2:44:06 PM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		The tops of all posts shall be set to the required grade and alignment		The tops of all posts were set to the required grade and alignment.	Conformance	11/16/2021 2:44:06 PM -07:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		The tops of all posts shall be set to the required grade and alignment		The tops of all posts are set to the required grade and alignment.	Conformance	3/1/2022 8:50:31 AM -07:00	C		Closed

Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover	9/12/2022 7:46:35 AM - 06:00	3.8 Paving Tolerances		Paving appears to follow paving Tolerances as outlined in ACI 117	Conformance	9/8/2022 4:28:45 PM -06:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Verify the surface preparation is in accordance with the following requirements of this section		Surface was adequately prepared according to plans and specifications	Conformance	2/17/2022 3:41:09 PM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Verify the surface preparation is in accordance with the following requirements of this section		Substrate was adequately prepared within Plans and Specifications.	Conformance	1/19/2022 10:50:27 AM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(a) Surface conditioner application (to concrete)		Surface Conditioner was applied within conformance to Specifications and Plans	Conformance	1/19/2022 10:50:27 AM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(a) Surface conditioner application (to concrete)		Surface was adequately prepared according to plans and specifications	Conformance	2/17/2022 3:41:09 PM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(b) Waterproofing membrane preparation		Substrate was observed to be prepared within conformance to Spec	Conformance	1/19/2022 10:50:27 AM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(b) Waterproofing membrane preparation		Waterproofing Membrane was prepared within plans and specifications	Conformance	2/17/2022 3:41:09 PM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(d) Waterproofing Membrane Application		Waterproofing Membrane was applied within plans and specifications	Conformance	2/17/2022 3:41:09 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(d) Waterproofing Membrane Application		Application of Waterproofing Membrane was observed to be within conformance to Plans and Specifications.	Conformance	1/19/2022 10:50:27 AM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(a) Separation/Protection course shall be installed as follows:		Protection Course/Root Barrier Protection was prepared within plans and specifications	Conformance	2/17/2022 3:41:09 PM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Verify the following testing was conducted in accordance with the following requirements of this section		P.I.E preformed the Integrity Test according to plans and specifications, (High Voltage)	Conformance	2/17/2022 3:41:09 PM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(a) All Drainage, Geofoam and Components shall		Hydrodrain was installed according to plans and specifications	Conformance	2/17/2022 3:41:09 PM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		(c) Hydrodrain Air Layer		Hydrodrain was installed according to plans and specifications	Conformance	2/17/2022 3:41:09 PM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover	3/31/2022 10:38:10 AM - 06:00	Section 601 of the Standard Specification is hereby revised for this project as follows:		Concrete was observed to be vibrated during placement to achieve consolidation and uniform finish. Revision of Spec 601.10(e) states "When SCC is used, vibration shall not be used to consolidate the concrete." Ongoing conversation/procedure needs to be had/developed to control the use of vibration as to not over consolidate the concrete	Item was reviewed. Field observations will continue of over vibrating concrete.	4/11/2022 3:46:30 PM -06:00	Audit Comment	We have reviewed wall details with our crews/PC/IQC teams.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Building	Cover		1.8 Delivery, Storage, and Handling		Contractor was in compliance with the requirements in section 1.8.	Conformance	3/31/2022 8:12:50 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		1.9 Project Conditions		Contractor was in compliance with requirements of section 1.9	Conformance	3/31/2022 8:12:50 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		2.2 Glazed Aluminum Sectional Overhead Doors		Contractor is in compliance with the following requirement 2.2 Glazed Aluminum Sectional Overhead Door.	Conformance	3/31/2022 8:12:50 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		3.3 Installation		Contractor is in compliance with the requirements of section 3.3 Installation.	Conformance	3/31/2022 8:12:50 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover		3.4 Adjusting and Cleaning		Contractor is in compliance with the requirements in section 3.4 Adjusting and Cleaning	Conformance	3/31/2022 8:12:50 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Building	Cover	5/2/2022 9:31:02 AM - 06:00	3.4 Installation of Fire-Alarm Wiring		Fire alarm low voltage wiring should not share a raceway. The contractor has installed the fire alarm low voltage wiring that is sharing a common raceway. Contractor is not in compliance with the following requirement from PA section 260519 - 5, 3.4, A., 2. Fire-alarm circuits and equipment control wiring associated with fire-alarm system shall be installed in a dedicated pathway system. This system shall not be used for any other wire or cable, and 260519 - 5, 3.4, B, 1. Cables and pathways used for fire-alarm circuits, and equipment control wiring associated with fire-alarm system, may not contain any other wire or cable.	Audit is retracted	5/19/2022 8:30:45 AM -06:00	NC-2	Audit being retracted by CDOT	Closed
Central 70	C 0704-241	SX	Roadway	6/24/2022 9:20:29 AM - 06:00	Transverse joints shall be formed by cutting back on the previous run to expose the full depth of the course.		Area shown in photo does not match jointing plans. Joint should have been milled at a 90 degree angle to pavement at inlet. Spoke to Max Hoffmeister and Amanda Tabor about this non conforming work.	Captured in NCR	6/27/2022 2:49:30 PM -06:00	NC-2	EMCR 1561 was assigned for this assessment	Closed
