Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	10/15/2019 4:21:12 PM - 06:00	g. The Developer shall assure, certify and provide documented evidence that the Work meets the requirements of the Project Agreement		IQC checklists were not found for the pipe lining crew working on the 48" pipe from the manhole at the bend in the corner of Airlawn to the east of Oneida. ***The department has elected to issue this as an audit comment instead of an NC with the expectation that a response will be received by 5/31/19.***	ncr written	6/3/2021 12:51:55 PM -06:00	Audit Comment		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)	10/30/2018 10:21:43 AM - 06:00	a. The Developer shall perform and document all required construction PC and IQC activities necessary to control the Work		An IQC checklist for barrier has not been officially submitted or completed in Kietrac.	NCR 382 created	4/29/2019 4:30:47 PM -06:00	NC-2	Please see NCR-382	Closed
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	10/10/2018 1:13:49 PM - 06:00	d. The daily inspection reports shall identify inspections conducted, dates of inspections, results of inspections, locations and nature of defects found, causes for rejection, and remedial or corrective actions taken or proposed		PC & IQC inspection checklists should be addressed to include the maximum spacing allowed for reflector installation on temporary concrete barrier. (Reference Standard S-612-1)	Barrier & Reflector Section included on checklists for inspection and conformance to Specifications & Standards.	4/28/2019 9:41:31 AM -06:00	Audit Comment	The MOT checklist PC and IQC includes a barrier and reflector check.	Closed
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	2/1/2019 3:14:37 PM - 07:00	The Developer shall document the identification of Nonconforming Work by completing and submitting a NCR to the Department as soon as reasonably practicable, and in any event within 24 hours, after the Developer first becomes aware of the Nonconforming Work		During the bi-weekly quality drive on 1/23/19 it was noted that many signs were taken down between on I-70 EB/WB between Havana and Peoria. An NCR was not written by IQC within 24hrs of becoming aware of the issue.	665 created	2/25/2019 10:07:26 AM -07:00	NC-2	NCR 665 Created	Closed

Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)		The Developer shall be responsible for designing, providing and maintaining safe and effective traffic control on all roadways that are affected by the Construction Work for the movement of people, goods, and services through and around the Project while minimizing impacts to local residents, businesses and commuters.		Closure followed the MHT (#111).	Conformance	11/1/2018 1:46:09 PM -06:00	C		Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	11/30/2018 11:47:28 AM - 07:00	The Developer shall be responsible for designing, providing and maintaining safe and effective traffic control on all roadways that are affected by the Construction Work for the movement of people, goods, and services through and around the Project while minimizing impacts to local residents, businesses and commuters.		<ol style="list-style-type: none"> The second and third lane closure tapers appeared to be short on length instead of 660'. Part of the issue with this is that the vertical panels are being placed and the last few in closure end up being a tangent. The mid-lane devices which are required were missing from the closure required at a minimum of 750' in all night time closures. The shifting taper for the reverse curve was extremely short it should have been around 660' and the implemented version was only 140' in length. In the shifting taper they were missing the devices delineating the left edge of the closure. These are necessary to prevent vehicles from attempting to run 2 wide through the reverse curve or making it clear to any errant vehicle which entered the 3 	NCR 355 has been written and is progressing towards closure.	11/15/2018 2:14:15 PM -07:00	NC-2	NCR #355 has been opened.	Closed

closed lanes that they should not be in the closed lane.

4. The tangent length from the end of the third lane closure should have been $2L=1320'$. The implemented tangent was only 80'. Creating an unsafe condition where motorists could have been hit if a vehicle ran through the 3rd lane closure.

5. The opening to exit at Peoria was 280' wide while the TA shows that it should be 100ft and the gore created with cones was not a point. These issues could lead to driver confusion and result in them trying to drive 2 wide or thinking that the closure has ended. Also we do not have a MHT approved for an exit opening in a closure.

6. The tangent length between the sequential lane closures was short for the tangent between the 2nd to 3rd lane closure. (required to be $2L=1320'$)

7. The Merge signs for the 2nd and 3rd lane closure were not posted on both sides of the roadway only the left.

Project Construction Assessments Overview as of September, 2022

							8. Merge sign was placed behind a barrier wall on a 1ft mount thus the sign was obstructed for drivers in lower vehicles.						
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	11/30/2018 11:47:28 AM - 07:00	The Developer shall be responsible for designing, providing and maintaining safe and effective traffic control on all roadways that are affected by the Construction Work for the movement of people, goods, and services through and around the Project while minimizing impacts to local residents, businesses and commuters. Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	10/5/2018 4:07:17 PM - 06:00	To implement the TCP, the Developer shall prepare MHTs that conform to the requirements specified herein and the CDOT Standard Specifications.		As discuss with IQC the KIC MHT #112 was the only MHT referenced for the closure and the implemented closure included signage which was not shown on KIC MHT #112. This signage was from MUTCD TA-42 & TA-44. This additional signage not being shown on the MHT lead to crews installing the "right lane merge" sign too close to the "merge" sign for the Peoria EB on ramp when conditions had adequate room to increase spacing between signs (Photos attached.) IQC has issued NCR 0338 for this issue.	NCR 338 generated. The NCR referenced by IQC was a typo the correct number is 338.	4/29/2019 11:58:53 AM -06:00	Audit Comment	Please see NCR 388. The IQC approval of MHTs and the PC and IQC management and oversight of MHTs has changed and been improved since development of this assessment.	Closed

Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	1/24/2019 9:55:20 AM - 07:00	To implement the TCP, the Developer shall prepare MHTs that conform to the requirements specified herein and the CDOT Standard Specifications.		(1) The closure did not follow an MHT. A TMA was placed in the lane but did not have a taper. (2) Only one TMA was used to set up this closure and it was placed in the right lane immediately after the reverse curve on to the temporary pavement. As a result drivers were confronted by several significant changes in a short distance after coming over the rise in I-270 bridge over EB Central Park off ramp (reverse curve to the temp pavement & TMA closing lane right after reverse curve).	628 created	2/27/2019 1:26:05 PM -07:00	NC-2	NCR 628 Created	Closed

issues below:

- (a) Midlane devices were not installed per the applicable reference documents.
- (b) The Exit Ramp opening for Havana was missing the taper on the right edge line
- (c) The exit ramp opening for Peoria off ramp was unsafe and did not comply with MUTCD (20ft tangent opening with a 24' long taper). The traffic control crew attempted to fix this taper to make it safer (adjusting the length to about 150') but was unable to make it compliant until the overhead sign removal was completed. (12:30am to 2:15am)
- (d) The temporary Exit sign for the ramp opening was located on the shoulder approx. 24' from channelized traffic.
- (e) The Havana & Central Park Entrance Ramp openings were missing the cones along the left edge.
- (f) The Merge signs for entrance ramps were placed far enough from through

Project Construction Assessments Overview as of September, 2022

							traffic that they could be missed.

Central 70	C 0704-241	BMPs	Environmental	5/6/2019 4:41:14 PM - 06:00	The Contractor shall maintain each vehicle tracking pad during the entire time that it is in use for the project. The vehicle tracking pad shall be removed at the completion of the project unless otherwise directed by the Department. Additional aggregate may be required for maintenance and will be paid for by the Contractor.		Trucks were hauling excavation spoils to the stockpile in the SE quadrant of Quebec. The trucks hauling this material exited the work area across track pads which were completely covered in sediment. As a result this sediment was tracked on to the roadway and was able to reach an unprotected inlet at the east abutment of the EB I-70 bridge over Sand Creek. Sweeping operation were performed to capture the sediment from the track out but sediment still remains. Crews will need to return to capture all sediment tracked out against the barrier wall on Sand Creek Bridge. Attached are photos of the track out and the outfall.	988	5/30/2019 8:28:43 AM -06:00	NC-2	Refer to NCR No. 0988	Closed
Central 70	C 0704-241	BMPs	Environmental	9/19/2018 4:22:48 PM - 06:00	Failure to implement the Stormwater Management Plan is a violation of the CDPS-SCP and CDOT specifications		The SWMP shows BMPs for work south of Swansea Elementary (Sheet attached). A crew was observed performing ground disturbing activities with an excavator (photos attached) without BMPs installed.	See NCR 388	11/27/2018 2:45:30 PM -07:00	NC-2	The SWMP does not show BMPs around this perimeter. The inlet protections shown on the map page were implemented in the field.	Closed

Central 70	C 0704-241	BMPs	Environmental	5/6/2019 4:41:14 PM - 06:00	(4) Failure to amend the SWMP and implement BMPs as required by subsection 208.04.		On 5/1 the department found significant track out on the WB Peoria On Ramp from trucks using other unprotected exit points from the work area. Attached are photos.	988	5/30/2019 8:28:33 AM -06:00	NC-2	Refer to NCR No. 0988	Closed
Central 70	C 0704-241	BMPs	Environmental	5/6/2019 4:41:14 PM - 06:00	(4) Failure to amend the SWMP and implement BMPs as required by subsection 208.04.		Upon evaluation of the outfall from the Sand Creek Bridge inlet it was found that the outfall did not have proper protection for the sediment entering the system due to the Quebec track out. It was also noticed that work was done around the outfall and the slope surrounding it were not protected. As a result of both of these issues sediment/silt enter the pond located in the NE quadrant of Sand Creek. See Item #3 for photos of the outfall & issues.	988	5/30/2019 8:28:48 AM -06:00	NC-2	Refer to NCR No. 0988	Closed

Central 70	C 0704-241	ITS	Electrical		C. Manholes are not allowed in paved shoulders or paved roadways, unless specifically Approved by the Department;		Manhole installed per plans(ITS-039)and is verified not in conflict with paved roadways or shoulders. Manhole installed on 2.28.18 at STA2402+36	Conformance	3/5/2019 2:20:47 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		C. Manholes are not allowed in paved shoulders or paved roadways, unless specifically Approved by the Department;		Manhole is not in paved shoulders or roadways.	Conformance	4/30/2019 7:48:29 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical	3/25/2019 1:53:24 PM - 06:00	C. Manholes are not allowed in paved shoulders or paved roadways, unless specifically Approved by the Department;		Placement is in greenspace	Conformance	3/25/2019 12:16:05 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		E. Pull boxes for ITS and ETC power shall be spaced no greater than 300 feet apart as Accepted by the Department;		No power pull boxes in area	Conformance	4/10/2019 10:16:30 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		F. Pull boxes or manholes shall be placed within 20 feet of the ITS and ETC equipment as Accepted by the Department, in safe, easy to access locations; and		Pull boxes placed within area of future ITS equipment locations	Conformance	4/10/2019 10:16:30 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All pull boxes shall be verified by a third-party nationally recognized Independent Testing Laboratory as meeting all test provisions of ANSI/SCTE 77 2007 Specification for Underground Enclosure Integrity, Tier 22 rating		Pull Box is Tier22 rated	Conformance	5/1/2019 9:26:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The Developer shall furnish and install all pull boxes and manholes based on the Construction Standards and any applicable Local Agency standards and specifications. Each location shall be easily accessible for maintenance purposes. Pull boxes shall not be placed in a known flood-prone area or drainage ditch. A fiber optic cable label shall be attached to each fiber optic cable located within a pull box or manhole.		In conformance with plans	Conformance	4/10/2019 10:16:30 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Each location shall be easily accessible for maintenance purposes		Pull boxes placed in a safe accessible location.	Conformance	4/10/2019 10:16:30 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Each location shall be easily accessible for maintenance purposes		This manhole is located in an accessible area for future maintenance crews.	Conformance	4/30/2019 7:48:29 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Each location shall be easily accessible for maintenance purposes		Area is not hazardous and is completely accessible for future maintenance crews.	Conformance	5/1/2019 9:26:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall not be placed in a known flood-prone area or drainage ditch		Pull box is installed per plan sheet ITS-026(RFC-East ITS & Tolling).	Conformance	5/1/2019 9:26:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall not be placed in a known flood-prone area or drainage ditch		Placement of pull boxes in accordance with plan sheets	Conformance	4/10/2019 10:16:30 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The Developer shall salvage all existing ITS equipment that is affected by the Construction Work.		All existing equipment was re-used to implement RMS.	Conformance	7/23/2019 11:34:29 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The Developer shall also provide documentation for all ITS equipment		The As-built documentation was provided to Kiewit.	Conformance	7/23/2019 11:34:29 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		A minimum of 12 inches of ¾ inch granite-gravel shall be placed below the Manhole TMS.	Conformance	4/30/2019 7:48:29 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		Manhole TMS will include marking conduit ownership in each, the Manhole TMS, excavation and backfill, hooks to hang coils, all cable innerduct, conduit inside Manhole TMS, all hardware, as well as all equipment and labor necessary to install the Manhole TMS.	Conformance	4/30/2019 7:48:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		Backfill around the Manhole TMS excavation shall conform to Section 206, Structure Backfill (Class 2).	Conformance	4/30/2019 7:48:29 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		The Contractor shall neatly excavate the site of Manhole TMS installation. A minimum of 12 inches of ¾ inch granite-gravel shall be placed below the Manhole TMS. Verified 12" of granite-gravel was installed prior to manhole being set.	Conformance	6/6/2019 2:16:03 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		Pre-cast units shall be provided with factory-installed knockouts that will permit the installation of a minimum of 6 of 2-inch conduits. The factory-installed knockouts shall be at a depth of 3 feet below the top of the Manhole TMS. Manhole knockout were verified 3' below the top of the manhole.	Conformance	6/6/2019 2:16:03 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		Manhole TMS shall be pre-cast concrete, circular or square, with a base and cast iron frame ring and cover. Each Manhole TMS, frame, and cover shall conform to American Association of State Highway and Transportation Officials (AASHTO) HS20-44. Manhole was verified to meet the approved submittal and HS20-44	Conformance	6/6/2019 2:16:02 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		The Manhole TMS shall have a detachable cover that has a skid-resistant surface and have the words “CDOT COMM” cast on top of cover. Verified manhole lid had CDOT COMM cast into it.	Conformance	6/6/2019 2:16:02 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 613 – CDOT Electrical Conduit (*CO-093)		Electrical Conduit shall be Schedule 80.	Conformance	4/26/2019 11:55:11 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 613 – CDOT Electrical Conduit (*CO-093)		All HDPE conduit shall be factory lubricated, low-friction, high-density conduit constructed of virgin high-density polyethylene resin.	Conformance	4/26/2019 11:55:11 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	4/19/2019 8:26:39 AM - 06:00	IQCP-02 IQC Record Collection		<p>IQC Inspectors failed to report improper testing procedures were followed during the process of concrete testing and placement for slotted trench drain. It was noted there was no slump or air testing taking place, instead every 100 CY of concrete, cylinders were taken for verification. Additionally, the first two trucks tested on 4/13/19, the air was tested and failed both PC & IQC. This concrete was placed, and no NCR was documented as per the NCR process (QSP-07). Per IQCP-02, IQC inspection will pertain to both temporary and permanent work, and testing performed in the field shall be overseen by IQC staff to ensure materials are adequately collected and tested, as applicable.</p>	Concrete performance during life-cycle not expected to have any impact from lack of testing. The Developer and Department spoke of time constraints from the closure, and the decision was made by Developer to place concrete regardless of proper testing procedure.	4/29/2019 8:56:32 AM -06:00	Audit Comment	Due to the time constraints of the closure, air and slump testing was not performed. The placement was temporary and air content will not impact performance over the life-cycle of the concrete.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	10/15/2018 4:07:21 PM - 06:00	Removal of temporary markings on transitions has been removed by grinding or water-blasting to result in 100% removal.		The pavement markings were not removed completely in the transitions and conflicting markings were still present in the lane in the tangent section of the shift.	NCR generated	4/29/2019 2:34:46 PM -06:00	NC-2	Please see NCR-0357	Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The material installed matches what is specified in the plans and conforms to the requirements set out in 501.02 (Ty. I) or 501.03 (Ty. II)		Checked the sheet piling on the ground and ones that had been installed and they met the requirements for Type I steel sheet piling.	Conformance	11/1/2018 3:34:25 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Sheetpile is driven by driving head.		The sheet piling that I observed being installed was driven by a driving head (vibratory hammer suspended from a lattice boom crawler crane that was specified in the Peoria safety critical bridge removal plan).	Conformance	11/1/2018 3:34:25 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Sheet pile is at the location specified on the plan; driven depth and cut-off elevation is as specified on the plans		The sheet piling that I observed being installed appeared to be at the location specified in the plans and tied into previously installed sheet piling. Driven depth met or exceeded the specified elevation and was driven to grade.	Conformance	11/1/2018 3:34:25 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		Sheet pile forms a tight bulkhead and any which does not has been removed and replaced		All sheeting that I observed being installed formed a tight bulkhead and none had to be removed. The contractor had an issue with one section as the tongue/groove did not want to engage properly, so that section was laid down and another picked up.	Conformance	11/1/2018 3:34:25 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Excess sheet pile is cut-off by an approved method.		All sheet piling that I observed being installed was driven to grade with the vibratory hammer and did not need to be cut off.	Conformance	11/1/2018 3:34:25 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		I checked the contractor survey stakes and all had the correct information as to orientation and the pile driving crew had the correct information about batter (none) and driving depth.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Excavation has been completed prior to driving pile?		I observed the excavation in progress and it was completed before driving any piling.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Pile tips have been attached according to the plans when required.		Pile tips were attached according to the plans.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Pile Driving Analyzer test has been run on two piles and these two piles were at different elements of the bridge (i.e. Abutment, pier, etc)		A PDA test was run on one pile at the east abutment and a second test is set up for the west abutment for the day that pile driving resumes, either 01/02/19 or 01/03/19.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The piles match those shown on the plans (size, type, and tips installed if required).		The piling size and type, and the pile tips matched those shown on the plans.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Pile driving equipment has been submitted and approved by IQC.		The pile driving equipment was submitted and approved by IQC.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The equipment in the field matches the approved equipment and is in good working order.		The pile driving equipment in the field is exactly what was submitted and approved, and is in good working order.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Driving leads are adequate to prevent horizontal movement. (Swinging leads have a pile gate fitted at the bottom and leads are long enough to be securely fixed at the ground at all times.		The driving leads are adequate to prevent horizontal movement and did have a pile gate fitted at the bottom. The leads are long enough to be stabbed into the ground and fixed.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The hammer cushion is suitable to prevent damage to the hammer or pile.		The hammer cushion was made of a suitable material to prevent damage to the hammer or pile.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Hammer cushion is not made of wood, wire rope, or asbestos cushion material.		The cushion is not made of wood, wire rope, or asbestos and appeared to be made of nylon or delrin.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Piles were driven to refusal in natural ground at or below the estimated minimum tip elevations.		The piling was driven to refusal in natural ground at or below the estimated tip elevation.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All commercial splices have been approved by the Engineer.		The commercial splices have been approved by the Engineer, which was verified to me by Raymond Lara.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All welders are qualified and have been approved prior to starting welding.		All welders are qualified and have been approved prior to starting welding.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds were made by using a prequalified joint design and a WPS had been submitted by the contractor.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Welded splices are performed with low hydrogen electrodes.		I checked the electrodes being used and they were of a low hydrogen type.	Conformance	12/26/2018 11:57:30 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQCM reviewed and approved the on-site supervisors and drill rig operator, which was noted on the drilled shaft installation plan.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	IQCM has reviewed and approved the on-site supervisors & drill rig operators.		On-Site Supervisor & Drill Rig Operator Experience is listed in the Drilled Shaft Installation Plan to be submitted under a separate cover. This submittal was unable to be located providing the required experience for the personnel. IQCM shall review and approve the required experience and personnel.		5/23/2019 7:57:03 AM -06:00	Audit Comment	Please see KMP-TRN-003573	Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/15/2019 5:20:40 PM - 06:00	IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC has reviewed and approved the on-site supervisors & drill rig operators to be utilized for Grout Column Installation operations.	Conformance	3/14/2019 1:15:24 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/15/2019 5:20:40 PM - 06:00	IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC has reviewed and approved the Safety Critical Grout Installation Plan.	Conformance	3/14/2019 1:15:24 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC has approved KIC Drilled Shaft Installation Plan for Caisson Walls.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQCM did review and approve the drilled shaft installation plan.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		The drilled shaft crew followed the steps in the approved drilled shaft plan.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		Overall detailed process, to include necessary equipment, for the approved drilled shaft plan is being followed and implemented per plan.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/15/2019 5:20:40 PM - 06:00	The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		Equipment, process, and details were followed by crew throughout grout column installation operations, as approved in the Safety Critical plan.	Conformance	3/14/2019 1:15:24 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	If slurry is being used the following has been submitted and approved by IQC: 1. The slurry manufacturer's technical representative assigned to the project. 2. The names of the Contractor's personnel assigned to the project and trained by the slurry manufacturer's technical representative in the proper use of the slurry.		1. IQC has approved the submittal for the resume of the polymer slurry tech representative assigned to the project. 2. Construction Submittal does not include a list of names for those trained by the slurry representative.		6/6/2019 10:43:42 AM -06:00	Audit Comment	list of trainees will be attached to the technical representative submittal and resubmitted.	Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	The Contractor's Quality Control staff shall prepare inspection logs using CDOT Form 1333 – Inspector's Report of Caisson Installation documenting each shaft construction activity. In addition, the Contractor shall prepare and submit the logs documenting any subsurface investigation borings or rock core holes performed by the Contractor at drilled shaft foundation locations.		IQC Inspector prepared and completed Form 1333 - Drilled Shaft Installation Form, as well as a Drilled Shaft Log depicting soils removed as drilling continued in depth.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	In addition to the information required on the Form 1333, the Contractor shall provide the following information: type and dimensions of tools and equipment used, and any changes to the tools and equipment; type of drilling fluid if used, the results of slurry tests, any problems encountered, and method used for bottom cleaning.		Form 1333 - Page 1 - Depicts the necessary equipment that was used per the Installation plan, as well as slurry results and method of cleaning for bottom of shaft.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	In addition to the information required on the Form 1333, concrete placement records shall include at least the following information: tremie tip elevation during concrete placement, and concrete yield curve (volume versus concrete elevation, actual and theoretical).		Documentation of concrete placement has not included a concrete yield curve (volume versus concrete elevation, actual versus theoretical).		5/23/2019 8:51:36 AM -06:00	Audit Comment	Tremie tip elevation and concrete yield curve are in our kietrac forms. Actual yield graph is being sent through email. These are recorded after every concrete truck.	Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	The contractor shall show bracing and any extra reinforcing steel required for fabrication of the cage on the shop drawings.		Shop Drawings depict required reinforcing rebar and bracing for respective caisson size to be utilized for the drilled shafts.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Operations were performed in a safe manner, following the drilled shaft installation plan, and utilizing construction means and methods to prevent excessive caving during the drilling operations.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Contractor controlled operations to prevent damage to surrounding area and previously drilled holes.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The location for the drilled shaft have been adequately staked with the correct information.		Location for drilled caissons were adequately staked with correct survey information.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	The location for the drilled shaft have been adequately staked with the correct information.		Shaft #12 was staked out from multiple locations to allow for proper centering of shaft per plan.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The location for the drilled shaft have been adequately staked with the correct information.		The drilled shaft location was adequately staked with the correct offset information.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	The location for the drilled shaft have been adequately staked with the correct information.		Shaft location and offset were surveyed and verified at 7:50 am before the placement of the casing.	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The shaft location has been check for potential underground utility conflicts.		The drilled shaft location was checked for potential underground utility conflicts.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed

Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Drilled shaft installation process; from temporary casing placement, to drilling, and placement of concrete, was completed in a continuous operation with no pauses or interruptions.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Drilled shaft excavation progressed in one continuous operation until completed. Pauses occurred for splicing of reinforcement cage.	Conformance	4/3/2020 4:44:22 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		The excavation of the drilled shaft was conducted in a continuous operation with no pauses other than casing installation when the contractor hit bedrock. The casing was covered and the contractor resumed excavation into the bedrock on the following day.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		The contractor covered the shaft with metal plate after casing installation.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		Drilled shaft excavation was protected should the operation not be completed at end of shift.	Conformance	4/3/2020 4:44:22 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Applicable specifications were being followed for the use of polymer slurry.	Conformance	4/3/2020 4:44:22 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Polymer slurry conformed to the allowable ranges for density, viscosity, pH, and sand content requirements.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Effort should be made to collect all slurry and water displaced during concrete placement operations. The pump operating this operations should be monitored to continuously keep up with the slurry displacement within the casing.		5/22/2019 5:11:03 PM -06:00	Audit Comment	Slurry and displaced water is captured during placement operations and continually monitored. Released will be tracked as NCRs.	Closed
Central 70	C 0704-241	Deep Foundations	Structures		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		All slurry and water displaced during final cleaning and concrete placement was collected and prevented from entering any travel lanes, railroad, or environmentally sensitive areas.	Conformance	4/3/2020 4:44:22 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		Minimum level of polymer slurry was maintained should the shaft excavation be paused, or not complete at the end of the shift. Specifications were complied with.	Conformance	4/3/2020 4:44:22 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		Polymer slurry level was maintained at or above the minimum required level to prevent any bottom heave, caving or sloughing of any potential unstable zones.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The dry shaft construction method is being followed for shafts which meet the following conditions: less than 12 inches of water accumulates above the base of excavation over a period of one hour when no pumping is performed, the sides and bottom of the hole remain stable without detrimental caving, sloughing or swelling between the completion of excavation and concrete placement, all loose material and water can be satisfactorily removed prior to inspection and concrete placement (no more than 2 inches of water will be permitted in the bottom of the shaft excavation at the time of concrete placement), and the Engineer can visually inspect the sides and bottom of the shaft prior to placing the concrete.		All the conditions of the dry shaft construction method were met, so the contractor used that method and did not use slurry.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Excavation has been protected to prevent material or persons from falling into the hole.		The contractor restricted access to the excavation and only allowed workers with safety harnesses that were tied off to concrete deadmen to approach it.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation was protected at all times from material or persons falling into the hole.	Conformance	4/3/2020 4:44:22 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation was protected at all times from material and persons falling into hole.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	Excavation has been protected to prevent material or persons from falling into the hole.		Casing for shafts A3-10 and A3-12 were placed. The projection according to the drilled shaft installation plan is 3.5ft minimum. An angle iron on the casing which rested on dunnage was measured to be 3'2". Due to the nature of the excavation, 3.5 ft projection from grade was not attained. 42" is required if the crew members are not tied off. This is a safety issue. Reference the attached photos.		5/21/2019 3:18:10 PM -06:00	Audit Comment	Acknowledged and the safety concern was addressed immediately.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/15/2019 5:20:40 PM - 06:00	Excavation has been protected to prevent material or persons from falling into the hole.		Temporary casing installed to minimum height above existing surface to protect and prevent material or persons from falling in. Should casing need to be lowered any, person was properly tied off.	Conformance	3/14/2019 1:15:24 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	Excavation has been protected to prevent material or persons from falling into the hole.		The casing was left out of the ground 4 ft to ensure no one would fall in.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb, of correct diameter, and excavated material has been compared to geotechnical data to ensure adequate bearing material was reached.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb, of correct diameter, and the excavated material was compared with geotechnical information to ensure adequate bearing material was reached.	Conformance	4/3/2020 4:44:22 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft has not exceeded the percentage tolerances in regards to location and plumbness of shaft.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		The contractor continuously checked the plumbness and diameter of the shaft, and compared the excavated material to the geological information from the bore logs.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		The contractor checked the depth of the excavation and the minimum embedment was obtained and documented. The contractor overdrilled this particular shaft by three feet.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft noted to have been drilled 3.08' deeper into bedrock, and reinforcing cage length was built to a length that would ensure minimum embedment was met, as well as top of caisson elevation is within the allowable tolerances.		5/22/2019 5:10:36 PM -06:00	Audit Comment	As-built information (shafts and rebar cage) are tracked and NCRs assigned if outside of tolerances.	Closed
Central 70	C 0704-241	Deep Foundations	Structures		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation, and minimum embedment was obtained and documented.	Conformance	4/3/2020 4:44:22 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft drilled to proper elevation, and minimum embedment was obtained and documented.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/15/2019 5:20:40 PM - 06:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Grout column drilled to proper elevation and documented that minimum tip elevation was achieved per the Safety Critical Grout Column Installation Plan.	Conformance	3/14/2019 1:15:24 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilling, placing the cage and placement of concrete/removal of slurry occur on the same day from my observations. In the rare case, a shaft is not complete by the end of the shift, the slurry is used to maintain sidewall stability.	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shafts P2-70 and P2-72 were left open overnight. The casing was the entire soil depth minimizing sidewall instability. The rock socket was exposed.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shaft operations did not remain open overnight, as 302-W1-C012 shaft was placed in one continuous operation from start to finish.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		The shaft was left overnight but was cased for the full depth of the excavation.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	All casing (including splices) shall be watertight and clean prior to placement in the excavation.		I checked the casing and it was clean and watertight prior to placement.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		The casing was smooth wall structural steel.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		The temporary casing was smooth wall structural steel.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		All casing placed today was smooth walled structural steel.	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/15/2019 5:20:40 PM - 06:00	All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		All temporary casing is smooth wall structural steel as called for in installation plan.	Conformance	3/14/2019 1:15:24 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		The temporary casing was installed and removed without deformation	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		The casing was installed and removed without deformation.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	Temporary casing shall be completely removed, unless otherwise shown on the Plans or approved by the Engineer. As the temporary casing is withdrawn, sufficient head of fluid concrete must be maintained to ensure that water or slurry outside the temporary casing will not breach the column of freshly placed concrete. Casing extraction shall be at a slow, uniform rate with the pull in line with the shaft axis. Excessive rotation of the casing shall be avoided to limit deformation of the reinforcing steel cage.		All of the temporary casing was removed and there was sufficient head of concrete.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/15/2019 5:20:40 PM - 06:00	Temporary casing shall be completely removed, unless otherwise shown on the Plans or approved by the Engineer. As the temporary casing is withdrawn, sufficient head of fluid concrete must be maintained to ensure that water or slurry outside the temporary casing will not breach the column of freshly placed concrete. Casing extraction shall be at a slow, uniform rate with the pull in line with the shaft axis. Excessive rotation of the casing shall be avoided to limit deformation of the reinforcing steel cage.		Temporary Casing removed in a slow vertical manner, while ensuring concrete head is sufficient upon complete removal of casing.	Conformance	3/14/2019 1:15:24 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	Temporary casing shall be completely removed, unless otherwise shown on the Plans or approved by the Engineer. As the temporary casing is withdrawn, sufficient head of fluid concrete must be maintained to ensure that water or slurry outside the temporary casing will not breach the column of freshly placed concrete. Casing extraction shall be at a slow, uniform rate with the pull in line with the shaft axis. Excessive rotation of the casing shall be avoided to limit deformation of the reinforcing steel cage.		The temporary casing was removed at the end of the shift from the previous day's placement for drilled shafts A3-13 and A3-15.	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Temporary casing shall be completely removed, unless otherwise shown on the Plans or approved by the Engineer. As the temporary casing is withdrawn, sufficient head of fluid concrete must be maintained to ensure that water or slurry outside the temporary casing will not breach the column of freshly placed concrete. Casing extraction shall be at a slow, uniform rate with the pull in line with the shaft axis. Excessive rotation of the casing shall be avoided to limit deformation of the reinforcing steel cage.		The temporary casing was removed in the correct manner.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Prior to concrete placement the CSL tubes have been filled with water and the watertight caps have been installed.		The CSL tubes were filled with water and the watertight caps were installed.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	Prior to concrete placement the CSL tubes have been filled with water and the watertight caps have been installed.		Neither CSL Testing or TIP Testing was performed on Shaft 312-W1-C012. Please provide plan for performing testing of shaft(s) moving forward with wall caissons.	Minimum testing frequency regarding CSL or TIP testing for wall shafts is being met.	5/22/2019 5:05:44 PM -06:00	Audit Comment	CSL testing of wall caissons has been changed from 1 per bent to 10%. We are now meeting that criteria	Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		Bottom of shaft was cleaned with a clean-out bucket and sounded at multiple locations at base of shaft to ensure base of excavation was not covered with more than 3" of loose sediment, and that a solid base has been reached.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		The drilled shaft excavation was dry, and the base of the excavation was clean with less than 1.5 inches of sediment or loose/disturbed material.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was tied such that it meets all the requirements stated with 100% tie at all intersections, double tied at intersections for at least 4 vertical bars, free from all loose bars and rigidly braced to retain its configuration and suspended off of the bottom of the hole.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		Reinforcing cage was inspected prior to placement in shaft to ensure 100% tied, and all bars were in placed as shown for 48" caisson shop drawings.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		Reinforcing cage was tied 100% at all intersections, and supported during placement to maintain configuration. Reinforcement was inspected and approved by IQC.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM -06:00	The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		From visual inspection, all intersections were tied and double ties where 4 bars converged. The rigging and hoisting procedure was appropriate for maintaining the cages configuration.	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM -07:00	The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The cage was 100% tied.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM -06:00	Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Reinforcing cage did not require any splicing as planned.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM -06:00	The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		Bottom of reinforcing cage is supported by bar boots to allow for proper concrete cover at the tip of cage, and securely staying in position throughout the entirety of concrete placement operations.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Adequate number of spacer devices were installed on the shaft cage to ensure concrete cover spacing is achieved uniformly throughout the entire shaft.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Concrete spacers were installed prior to placement of reinforcement cage in excavation. Proper installation intervals were met vertically on the cage.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		The shaft spacers were installed at the correct locations but were split in half and wired to the reinforcing steel cage. These were not installed per the manufacturer's directions and this was also not noted on the IQC inspection checklist	502 was closed.	3/27/2019 11:54:56 AM -06:00	NC-2	NCR 0502 was written to address this issue. The NCR was closed on 3/26/19.	Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		Appropriate boots and 4" spacers at 10 foot intervals were placed on the cages as the cage was placed in the hole.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	Concrete spacers or other non corrosive spacing devices shall be installed to provide uniform spacing for the entire cage which do not exceed 10' intervals vertically and a minimum of 4 spacers or 1 per 1' of shaft diameter horizontally.		The spacers were placed at 10ft intervals. The drilled shaft is 42" in diameter. 4 spacers were found. Reference the attached photos.	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	Minimum concrete cover is compliant with values shown in the table of Section 503.18		The 4 spacers had a 4" radius. The clear cover meets the minimum requirements in Table under Section 503.18	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	Minimum concrete cover is compliant with values shown in the table of Section 503.18		The appropriate concrete cover was maintained during placement by the boots and drilled shaft spacers.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Minimum concrete cover is compliant with values shown in the table of Section 503.18		The concrete cover at the bottom of the shaft was not met as the reinforcing steel cage settled 3.5 inches and the vertical bars had no rebar boots on them.	This has been documented in the field.	3/27/2019 11:55:11 AM -06:00	Audit Comment	Aldridge to install boots going forward in addition to supporting the rebar cage from the top.	Closed
Central 70	C 0704-241	Deep Foundations	Structures		Minimum concrete cover is compliant with values shown in the table of Section 503.18		Minimum concrete cover is compliant.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	Minimum concrete cover is compliant with values shown in the table of Section 503.18		Minimum concrete cover has been achieved through the use of bar boots and cage centralizers.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	For any portion of the caisson socketed in fine grained bedrock susceptible to slaking and degradation such as, but not limited to, claystone, siltstone, or shale and provided the proper slurry properties have been achieved. If the concrete is not placed within four hours of drilling, the Contractor shall drill into the bedrock an additional 1/3 of the plan specified rock socket prior to placing the concrete		Concrete placement proceeded within 4 hours of completion of excavation for the drilled shaft.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed

Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	For any portion of the caisson socketed in fine grained bedrock susceptible to slaking and degradation such as, but not limited to, claystone, siltstone, or shale and provided the proper slurry properties have been achieved. If the concrete is not placed within four hours of drilling, the Contractor shall drill into the bedrock an additional 1/3 of the plan specified rock socket prior to placing the concrete		Concrete was placed within the four hour window after drilling was completed.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The steel reinforcing cage has been placed immediately prior to placing concrete.		I observed as the steel reinforcing cage was placed immediately prior to concrete placement.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	The steel reinforcing cage has been placed immediately prior to placing concrete.		Post shaft clean-out, the steel reinforcing cage was placed immediately prior to pumping of concrete with the use of tremie.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The steel reinforcing cage has been placed immediately prior to placing concrete.		Steel reinforcing cage was placed immediately prior to concrete placement.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	The steel reinforcing cage has been placed immediately prior to placing concrete.		The cage was placed immediately before the concrete placement.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	The steel reinforcing cage has been placed immediately prior to placing concrete.		The cage was placed prior to the concrete delivery	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	CSL have been installed at each drilled shaft. The installed tubes have a minimum cover of 3 inches and extend from 1/2 foot above the caisson bottoms to at least 3-feet above the caisson top.		The CSL tubes were installed correctly in the drilled shaft cages with a minimum cover of 3 inches and extending 6 inches above the caisson bottom and 3 feet above the caisson top.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The greater of a minimum of four (4) CSL tubes or one (1) CSL tube per linear foot of the drilled caisson diameter, whichever ever maximum number of CSL tubes controls, shall be installed in each drilled caisson, equally spaced around the perimeter of the caisson at 90 degrees.		There were 7 CSL tubes installed in the caisson, which has a 6'-6" diameter.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	CSL testing has been performed after minimum 48hrs after concrete placement, and must be completed within 20 calendar days.		The CSL test was performed 120+ hours after concrete placement as the shaft was poured on 12/05/18 and the CSL test was performed on 12/10/18.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The access tubes shall have a round, regular inside diameter free of defects and obstructions, including all pipe joints, in order to permit the free, unobstructed passage of 1.35 inch maximum diameter source and receiver probes used for the CSL tests.		The CSL access tubes meet all the requirements stated and I observed the CSL test being performed and there was free and unobstructed passage of the source and receiver probes.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	The access tubes shall be schedule 40 steel, watertight, free from corrosion, and with clean internal and external faces to ensure good bond between the concrete and the access tubes. The access tubes shall be fitted with watertight shoe on the bottom and removable cap on the top		The CSL access tubes meet all the requirements stated.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		The concrete used is an approved class BZ mix.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete used was a class BZ mix that was approved by IQC for the project.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Concrete Class BZ SCC Mix is being utilized (20-26" Spread), and was approved by the Department prior to use. Truck #2 Spread Test was documented in PC Report as a 27.5" spread, however, IQC has determined this to be a typo, and was tested to be a 22.5" spread. Please ensure documentation and reporting of testing is complete and accurate to ensure all requirements and tolerances are within conformance of the PA.	BZ Concrete with slump of 6-9" is now being utilized consistently, in place of BZ SCC Mix.	5/22/2019 5:06:59 PM -06:00	Audit Comment	Testing of spread vs slump was in discussion at the beginning of the wall shafts. At the request of CDOT, BZ concrete is now consistently using slump.	Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		A slump of 8.5" was recorded for the first load delivered for drilled shaft A3-10.	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		BZ concrete was used and the test results provided it to be within specification. Please reference the attached photo.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	For underwater placement is the contractor meeting the criteria & methods of 503.19.		The shafts were left open for 24 hours after the shaft was drilled without slurry. From visual inspection the drilled shaft had no visible cave-ins and the bottom of the hole was checked prior to the concrete placement. The concrete was placed by the tremie method. During my observation, approximately 3ft of water was pumped off the top of the concrete. A combination of the wet and dry drilled shaft method was used. Please add a dry placement method to the Aldridge Drilled Shaft Installation Plan (Submittal #: C70-Ald Elec-BRG-PRC-000002) to properly ensure this sequence is encapsulated.	Acknowledged	11/13/2019 7:27:30 AM -07:00	Audit Comment	KIC will get with KFC and Aldridge about the drilled shaft installation plan additions	Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Polymer slurry was utilized for the drilled shaft operation, and concrete placement was completed with the use of a tremie and concrete pump truck.	Conformance	1/31/2019 8:28:17 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls	6/4/2019 9:11:30 AM - 06:00	During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		Drilled shaft concrete placement did not result in upward or downward displacement exceeding the allowable tolerances. According to PC & IQC, concrete was placed approximately 4-5" higher than planned top of casing to account for concrete settling during curing process.		5/22/2019 5:09:52 PM -06:00	Audit Comment	correct. The drilled shaft concrete has been shown to settle 2-4 inches. This is taken into account during concrete placement.	Closed
Central 70	C 0704-241	Deep Foundations	Structures		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		Drilled shaft reinforcement steel did not exceed upward or downward displacement outside requirement range, as per specifications.	Conformance	4/3/2020 4:43:45 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	12/13/2018 4:26:33 PM - 07:00	During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		The drilled shaft reinforcing displacement was 3.5 inches down and therefore was in tolerance.	Conformance	12/11/2018 11:40:03 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover	11/10/2019 7:01:47 PM - 07:00	During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		No displacement of the cage was witnessed during my observation.	Conformance	11/8/2019 9:40:37 AM -07:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls	3/29/2019 12:21:09 PM - 06:00	During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		This was continuously monitored throughout the placement. No displacement of the cage was observed.	Conformance	3/28/2019 4:07:56 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All column reinforcing steel and its epoxy coating was protected from damage at all times, as well as dirt and other foreign debris.	Conformance	4/4/2020 3:59:53 PM -06:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		protected per plan	Conformance	3/1/2019 9:09:41 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Reinforcement has been inspected and approved by before concrete placement by IQC.		installed per plan	Conformance	3/1/2019 9:09:41 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcement has been inspected and approved by IQC prior to concrete placement.	Conformance	4/4/2020 3:59:54 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcement has been inspected and approved by IQC.	Conformance	4/4/2020 3:59:17 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		Ray Lara and Jason Myrvold checked the reinforcing steel the day of the night concrete pour.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcing steel was inspected and approved by IQC before concrete placement.	Conformance	7/16/2019 7:25:53 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Reinforcement has been inspected and approved by before concrete placement by IQC.		The pre-pour inspection was conducted with all the appropriate parties in attendance. It was conducted at 4:30 pm on Tuesday, August 20th the afternoon before the placement.	Conformance	8/21/2019 1:02:39 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Reinforcement has been inspected and approved by before concrete placement by IQC.		IQC performed reinforcement and clearance inspection prior to any concrete placement.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Reinforcement has been inspected and approved by before concrete placement by IQC.		A series of cages were inspected and tagged on Monday by IQC (Ground). The cages that were going to be installed that day were checked again before placement.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		The reinforcing steel was checked and approved by Ray Lara and Jason Myrvold.	Conformance	4/3/2019 7:01:24 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		I walked the deck infill area before placement and all reinforcement had a minimum clear cover of 2 inches.	Conformance	4/3/2019 7:01:24 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		The required spacers were 4" in diameter. 4 spacers were placed at an equal distance around the shaft and every 10ft. The spacers maintain the appropriate clear cover according to the Cover Abutment #3 42" Caisson Shop Drawings Cross Section B.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Minimum clear cover of 2", except where noted otherwise, was achieved.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All of the clear cover was in accordance with the plans.	Conformance	8/21/2019 1:02:39 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement had clear cover of a minimum of 2 inches.	Conformance	7/16/2019 7:25:54 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		I walked the deck infill area and the concrete cover met or exceeded the specification.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement has required clear cover per plans.	Conformance	4/4/2020 3:59:17 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All column reinforcement has clear cover as shown on approved plans.	Conformance	4/4/2020 3:59:54 PM -06:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		spacing per plan	Conformance	3/1/2019 9:09:41 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Partially embedded bars are not field bent unless shown on the plans and are bent cold.		Partially embedded bars were not field bent.	Conformance	4/4/2020 3:59:17 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Partially embedded bars are not field bent unless shown on the plans and are bent cold.		No embedded bars were field bent.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Partially embedded bars are not field bent unless shown on the plans and are bent cold.		No field bent bars were required in this placement.	Conformance	8/21/2019 1:02:39 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Partially embedded bars are not field bent unless shown on the plans and are bent cold.		No bent rebar was required for this drilled shaft.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Partially embedded bars are not field bent unless shown on the plans and are bent cold.		All embedded bars were placed according to project documents and were not bent using heat.	Conformance	4/3/2019 7:01:24 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed bars matched the grade, size, number of bars, location and spacing as required by the plans.	Conformance	4/3/2019 7:01:24 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Drilled Shafts A3-32 & A3-52 were in compliance with the RP-C1 Cover ABUT 3 CAISSON shop drawings.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed reinforcing bars match the size type, number, location, and spacing required per the plans.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		All bars that were installed matched the plans and shops drawings.	Conformance	8/21/2019 1:02:39 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		I inspected the reinforcing steel and found that all installed bars matched the grade, size, type, number of bars, location and spacing as required on the plans.	Conformance	7/16/2019 7:25:54 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed bars match the grade, size type, number of bars, location, and spacing as required on plans.	Conformance	4/4/2020 3:59:17 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The rebar installation matched the plans in bar numbers and sizes, spacing and location.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed bars match the grade, size type, number of bars, locations and spacing required per the approved plans.	Conformance	4/4/2020 3:59:54 PM -06:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		material per plan	Conformance	3/1/2019 9:09:41 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		Epoxy coated reinforcing steel utilized for pier columns as they will be exposed to splash from adjacent roadway.	Conformance	4/4/2020 3:59:54 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The placement occurred at Abutment 3 between Clayton and Columbine between drilled shafts A3-16 and A3-22. The abutment would be outside the splash zone.	Conformance	8/21/2019 1:02:39 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		Epoxy coated reinforcement utilized where future roadway barrier is to be in place.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The drilled shafts for the Cover will be behind precast wall panels. The drilled shafts will be not be exposed to roadway splash.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Lap Splices are in conformance with plans (RP-C1 Cover ABUT 3 CAISSON shop drawings). Minimum lap splice is 7'10". The measured splice was 8'2". Reference photos.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All reinforcing steel splices were as shown on the plans.	Conformance	4/3/2019 7:01:24 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices conform to the spacing requirements defined in the plans, as well as within the CDOT Specification Section 602.06.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All splices were in compliance with the plans and specifications.	Conformance	8/21/2019 1:02:39 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All splices were at plan locations.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are at locations shown on plans.	Conformance	4/4/2020 3:59:17 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		I found no splices that were not in the correct location.	Conformance	7/16/2019 7:25:54 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		All splices in the structure were in the plan location.	Conformance	7/16/2019 7:25:54 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		Splices in adjacent lines of reinforcing have been staggered, and spaced at the length required for a lapped splice in the bar.	Conformance	4/4/2020 3:59:17 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		Splices in adjacent bars are staggered and spaced at required length.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		Each lap splice for the bundled bars on the retained fill side of the shaft were alternating. The rebar cage for drilled shafts A3-32 and A3-52 were inspected.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Reinforcing bars No. 14 and No. 18 shall not be spliced by lapping, but shall be joined by butt welding...		No reinforcing steel is larger than #11 bar.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Reinforcing bars No. 14 and No. 18 shall not be spliced by lapping, but shall be joined by butt welding...		No #14 or #18 bars were used in this concrete placement.	Conformance	8/21/2019 1:02:39 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For epoxy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		The chairs in contact with the forms were epoxy coated.	Conformance	8/21/2019 1:02:39 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For epoxy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		4 plastic spacers were placed at an equal distance around the shaft diameter and every 10ft. Plastic boots were used to keep the appropriate tolerances at the bottom of the cage.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For expoy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		All reinforcing steel bar supports met the requirements of the plans and specifications.	Conformanc e	4/3/2019 7:01:24 AM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For expoy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		Precast mortar blocks utilized to support the bottom of cage. The chairs that were in contact with formwork conformed to the requirements of CRSI Class 1 or 2.	Conformanc e	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For expoy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		Rebar supports are precast concrete blocks per specifications for footing bars or slabs on grade.	Conformanc e	4/4/2020 3:59:17 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For expoy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		Epoxy coated chairs utilized to maintain concrete clear cover between forms and epoxy coated reinforcing steel.	Conformance	4/4/2020 3:59:54 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For expoy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		Precast concrete blocking was used in the slab on grade.	Conformance	7/16/2019 7:25:54 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For expoy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		Rebar supports were of the required size and type.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For expoy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		supports per plan	Conformanc e	3/1/2019 9:09:41 AM -07:00	C		Closed
Central 70	C 0704-241	Substructu re	Structures		Embedded bars are adequately supported to eliminate field damage and displacement.		Embedded epoxy coated reinforcing (dowels) was adequately supported to eliminate field damage or displacement.	Conformanc e	4/4/2020 3:59:17 PM -06:00	C		Closed
Central 70	C 0704-241	Substructu re	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		The projection steel/embedded bars are integral to the cage. The cage was monitored throughout the placement to ensure no displacement has occurred.	Conformanc e	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		There were no embedded bars in this placement. The steel post tensioning duct was supported appropriately to eliminate displacement.	Conformanc e	8/21/2019 1:02:39 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcing steel was tied appropriately.	Conformanc e	8/21/2019 1:02:39 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		From visual inspection, all intersections were tied appropriately.	Conformance	4/10/2019 8:43:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcing bar intersections were tied according to CDOT Standard Specifications Section 602.	Conformance	4/3/2019 7:01:24 AM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Reinforcement tied at all intersections, however, where the spacing was less than 1 foot, the intersections tied were alternated.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Reinforcement was tied at all intersections, except those areas where spacing was less than 1' in each direction. In this case, alternate intersections were tied.	Conformance	4/4/2020 3:59:17 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The reinforcing steel was tied at the required intersections according to the specifications.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied. Central 70	C 0704-241	Lighting	Electrical	12/10/2018 12:06:00 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Temporary Light Readings for Illuminance were taken and reported to fall below the required average per Table 2-15 of the PA. Per the work plan and what has been installed in the field, it was observed that some of the missing barrier mounted lights, and low illuminance emitted may be due to the construction entrance installed on the East Side of the Sand Creek Bridge of mainline (I-70 EB at Quebec On-Ramp). Temporary Lighting illuminance should be addressed at all locations to ensure that all lanes of mainline & temporary detours are thoroughly lit to comply with the PA.	Was Tracked by NCR 515 and completed. Lighting complies with PA where previous non-conformance was found.	2/5/2019 10:53:51 AM -07:00	NC-2		Closed
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	12/4/2018 4:49:33 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Havana WB On Ramp: Both message boards were not turned on to guide drivers during the closure as called out on the detour plans.	NCR generated	12/19/2018 7:50:30 AM -07:00	NC-2	NCR 481 was opened.	Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	12/4/2018 4:49:33 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Central Park WB Off Ramp: Both Message board were not turned on providing drivers with the detour route & the Detour Ahead sign was not moved out so it was visible to drivers. It was left behind barrier wall over 48' away from traffic.	NCR generated	12/19/2018 7:50:12 AM -07:00	NC-2	NCR 481 was opened.	Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	12/4/2018 4:50:19 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The removal and relocation of the Overhead signs for EB I-70 Havana Off Ramp and the EB I-70 Exit to I-225 do not match the plans & CDOT Specification. The signs were not covered with aluminum matching the sign backing and location [1] the sign in place does not match the plans. A	Item corrected in the field	12/19/2018 7:47:15 AM -07:00	NC-2	NCR 482 was opened.	Closed

Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	12/4/2018 4:51:06 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The existing signage warning drivers of the merge condition occurring on the EB I-70 On Ramp from Quebec was not adjusted when the ramp was re-stripped for the current traffic switch. The sign is currently installed after the new merge point. Per the MOT plans existing conflicting signage should be relocated. The Department has identified that the MOT plans are lacking in showing the relocation of exiting signage and crews in the field are overlooking relocation's of existing signs. The decision of relocating existing signage should be made by the design engineer and shall be shown on the RFC plans.	NCR progressing	12/19/2018 7:46:37 AM -07:00	NC-2	NCR 479 was opened.	Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	12/10/2018 12:04:52 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		WB I-70 "Exit 280; Havana Street 1/2 Mile; Exit Only": Was placed on a temporary sign support but does not match the RFC plans. The Exit Only portion of the sign was covered with a sheet of plywood instead of being changed to match the plans. Attached is the plan sheet.	NCR was opened and is progressing	12/19/2018 7:32:05 AM -07:00	NC-2	NCR 486 was opened.	Closed

Central 70	C 0704-241	Temp Barrier	Maintenance of Traffic (MOT)	6/18/2020 9:58:32 AM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		It was noted that barrier wall installed onsite did not have 3' of space for barrier wall deflection next to a significant drop off. KIC performed anchoring of the wall that night which was greatly appreciated by the Department. Although the anchoring installed by the crews did not match the KIE design (Hilti Kwik Bolt & location). The question was also raised if the design for anchoring covered anchoring barrier wall into asphalt vs. concrete. IQC was made aware of this issue and is chasing it out. This audit is to document the conversation & QCAT findings.		7/1/2020 12:53:50 PM -06:00	Audit Comment	This issue was resolved immediately following the identification by the Quality team.	Closed

Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Underground utility conflicts located and/or potholed and resolved.		A pothole truck was on the job site the first half of the weekend to help locate tie ins to existing drainage pipes.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM - 06:00	Underground utility conflicts located and/or potholed and resolved.		Clay utility conduits and 24" RCP was found in the excavation. Both were abandoned before removal.	Conformance	3/25/2019 4:00:58 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Underground utility conflicts located and/or potholed and resolved.		Conflicts have been identified, but scheduling has not resolved those issues yet.	Conformance	1/15/2020 1:47:43 PM -07:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Underground utility conflicts located and/or potholed and resolved.		per plan	Conformance	3/1/2019 9:09:41 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	12/3/2018 12:23:40 PM - 07:00	Underground utility conflicts located and/or potholed and resolved.		All underground utilities were properly located and identified.	Conformance	11/15/2018 8:06:14 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	12/3/2018 12:23:40 PM - 07:00	Trench bed has been properly graded and compacted		Witnessed trench bed properly graded and compacted.	Conformance	11/15/2018 8:06:14 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Trench bed has been properly graded and compacted		Requirement met	Conformance	12/18/2018 2:21:16 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Trench bed has been properly graded and compacted		Bedding used is Class 1 Backfill	Conformance	1/15/2020 1:47:10 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Trench bed has been properly graded and compacted		Trench bottom, subgrade, has been properly graded and compacted. Compaction testing was performed to ensure suitable prior to placement of CBC bedding.	Conformance	4/12/2019 1:08:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM - 06:00	Trench bed has been properly graded and compacted		The crew used an aluminum level to screed the grade to ensure the proper slope. A plate compactor was used before placing the next section of the box culvert.	Conformance	3/25/2019 4:00:58 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Trench bed has been properly graded and compacted		The trench excavation was deep enough to meet the required depth of bedding beneath the pipe. #67 Stone was used for backfill and does not require compaction.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Trench bed has been properly graded and compacted		Trench bed was properly graded and compacted.	Conformance	12/4/2019 6:21:51 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Rock encountered during trenching has been removed to 12" below grade.		Rock was not encountered during the excavation.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Alignment and elevation of trench matches the plans and specifications		The elevation was appropriate to make the required tie ins to the slot drain.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM - 06:00	Alignment and elevation of trench matches the plans and specifications		A pipe laser was used throughout the day. The proper safety measures should be taken at the end of the day to retrieve this equipment. The culvert was closed up for the shift. An individual went down the manhole into the confined space without communicating his intentions. Proper communication would have been key.		5/10/2019 7:55:53 AM -06:00	Audit Comment	Understood and agree. The JHA reflects confined space and entry/exit of the culverts/pipe.	Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Alignment and elevation of trench matches the plans and specifications		Alignment of the CBC, as well as elevation, complies with the plans and tolerances within the specifications.	Conformance	4/12/2019 1:08:57 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Alignment and elevation of trench matches the plans and specifications		Alignment per plan	Conformance	1/15/2020 1:47:10 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		Trench width is a minimum of 1'-6" from each outside face to ensure proper compaction may be achieved in successive lifts. The trench bottom conforms to the minimum depth of 3" in soil, as called for within the M&S Standards.	Conformance	4/12/2019 1:08:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		Excavation per spec	Conformance	1/15/2020 1:47:10 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		Requirement met	Conformance	12/18/2018 2:21:16 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM -06:00	Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		The trench width and depth were adequate for the precast element.	Conformance	3/25/2019 4:00:58 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		The trench width was 7ft wide for an 18" RCP element. Reference photos	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check the type and depth of bedding for conformance with M&S Standards.		The bedding/fill around the pipe was a #67 stone. This material was agreed upon by the appropriate parties before the weekend work began. The depth was in conformance of the M&S standards (M-206-1).	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM - 06:00	Check the type and depth of bedding for conformance with M&S Standards.		The depth of bedding does not conform to the M&S Standards. Two different measurements were taken. They were found to be 4.75" & 5.5" inches respectively. Reference photos for measurements and locations.	849 was created	4/2/2019 12:45:41 PM -06:00	NC-2	This will be resolved in NCR 0849.	Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/25/2019 1:52:23 PM - 06:00	Check the type and depth of bedding for conformance with M&S Standards.		Bedding does not meet CDOT standards in material and does not meet CCD standards for depth. Please see attached pictures. This is for the 3rd section of CBC from west going east.	849 created	5/14/2019 7:27:05 AM -06:00	NC-2	NCR-0849 has been written to track this issue.	Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check the type and depth of bedding for conformance with M&S Standards.		Class 1 (3" below pipe to 1' above)	Conformance	12/18/2018 2:21:16 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check the type and depth of bedding for conformance with M&S Standards.		Conformance	Conformance	2/4/2019 8:55:24 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	12/3/2018 12:23:40 PM - 07:00	Check the type and depth of bedding for conformance with M&S Standards.		Bedding material and depth of bedding were in conformance.	Conformance	11/15/2018 8:06:14 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Check the type and depth of bedding for conformance with M&S Standards.		The Developer and Department discussed and agreed upon a minimum of 6" of Class 6 Bedding material to be placed, as well as 0.5" +/- of Class 1 material for ease of constructability (i.e. leveling, setting, and placement of CBC).	Conformance	4/12/2019 1:08:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		When conduits are to be installed in new embankments, the embankment shall first be constructed to the required height of at least 0.3 times the outside diameter or raise of the conduit, and for a distance each side of the conduit location of at least 5 times the diameter or span of the conduit, after which the trench shall be excavated and the conduit installed.		The pipe was installed in the existing in-situ roadway embankment.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe matches the class, size and type shown on the plans.		The pipe was an 18" RCP which is conformance with the plans.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	4/19/2019 8:26:39 AM - 06:00	Pipe matches the class, size and type shown on the plans.		Material used for slotted trench drain pipe was observed to be in conformance of submitted material, and of the type and size shown on the plans.	Conformance	4/18/2019 3:42:11 PM -06:00	C		Closed

Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Pipe placement begun at downstream end?		CBC Installation began at the downstream end and proceeded upstream.	Conformance	4/12/2019 1:08:57 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Conformance	Conformance	2/4/2019 8:55:24 AM -07:00	C		Closed
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	4/19/2019 8:26:39 AM -06:00	Pipe placement begun at downstream end?		12" Slotted Drainage Pipe (Trench Drain) was observed to be placed beginning at the downstream end.	Conformance	4/18/2019 3:42:11 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		The pipe placement started at the downstream end.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	12/4/2019 6:21:51 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Class 1 material was placed up to springline of pipe.	Conformance	12/4/2019 6:21:51 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		All pipe placed was in contact with bedding material at the proper flow line.	Conformance	8/8/2019 2:28:45 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		From visual inspection, the entire length of each pipe was in contact with the bedding.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM -06:00	Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		By using an aluminum level as a screed and a plate compactor. The crew was able to ensure full contact between bedding and box.	Conformance	3/25/2019 4:00:58 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Conformance	Conformance	2/4/2019 8:55:24 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Requirement met	Conformance	12/18/2018 2:21:16 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	12/3/2018 12:23:40 PM -07:00	Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Witnessed box culvert structures being properly placed and flow lines checked.	Conformance	11/15/2018 8:06:14 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Pipe rests in contact with bedding	Conformance	1/15/2020 1:47:10 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Pipe bedding material properly graded to ensure entire length of CBC rests in contact with the bedding.	Conformance	4/12/2019 1:08:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		Bell end upstream	Conformance	1/15/2020 1:47:10 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	12/3/2018 12:23:40 PM -07:00	Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		Box culvert structures grooved ends were placed properly.	Conformance	11/15/2018 8:06:14 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		Placed correctly with bell end upstream and the placement started at the downstream end.	Conformance	12/18/2018 2:21:16 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		Conformance	Conformance	2/4/2019 8:55:24 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		The bell end of the pipe was placed upstream.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		Bell of pipe was placed upstream.	Conformance	12/4/2019 6:21:51 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Ensure that all lift holes are properly plugged.		All lifting holes were properly plugged with approved material as specified in Standards and Specifications.	Conformance	4/12/2019 1:08:57 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Damage or displacement to pipe or structure corrected before backfill		Pipe defects and damage corrected prior to placement	Conformance	1/15/2020 1:47:10 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM -06:00	Damage or displacement to pipe or structure corrected before backfill		No damage was witnessed before the placement of each box section.	Conformance	3/25/2019 4:00:58 PM -06:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Sanitary Sewer lines pressure tested for water tightness prior to backfilling		testing performed by CCD and approved	Conformance	3/1/2019 9:09:41 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		backfill per plan	Conformance	3/1/2019 9:09:41 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	12/3/2018 12:23:40 PM -07:00	Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		All backfill material was placed on both sides of box culvert structures simultaneously.	Conformance	11/15/2018 8:06:14 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		Conformance	Conformance	2/4/2019 8:55:24 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		Requirement met	Conformance	12/18/2018 2:21:16 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		Lifts acceptable	Conformance	1/15/2020 1:47:10 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM -06:00	Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		Each side of the culvert was backfilled and compact at the same time. IQC and PC were conducting 12" tests throughout the day. The 6" lift thickness was not enforced. The crew did place 12" paint marks on the culvert to aid in the effort. Reference photos for more information.		5/14/2019 7:30:54 AM -06:00	Audit Comment	IQC and PC verified the marks on the side of the box culvert were 8" loose. PC and IQC test using 8" depths. This process catches 2" of the previous lift.	Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		Backfill material was placed simultaneously on both sides of the pipe in 6" compacted lifts.	Conformance	8/8/2019 2:28:45 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		Each side of the pipe was simultaneously placed.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	4/19/2019 8:26:39 AM - 06:00	Backfill material placed simultaneously on both sides of pipe in layers of 6" or less		Backfill material consisted of concrete placement to top of trench with a slope inwards to slotted drain pipe for flow. Per the Slotted drain plan Model 4-11-19.pdf, concrete backfill was to have been a combination of both Class B/D/P 4500 PSI Mix on bottom of trench & Class E 7150 PSI Mix on the top. Only Class D Standard 4500 PSI Mix was observed to have been used.	Class D concrete utilized for its higher quality, and will perform as needed and planned.	4/29/2019 8:45:08 AM -06:00	Audit Comment	Correct, only D concrete was placed due to known performance of this material and its higher quality.	Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Required compaction obtained prior to placing successive layers		#67 Stone was used as backfill. Compaction cannot be taken on this material.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Required compaction obtained prior to placing successive layers		Compaction was achieved in lifts. PC and/or IQC achieved passing density tests at required intervals.	Conformance	12/4/2019 6:21:51 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Required compaction obtained prior to placing successive layers		Proper compaction was obtained prior to placing successive lifts.	Conformance	8/8/2019 2:28:45 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM - 06:00	Required compaction obtained prior to placing successive layers		IQC and PC staff were using Nuclear gauges to ensure proper compaction was obtained at the required frequency. The moisture content of the material was rather inconsistent. There was a water truck onsite the entire day. So the crew was able to adjust appropriately to get the moisture within the +/- 2.0% of optimum.	Conformance	3/25/2019 4:00:58 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Required compaction obtained prior to placing successive layers		IQC checked the compaction per schedule	Conformance	1/15/2020 1:47:10 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Required compaction obtained prior to placing successive layers		Proper compaction obtained in each layer of backfill prior to the placement of layers on top.	Conformance	4/12/2019 1:08:57 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Required compaction obtained prior to placing successive layers		Class 1 backfill failed first IQC test. The foreman reworked the area and IQC retested the backfill getting a passing test.	Conformance	12/18/2018 2:21:16 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Required compaction obtained prior to placing successive layers		Conformance	Conformance	2/4/2019 8:55:24 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	12/3/2018 12:23:40 PM - 07:00	Required compaction obtained prior to placing successive layers		Proper compaction was obtained on all lifts and density tests performed and passed.	Conformance	11/15/2018 8:06:14 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Required compaction obtained prior to placing successive layers		compaction testing per plan	Conformance	3/1/2019 9:09:41 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		In-place pipe checked for damage prior to backfilling and again before accepting project		All pipe placed was checked prior to backfilling.	Conformance	8/8/2019 2:28:45 PM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM - 06:00	Pipe and structures must be cleaned prior to acceptance		The crew used a broom throughout the operation to clean the nuisance material that made its way into the culvert before the placement of the next section.	Conformance	3/25/2019 4:00:58 PM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	3/26/2019 2:02:41 PM - 06:00	Trenches in roadway resurfaced before opening to traffic		Backfilling the area wrapped up on Sunday afternoon. Dylan Gibbons was onsite to witness this. The cold patch was used to cover the area before it was open to traffic. Proper resurfacing will occur in the coming days once the box culvert is extended past the curb line. Reference the attached photos.	Conformance	3/25/2019 4:00:58 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Trenches in roadway resurfaced before opening to traffic		Filter fabric was placed over the stone then asphalt was used to bring the crossing up to the existing asphalt. These observations were completed during the day shift. The pipe placement was not complete by the end of the night shift.	Conformance	4/15/2019 9:26:18 AM -06:00	C		Closed

Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Visually check staking for obvious irregularities (e.g., off right of way).		Conformance	Conformance	4/12/2019 1:11:33 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Visually check staking for obvious irregularities (e.g., off right of way).		Staking was checked.	Conformance	8/8/2019 2:29:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	6/5/2019 4:34:39 PM - 06:00	Visually check staking for obvious irregularities (e.g., off right of way).		The stakes were visually checked in relation to Columbine St. Reference the comment #9 below.	Conformance	6/4/2019 11:17:03 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	1/16/2020 7:25:13 AM - 07:00	Visually check staking for obvious irregularities (e.g., off right of way).		No issues	Conformance	1/15/2020 2:05:08 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	1/16/2020 7:25:13 AM - 07:00	Observe the area for unsuitable material and wet spots.		No issues	Conformance	1/15/2020 2:05:08 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Observe the area for unsuitable material and wet spots.		Area was constructed with suitable material.	Conformance	8/15/2019 1:07:48 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the area for unsuitable material and wet spots.		No unsuitable material or wet spots were observed.	Conformance	8/8/2019 2:29:37 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM - 07:00	Observe the area for unsuitable material and wet spots.		Witnessed no unsuitable material being placed. During Proof Roll wet spots were identified and corrected by the contractor.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade (Old)	Roadway	11/28/2018 12:14:04 PM - 07:00	Observe the area for unsuitable material and wet spots.		3 areas were observed for unsuitable material and wet spots. Material was removed from site.	Conformance	11/27/2018 3:39:45 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the area for unsuitable material and wet spots.		No unsuitable material remained after excavation.	Conformance	5/11/2020 10:42:48 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the area for unsuitable material and wet spots.		No observed excessive wet spots, or unsuitable material, was noted.	Conformance	4/2/2019 12:46:19 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the area for unsuitable material and wet spots.		Area was constructed with suitable and material and no wet spots were visibly noticed.	Conformance	7/17/2019 3:08:34 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify removal or treatment based on the direction given by the Project Engineer.		Top 1' of material is being removed and hauled off per the PA.	Conformance	11/20/2019 8:11:10 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	4/3/2019 3:51:29 PM - 06:00	Be alert to any condition that could indicate a possible slide area		Current excavation method should be monitored, and potentially changed to ensure that a possible slide area is not created. See attachment. Contractor noted the area would be properly sloped as excavation proceeded to planned limits.	Excavation methods will be monitored frequently by PC and IQC.	5/13/2019 6:48:11 AM -06:00	Audit Comment	Acknowledged. Slopes are monitored frequently by PC and IQC.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Be alert to any condition that could indicate a possible slide area		The contractor adjusted the slope on the left side of the 615-W2 slope to meet the 1.25:1 requirement.	Conformance	1/9/2019 1:37:52 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Make certain the Contractor preserves slope stakes and control point references during the operation		Stakes and control points are all still intact.	Conformance	1/9/2019 1:37:52 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	4/3/2019 3:51:29 PM - 06:00	Make certain the Contractor preserves slope stakes and control point references during the operation		Top of slope stakes were preserved as carefully as they could for reference during excavation/embankment operations.	Conformance	4/3/2019 7:50:44 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Make certain the Contractor preserves slope stakes and control point references during the operation		Control points and stakes were preserved.	Conformance	4/2/2020 6:51:51 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Clearing and grubbing was completed.	Conformance	2/27/2020 6:46:32 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Area is being properly cleared, to include removal of asphalt, curb and gutter, sidewalk, etc. as well as the top 1' of material as called out in the PA.	Conformance	11/20/2019 8:11:10 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Area properly cleared and grubbed, to include removal of top 1' of material.	Conformance	4/2/2019 12:46:19 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	4/3/2019 3:51:29 PM - 06:00	Verify that the site has been properly cleared and grubbed		Area was properly cleared and grubbed, to include removal of the top 1' of material as required per the PA.	Conformance	4/3/2019 7:50:44 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Conformance	Conformance	4/12/2019 1:11:33 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Verify that the site has been properly cleared and grubbed		Location, Frontage Road & Northwest of Colorado Blvd., was properly cleared and grubbed (to include the top 1' of material), stockpiled, and hauled off site. Earthwork was performed in the area, and graded to allow for ease of access and for future construction work in the area.	Conformance	3/18/2019 7:34:40 AM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Verify that the site has been properly cleared and grubbed		Site observed to have been properly cleared and grubbed, to include removal of all trees, shrubs, bushes, etc., as well as the top foot of material for all locations West of Colorado Blvd as stated within the PA.	Conformance	4/15/2019 10:37:04 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Area was properly cleared and grubbed	Conformance	7/17/2019 3:08:34 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Verify that the site has been properly cleared and grubbed		All topsoil and grass in the wall excavation was removed.	Conformance	1/9/2019 1:37:52 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Site was properly cleared and grubbed. No signs of organic or foreign material noticed.	Conformance	12/19/2018 3:15:03 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Site was properly cleared and grubbed.	Conformance	8/8/2019 2:29:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM -07:00	Verify that the site has been properly cleared and grubbed		Site was properly cleared and grubbed.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM - 07:00	Observe and report noticeable changes in excavated material with regard to type, texture, and color.		No noticeable changes in material being placed.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Observe and report noticeable changes in excavated material with regard to type, texture, and color.		The soil on site at the excavation appeared very uniform.	Conformance	1/9/2019 1:37:52 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	4/3/2019 3:51:29 PM - 06:00	Observe and report noticeable changes in excavated material with regard to type, texture, and color.		No noticeable changes in excavated material was noted, in regards to type, texture, and color. Where concrete and/or asphalt was found and excavated, a separate stockpile of material was created to be hauled off separately from rest of soils.	Conformance	4/3/2019 7:50:44 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM - 07:00	Approval of embankment material is contingent on the material meeting the Atterberg Limit and gradation requirements specified in the Contract		Please provide location of proctor and test results.	Results have been documented.	11/6/2018 9:15:39 AM -07:00	Audit Comment	PC test results are available in SharePoint quality PC inspection and tests. IQC test results are available in Spectra quest and/or SharePoint in IQC tests for temporary work.	Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Materials that contain organics or that cannot be dried or moisture conditioned, then compacted to the required density shall be disposed of and shall not be reused as embankment fill		The topsoil in the area was removed and I noticed no organics in the material at the wall excavation.	Conformance	1/9/2019 1:37:52 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Materials that contain organics or that cannot be dried or moisture conditioned, then compacted to the required density shall be disposed of and shall not be reused as embankment fill		Conformance	Conformance	4/12/2019 1:11:33 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	4/3/2019 3:51:29 PM -06:00	Observe that rounding along the top of cut slopes is performed where specified.		Top of cut slopes were rounded as planned and specified.	Conformance	4/3/2019 7:50:44 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Watch for damage to the embankment (e.g., unexpected high water with respect to design, improperly drained foundation or roadbed, damage from precipitation).		Due to inlets being higher than subgrade drainage of the area was very minimal and the excavated area was holding water following a precipitation event.	Conformance	4/12/2019 1:11:33 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Watch for damage to the embankment (e.g., unexpected high water with respect to design, improperly drained foundation or roadbed, damage from precipitation).		No damage to embankment was observed after placement.	Conformance	8/8/2019 2:29:37 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Ensure that the Best Management Practices for water quality control are monitored as required		The contractor had installed some BMP's and added additional ones after a site visit from Emily Koenigs.	Conformance	1/9/2019 1:37:52 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	10/30/2018 2:22:05 PM -06:00	Ensure that the Best Management Practices for water quality control are monitored as required		Inlet protections were in placed. However inlets were blocked.	Conformance	10/30/2018 10:31:40 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities	11/6/2018 10:08:09 AM -07:00	Ensure that the Best Management Practices for water quality control are monitored as required		Denver water has been contacted to perform disinfection testing of the water main as a part of the testing requirements, and to ensure best management practices for water quality control (10/30/18).	Conformance	11/6/2018 9:28:52 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Ensure that the Best Management Practices for water quality control are monitored as required		BMPs per plan	Conformance	3/1/2019 9:10:21 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	4/3/2019 3:51:29 PM - 06:00	Ensure that the Best Management Practices for water quality control are monitored as required		Area is being continuously monitored in regards to BMPs in place during excavation operations. This includes street sweeping, watering as dust control, and inlet protection along city streets.	Conformance	4/3/2019 7:50:44 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	4/3/2019 3:51:29 PM - 06:00	Verify that slopes and transition areas are being treated as specified with regard to keying the new material		Per 208 Specifications, all slopes shall be tracked vertically or surface roughened at the end of each shift as a form of slope control. All grading crews should ensure this is being completed prior to end of each shift.	Conformance	4/3/2019 7:50:44 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that slopes and transition areas are being treated as specified with regard to keying the new material		Transition areas were treated properly.	Conformance	5/11/2020 10:42:49 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment material was clean and free of organics.	Conformance	7/17/2019 3:08:34 PM -06:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		fill per plan	Conformance	3/1/2019 9:10:21 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		I observed no organics or frozen materials in the fill material and it was uniformly mixed.	Conformance	12/4/2018 11:42:55 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Wet (Water)	Utilities	11/6/2018 10:08:09 AM - 07:00	Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Backfill consists of imported sand materials from Aggregate Industries around the pipe material, including bedding, and followed by existing material that is moisture conditioned and uniformly mixed. Organic material has not been observed to be removed. Per PC, unsuitable material has been found previously, and replaced to ensure stable and compacted area per the specification.	Conformance	11/6/2018 9:28:52 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	10/30/2018 2:22:05 PM - 06:00	Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Contractor followed CDOT Standard Spec 203.06	Conformance	10/30/2018 10:31:40 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM - 07:00	Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		All embankment material used was free of organic and frozen material and was mixed uniformly.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		All embankment placed was free of organics.	Conformance	12/19/2018 3:15:03 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		All embankment material used was free of organics and frozen material.	Conformance	8/8/2019 2:29:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment material is free of organics.	Conformance	2/27/2020 6:46:32 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		All material being placed has been free of organics and no frozen material has been witnessed.	Conformance	4/4/2019 3:59:51 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Concrete rubble that has been placed is within the allowable dimensions.	Conformance	4/4/2019 3:59:51 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Concrete and asphalt chunks are being removed and disposed off properly. They are being utilized elsewhere where applicable and allowed.	Conformance	11/20/2019 8:11:10 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Asphalt chunks were removed.	Conformance	2/27/2020 6:46:32 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		No rocks or concrete used were larger than the allowable dimensions.	Conformance	8/8/2019 2:29:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	12/13/2018 4:27:27 PM -07:00	Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Concrete chunks placed in the fill exceeded the maximum dimension as identified in 203.03 (greater than 24 inches).	NCR 552 was added.	1/24/2019 2:24:50 PM -07:00	NC-2	This issue is being tracked with NCR 552 on block 6217	Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM -07:00	Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Does not appear that embankment material placed had any signs of rocks, concrete, or asphalt. Material was clean.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	10/30/2018 2:22:05 PM -06:00	Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Material witnessed being used for backfill was free of concrete and asphalt chunks.	Conformance	10/30/2018 10:31:40 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		The material that I observed being placed and compacted had no chunks of any material larger than allowable.	Conformance	12/4/2018 11:42:55 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		The contractor did a good job of placing lifts of material that were in conformance and did not exceed the allowable maximum thickness.	Conformance	12/4/2018 11:42:55 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		fill per plan	Conformance	3/1/2019 9:10:21 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities	11/6/2018 10:08:09 AM -07:00	Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		PC/ IQC failed to provide proper documentation of inspection (lift thicknesses, proper compaction per lift, witnessing of proper compaction/density testing, etc.) for the re-work of the waterline due to the gate elevation issue at Vine Street that was determined by Denver Water inspector and PC. Re-Work Inspection reports/documentation/pictures were requested 11/2/2018 from IQC.	Addressed in NCR 0414.	4/28/2019 9:47:46 AM -06:00	NC-2	Please see NCR-414	Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	10/30/2018 2:22:05 PM -06:00	Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Contractor followed CDOT Standard Spec 203.07 (a).	Conformance	10/30/2018 10:31:40 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM -07:00	Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		All lifts noticed were placed in allowable maximum thickness.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		All embankment material was placed within allowable maximum thickness.	Conformance	8/8/2019 2:29:37 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Lifts appear to have been placed per spec.	Conformance	2/27/2020 6:46:32 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Embankment material has been witnessed being placed in uniform allowable maximum thickness.	Conformance	4/4/2019 3:59:51 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Lift thickness was measured and was 8 inches loose.	Conformance	3/25/2019 4:14:33 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Embankment material shall be classified into one of the material groups listed below, and placed and compacted in accordance with the appropriate methods specified		Class 2 material was used.	Conformance	2/27/2020 6:46:32 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Embankment material shall be classified into one of the material groups listed below, and placed and compacted in accordance with the appropriate methods specified		Embankment material was placed in accordance to the Spec.	Conformance	12/19/2018 3:15:03 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM -07:00	Embankment material shall be classified into one of the material groups listed below, and placed and compacted in accordance with the appropriate methods specified		All lifts noticed were placed in 8" lifts and compacted using a static roller and a plate compactor.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	10/30/2018 2:22:05 PM -06:00	Embankment material shall be classified into one of the material groups listed below, and placed and compacted in accordance with the appropriate methods specified		Embankment material used was in accordance to the Standard Spec 203.07. Placed and compacted according to spec.	Conformance	10/30/2018 10:31:40 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Embankment material shall be classified into one of the material groups listed below, and placed and compacted in accordance with the appropriate methods specified		The embankment material fell within the proper classification and was placed using the appropriate methods specified for that material.	Conformance	12/4/2018 11:42:55 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		I talked several times with the material testers from Vivid and confirmed that the compaction of the material met the requirements for moisture content and density.	Conformance	12/4/2018 11:42:55 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Observe the compaction operation for uniformity with respect to moisture content and target density.		IQC made changes as necessary. final fill per plan	Conformance	3/1/2019 9:10:21 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities	11/6/2018 10:08:09 AM -07:00	Observe the compaction operation for uniformity with respect to moisture content and target density.		See evidence from Item #4. Only one test from IQC technician (GROUND) was able to be supplied when requested for all re-work in this area.	Addressed in NCR 0414.	4/28/2019 9:48:06 AM -06:00	Audit Comment	Please see NCR-414	Closed
Central 70	C 0704-241	Base (Old)	Roadway	12/4/2018 5:01:03 PM -07:00	Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction was achieved for proper moisture content and target density.	Conformance	12/4/2018 11:41:59 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	10/30/2018 2:22:05 PM -06:00	Observe the compaction operation for uniformity with respect to moisture content and target density.		All tests observed had passing moisture and dry density results.	Conformance	10/30/2018 10:31:40 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM -07:00	Observe the compaction operation for uniformity with respect to moisture content and target density.		Observed compaction and density tests. Density tests were failing at first. Contractor then pulled another sample of material being placed. Results came back with a lower Proctor. All tests witnessed there after were all passing. Witnessed IQC testing.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		PC and IQC were on site observing compaction and densities.	Conformance	12/19/2018 3:15:03 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		All compaction observed was done uniformly.	Conformance	8/8/2019 2:29:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction operation was observed. Density tested were performed and passed.	Conformance	7/17/2019 3:08:34 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction occurred per spec. Eastern most section is not yet completed.	Conformance	2/27/2020 6:46:32 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Witnessed several density tests being performed. Failing test areas were corrected and retested with passing results.	Conformance	4/4/2019 3:59:51 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Crews appeared to be following a roller pattern. IQC was onsite during placement and compaction. Embankment material was coming from 5109 (AP-109 location)	Conformance	3/25/2019 4:14:33 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Monitor the operation of specialized compaction equipment for compliance.		Contractor is compacting fill area with heavy sheep's foot roller and is in compliance.	Conformance	4/4/2019 3:59:51 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	11/5/2018 10:31:17 AM -07:00	Monitor the operation of specialized compaction equipment for compliance.		Witnessed specialized tamper being used.	Conformance	11/5/2018 10:18:02 AM -07:00	C		Closed

Central 70	C 0704-241	HMA	Roadway	4/12/2019 2:11:43 PM - 06:00	Weather conditions acceptable for paving? Ambient and surface temperature?		From CDOT Std Spec Table 401-3, the minimum surface and air temperature is 50F degrees for the top lift and 40F for the bottom lift. The ambient air temperature I observed was 39F degrees. The temperature of the grade was 48F degrees.	Adequate documentation provided.	4/17/2019 4:50:27 PM -06:00	Audit Comment		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	5/6/2019 4:44:44 PM - 06:00	Temperature of delivered plant mix meets specifications?		Conformance	Conformance	5/6/2019 12:01:19 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	5/9/2019 5:04:14 PM - 06:00	Temperature of delivered plant mix meets specifications?		The PC and IQC inspector had temperature guns to check the temperature of the mix. It was observed the inspectors made random checks throughout the day.	Conformance	5/7/2019 10:47:21 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	11/16/2018 2:47:54 PM - 07:00	Temperature of delivered plant mix meets specifications?		IQC had a FLIR high temperature gun for taking temperature.	Conformance	11/16/2018 2:15:11 PM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway	7/22/2019 1:46:56 PM - 06:00	Temperature of delivered plant mix meets specifications?		Concrete temperatures fell within the allowable requirements of 50-90 degF.	Conformance	7/21/2019 7:02:26 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Temperature of delivered plant mix meets specifications?		Temperature of delivered plant mix meets the specification tolerances.	Conformance	6/11/2019 10:30:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	11/16/2018 2:47:54 PM - 07:00	The number of trucks on the haul. (Truck types, tandem, trailer, belly dump, or live bottom)		Tandem Trucks were used for the operation. Numbers of trucks on the haul were not accounted for. The tandems seemed to be filled with a one drop method at the plant which increases the chances of segregation.	Acceptable	5/30/2019 9:58:59 AM -06:00	Audit Comment	The number of trucks is not a requirement . The segregation of pavement is a requirement . Segregation is being monitored.	Closed
Central 70	C 0704-241	HMA	Roadway	5/9/2019 5:04:14 PM - 06:00	Differing appearance in subsequent loads may indicate an unacceptable change in mix proportions or temperature. The Project Inspector should notify the Construction Manager if any of the previous conditions occur. 1) Is the appearance of the load seam peaking or flat, dull or shiny, white or blue smoke? 2) Does the mix look segregated or is the aggregate improperly coated with asphalt? 3) The SMA mixture shall be transported and placed on the roadway without drain-down or flushing		A truck was rejected by the visual inspection of PC inspector. He observed it was too course. All of the rejected mix in the hopper was removed. Please reference the attached photos.	Conformance	5/7/2019 10:47:21 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	5/9/2019 5:04:14 PM - 06:00	Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		Any excess amount of mix that fell onto the roadway was removed with a skidster.	Conformance	5/7/2019 10:47:21 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	5/14/2019 8:56:43 AM - 06:00	Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		Some mix was dumped on the roadway. The operation was stopped to remove a considerable amount of mix off the roadway before preceding.	Conformance	5/14/2019 7:56:08 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		Two Haul Trucks, back to back, when delivering their load to charge the hopper pulled forward ahead of the paver and their load was dumped onto the surface in front of the paver. This material was then picked up with the use of skidsteer and placed back into the hopper of the paver resulting in segregated material. Remaining material was worked into the subgrade and paved over.	NCR 1173 Created.	6/25/2019 1:14:44 PM -06:00	NC-2	This issue will be resolved in NCR 1173	Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Was one of the following paving control devices used? (1) Ski-type device at least 30 feet in length. Automatic leveling ski of proper length? (2) Short Ski or short shoe. (3) At least 5,000 feet of control line and stakes. However, the following instances of manual operation are acceptable:		Lift thickness was controlled manually.		6/25/2019 10:06:33 AM -06:00	Audit Comment	Paving crew runs depth manually	Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Manual operation of the paver is permitted in irregularly shaped and minor areas (e.g., tapers, ramps, manholes, joints and where adverse paving conditions are encountered). Closely monitor these areas for conformance.		Area to be paved had multiple manholes, water valves, drainage structures, and tapers resulting in manual operations to be utilized. Entirety of area shall be monitored for continued conformance throughout its use. Areas to be temporary and permanent will need to be delineated and noted, as mentioned above in Requirement #1.		6/25/2019 10:06:38 AM -06:00	Audit Comment	Permanent and Temp areas will be delineated. The temporary pavement will continue to be monitored.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	11/16/2018 2:47:54 PM - 07:00	Manual operation of the paver is permitted in irregularly shaped and minor areas (e.g., tapers, ramps, manholes, joints and where adverse paving conditions are encountered). Closely monitor these areas for conformance.		Manual operation of the paver was used. The gore area, curve of the ramp and non uniform paving width made manual operation necessary. Only one lift of asphalt was placed at the following locations: EB Havana Off ramp, EB Havana On Ramp and WB Havana Off Ramp.	Conformance	11/16/2018 2:15:11 PM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	5/14/2019 8:56:43 AM - 06:00	Manual operation of the paver is permitted in irregularly shaped and minor areas (e.g., tapers, ramps, manholes, joints and where adverse paving conditions are encountered). Closely monitor these areas for conformance.		All of the areas that were paved were considered irregular. Poor saw cutting was a key factor in poor mix placement. Saw cuts need to planning to accommodate a paver. This will lead to a better overall product. Reference the attached photos.	Noted	5/23/2019 8:49:34 AM -06:00	Audit Comment	Utility line relocation and median removal left irregular removal limits. PC,IQC and QCATS walked and discussed this situation. the saw cutting was done on night shift and was not done with paving in mind. KIC superintendent was made aware and communicated the problems to the team.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	5/9/2019 5:04:14 PM - 06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		The paving area was two long straight pulls. The operation was smooth and continuous as long as the mix delivery consistent. As mentions in a following comment, the asphalt broke down from approximately 10:45am-1:30pm.	Conformance	5/7/2019 10:47:21 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	5/9/2019 4:46:27 PM - 06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Due to the unique area, the paver had to move and setup multiple times. This caused a stop and go operation.	Conformance	5/7/2019 10:46:27 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	11/16/2018 2:47:54 PM - 07:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		The paving operation was completed in a stop and go motion. Due to the limited work area, the asphalt delivery to the hopper was difficult. A better plan for access is necessary.	Acceptable	5/30/2019 9:55:19 AM -06:00	Audit Comment	Agreed. Improvements in access were made in future pours.	Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Paving operations proceeded in a stop and go motion.		6/25/2019 10:07:11 AM -06:00	Audit Comment	Acknowledged. As discussed in the joint meeting held on 6/19/19. Delivery can be an issue due to traffic and tight paving areas.	Closed

Central 70	C 0704-241	HMA	Roadway	2/4/2019 3:39:43 PM - 07:00	Was segregation observed during the movement of material from the paver hopper back to the paver augers? (Reference Spec for more information)		No segregation was noticed when material was transferred from the hopper to the augers.	Conformance	2/4/2019 8:56:43 AM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	11/16/2018 2:47:54 PM - 07:00	Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		The paver wings were lifted after each load was placed in the hopper and emptied after each load.	Conformance	11/16/2018 2:15:11 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		Paver wings were cycled periodically throughout the day to prevent buildup of material.	Conformance	6/11/2019 10:30:31 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	5/9/2019 4:46:27 PM - 06:00	Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		The asphalt plant broke down between 10:45am-1:30pm. So the wings were dumped multiple times throughout the day.	Conformance	5/7/2019 10:46:27 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	5/9/2019 5:04:14 PM - 06:00	Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		The asphalt plant broke down between 10:45am-1:30pm. So the wings were dumped multiple times throughout the day.	Conformance	5/7/2019 10:47:21 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	5/14/2019 8:56:43 AM - 06:00	Were the wings of the hopper dumped only at end of day? Paver wings should be cycled at a regular interval to prevent large buildups of the material.		The paver wings were cycled regularly due to the long duration between loads.	Conformance	5/14/2019 7:56:08 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Do the augers extend the full width of the screed? Is the auger two inches above the finished surface of the mat?		Augers extend full width of screed, and atleast 2" above the finished surface of the mat.	Conformance	6/11/2019 10:30:31 AM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway	7/22/2019 1:46:56 PM - 06:00	Is the screed vibrator functioning?		The bidwell screed is operating as needed, vibrating the surface, and providing a smooth finish as operations continue on.	Conformance	7/21/2019 7:02:26 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway	7/22/2019 1:46:56 PM - 06:00	The paver should be equipped with a full-width vibratory screed. Was the screed checked for trueness with a string line?		The paving equipment was not observed to have been checked for trueness with a string line. No "dry-run" was noted to have been completed. Only depths at planned joints were string-lined to verify depths.		8/20/2019 12:28:43 PM -06:00	Audit Comment	Paver is equipped with a full-width vibratory screed. PCCP in Blk. 2515 (Brighton Blvd.) is not a mainline operation. CCD was present when Pre-Pour Placement occurred and verified all aspects of the operation to be performed.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway	7/22/2019 1:46:56 PM - 06:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		A smooth surface was produced after the concrete paving operations were finished, and appeared to be uniform in appearance and texture. The minimum required thickness of 12.5" was achieved over the entire width paved. The required surface tolerance was noted to be within tolerance of 2.0% Cross-Slope.	Conformance	7/21/2019 7:02:26 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was observed to be placed within required surface tolerances with an acceptable finish without segregation. Area in question however remains around the location where asphalt load was dumped from haul truck onto the subgrade surface and handworked into place for a portion.		6/25/2019 10:05:10 AM -06:00	Audit Comment	As discussed in the meeting with the Department and IQC on 6/19/19. Means and methods will be adjusted to minimize segregation.	Closed

Mini dual (static) and combo (static & pneumatic) rollers were utilized for compaction efforts. No vibratory was used in this stretch of paving. Only static and pneumatic was used. This is not in conformance with the compacted test section.	NCR 1173 Created.	6/25/2019 1:15:00 PM -06:00	NC-2	This issue will be resolved in NCR 1173	Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is performed while the mix is warm enough to permit the removal of roller marks.		Rolling and compaction efforts were made in the required sequence, however smaller roller equipment was utilized at a slightly faster speed to ensure the proper breakdown was achieved. Finish rolling was performed when the mix was warm enough to removal other marks.	Conformance	6/11/2019 10:30:31 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/4/2019 3:39:43 PM - 07:00	Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is performed while the mix is warm enough to permit the removal of roller marks.		The compaction operation sequence was followed per Spec.	Conformance	2/4/2019 8:56:43 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	11/16/2018 2:47:54 PM - 07:00	Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is preformed while the mix is warm enough to permit the removal of roller marks.		The initial breakdown roller was broken. Rolling at the beginning of the shift was completed with a pneumatic roller. Please reference the attached photos. The crew finally got the steel wheel breakdown roller working. This piece of equipment was tempermental the rest of the observation since the water sprayers weren't working.	Acceptable	5/30/2019 9:56:59 AM -06:00	Audit Comment	Agreed - improvements in paving equipment will be made moving forward.	Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	5/9/2019 4:46:27 PM - 06:00	Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is preformed while the mix is warm enough to permit the removal of roller marks.		Half of the paving at SB Steele was complete with a finish roller. A crew was using the knockdown roller at the EB Steel/Vasquez Off ramp for the island detour paving. Planning the work helps ensure the appropriate equipment can be utilized. The temperature of the mat was too high to be using a finish roller.	Acceptable	5/30/2019 9:34:53 AM -06:00	Audit Comment	PC and IQC made the decision to use the smaller roller on small temporary detour areas. The large rollers have been causing tearing and checking in the mat. The density's were within specification.	Closed
Central 70	C 0704-241	HMA	Roadway	6/11/2019 3:36:03 PM - 06:00	Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		The smaller rollers were traveling faster than approximately 3 MPH, however no picking up of material was observed and rollers were kept clean.	Conformance	6/11/2019 10:30:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		Ensure that channelizing devices conform to the requirements of the Contract Specifications, Manual of Uniform Traffic Control Devices, Method of Handling Traffic, and the project's Traffic Control Plan. Pay particular attention to the following: a. correct dimensions in a clean, serviceable condition, b. proper retroreflectorized sheeting or collars, c. correct placement with proper taper lengths and spacing, d. proper and functioning warning lights that are set in the correct mode, and e. weighting by acceptable methods.		Conformance	Conformance	4/9/2019 7:48:14 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	4/8/2019 12:21:15 PM - 06:00	Ensure that channelizing devices conform to the requirements of the Contract Specifications, Manual of Uniform Traffic Control Devices, Method of Handling Traffic, and the project's Traffic Control Plan. Pay particular attention to the following: a. correct dimensions in a clean, serviceable condition, b. proper retroreflectorized sheeting or collars, c. correct placement with proper taper lengths and spacing, d. proper and functioning warning lights that are set in the correct mode, and e. weighting by acceptable methods.		Compliance	Conformance	4/4/2019 3:48:33 PM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	4/8/2019 12:21:15 PM - 06:00	Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Crews failed to installed temporary barrier prior to starting work in the area as shown on the RFC MOT sheets. This was brought to their attention and they installed the barrier that night.	closed	4/15/2019 10:48:39 AM -06:00	Audit Comment	Barrier was installed the next night	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)	4/5/2019 2:33:00 PM - 06:00	Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Temporary barrier wall was installed at the locations shown on the plans. Entrances between EB & WB were staggered to prevent vehicles from entering the opposing direction of travel. (Noted on the attached Markups) Attenuators were installed at all required locations.	Conformance	4/5/2019 9:33:52 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	4/29/2019 3:27:37 PM - 06:00	Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Crews were notified of the missing barrier on NB Colorado separating pedestrians from traffic. Crews installed this barrier less than 12hrs later.	Conformance	4/29/2019 12:10:08 PM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	4/29/2019 3:27:37 PM - 06:00	Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Barrier wall which starts at the South abutment on the SB Colorado over I-70 Bridge does not have proper end treatment. See attached audit report.	968 was created	5/7/2019 10:19:31 AM -06:00	NC-2	NCR 968 Created	Closed
Central 70	C 0704-241	Temp Barrier	Maintenance of Traffic (MOT)		Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Barrier was correctly placed	Conformance	8/9/2019 10:58:14 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Temp Barrier	Maintenance of Traffic (MOT)	6/18/2020 9:59:56 AM - 06:00	Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Incorrect bolts and bolt pattern noted to be utilized for connection from barrier to impact attenuator. Manufacturer installation manual shall be utilized for proper installation of impact attenuator to ensure functioning as designed. Please ensure all end treatment systems project wide follow the proper bolt pattern and use correct size/provided bolts and washers.	NCR written	7/1/2020 12:48:38 PM -06:00	NC-2	NCR's 0533 and 0534 were written to address this issue	Closed
Central 70	C 0704-241	Temp Barrier	Maintenance of Traffic (MOT)	6/18/2020 9:59:56 AM - 06:00	Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Drop Pin placed between pin and loop barrier was placed incorrectly and does not go through all hooks. This barrier was assumed to be moved by a night crew to mobilize equipment into and out of the work zone, and at end of shift the barrier was not properly set back in the correct way.	NCR written	7/1/2020 12:48:41 PM -06:00	NC-2	NCR's 0533 and 0534 were written to address this issue	Closed

Project Construction Assessments Overview as of September, 2022

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	2/9/2019 12:57:09 PM - 07:00	Ensure that signs conform to the Contract, including the CDOT M&S Standards and the Manual of Uniform Traffic Control Devices. Pay particularly attention to compliance of the following: a. size, shape, and color; b. retroreflective sheeting; c. appropriate location.	(1) The closure of the auxiliary lane for the WB Havana Exit did not follow the M&S plans due to the length and size of the lane this should have followed Case 22 of the M&S plans being similar to a right lane closure. The closure implemented was MHT #164 combined with an exit opening for a typical right lane closure.	676 created	2/25/2019 10:03:44 AM -07:00	NC-2	NCR 676 Created	Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	2/9/2019 12:57:09 PM - 07:00	Signs installed properly and in satisfactory condition	(2) The WB Havana On Ramp was missing the following signs: -(2A) PCMS board was dark and would have been shared with the EB On Ramp closure -(2B) A Ramp Closed sign should have been installed in the NB aux. lane with a type 3, only cones were installed. (3) The EB Havana Entrance Ramp Closure did not follow the MHT or M&S. The auxiliary lane for the ramp was closed by placing cone across the lane approximately 50-100ft from the ramp. This lane should have been closed by either a typical right lane closure or taking the lane south of 40th prior to it starting. Also this	676 created	2/25/2019 10:03:53 AM -07:00	NC-2	NCR 676 Created	Closed

						<p>closure was missing the following signs: -{3A} Ramp Closed sign and Ty. III in the auxiliary lane showing NB traffic the lane/ramp is closed. -{3B} I-70 East Detour sign assemblies were missing. -{3C} PCMS board for this closure was dark & would be shared with the WB closure</p> <p>(1) Detour Signs for the WB Havana Off Ramp were installed per plan.</p>					
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)		Signs installed properly and in satisfactory condition	Conformance	Conformance	2/22/2019 4:10:17 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Backfill around the Manhole TMS excavation shall conform to Section 206, Structure Backfill (Class 2).		IQC and PC testers passed the compaction on the structure backfill around the ITS manhole on 2/18/2019. Various attempts to backfill were made over a two week period, but failed multiple times on moisture and temperature. The Class 2 brought on site originally had visible clumps of snow and had a temperature around 30 degrees, which IQC failed upon visual inspection of soil.	Conformance	2/26/2019 3:23:49 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Backfill around the Manhole TMS excavation shall conform to Section 206, Structure Backfill (Class 2).		Site passed IQC and PC inspection of compaction. Compaction was completed and in compliance with CDOT Standard 206.03 Structure Excavation and Structure Backfill. Manhole installed on 2.28.18 at STA2402+36	Conformance	3/5/2019 2:20:47 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical	3/8/2019 4:21:36 PM -07:00	Backfill around the Manhole TMS excavation shall conform to Section 206, Structure Backfill (Class 2).		Manhole at Station 2391+39 was back filled with lifts conforming to Section 206 and tested by both PC and IQC testers.	Conformance	3/8/2019 2:15:15 PM -07:00	C		Closed

Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	The Contractor shall add the following information to the batch ticket at the placement site: (13)Gallons of water added by truck operator, the time the water was added, and the quantity of concrete in the truck each time water is added. (14)Number of revolutions of drum at mixing speed (for truck mixed concrete). (15)Discharge time. (16)Location of batch in placement. (17)Water to cementitious material ratio. (18)Weight of polyolefin fiber reinforcement.		No additional information pertaining to exactly what was delivered and tested at the placement site appears to have been added by the contractor to the batch tickets, as described in the requirement (i.e. discharge time, w/c ratio, etc.).		4/30/2019 7:36:58 AM -06:00	Audit Comment	The process to document water added, revolutions, discharge time, and location of batch in placement on the batch ticket will be reviewed in greater detail. This information is critical to document a successful concrete pour. KIC continues to appreciate the oversight provided by CDOT in our operations.	Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		The Contractor shall add the following information to the batch ticket at the placement site: (13)Gallons of water added by truck operator, the time the water was added, and the quantity of concrete in the truck each time water is added. (14)Number of revolutions of drum at mixing speed (for truck mixed concrete). (15)Discharge time. (16)Location of batch in placement. (17)Water to cementitious material ratio. (18)Weight of polyolefin fiber reinforcement.		The Contractor added the information to the batch tickets as required.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Concrete has been placed within the following times after batching: a) 90 minutes when concrete is delivered in truck mixers or agitating trucks a.i) Except for Class H and HT concrete, the 90 minute time limit for mixer or agitating trucks may be extended to 120 minutes if: (1) No water is added after 90 minutes. (2) The concrete temperature prior to placement is less than 90 °F a.ii) Except for Class H and HT concrete, the 90 minute time limit for mixer or agitating trucks may be extended to 180 minutes if 1-2 above & 3 below: (3) The approved concrete mix contains a Type D water reducing and retarding chemical admixture. b) 60 minutes when delivered in non agitating trucks.		Concrete placement occurred during the allowable timeframe after batching.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Concrete mixed entirely in a stationary mixer and delivered to the job in a truck mixer shall be remixed for a minimum of 20 revolutions of the mixing drum at mixing speed at the job site prior to discharge.		A minimum of 20 revolutions within the mixing drum of the truck was performed upon arrival to the job site, prior to any discharge.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		No additional water was noted to have been added at the delivery site, which would require additional 20 revolutions of mixer drum at mixing speed.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		The trucks that I observed were within the slump range specified and had no water added to them.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		None of the trucks arrived with a low slump so no water was added on site.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		5 Gallons of water was added to the first of the two trucks, and was mixed with minimum of 20 revolutions prior to any discharge.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix after the truck has left the charging plant. The added water shall not cause the water/cement ratio to exceed the requirements in subsection 601.02 & documented on the delivery slip.		All concrete trucks that arrived on site had an accurate and operating water measuring device.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix after the truck has left the charging plant. The added water shall not cause the water/cement ratio to exceed the requirements in subsection 601.02 & documented on the delivery slip.		I checked all of the trucks and each had a water measuring device in good working condition.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix after the truck has left the charging plant. The added water shall not cause the water/cement ratio to exceed the requirements in subsection 601.02 & documented on the delivery slip.		I checked all of the trucks that arrived on site and all had water-measuring devices that were in good working order.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	The Contractor shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix after the truck has left the charging plant. The added water shall not cause the water/cement ratio to exceed the requirements in subsection 601.02 & documented on the delivery slip.		Water-measuring device noted to be in a working condition on mixer trucks, and available to use should any water need to be added after truck has left the plant.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		The Contractor shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix after the truck has left the charging plant. The added water shall not cause the water/cement ratio to exceed the requirements in subsection 601.02 & documented on the delivery slip.		I checked the trucks that arrived at the wall site and each had a functioning water measuring device.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	When a batch of concrete delivered to the project does not conform to the minimum specified air content, an air entraining admixture conforming to subsection 711.02 may be added in accordance with subsection 601.17. After the admixture is added, the concrete shall be re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.		Concrete delivered for placement of 615-W3 footing has conformed to the minimum specified air content.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms observed and documented to have wear and tear. Stayfoam documented by IQC to have been used in corners by steps, elevation changes, to stop potential leaks through these areas.		4/30/2019 7:37:33 AM -06:00	Audit Comment	Although forms do wear during the construction operations, there is a point where forms need to be replaced. Wear and tear is subjected but noted. IQC will continue to monitor the performance of the form work and replace as necessary.	Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms for pier cap 5 were sufficiently tight and rigid to prevent distortion.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		I checked the forms and all were mortar tight and sufficiently braced to prevent distortion and blow-outs.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		All forms appeared to be mortar tight and were sufficiently braced to avoid distortion.	Conformance	7/16/2019 7:25:54 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were mortar tight and were sufficiently braced and rigid to prevent distortion due to the pressure of the concrete and other incidental loads such as from concrete vibrators.	Conformance	7/22/2019 12:34:48 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		I checked the forms during a pre-pour walk through and they appeared to be well constructed and braced.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms installed are mortar tight and rigid enough to prevent any distortion due to concrete pressures and other incidental loads during concrete placement operations.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms are sufficiently rigid to prevent distortion due to concrete loads, and incidental loads during concrete placement operations.	Conformance	4/4/2020 3:57:35 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The contractor used metal coping forms that were tightly bolted together and shored.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		All wall forms are mortar tight and sufficiently rigid to prevent distortion due to the concrete load and other loads incidental to construction.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The overhang forms that I observed were mostly mortar tight but the contractor had sealed some of the wider seams in the forms that were caused by it being a curved bridge.	Conformance	7/8/2019 9:56:42 AM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms placed for cap beam are mortar tight and sufficiently rigid to contain the pressure of the concrete and prevent distortion.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were solidly put together and braced, and were mortar tight and rigid.	Conformance	4/4/2019 9:40:59 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		I walked the deck infill area and walked underneath the bridge, and all deck forms appeared to be mortar tight and well braced.	Conformance	4/3/2019 7:01:24 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM -06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		I checked the forms prior to the deck pour and all forms appeared to be mortar tight and sufficiently rigid. No dripping of mortar was noted during the pour.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		I checked the forms and all appeared to be sufficiently mortar tight and rigid to prevent distortion.	Conformance	6/17/2019 12:38:31 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Rail	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		The forms were constructed and maintained using form ties.	Conformance	6/17/2019 12:38:31 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		All infill deck forms were well constructed as to prevent opening of joints.	Conformance	4/3/2019 7:01:24 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Formwork has been constructed and well maintained to prevent opening of joints.	Conformance	4/4/2020 3:57:35 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		The forms were constructed and maintained in a way to prevent opening of the joints.	Conformance	3/22/2019 9:21:18 AM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		The contractor used sufficient form ties to prevent opening of joints and no twisted wire loops were used.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed

Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Forms observed and documented by IQC to have minor bends at locations where the forms no longer match up together.		4/30/2019 7:37:38 AM -06:00	Audit Comment	Although forms do wear during the construction operations, there is a point where forms need to be replaced. Wear and tear is subjected but noted. IQC will continue to monitor the performance of the form work and replace as necessary.	Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Location to receive concrete placement was clean of concrete splatter from previous pours, as well as loose tie wire, debris, and dirt.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The forms were clean and the contractor had covered the cap prior to the pour to prevent water, snow or other deleterious materials from getting into the forms.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		I checked the column forms as they were installed and all were clean and had form oil. The column had a tarp placed on top that was removed just prior to placement, and this prevented any rain, snow or other deleterious materials from entering the form.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The surfaces of the forms were clean of any deleterious materials.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside surfaces of forms have been cleaned of all foreign debris prior to concrete placement.	Conformance	4/4/2020 3:57:35 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the forms were clean and the contractor sprayed the grade and forms with water before concrete placement.	Conformance	7/16/2019 7:25:54 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside of the forms were clean of any deleterious materials.	Conformance	7/22/2019 12:34:48 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the forms were cleaned of any deleterious materials before being placed.	Conformance	4/4/2019 9:40:59 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surface of all forms are clean as they are all of new material.	Conformance	7/8/2019 9:56:42 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the forms are clean of any deleterious materials.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were cleaned of any foreign material prior to placement of concrete.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside surfaces of forms were cleaned of all foreign debris prior to concrete placement.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		I observed the contractor cleaning and oiling the forms.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM -06:00	The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surface of all forms were cleaned of deleterious materials prior to the deck pour.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the forms and the construction joint at the deck were clean of all deleterious materials.	Conformance	6/17/2019 12:38:31 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		Forms were thoroughly coated with an approved form oil.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		The contractor coated the forms with a form oil from the approved products list.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		The forms were thoroughly coated with a form oil from the approved list	Conformance	7/8/2019 9:56:42 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		The form surfaces were thoroughly coated with form oil prior to being placed except for surfaces with form liners.	Conformance	4/4/2019 9:40:59 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		The contractor sufficiently coated the forms with a form oil from the approved products list.	Conformance	7/22/2019 12:34:48 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		The forms were thoroughly coated with an approved form oil.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		All column form sections were thoroughly coated with form oil prior to placement and assembly.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		Reinforcement of wall footer noted to be in place, formwork connected, and PC / IQC Checklists performed prior to concrete placement beginning.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		I observed the concrete pour and all the forms and embeds were secure and in place before the pour started.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		All forms were complete and well braced before the concrete pour started.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		All work with constructing the forms and embedment was complete before the concrete placement commenced.	Conformance	7/22/2019 12:34:48 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		Concrete was not deposited in the forms until all work connected with abutment cap was in place, inspected, and approved by IQC.	Conformance	4/4/2020 3:57:35 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		All work associated with the SIP and overhang forms was complete before concrete placement started.	Conformance	7/8/2019 9:56:42 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		Concrete was not deposited into the forms until all work associated with abutment, including all reinforcement and embedded materials, was installed, and inspected and approved by IQC.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		All work connected with constructing the forms was completed and there were no embeds in the section that I observed.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		All reinforcing, placement of forms, clearances, and any additional work was completed prior to placement of concrete within the forms.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be deposited in the forms until all work connected with constructing the forms has been completed; all materials required to be embedded in the concrete have been placed, unless otherwise specified on the plans or approved.		All work connected with the forms was completed prior to concrete placement.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¾ inch by ¾ inch at all exterior corners.		Forms were chamfered as shown on the plans, at all expansion joints and weakened planes in the cap beam.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¾ inch by ¾ inch at all exterior corners.		Forms were chamfered as shown on approved plans with 3/4" triangular fillets.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM -06:00	Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¾ inch by ¾ inch at all exterior corners.		Concrete forms were chamfered in all required locations.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¾ inch by ¾ inch at all exterior corners.		Forms were chamfered as shown on the plans.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be filleted and chamfered as shown on the plans, and shall be given a bevel or draft in the case of all projections, such as girders and copings, to assure easy removal. Unless otherwise specified, forms for exposed surfaces shall be constructed with triangular fillets ¾ inch by ¾ inch at all exterior corners.		Forms were filleted and chamfered as shown on the plans.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms treated with form oil or an approved release agent compatible with the finish coatings		The form oil used is an approved one.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms treated with form oil or an approved release agent compatible with the finish coatings		Forms were treated with an approved compatible form oil.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Rail	Structures		Forms treated with form oil or an approved release agent compatible with the finish coatings		The forms were treated with a form oil from the approved products list.	Conformance	6/17/2019 12:38:31 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Wood forms were moistened with water using the water hose from the concrete trucks.	Conformance	6/17/2019 12:38:31 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		The ground under the wall was sprayed with water prior to concrete placement.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Wood formwork was thoroughly moistened with water immediately prior to concrete placement.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM -06:00	Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		The wood forms were thoroughly moistened prior to placement of concrete.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Wood forms thoroughly moistened prior to concrete placement.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Wood forms were thoroughly moistened before pouring concrete, using the water hose from each concrete truck.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		The forms and the ground were thoroughly moistened using the concrete truck water hose immediately before placing the concrete.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		All falsework drawings, including revisions, shall be prepared by the Contractor's Engineer, shall meet the requirements of subsection 601.11, and shall be provided by the Contractor to the Engineer for record purposes only. The drawings shall be signed and sealed by the Contractor's Engineer.		Falsework drawings were prepared by the Contractor's Engineer and meet the requirements of subsection 601.11. These were provided by the Contractor to the Engineer for record purposes, and were signed and sealed by the Contractor's Engineer.	Conformance	7/8/2019 9:56:42 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The cap contained post-tension ducts that were accurately placed and secured.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embedded epoxy coated reinforcing dowels were installed and adequately secured.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Drainage and weep holes at proper locations and elevations		Weep holes were placed at the proper locations and elevations.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Drainage and weep holes at proper locations and elevations		Weep holes were placed at the proper location and elevation due to more than 4 feet of the wall being exposed.	Conformance	4/4/2019 9:40:59 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters and all necessary wires and connectors were provided by the contractor.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor supplied and placed maturity meters.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM - 06:00	The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided and placed maturity meters, wiring, and connectors and I observed these in the area of the concrete barrier rail.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters provided by contractor and installed on both columns with the necessary wires and connectors.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters and all necessary wires and connectors were provided by the contractor.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Structures PC (Megan Brown) installed a maturity meter in the left side of the approach slab at the barrier.	Conformance	7/22/2019 12:34:48 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor supplied and placed all maturity meters, wiring and connectors.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The Contractor provided maturity meters and all necessary wiring and connectors.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meter, along with all necessary components, has been provided by the Contractor.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		I checked the forms before placement and all maturity meters and wiring was in place.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		<p>The forms for any portion of the structure shall not be removed until the concrete is strong enough to withstand damage when the forms are removed. Concrete compressive strength shall be determined by maturity meters in accordance with CP 69.</p> <p>Below are the elements with required compressive strengths for form removal.</p> <ul style="list-style-type: none"> -Members which resist dead load bending: 80 percent of the required 28 day compressive strength, 0.80f 'c. -Columns: compressive strength of at least 1,000 psi -Sides of beams, walls or other members that do not resist dead load bending: 500 psi -Cast-in-place concrete box culverts spans not larger than 12feet shall reach compressive strength of 0.6f 'c; -Cast-in-place concrete box culverts spans over 12 feet but not over 20 feet shall reach compressive strength of 0.67f 'c -Cast-in-place concrete box culverts spans larger than 20 feet shall not be removed until after all concrete has been placed in all spans and has attained a compressive strength of at least 0.80f 'c 		The forms were not removed before the concrete was strong enough to withstand form removal.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed

Central 70	C 0704-241	Substructure	Structures		<p>The forms for any portion of the structure shall not be removed until the concrete is strong enough to withstand damage when the forms are removed. Concrete compressive strength shall be determined by maturity meters in accordance with CP 69.</p> <p>Below are the elements with required compressive strengths for form removal.</p> <ul style="list-style-type: none"> -Members which resist dead load bending: 80 percent of the required 28 day compressive strength, 0.80f 'c. -Columns: compressive strength of at least 1,000 psi -Sides of beams, walls or other members that do not resist dead load bending: 500 psi -Cast-in-place concrete box culverts spans not larger than 12feet shall reach compressive strength of 0.6f 'c; -Cast-in-place concrete box culverts spans over 12 feet but not over 20 feet shall reach compressive strength of 0.67f 'c -Cast-in-place concrete box culverts spans larger than 20 feet shall not be removed until after all concrete has been placed in all spans and has attained a compressive strength of at least 0.80f 'c 		Formwork was not removed until the concrete was strong enough to withstand damage when the forms were removed. Concrete strength was determined by maturity meters in place.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete compressive strength was determined by maturity meters as per the specifications.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		For each column at Pier 2, maturity meters in place to determine compressive strength of concrete.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM - 06:00	Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		The contractor placed and will use maturity meters for the compressive strength of the deck concrete.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete compressive strength was determined by maturity meters.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Acceptance cylinders were not used a means of determining compressive strength to remove formwork.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Acceptance cylinders were not used to determine strength for removal of forms.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Form removal was not started until the required compressive strength was achieved and this was determined by using the maturity meters.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Deck slab forms between girders shall be constructed with no allowance for settlement relative to the girders.		Deck slab forms were constructed with no allowance for settlement relative to the girders.	Conformance	7/8/2019 9:56:42 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM - 06:00	Deck slab forms between girders shall be constructed with no allowance for settlement relative to the girders.		The SIP form were constructed with no allowance for settlement relative to the girders.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Rail	Structures		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The construction joint at the deck was clean of any deleterious materials and curing compound.	Conformance	6/17/2019 12:38:31 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		The construction joints were adequately cleaned before the next pour.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM -06:00	Construction joints are at approved locations on the plans or placing schedule.		The transverse construction joint was placed in the correct location between piers 4 and 5.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Construction joints are at approved locations on the plans or placing schedule.		Construction joints are at the plan locations.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		The contractor pre-moistened the construction joint at the deck.	Conformance	6/17/2019 12:38:31 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		The vertical construction joints were SSD.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Concrete shall not be placed on frozen ground.		The ground was not frozen at the time of concrete placement.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground. Area remained heated and covered prior to concrete placement.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		Area to receive concrete remained covered and heated prior to concrete placement.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		The contractor covered the top of the form with a tarp after the form was placed, preventing any rain, snow or frost from entering the form.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		The contractor covered the cap form with a tarp to prevent any ice, snow or frost from getting into the form.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Salt shall not be used to thaw ice, snow, or frost.		No salt was necessary for any snow or ice removal operations in or around the concrete placement operations, more importantly within the formwork.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Concrete placed in accordance with the approved placing sequence		Concrete placement followed approved placing sequence.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in accordance with the approved placing sequence		Concrete was placed in accordance with approved placement plan.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in accordance with the approved placing sequence		Concrete was placed in accordance with approved placement sequence.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM - 06:00	Concrete placed in accordance with the approved placing sequence		The bridge deck concrete was placed using an approved placing sequence.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete placed in accordance with the approved placing sequence		Concrete placed through the use of a pump truck, and process consisted of placing in required lifts to ensure proper consolidation was achieved with vibrator.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete pump truck chute was lowered near to base of column to ensure concrete was not dropped more than 5 feet. Chute was brought up with each subsequent lift of concrete.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM -06:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		I observed the bridge deck concrete pour and never saw the concrete being dropped for more than 5 feet.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was dropped less than five feet from the concrete bucket into the forms.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was confined in a pipe but was not dropped more than five feet.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The contractor used a funnel for concrete placement and no concrete was dropped for more than 5 feet.	Conformance	4/4/2019 9:40:59 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Rail	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was dropped from form height, which is less than five feet.	Conformance	6/17/2019 12:38:31 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than five feet during placement.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet during placement operations.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was enclosed by a closed chute.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was not dropped more than 5 feet and was enclosed by a tremie pipe.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was placed using a bucket and was not dropped more than five feet.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed the concrete pour and the concrete was placed near the final position and was not excessively vibrated to move it into place.	Conformance	1/24/2019 8:41:00 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		The Contractor used the tremie pipe to place the concrete close to its final position so that it didn't have to be moved with the vibrator.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		A 2 CY concrete bucket & CAT 335F Excavator was used to deposit concrete as close to its final position as possible.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited as near to final position as possible within the forms.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited as near to final position as possible within the forms.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed close to the final position and was not moved with the vibrator.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed the concrete being placed close to the final position and not being moved (dragged with a vibrator).	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM - 06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed concrete being placed near the final position and never saw it being moved by dragging it with the vibrator or any other means.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed in forms as close to final position as possible.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No aluminum equipment was used during pumping, placement or finishing.	Conformance	9/17/2020 5:24:36 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		The concrete was placed using a steel concrete bucket and the concrete truck chutes were made of steel also.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Concrete bucket utilized during placement operations remained free and clean of coatings of hardened concrete.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All the concrete truck chutes were free of concrete build up as was the funnel used for placement.	Conformance	4/4/2019 9:40:59 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Concrete truck chute kept clean and free from hardened concrete.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Required lifts of not more than 18 inches was followed, and was properly consolidated to avoid formation of construction joint within the column forms.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was not placed in excessive layers over 18".	Conformance	9/17/2020 5:24:37 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in horizontal layers not exceeding 18 inches in thickness. Each layer was consolidated to avoid the formation of a construction joint with the preceding layer.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was not placed in excess of 18" layers, and was properly consolidated during placement operations.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in horizontal layers not exceeding 18 inches in thickness. Each layer was consolidated so as to avoid formation of construction joints with preceding layers.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		All external surfaces of concrete were thoroughly worked during placement to produce a smooth finish that is substantially free from water and air pockets.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		All external surfaces were thoroughly worked during placement to force coarse aggregate from the surface and bring mortar against the forms to best produce a smooth finish that was substantially free of water and honeycombing.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		External surfaces of concrete were adequately and thoroughly worked to ensure coarse aggregate was forced away from the surface, and to bring mortar against forms for a substantially honeycomb free final surface.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		The concrete was finished by hand using magnesium hand floats.	Conformance	9/17/2020 5:24:37 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM -06:00	The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		All external surfaces of the concrete bridge deck were worked using tools of an approved type and material (no aluminum). The bridge deck had a good broom finish with no water, air pockets or honeycomb.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Proper consolidation procedures were followed with the use of a suitable mechanical vibrator, utilized throughout entirety of pour, to include all lifts.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated with suitable mechanical vibrators.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated using suitable mechanical vibrators.	Conformance	9/17/2020 5:24:37 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Consolidating of concrete was performed using adequate vibrator.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The Contractor used suitable mechanical vibrators with vibration frequencies that were checked by IQC.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated using suitable vibrators that had been checked for the correct frequency.	Conformance	1/24/2019 8:41:43 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated with suitable mechanical vibrators.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The vibrators were only used to consolidate the concrete and were not used to moved the concrete into position.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators properly used during concrete placement operations.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means to cause concrete to flow or run into a position. Concrete placed as near to final position.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used a means to cause concrete to flow or run into position.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The contractor personnel did a good job with concrete placement and the vibrators were not used to drag concrete into place.	Conformance	4/4/2019 9:40:59 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means of causing concrete to flow or run into place. Pump truck chute was utilized as a means of placing concrete as close to final position as possible.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		No water or finishing aids were added to the top surface of the concrete on the column to assist in finishing operations.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM - 06:00	Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		The contractor finishers used no water as a finishing aid and only used fogging as a means to prevent evaporation.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Additional water or finishing aids were not observed to be added to surface during concrete finishing operations.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	The Contractor shall provide fogging equipment and keep the concrete surface moist at all times by fogging with an approved atomizing nozzle until the curing material is in place.		Concrete remained workable during placement operations, and finishing was accomplished followed by placement of curing materials (i.e. blankets).	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM - 06:00	The Contractor shall provide fogging equipment and keep the concrete surface moist at all times by fogging with an approved atomizing nozzle until the curing material is in place.		The contractor did not have a backup pressure washer and there was a delay while another one was acquired.	The issue will be addressed.	7/15/2019 12:52:45 PM -06:00	Audit Comment	Back up equipment will be discussed in the pre placement conference for all remaining bridge decks.	Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature complied with the allowable temperature range.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		The concrete mix temperature was within the temperature specifications.	Conformance	4/4/2019 9:40:59 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete temperature was in the required range of temperature.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete mix temperature is between 50 and 90 degrees F		The concrete used was in the required temperature range.	Conformance	9/17/2020 5:24:37 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was within the allowable temperature range of 50-90 deg F.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Concrete mix temperature is between 50 and 90 degrees F		Concrete mix falls within the allowable temperature range tolerance.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		The concrete was in the required temperature range.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete placement followed approved sequence, and in a manner that avoids segregation and displacement of the reinforcement.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which best avoids segregation and displacement of reinforcement.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner consistent with best practices, to avoid segregation and displacement of reinforcement.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a maner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a way to avoid segregation and displacement of reinforcement.	Conformance	6/18/2019 3:57:03 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a suitable manner to avoid segregation and reinforcement displacement.	Conformance	9/17/2020 5:24:37 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner that avoids segregation and displacement of reinforcement in the abutment cap.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete placed in manner to avoid segregation and displacement of reinforcement.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM -06:00	All surfaces have been finished properly		All of the bridge deck had a proper finish.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All surfaces have been finished properly		All surfaces were finished properly.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Caisson Walls (Old)	Walls		All surfaces have been finished properly		Surfaces in need of concrete finishing were done so properly.	Conformance	3/25/2019 7:17:04 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All surfaces have been finished properly		All surfaces were finished properly.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM -07:00	All surfaces have been finished properly		Surfaces properly finished for the footing of 615-W3.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was adequately primed and enough concrete discarded to produce a uniform mix.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump truck was primed at the contractors expense, and discarded enough concrete to produce a uniform flow of concrete exiting the pump.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump truck was primed at the contractors expense and discarded enough concrete to produce a uniform mix exiting the pump.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	7/10/2019 2:50:24 PM - 06:00	The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		I observed the pump truck operator prime the pump and at least 0.25 CY of concrete was pumped and discarded. The concrete coming out of the pump after the priming was of good quality.	Conformance	7/8/2019 9:57:31 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump truck chute/hose was primed and enough concrete was discarded in order to ensure a uniform concrete mix exited the pump during placement operations.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		No water was added into the concrete pump hopper after placement operations began.	Conformance	4/29/2019 4:39:24 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		I observed no water being added directly to the hopper of the pump truck.	Conformance	1/24/2019 8:52:19 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		No water was added into the concrete pump hopper after placement was started.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated so that a continuous stream of concrete was produced.	Conformance	2/18/2019 8:37:45 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated with a continuous stream of concrete being produced for placement of abutment.	Conformance	4/4/2020 3:57:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Pump was operated with a continuous stream of concrete being produced.	Conformance	4/4/2020 3:56:50 PM -06:00	C		Closed
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	The top surfaces of concrete adjacent to the forms shall be smoothed with a trowel to minimize visible joints upon exposed faces.		Wall footing of 615-W3 was finished in a manner to minimize joints, and to smooth over where present. Joints will not be exposed from the footing.	Conformance	3/6/2019 2:01:05 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Cast-In-Place Walls (Old)	Walls	3/6/2019 3:41:16 PM - 07:00	Immediately after the work of placing concrete is halted, all accumulations of mortar splashed upon the reinforcement and surfaces of forms shall be removed before the concrete takes its initial set. Care shall be taken when cleaning reinforcing steel to prevent damage to or breakage of the concrete-steel bond.		Concrete splatter during placement operations of footing will need to be cleaned from all reinforcing steel to prevent damage to or breakage of the concrete steel bond within the stem of the wall.	Observed concrete splatter on future placement operations by Department staff will be noted and communicated to IQC and KIC to ensure all parties aware of this requirement that is to be followed in order to comply with the standards, specifications, and PA.	4/30/2019 7:43:02 AM -06:00	Audit Comment	Concrete on rebar extensions must be cleaned to allow for proper bonding on concrete in future pours. KIC appreciates this observation and will continue to improve this part of our work. Information from the department at the time of the pour would be helpful during concrete pours.	Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Local utility company has been contacted to ensure installation in in compliance with local standards and specifications.		Denver Water inspector on-site and approved pipe installation prior to backfill	Conformance	4/18/2019 8:12:30 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities	1/6/2020 4:03:27 PM - 07:00	Local utility company has been contacted to ensure installation in in compliance with local standards and specifications.		Undermining at Columbine (caused by drilled shaft operation) impacted newly installed watermain. Denver Water will need to be contacted to work out corrective actions.	Denver water inspected the water line	2/18/2020 4:37:24 PM -07:00	Audit Comment	Denver water was contacted and the work out the corrective action and implement the work.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Wet (Water)	Utilities		Local utility company has been contacted to ensure installation in in compliance with local standards and specifications.		Denver Water inspector on-site and approved pipe installation prior to backfill	Conformance	4/18/2019 8:11:49 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Trench shall be excavated to a width sufficient to allow for proper jointing of the water line and thorough compaction of the backfill material in accordance with Section 206.		backfill passed IQC testing	Conformance	4/18/2019 8:11:49 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Trench shall be excavated to a width sufficient to allow for proper jointing of the water line and thorough compaction of the backfill material in accordance with Section 206.		backfill passed IQC testing	Conformance	4/18/2019 8:12:30 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Each layer shall be thoroughly compacted as required. All joints, connections, valves and fittings shall be watertight.		passed pressure test performed by Denver Water	Conformance	4/18/2019 8:12:30 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities	1/6/2020 4:03:27 PM - 07:00	Each layer shall be thoroughly compacted as required. All joints, connections, valves and fittings shall be watertight.		Acceptance testing has not been completed but installation appears to be within spec. Denver Water's onsite inspector was involved and approved of installation.	Conformance	1/2/2020 9:40:27 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Each layer shall be thoroughly compacted as required. All joints, connections, valves and fittings shall be watertight.		passed pressure test performed by Denver Water	Conformance	4/18/2019 8:11:49 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Top 6" of the existing subgrade shall be reconditioned by blading and rolling.		Existing subgrade was reconditioned by scarifying surface and rolling with pneumatic tire and smooth drum rolling equipment.	Conformance	8/28/2019 3:56:40 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		Top 6" of the existing subgrade shall be reconditioned by blading and rolling.		Greater than the 6" of existing subgrade was reconditioned and prepared as subgrade. Soft spot repair was necessary after gas line boring. Blading and rolling was completed as required to elevation and cross-slope.	Conformance	7/9/2019 3:47:18 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Sufficient water shall be added to meet density requirements.		Sufficient water was present and at optimum moisture when density tests were completed.	Conformance	7/9/2019 3:47:18 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Sufficient water shall be added to meet density requirements.		No water was needed to meet density requirements. IQC achieved passing tests in the moisture density gauge.	Conformance	8/28/2019 3:56:40 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Surface tested for smoothness and density prior to application of any base course material.		Surface was tested for moisture density, and noted to be within conformance of the moisture density needed. Area was then proof-rolled and passed prior to any application of base course material.	Conformance	7/9/2019 3:47:18 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Surface satisfactorily maintained until base course has been placed.		Surface of subgrade was adequately maintained after subgrade finalization, and prior to the placement of 4" of base material.	Conformance	7/9/2019 3:47:18 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Water applied for moisture and density control, as dust palliative, and for prewetting shall be free from injurious matter.		Water applied when necessary, as a dust palliative, and done so in a safe manner.	Conformance	4/2/2019 12:46:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork	4/3/2019 3:51:29 PM - 06:00	Water applied for moisture and density control, as dust palliative, and for prewetting shall be free from injurious matter.		Water is being applied as a dust palliative and is free from injurious matter, as well as being performed in a safe manner through the use of a water truck.	Conformance	4/3/2019 7:50:44 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Required compacted depth of the aggregate base course exceeds 6", shall be constructed in 2 or more layers of approximate equal thickness.		Base course did not exceed 6" compacted.	Conformance	8/12/2019 2:09:42 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Maximum compacted thickness of any one layer shall not exceed 6".		Compacted thickness did not exceed 6" in depth.	Conformance	8/12/2019 2:09:42 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Maximum compacted thickness of any one layer shall not exceed 6".		Base was placed and compacted in one 6" lift.	Conformance	9/17/2019 9:36:45 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Maximum compacted thickness of any one layer shall not exceed 6".		Compacted maximum thickness did not exceed 6".	Conformance	9/5/2019 11:54:09 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Maximum compacted thickness of any one layer shall not exceed 6".		Base was placed in 6" lifts.	Conformance	3/5/2021 7:07:59 AM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Aggregates mixed by method to insure thorough and homogeneous mixture.		Aggregates were mixed thoroughly.	Conformance	3/5/2021 7:07:59 AM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		All density test performed passed with 95% or above.	Conformance	9/5/2019 11:54:09 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		95% of maximum density was achieved during compaction operation.	Conformance	3/5/2021 7:07:59 AM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Base course was compacted and density tests performed and passed.	Conformance	9/17/2019 9:36:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Density tests performed and passed.	Conformance	8/12/2019 2:09:42 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Optimum moisture was in spec.	Conformance	9/17/2019 9:36:45 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Optimum moisture did not exceed +/- 2%.	Conformance	8/12/2019 2:09:42 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Compaction was achieved at optimum moisture content.	Conformance	3/5/2021 7:07:59 AM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Moisture content on tests taken were in spec.	Conformance	9/5/2019 11:54:09 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Moisture conditioning was being properly performed during compaction.	Conformance	9/5/2019 11:54:09 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Moisture conditioning was performed uniformly during compaction	Conformance	8/12/2019 2:09:42 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Water truck on site performing moisture conditioning.	Conformance	9/17/2019 9:36:45 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primer or pavement.		Surface base course was tested with 10' straightedge by IQC.	Conformance	9/17/2019 9:36:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface was tested with a 10' straightedge.	Conformance	9/5/2019 11:54:09 AM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Reflector strips were installed in accordance with CDOT M&S Standards.	Conformance	12/2/2019 10:22:33 AM -07:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Reflector strips were installed as per standards.	Conformance	12/4/2019 6:22:31 AM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		This work consists of the construction of curb, gutter or combination curb and gutter in accordance with these specifications and in conformity with the lines and grades as shown on the plans or established.		Work performed in accordance with plans and specifications to include the lines and grades of fine grading bed course material for curb and gutter placement.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Bed Course Material 703.07		Bed course material utilized for fine grading of curb and gutter is in conformance with the plans and specifications.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(a) Graded and compacted properly?		Material was graded and compacted properly.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(b) Soft spots indentified and corrected?		Any questionable soft spots were identified and addressed correctly prior to concrete placement for curb and gutter.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(c) Cross-slope, elevation, and alignment correct?		Elevation and alignment of curb and gutter appeared to be correct and to match existing curb and gutter that was to be tied into.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(d) Ground conditions suitable?		Ground conditions were in adequate condition, smooth, hard, and of proper moisture for placement operations.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(e) Approved?		IQC observed, inspected with pre-pour walkthrough, and accepted the grade for curb and gutter placement.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Excavation. Excavation and bedding shall conform to the requirements of subsection 608.03 (a).		Excavation and bedding material conformed to the requirements as stated in previous Requirement #2.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(a) Set to proper line and elevation?		Grade and formwork appeared to be set to the proper line and elevation per plan.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(b) Set per grade stakes?		Grade and formwork set to the survey grade stakes.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(a) Grade trimmed to correct cross-slope and elevation?		Grade was trimmed where needed to match plan elevation and cross-slope for drainage flow-line when curb and gutter placed.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		(b) Gradeline correct per grade stakes?		Gradeline appeared to be correct and within conformance per the survey grade stakes.	Conformance	3/27/2020 1:22:08 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Flatwork	Roadway		This work consists of the construction of bituminous or concrete sidewalks, bikeways, and curb ramps in accordance with these specifications and in conformity with the lines and grades shown on the plans or established.		Lines and grades matched.	Conformance	10/1/2020 10:34:50 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Concrete for sidewalks, bikeways, and curb ramps shall be Class B, and meet the requirements of Section 601.		Meets CCD/CDOT standards	Conformance	10/1/2020 10:34:50 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Excavation shall be made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation shall be shaped and compacted to a firm even surface conforming to the section shown on the plans or as staked. When the Engineer determines that material is uncompactable, the material shall be removed and replaced in accordance with subsection 206.03.		Excavation was adequate.	Conformance	10/1/2020 10:34:50 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Forms. Forms shall be of wood, metal, or other suitable material, and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. A satisfactory slip-form method may be used.		No signs of bulging.	Conformance	10/1/2020 10:34:50 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Joints. Expansion joints, at intervals of not more than 500 feet, shall be filled with 1/2 inch thick full depth, preformed expansion joint filler. The sidewalk or bikeway shall be divided into sections by dummy joints formed by a jointing tool or other acceptable means as directed. These dummy joints shall extend into the concrete for at least 1/4 of the depth and shall be approximately 1/8 inch wide. Dummy joints shall be spaced at intervals approximately equal to the width of the sidewalk or bikeway.		Joints were placed. Match C&G	Conformance	10/1/2020 10:34:50 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		This work consists of constructing a Concrete Panel Facing Mechanically Stabilized Earth (MSE) Retaining Wall System at the locations and to the lines and grades shown on the plans.		The MSE wall is being constructed to the lines and grades shown on the plans and as staked by survey in the field.	Conformance	5/20/2019 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	This work consists of constructing a Concrete Panel Facing Mechanically Stabilized Earth (MSE) Retaining Wall System at the locations and to the lines and grades shown on the plans.		I observed the survey crew out shooting lines and grades for wall placement to the correct locations and grades.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Either metallic or geosynthetic reinforcement (woven fabrics or geogrids) as specified in this specification may be used as MSE reinforcement in the reinforced structure backfill zone.		Reinforcement within the structural backfill zone complies with the specifications.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Either metallic or geosynthetic reinforcement (woven fabrics or geogrids) as specified in this specification may be used as MSE reinforcement in the reinforced structure backfill zone.		Metallic (galvanized metal straps) are being used as MSE reinforcement in the backfill zone.	Conformance	5/20/2019 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The Contractor shall submit six sets of shop drawings and certified material test reports for review prior to construction of the wall.		Class 1 Backfill Material was placed at risk by the contractor, as not all of the applicable material tests had been completed prior to construction of 624-W1. More specifically, the direct shear test report was yet to be determined at this time.	Test results since been documented and returned to Developer.	5/13/2019 6:56:34 AM -06:00	Audit Comment	acknowledged. KIC has since received the test results.	Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The shop drawings shall provide the details necessary to demonstrate compliance with the Contract, including the items listed in 504.02 (a) through (m).		Shop drawings provide the necessary details, as required, to comply with the contract for the construction of MSE Walls.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Unless otherwise specified on the plans, wall backfill material in the reinforced structure backfill zone and the associated trapezoidal retained structure backfill zone shall conform to the requirements for Structure Backfill (Class 1) of Section 206.		The backfill material went out of the specifications and the Contractor removed the out of tolerance material and only placed new fill material when it was back within specifications.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Unless otherwise specified on the plans, wall backfill material in the reinforced structure backfill zone and the associated trapezoidal retained structure backfill zone shall conform to the requirements for Structure Backfill (Class 1) of Section 206.		Class 1 Material is being utilized within the reinforced structure backfill zone.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless otherwise specified on the plans, wall backfill material in the reinforced structure backfill zone and the associated trapezoidal retained structure backfill zone shall conform to the requirements for Structure Backfill (Class 1) of Section 206.		The backfill material in the reinforced structure backfill zone and the associated trapezoidal retained structure backfill zone conforms to the requirements for Structure Backfill (Class 1) of Section 206.	Conformance	5/20/2019 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Concrete for the leveling pad shall be Concrete (Class D) conforming to the requirements of Section 601.		The concrete that I have observed being poured for the leveling pad is Class D that conforms to the requirements of Section 601 and is of an IQC approved mix design.	Conformance	5/20/2019 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Concrete for the leveling pad shall be Concrete (Class D) conforming to the requirements of Section 601.		Concrete utilized for leveling pad placement conformed to the requirement of Class D.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Concrete for the leveling pad shall be Concrete (Class D) conforming to the requirements of Section 601.		The concrete batch tickets indicated that the concrete was of the correct class and conformed to the requirements of Section 601.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	The geomembrane shall meet the requirements of subsection 712.08 for geomembrane, and shall have a minimum thickness of 30 mils.		The geomembrane meets the requirements of subsection 712.08 and has a minimum thickness of 30 mils.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The geomembrane shall meet the requirements of subsection 712.08 for geomembrane, and shall have a minimum thickness of 30 mils.		Geomembrane complies with the requirements as set forth in subsection 712.08, to include a minimum thickness of 30 mils.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The geomembrane shall meet the requirements of subsection 712.08 for geomembrane, and shall have a minimum thickness of 30 mils.		The geomembrane meets the requirements of subsection 712.08 for geomembrane, meets the required minimum thickness and is from an approved supplier.	Conformance	5/20/2019 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		The precast concrete panels shall conform to the requirements shown on the plans and these specifications, including the color, texture, dimensions and pattern.	Conformance	5/20/2019 8:10:08 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		The pattern on the panel installed in the northeast quadrant is not correct.	The field repair to the pattern/panel is satisfactory.	5/20/2019 8:16:57 AM -06:00	Audit Comment	The repair of the pattern is now complete. Changes were made to the form at Pacheco.	Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		The precast concrete panels conform to the requirements shown on the plans and the specifications including color, texture, dimension and pattern.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		The precast concrete panels comply with the standards and specifications to include color, texture, dimensions, and pattern.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		The precast panels conform to the requirements shown on the plans and the specifications, including color, texture, dimensions and pattern.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Panel thickness shall be a minimum of 6 inches plus the depth of rustication.		The panel thickness is a minimum of 6 inches plus the depth of rustication.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Panel thickness shall be a minimum of 6 inches plus the depth of rustication.		The panel thickness meets the minimum requirement of 6 inches thick, plus the depth of rustification.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Construct MSE Wall	Walls		Panel thickness shall be a minimum of 6 inches plus the depth of rustication.		Panel thickness are at least 6 inches plus the depth of the rustification.	Conformance	5/20/2019 8:10:08 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		All unit dimensions shall be within ¼ inch of plan.		I spot checked unit dimensions and all were within 1/4" of the plan.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Squareness determined by the difference between two diagonals, shall not exceed ½ inch.		I spot checked multiple panels that were square, determined by measuring between the two diagonals.	Conformance	5/20/2019 8:10:09 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Squareness determined by the difference between two diagonals, shall not exceed ½ inch.		I checked several of the panels and the difference between two diagonals was less than 1/2 inch.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	The foreman shall be on the site for 100 percent of the time during which the work is being done.		I have been onsite several times and the foreman was onsite every time.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The foreman shall be on the site for 100 percent of the time during which the work is being done.		Assessor observed the foreman on-site at all times during site visits to the operation.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The foreman shall be on the site for 100 percent of the time during which the work is being done.		The foreman has been on site every time that I have been on site for an observation.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The resume and credentials of the foreman shall be submitted to the Engineer for approval prior to the Pre-construction Conference.		Please provide location of resume and credentials for the foreman overseeing MSE Wall Construction at 624-W1, to include experience in construction of atleast five transportation related MSE walls within the last three years.	Qualifications provided.	5/13/2019 6:53:49 AM -06:00	Audit Comment	The MSE wall manager, superintendent and foreman were discussed in the pre activity. The years of experience and qualifications are in the	Closed

Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	The wall test segment shall be constructed in the presence of the Technical Representative and the Engineer and shall include construction of each of the 5 elements listed in subsection 504.11 below.		I have not seen the RECo representative on site at any point when I have been at 624-W2.	The Reco rep was on-site but was driving a vehicle with no markings indicating that he was employed by Reco.	5/20/2019 8:18:43 AM -06:00	Audit Commen t	The Reco rep has been on-site.	Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The wall test segment shall be constructed in the presence of the Technical Representative and the Engineer and shall include construction of each of the 5 elements listed in subsection 504.11 below.		Assessor did not observe the Reinforced Earth Representative on-site during the initial segment of the wall constructed, which began on 624-W2 prior to the start of operations at 624-W1.	RECO to monitor work as needed and as work progresses.	5/13/2019 6:53:54 AM -06:00	Audit Commen t	RECO had a representati ve onsite for the first 2 days of constructio n on the wall. RECO will check in periodically as the work progresses	Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Before the start of wall construction, the Contractor shall provide a panel-placing plan and shall supply daily placement logs to the Engineer weekly and at the completion of the wall.		Please provide location of MSE Panel-Placing Plan, to include plan for curved layouts, special corner panels, sequence of panel placement, and construction off-sets as recommended by the manufacturer.	Placement plan provided.	5/13/2019 6:54:11 AM -06:00	Audit Commen t	See pre activity meeting minutes. Each wall has a specific plan. <a href="https://portal.kiewit.com/p:/teams/BW101001271/QUA_layo	Closed

Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The daily placement log shall consist of an elevation view of the wall showing the dates, number of panels placed, and the serial numbers of the panels placed.		Please provide location of daily placement log for MSE Wall 624-W1 Panels, to include elevation view of wall showing dates, number of panels placed, and serial numbers of panels.	Panel placement log provided in application utilized by Developer, called Tableau.	5/13/2019 6:55:18 AM -06:00	Audit Comment	KIC keeps track of the wall placement by panel utilizing Tableau. This program and tracking mechanism has been showed to the department in multiple task force meetings.	Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		Leveling Pad base was compacted to required density and tested prior to any formwork, and placement of concrete for leveling pad.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		I observed the base of the leveling pad being compacted and it was the same compaction as the cut area.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		The base of the leveling pad received the same compaction as the cut area required by subsection 203.07.	Conformance	5/20/2019 8:10:09 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		From my observations, the leveling pad received the same compaction as the cut area.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		The contractor graded the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length plus 18 as shown on the plans.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		The Contractor graded the foundation for the bottom of the wall to a width exceeding the limits of the Reinforcement Length plus 18 inches as shown on the plans.	Conformance	5/20/2019 8:10:09 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		The Contractor graded the foundation for the bottom of the wall for a width equal to or exceeding the limits for the RL plus 18 inches as shown on the plans.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Contractor graded the foundation bottom of wall to required width, equal to or exceeding the limits, of the reinforcement length, plus 18" as shown on the plans.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	This graded area shall be compacted with an appropriate vibratory roller weighing a minimum of 8 tons for at least five passes or as directed by the Engineer.		Graded area was compacted, tested for moisture density, and proof-rolled.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		This graded area shall be compacted with an appropriate vibratory roller weighing a minimum of 8 tons for at least five passes or as directed by the Engineer.		I researched the vibratory roller being used and it weighed more than the minimum eight tons, and was being used for five passes or more.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		This graded area shall be compacted with an appropriate vibratory roller weighing a minimum of 8 tons for at least five passes or as directed by the Engineer.		I looked up the vibratory roller that the Contractor was using and it weighed more than the minimum of 8 tons and the Contractor was making more than five passes.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		The maximum vertical step is less than 36 inches on the plans and in the field. The leveling pad has only been reinforced at the steps.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		After initial placement of concrete, reinforcement was not observed at the steps on the SW Quadrant of 624-W1. Area was saw cut at steps and removed entirely at this area. Reinforcement was placed and pad was re-poured to be within conformance.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		The level pad vertical step in the southeast quadrant does not have reinforcing steel or a vertical concrete face on the step and is not built according to plan sheet WS306.	The level pad vertical step in the southeast quadrant was removed and replaced with reinforcing steel in place.	5/20/2019 8:17:49 AM -06:00	NC-2	Please see NCR-700	Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		The maximum vertical step is no greater than 36 inches and reinforcing steel was installed at the steps.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		The maximum vertical step on was less than 36 inches and none were shown on the plans greater than that. The leveling pad was only reinforced at the steps.	Conformance	5/20/2019 8:10:09 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The foundation of the leveling pads shall meet the requirement of subsection 504.11.		The foundation of the leveling pad meets the requirements of subsection 504.11. I observed the representative at the project site on a couple of different occasions.	Conformance	5/20/2019 8:10:09 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The foundation of the leveling pads shall meet the requirement of subsection 504.11.		Foundation of leveling pad complies with the requirements of subsection 504.11, to include reinforcement of the steps.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The foundation of the leveling pads shall meet the requirement of subsection 504.11.		The leveling pad foundation meets the requirement of subsection 504.11 and the representative has been present at this site.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The leveling pad shall be level within the tolerance of ? inch for any two points along the length of a panel, and within ¼ inch for any two points 10 feet apart.		I observed the IQC tech checking the levelness of the leveling pad, and it was within tolerance.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Shimming material in place to support the bottom edge of precast panels that are directly founded on the leveling pad.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Cushion or shimming material (expansion joint material, concrete mortar grout, roofing felt, or geosynthetic reinforcement) shall be used to support panels directly founded on the leveling pad.		Cushions/shims were installed to support panels directly placed on the leveling pad.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		Observed 2 shims placed on bottom of first layer of panels to provide protection and level panel on level pad.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		No more than 2 shims (each 3/16 inch thick) should be required to level the panels on the leveling pad.		I observed no more than 2 (3/16 inch) shims per panel.	Conformance	5/20/2019 8:10:09 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The wooden wedges shall be made from hard wood (such as oak, maple or ash).		Wooden wedges utilized are of solid, hard wood.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Leveling pad concrete shall be cured for at least 12 hours before placement of the concrete panels.		Leveling pad concrete was cured for more than 12 hours prior to placement of the concrete panels.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Leveling pad concrete shall be cured for at least 12 hours before placement of the concrete panels.		Leveling Pad was allowed proper amount of curing time prior to the placement of concrete panels.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Leveling pad concrete shall be cured for at least 12 hours before placement of the concrete panels.		The leveling pad concrete was cured for more than 12 hours before setting panels.	Conformance	5/20/2019 8:10:09 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		I observed no panels with an overall negative batter.	Conformance	5/20/2019 8:10:09 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	An overall negative batter (wall face leaning outward) between the bottom and the top of the wall is not allowed.		I have observed the contractor using a straightedge on the wall and have not witnessed a negative batter situation.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	To avoid leaking or soil erosion through the joint, a filter fabric at least 12 inches wide shall be glued to the panels behind all vertical joints.		I have observed the proper filter fabric material installed at all the vertical joints that I have seen.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	To avoid leaking or soil erosion through the joint, a filter fabric at least 12 inches wide shall be glued to the panels behind all vertical joints.		Approved filter fabric, at least 12 inches wide, is being glued or nailed behind all vertical joints on the back face of the wall panels.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The reinforcement shall not be connected to the wall until the compacted fill is at or slightly higher than the location of the connector.		Reinforcement is not connected prior to the compacted fill being at or slightly higher than the location of respective connector on the back face of the wall panel.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The reinforced structure backfill zone and the retained structure backfill zone portion immediately behind the wall as defined on the plans shall be Structure Backfill (Class 1).		Class 1 Structure Backfill is being utilized within the reinforced structure backfill zone.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Each compacted layer of backfill within a distance equal to the reinforcement spacing away from the back of the panels shall not exceed 4 inches. (Plate compaction zone)		Plate compaction zone, within 3 feet of the back face of the wall, is not exceeding backfill requirements of 4" loose lift.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Each compacted layer of backfill shall be in even increments up to 8 inches thick.		Backfill layers are being compacted in increments of no more than 8" loose thickness.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	Each compacted layer of backfill shall be in even increments up to 8 inches thick.		The compacted layers of backfill that I have observed have been 8 inches or less in thickness.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Each compacted layer of backfill shall be in even increments up to 8 inches thick.		All the compacted layers of backfill that I have observed have been in even increments up to eight inches thick.	Conformance	5/20/2019 8:10:34 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	All Structure Backfill (Class 1) including fill material under the wall and on-site material as allowed by subsection 504.03 shall be compacted to a density of at least 95 percent of the maximum density according to AASHTO T 180.		Class 1 Backfill Material is being compacted and moisture conditioned to the required 95% of maximum density as identified by AASHTO T 180.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Only power operated roller or plate compaction equipment weighing less than 1,000 pounds is allowed within 3 feet of the front of the wall face.		Plate compaction equipment being utilized within the 3 foot zone of the front face of the wall.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	To avoid the foundation of the leveling pad being washed out by rain, the area in front of the wall and around the leveling pad shall be backfilled as soon as practicable.		Area in front of leveling pad was backfilled as soon as practicable as the elevation of the wall increases.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The drainage system shall consist of a 12 inch wide geocomposite strip drain inserted into a slot in the geomembrane, at 10 foot maximum spacing, that collects the water from the membrane and conveys it to a water collector system (Called out on the shop drawings as the drain detail).		Drainage system consists of 12" wide geocomposite strip drains at 10' intervals as detailed in the shop drawings and RFC plan drawings.	Conformance	3/6/2019 2:02:12 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	The water collector system shall consist of a 4 inch diameter perforated collector pipe surrounded by Filter Material Class B and wrapped with class 3 geotextile.		Water collector system, under-drain, was installed utilizing a 4" diameter perforated collector pipe and surrounded with Filter Material Class B, and wrapped with Class 3 Geotextile.	Conformance	3/6/2019 2:02:13 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	MSE Walls (Old)	Walls	2/16/2019 3:34:18 PM - 07:00	The water collector system shall consist of a 4 inch diameter perforated collector pipe surrounded by Filter Material Class B and wrapped with class 3 geotextile.		The water collector system that I observed being installed was done correctly and the IQC inspector showed me several pictures of additional water collectors that were installed correctly also.	Conformance	2/15/2019 11:40:53 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	A 4 inch diameter non-perforated drain pipe, at 100 foot maximum spacing, shall be used to discharge the water in the water collector system out the face of the wall.		4" Diameter, non-perforated, drain pipe was installed per the detail included in the RFC plans, and complies with the standards & specifications.	Conformance	3/6/2019 2:02:13 PM -07:00	C		Closed
Central 70	C 0704-241	MSE Walls (Old)	Walls	3/6/2019 3:42:42 PM - 07:00	Cover on the back face of the wall for horizontal and vertical joints is required between panels and shall be a drainage geotextile conforming to Subsection 712.08, a minimum of 12 inches wide, nailed or glued in place prior to placing backfill.		Cover on the back face of wall panels complies with subsection 712.08, including a minimum 12" wide geotextile nailed or glued prior to backfill along all horizontal and vertical joints.	Conformance	3/6/2019 2:02:13 PM -07:00	C		Closed
Central 70	C 0704-241	Wall Facing	Aesthetics	3/11/2019 3:19:24 PM - 06:00	All damages to a completed wall or parts of a completed wall, including blemishes and discoloring of panels, shall be replaced or repaired before final payment is made. Sand blasting may be used if approved by the Engineer.		Observed damaged MSE Panel placed on 624-W2 in the Southeast Quadrant.	Addressed in NCR 0773.	4/29/2019 8:37:12 AM -06:00	NC-2	Please see NCR-773	Closed

Central 70	C 0704-241		IAT Materials Testing	2/21/2019 2:44:57 PM - 07:00	Soil Compaction - M/D Gauge per CP 80		While both Tedeles and my results for % Compaction & % Moisture were within the given tolerance of 2% the Curve chosen by IQC representative Tedle could not be verified by 1-point.	Tedele retest passed.	5/7/2019 4:35:40 PM -06:00	Audit Comment	Process has changed to have PC initially select the Proctor and validate the Proctor via one point. IQC will then verify the Proctor selected by PC. If IQC density test does not correlate to the Proctor provided, IQC will perform a one point to select another Proctor for relative compaction determination.	Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241		IAT Materials Testing	3/21/2019 9:21:50 AM - 06:00	Soil Compaction - M/D Gauge per CP 80		IAT & OVT 1-points matched eachother but did not match the selected IQC curve. There appeared to be a repeatable 2lb difference in points pounded by hand vs. those pounded by the auto proctor hammer.	IAT continues to run on the high end of the 2 pcf allowable difference per CDOT Field Materials Manual. This issue continues to be present in the field but a proper procedure has been developed to get 1-point results quickly and inform the contractor of any re-work due to possible failing material	6/10/2019 11:37:59 AM -06:00	Audit Comment	1-IQC,OVT, and IAT recalibrate all molds, hammers, and mechanical machine. 2-Moved mechanical machine to a better spot. 3-Also, 3 labs split a sample and ran them. In the material meeting IQC asked OVT and IAT to use non split mold. after doing all the recalibrating and testing, all labs now are in tolerance.	Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		backfilled appropriately	Conformance	10/31/2019 7:42:37 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		backfilled appropriately	Conformance	10/31/2019 7:41:08 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Backfill shall consist of approved materials uniformly distributed in layers brought up equally on all sides of the structure.		Backfilled appropriately	Conformance	10/31/2019 7:40:32 AM -06:00	C		Closed

Central 70	C 0704-241	UPRR	Railroads		Shoring shall be constructed in conformity with the shoring drawings provided to the Engineer.		Construction of shoring elements (i.e. Soldier Piles) are being constructed in accordance with the conditionally approved shoring plans; including piles in need of temporary casing during drilling operations, as well as minimum imbedment being reached. Conditionally approved plans (as of 2/17/19) allow for WA1-WA5 & WB11-WB19 to be drilled.	Conformance	2/18/2019 11:14:11 AM -07:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Shoring shall be constructed in conformity with the shoring drawings provided to the Engineer.		The Contractor is constructing the shoring in conformity with the drawings provided to the Engineer.	Conformance	4/17/2019 2:17:18 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Shoring drawings shall include 206.09 items (1) through (5).		The shoring drawings include 206.09 items (1) through (5).	Conformance	4/17/2019 2:17:18 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Shoring drawings shall include 206.09 items (1) through (5).		Applicable Requirements / General Notes have been included within the UPRR West Shoofly Walls Shoring Drawings.	Conformance	2/18/2019 11:14:11 AM -07:00	C		Closed

Central 70	C 0704-241		IAT Materials Testing		Air Content - Air Meter per AASHTO T 152		<p>A Significant Difference of greater than 0.5% was detected during a qualification of Jon Olson for 601 Concrete. After fabricating my cylinders I performed a 5% displacement calibration at my lab trailer. My Air Meter was found to be in calibration. I then asked the owner of the Air Meter in question, Lev to perform a quick check of his calibration. He did a quick check with a 5% "bomb". It initially read 5% but when I released the remaining air in the cylinder the reading became 5.4%. Lev checked 1 more time. Again it read 5% Initially. I released the remainder of the air and the reading was 5.5%.</p> <p>With all that in mind I believe it was not the fault of the tester but equipment that had been improperly calibrated or damaged. The valve did not open with ease allowing the release of the compressed air into the concrete chamber.</p>	A retest with Jon Olsen w/Yeh & Associates yielded an acceptable minor difference on Both Air content and Slump	3/8/2019 10:46:35 AM -07:00	Audit Comment	Air meter has been recalibrated . Next calibration is due June 1, 2019.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	5/22/2019 4:41:01 PM - 06:00	Air Content - Air Meter per AASHTO T 152		A significant difference of greater than 0.5% (6.8% IQC & 5.5% IAT) was detected during a qualification of Chris Halbach for 601 Concrete. During the test he appeared to follow AASHTO T152. All three testers' unit weights were very close to each other but Chris' measured air content far exceeded both PC(PSI) and IAT. The previous concrete qualification that was performed on Chris Halbach was on 503 concrete where Air content is not required to be tested per MTIP/FMM.	The retest of Chris Halbach on 601 concrete yielded a difference well within the tolerance of 0.5%. The Tester as well as supervisors were very attentive and thorough through while addressing this significant difference.	6/11/2019 10:58:57 AM -06:00	Audit Comment	Due to the significant difference observed between test results, the Type B pressure air meter was recalibrated . The IAT testing was redone on 5/17/2019 and documented on work order number 19-1239-C03 and the retest results were within the appropriate tolerance.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	3/12/2019 12:53:44 PM - 06:00	Air Content - Air Meter per AASHTO T 152		A significant difference of greater than 0.5% (6.8% IQC & 5.7% IAT) was detected during a qualification of Shyam Dhruv for 601 Concrete. During the test he appeared to follow AASHTO T152. Just prior to testing I observed Shyam w/Ground appearing to adjust his gauge on top of his air meter. IQC shall work with IAT to determine the cause of this significant difference and schedule a re-test once the issue is resolved.	The Retest on Shyam for 601 Concrete yielded and acceptable difference less than 0.5%. The report of the retest is attached.	6/27/2019 6:38:30 AM -06:00	Audit Comment	IQC took Shyam's air meter out of service the same day. Ground engineer gave shyam another calibrated air meter. Shyam was trained on how to calibrate air meter in the field or at the lab. Those are the steps IQC took to fix the issue. Next day Shyam retested with IAT all result were in tolerance.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	4/5/2019 2:26:20 PM - 06:00	Compressive Strength - Compressive Strength per ASTM C 39		A Significant Difference of greater than 10% of the Average IAT 28-day day strength was detected during a qualification/Spotcheck of Mahdi Almahasnah for 601Lab. IAT 28-day Strength was 16% higher than IQC's passing 28-day break strength. I spoke with the IQC Inspector(Jennie Honeycutt) on site that day and she reminded me of low/freezing ambient air temperatures during the day. it is unclear if there was proper protection in the IQC cure box to prevent freezing temperatures from effecting the initial cure of the strength specimens.	The differences in IQC and IAT initial curing techniques may lead to differences in compressive strength. However a greater than 10% difference is unlikely. In a conversation with Mahdi Almahasnah, he indicated that proper curing procedures were discussed with all personnel and as weather changes those needs will change.	6/17/2019 12:05:24 PM -06:00	Audit Comment	IQC cylinders were made in the field and cured in the field for one day. IAT cylinders were made outside of the lab and cured in the tank. After IQC has been notified we looked into the issue. IQC believe after looking at the inspector checklist, the day the cylinders cured in a cooler in the field, Temperature reached to freezing. Therefore we believe the curing is the difference not the breaking of cylinders	Closed
Central 70	C 0704-241	Ramp Meter	Electrical		Electrical conduit that is installed by direct burial methods such as plowing, open trenching, or other excavation methods shall be PVC or HDPE.		HDPE Conduit was installed via open trench.	Conformance	11/19/2019 8:06:06 AM -07:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.		Conduit in bore bundle consists of HDPE conduit	Conformance	9/8/2020 12:45:40 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		During construction operations, the Contractor shall maintain boring logs that include the depth at specific distances along the bore. Boring logs shall be submitted on a weekly basis.		Borelogs updated through bore process and submitted to ACONEX	Conformance	9/8/2020 12:45:40 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit splices shall be kept to a minimum and all such locations shall be Approved and inspected by the Engineer and the authority having jurisdiction.		Conduit splice approved by CDOT representative	Conformance	9/8/2020 12:45:40 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed.		Conduit plugs installed upon completion	Conformance	9/8/2020 12:45:40 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All conduits ends shall be free from sharp edges and burrs.		Conduit was reamed before installing SHUR-LOK conduit splice coupler	Conformance	9/8/2020 12:45:40 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Structural Carbon Steel. Structural carbon steel for bolted or welded construction shall conform to AASHTO M 270 (ASTM A 709) Grade 36. Material supplied for main members in tension as designated in the Contract shall meet a longitudinal Charpy V-notch (CVN) value of 15 foot-pounds at 40 °F. Testing shall be in accordance with AASHTO T 243 (ASTM A 673). The H frequency of heat testing shall be used.		All bolted structural steel met the requirements of AASHTO M 270 (ASTM A 709) Grade 36.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Steel conforming to AASHTO M 270 (ASTM A 709) Grade 50W shall not be painted unless otherwise shown on the plans.		All structural steel is of the weathering type and will not be painted.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Material supplied for main members in tension, as designated in the Contract, shall meet the longitudinal Charpy V-notch tests as specified for Zone 2 in AASHTO M 270.		All members that will be in tension, as designated in the contract, met the longitudinal Charpy V-notch tests as specified for Zone 2 in AASHTO M 270.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Structures		Mill Test Reports. The fabricator shall furnish the quality assurance inspector with copies of the certified mill test reports on all material that will be used. Mill test reports shall be furnished prior to cutting of the steel or any other fabrication. The fabricator may furnish, with the approval of the Engineer, material from stock, provided it can be identified by rolling direction (where orientation is specified), heat number, and mill test reports.		The QA inspector was supplied with copies of all the CMTR'S for all materials used.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		All washers shall be hardened steel washers conforming to the requirements of AASHTO M293 (ASTM F436). The washers shall be specifically marked to identify the manufacturer.		All washers were of the hardened steel type, conforming to the requirements of AASHTO M293 (ASTM F436). The washer were marked to identify the manufacturer.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		High Strength Bolts. All bolts used in fastening structural steel connections shall conform to the requirements of AASHTO M 164 (ASTM A 325), commonly known as High Strength Structural Bolts (HS). Heavy Hex Structural or Tension Control Bolts with suitable Heavy Hex Nuts and Plain Hardened Washers shall be provided. Type 1 bolts shall be provided for painted and Type 3 bolts for weathering (AASHTO M 222) structural steel. The length of bolts shall be such that the end of bolt will be flush with or outside the face of the nut when properly installed. Sufficient thread shall be provided to prevent the nut from encountering thread runoff.		The bolts used in fastening the structural steel connection conformed to the requirements of AASHTO M164 (ASTM A 325). Type 3 heavy hex structural bolts were supplied with suitable heavy hex nuts and plain hardened washers and all bolts were of a length to prevent thread runoff.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		(d) The bolt, nut, and washer assembly shall be tested in a Skidmore-Wilhelm Calibrator or an acceptable equivalent device.		The bolt, nut, washer, DTI assembly was tested in a Skidmore-Wilhelm calibrator and was observed by multiple members of the CDOT team.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Girders	Structures		Bolts, nuts, and washers (where required) from each rotational capacity lot shall be shipped in the same container. Each container shall be permanently marked with the rotational capacity lot number such that identification is possible at any stage prior to installation.		All bolts, nuts, washers and DTI's from each rotational capacity lot were shipped in the same container. All containers were well marked to prevent contamination of the lot.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Bearings. Bearings and bearing seats shall conform to Section 512.		IQC checked each bearing seat and bearing for conformance to Section 512.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Anchor bolts acceptable?		All anchor bolts were acceptable.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Structures		Handling and Installation. During erection the parts shall be accurately assembled, as shown on the plans, and match-marks shall be followed. The material shall be so handled that parts will not be bent, broken, or otherwise damaged. Hammering which will damage or distort the members will not be permitted. Bearing surfaces and surfaces to be in permanent contact shall be cleaned before members are assembled. Splices and field connections of main stress carrying members shall have a minimum of one half of the holes filled with high strength bolts and cylindrical erection pins, with the bolts fully tightened before external support systems are removed and the connections completed by belting, unless otherwise specified.		During structural steel erection, all parts were accurately assembled and had a good fit up. I observed no hammering other than a small amount to remove drift pins from the structure, and all bearing surfaces in permanent contact were cleaned before structural steel assembly. Splices and field connections all had over one half of the holes filled and all bolts were fully tightened before any external support was removed.	Conformance	4/15/2019 8:37:31 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Support of Excavation	Earthwork		<p>I. The SMP is a living document and shall be updated when a process, method, chemical or other Construction Work criteria changes that affects the safety of a person or property. The updated portion of the SMP shall be submitted for Acceptance.</p>	<p>Due to overhead site conditions, Kiewit staff did not follow the "Temporary Shoring Sequence" in the Safety Critical work plan. The crew adjusted appropriately to create adequate access for the equipment. This led to a safer and more efficient work area. Explanation below: Step #2= The crew was well aware of obstructions/utilities that are on the South side of the excavation. (Denver Waterline & CBC Box) Step #4= If pedestrians did enter the work area. The excavation was protected with the appropriate pedestrian fence. Step #5= Kiewit did not install the H-pile prior to the start of the excavation. The excavator & H-pile were too tall. The first lift of material had to be removed so enough clearance under the viaduct was provided. The first lift was 5 feet instead of the listed 4 ft. Step #6= Wood lagging "Douglas Fir #2 timber" was used to support the excavation</p>	Conformance	6/6/2019 10:55:53 AM -06:00	C		Closed

Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	9/27/2019 8:43:09 AM - 06:00	a. The TCP shall generally include all lane and shoulder configurations, including widths, traffic control signing, pavement markings, traffic control devices, temporary signalization, construction access, construction parking, emergency access, work areas, lighting, and pedestrian/bicycle movements necessary for each construction phase		Department cannot locate MOT signing sheets for the 270 phase that KMP switched to on 9-20-19. On 9-20-19 KMP switched to new 270 bridge. The EMT-1801 through 1804 sheets show the traffic on the old 270 bridge and is currently the best representation of the signing that should be in place (see attachments from requirement 1). KMP needs to ensure that signing is adequate for the current phase.	NCR 1531 confirmed	12/3/2019 4:40:12 PM -07:00	NC-2	See NCR 1531	Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	6/11/2019 3:33:10 PM - 06:00	The MHTs shall be submitted to the Department for Acceptance		The paving crew was observed moving equipment from 6307 to 6201 using a rolling closure. In order for the train to remain together and the chase vehicle to stay with the train the crew had to disregard the traffic signals at Central Park and I-70 Ramps. The approved method for performing this is through using a UTC.		7/17/2019 10:33:25 AM -06:00	NC-2	This issue will be tracked with NCR 1265	Closed

Central 70	C 0704-241	ITS	Electrical	6/4/2019 9:09:17 AM - 06:00	f. Temporary traffic signal and timing plans shall be designed, as necessary, to facilitate re-construction of any existing signalized intersection. Span wire type installations are permitted for temporary signals only. Poles shall be placed at locations that will facilitate all stages of intersection reconstruction and must meet clear zone requirements. Noninvasive loops are permitted for temporary installations. All traffic signal pole locations shall be staked in the field and approved by CCD and Accepted by the Department before installations. All traffic signal timing plans shall be coordinated and approved by CCD prior to implementation. The plans shall be submitted for Acceptance to the Department prior to implementation for both temporary and permanent installations;		Temp CCD fiber was installed on the viaduct between Columbine on the week of 5/20/2019 without RFC plans. NDC-000056 was received by the department on 5/24/2019. At 10:15am on 5/24/2019 a field visit was made to the splice trailer where the contractor was splicing the CCD signals to the new temp fiber. No plans or splice details could be produced by the contractor. Please refer to CAR 08 as this is another example of work performed without RFC'd plans.	Acceptable response	7/16/2019 8:56:02 AM -06:00	Audit Comment	KIC has began implementing CAR-008 action items. One of the actions is a new process with KMP the department to walk field issues and make quick decisions on field fit issues.	Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Ramp Meter	Electrical		<p>h. Existing ramp meter signal operations shall be maintained throughout construction. The Developer shall be responsible for the removal and disposal of existing signal equipment and structures that are to be replaced. The existing Type 170 controllers and serial communication for existing ramp meter locations shall be replaced with new Type 170 controllers (*CO-092) and Ethernet switches. If existing ramp meters are impacted as a part of the Project, new equipment shall be installed, as Approved by the Department (*CO-092). Existing ramp meters, listed below, and any added to temporary configurations need to continue operating with Type 170 controllers and serial communication until a full system switch-over to Ethernet (*CO-092) occurs. i. Westbound Central Park Boulevard (to I-270) (*CO-092);</p>		<p>Starting in June of 2019 all existing ramp meter locations were checked weekly, and any physical issues were reported to the developer. In all cases where issues were found, they have all been corrected within 24 hours.</p> <p>Because the project team us unable to check the status of the ramp meter network, a process has been developed to inform the department project team and the developer when there is a network or communication issue. An email distribution list was created to inform the project team when there is a network or comms issue. The developer then troubleshoots and corrects the issue and reports back through the email distribution chain. To date this process has worked extremely well.</p>	Conformance	11/20/2019 3:09:16 PM -07:00	C		Closed

Central 70	C 0704-241	ITS	Electrical		QSP-10 Restricted Activity Construction		Conduit duct bank installed matches restricted activity-QSP-10-02-Restricted Activity Construction Form-Clayton 46th Ave Signed 7-29-19.	Conformance	8/9/2019 9:26:47 AM -06:00	C		Closed
Central 70	C 0704-241	BMPs	Environmental	6/19/2019 9:06:41 PM - 06:00	20.1.2. Water quality activities shall be conducted in accordance with Section 208.		The Department has been informed by CCD that the storm drain inlets in the sump area of the relocated 46th eastbound lane at the southwest quadrant of 16th and Steele are "live" and will discharge into CCDs MS4. The BMPs at this location are either missing or inadequate. See attached photos for further details. IQC wrote NC 1140 on 06-13-2019 and KMP did respond by	ncr 1140	6/25/2019 12:35:09 PM -06:00	NC-2	This NCR was self reported by KMP (#1140). Please refer to the NCR. Work as described in the disposition is complete as of 6/19. Additionally the structures group is working on shocrete application.	Closed

							applying "dirt glue" to the slopes on 06-14-2019. While the dirt glue may be helping, it is not an adequate solution by itself. The sandy nature on the uncompacted soil above the inlets diminishes the effectiveness of the dirt glue. In addition, there are multiple other sources of sediment that will drain to this sump area in a rain event. Also, there are gaps in the orange inlet covers that will allow sediment laden water to bypass the BMP. (See photos 4, 6, and 7.) The gaps were scheduled to be corrected on the evening in 06-14-2019, however based on the photos it appears that this work was not completed.					
Central 70	C 0704-241	ITS	Electrical		Due to the risk of obsolescence, equipment should not be purchased or ordered more than six months prior to the installation date for any piece of equipment without prior written Acceptance by the Department.		Equipment tested in ITS test lab prior to install and installed within 6 months of testing	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Longitudinal conduits for the communications network shall be installed within the Right-of-Way (ROW) and as close to the ROW line as practical		ITS duct bank installed in the gore point between I270 and Cnetral Park. Well within I70 ROW.	Conformance	8/9/2019 10:46:28 AM -06:00	C		Closed

Central 70	C 0704-241	ITS	Electrical		i. Utilities shall not be permitted in the joint trench and shall not be permitted within 4 feet on either side of the joint trench.		No Utilities in joint trench. 5 Orange CDOT HDPE and 1 Green with Orange HDPE CCD conduit (s) in trench.	Conformance	5/22/2019 7:57:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Utilities shall not be permitted in the joint trench and shall not be permitted within 4 feet on either side of the joint trench.		No utilities are in the joint trench.	Conformance	7/16/2019 8:55:12 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Utilities shall not be permitted in the joint trench and shall not be permitted within 4 feet on either side of the joint trench.		Conduit was installed using a directional bore machine. No utilities within 4 feet of bore.	Conformance	8/16/2019 7:59:44 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Utilities shall not be permitted in the joint trench and shall not be permitted within 4 feet on either side of the joint trench.		No joint trench. Conduit was bored underground within the embankment.	Conformance	9/18/2019 10:12:39 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Wet Utilities are not allowed above or below the conduit duct bank except for crossings		No wet utilities in area.	Conformance	7/16/2019 8:55:12 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		i. Wet Utilities are not allowed above or below the conduit duct bank except for crossings		No wet utilities along the ITS duct bank.	Conformance	5/22/2019 7:57:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Wet Utilities are not allowed above or below the conduit duct bank except for crossings		No wet utilities present	Conformance	3/18/2020 1:46:26 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Wet Utilities are not allowed above or below the conduit duct bank except for crossings		No wet utilities in area.	Conformance	8/15/2019 3:37:29 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Wet Utilities are not allowed above or below the conduit duct bank except for crossings		Conduit was not installed above or below any wet utilities. There were two crossings over storm drains.	Conformance	7/23/2019 1:30:21 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		Conduit duct bank had at least 4' of cover in all areas checked.	Conformance	8/26/2019 9:27:31 AM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		Conduit was bored and trenched no more than 22" wide and at least 4" deep.	Conformance	8/16/2019 8:01:45 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		The Conduit duct bank provided at least 4 feet of cover. Areas measured where between 4'6" and 5'4".	Conformance	7/23/2019 1:30:21 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		ITS DB is less than 22" wide	Conformance	7/24/2020 12:22:26 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		Conduit trench was excavated using backhoe and does not exceed maximum width of 22 inches wide. Conduit was secured and bundled together with zip ties to prevent separation.	Conformance	2/17/2021 9:24:07 AM -07:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		Trench does not exceed 22 inches wide and is at a depth of 5'3".	Conformance	8/15/2019 3:38:19 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		As stated above conduit is at 5'3".	Conformance	8/15/2019 3:38:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Depth marking on bored locate do not exceed 6'.	Conformance	9/18/2019 10:12:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Bored conduit was between 4' and 6' deep	Conformance	8/16/2019 7:59:44 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Markings on pavement show bore shot between 4' and 6'.	Conformance	4/6/2020 1:42:31 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		One depth of the bore is shown at 7', but is acceptable.	Conformance	8/29/2019 10:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit bored in and marked in accordance to boreshot depth requirement	Conformance	10/8/2019 10:58:12 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		ITS duct bank sits at 4'9"	Conformance	7/24/2020 12:22:26 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit was installed 5'1" below final grade.	Conformance	9/24/2019 3:37:53 PM -06:00	C		Closed

Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit duct bank ranged between 3-1/2' to 4-1/2' deep.	Conformanc e	2/26/2020 10:28:44 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit was installed via boreshot and depths taken every 5 feet.	Conformanc e	10/10/2019 2:38:38 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical	10/23/2019 2:59:59 PM - 06:00	i. Conduit duct bank shall be no deeper than 6 feet		Conduit depth was measured in trench between 28" and 5'6". No conduit was deeper than 6'.	Conformance	10/23/2019 9:46:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical	10/23/2019 2:59:59 PM - 06:00	i. Cover and placement requirements for utilities, conduit, and duct bank shall be followed or as Approved by the Department;		Cover and placement requirement were meet or approved by the department and matched RFC'ed details.	Conformance	10/23/2019 9:46:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Cover and placement requirements for utilities, conduit, and duct bank shall be followed or as Approved by the Department;		Requirement met	Conformance	5/22/2019 7:57:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. Any interference between other conduits, drainage pipes and outlets shall be mitigated. The fiber conduits perpendicular to any drainage outlets shall be cast in concrete (Class BZ) to prevent it from floating upward to the surface. A design by the Developer shall be submitted for Acceptance if at least a 48-inch depth from the top of the conduit trench to the surface cast in concrete (Class BZ) cannot be accommodated. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore;		No interference between conduits in area.	Conformance	7/16/2019 8:55:12 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. Any interference between other conduits, drainage pipes and outlets shall be mitigated. The fiber conduits perpendicular to any drainage outlets shall be cast in concrete (Class BZ) to prevent it from floating upward to the surface. A design by the Developer shall be submitted for Acceptance if at least a 48-inch depth from the top of the conduit trench to the surface cast in concrete (Class BZ) cannot be accommodated. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore;		BZ concrete was used to mitigate conduit from floating.	Conformance	9/24/2019 3:37:53 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		ii. Any interference between other conduits, drainage pipes and outlets shall be mitigated. The fiber conduits perpendicular to any drainage outlets shall be cast in concrete (Class BZ) to prevent it from floating upward to the surface. A design by the Developer shall be submitted for Acceptance if at least a 48-inch depth from the top of the conduit trench to the surface cast in concrete (Class BZ) cannot be accommodated. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore;		At two storm drain crossing the 4' coverage was not able to be obtained. BZ concrete was brought in to cap the area where appropriate depth wasn't attained.	Conformance	7/23/2019 1:30:21 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		ii. Any interference between other conduits, drainage pipes and outlets shall be mitigated. The fiber conduits perpendicular to any drainage outlets shall be cast in concrete (Class BZ) to prevent it from floating upward to the surface. A design by the Developer shall be submitted for Acceptance if at least a 48-inch depth from the top of the conduit trench to the surface cast in concrete (Class BZ) cannot be accommodated. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore;		Installed conduit does not interfere with any existing utilities or conduit in area.	Conformance	8/15/2019 3:38:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. The fiber conduits perpendicular to any drainage outlets shall be capped (*CO-049) in concrete (Class BZ) to prevent it from floating upward to the surface		No drainage crossings.	Conformance	7/16/2019 8:55:12 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. The fiber conduits perpendicular to any drainage outlets shall be capped (*CO-049) in concrete (Class BZ) to prevent it from floating upward to the surface		No drainage outlets present	Conformance	5/22/2019 7:57:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. The fiber conduits perpendicular to any drainage outlets shall be capped (*CO-049) in concrete (Class BZ) to prevent it from floating upward to the surface		Drainage crossing in area was avoided by running ITS dB conduit underneath drainage and was cast in BZ concrete.	Conformance	11/11/2019 12:03:55 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical	10/23/2019 2:59:59 PM - 06:00	ii. A design by the Developer shall be submitted for Acceptance if at least a 48-inch depth from the top of the conduit trench to the surface cast in concrete (Class BZ) cannot be accommodated		An RFC design by the developer has been accepted for situations where conduit depth of 48" can not be meet.	Conformanc e	10/23/2019 9:46:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore.		Two Zayo 6" conduit, five orange 2" CDOT conduit and one CCD 2" conduit bored in and pulled in a bundle.	Conformanc e	10/10/2019 12:38:50 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore.		Conduits bored and pulled in a bundle per requirements	Conformanc e	10/10/2019 2:38:38 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore.		All conduit was installed in a trench. No boring.	Conformanc e	2/26/2020 10:28:44 AM -07:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately after conduit install.	Conformance	8/15/2019 3:37:29 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		All conduit(CDOT and CCD) plugged immediately after installation.	Conformance	5/22/2019 7:57:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed in all conduits after install.	Conformance	1/28/2020 10:42:43 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed right away.	Conformance	9/26/2019 11:00:44 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs immediately upon installation	Conformance	3/18/2020 1:46:26 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		All installed conduit that was observed had conduit plugs installed.	Conformance	8/26/2019 9:27:31 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed directly after conduit was cut and in the ground.	Conformance	8/9/2019 10:46:28 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		All conduit ends were verified that conduit plugs were installed.	Conformance	7/23/2019 1:30:21 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		All new conduits had Conduit plugs installed after installation.	Conformance	8/16/2019 8:01:45 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately.	Conformance	10/8/2019 10:58:12 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately upon completion	Conformance	7/24/2020 12:22:26 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Plugs were installed immediately.	Conformance	9/24/2019 3:37:53 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Water-tight mechanical plugs were installed prior to conduit needing to be spliced together to prevent weather and dirt from entering conduit.	Conformance	2/17/2021 9:24:07 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were not installed immediately after the bore show was complete, but contractor left to get plugs and had the conduit plugged by the end of the day.	Conformance	8/16/2019 7:59:44 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed promptly after bore was complete.	Conformance	4/6/2020 1:42:31 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed immediately after conduit pulgs.	Conformance	8/29/2019 10:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed in all bored conduit.	Conformance	9/18/2019 10:12:40 AM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		All conduit plugs were installed immediately.	Conformance	8/9/2019 2:00:38 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		All conduit were plugged immediately upon installation.	Conformance	8/15/2019 3:38:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduits were observed to have duct plugs at the end of each shift.	Conformance	2/26/2020 10:28:44 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately after being cut from reels and after install into manholes.	Conformance	10/10/2019 12:38:50 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately after cutting from reels and after pulling conduit through boreshot.	Conformance	10/10/2019 2:38:38 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical	10/23/2019 2:59:59 PM -06:00	iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed in all conduits immediately after installation.	Conformance	10/23/2019 9:46:46 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed immediately after conduit was pulled from trailers and placed in trench.	Conformance	11/11/2019 12:03:55 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The DMS shall be centered over the General Purpose Lanes, except at Approved cantilever locations, and but be visible to all Users (*CO-049).		DMS is centered above lanes	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The DMS walkway shall be mesh with a maximum diameter of 1/2-inch to prevent dropped tools and debris from falling onto the travelled way		DMS walkway is mesh and diameter of cutouts is less than 1/2"	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		In addition, the walkway shall be Occupational Safety and Health Administration (OSHA) compliant with side rails and toe kicks		Walkway is OSHA compliant	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A. The sign shall utilize light emitting diode (LED) displays;		DMS is full color LED technology	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		B. The sign shall be equipped with the ability to display three lines of text with a character height of 18-inches and 18 characters minimum per line;		Sign is equipped with 3 lines of text capability	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		C. The sign shall utilize a full-color, full-matrix display and utilize a 24 bit red, green, blue color with a 32-35 mm pixel spacing (approximate size 26 feet width, 8.5 feet height by 4 feet depth with a tolerable variation of plus or minus 7-inches);		Sign is compliant with full color requirements	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		D. The sign shall have a walk-in cabinet;		Sign is accessible by ladder mounted to overhead structure and is a walk-in DMS	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		E. The sign viewing angle shall be 30 degrees;		Sign viewing angle installed at 30 degrees from the roadway viewing angle	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. The DMS shall be installed in accordance with manufacturer's recommendations		DMS installed per manufacturer recommendations.	Conformance	7/24/2020 9:17:23 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		utilize fiberglass reinforced, polymer concrete pull boxes and pre-cast concrete manholes with the interior dimensions of 4 feet (width) by 4 feet (length) by 4 feet (depth), with a cast iron frame ring and cover		Pullbox is made from fiberglass reinforced concrete and manhole is 5'x5'x5' (changed from 4'x4'x4' with NDC)	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall be 24-inches by 36-inches minimum for fiber laterals or ITS and ETC power locations and manholes shall be used for all CDOT fiber backbone locations		CCD Pullbox is 24x36	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall be 24-inches by 36-inches minimum for fiber laterals or ITS and ETC power locations and manholes shall be used for all CDOT fiber backbone locations		Pullboxes are 24x36 inches.	Conformance	6/10/2019 1:37:54 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall be 24-inches by 36-inches minimum for fiber laterals or ITS and ETC power locations and manholes shall be used for all CDOT fiber backbone locations		Pullboxes(2) are 24"x36"	Conformance	10/14/2019 8:00:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall be 24-inches by 36-inches minimum for fiber laterals or ITS and ETC power locations and manholes shall be used for all CDOT fiber backbone locations		Pullbox measures 24"x36" after previous NC for incorrect pullbox size	Conformance	12/12/2019 9:48:50 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A. The manholes and pull boxes shall be clustered in a group wherever possible;		Power pullbox and Fiber lateral pullbox are installed in a cluster.	Conformance	12/12/2019 9:48:50 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		A. The manholes and pull boxes shall be clustered in a group wherever possible;		Pullboxes installed in a cluster.	Conformance	8/23/2019 10:33:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A. The manholes and pull boxes shall be clustered in a group wherever possible;		CDOT communications pullbox and CDOT power pullbox are clustered together 2' apart.	Conformance	10/14/2019 8:00:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A. The manholes and pull boxes shall be clustered in a group wherever possible;		CDOT and Zayo manholes installed in cluster.	Conformance	10/10/2019 12:38:50 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A. The manholes and pull boxes shall be clustered in a group wherever possible;		Manhole and pullbox in area are clustered together.	Conformance	8/15/2019 3:37:57 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A. The manholes and pull boxes shall be clustered in a group wherever possible;		4 total pullboxes are clustered together.	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		B. Pull boxes are not allowed in traffic areas, paved shoulders, paved roadways, and sidewalks, unless otherwise Approved by the Department. Where Approved by the Department, pull boxes in traffic areas shall be traffic rated. (*CO-029) No fiber optic splicing shall be performed in CDOT pull boxes;		As shown in previous pictures the pullboxes are installed on a slope and are not placed within traffic of shoulders.	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		B. Pull boxes are not allowed in traffic areas, paved shoulders, paved roadways, and sidewalks, unless otherwise Approved by the Department. Where Approved by the Department, pull boxes in traffic areas shall be traffic rated. (*CO-029) No fiber optic splicing shall be performed in CDOT pull boxes;		Pullbox is not in future roadway plan or paved shoulder area.	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		B. Pull boxes are not allowed in traffic areas, paved shoulders, paved roadways, and sidewalks, unless otherwise Approved by the Department. Where Approved by the Department, pull boxes in traffic areas shall be traffic rated. (*CO-029) No fiber optic splicing shall be performed in CDOT pull boxes;		Pullboxes are 30 feet from roadway.	Conformance	8/23/2019 10:33:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		C. Manholes are not allowed in paved shoulders or paved roadways, unless specifically Approved by the Department;		Manhole is not in future roadway plan or in paved shoulder.	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		D. The CDOT and Zayo manholes shall be spaced no greater than 1,200 feet apart and CCD pull boxes shall be spaced no greater than 500 feet apart, unless otherwise Approved *CO-011 by the Department;		Pullbox and Manholes are spaced correctly.	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		E. Pull boxes for ITS and ETC power shall be spaced no greater than 300 feet apart as Accepted by the Department;		Distance between pullboxes is minimal due to Schedule 10 Section 3 requirement of pullbox clustering whenever possible.	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		E. Pull boxes for ITS and ETC power shall be spaced no greater than 300 feet apart as Accepted by the Department;		Pullboxes are currently spaced 4 feet apart.	Conformance	8/23/2019 10:33:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		F. Pull boxes or manholes shall be placed within 20 feet of the ITS and ETC equipment as Accepted by the Department, in safe, easy to access locations; and		Pullboxes are installed within 10 ft. of future location for a CCTV, DSRC and EFS.	Conformance	12/12/2019 9:48:50 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		F. Pull boxes or manholes shall be placed within 20 feet of the ITS and ETC equipment as Accepted by the Department, in safe, easy to access locations; and		Future ITS pole will be 5 feet from pullbox cluster.	Conformance	8/23/2019 10:33:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		F. Pull boxes or manholes shall be placed within 20 feet of the ITS and ETC equipment as Accepted by the Department, in safe, easy to access locations; and		Pullboxes are located 5' from future ITS device location.	Conformance	10/14/2019 8:00:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		F. Pull boxes or manholes shall be placed within 20 feet of the ITS and ETC equipment as Accepted by the Department, in safe, easy to access locations; and		Future placement of ITS cabinet and ITS pole is within 5 feet of pullbox cluster. (Attached image shows conduit stubbed up [grey conduit] for future placement of ITS cabinet and Pole)	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		be constructed of fiberglass reinforced, polymer concrete and have a detachable cover with a skid-resistant surface and have the label of the owner cast into the surface		Pullboxes are Quazite brand and have CDOT cast into pullbox lid	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		be constructed of fiberglass reinforced, polymer concrete and have a detachable cover with a skid-resistant surface and have the label of the owner cast into the surface		Lid is skid resistant and labeled TRAFFIC COMM per CCD spec.	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		be constructed of fiberglass reinforced, polymer concrete and have a detachable cover with a skid-resistant surface and have the label of the owner cast into the surface		Lid is skid resistant and has CDOT cast into lid	Conformance	6/10/2019 1:37:54 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		be constructed of fiberglass reinforced, polymer concrete and have a detachable cover with a skid-resistant surface and have the label of the owner cast into the surface		Pullboxes are Quazite brand concrete reinforced fiberglass. They also include a skid-resistant lid and are labeled "CDOT COMM".	Conformance	10/14/2019 8:00:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		be constructed of fiberglass reinforced, polymer concrete and have a detachable cover with a skid-resistant surface and have the label of the owner cast into the surface		Pullboxes are constructed of fiberglass reinforced polymer concrete with a detachable two piece lid. Pullboxes are labeled CDOT COMM and ELECTRIC respectively.	Conformance	8/23/2019 10:33:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		be constructed of fiberglass reinforced, polymer concrete and have a detachable cover with a skid-resistant surface and have the label of the owner cast into the surface		Pullboxes are manufactured by New Basis from fiberglass reinforced concrete. The lid is skid-resistant and is labeled "CDOT POWER"	Conformance	12/12/2019 9:48:50 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Painting of words shall not be allowed		No paint used	Conformance	6/10/2019 1:37:54 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Painting of words shall not be allowed		Words are not painted nor shall they be.	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Painting of words shall not be allowed		Words have not been and shall not be painted	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All pull boxes shall be verified by a third-party nationally recognized Independent Testing Laboratory as meeting all test provisions of ANSI/SCTE 77 2007 Specification for Underground Enclosure Integrity, Tier 22 rating		Pullboxes are Quazite brand which have a Tier 22 rating	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All pull boxes shall be verified by a third-party nationally recognized Independent Testing Laboratory as meeting all test provisions of ANSI/SCTE 77 2007 Specification for Underground Enclosure Integrity, Tier 22 rating		Pullbox is tier 22 rated as shown cast into lid.	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All pull boxes shall be verified by a third-party nationally recognized Independent Testing Laboratory as meeting all test provisions of ANSI/SCTE 77 2007 Specification for Underground Enclosure Integrity, Tier 22 rating		Tier-22 Rated	Conformance	6/10/2019 1:37:54 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All pull boxes shall be verified by a third-party nationally recognized Independent Testing Laboratory as meeting all test provisions of ANSI/SCTE 77 2007 Specification for Underground Enclosure Integrity, Tier 22 rating		Pullbox is Tier22 rated.	Conformance	12/12/2019 9:48:50 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All pull boxes shall be verified by a third-party nationally recognized Independent Testing Laboratory as meeting all test provisions of ANSI/SCTE 77 2007 Specification for Underground Enclosure Integrity, Tier 22 rating		Pullboxes are Tier 22 rated. Conformance	10/14/2019 8:00:40 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		The Developer shall furnish and install all pull boxes and manholes based on the Construction Standards and any applicable Local Agency standards and specifications. Each location shall be easily accessible for maintenance purposes. Pull boxes shall not be placed in a known flood-prone area or drainage ditch. A fiber optic cable label shall be attached to each fiber optic cable located within a pull box or manhole.		ITS pullboxes installed per RFC plan sheet ITS-038	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Each location shall be easily accessible for maintenance purposes		Area is accessible for future needs.	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Each location shall be easily accessible for maintenance purposes		Area is easily accessible for future maintenance purposes.	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Each location shall be easily accessible for maintenance purposes		Area is accessible for future crews	Conformance	6/10/2019 1:37:54 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Each location shall be easily accessible for maintenance purposes		Manhole was installed per plan and will be easily accessible.	Conformance	6/12/2019 10:09:32 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Each location shall be easily accessible for maintenance purposes		Area is easily accessible for future use.	Conformance	8/23/2019 10:33:19 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall not be placed in a known flood-prone area or drainage ditch		Not installed in flood prone area	Conformance	6/10/2019 1:37:54 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall not be placed in a known flood-prone area or drainage ditch		Area is not a known flood-prone area or drainage ditch.	Conformance	8/15/2019 3:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Pull boxes shall not be placed in a known flood-prone area or drainage ditch		Area is not a known flood-prone area.	Conformance	7/23/2019 11:28:36 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		Each Manhole TMS shall include all hangers and hooks that needed all proposed fiber and communication cabling. Fiber management hangers and hooks for fiber coils and splice canisters shall be of sufficient quantity to hang each backbone and lateral cable installed in the Manhole TMS separately.	Conformance	6/12/2019 10:09:32 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		Backfill around the Manhole TMS excavation shall conform to Section 206, Structure Backfill (Class 2).	Conformance	6/12/2019 10:09:32 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		The Manhole TMS shall have a detachable cover that has a skid-resistant surface and have the words "CDOT COMM" cast on top of cover.	Conformance	6/12/2019 10:09:32 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		The Contractor shall neatly excavate the site of Manhole TMS installation. A minimum of 12 inches of ¾ inch granite-gravel shall be placed below the Manhole TMS.	Conformance	6/12/2019 10:09:32 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		Pre-cast units shall be provided with factory-installed knockouts that will permit the installation of a minimum of 6 of 2-inch conduits. The factory-installed knockouts shall be at a depth of 3 feet below the top of the Manhole TMS.	Conformance	6/12/2019 10:09:32 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Revision of Section 604 – CDOT ITS Manhole for Traffic Management System		Manhole TMS shall be pre-cast concrete, circular or square, with a base and cast iron frame ring and cover. Each Manhole TMS, frame, and cover shall conform to American Association of State Highway and Transportation Officials (AASHTO) HS20-44. Manhole TMSs shall be capable of accepting concrete grade rings to add height to raise the ring and cover to a future finished grade.	Conformance	6/12/2019 10:09:32 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		I walked the abutment area and looked at the stakes, and found that the piles were properly staked with the correct information.	Conformance	6/8/2020 6:40:09 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	10/8/2019 4:31:43 PM -06:00	Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		The pile locations were staked but did not have the flange orientation as I had to look that up in the plans and inform the contractor.	Issue addressed	10/22/2019 8:08:56 AM -06:00	Audit Comment	Acknowledged.	Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		The pile locations were properly staked and have the correct information.	Conformance	2/17/2020 8:59:51 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		The piling locations were properly staked and had the correct information on the stakes.	Conformance	12/2/2019 9:20:58 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		Piling locations are properly staked with the correct orientation information.	Conformance	5/22/2020 9:53:24 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		Pile locations are properly staked with flange orientation, line and driving depth.	Conformance	12/18/2019 10:17:10 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		All pile locations appeared to be properly staked, were in a straight line and had the proper distance between markers.	Conformance	9/16/2019 12:58:59 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		The pile locations and orientation were properly staked.	Conformance	12/5/2019 9:53:05 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		Piling locations were properly staked.	Conformance	2/3/2020 11:54:27 AM -07:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	10/8/2019 4:31:43 PM - 06:00	All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds were made using a prequalified joint design and a WPS that was submitted by the contractor.	Conformance	10/7/2019 12:54:17 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	9/5/2019 4:16:59 PM - 06:00	All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		The joint design was pre-qualified and the WPS was submitted by the contractor.	Conformance	9/4/2019 2:18:16 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds are made by using a prequalified joint design and a WPS has been submitted by the contractor.	Conformance	2/17/2020 8:59:51 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds are made using a prequalified joint design and a WPS has been submitted by the contractor.	Conformance	5/22/2020 9:53:24 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds are made by using a prequalified joint design and a WPS has been submitted by the contractor.	Conformance	12/18/2019 10:17:10 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds are made using a prequalified joint design and a WPS has been submitted by the contractor.	Conformance	2/3/2020 11:54:28 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds were made using a prequalified joint design and a WPS has been submitted by the contractor.	Conformance	12/5/2019 9:53:05 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds were made using a prequalified joint design and a WPS was submitted by the contractor.	Conformance	9/16/2019 12:59:00 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		Welded splices were performed with low hydrogen electrodes.	Conformance	9/16/2019 12:59:00 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		All welded splices were made using low hydrogen electrodes.	Conformance	12/5/2019 9:53:05 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		All welded splices were made using low hydrogen electrodes.	Conformance	2/3/2020 11:54:28 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		All welded splices are performed with low hydrogen electrodes.	Conformance	12/18/2019 10:17:10 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		Welded splices were performed with low hydrogen electrodes.	Conformance	2/17/2020 8:59:51 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		Welded splices are performed with low hydrogen electrodes.	Conformance	5/22/2020 9:53:24 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	9/5/2019 4:16:59 PM -06:00	Welded splices are performed with low hydrogen electrodes.		Low hydrogen electrodes were used on the splices.	Conformance	9/4/2019 2:18:16 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	10/8/2019 4:31:43 PM -06:00	Welded splices are performed with low hydrogen electrodes.		I checked the welding rods being used and they were a low hydrogen type.	Conformance	10/7/2019 12:54:17 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		Welded splices were performed with low hydrogen electrodes.	Conformance	6/8/2020 6:40:09 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The first two splices have been ultrasonically tested for acceptance.		The contractor performed UT on the necessary piling.	Conformance	6/8/2020 6:40:09 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC has reviewed and approved the on-site supervisors and drill rig operators.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC has reviewed and approved the on-site supervisors and drill rig operators.	Conformance	1/6/2020 4:48:45 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		IQCM has reviewed and approved the on-site supervisors & drill rig operators.		KFC On-Site Supervisors and Drill Rig Operators have been approved by IQC.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Grout Columns	Walls		IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC has reviewed and approved the on-site drill rig operators and supervisors to be performing the work.	Conformance	6/24/2019 3:27:18 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC and UPRR have reviewed and approved the on-site supervisors and drill rig operators within the revised drilled shaft installation plan.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC team has previously reviewed and approved the on-site supervisors and drill rig operators.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC Team has reviewed and approved the on-site supervisors and drill rig operators.	Conformance	7/25/2019 11:36:47 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC has reviewed and approved the KFC Drilled Shaft Installation Plan as they are crew performing the work for 302-W1 Wall.	Conformance	7/25/2019 11:36:47 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC team has previously reviewed and approved the Drilled Shaft Installation Plan.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC has reviewed and approved the KIC Secant Shaft Installation Plan.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC and UPRR have reviewed and approved the revised Drilled Shaft Installation Plan.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Grout Columns	Walls		IQCM has reviewed and approved the Drilled Shaft Installation Plan.		Safety Critical Grout Column Submittal has been reviewed and approved by IQC.	Conformance	6/24/2019 3:27:19 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		IQCM has reviewed and approved the Drilled Shaft Installation Plan.		KFC Drilled Shaft Installation Plan has been reviewed and approved by IQC.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC and BNSF has reviewed and approved the drilled shaft installation plan.	Conformance	1/6/2020 4:48:45 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC and UPRR has reviewed and approved the drilled shaft installation plan.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		The overall equipment, process, and details in the approved drilled shaft plan was followed and implemented in conformance.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		The crew followed all processes outlined in the Drilled Shaft Installation Plan.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		The overall equipment, process, and details in the approved drilled shaft plan was followed and implemented in conformance.	Conformance	1/6/2020 4:48:45 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		Approved process, including equipment and other details, in the drilled shaft plan are being followed by the drilled shaft crew.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Grout Columns	Walls		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		Grout column installation is being followed as described within the approved submittal.	Conformance	6/24/2019 3:27:19 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		Modifications to the drilled shaft process have been reviewed and approved within the revised drilled shaft installation plan. The equipment, processes, and details within approved plan have been followed and are within conformance.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		The equipment, overall process, and details set forth in the approved secant shaft installation plan is being followed by the field crew.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		The equipment and processes, as defined in the approved drilled shaft plan are being followed by the field crew. Changes are not being made without submitting and receiving approval.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The equipment, process, and details in the Approved Drilled Shaft Plan is being followed by the drilled shaft crew and if modifications are being implemented they have also been submitted and approved.		The equipment, process, and details shown in the approved drilled shaft plan are being followed by all crew members, and being implemented properly.	Conformance	7/25/2019 11:36:47 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If slurry is being used the following has been submitted and approved by IQC: 1. The slurry manufacturer's technical representative assigned to the project. 2. The names of the Contractor's personnel assigned to the project and trained by the slurry manufacturer's technical representative in the proper use of the slurry.		Slurry is being utilized, and has been previously approved by the IQC Team.	Conformance	7/25/2019 11:36:47 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If slurry is being used the following has been submitted and approved by IQC: 1. The slurry manufacturer's technical representative assigned to the project. 2. The names of the Contractor's personnel assigned to the project and trained by the slurry manufacturer's technical representative in the proper use of the slurry.		Slurry is being utilized and has been submitted and approved by IQC and UPRR. List of Contractor personnel assigned to project and trained with slurry use has been provided by manufacturer's representative.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If slurry is being used the following has been submitted and approved by IQC: 1. The slurry manufacturer's technical representative assigned to the project. 2. The names of the Contractor's personnel assigned to the project and trained by the slurry manufacturer's technical representative in the proper use of the slurry.		Required submittals regarding the use of slurry have been reviewed and approved by IQC.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If slurry is being used the following has been submitted and approved by IQC: 1. The slurry manufacturer's technical representative assigned to the project. 2. The names of the Contractor's personnel assigned to the project and trained by the slurry manufacturer's technical representative in the proper use of the slurry.		Polymer slurry utilized for drilled shaft operations. Polymer slurry to be used was reviewed and approved by IQC and UPRR. Submittal included names of contractor personnel trained by manufacturer's representative in the proper use and testing of slurry.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	If slurry is being used the following has been submitted and approved by IQC: 1. The slurry manufacturer's technical representative assigned to the project. 2. The names of the Contractor's personnel assigned to the project and trained by the slurry manufacturer's technical representative in the proper use of the slurry.		Polymer slurry utilized for drilled shaft operations. Polymer slurry to be used was reviewed and approved by IQC and BNSF.	Conformance	1/6/2020 4:48:45 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		The Contractor's Quality Control staff shall prepare inspection logs using CDOT Form 1333 – Inspector's Report of Caisson Installation documenting each shaft construction activity. In addition, the Contractor shall prepare and submit the logs documenting any subsurface investigation borings or rock core holes performed by the Contractor at drilled shaft foundation locations.		The proper form and information was provided on the inspection report. Please see attached.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The Contractor's Quality Control staff shall prepare inspection logs using CDOT Form 1333 – Inspector's Report of Caisson Installation documenting each shaft construction activity. In addition, the Contractor shall prepare and submit the logs documenting any subsurface investigation borings or rock core holes performed by the Contractor at drilled shaft foundation locations.		Inspection logs, utilizing CDOT Form 1333 - Inspector's Report of Caisson Installation, each drilled shaft is being documented.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The Contractor's Quality Control staff shall prepare inspection logs using CDOT Form 1333 – Inspector's Report of Caisson Installation documenting each shaft construction activity. In addition, the Contractor shall prepare and submit the logs documenting any subsurface investigation borings or rock core holes performed by the Contractor at drilled shaft foundation locations.		IQC performed inspection and prepared CDOT Form 1333 Inspection for Drilled Shaft #7 at Abutment 1.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The Contractor's Quality Control staff shall prepare inspection logs using CDOT Form 1333 – Inspector's Report of Caisson Installation documenting each shaft construction activity. In addition, the Contractor shall prepare and submit the logs documenting any subsurface investigation borings or rock core holes performed by the Contractor at drilled shaft foundation locations.		PC & IQC Representatives are performing and completing respective checklists, including inspection logs using the CDOT Form 1333 or equivalent.	Conformance	7/25/2019 11:36:47 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	The Contractor's Quality Control staff shall prepare inspection logs using CDOT Form 1333 – Inspector's Report of Caisson Installation documenting each shaft construction activity. In addition, the Contractor shall prepare and submit the logs documenting any subsurface investigation borings or rock core holes performed by the Contractor at drilled shaft foundation locations.		Quality control staff performing inspection duties and preparing inspection logs using CDOT Form 1333 to document Shaft C8 for Abutment 3 (North) of the S/V Bridge.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	In addition to the information required on the Form 1333, the Contractor shall provide the following information: type and dimensions of tools and equipment used, and any changes to the tools and equipment; type of drilling fluid if used, the results of slurry tests, any problems encountered, and method used for bottom cleaning.		Required information on the Form 1333 was provided. (i.e. types of equipment used, slurry test results, and method of bottom cleaning, etc.)	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		In addition to the information required on the Form 1333, the Contractor shall provide the following information: type and dimensions of tools and equipment used, and any changes to the tools and equipment; type of drilling fluid if used, the results of slurry tests, any problems encountered, and method used for bottom cleaning.		The required information, as set forth on the Form 1333, are being listed as a part of the inspection during drilled shaft operations.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		In addition to the information required on the Form 1333, the Contractor shall provide the following information: type and dimensions of tools and equipment used, and any changes to the tools and equipment; type of drilling fluid if used, the results of slurry tests, any problems encountered, and method used for bottom cleaning.		Form 1333 completed by IQC provides the required information of type and dimension of equipment used, type of drilling fluid, and methods used for cleaning out of bottom of shaft.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		In addition to the information required on the Form 1333, the Contractor shall provide the following information: type and dimensions of tools and equipment used, and any changes to the tools and equipment; type of drilling fluid if used, the results of slurry tests, any problems encountered, and method used for bottom cleaning.		Additional information, including equipment used, results of slurry test, problems encountered, and method used for bottom of shaft cleaning, is being documented as required.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		In addition to the information required on the Form 1333, the Contractor shall provide the following information: type and dimensions of tools and equipment used, and any changes to the tools and equipment; type of drilling fluid if used, the results of slurry tests, any problems encountered, and method used for bottom cleaning.		The proper information was provide on the inspection report. Please see the attached inspection report in Comment #2.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Cover		In addition to the information required on the Form 1333, concrete placement records shall include at least the following information: tremie tip elevation during concrete placement, and concrete yield curve (volume versus concrete elevation, actual and theoretical).		The proper information was provide on the inspection report. Please see the attached inspection report in Comment #2.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		In addition to the information required on the Form 1333, concrete placement records shall include at least the following information: tremie tip elevation during concrete placement, and concrete yield curve (volume versus concrete elevation, actual and theoretical).		Concrete placement records are included in checklists, including concrete yield curve and tremie tip elevation during concrete placement.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		In addition to the information required on the Form 1333, concrete placement records shall include at least the following information: tremie tip elevation during concrete placement, and concrete yield curve (volume versus concrete elevation, actual and theoretical).		Concrete placement records have been created to include tremie tip elevation during concrete placement, as well as a concrete yield curve.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		In addition to the information required on the Form 1333, concrete placement records shall include at least the following information: tremie tip elevation during concrete placement, and concrete yield curve (volume versus concrete elevation, actual and theoretical).		During concrete placement operations, the required information, including tremie tip elevation and concrete yield after each truck has been placed (actual vs. theoretical), is being adequately documented.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The contractor shall show bracing and any extra reinforcing steel required for fabrication of the cage on the shop drawings.		Required information regarding extra reinforcing steel for fabrication of rebar cages is shown on the shop drawings, and approved by IQC.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	The contractor shall show bracing and any extra reinforcing steel required for fabrication of the cage on the shop drawings.		Drilled Shaft Rebar Shop Drawings show additional reinforcing / bracing required for fabrication of the cage.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Contractor is controlling operations to ensure recently drilled holes are being protected, and construction means and methods are being utilized to prevent any caving of drilled shaft excavations, while also monitoring and controlling vibrations around recently drilled and placed holes.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		I observed the drilling and pouring operations and the contractor sufficiently controlled both operations to prevent damage to existing structures, utilities, and roadway.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Contractor controlling operations to prevent damage to existing structures and previously drilled holes, or other facilities or utilities. Means and methods set forth in the approved Drilled Shaft Installation Plan were depicted to best prevent excessive caving of drilled shaft, monitoring and controlling of vibrations from temporary casing, etc.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Grout Columns	Walls		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Precautions are being taken to control operations and prevent damage to surrounding structures, and recently drilled holes or shafts placed.	Conformance	6/24/2019 3:27:19 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Contractor is controlling their work, and performing operations in a manner to prevent damage to existing structures, recently drilled holes, utilities, etc.	Conformance	9/17/2019 4:35:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Operations performed in a manner to best prevent damage to existing structures, recently drilled shafts, utilities, etc. Drilled was done in a manner to best prevent any shaft caving by using temporary casing and polymer slurry during drilling operations.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		The contractor had a cave-in issue with the drilled shaft when the shaft was started, but filled it with flow fill and re-excavated.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Contractor controlling operations in the area to prevent any damage to existing structures, previously installed drilled shafts in the proximity, and using best practices to prevent excessive caving of the drilled shaft during excavation.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The Contractor shall control operations to prevent damage to existing structures and recently drilled holes, utilities, roadways and other facilities. Not limited to, selecting construction methods and procedures that will prevent excessive caving of the drilled shaft excavation and monitoring and controlling the vibrations from the driving of casing or sheeting, drilling of the shaft, or from blasting, if permitted.		Contractor is controlling their operations to prevent damage to existing structures, newly drilled holes with fresh concrete, and following their approved installation plan to prevent any caving during casing installation & removal.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The location for the drilled shaft have been adequately staked with the correct information.		Locations were previously staked adequately for the placement of secant pile guide wall template for the pump station base.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	The location for the drilled shaft have been adequately staked with the correct information.		Location of Shaft C8 was adequately staked out prior to any drilling operations, and were double checked by the contractor performing the drilling operations.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	The location for the drilled shaft have been adequately staked with the correct information.		I checked the info on the survey stakes and found it adequate to maintain control of location and there were several stakes in case one was knocked out.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The location for the drilled shaft have been adequately staked with the correct information.		Wall 302-W1 Caissons 140 / 144 / 148 were drilled and concrete was placed on 7/24/19. These shafts were all adequately staked for layout.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		The location for the drilled shaft have been adequately staked with the correct information.		Each shaft location / centerline of pile was laid out prior to install of temporary casing, and continuation of drilling.	Conformance	9/17/2019 4:35:19 PM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		The location for the drilled shaft have been adequately staked with the correct information.		Location of signal foundation was adequately staked by survey.	Conformance	10/26/2019 8:49:36 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Grout Columns	Walls		The location for the drilled shaft have been adequately staked with the correct information.		Locations for grout columns have been adequately staked out.	Conformance	6/24/2019 3:27:19 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The location for the drilled shaft have been adequately staked with the correct information.		Location for Abutment 1 Shaft 7 was adequately staked for layout.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The location for the drilled shaft have been adequately staked with the correct information.		Shaft location was adequately staked out prior to placement of temporary casing, and drilling operations commencing.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The location for the drilled shaft have been adequately staked with the correct information.		The survey stakes were present and had sufficient information on them to locate the shaft correctly.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		The location for the drilled shaft have been adequately staked with the correct information.		Appropriate stakes and markings were in place to ensure the rebar cage was in the right location.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The location for the drilled shaft have been adequately staked with the correct information.		Location for Pier 4 Shaft 44 was adequately staked for layout. 12' Shoring Casing was installed prior to 7' Casing for drilled shaft.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	The location for the drilled shaft have been adequately staked with the correct information.		Location for Pier 2 Shaft 2 (Center) was adequately staked for layout.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The location for the drilled shaft have been adequately staked with the correct information.		Stakes were placed at drill shaft location	Conformance	8/26/2019 12:58:52 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The location for the drilled shaft have been adequately staked with the correct information.		Area was staked and verified by IQC prior to drilling.	Conformance	10/29/2019 1:14:16 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The location for the drilled shaft have been adequately staked with the correct information.		Location staked and verified by IQC.	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The shaft location has been check for potential underground utility conflicts.		All proper procedures followed prior to shaft being drilled.	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The shaft location has been check for potential underground utility conflicts.		All proper procedures observed before drilled shaft began.	Conformance	10/29/2019 1:14:16 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	The shaft location has been check for potential underground utility conflicts.		Shaft location was checked prior to installation of shoring/ casing for any potential underground utilities.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The shaft location has been check for potential underground utility conflicts.		Shaft location was checked prior to installation of shoring/ casing for any potential underground utilities.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The shaft location has been check for potential underground utility conflicts.		The shaft location had been checked for potential underground utility conflicts.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The shaft location has been check for potential underground utility conflicts.		Shaft location was previously checked to ensure no potential underground utilities would be in conflict.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The shaft location has been check for potential underground utility conflicts.		Shaft location was checked prior to installation of shoring/ casing for any potential underground utilities.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Grout Columns	Walls		The shaft location has been check for potential underground utility conflicts.		Area has been checked for potential underground utility conflicts and none present a risk at this location.	Conformance	6/24/2019 3:27:19 PM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		The shaft location has been check for potential underground utility conflicts.		Foundation shaft was checked for potential underground utility conflicts.	Conformance	10/26/2019 8:49:36 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The shaft location has been check for potential underground utility conflicts.		Shaft locations were checked for potential underground utility conflicts, and no digging was performed until the proper dig permit was received.	Conformance	9/17/2019 4:35:19 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The shaft location has been check for potential underground utility conflicts.		Shaft location was checked for potential utility conflicts prior to drilling operations.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	The shaft location has been check for potential underground utility conflicts.		Shaft location was checked for potential underground utilities conflicts prior to proceeding with drilling.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The shaft location has been check for potential underground utility conflicts.		Shaft locations were checked for potential underground utility conflicts prior to commencing.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		Excavation to the foundation cap elevation of the secant wall was completed prior to drilling operations.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		Foundation cap elevation was excavated to prior to drilled shaft excavation beginning.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		Excavation to the allowable elevation for the install of the shoring piles was completed prior to drilling of the shafts. Excavation was needed to be low enough to install walers and tie rods.	Conformance	9/17/2019 4:35:19 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		Prior to excavation final grade was complete	Conformance	7/24/2020 12:21:25 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Grout Columns	Walls		Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		Excavation to the top of foundation cap to receive grout columns has been completed prior to grout column drilling and placement of concrete.	Conformance	6/24/2019 3:27:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		Excavation to base of foundation cap was completed prior to drilling operations proceeding.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		12' Shoring Casing was installed and completed to top of drilled shaft elevation prior to shaft operations began.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		Excavation to the cap elevation for the drilled shafts at Pier 2 were completed before drilled shaft construction began at this location.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Excavation and/or embankment to the foundation cap elevation shall be completed before drilled shaft construction begins.		Final grade established before drilled shaft began.	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Excavation began at 0800 and was completed at 1000. Excavation was continuous without pause.	Conformance	10/29/2019 1:16:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Drilled shaft excavation completed within same day as start.	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Excavation completed in same work day as start.	Conformance	10/29/2019 1:14:16 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Drilling from bottom of CMP casing installed to tip of shaft was conducted in a continuous operation.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Drilling from bottom of casing installed to tip of shaft was conducted in a continuous operation.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		The excavation was a smooth and continuous operation until the drilled shaft was complete.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Excavation of the caisson was conducted in a continuous operation until it was complete.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Drilling operations are a continuous operation with no pauses or interruptions, except for installation of cage and removal of temporary casing after concrete placement.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Excavation of drilled shaft completed continuous operation without interruption	Conformance	7/24/2020 12:21:25 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Drilling continued in one continuous operations until the excavation was completed, including bottom cleanout.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Drilling operations proceeded in smooth operation until the excavation was completed.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Once excavation has started it shall be conducted in a continuous operation until excavation is completed. Pauses or interruptions of the operation only occur for the following reasons casing installation, casing splicing and removal of materials or obstructions.		Excavation of the shafts continues in one operation as smoothly as can be done. As stated in the approved installation plan, there will be times where the excavation is advanced one day and finished another day.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		When shafts excavations are not complete at the end of the shift, they are protected by covering to ensure the hole is covered to prevent anyone or anything from falling into the drilled shaft. These shafts are also being protected from caving through the use of temporary casing for the entirety of the shaft.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		The contractor did not complete the excavation by the end of the day, but filled the shaft with tested slurry and covered the excavation to prevent anyone from falling into the shaft.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		When stoppages occurred during drilled shaft operations, the shaft was protected through the use of casing and polymer slurry for up to 72 hours. The 72 hour timeframe was not exceeded and concrete was placed.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		The contractor protects the drilled shaft excavation through the use of polymer slurry.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		Drill shaft excavation, cage placement, and concrete were completed on the same day.	Conformance	8/26/2019 12:58:52 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Sidewall over reaming shall be performed when the time for shaft excavation exceeds 24 hours or when the sidewall of the hole is determined to have softened due to the excavation methods, swelled due to delays in the start of concrete placement, or degraded because of slurry cake buildup		The drilled shaft was left open over night. The concrete was placed in the drilled shaft before the 24 hours has elapsed.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Sidewall over reaming shall be performed when the time for shaft excavation exceeds 24 hours or when the sidewall of the hole is determined to have softened due to the excavation methods, swelled due to delays in the start of concrete placement, or degraded because of slurry cake buildup		The shaft was open for less than 24 hours, so no over reaming was necessary.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		The applicable specifications for polymer slurry are being followed.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Polymer slurry applicable specifications are being followed.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Polymer slurry applicable specifications are being followed in conformance with the Contract, and testing/inspection of slurry was completed.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Polymer slurry was being utilized during drilling operations. The applicable specifications were followed and achieved when slurry tests were performed.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Polymer slurry was observed to be tested and to be within conformance with all properties (Density, Viscosity, pH, and Sand Content).	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Slurry and water displaced during concrete placement operations is being properly collected, preventing it from entering railroad or environmentally sensitive/ restricted areas.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Slurry and water displaced during concrete placement operations was pumped back and collected preventing it from potentially entering any travel lane, water way, or environmentally sensitive area.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Displaced water and slurry during final cleaning and concrete placement has been collected by pumping back to slurry tanks, and is prevented from entering the travel lanes, environmentally sensitive areas, and leaving the construction site.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		The contractor had a vac truck on site to collect any slurry and water.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Water displacement, and concrete were collected.	Conformance	8/26/2019 12:58:53 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Slurry and water displaced during final cleanout is being adequately protected from entering any railroad area.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Slurry and water displaced during final cleanout is being adequately protected from entering any railroad area.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		All slurry and water displaced during final cleaning and concrete placement was pumped off and into a tank.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		Minimum level of polymer slurry was maintained within the excavation.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		Minimum level of polymer slurry was maintained within the excavation.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		The minimum height/level of the slurry was maintained on the shafts after the completion of excavation and prior to placement of concrete.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	The dry shaft construction method is being followed for shafts which meet the following conditions: less than 12 inches of water accumulates above the base of excavation over a period of one hour when no pumping is performed, the sides and bottom of the hole remain stable without detrimental caving, sloughing or swelling between the completion of excavation and concrete placement, all loose material and water can be satisfactorily removed prior to inspection and concrete placement (no more than 2 inches of water will be permitted in the bottom of the shaft excavation at the time of concrete placement), and the Engineer can visually inspect the sides and bottom of the shaft prior to placing the concrete.		This shaft was dry as no water came into the hole and the slurry that was used to maintain the excavation overnight was removed by the vac truck.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		The dry shaft construction method is being followed for shafts which meet the following conditions: less than 12 inches of water accumulates above the base of excavation over a period of one hour when no pumping is performed, the sides and bottom of the hole remain stable without detrimental caving, sloughing or swelling between the completion of excavation and concrete placement, all loose material and water can be satisfactorily removed prior to inspection and concrete placement (no more than 2 inches of water will be permitted in the bottom of the shaft excavation at the time of concrete placement), and the Engineer can visually inspect the sides and bottom of the shaft prior to placing the concrete.		Dry shaft installation methods are being followed, and meet the requirements of less than 2-inches of sediment or debris for no more than 50 percent of the bottom area of each shaft. Maximum depth of any sediment shall not exceed 3 inches.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The dry shaft construction method is being followed for shafts which meet the following conditions: less than 12 inches of water accumulates above the base of excavation over a period of one hour when no pumping is performed, the sides and bottom of the hole remain stable without detrimental caving, sloughing or swelling between the completion of excavation and concrete placement, all loose material and water can be satisfactorily removed prior to inspection and concrete placement (no more than 2 inches of water will be permitted in the bottom of the shaft excavation at the time of concrete placement), and the Engineer can visually inspect the sides and bottom of the shaft prior to placing the concrete.		Dry shaft construction was followed and all conditions were met.	Conformance	8/26/2019 12:58:53 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation site was properly protected.	Conformance	8/26/2019 12:58:53 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	Excavation has been protected to prevent material or persons from falling into the hole.		Excavation has been protected to prevent material or any persons from falling into the drilled shaft.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation has been protected to prevent material or any persons from falling into the shoring/ drilled shaft casing.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Excavation has been protected to prevent material or persons from falling into the hole.		The drilled shaft casing was installed 4ft above the ground elevation to ensure no one would fall in.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Excavation has been protected to prevent material or persons from falling into the hole.		Crews tied off and panels for covering hole labeled "hole" used.	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Excavation has been protected to prevent material or persons from falling into the hole.		Covers with "Hole" labeled on site for protection. Crews also wore harnesses and were tied off.	Conformance	10/29/2019 1:16:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Excavation has been protected to prevent material or persons from falling into the hole.		Crews tied off for protection	Conformance	10/29/2019 1:14:16 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation has been protected to prevent material or persons from falling into the hole. These measures remain in place should operations move into the following day and aren't completed in one shift.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		Excavation has been protected to prevent material or persons from falling into the hole.		Immediately after drilling hole and before cage placement hole was covered to prevent items/people from falling in hole.	Conformance	10/22/2019 1:58:13 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	Excavation has been protected to prevent material or persons from falling into the hole.		The contractor covered the excavation overnight to prevent any material or persons from falling into the hole.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Excavation has been protected to prevent material or persons from falling into the hole.		Temporary casing is being utilized to protect material or persons from falling into the hole. The temporary casing is being placed with the top portion at an adequate height above the ground level.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation was protected to ensure material or persons from falling into the hole.	Conformance	10/26/2019 8:49:36 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	Excavation has been protected to prevent material or persons from falling into the hole.		Excavation area remained protected throughout all operations of drilling, cage placement, and concrete placement operations.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Excavation has been protected to prevent material or persons from falling into the hole.		Elevation of temporary casing is being maintained high enough to ensure hole is protected to prevent materials on personnel from falling into hole.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation area has been protected to prevent anyone or anything from falling into the hole. Area was roped off around active drilling operations.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation has been well protected to prevent material of persons from falling into the hole. Crew performs JHA prior to shift beginning each day, and no person may be within the vicinity of the excavation unless tied-off.	Conformance	9/17/2019 4:35:19 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Shaft hole is of the correct diameter, and the pile is placed plumb.	Conformance	9/17/2019 4:35:19 PM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Shaft foundation is plumb and correct diameter.	Conformance	10/26/2019 8:49:36 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb and of correct diameter. The excavated material is being compared with geological borings to ensure adequate rock socket length.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft has been checked for plumbness, including the temporary casing installed. The diameter has been checked against the RFC plans, and excavated material is being documented to compare to geological information obtained in borings.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft inspected by IQC to be plumb, correct diameter, and the excavated material was being compared to applicable geological information to ensure adequate material (bedrock embedment) is being reached and achieved.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft was inspected by IQC and noted to be plumb, correct diameter, and the excavated material that has been drilled is being compared to the geological information that has been previously provided in boring logs.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		The contractor checked the plumbness and diameter of the shaft multiple times and IQC verified the geological information.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Both caissons in area are to specifications.	Conformance	10/22/2019 1:58:13 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb and the diameter is correct. The excavated material is being compared with the geological information for each shaft that is being drilled.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb and diameter in correct	Conformance	10/29/2019 1:16:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Plumbness and diameter verified by IQC	Conformance	10/29/2019 1:14:16 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Shaft drilled and plumpness and depth verified by IQC.	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		The drilled shaft was plumb and the diameter of the casing was the correct size.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb and drilled with the correct diameter. The excavated material was compared with the geological borings taken to ensure adequate bearing material was reached with proper embedment.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb and drilled with the correct diameter. The excavated material was compared with the geological borings taken to ensure adequate bearing material was reached with proper embedment.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft 44 at Pier 4 was drilled to proper elevation, and minimum embedment was obtained and documented to ensure proper embedment depth into bearing material.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		The drilled shaft depth was verified with a weighted tape.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft 2 at Pier 2 was drilled to proper elevation, and minimum embedment was obtained and documented to ensure proper embedment depth into bearing material.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation.	Conformance	8/26/2019 12:58:53 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		18 ft. Depth verified by IQC	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Depth of 18 ft.	Conformance	10/29/2019 1:16:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Depth verified by Kiewit IQC.	Conformance	10/29/2019 1:14:16 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Drilled Shafts (Secondary Shafts) 38 & 42 were drilled to elevation after consulting the engineer for secant pile depths. This information was documented by IQC.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Caisson placement meets survey stakes in area	Conformance	10/22/2019 1:58:13 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		I observed IQC verify that the shaft had been drilled to the proper tip elevation.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shafts were drilled to required elevation, and minimum embedment into bearing material was achieved.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft was drilled to proper elevation, and minimum embedment was achieved and documented by IQC.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft has been drilled to planned elevation, or until minimum embedment has been obtained, whichever is lower.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft has been drilled to proper elevation, and minimum embedment was obtained and documented.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft foundation was drilled to required depth per plan.	Conformance	10/26/2019 8:49:36 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		All shafts were drilled to proper elevations, and the minimum embedment of the pile was achieved.	Conformance	9/17/2019 4:35:19 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shaft excavation was not left open overnight. Shaft was drilled and concrete placed within the same day.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shaft excavation is being cased full depth.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shaft excavation left open overnight is cased and protected against sidewall instability through the use of polymer slurry.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Slurry was used to protect against sidewall instability overnight.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shaft excavation left open overnight is cased and protected against sidewall instability through the use of polymer slurry. The 72 hour timeframe for the use of polymer slurry is closely monitored by production and IQC teams.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		The drilled shaft was not left open overnight.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		All casing was watertight include the splices in the casing.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		Casing used for drilled shaft operation is watertight and clean prior to placement in the excavation area.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	All casing (including splices) shall be watertight and clean prior to placement in the excavation.		CMP Casing used for drilled shaft operation is watertight and clean prior to placement in the excavation area.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		Segmental casing is being utilized, and all sections, including where connections are being made with bolts, are watertight and clean prior to being placed in the excavation.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		Casing used for drilled shaft operation is watertight and clean prior to placement in the excavation area.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If permanent casing is called out on the plans the installed casing is of the same diameter and satisfies the called out minimum thickness.		Non-structural (temporary stay-in-place) casing is called out within the approved drilled shaft installation plan, and satisfies the proper casing diameter per plan and minimum thickness needed.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	If permanent casing is called out on the plans the installed casing is of the same diameter and satisfies the called out minimum thickness.		Permanent CMP casing installed per the approved drilled shaft installation plan is of adequate diameter and thickness.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If permanent casing is called out on the plans the installed casing is of the same diameter and satisfies the called out minimum thickness.		Non-structural (temporary stay-in-place) casing is called out within the approved drilled shaft installation plan, and satisfies the proper casing diameter per plan and minimum thickness needed.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		Casing is smooth wall steel.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		No temporary casing was installed.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		Casing is smooth wall steel.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		Temporary casing conforms to the specifications of being smooth wall structural steel.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		Temporary casing is smooth wall structural steel.	Conformance	9/17/2019 4:35:19 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		Temporary casing is smooth wall structural steel as required.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		Temporary casing being utilized is smooth wall structural steel.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All temporary casing is smooth wall structural steel unless otherwise is called out on the plans.		Temporary casing is smooth wall structural steel as required.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		Temporary casing, as depicted in the drilled shaft installation plan, is being installed and removed without deforming and potentially causing any damage to the completed shaft, including disturbing the surrounding soils.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		Temporary casing is being installed and removed as set forth in the approved Drilled Shaft Installation Plan. Install and removal operations are being performed in a manner to not damage or deform the shaft, and to not disturb the surrounding soils.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		Temporary casing was able to be installed and removed, per the approved installation plan, without causing damage to the completed secondary shafts (38 & 42).	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		Temporary casing is capable of being installed and removed without deforming or causing damage to other completed shafts, or disturbing surrounding soils.	Conformance	9/17/2019 4:35:20 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		Temporary casing is carefully installed and removed with little twisting of casing to best prevent disturbing of surrounding soils, and to protect completed shaft and cage from any twisting or other non-conformance's.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Temporary casing shall be capable of being installed and removed without deforming and causing damage to the completed shaft and without disturbing the surrounding soil.		60" temporary casing is capable of being removed without causing damage to the completed shaft.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		Casing is of ample strength to prevent any damage or deformation from transportation or installation, and all other forces acting on the casing.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		Temporary casing is of ample strength to resist damage and handle all external forces acting on the casing.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		Temporary Casing is of required ample strength to resist any damage or deformation during transport and handling, and any pressures or forces acting upon it during its use.	Conformance	9/17/2019 4:35:20 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		Temporary casing is double walled and of ample strength to resist damage and deformation throughout the secant shaft installation process.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		Temporary casing is of ample strength to resist damage and deformation throughout the drilled shaft installation process.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		Temporary casing material is of adequate strength to resist damage and deformation from transportation, handling, and installation/removing, etc.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		Casing is of ample strength to prevent any damage or deformation from transportation or installation, and all other forces acting on the casing.	Conformance	1/6/2020 8:33:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	All temporary or permanent casing is of ample strength to resist damage and deformation from transportation and handling, installation and extraction stresses, and all pressures and forces acting on the casing.		Casing is of ample strength to prevent any damage or deformation from transportation or installation, and all other forces acting on the casing.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Temporary casing shall be completely removed, unless otherwise shown on the Plans or approved by the Engineer. As the temporary casing is withdrawn, sufficient head of fluid concrete must be maintained to ensure that water or slurry outside the temporary casing will not breach the column of freshly placed concrete. Casing extraction shall be at a slow, uniform rate with the pull in line with the shaft axis. Excessive rotation of the casing shall be avoided to limit deformation of the reinforcing steel cage.		The temporary casing was completely removed after the operation.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status

CSL tubes have been filled with water prior to concrete placement.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		Prior to rebar and concrete placement, IQC confirmed the base of the excavation was sound and not covered with more than allowable sediment or loose material per the specification.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		I observed the shaft sounding and there was less than 3 inches of sediment/loose material just prior to reinforcing cage and concrete placement.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed

Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		I observed IQC verify that the base of the excavation met specifications for a dry shaft.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		Prior to concrete placement, the drilled secant shaft meets the required specifications for bottom of shaft cleanliness when utilizing dry shaft method.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed

Central 70	C 0704-241	Deep Foundations	UPRR Structures		Prior to rebar and concrete placement the drilled shaft meets the following criteria: I. For wet drilled shaft excavation in soils, the base of the excavation shall be covered with not more than 3 inches of sediment or loose or disturbed material just prior to placing concrete. II. For dry drilled shaft excavations in soils, the base of excavation shall be covered with not more than 1.5 inches sediment or loose or disturbed material just prior to placing concrete. III. For wet and dry drilled shaft excavations in rock, the base of the excavation shall be covered with not more than 0.5 inch for 50 percent of the base area of sediment or loose or disturbed material just prior to placing concrete.		Prior to reinforcement and concrete placement operations, the tip of the drilled shaft excavation meets the requirements for wet drilled shaft excavation in soils.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was tied 100% at all intersections, and was braced adequately enough to retain its configuration during all handling and placement operations.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		it was verified that the cage was tied 100% before placing of the cage. 6" feet chairs were used to keep the cage suspended off the ground.	Conformance	9/30/2020 10:17:25 AM -06:00	C		Closed

Central 70	C 0704-241	Deep Foundations	UPRR Structures		The steel reinforcing cage has been placed immediately prior to placing concrete.		Reinforcing cage was installed immediately prior to placing concrete.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		The steel reinforcing cage has been placed immediately prior to placing concrete.		concrete was place immediately after the cage was set in the drill shaft.	Conformance	9/30/2020 10:17:25 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage has been placed immediately prior to placing concrete.		Steel reinforcing cage is being placed immediately prior to placement of concrete.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		The steel reinforcing cage has been placed immediately prior to placing concrete.		The steel reinforcing cage was placed immediately prior to placing concrete.	Conformance	10/26/2019 8:49:37 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		CSL have been installed at each drilled shaft. The installed tubes have a minimum cover of 3 inches and extend from 1/2 foot above the caisson bottoms to at least 3-feet above the caisson top.		CSL tubes have been installed at drilled shaft, have minimum cover of at least 3 inches and extend high enough above top of caisson.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		CSL have been installed at each drilled shaft. The installed tubes have a minimum cover of 3 inches and extend from 1/2 foot above the caisson bottoms to at least 3-feet above the caisson top.		CSL tubes have been installed per plan for drilled shaft.	Conformance	1/6/2020 8:33:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	CSL have been installed at each drilled shaft. The installed tubes have a minimum cover of 3 inches and extend from 1/2 foot above the caisson bottoms to at least 3-feet above the caisson top.		CSL tubes have been installed at each drilled shaft, and have minimum required cover.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	The greater of a minimum of four (4) CSL tubes or one (1) CSL tube per linear foot of the drilled caisson diameter, which ever maximum number of CSL tubes controls, shall be installed in each drilled caisson, equally spaced around the perimeter of the caisson at 90 degrees.		See DVR_RFC BNSF Bridge_000_dgibbons_12 for reference to apparent discrepancy between plans and CDOT Specifications regarding the total number of CSL tubes required related to shaft diameter.	DVR_RFC BNSH Bridge_000_dgibbons_12 audit comment has been closed out.	1/15/2020 8:36:35 AM -07:00	Audit Comment		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The greater of a minimum of four (4) CSL tubes or one (1) CSL tube per linear foot of the drilled caisson diameter, which ever maximum number of CSL tubes controls, shall be installed in each drilled caisson, equally spaced around the perimeter of the caisson at 90 degrees.		A total of seven (7) CSL tubes were installed in drilled shaft as approved in RFC plans.	Conformance	1/6/2020 8:33:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The greater of a minimum of four (4) CSL tubes or one (1) CSL tube per linear foot of the drilled caisson diameter, which ever maximum number of CSL tubes controls, shall be installed in each drilled caisson, equally spaced around the perimeter of the caisson at 90 degrees.		4 CSL tubes have been installed and equally spaced at 90 degrees for Shaft 7 at Abutment 1, which is a planned 42" Drilled Shaft.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	The greater of a minimum of four (4) CSL tubes or one (1) CSL tube per linear foot of the drilled caisson diameter, whichever ever maximum number of CSL tubes controls, shall be installed in each drilled caisson, equally spaced around the perimeter of the caisson at 90 degrees.		Minimum of four (4) CSL tubes were installed for the 42" Drilled Shaft (Shaft C8 Abutment 3), and they were equally spaced around the perimeter at 90 degrees.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		CSL testing has been performed after minimum 48hrs after concrete placement, and must be completed within 20 calendar days.		CSL testing is scheduled to take place no earlier than 48 hours, and prior to 20 calendar days after placement.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Installed access tubes for CSL testing shall be schedule 40 steel and at least 1-1/2 inch inside diameter.		Installed CSL tubes are 2" nominal steel pipes (ASTM A53, Grade B), per plan and set forth in approved CSL Testing Procedure.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Installed access tubes for CSL testing shall be schedule 40 steel and at least 1-1/2 inch inside diameter.		Installed CSL tubes are 2" nominal steel pipes (ASTM A53, Grade B), per plan and set forth in approved CSL Testing Procedure.	Conformance	1/6/2020 8:33:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	Installed access tubes for CSL testing shall be schedule 40 steel and at least 1-1/2 inch inside diameter.		Installed CSL tubes are 2" nominal steel pipes (ASTM A53, Grade B), per plan and set forth in approved CSL Testing Procedure.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed

The access tubes shall be fitted with watertight shoe on the bottom and removable cap on the top		Access tubes installed are 2" nominal steel pipes (ASTM A53, Grade B) which are per plan and approved within RFC and CSL Testing Procedure Plans.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled Shaft Concrete used is a class BZ mix which has been reviewed and approved by IQC and UPRR for use.	Conformance	1/6/2020 8:33:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		The concrete was the approved BZ special mix design.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled Shaft Concrete used is a class BZ mix which has been reviewed and approved by IQC and BNSF for use.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		BZ mix concrete used for caisson. Air content tested by PC, IQC and IQC testers.	Conformance	10/29/2019 1:14:16 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		BZ mix used	Conformance	10/29/2019 1:16:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Shaft was filled with BZ concrete and tested for air content by IQC	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled Shaft Concrete used is a class BZ mix which has been reviewed and approved by IQC and UPRR for use.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		BZ Mix with a slump of 6-9" is being utilized for drilled shaft concrete.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		BZ mix concrete used for caisson	Conformance	7/24/2020 12:21:25 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled Shaft Concrete being utilized is a Class BZ Mix which was been previously approved for use on the project by IQC. The concrete has an allowable 6-9" slump.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		BZ Concrete mix has been reviewed and approved by IQC. Concrete has been tested and conforms to 6-9" slump.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		BZ Mix was utilized for secant shaft concrete placement operations. Slump requirement of 6-9" is being met.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Concrete is being placed with a pump truck and tremie as required by the specifications.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Slurry is being utilized for drilled shaft operations, and a tremie is used for concrete placement.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Concrete is being placed with a tremie as polymer slurry is being used for drilled shaft operations.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Drilled shaft operation meets criteria for wet placement with slurry being used, and concrete is being placed with a tremie.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		The concrete was placed with the tremie/wet process in Alridge's Drilled Shaft Installation Plan.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Drilled shaft operation meets criteria for wet placement with slurry being used, and concrete is being placed with a tremie.	Conformance	1/6/2020 8:33:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM -07:00	If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Drilled shaft operation meets criteria for wet placement with slurry being used, and concrete is being placed with a tremie.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement cage did not exceed specifications for upward or downward.	Conformance	8/26/2019 12:58:53 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		The cage dropped 1 1/4". Drilled shaft #P2-2.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement the drilled shaft steel has not exceeded the upward or downward displacement tolerances. During the placement operations and throughout curing time, the cage is supported in place from the top of drilled shaft.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		Checked by Kiewit IQC on site and verified.	Conformance	10/29/2019 1:16:32 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement, the drilled shaft steel has not exceeded upward or downward displacement outside of allowable range.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete pour cage did not "float" and was secured in place throughout pour	Conformance	7/24/2020 12:21:25 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement operations, the drilled shaft has not exceeded the upward or downward displacement tolerances (+2/ -6 inches).	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		The drilled shaft steel reinforcing cage was sitting in boots on the bottom of the excavation and did not move downwards, and the upward excavation was less than two inches.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		I observed the pour and the tremie pipe remained submerged in the concrete at least five feet for the duration of the concrete pour.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		The discharge end of the tremie remained submerged within the concrete a minimum of 5', and contains enough concrete to prevent any water/slurry from entering.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		Throughout the concrete placement operations, the tremie remained submerged in the concrete at least five feet and the contained enough concrete to prevent any water or slurry from entering.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		No slurry was in place as dry shaft installation process was utilized, however, during concrete placement operations the tremie pipe was maintained submerged a minimum of 5 feet in the concrete.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		Tremie pipe embedment remained submerged within concrete atleast 5 feet, and containing enough concrete to prevent water/slurry from entering.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		Discharge end of tremie during concrete placement operations is maintained a minimum of 5 feet, averaging approximately 7 feet embedment.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		The tremie pipe was submerged the appropriate depth.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Throughout the underwater concrete placement operation, the discharge end of the tube shall remain submerged in the concrete at least five feet and the tube shall always contain enough concrete to prevent water from entering.		Tremie pipe embedment remained submerged within concrete atleast 5 feet, and containing enough concrete to prevent water from entering.	Conformance	1/6/2020 8:33:50 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement operations continue in one operation, not exceeding allowable time in the drilled shaft installation plan.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement continued in one operation, and did not exceed the allowable time.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete was placed in one continuing operation.	Conformance	10/26/2019 8:49:37 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement in continuing in as smooth an operation as can be performed, and did not exceed the allowable time in the secant shaft installation plan.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement proceeded in one continuous operation, not exceeding the allowable time in the approved drilled shaft installation plan.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete placement is continuing in one operation and has not exceeded the time in the Drilled Shaft Installation Plan.		Concrete placement continued in one smooth operation, and did not exceed the time in the drilled shaft installation plan.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete placed without hitting sides of reinforcing cage or shaft hole.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	7/22/2019 1:48:19 PM - 06:00	Concrete is placed without hitting sides of reinforcing cage or holes.		I observed the concrete pour and the concrete did not hit the sides of the reinforcing cage or the sides of the excavation.	Conformance	7/22/2019 12:38:00 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete is being placed without hitting sides of reinforcing cage or shaft hole.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed using a concrete pump truck with a tremie, and was placed in the center of the shaft for the entirety of the shaft.	Conformance	8/8/2019 4:38:15 PM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete was placed without hitting the sides of the reinforcing cage.	Conformance	10/26/2019 8:49:37 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Concrete is placed without hitting sides of reinforcing cage or holes.		Tremie pipe is utilized to the base of the drilled shaft to place concrete without hitting sides of reinforcing cage or hole.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Concrete is placed without hitting sides of reinforcing cage or holes.		Tremie is supported during concrete placement operations to prevent from hitting sides of reinforcing cage.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete guide used during pour.	Conformance	10/29/2019 1:14:16 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete pour guide used	Conformance	10/29/2019 1:16:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Concrete is placed without hitting sides of reinforcing cage or holes.		Concrete guide used for pouring concrete into drilled shaft.	Conformance	10/29/2019 1:15:17 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Concrete is placed without hitting sides of reinforcing cage or holes.		Tremie pipe is utilized to the base of the drilled shaft to place concrete without hitting sides of reinforcing cage or hole.	Conformance	1/6/2020 8:33:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Cover		Concrete is placed without hitting sides of reinforcing cage or holes.		A tremie pipe guide at the top of the casing was used to ensure the tremie pipe did not come in contact with the reinforcing cage.	Conformance	11/16/2019 2:20:54 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	Concrete is placed without hitting sides of reinforcing cage or holes.		Tremie pipe is utilized to the base of the drilled shaft to place concrete without hitting sides of reinforcing cage or hole.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Concrete is placed without hitting sides of reinforcing cage or holes.		Used a pump truck with tremie pipe and did not hit side of the cage,	Conformance	8/26/2019 12:58:53 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	The concrete at the top of the shaft is properly cured.		Concrete at top of shaft is being properly cured. Blankets are being used to cover the top of shaft as a form of cold weather protection.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The concrete at the top of the shaft is properly cured.		The contractor placed curing blankets on top of the shaft after placement was finished and the laitance was removed.	Conformance	10/28/2019 4:03:57 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The concrete at the top of the shaft is properly cured.		Concrete at top of shaft is being properly cured.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The concrete at the top of the shaft is properly cured.		Concrete at top of shaft was overpoured approximately 3-3.5' above top of planned elevation to ensure sound concrete at top of shaft. Laitance and slurry was removed, and top 5' of shaft concrete was vibrated per approved process within drilled shaft installation plan.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed
Central 70	C 0704-241	Signaling	Electrical		The concrete at the top of the shaft is properly cured.		The concrete at the top of the shaft foundation is properly cured.	Conformance	10/26/2019 8:49:37 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Recently poured drilled shafts have been allowed to cure for 24hrs and achieve 1800 psi prior to commencing pile driving or casing installation within a 20ft radius of the shaft, and drilled shaft operations within 3 shaft diameters.		Drilled shaft operations have been allowed minimum 24 hours of cure time to achieve 1800 psi prior to additional drilled operations continuing within 3 shaft diameters.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Recently poured drilled shafts have been allowed to cure for 24hrs and achieve 1800 psi prior to commencing pile driving or casing installation within a 20ft radius of the shaft, and drilled shaft operations within 3 shaft diameters.		Recently drilled shafts were allowed to cure for a minimum of 24 hours and achieve 1800 psi prior to driving casing within 20 feet radius of shaft, and continuing drilled shaft operations within 3 shaft diameters.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	Recently poured drilled shafts have been allowed to cure for 24hrs and achieve 1800 psi prior to commencing pile driving or casing installation within a 20ft radius of the shaft, and drilled shaft operations within 3 shaft diameters.		Recently poured drilled shaft #26 at Pier 2 was allowed to set/ cure for at least 24 hours prior to any additional operations continuing within proximity.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	The drilled shaft meets the tolerances outlined in 503.20		The drilled shaft meets the tolerances outlined in 503.20.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft meets the tolerances outlined in 503.20		Drilled Shaft meeting the tolerances outlined in specification 503.20, and conforming with the special provisions.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		Top of shaft is removed of all scum, laitance, and loose sediment, as well has high spots of concrete that would prevent conforming installation of rebar cage and completion of shaft.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		Slurry and laitance has been removed and cleaned from top of shaft.	Conformance	3/13/2020 10:38:54 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		Top of shaft was cleaned up by removing all scum, excess concrete, and loose gravel/ sediment on the surface of the shaft, including any high spots that would prevent the correct elevation of the reinforcing steel.	Conformance	7/25/2019 11:36:48 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		Slurry & water at the top of the shaft has been cleaned up during concrete placement, including removing all loose gravel and sediment and scum from the top that would prevent the correct installation of reinforcing steel.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	BNSF Structures	1/6/2020 4:57:15 PM - 07:00	For shafts placed in water or with slurry the top of shaft has been cleaned up removing all scum, laitance, loose gravel and sediment on the surface along with any high spots that would prevent the correct installation of reinforcing steel.		Top of shaft was cleaned of all scum and laitance from polymer slurry used during drilling operations.	Conformance	1/6/2020 4:48:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	Projecting reinforcing steel is cleaned of excess concrete (i.e.. splatter)		Projecting rebar is being cleaned of excess concrete splatter.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Projecting reinforcing steel is cleaned of excess concrete (i.e.. splatter)		Protective wrapping is being utilized for any projecting rebar to best protect from concrete splatter. Any additional cleaning is addressed once this wrapping is removed.	Conformance	5/23/2019 3:59:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All of the reinforcing steel is epoxy coated, was protected from damage and was free of any deleterious materials.	Conformance	9/19/2019 12:58:14 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel and its epoxy coating was protected from damage and foreign debris for deck and diaphragm steel.	Conformance	4/4/2020 3:55:53 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel and its epoxy coating were protected from damage at all times and is free of any deleterious materials.	Conformance	2/27/2020 6:46:56 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel in the moment slab section was clean and protected from damage.	Conformance	9/17/2019 9:38:46 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM - 06:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All of the reinforcing steel was clean and free of foreign substances by the time the placement occurred.	Conformance	6/14/2019 2:03:09 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		None of the reinforcing steel is epoxy coated. This denoted by "N" in Detail B & E on plan sheet B050.142.	Conformance	7/8/2019 11:48:39 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM - 06:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		Reinforcing steel has been protected from damage and is free of foreign substance prior to installation within the shaft.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	8/13/2019 2:26:02 PM - 06:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		Most of the deck rebar and the epoxy coating were good, but the stirrups coming out of the deck were bent over and the epoxy on those were repaired. There was an issue with the cut epoxy bars where the manholes are located however and since the manhole frames were already installed, the repair on those bars was not 100% due to access issues.	The issue was acknowledged and addressed.	8/22/2019 7:17:44 AM -06:00	Audit Comment	PC and IQC have epoxy coating verification on the pre-pour checklists. We will reiterate the importance of inspecting all bar prior to placement.	Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		The reinforcing steel used in the bridge deck was clean and had no damage.	Conformance	4/24/2020 7:19:17 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover	7/24/2019 1:40:11 PM - 06:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		The main reinforcing steel in the cap was not epoxy coated. Denoted by "N" on the plans.	Conformance	7/23/2019 3:52:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel was clean and free of foreign substances.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		The reinforcing steel used in the approach was stored on dunnage, was protected from damage and was free from any deleterious materials.	Conformance	7/17/2019 10:53:19 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures	8/20/2019 7:22:00 AM - 06:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		Reinforcement that is epoxy coated has been protected from damage at all times, and free from dirt and foreign material.	Conformance	8/19/2019 4:35:28 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	BNSF Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		Epoxy coated reinforcing steel has been protected from damage at all times.	Conformance	2/24/2020 3:43:18 PM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		The epoxy coated rebar in the approach slab had no damage and was free of any deleterious materials.	Conformance	1/15/2020 2:14:56 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	1/22/2020 11:49:01 AM - 07:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		Epoxy reinforcing steel and the epoxy itself has been protected, and is free from dirt and other foreign substance.	Conformance	1/21/2020 1:06:49 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		The placement areas was free of debris. The reinforcing steel was free of rust and foreign material.	Conformance	12/28/2019 12:57:06 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel and its epoxy coating were protected from damage at all times and is free from deleterious substances.	Conformance	12/7/2020 10:56:33 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All the reinforcing steel and its epoxy coating were protected from damage at all times and is free from deleterious materials.	Conformance	3/12/2021 1:16:01 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		Rebar was clean and free of damage.	Conformance	8/19/2019 8:29:30 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcing was inspected by IQC prior to concrete placement.	Conformance	8/19/2019 8:29:30 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcement was inspected and approved before concrete placement by IQC (Mahdi).	Conformance	3/12/2021 1:16:01 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcement has been inspected and approved by IQC (Sean Gilman) before concrete placement.	Conformance	12/7/2020 10:56:33 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Reinforcement has been inspected and approved by before concrete placement by IQC.		All reinforcing steel was checked by IQC before the placement. I completed my inspection Wednesday afternoon before the placement Thursday morning at 7:00am. The total depth was found to be 1/4" out of tolerance (ACI 117). IQC rechecked the total depth of the cap to be in tolerance the morning of the placement.	Conformance	12/28/2019 12:57:06 PM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		The reinforcing steel was checked and approved by Tony Mcalpin and Sean Deller of IQC.	Conformance	1/15/2020 2:14:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	1/22/2020 11:49:01 AM - 07:00	Reinforcement has been inspected and approved by before concrete placement by IQC.		This audit comment is being generated to note that missing rebar was brought to field personnel's attention by the Department after PC and IQC gave approval. Areas noted to be missing rebar were addressed and then reinspected again to ensure compliance prior to concrete placement.	Had discussions with PC on more oversight of reinforcement placement, and not relying on IQC to find missing or out of place reinforcement.	2/10/2020 3:37:53 PM -07:00	Audit Comment	Acknowledged	Closed
Central 70	C 0704-241	Substructure	BNSF Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		IQC has inspected and approved the reinforcement placement prior to concrete placement.	Conformance	2/24/2020 3:43:18 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	8/20/2019 7:22:00 AM - 06:00	Reinforcement has been inspected and approved by before concrete placement by IQC.		A pre-inspection of the reinforcement cage was performed on 8/15/19 by IQC prior to continuation of formwork placement. A final inspection is still to be performed by IQC prior to concrete placement.	Closed	9/18/2019 7:56:43 AM -06:00	Audit Comment	The inspectors do a reinforcement check before the buttoning up of the forms so changes can be done while access is still good. Once the forms are done the reinforcement is looked at again when production is ready for concrete.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		I was out for the reinforcing steel inspection and IQC checked and approved it before concrete placement.	Conformance	7/17/2019 10:53:19 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Reinforcement has been inspected and approved by before concrete placement by IQC.		The inspection was completed by IQC inspector Anthony McAplin. Please see attached inspection.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover	7/24/2019 1:40:11 PM -06:00	Reinforcement has been inspected and approved by before concrete placement by IQC.		Please see the attached IQC inspection report.	Conformance	7/23/2019 3:52:36 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Reinforcement has been inspected and approved by before concrete placement by IQC.		The reinforcing steel was inspected and approved by IQC before concrete placement.	Conformance	4/24/2020 7:19:17 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	8/13/2019 2:26:02 PM -06:00	Reinforcement has been inspected and approved by before concrete placement by IQC.		The reinforcement was inspected and approved by IQC before concrete placement.	Conformance	8/9/2019 11:20:50 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcement was inspected and approved by IQC prior to installation in the shaft, and concrete placement.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcement for the first section of Wall 404-W3 Footing was inspected and approved by IQC prior to concrete placement operations.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Reinforcement has been inspected and approved by before concrete placement by IQC.		IQC inspected and signed off on the Cap before concrete placement started.	Conformance	3/12/2021 1:22:23 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	Reinforcement has been inspected and approved by before concrete placement by IQC.		Reinforcement was inspected and approved by IQC prior to shotcrete placement.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Reinforcement has been inspected and approved by before concrete placement by IQC.		NCR-1196 was fixed before the cages were set. From as-builts for the Pier 2 shafts, it was discovered that the drilled shaft projection rebar did not provide adequate clear cover to the outside of the column. The bars in question were cut off and new dowels were drilled and set using epoxy. Reference the attached NCR-1196 repair procedure. The column rebar cage was first inspected on Friday, July 5th. Reference comment #5 below. IQC was onsite on Sunday, July 7th to verify the placement of the form work around the rebar. Survey was onsite Monday, July 8th at 8:00 am to verify form placement before concrete arrived at 9:15 am. IQC made their final projection steel and clear cover verification right after survey.	Conformance	7/8/2019 11:48:39 AM -06:00	C		Closed

Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM - 06:00	Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		<p>The rebar was verified with plan sheet B050.122 and the "Rebar Shop Drawings Cover Abut 3 Cap Rev. 1". The plans required 5 abutment steps from shaft A3-12 (East Edge) to between shaft A3-15 & A3-16. The shop drawing sheet "RP-C1-03" required 4 abutment steps. I had a field discussion with the PC Inspector Phil Mazzarella. He was well aware of the issue and added a 5th step to comply with the plans. RFC-000069 was received on Wednesday, June 12th. The chamfer for the abutment steps was installed to ensure the appropriate bearing seat cross slope was attained for Girders W17-2, W18-2, G19-2, G20-2 & G212. A post pour inspection for the bearing seat cross slope will be conducted. The girder center line and block out locations were verified with survey during the morning inspection.</p>	Conformance	6/14/2019 2:03:09 PM -06:00	C		Closed

Central 70	C 0704-241	Substructure	Structures	8/20/2019 7:22:00 AM - 06:00	Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Key Note #1 on Sheet B110.113 states the "#6 [projecting vertical bars] at 1'-0" max. from each side of bottom flange of each girder. Displace at pile as necessary, cut vertical leg at girder." These vertical projecting bars were cut prior to survey marking centerline of girders. Verify this 1'-0" max. length from each side of girder will not be surpassed due to cutting prior to survey layout. Additionally, between Girders C & D, where utility conduit is to be located, will the cutting of projecting bars in this location mean the 1'-0" max. spacing be passed? Should the 1'-0" max spacing not be met, what is the repair procedure? Will splicing of #6 epoxy-coated rebar be allowed within the cap?	closed	9/18/2019 7:56:56 AM -06:00	Audit Comment	The projecting bar around the utility blockout will be adjusted to miss the blockout and maintain the spacing and the required clearance. According to the general notes splicing is allowed as long as the required splice is met for the size bar being spliced.	Closed
Central 70	C 0704-241	Approach Slabs	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The reinforcing steel installed was of the correct grade, size, type, number, location and spacing as required on the plans.	Conformance	7/17/2019 10:53:19 AM -06:00	C		Closed

[2] Location and alternating of 2-#4 diagonal hook bars was brought up by Department Assessor to IQC prior to pier cap reinforcement placement. Bars were addressed to vertically alternate hooks within the wall portion per plan sheet B090.114.	Field Resolved Comment [2] with IQC Team.	2/24/2020 3:53:45 PM -07:00	Field Resolved		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed bars match the grade, size, type, number of bars, location and spacing as required on the plans.	Conformance	12/7/2020 10:56:33 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Placement: Cover Pier 2 Cap, from column P2-24 to P2-28 (Plan Sheet B050.133 - B050.134 & B050.142).All of the bars included in the pier cap were in conformance with the plans.	Conformance	12/28/2019 12:57:06 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Barrier Walls	Roadway		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed bars match the grade, size, type, number of bars, location and spacing as required on the plans.	Conformance	3/12/2021 1:16:01 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		Epoxy coated reinforcing steel was used as this is bridge barrier.	Conformance	3/12/2021 1:16:01 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	BNSF Structures		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		Column Pier Wall uses epoxy-coated reinforcing steel as will be adjacent to roadway.	Conformance	2/24/2020 3:43:18 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	8/20/2019 7:22:00 AM -06:00	All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		Abutment projections within the diaphragm are epoxy-coated reinforcement as per plan.	Conformance	8/19/2019 4:35:28 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The column steel for pier 2 will be behind precast wall panels. The splash zone will not affect the columns.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover	7/24/2019 1:40:11 PM -06:00	All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		This placement was a pier cap for Columbine Bridge. The pier cap is not exposed to the splash zone.	Conformance	7/23/2019 3:52:36 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The columns will be behind precast walls panels. Epoxy coated rebar in not required.	Conformance	7/8/2019 11:48:39 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM - 06:00	All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		All of the reinforcing steel in the abutment was epoxy coated. The drilled shaft projection steel was un-coated black steel which was called out on Plan Sheet B050.123 (Section C, denoted by "N").	Conformance	6/14/2019 2:03:09 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		All reinforcing steel in the concrete barrier is epoxy coated.	Conformance	9/19/2019 12:58:14 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		Epoxy coated reinforcing steel was used in the moment slab.	Conformance	2/27/2020 6:46:56 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are located as shown on the plans.	Conformance	2/27/2020 6:46:56 AM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are at correct locations as shown on the plans.	Conformance	4/4/2020 3:55:53 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All splices were as shown on the plans.	Conformance	9/19/2019 12:58:14 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM - 06:00	Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All of the splices that were checked were in conformance with the plans and specs.	Conformance	6/14/2019 2:03:09 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		The splices for the drilled shaft projection steel and column cage matched the plans.	Conformance	7/8/2019 11:48:39 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Rebar	Cover	7/24/2019 1:40:11 PM - 06:00	Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		The longitudinal bar splices were in conformance with the plans and specs.	Conformance	7/23/2019 3:52:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		The only splice encountered was between the drilled shaft projection steel at the bottom of the column. This was conformance with the plans.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are at the locations shown on the plans.	Conformance	4/24/2020 7:19:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	8/20/2019 7:22:00 AM - 06:00	Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are at the locations shown on the plans, and in conformance with spacing defined in the specifications.	Conformance	8/19/2019 4:35:28 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All reinforcing steel splices were at the locations indicated on the plans.	Conformance	7/17/2019 10:53:19 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	BNSF Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are at the locations shown on the plans, and are within conformance with the specifications.	Conformance	2/24/2020 3:43:18 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All splices are at locations shown on the plans other than locations where the length was insufficient (bars coming from the existing phase approach slab). Approved bar couplers were used at these locations.	Conformance	1/15/2020 2:14:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		The adequate splice length was provided from the previous pier cap placement. Please reference the pictures in the attachment of comment #4.	Conformance	12/28/2019 12:57:06 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All splices are at the locations shown on the plans.	Conformance	12/7/2020 10:56:33 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are at the location shown on the plans.	Conformance	3/12/2021 1:16:01 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		The splices were in conformance with the shop drawings and plan sheets.	Conformance	12/28/2019 12:57:06 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	BNSF Structures		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		Splices in adjacent lines of reinforcing bar are staggered and spaced at required lengths.	Conformance	2/24/2020 3:43:18 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	8/20/2019 7:22:00 AM -06:00	Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		Splices in adjacent lines of reinforcing bars are staggered and spaced at the required length.	Conformance	8/19/2019 4:35:28 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	8/13/2019 2:26:02 PM - 06:00	Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		All splices were located as shown on the plans.	Conformance	8/9/2019 11:20:50 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		The hoop steel lap splice were in conformance with plans.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		Splices in adjacent lines of reinforcing are staggered so that the spacing does not exceed 9" as stated in Key Note #3 on Plan Sheet WS208.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		The rebar hoops splices were staggered.	Conformance	7/8/2019 11:48:39 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM - 06:00	Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		All splices were in conformance with the plans and shop drawings.	Conformance	6/14/2019 2:03:09 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		Reinforcement splices have been staggered and spaced at the required length for lapped splicing of bars.	Conformance	4/4/2020 3:55:53 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM - 06:00	Reinforcing bars No. 14 and No. 18 shall not be spliced by lapping, but shall be joined by butt welding...		Number #14 & #18 bar were not used in this placement.	Conformance	6/14/2019 2:03:09 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Reinforcing bars No. 14 and No. 18 shall not be spliced by lapping, but shall be joined by butt welding...		#14 or #18 rebar was not required in this placement.	Conformance	7/8/2019 11:48:39 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Reinforcing bars No. 14 and No. 18 shall not be spliced by lapping, but shall be joined by butt welding...		#14 and #18 were not used in this installation.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Rebar supports shall be as follows: -Footing bars or slabs on grade: Precast concrete blocking or other approved blocking material -All other applications: Steel chairs or precast mortar blocks (For epoxy coated steel all tie wire & supports are epoxy or plastic coated.) -All Chairs in contact with forms: CRSI Class 1 or 2: Type B (ie. stainless protected, plastic or plastic protected, Epoxy-Coated, Vinyl-Coated, or Plastic-Coated)		Precase concrete blocking was used to support rebar.	Conformance	8/19/2019 8:29:30 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	9/5/2019 4:14:47 PM - 06:00	Embedded bars are adequately supported to eliminate field damage and displacement.		Bars were supported by several grout blocks, however after initial bucket of concrete was placed, the cage shifted under weight of concrete placement. Crews attempted to move bars back to original position, and were only partially successful. Proper clearance and spacing was maintained in collar.		9/16/2019 5:03:26 PM -06:00	Audit Comment	PC and IQC discussed these field concerns in the drainage task force meeting on Mondays at 10 AM	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		The pier cap included #8 bars at 1ft on center along the cap center line (Plan Sheet B050.142). The crew decided to cast these bars in place instead of using the galvanized corrugated metal sleeve (General Note #8). There was no over head obstruction for the future girder set so the sleeve was not required.	Conformance	12/28/2019 12:57:06 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	BNSF Structures		Embedded bars are adequately supported to eliminate field damage and displacement.		Embedded bars in the pier are protected from damage and displacement in the field.	Conformance	2/24/2020 3:43:18 PM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		Embedded bars are adequately supported to eliminate field damage and displacement.		Embedded bars were adequately supported to protect from field damage and displacement.	Conformance	4/4/2020 3:55:53 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM - 06:00	Embedded bars are adequately supported to eliminate field damage and displacement.		No embedded bars were used during this placement. A 6" corrugated galvanized steel post tensioning duct block out was the only embedded item. Each block out was verified by survey to be at the center line of each girder.	Conformance	6/14/2019 2:03:10 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	8/20/2019 7:22:00 AM - 06:00	Embedded bars are adequately supported to eliminate field damage and displacement.		Embedded bars are adequately supported to best eliminate field damage and/or displacement.	Conformance	8/19/2019 4:35:28 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		There were no embedded items.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All areas were tied appropriately.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover	7/24/2019 1:40:11 PM -06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The reinforcing was tied at alternating intersections in accordance with this specification.	Conformance	7/23/2019 3:52:36 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	8/13/2019 2:26:02 PM -06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement was tied at the correct frequency according to the spacing of the bars.	Conformance	8/9/2019 11:20:50 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures	8/8/2019 7:18:38 AM -06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Reinforcement tied at all intersections throughout the cage length.	Conformance	8/7/2019 7:38:35 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	8/20/2019 7:22:00 AM -06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Reinforcement tied at alternate intersections where spacing is less than 1 foot in all directions. Elsewhere, the abutment reinforcing cage is tied at all intersections.	Conformance	8/19/2019 4:35:28 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All bar spacing was less than 12" in both directions, so the mats were tied at 50%.	Conformance	7/17/2019 10:53:19 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM - 06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		100% tie was required for this placement. Due to moving the rebar for block outs, some areas were less than a foot in each direction which would allow alternating intersections to be tied. The picture was taken 1.25 hours before placement. The attached image was consistent throughout the entire placement. The crew was able to tie the areas before concrete arrived. The reinforcing steel should have been tied appropriately throughout the rebar installation and not at the very end to allow a more thorough inspection.	Acceptable	7/11/2019 3:48:06 PM -06:00	Audit Comment	Acknowledged. PC and IQC will verify on the pre pour checklists when 100% tie is called out	Closed
Central 70	C 0704-241	Rebar	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The alternating intersections were tied throughout all of the cages. The spacing was smaller than 1 foot in each direction.	Conformance	7/8/2019 11:48:40 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcing was tied at every intersection.	Conformance	2/27/2020 6:46:56 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Since each stirrup was placed at 6" on center. Tying alternating intersections was adequate.	Conformance	12/28/2019 12:57:06 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Cap	Walls		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcing steel was tied according to specifications (every intersection).	Conformance	12/7/2020 10:56:33 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All of the steel was tied by hand.	Conformance	12/28/2019 12:57:06 PM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All of the cages were tied by hand.	Conformance	7/8/2019 11:48:40 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	6/17/2019 8:05:12 AM -06:00	Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All the reinforcing steel was tied by hand.	Conformance	6/14/2019 2:03:10 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover	7/24/2019 1:40:11 PM -06:00	Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All the intersections were tied manually.	Conformance	7/23/2019 3:52:36 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All tie wire was installed manually.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated rebar was not required.	Conformance	7/13/2019 1:08:20 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Cover	7/24/2019 1:40:11 PM -06:00	If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated rebar was not included in the placement.	Conformance	7/23/2019 3:52:36 PM -06:00	C		Closed

Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	7/3/2019 7:21:10 AM - 06:00	Trench excavation correctly aligned and proper width. Verify that pipe placement begins at the downstream end. Perform frequent alignment and elevation checks. Be exacting on sanitary sewer grades and flow-line smoothness.		Pipe run P-MH-70W2334 was laid prior to being connected to the box. After crews installed the box it was discovered the pipe run was slightly off on alignment. As a result crews cut pipe and poured a concrete collar. The location of the collar was close enough to the box that the collar for the pipe penetration into the box and the pipe to pipe collar were one. (Attached are photos. In the photo showing the collar the skewed pipe is not visible it is encased in the large concrete collar.) The crews used a collar detail which was not specified for this location. Attached is a copy of the plan sheet they used.	NCR written	7/23/2019 12:20:27 PM -06:00	NC-2	This issue will be addressed in NCR 1212	Closed

Central 70	C 0704-241	Subgrade	Earthwork		Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		Earthwork cross-section were built per plans.	Conformance	11/8/2019 8:51:43 AM -07:00	C		Closed
Central 70	C 0704-241	Earthwork	Earthwork	7/19/2019 10:12:56 AM -06:00	Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		Slopes around ends of embankment were observed to be approximately 1:1, not conforming to safety critical plan. Slope angle continues past ends of embankment, going east and west at same ratio on all 4 sides.	See KIE-EML-002831 which is a response to CDOT-EML-005765. Also NCR 1297 was created.	10/28/2019 2:24:17 PM -06:00	NC-2		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		The cross slope and grade were in conformance with the plans. Please reference attached pictures.	Conformance	8/25/2020 9:25:55 AM -06:00	C		Closed
Central 70	C 0704-241	BNSF	Railroads	5/11/2020 5:56:20 PM -06:00	Check the installation of drainage facilities for proper operation and that the Contractor maintains the roadbed in proper condition.		Drainage facilities appear to be cut into the proper elevation so that the rail bed will remain dry.	Conformance	5/11/2020 11:06:58 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		The Department's inspectors have a responsibility to thoroughly inspect all subgrade in cooperation with the Contractor's forces.		All subgrade was inspected by inspector throughout all subgrade	Conformance	6/16/2020 11:46:35 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		The Department's inspectors have a responsibility to thoroughly inspect all subgrade in cooperation with the Contractor's forces.		IQC and PC were present.	Conformance	7/8/2019 9:54:15 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Grade was verified prior to base.	Conformance	7/8/2019 9:54:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		subgrade and base were constructed per plans.	Conformance	8/15/2019 1:06:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		The subgrade was constructed and sting-lined was set to the correct cross-slope, elevation and alignment.	Conformance	6/16/2020 11:46:35 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		The subgrade was free from all ruts, corrugations. The subgrade was compacted and approved in accordance with section 203	Conformance	6/16/2020 11:46:35 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to required grade. No ruts or other irregularities were observed.	Conformance	12/11/2019 9:38:29 AM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		No rutting was observed in subgrade.	Conformance	11/7/2019 9:21:55 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to the required grade and free from ruts.	Conformance	8/15/2019 1:06:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Appeared to be graded to the appropriate grade and sections	Conformance	7/8/2019 9:54:15 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped properly, free from ruts.	Conformance	11/2/2020 3:53:43 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Railroad Grading	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Grade was set to the required cross-slope and elevation, free of irregularities, and compacted / approved within conformance of Section 203 of the Specifications, and any additional railroad specifications were followed.	Conformance	7/9/2019 3:46:51 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to the required grade per plans. Subgrade was free from all ruts and irregularities.	Conformance	10/7/2019 4:05:21 PM -06:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade/ subballast was moisture conditioned and required moisture density obtained for areas where grading support was utilized.	Conformance	7/9/2019 3:46:51 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required density.	Conformance	11/2/2020 3:53:43 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required density.	Conformance	6/1/2020 7:54:32 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade and base were compacted to the required moisture and density.	Conformance	8/15/2019 1:06:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required density at an acceptable moisture range.	Conformance	12/4/2019 6:21:04 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		The subgrade/base was compacted to the required moisture and density	Conformance	6/16/2020 11:46:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		PC and IQC achieved passing density tests after cement treatment was applied to subgrade.	Conformance	12/11/2019 9:38:29 AM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted. IQC achieved passing tests on subgrade.	Conformance	11/7/2019 9:21:55 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required moisture/density.	Conformance	10/1/2020 10:31:29 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Densities will be determined by nuclear methods in accordance with CP 80.		Density tests were performed by nuclear methods on accordance with CP80.	Conformance	8/15/2019 1:06:37 PM -06:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		Densities will be determined by nuclear methods in accordance with CP 80.		Densities were achieved using the nuclear methods, and upon approval of passing densities, a proof-roll was completed prior to moving onto subballast and ballast.	Conformance	7/9/2019 3:46:51 PM -06:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		Proof-roll operations conformed to the specifications, and if any soft spots were identified, they were corrected and retested prior to proceeding.	Conformance	7/9/2019 3:46:51 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		No soft spots were observed during the proof roll	Conformance	6/1/2020 7:54:32 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		No soft spots were observed during proof roll.	Conformance	11/2/2020 3:53:43 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		Soft spots were identified and corrected by the contractor. No ruts were identified during operation.	Conformance	10/7/2019 4:05:21 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		During proof roll operation. Soft spots were encountered and corrected by the contractor.	Conformance	8/15/2019 1:06:37 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		During the proof roll there were no soft spots or ruts.	Conformance	6/16/2020 11:46:35 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		During initial proof roll, IQC identified 2 soft spots that were then corrected and verified during final proof roll.	Conformance	12/11/2019 9:38:29 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		Soft spots were corrected prior to paving operations.	Conformance	12/11/2019 9:38:29 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Any soft spots should be corrected before the paving operation begins.		There were no soft spots in the subgrade.	Conformance	6/16/2020 11:46:36 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Any soft spots should be corrected before the paving operation begins.		Soft spots were corrected prior to paving operation.	Conformance	10/1/2020 10:31:29 AM -06:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		Any soft spots should be corrected before the paving operation begins.		Soft spots identified were corrected prior to continuing with subballast / ballast placement operations.	Conformance	7/9/2019 3:46:51 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork	6/11/2019 3:31:16 PM - 06:00	Any soft spots should be corrected before the paving operation begins.		During placement of second lift of HMA on block 6304. From Approx. Sta 2218+80 to Sta 2224+34. Movement (Pumping) was observed on the first lift of HMA. Paving operation continued.	NCR-1121	6/25/2019 12:33:38 PM -06:00	NC-2	This issue will be resolved with NCR-1121	Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		6. Ensure that the work has been adequately protected once the subgrade has been approved in accordance with the specification.		Subgrade was adequately protected upon completion and approval of grade, prior to subballast/ ballast placement. In most cases, the next layer (i.e. subballast or ballast) was placed to provide protection to the previously approved grade.	Conformance	7/9/2019 3:46:51 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		6. Ensure that the work has been adequately protected once the subgrade has been approved in accordance with the specification.		After subgrade was approved it was protected.	Conformance	11/2/2020 3:53:43 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		6. Ensure that the work has been adequately protected once the subgrade has been approved in accordance with the specification.		All subgrade was protected after it was approved.	Conformance	6/16/2020 11:46:36 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		6. Ensure that the work has been adequately protected once the subgrade has been approved in accordance with the specification.		Work was protected with positive grading to drain any water away from subgrade.	Conformance	11/7/2019 9:21:55 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		7. Upon approval of the proof rolling, the subbase, base course, or initial pavement course shall be placed within 48 hours.		After the subgrade was sold off and proof rolled was done the pavement was placed within 48 hours.	Conformance	6/16/2020 11:46:36 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		7. Upon approval of the proof rolling, the subbase, base course, or initial pavement course shall be placed within 48 hours.		Asphalt was placed within 36 hrs of base course being sold.	Conformance	10/7/2019 4:05:21 PM -06:00	C		Closed

Central 70	C 0704-241	HMA	Roadway	8/13/2019 2:27:08 PM - 06:00	Review the Contract limitations with respect to cold-weather paving and inclement weather, including allowable conditions for placing prime and tack coats and underlying pavement layers and surface lifts.		No cold weather was encountered. Paving operations were stopped when rain began.	Conformance	8/9/2019 9:15:37 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	10/23/2019 3:01:25 PM - 06:00	Review the Contract limitations with respect to cold-weather paving and inclement weather, including allowable conditions for placing prime and tack coats and underlying pavement layers and surface lifts.		Asphalt was placed on surface that was below CDOT Standard Specs. minimum allowable temperature for placement. See attachment pic 2 taken when first truck backed up to paver. See attachment Pic 3 taken when ambient temperature fell below CDOT Standard Specs. minimum allowable temperature for asphalt placement. From approx. Sta 2293+40 Lt to Sta 2298+50 Lt		10/28/2019 10:11:41 AM -06:00	Audit Comment	IQC and PC had the discussion about the dropping ambient temperatures. The joint decision was made to shut the plant off and place what material was on the road (5 loads) IQC still had an ambient temp of 56 degrees at the time the last truck was placed.	Closed
Central 70	C 0704-241	HMA	Roadway	10/23/2019 3:01:25 PM - 06:00	Was the placement of the asphalt overlay in accordance with Table 401-4 "Periods Required Overlay of Treated Surfaces"?		Asphalt placement overlay was in accordance with Table 401-4.	Conformance	10/21/2019 8:25:12 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted properly.	Conformance	3/30/2020 4:41:35 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was compacted properly and density tests were achieved.	Conformance	11/11/2019 3:10:16 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	General Work	Cover	8/20/2019 7:14:15 AM - 06:00	Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Due to the nature of the placement, the grade was irregular. This was to ensure that the pavement tied in the existing Columbine (Crowned) pavement and the new Columbine bridge (Complex slopes). The south end of the Columbine bridge required very little fill material. The asphalt wedge protruded onto the concrete deck. The north end of the structure required grading in each corner to get positive drainage. Reference the attached pictures.	Conformance	8/19/2019 3:06:21 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		The surface was prepped appropriately before the proof roll occurred. Reference comment #3.	Conformance	8/19/2019 3:05:24 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compact properly.	Conformance	8/15/2019 1:08:19 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded properly and with no visible irregularities noticed on base course.	Conformance	8/19/2019 2:28:18 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	9/5/2019 4:18:30 PM - 06:00	Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Please see attached photos of the hard cap area. Surface Irregularities can be seen in photos as well as loose dry material.		10/7/2019 3:00:11 PM -06:00	NC-2	NCR 1443 was written to address this issue	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and properly compacted.	Conformance	9/4/2019 2:17:01 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted. Base was brought to grade and cross section.	Conformance	9/5/2019 11:50:06 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted properly prior to placing HMA.	Conformance	9/24/2019 10:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted properly. Base was brought to uniform grade and cross section.	Conformance	6/9/2020 11:03:59 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Subgrade cement treated, graded and compacted properly. Grade was brought to uniformity and planned cross section.	Conformance	3/2/2020 9:51:19 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted properly prior to placing HMA.	Conformance	11/11/2019 3:10:41 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted properly prior to placing HMA	Conformance	9/4/2019 2:16:34 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted prior to asphalt placement. No irregularities were noticed.	Conformance	8/12/2019 2:11:31 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	7/16/2019 4:11:54 PM -06:00	Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded per plan and compacted.	Conformance	7/16/2019 1:22:39 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded and compacted properly. IQC and PC achieved passing density tests.	Conformance	12/20/2019 5:28:21 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the surface graded and compacted properly? Are the Irregularities in the existing pavement or base brought to uniform grade and cross section?		Surface was graded, compacted properly, brought to grade and cross section.	Conformance	10/7/2019 10:04:24 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified and corrected by the contractor.	Conformance	10/7/2019 4:05:21 PM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Subgrade was above freezing, and no soft spots were identified.	Conformance	12/20/2019 5:28:21 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified by the contractor and corrected.	Conformance	11/11/2019 3:10:42 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified by the contractor and corrected.	Conformance	9/4/2019 2:16:34 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Any soft spots that were identified were corrected. Paving was not allowed to be placed on frozen subgrade.	Conformance	3/2/2020 9:51:19 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified during proof roll operation and corrected prior to HMA placement.	Conformance	6/9/2020 11:03:59 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified by the contractor and corrected prior to placing HMA.	Conformance	9/24/2019 10:10:34 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		No soft spots were identified during proof-roll operation of base course.	Conformance	9/5/2019 11:50:06 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were identified and corrected by the contractor.	Conformance	9/4/2019 2:17:01 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		No soft spots were identified during proof roll operation.	Conformance	8/15/2019 1:08:19 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		During the proof roll, two soft spots were identified at the South Clayton bridge approach between the bridge and 46th. The soft spots were addressed before asphalt was placed. Geo-grid was placed across the entire placement area. Please reference the attached pictures.	Conformance	8/19/2019 3:05:24 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover	8/20/2019 7:14:15 AM - 06:00	Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		No soft spots were found on the North end of the bridge when a proof roll was conducted.	Conformance	8/19/2019 3:06:21 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		No soft spots were identified by IQC.	Conformance	11/11/2019 3:10:16 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spot was identified and corrected by the contractor prior to placing asphalt.	Conformance	9/24/2019 10:13:04 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Soft spots identified and corrected? Do not permit paving on frozen subgrade or base material.		Soft spots were corrected prior to placement.	Conformance	3/30/2020 4:41:35 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		Proof roll was conducted.	Conformance	3/30/2020 4:41:35 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover	8/20/2019 7:14:15 AM - 06:00	Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		A proof roll was conducted on the North end of the Columbine bridge first thing Friday morning (August 16th).	Conformance	8/19/2019 3:06:21 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		The grading crew placement embankment the previous day (8/14/2019). A proof roll occurred at 8:00 am the morning of the asphalt placement (8/15/2019)	Conformance	8/19/2019 3:05:24 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		Proof roll was conducted, soft spots were identified and corrected bu the contractor prior to placing HMA.	Conformance	8/19/2019 2:28:18 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		Proof-roll was conducted. Soft spots noticed and corrected.	Conformance	9/24/2019 10:10:34 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		Proof-roll conducted to identify soft spots prior to paving. Any soft spots identified were addressed prior to permanent pavement placement.	Conformance	3/2/2020 9:51:19 AM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		Proof-roll was conducted with a CAT 938 front end loader carrying a half full bucket.	Conformance	12/20/2019 5:28:21 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Was the Proof-roll conducted accordance of Spec 203.09 to identify soft pockets and areas of excess yielding? 1. Does the inspector have the Weight ticket for the axel of the truck being used? 2. Was the inspector marking areas which exhibit excessive deflection? 3. Was the inspector documenting the proof roll information such as; date, areas (Stations), general condition, methods used to repair unacceptable subgrade		Proff-roll was conducted.	Conformance	10/7/2019 10:04:24 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Is the surface to be treated properly prepared?		Subgrade was cement treated and inspected by IQC.	Conformance	6/1/2020 7:53:22 AM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover	8/20/2019 7:14:15 AM -06:00	Is the surface to be treated properly prepared?		All of the surfaces were treated with tack appropriately.	Conformance	8/19/2019 3:06:21 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Were the irregularities in the existing pavement or base brought to uniform grade and cross section?		The sub-base material was uniform so asphalt may be tied into the existing pavement at 46th on the South end and Clayton on the North end.	Conformance	8/19/2019 3:05:24 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	8/13/2019 2:27:48 PM -06:00	Were the irregularities in the existing pavement or base brought to uniform grade and cross section?		No irregularities were noted at time of inspection.	Conformance	8/9/2019 9:12:04 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	8/13/2019 2:27:48 PM -06:00	Is the existing surface properly repaired, patched and cleaned?		Base was placed properly. Asphalt tack was placed between asphalt layers.	Conformance	8/9/2019 9:12:04 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Was the surface swept to remove accumulations of loose gravel and debris?		Existing pavement surface was swept properly.	Conformance	12/20/2019 5:28:21 PM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	9/3/2019 12:21:58 PM -06:00	Was the surface swept to remove accumulations of loose gravel and debris?		Surface was swept prior to paving	Conformance	9/3/2019 12:02:40 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		Surface was swept clean of debris and ready for SMA placement.	Conformance	9/19/2019 12:58:42 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		Surface was swept from debris prior to placing tack.	Conformance	11/11/2019 3:10:42 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		Surface was swept and all loose gravel and debris was removed.	Conformance	6/4/2019 11:16:24 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	General Work	Cover		Was the surface swept to remove accumulations of loose gravel and debris?		All loose debris was swept away at the joints before tack was placed.	Conformance	8/19/2019 3:05:24 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		Surface was properly swept of any debris prior to placing tack.	Conformance	9/4/2019 2:17:01 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	10/2/2019 4:00:17 PM -06:00	Was the surface swept to remove accumulations of loose gravel and debris?		Approach slab surfaces were swept prior to tack coat application. Bridge deck was hand swept and backpack blower was used.	Conformance	9/9/2019 1:57:41 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		Surface was swept after milling operation and prior to placing tack.	Conformance	9/24/2019 10:12:28 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the surface swept to remove accumulations of loose gravel and debris?		Surface was swept after milling operation and prior to tack placement.	Conformance	9/24/2019 10:11:36 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	10/23/2019 3:01:25 PM -06:00	Was the surface swept to remove accumulations of loose gravel and debris?		Surface was swept after milling and all loose material and debris was collected.	Conformance	10/21/2019 8:25:12 AM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Are the vertical faces free of tack?		All vertical faces were tacked appropriately. Please reference the attached pictures.	Conformance	8/19/2019 3:05:24 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	General Work	Cover	8/20/2019 7:14:15 AM - 06:00	Are the vertical faces free of tack?		Since the asphalt is considered temporary, no tack was place on the vertical face of the knee wall of the cover abutment 1 on Columbine. This is for the ease of removal later. All other areas were tacked in accordance with the specification. Please see the attached photos.	Conformance	8/19/2019 3:06:21 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Were the Contact Surfaces of curbing, gutters, manholes, and other structures uniformly coated with asphalt cement prior to placing asphalt mixture against them?		Tack was placed appropriately on all contact areas in the placement area. Please reference the attachment in comment #6.	Conformance	8/19/2019 3:05:24 PM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	9/3/2019 12:21:58 PM - 06:00	Were the Contact Surfaces of curbing, gutters, manholes, and other structures uniformly coated with asphalt cement prior to placing asphalt mixture against them?		asphalt cement was tacked prior to placing mix.	Conformance	9/3/2019 12:02:40 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were the Contact Surfaces of curbing, gutters, manholes, and other structures uniformly coated with asphalt cement prior to placing asphalt mixture against them?		Tack was applied.	Conformance	6/1/2020 7:53:22 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	8/13/2019 2:27:48 PM - 06:00	Were the Contact Surfaces of curbing, gutters, manholes, and other structures uniformly coated with asphalt cement prior to placing asphalt mixture against them?		Tack was placed on the asphalt manholes/inlets as necessary. Manhole riser and grate not placed at this time.	Conformance	8/9/2019 9:12:04 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Allowed to break after application? Where overspray or smearing is observed, were the affected surfaces cleaned?		Tack was allowed to break after application.	Conformance	12/20/2019 5:28:21 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Allowed to break after application? Where overspray or smearing is observed, were the affected surfaces cleaned?		Tack was allowed to break prior to paving.	Conformance	6/1/2020 7:53:22 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Allowed to break after application? Where overspray or smearing is observed, were the affected surfaces cleaned?		Tack was allowed to break prior to placing HMA.	Conformance	11/11/2019 3:10:42 PM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	9/3/2019 12:21:58 PM -06:00	Allowed to break after application? Where overspray or smearing is observed, were the affected surfaces cleaned?		Tack coat was allowed to break prior to paving.	Conformance	9/3/2019 12:02:40 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	11/12/2019 8:39:26 AM - 07:00	Weather conditions acceptable for paving? Ambient and surface temperature?		IQC Checklist states that paving began 4:00AM, and 2 lifts of 3 inches were placed at Central Park. Per CDOT Standard Specifications for Road and Bridge Construction Table 401-3, the minimum temperature for placing a 3 inch lift of asphalt below top layer is 35 degrees. Historical weather data for the area shows that ambient air temperature at the time was 30 degrees.		12/20/2019 8:08:10 AM -07:00	NC-2	I was given the understanding that this NC-2 was to be retracted as the surface temperature was checked by IQC and PC in the field/on site and found to be in compliance. This is documented within the IQC checklist. The historical data attached was from DIA from conversations previously had about this matter.	Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	10/2/2019 4:00:17 PM - 06:00	Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		After 2nd pull from inside shoulder on EB bridge, and 2nd pull from outside shoulder on WB bridge, skid steer was used to collect and replace mix that had been dumped on unswept existing roadway back into paver. IQC was aware, and advised crew against performing this action.	See NCR 1465	10/4/2019 9:59:35 AM -06:00	NC-2	NCR 1465 was issued to resolve this NC-2. This is not a preferred practice that the crews should be doing. They have been advised for future work to waste mix if it has been contaminated, but in this case was not.	Closed
Central 70	C 0704-241	HMA	Roadway	7/31/2019 12:09:55 PM - 06:00	Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		Multiple times, trucks moved forward ahead of paver, causing mix to be dumped onto subgrade or existing pavement in front of paver. Skid steer was used to replace dumped pavement into paver, instead of removing completely. Please advise truck drivers to be attentive to paving crew directions, and dump mix directly into paver. Also, mix that has been contaminated with dirt or other subgrade materials should not be placed back into paver.		8/9/2019 8:11:37 AM -06:00	Audit Comment	Acknowledged. Truck drivers are a on going training challenge. We will communicate with paving foreman to waste material that is contaminated.	Closed

Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	8/28/2019 10:46:18 AM - 06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Paver was operating in a stop and go motion.		10/4/2019 3:04:05 PM -06:00	Audit Comment	Acknowledged. KIC does as much as possible to eliminate the stop and go paving.	Closed
Central 70	C 0704-241	HMA	Roadway		Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Paver was operated at an acceptable pace.	Conformance	6/1/2020 7:53:22 AM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Once aligned within the paving limits, the operation of the paver was smooth and continuous.	Conformance	8/19/2019 3:05:24 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	10/2/2019 4:00:17 PM - 06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Paver was operating in a constant forward motion, with a mostly uniform speed.	Conformance	9/9/2019 1:57:41 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	6/16/2020 2:40:36 PM - 06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Paver was being operated in a stop and go motion.		11/6/2020 10:29:48 AM -07:00	Audit Comment	acknowledged.	Closed
Central 70	C 0704-241	SMA	Roadway		Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		The paver was operating at a forward speed consistent with uniform and continuous laying of the mixture, no stop and go motion.	Conformance	6/16/2020 11:43:07 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		Hopper was more than half- full, material was kept at midpoint of augers/ 1/2 to 2/3 full, cross slope as shown on typical sections.	Conformance	6/16/2020 11:43:07 AM -06:00	C		Closed

Central 70	C 0704-241	HMA	Roadway	10/2/2019 4:00:17 PM - 06:00	When the placement of hot mix asphalt is on a waterproofed bridge deck, ensure the equipment did not damage the membrane or protective covering.		On the EB bridge deck, when preparing for the second and third pulls (going from inside shoulder to outside shoulder) the outside track of the paver created cracks and tears in the membrane, from 2-18 inches long, but not wider than 3 inches. Paving superintendent and IQC were aware of tears, superintendent decided to continue paving on surface.		9/16/2019 5:24:12 PM -06:00	Audit Comment	There is no evidence that the deck surface is showing through. The waterproofing membrane still appears to be in place.	Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature was taken on mat behind the paver and prior to rolling.	Conformance	9/4/2019 2:17:01 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		IQC on site checking temperature as well as myself behind the paver. Temperatures check all in conformance.	Conformance	8/19/2019 2:28:18 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		IQC was observed taking temperature.	Conformance	8/15/2019 1:08:19 PM -06:00	C		Closed

Central 70	C 0704-241	HMA	Roadway		Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is performed while the mix is warm enough to permit the removal of roller marks.		Rollers were following the rolling sequence.	Conformance	9/4/2019 2:16:34 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is performed while the mix is warm enough to permit the removal of roller marks.		Compaction rolling operation was followed.	Conformance	9/19/2019 12:58:42 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is performed while the mix is warm enough to permit the removal of roller marks.		All compaction rolling sequence was followed. From initial breakdown, intermediate, to finished.	Conformance	8/12/2019 2:11:31 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is performed while the mix is warm enough to permit the removal of roller marks.		Compaction operation rolling sequence was being followed.	Conformance	9/24/2019 10:10:34 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is preformed while the mix is warm enough to permit the removal of roller marks.		Compaction rolling sequence was followed.	Conformance	6/1/2020 7:53:22 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		Roller was traveling at acceptable speed.	Conformance	6/1/2020 7:53:22 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	8/13/2019 2:27:08 PM - 06:00	Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		Roller was operating at a brisk walking pace. No material was picked up by rollers or pneumatic wheels. Water was used in rollers to ensure cleanliness and prevent material pickup.	Conformance	8/9/2019 9:15:37 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)	9/3/2019 12:21:58 PM - 06:00	Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		Paver was operating at a brisk walking pace, and did not pick up material as it was compacting mat.	Conformance	9/3/2019 12:02:40 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	7/31/2019 12:09:55 PM - 06:00	Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		Rollers were moving at adequate speed, and roller spray nozzles were working properly to prevent HMA from sticking to roller heads.	Conformance	7/31/2019 7:44:32 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		Rollers operated a slow speed and did not pick up material.	Conformance	12/20/2019 5:28:21 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		Rollers operated at proper speed.	Conformance	3/30/2020 4:41:35 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	6/16/2020 2:40:36 PM - 06:00	Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		Rollers were being operated/traveling at a brisk walking pace. Rollers were kept clean and not picking up material.	Conformance	6/16/2020 11:44:26 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	10/2/2019 4:00:17 PM - 06:00	Is the roller traveling faster than approximately three miles per hour (brisk walking pace)? Traveling below 3 mph? Picking up material? Rollers kept clean?		Rollers traveled at a brisk walking pace. Rollers were kept clean.	Conformance	9/9/2019 1:57:41 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was a pneumatic-tire roller are used? Was the correct tire pressure used in accordance with the compaction test section? Pneumatic wheel rollers shall not be used on SMA mix		Pneumatic tire rollers were used.	Conformance	3/30/2020 4:41:35 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was a pneumatic-tire roller are used? Was the correct tire pressure used in accordance with the compaction test section? Pneumatic wheel rollers shall not be used on SMA mix		Pneumatic tire roller was used.	Conformance	6/1/2020 7:53:22 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was a pneumatic-tire roller are used? Was the correct tire pressure used in accordance with the compaction test section? Pneumatic wheel rollers shall not be used on SMA mix		No pneumatic tire roller was used during this operation.	Conformance	9/19/2019 12:58:42 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the vibratory feature of the roller using? Vibratory rollers can be used in either the static or vibratory mode. Where the vibratory mode is used, the frequency should be as high as practical without detriment to the mat.		Rollers vibrated breakdown and intermediate rolling, however final rolling was done in static mode.	Conformance	6/1/2020 7:53:22 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	6/16/2020 2:40:36 PM - 06:00	Was the vibratory feature of the roller using? Vibratory rollers can be used in either the static or vibratory mode. Where the vibratory mode is used, the frequency should be as high as practical without detriment to the mat.		Rollers were being used in vibratory and static modes during compaction operating.	Conformance	6/16/2020 11:44:27 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the vibratory feature of the roller using? Vibratory rollers can be used in either the static or vibratory mode. Where the vibratory mode is used, the frequency should be as high as practical without detriment to the mat.		Breakdown and tire rollers were operated in vibratory mode.	Conformance	3/30/2020 4:41:35 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	General Work	Cover		Was the vibratory feature of the roller using? Vibratory rollers can be used in either the static or vibratory mode. Where the vibratory mode is used, the frequency should be as high as practical without detriment to the mat.		The vibratory function of the roller used in comment #15 for knockdown was adequate.	Conformance	8/19/2019 3:05:25 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover	8/20/2019 7:14:15 AM - 06:00	Was the vibratory feature of the roller using? Vibratory rollers can be used in either the static or vibratory mode. Where the vibratory mode is used, the frequency should be as high as practical without detriment to the mat.		The vibratory function of the roller was not utilized while compacting the mix on the South side of the bridge deck which is with in conformance with the specification. The vibratory function was used on the north approach since it was on compacted sub base material.	Conformance	8/19/2019 3:06:21 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	10/2/2019 4:00:17 PM - 06:00	Use of vibratory roller with the vibrator on will not be permitted during surface course final rolling and will not be permitted on bridge decks covered with waterproofing membrane.		No vibratory rolling was used on bridge decks.	Conformance	9/9/2019 1:57:42 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Rollers shall not be used in vibratory mode on SMA unless successfully used on control strip in subsection 403.03.		No rollers used in this operation were compacting in vibratory mode.	Conformance	9/19/2019 12:58:42 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Crushing aggregate?		No visible signs of crushing aggregate were observed.	Conformance	9/19/2019 12:58:42 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Crushing aggregate?		No crushing aggregate was observed.	Conformance	9/4/2019 2:16:34 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Crushing aggregate?		No visible signs of aggregate being crushed.	Conformance	11/11/2019 3:10:42 PM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Crushing aggregate?		Aggregate was not observed being crushed.	Conformance	12/20/2019 5:28:21 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Crushing aggregate?		No visible crushing aggregate was noticed on mats.	Conformance	8/19/2019 2:28:18 PM -06:00	C		Closed

Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	7/3/2019 7:21:10 AM - 06:00	Pipe sections on the inside of manholes or inlets shall be treated as shown on the plans, or as directed, and shall project outside sufficiently for proper connection with next pipe section.		The plans do not show a detail on how pipe penetrations in the box should be handled. Also the Department found crews backfilled up to spring line at the box without having the sand bags in place. The department alerted IQC and PC of the issue. Prior to pouring the invert crews installed sandbags as far under the pipe as possible and the grouting crew cleaned the void as much as possible. Attached are photos when the department found the issue along with a photo after it was addressed. The department has concerns with this issue occurring else where on the project.	KMP has a Plan to address	7/23/2019 12:22:44 PM -06:00	Audit Comment	The crews make a field judgement on the when the sandbags are required to eliminate infiltration. They asses the size of the penetration and type of material. IQC and PC has added pipe penetrations as a focus point. We have field walks set up to inspect on going and previously installed items.	Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe sections on the inside of manholes or inlets shall be treated as shown on the plans, or as directed, and shall project outside sufficiently for proper connection with next pipe section.		Pipe penetration into manhole was adequate, and projected outside properly to connect with next pipe section.	Conformance	8/19/2019 8:30:50 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe elevations and locations properly staked and match plans.		Elevations and location were staked to plans.	Conformance	7/25/2019 8:39:15 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Underground utility conflicts located and/or potholed and resolved?		All utilities were located and resolved.	Conformance	7/25/2019 8:39:15 AM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pavement/Surface Removals	Removal	8/13/2019 2:28:33 PM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Crew was working on the shoulder behind drums without a TMA. The department contacted the MOT team and a TMA was deployed immediately. Please educate crew on proper traffic control.	Response was adequate	9/18/2019 7:53:14 AM -06:00	Audit Comment	MOT will discuss with the crews removing guardrail	Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	8/13/2019 2:29:36 PM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Traffic control devices were properly used to separate construction workers from traffic, and guide traffic through work zone.	Conformance	8/12/2019 2:51:29 PM -06:00	C		Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	7/26/2019 10:55:26 AM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		WB I-270 Central Park off Ramp to Central Park On Ramp	Conformance	7/26/2019 9:17:06 AM -06:00	C		Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	7/26/2019 10:55:26 AM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		WB I-70 Peoria to Havana	Conformance	7/26/2019 9:17:06 AM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)	7/26/2019 10:51:17 AM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Conformance	Conformance	7/26/2019 10:27:25 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Temp Barrier	Maintenance of Traffic (MOT)	7/10/2019 2:14:37 PM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		A shoulder closure was not installed for the drainage crew to perform drainage installation. The crew was observed with an approx 5' deep hole roughly 10' from WB I-70 traffic. As shown in the photos the excavator bucket was extending into the open I-70 shoulder.	NCR written and issue was addressed in under 2hrs from notification.	7/23/2019 12:37:45 PM -06:00	NC-1	This issue will be resolved through NCR # 1228.	Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Conformance	Conformance	7/8/2019 9:55:52 AM -06:00	C		Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)		Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Advance warning signs were installed as were the appropriate detour signage.	Conformance	7/2/2019 9:00:05 AM -06:00	C		Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	7/3/2019 7:22:06 AM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		MHT 104	Conformance	7/2/2019 9:00:41 AM -06:00	C		Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	7/3/2019 7:22:06 AM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		MHT 243	Conformance	7/2/2019 9:00:41 AM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	6/11/2019 3:33:46 PM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		A boring crew was working on shooting a bore across Central Park from the EB off ramp to the EB on ramp. CCD came across a laborer approximately 10' from a crosswalk towards the middle of the Central Park & EB Ramps intersection. The worker did not have adequate traffic control in place to protect him from traffic. When CCD noticed the issue MOT team was notified and they brought a UTC out to stop traffic for the worker to track the bore. Attached is a graphic of the situation CCD encountered.	response adequate	6/25/2019 1:03:32 PM -06:00	Audit Comment	MOT has talked with the boring crew. When the head travel under an intersection and someone will follow it to locate it, a UTC will be present to direct traffic around them.	Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	6/11/2019 3:33:46 PM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		A ITS boring crew was observed working within the clear zone of the EB Havana on ramp without traffic control in place. The crew was approximately 5-10' off the travel lane of the on ramp. Sturgeon and MOT were made aware of the issue observed by the department and is generating an NCR.	NCR 1153 generated	6/25/2019 1:03:11 PM -06:00	Audit Comment	NCR 1153 Created	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Demolition	Removal	6/17/2019 8:04:10 AM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		The west sidewalk was marked as closed to pedestrians, detour sign routed pedestrians to east Sidewalk, where active work was occurring.		7/9/2019 1:44:36 PM -06:00	Audit Comment	Pedestrian access is monitored daily. This area specifically was closed due to safety concerns. In areas where work is being performed we will escort peds.	Closed
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	6/19/2019 9:11:24 PM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Devices in place and flagger was used to keep vehicles from following work vehicles. The flagger did stop drivers and redirected them.	Conformance	6/18/2019 3:56:06 PM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)	9/30/2019 8:30:14 AM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Traffic control devices observed to be in place to warn the traveling public, and to advise them of the proper path through the work zone and onto the new WB On-Ramp.	Conformance	9/27/2019 7:04:21 PM -06:00	C		Closed
Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)		Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Traffic control devices were properly utilized, as depicted within the MHT, to warn the traveling public and advise them of the proper path to follow to detour the workzone.	Conformance	9/23/2019 12:44:00 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	8/13/2019 2:29:36 PM - 06:00	Ensure that channelizing devices conform to the requirements of the Contract Specifications, Manual of Uniform Traffic Control Devices, Method of Handling Traffic, and the project's Traffic Control Plan. Pay particular attention to the following: a. correct dimensions in a clean, serviceable condition, b. proper retroreflectorized sheeting or collars, c. correct placement with proper taper lengths and spacing, d. proper and functioning warning lights that are set in the correct mode, and e. weighting by acceptable methods.		MHT listed in LCR was #187 Right Lane Closure with snake to left, however MHT implemented was more consistent with #188, left lane closure with lane shift to right. Barrels were in serviceable condition, with correct spacing. Arrow board however had a caution configuration, when MHT 187 and 188 detail for arrow board to direct traffic to open lane.	LCR will be adjusted.	8/20/2019 4:32:13 PM -06:00	Audit Comment	Since the snake was not on the freeway a arrow board was not needed. The TMA was placed to protect the workers, not to direct traffic. MHT 187 and 188 are not for work on non freeway roads and the LCR will reflect that going forward.	Closed
Central 70	C 0704-241	Remove Temporary Barrier	Maintenance of Traffic (MOT)	11/21/2019 3:46:54 PM - 07:00	Ensure that channelizing devices conform to the requirements of the Contract Specifications, Manual of Uniform Traffic Control Devices, Method of Handling Traffic, and the project's Traffic Control Plan. Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	6/19/2019 9:11:24 PM - 06:00	Ensure that signs conform to the Contract, including the CDOT M&S Standards and the Manual of Uniform Traffic Control Devices. Pay particular attention to compliance of the following: a. size, shape, and color; b. retroreflective sheeting; c. appropriate location.		IQC night shift performed an inspection of the detour route and advance warning signs for the closure of the WB Peoria On Ramp. When the department drove the detour route they found the detour route trailblazers on Peoria were obstructed by tree branches. The daytime IQC actually drove the route after being notified of the issues and originally missed the signs on Peoria. The department also noticed the PCMS board for SB shown on the plans being north of 47th was missing. Daytime IQC went looking for the PCMS and found it was located south of 47th near 45th. (Attached is the detour route plan sheet and the IQC nighttime inspection.)	1170 was created	2/13/2020 1:50:36 PM -07:00	NC-2	This is addressed by NCR No. 1170	Closed

Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)	7/26/2019 10:51:17 AM - 06:00	Signs conform to Traffic Control Plan (TCP) and approved Method of Handling Traffic (MHT)		Two items were noticed on the drive and sent to the MOT team. [1] The PCMS for SB Peoria was placed further north than shown on the plans. Having it further north may reduce its effectiveness in reaching the majority of drivers. [2] The detour sign placed on I-70 WB directing drivers to exit at WB Havana was placed beyond the exit opening. As a result drivers were given late noticed to exit. This sign was also placed roughly 26 (single lane + aux lane) -38' (double lane + aux lane) from the live lane. It would be better to move this sign closer to traffic and prior to the exit opening allowing drivers to react.	closed	9/18/2019 7:46:32 AM -06:00	Audit Comment	PCMS was moved to south to best reach drivers. Due to the work zone the sign was farther off the road. Once work was completed it was moved to be in the correct position.	Closed

Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete mixed entirely in a stationary mixer and delivered to the job in a truck mixer shall be remixed for a minimum of 20 revolutions of the mixing drum at mixing speed at the job site prior to discharge.		The truck remixed its load before it was discharged into the pump truck.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mixed entirely in a stationary mixer and delivered to the job in a truck mixer shall be remixed for a minimum of 20 revolutions of the mixing drum at mixing speed at the job site prior to discharge.		Concrete Mixer Truck remixed a minimum of 20 revolutions at mixing speed upon arrival to the site, prior to any discharge.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		When water was added to the mix at the site, a minimum of 20 revolutions of the mixer at mixing speed was performed prior to retesting of the concrete properties (slump, air, etc.).	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		When water is added at the delivery site the concrete shall be mixed for at least 20 revolutions of the mixer drum at mixing speed for each addition of water before discharge. These revolutions are in addition to the minimum revolutions required for mixing at the delivery site.		5 gallons was added to each truck and the load was remixed before discharge.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The Contractor shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix after the truck has left the charging plant. The added water shall not cause the water/cement ratio to exceed the requirements in subsection 601.02 & documented on the delivery slip.		All of the trucks that I checked had a water measuring device in functioning in a proper manner.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix after the truck has left the charging plant. The added water shall not cause the water/cement ratio to exceed the requirements in subsection 601.02 & documented on the delivery slip.		All the concrete trucks that I observed had a functioning water meter in good condition.	Conformance	8/2/2019 12:27:46 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		The Contractor shall furnish a water-measuring device in good working condition, mounted on each transit mix truck, for measuring the water added to the mix after the truck has left the charging plant. The added water shall not cause the water/cement ratio to exceed the requirements in subsection 601.02 & documented on the delivery slip.		I checked several of the trucks and a water measuring device in good condition was on each truck.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Moment Slab	Walls		When a batch of concrete delivered to the project does not conform to the minimum specified air content, an air entraining admixture conforming to subsection 711.02 may be added in accordance with subsection 601.17. After the admixture is added, the concrete shall be re-mixed for a minimum of 20 revolutions of the mixer drum at mixing speed.		The Contractor had one load of concrete arrive at the project with low air. The same type air admixture used at the batch plant was added to that load and mixed according to specifications, bring the air content into the required range.	Conformance	9/17/2019 9:39:08 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were mortar tight and sufficiently rigid to resist distortion due to the pressure of the concrete and other incidental loads such as vibration.	Conformance	9/17/2019 9:39:08 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads including vibration.	Conformance	9/17/2019 9:38:46 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms placed around the column cages are mortar tight and sealed to ensure no distortion due to the pressure of the concrete within the forms.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM - 06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Some of the overhang forms were not mortar tight but were monitored by Lawrence while over areas with traffic. The contractor should seal these in the future as there was some confusion with IQC about having a MRR and a materials certification for the sealing material.	The issue was acknowledged.	6/18/2019 6:49:00 AM -06:00	Audit Comment	Acknowledged discussed in the Deck De-brief meeting.	Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were mortar tight throughout the placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The side and overhang forms were mortar tight, and sufficiently rigid and braced to prevent distortion.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		I checked the forms and all were mortar tight, sufficiently rigid and shored to prevent distortion due to the pressure of the concrete and other loads including vibration.	Conformance	6/18/2019 8:30:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms installed were mortar tight and sufficiently rigid enough to prevent distortion due to concrete loading during placement operations.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms observed to be mortar tight and adequate enough to prevent distortion due to the pressure of the concrete and other loads during placement operations and the curing process.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The barrier rail forms being used were made of steel and were mortar tight and sufficiently rigid to prevent distortion of any kind.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms are sufficiently rigid to prevent distortion during the placement operations, and throughout the curing process.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		I checked the forms as I was checking the rebar and they were mortar tight and sufficiently braced to prevent distortion from any loads.	Conformance	7/31/2019 7:46:30 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were observed to be mortar tight.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were installed to be sufficiently rigid to prevent distortion throughout the concrete placement operations and curing.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were mortar tight and rigid.	Conformance	2/24/2020 3:41:47 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms are sufficiently rigid and mortar tight to best prevent distortion from concrete loads within.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		it was observed that all forms were mortar tight before and during placement of concrete.	Conformance	3/12/2021 1:22:23 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The structural slab edge forms were rigid. Due to the nature of the placement, the edges were not mortar tight. The gaps between the girders were filled with backer rod and/or expansive foam which were mortar tight. Reference photos in comment #5.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms are mortar tight and sufficiently rigid to prevent distortion.	Conformance	12/7/2020 10:56:33 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	UPRR Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms are mortar tight and sufficiently rigid to prevent any distortion due to pressure loads within the formwork during concrete placement operations.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms are mortar tight and of sufficient strength/bracing for the loads incidental to concrete operations.	Conformance	1/15/2020 2:14:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight and rigid.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were mortar tight and rigid.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Forms have been well maintained and constructed to prevent opening of joints.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Forms were constructed so that joints would not open.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Forms are being maintained to prevent the opening of joints.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		The forms that were used were metal. Opening of the form joints was not observed during my observation.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		The forms used were made of metal and bolted together, preventing the opening of any joints.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Forms being utilized for the pier cap are being maintained.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Forms are maintained to prevent opening of joints due to shrinkage of any lumber. Twisted wire loops are not being used to hold forms in place.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Forms maintained to prevent opening of joints, and to ensure quality finished product.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Metal forms are being utilized for placement of concrete for columns. These forms have been maintained to prevent any chance of opening of joints due to shrinkage of the lumber.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		"The inside surfaces of the forms have all been cleaned and any dirt or material prior to the placement of concrete.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM - 06:00	The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were mostly clean but we had the contractor do some additional cleaning during the rebar inspection.	Conformance	6/7/2019 9:36:52 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were clean and adequate for placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the forms were clean and the contractor sprayed the ground with water to prevent it from absorbing moisture from the concrete.	Conformance	9/17/2019 9:39:08 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside of forms are cleaned of all dirt and foreign material prior to placement around cage.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were clean.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The forms used were of all new material and were clean.	Conformance	6/18/2019 8:30:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside surfaces of diaphragms and top of deck were cleaned and free of foreign debris prior to concrete placement.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surface of the forms had been cleaned and I observe no deleterious materials in them.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside of forms were cleaned of foreign material, including any dirt or debris, prior to any concrete placement.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		I checked the forms before the concrete pour started, and all were clean of any deleterious materials.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Surfaces of the formwork are being maintained, and cleaned of all excess material prior to concrete placement.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		I received a phone call from IQC inspector Alex Chapman on Monday, July 15th at 6:13pm. He had finished his IQC inspection just prior to the phone call. Removing debris from the placement area was his biggest take away from his inspection. When I arrived onsite at 6:30am the following day. The crew had removed all of the foreign material.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		All surfaces of the forms were clean and free of foreign materials.	Conformance	2/24/2020 3:41:47 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the forms were cleaned of all excess material prior to the placement of concrete.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The formed areas were clean and free of foreign material. (Abutment 1 & 3 Diaphragms, Pier 2 Closure Pour)	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		before concrete placement started the crew cleaned all trash and foreign objects out from the forms.	Conformance	3/12/2021 1:22:23 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces are cleaned of dirt and foreign material, including trash.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside surfaces of forms have been cleaned of all foreign material.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of forms were clean and free of any deleterious materials.	Conformance	12/7/2020 10:56:33 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were clean prior to placement.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The inside surfaces of the forms are clean and free of deleterious materials.	Conformance	1/15/2020 2:14:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		All the surfaces of the forms were clean and free of foreign materials.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		Form surfaces have a thorough coating of an approved form oil from the approved products list.	Conformance	1/15/2020 2:14:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		Form oil used to thoroughly coat the formwork to be removed.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		The inside of the forms were coated in form oil before the forms were installed on Wednesday, 10/23/2019.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		The forms were coated in form oil before the placement of concrete.	Conformance	2/24/2020 3:41:47 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		From visual observation, form oil was adequately sprayed across the form surface.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Rail	Structures		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		I checked the forms before the pour and all had been liberally coated with a form oil from the approved list.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		An approved form oil was used to coat the forms prior to use.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		The contractor sprayed the overhang and edge forms with an approved form oil.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		Forms were thoroughly treated with oil prior to use and placement of concrete.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	Forms which will later be removed shall be thoroughly coated with form oil prior to use. The form oil shall be a commercial quality form oil or other equivalent coating which will permit the ready release of the forms and will not discolor the concrete. Forms to which a form liner is to be attached SHALL NOT be treated with oil.		There was left over form oil from a previous placement. Form oil was not adequately sprayed across the contact area.		7/15/2019 4:29:58 PM -06:00	Audit Comment	Acknowledged. PC will discuss with the foreman during pre pours.	Closed

Central 70	C 0704-241	Substructure	Structures		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Wood forms were moistened prior to placement.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		A crew member used a power washer with a wide angle tip to spray all formed surfaces as well as the girders.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Forms were moistened prior to placement.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Wood forms were thoroughly moistened with water immediately prior to concrete placement within them.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		The contractor used a pressure washer to spray a water mist on all wood forms before concrete was placed.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		Wood form work was used to bridge a small area. From visual inspection, the forms were not sprayed with water prior to placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM - 06:00	Wood forms shall be thoroughly moistened with water immediately before placing the concrete.		All wood forms, concrete panels and concrete beams were thoroughly moistened with water before placing concrete.	Conformance	6/7/2019 9:36:52 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All falsework drawings, including revisions, shall be prepared by the Contractor's Engineer, shall meet the requirements of subsection 601.11, and shall be provided by the Contractor to the Engineer for record purposes only. The drawings shall be signed and sealed by the Contractor's Engineer.		Falsework installed for concrete placement of the pier cap was previously provided and approved for use.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		Falsework remained in place until the minimum 0.80f'c of compressive strength was obtained by maturity meter reading.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Unless specified in the plans or specifications, falsework shall remain in place until concrete has attained a minimum compressive strength of 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		Falsework for the Clayton Pier #2 Cap remained in place until minimum concrete compressive strength was achieved.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Girders shall not be erected onto such pier caps until the concrete in the cap has attained the compressive strength of at least 0.80f 'c. (Concrete compressive strength shall be determined by maturity meters)		Girders were not erected onto Columbine Pier #2 Cap until the compressive strength reached was atleast 0.80f'c, as read by the maturity meters in place.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The corrugated metal sleeves were placed in accordance with the plans and specifications.	Conformance	2/24/2020 3:41:48 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		All of the corrugated galvanized steel post-tensioning ducts were installed to plan.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embedded materials (expansion joints) were placed and adequately secured.	Conformance	8/2/2019 12:27:46 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Denver Waterline block outs, deck manhole block outs, and light pole rebar were installed and adequately secured.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		The corrugated steel post tensioning blockout was adequately secured before placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		Embedded materials and blockouts (deck drains and utility blockout) were in place and adequately secured.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Embedded materials and block outs (e.g. conduits, drains, utility blockouts, anchoring devices) have been placed and adequately secured.		No other block outs were required. The dance floor support block out was included in each column.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Drainage and weep holes at proper locations and elevations		Wall Drainage holes at CIP Wall 401-W2 were not placed at proper locations and elevations, resulting in holes having to be cored. No repair procedure in place to address these incorrect hole voids, as well as the aesthetics on the front face of wall at these locations where they have been plugged.	NCR 1582 Created to track this issue.	10/8/2019 12:42:26 PM -06:00	NC-2		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	Drainage and weep holes at proper locations and elevations		No drainage or weep holes were required in this placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	Horizontal joints in adjacent form liner sections shall be offset by no less than one foot vertically. The form liners shall be properly aligned to limit visible horizontal and vertical joints in the concrete.		All forms were placed to ensure all horizontal and vertical joints were aligned.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		At the Pre-pour Conference, the Contractor shall submit the location where maturity meters will be placed.		A pre-pour inspection was completed before placement on Columns C-23, C-24, C-25 and C-26.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM -06:00	At the Pre-pour Conference, the Contractor shall submit the location where maturity meters will be placed.		The locations for the maturity meters were provided in the thermal control plan: Mid-Center, Top-Center and Ambient.	An NCR was generated.	4/4/2020 2:14:17 PM -06:00	Audit Comment	NCR 2051 will address all issues identified in the thermal control plan.	Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM -06:00	The Contractor shall provide maturity meters and all necessary wires and connectors.		A maturity meter was provided in the placement to ensure the concrete was maintained within the prescribed temperature range.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed

Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were placed in forms prior to placement.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Contractor has provided maturity meters and all necessary wires and connectors. (Pier 4 Shafts 43 & 44)	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were included to track internal temperature during curing.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	The Contractor shall provide maturity meters and all necessary wires and connectors.		A maturity meter was placed within the placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Contractor has provided and installed the maturity meter and all necessary wires and connectors.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided and placed maturity meters, wiring and all necessary connectors.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters and all necessary wires and connectors were provided by the contractor.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters and additional wires were provided by the contractor and installed in each column.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meter, and all necessary wires/connections, were noted to be installed.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity meters were placed in forms.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		Contractor provided the required wires and connectors for maturity meter in place.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		the contractor provided a maturity mater along with all hardware needed. it was observed that the maturity meter was placed on the top rebar mat during concrete placement.	Conformance	3/12/2021 1:22:23 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The Contractor shall provide maturity meters and all necessary wires and connectors.		I observed a maturity meter installed with the necessary wiring and connectors.	Conformance	7/31/2019 7:46:30 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	The Contractor shall provide maturity meters and all necessary wires and connectors.		Maturity Meters were placed within the placement.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The contractor provided all necessary wires and connectors for the maturity meters to be installed.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The Contractor shall provide maturity meters and all necessary wires and connectors.		Contractor provided necessary wires and connections for the use of maturity meters installed.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		The Contractor shall provide maturity meters and all necessary wires and connectors.		The Contractor provided and installed maturity meters and all necessary wiring and connectors.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed

Central 70	C 0704-241	Concrete Cure	Structures		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete maturity meter installed and utilized to determine concrete compressive strength.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete strength was determined by maturity meter installed, which also designated when forms may be removed.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete compressive strength to be determined with maturity meter for the 90' section of footer placed this date at wall 404-W3.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		The lowest compressive strength, as read from the two maturity meters in place, was utilized to determine when the forms could be removed.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete compressive strength was determined by maturity meters.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete compressive strength shall be determined by maturity meters in accordance with CP 69. (For structures with multiple maturity meters, the lowest compressive strength shall determine when the forms can be removed.)		Concrete compressive strength was determined by maturity meters.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Cylinders were created, including additional cylinders, however, were not utilized to determine when the forms were to be removed.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Cylinders were taken during testing, however, were not used to determine when form removal could take place. This was determined through maturity meter installed.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Acceptance cylinders shall not be used for determining compressive strength to remove forms.		Forms were not removed based off of acceptance cylinders for concrete compressive strength. Only the maturity meter will control the form removal.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Form removal operations did not proceed until minimum compressive strength was reached per the maturity meter.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Removal of forms did not take place until required compressive strength was reached, as determined by maturity meter in place.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Removal of forms did not proceed until maturity meter readings were taken and concrete was noted to be at or above minimum compressive strength required.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Removal of concrete forms was determined by maturity meters and no forms were removed until indicated by the readings from the meters.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Maturity meters in place controlled field operations, including when it was acceptable to begin removal of forms and supports.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Forms were not removed until the maturity meters released the work to continue for removal of forms and any falsework.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		When field operations are controlled by maturity meters, the removal of forms, supports and housing and the discontinuance of heating and curing may begin when the concrete is found to have the required compressive strength.		Removal of forms is not commencing until maturity meters have been read and required compressive strength has been met.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forming materials shall be removed when permanent access is available to portions of structures.		Forms were removed when permanent access was available, and the concrete was cured, as determined by the maturity meters.	Conformance	7/22/2019 1:41:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		Deck slab forms between girders shall be constructed with no allowance for settlement relative to the girders.		Deck slab forms were included underneath the manholes. Bolts were drilled through the precast deck panels to hold the plywood flush against the placement surface.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		the Contractor shall present a concrete winter protection plan for acceptance by the Engineer.		Winter protection plan was discussed and approved by IQC and EOR during pre-placement conference.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/21/2019 10:23:43 AM - 07:00	plan shall contain information on the number and type of heat sources to be used, a sketch detailing the enclosure materials, and all other pertinent information.		A repair procedure for unforeseen drilled shaft defects was not submitted for approval. The work progressed without the issue being properly addressed. Please reference the attached photos.	1798 was written	1/2/2020 9:42:24 AM -07:00	NC-2	NCR 1798 was written to track the additional repairs required for the lower sections of this shaft. NCR 1579 was written to track this shaft back in October. And the Designer asked to keep it open for the entire shaft excavation.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	UPRR Structures		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		Construction joint between top of drilled shaft and bottom of column has been adequately cleaned, and loose concrete removed.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM - 06:00	Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		All of laitance concrete was removed from the secant wall before placement.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		A future construction joint will be between drilled shafts A3-102 and A3-103. This will be the next expected placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		There was a construction joint between drilled shaft A3-87 and A3-88. The joint was clean. The appropriate expansion material was used at this joint. The optional construction joint between A3-77 and A3-78 was not used.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Construction joints have been adequately cleaned (free of surface laitance, curing compound, and other foreign materials) and loose concrete removed.		Construction joints were clean and free of all materials.	Conformance	12/16/2019 8:19:24 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway	3/24/2020 4:17:33 PM - 06:00	Construction joints are at approved locations on the plans or placing schedule.		Joints were not cut per planned location in adequate timing, resulting in uncontrolled concrete cracking in panels. Joints were to be located at half panels near crown of Brighton Blvd between NB and SB lanes.	Panels noted were removed and replaced.	5/28/2020 3:16:07 PM -06:00	Audit Comment	Brighton has been walked with CCD and any uncontrolled cracks we find will be evaluated and most likely remove and replace.	Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	Construction joints are at approved locations on the plans or placing schedule.		The construction joints are in compliance with the shop drawings. (Plan sheet RP-C1-11). Between drilled shafts A3-102/A3-103 and A3-107/A3-107. 5 drilled shafts were included in the placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM - 06:00	Construction joints are at approved locations on the plans or placing schedule.		All construction joints were placed in conformance of the RFC plans and shop drawings.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Construction joints are at approved locations on the plans or placing schedule.		Construction joint at approved location on the plans.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		The top surface of the drilled shaft concrete on which concrete is to be placed for the columns was in a saturated surface dry condition.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		The placement was not on or adjacent to hardened concrete surfaces.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	When concrete is to be placed on or adjacent to hardened concrete surfaces, the surface shall be saturated surface dry.		The new concrete was not place directly against an adjacent construction joint. Expansion material was used. Reference comment #12 above.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		If new concrete if being jointed to existing by reinforcing dowels the installation is in compliance with 601.12(j).		The installation and placement of dowels were in compliance with Spec.	Conformance	12/16/2019 8:19:24 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	If new concrete if being jointed to existing by reinforcing dowels the installation is in compliance with 601.12(j).		The abutment was attached to the existing drilled shaft projection steel.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete shall not be placed on frozen ground.		A heater was used over night to heat the placement and melt any remaining ice that was in the placement.	Conformance	2/24/2020 3:41:48 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be placed on frozen ground.		Ground was covered with insulated blankets and a heater running to maintain temperature requirements within the forms.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Concrete shall not be placed on frozen ground.		Concrete was not placed on frozen ground.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Concrete shall not be placed on frozen ground.		Since the placement was on top of the drilled shaft, sub-grade was not present. The placement area was protected with curing blankets the night before the placement since cold weather was expected.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		No ice or frost was present within the placement.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		Area to receive PCCP was blanketed and kept within temperature requirements so that no ice or frost was present.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		Forms were heated and blanketed until immediately prior to pour.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		No ice, snow, or frost was present within the formwork	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Before concrete placement, all ice, snow, and frost shall be completely removed from within formwork.		There was no ice found within the placement.	Conformance	2/24/2020 3:41:48 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Salt shall not be used to thaw ice, snow, or frost.		Salt was no observed around the placement.	Conformance	2/24/2020 3:41:48 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Salt shall not be used to thaw ice, snow, or frost.		No salt was used to thaw any ice, snow, or frost.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Salt shall not be used to thaw ice, snow, or frost.		No salt was present to thaw ice or snow.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete placed in accordance with the approved placing sequence		The concrete was placed in accordance with the approved placing sequence	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway		Concrete placed in accordance with the approved placing sequence		Concrete placed in accordance with the approved placing sequence.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete placed in accordance with the approved placing sequence		Concrete placed in accordance with approved placing plan.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM -06:00	Concrete placed in accordance with the approved placing sequence		Placing sequence followed the specifications and the information provided in the Pre-activity meeting.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete placed in accordance with the approved placing sequence		Concrete was placed in accordance with the approved placing sequence.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Concrete placed in accordance with the approved placing sequence		The placement sequence is in Lobato's Process Control Plan under Appendix 3 & 4. (Submittal C70-KIE-COV-PMP-000003)	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	Concrete placed in accordance with the approved placing sequence		I observed the first two lifts of the concrete placement in approximately the first 50 feet of the placement. The placing sequence was adequate.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in accordance with the approved placing sequence		Concrete placed in accordance with approved placing sequence.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	Concrete placed in accordance with the approved placing sequence		The sequence and placement of concrete was in compliance with the specification.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Concrete placed in accordance with the approved placing sequence		Concrete was placed in accordance with approved placement plan.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		Concrete placed in accordance with the approved placing sequence		Concrete placement followed the approved placing sequences.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in accordance with the approved placing sequence		Concrete placement operations followed the approved placing sequence.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped from more than 5 feet during placement operations. A concrete pump truck was utilized with an additional chute attachment to reach base of the column.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was placed using a pump truck chute and was not dropped from greater than 5 feet.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than five feet.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was pumped and confined by a pipe but was not dropped more than five feet at any time.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was deposited with a chute and was not dropped more than five feet.	Conformance	6/18/2019 8:30:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The crew used a concrete bucket to transfer the concrete from the chute to the point of placement within the forms. The drop was not higher than 5 feet.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete pump truck utilized for placement operations. Pump hose was lowered to bottom of columns to ensure concrete was not dropped more than the allowable 5 feet.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM - 06:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was confined by a tremie pipe and was not dropped more than five feet.	Conformance	6/7/2019 9:36:52 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The concrete was not dropped more than five feet.	Conformance	9/17/2019 9:38:46 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		A concrete pump truck was utilized through out placement. 5ft of drop was not observed during the placement.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than the allowable 5 feet into the forms.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		I observed the pour and concrete was placed by chutes from the trucks and no concrete was dropped more than five feet.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete pump trucks were used for placement. This allowed concrete to be placed with a minimum fall distance.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet, and utilized a pump truck tremie to place concrete as near to final position as possible.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped from greater than 5 feet.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		it was observed that concrete was not dropped more then 5 feet during placement.	Conformance	3/12/2021 1:22:23 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM -06:00	Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		The slab was 4 ft thick. The pump truck hose was maneuvered as close as possible to minimize the fall distance.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet. Concrete pump chute was lowered into column center for concrete placement, and was brought up slowly as the concrete operation proceeded. (Pier 4 Shafts 43 & 44)	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was pumped into form. Pump tube was less than 5 feet from bottom of form.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	PCCP	Roadway		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Concrete was not dropped more than 5 feet.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete shall not be dropped more than 5 feet, unless confined by closed chutes or pipes.		Since a pump truck was utilized to place the concrete. The fall distance was minimized.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Since a pump truck was utilized the concrete was placed near its final position.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Care was taken to ensure concrete was deposited as near to final position as possible.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited as close to final position as possible from pump chute.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed as near to final position as possible.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM -06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		The concrete was deposited as close to the final position as possible.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed as near to final position as reasonably possible, given space requirements in trench.	Conformance	8/19/2019 8:29:30 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited as near to final position as possible within the forms.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited as near to final position as possible.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		By using a concrete pump truck, the concrete was placed with accuracy.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited as close to final position as possible.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		By using a concrete pump truck, the placement of the mix within the forms was extremely accurate.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		All concrete was placed near its final position.	Conformance	9/17/2019 9:38:46 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		The deposit of concrete was adequate. A vibrator was used to fully consolidate the concrete.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed the contractor placing concrete as near to the final position as possible and not using vibrators to drag the concrete to the final position.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		I observed the pour and the concrete was placed at or near its final position and was not moved with a vibrator.	Conformance	6/18/2019 8:30:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited as near to final position as possible during deck placement.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was placed using a pump truck and was placed as close to final position as possible.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		Care shall be taken to fill each part of the form by depositing the concrete as near final position as possible.		Concrete was deposited in the forms from the chute as close to final position as possible	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No materials used to place the concrete were made of aluminum.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No aluminum placement tools were observed.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No aluminum placing materials were witnessed.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The Contractor shall not use pipes, fittings, chutes, troughs, spouts, or tremies that are fabricated of aluminum materials for pumping, conveying, or placing concrete.		No aluminum placement devices were observed during the placement.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Pipe was cleaned prior to placement.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All pipes used for placement were clean and good working order.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		The concrete bucket that was used for the placement was clean.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		All chutes and pipes were clean.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Concrete Cure	Structures		All chutes, troughs and pipes shall be kept clean and free from coatings of hardened concrete.		Concrete chute used for placement was maintained clean and free from coatings of hardened concrete.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in horizontal layers conforming to the maximum of 18" thick. Each layer was vibrated to ensure proper consolidation to avoid construction joints with preceding layers.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in 18 inch layers.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete placement operations were followed as set forth in the placing sequence and specifications. Horizontal layers of not more than 18" thick was followed, and each layer was vibrated and consolidated so as to avoid a construction joint with preceding layers.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		All concrete lifts were placed less than 18" thick. 4 lifts were used to fill the entire placement volume. Adequate penetration of the vibrator between lifts to minimize a cold joint was observed.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Contractor placed concrete in maximum of 18" lifts. Each layer was vibrated and so consolidated to prevent the formation of construction joints with preceding layers placed.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in horizontal layers not exceeding 18 inches, and consolidated to ensure no formation of construction joints with a preceding layer.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		During my observation, all concrete lifts that were placed at 18 inches.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		The concrete lifts were placed at around 3 ft. IQC and the foreman were notified right away. The remaining concrete was placed with the appropriate lift thickness. Please reference the attached pictures.	Addressed	4/20/2020 11:11:28 AM -06:00	Audit Comment	Noted. Lift thickness was addressed in the field. It is my understanding that proper consolidation was achieved.	Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was not placed in greater lifts than 18" thick, and each layer was adequately consolidated in order to avoid the formation of construction joints from the preceding layer.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in horizontal lifts not exceeding 18" in thickness. Each layer was consolidated to avoid any formation of a construction joint in the preceding layer.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed in horizontal layers not exceeding more than 18" in thickness. Each concrete layer was consolidated to prevent formation of construction joint with the preceding layer.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		Concrete was placed and vibrated in layers less than 18 inches.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Concrete shall be placed in horizontal layers not more than 18 inches thick except as hereinafter provided. Each layer shall be so consolidated as to avoid the formation of a construction joint with a preceding layer which has not taken initial set.		The columns were placed in 3 equal lifts and consolidated appropriately.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		External surfaces were thoroughly worked during placement with appropriate and approved methods to ensure a smooth finish.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		Approved floats, levels, and other hand tools were used to work surface.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		External surfaces of concrete were thoroughly worked to produce a smooth surface by forcing the coarse aggregate from the surface and bringing mortar against the forms.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	9/5/2019 4:14:47 PM - 06:00	The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		External surface of collar was minimally worked with shovels, no use of concrete trowels or other hand finishing tools were observed.		9/16/2019 5:03:33 PM -06:00	Audit Comment	PC and IQC discussed these field concerns in the drainage task force meeting on Mondays at 10 AM	Closed
Central 70	C 0704-241	Substructure	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		External surface of the concrete was thoroughly worked to a smooth surface during placement to best prevent air pockets or honeycombing.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		The surface of the concrete was adequately worked and finished during placement with approved hand tools. A smooth finish was formed, that was free from water, air pockets, and honeycombing.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		All external surfaces were thoroughly worked during placement, to bring mortar up against all forms and produce a smooth finished surface.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		The concrete that was placed in the diaphragms and closure pour at pier two in multiple lifts. The rest of the deck was placed in one uniform placement.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM - 06:00	The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		A mechanical vibrator with appropriate technique was observed to remove any possible surface distress.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		The external surface of the concrete was thoroughly worked during placement by approved tools.	Conformance	9/17/2019 9:38:46 AM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		Top surface of abutment cap at Clayton was thoroughly worked during placement and finished with approved tool types to force coarse aggregate from the surface in order to produce smooth finish on surface.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The external surface of all concrete shall be thoroughly worked during the placing by means of tools of an approved type. The working shall be such as to force all coarse aggregate from the surface and to bring mortar against the forms to produce a smooth finish substantially free from water and air pockets, or honeycomb.		All external surfaces of concrete were thoroughly worked to best force all coarse aggregate from the surface to bring mortar against the forms and produce a smooth finish that was substantially free from water and air pockets.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was being consolidated with suitable mechanical vibrators.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The contractor used suitable mechanical vibrators that had been certified for the vibration frequency.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Suitable vibrators were available and utilized to consolidate the concrete. Backup vibrators were available should they be needed.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Suitable mechanical vibrators were utilized throughout concrete placement operations.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was adequately vibrated.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated using a suitable mechanical vibrator operating within the concrete.	Conformance	9/17/2019 9:38:46 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete placed was consolidated with a suitable mechanical vibrator as required.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Appropriate vibration techniques were utilized during the placement.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Suitable mechanical vibrators were used to consolidate the concrete.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Mechanical vibrators were used to consolidate the concrete.	Conformance	2/24/2020 3:41:48 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was adequately consolidated with suitable vibrators operating within the concrete.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		All consolidation was completed with the use of a mechanical vibrator. Two different vibrators with varying head sizes were available.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		The concrete was consolidated by mechanical vibrators and no supplemental hand spading was needed.	Conformance	7/16/2019 7:28:03 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated with suitable vibrators operating within the concrete.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM -06:00	The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Mechanical vibrators were used to consolidate the concrete.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	UPRR Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete consolidated with suitable mechanical vibrators (2).	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was properly vibrated.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Concrete was consolidated with suitable mechanical vibrators operating within the concrete.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The concrete shall be consolidated with suitable mechanical vibrators operating within the concrete. When required, vibrating shall be supplemented by hand spading with suitable tools to assure proper and adequate consolidation.		Mechanical vibrators were used to consolidate each lift.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The columns were a vertical placement and using a vibrator to induce flow wasn't a concern.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means to cause concrete to flow or run into position. Concrete was placed as close to final position as possible.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	UPRR Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means of causing flow of concrete to move into a position. Concrete was placed as close to final position from end of concrete pump chute.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were operated in a smooth vertical motion to prevent flowing or running.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The vibrators were inserted into the concrete with an up and down vertical movement. This minimized the lateral movement of the concrete.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means of moving concrete into position, instead of placing concrete as close to final position as possible.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means to push concrete into position. Concrete was placed as near to final position as possible.	Conformance	10/11/2019 3:44:43 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means of causing concrete to flow or run into position. Concrete was placed from the pump as close to final position as possible.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		The vibrators were inserted and removed in one solid vertical moment. No lateral movement was witnessed during my observation.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Appropriate penetration and removal of the vibrator was observed.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means of moving or pushing concrete into place. The concrete pump truck chute was used to place concrete as close to final position.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means to push concrete into position. Concrete was placed as close to final position from pump truck chute.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were only used to consolidate and not to move concrete.	Conformance	6/18/2019 8:30:29 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Vibrators shall not be used as a means to cause concrete to flow or run into position in lieu of placing.		Vibrators were not used as a means to cause concrete to run into position. Concrete was placed as near to final position as possible.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		No water was added to the surface of the concrete as a finishing aid.	Conformance	6/18/2019 8:30:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		The contractor only used water from a pressure washer to spray a mist in the air above the concrete to prevent evaporation.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Additional finishing aids were not added to the surface of the concrete to assist in finishing operations.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Finishing aids were not added to assist in finishing of concrete operations.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM -06:00	Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		I saw the foreman direct a worker to directly spray water on the concrete in front of the screed rollers, so I talked with Jamiee Ganzhorn of Lawrence and had this stopped.	The issue was acknowledged.	6/18/2019 6:49:25 AM -06:00	Audit Comment	This was discussed in the Deck De-brief and the pre activity for the 270 deck placement. Fogging systems will be in place to replace lost moisture.	Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		No water was used on the surface of the concrete as a finishing aid.	Conformance	9/17/2019 9:38:46 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		No water or finishing aids were witnessed during my observation. Reference Comment #34.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Minimal amounts of water was used to aid in the finishing of the concrete surface. No adverse affects of the additional water were observed during my post placement inspection. Reference the attached photos.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Water or finishing aids shall not be added to the surface of the concrete to assist in finishing operations.		Water / finishing aids were not utilized to assist in finishing operations.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM - 06:00	The Contractor shall provide fogging equipment and keep the concrete surface moist at all times by fogging with an approved atomizing nozzle until the curing material is in place.		The contractor only had a water hose with a spray nozzle and I told Jamiee Ganzhorn that they needed real fogging equipment such as a pressure washer spraying the air above the concrete.	The issue was acknowledged.	6/18/2019 6:49:33 AM -06:00	Audit Comment	This was discussed in the Deck De-brief and the pre activity for the 270 deck placement. Fogging systems will be in place to replace lost moisture.	Closed
Central 70	C 0704-241	Bridge Deck	Structures		The Contractor shall provide fogging equipment and keep the concrete surface moist at all times by fogging with an approved atomizing nozzle until the curing material is in place.		Contractor provided fogging equipment to keep the surfaces moist at all times until the curing material could be in place.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between the allowable temperature requirements of 50-90 degF.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Concrete Cure	Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between the allowable temperature requirements of 50-90 DegF.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM -06:00	Concrete mix temperature is between 50 and 90 degrees F		The concrete temperature was with specifications.	Conformance	6/7/2019 9:36:52 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature is between the allowable temperature requirements.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	6/28/2019 3:31:01 PM -06:00	Concrete mix temperature is between 50 and 90 degrees F		The concrete temperature was within the appropriate limits.	Conformance	6/26/2019 3:59:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperatures were within the allowable tolerances of 50 to 90 degF.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was between the allowable range of 50 -90 degF.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was within the allowable temperature range, as approved by UPRR.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was within allowable range.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix temperature was within the required range.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Concrete mix temperature is between 50 and 90 degrees F		Concrete mix was poured at approximately 87 degrees, as tested by IQC.	Conformance	8/19/2019 8:29:30 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM - 06:00	Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Adam Mercers guidance. The concrete would build up on the surface of the wire mesh and rebar. The crew would use the vibrator to vibrate the concrete through the mesh and rebar. This caused some segregation. After Adams suggestion, the crew started to use shovels to move the concrete so no further segregation would take place.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which best avoids segregation and displacement of reinforcement.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner which best avoided segregation and displacement of any reinforcement.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Reinforcement was not displaced during pour, and mix was not segregated.	Conformance	2/13/2020 2:53:56 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete was placed in a manner to best avoid segregation and displacement of reinforcement.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed

Central 70	C 0704-241	Substructure	Structures		Concrete placed in a manner which to avoids segregation and displacement of reinforcement.		Concrete operations observed to place in a manner to best avoid segregation of the concrete, as well as displacement of the rebar column cage.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All surfaces have been finished properly		All surfaces have been finished properly.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Concrete Cure	Structures		All surfaces have been finished properly		Surfaces were finished properly on the top surface.	Conformance	7/8/2019 3:51:53 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All surfaces have been finished properly		All surfaces were finished properly.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	All surfaces have been finished properly		The top surface of the abutment was finished appropriately.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		All surfaces have been finished properly		Surfaces have been finished properly.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	PCCP	Roadway		All surfaces have been finished properly		All surfaces were finished properly.	Conformance	10/31/2019 3:01:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump was primed by pumping and discarding enough concrete to produce uniform mix exiting the end of the pump.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The first 0.25 cyd of concrete was discarded.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Priming the pump into an approved concrete clean out was observed.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump truck was primed and discarded to ensure a uniform concrete mix exited the pump during placement operations.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Concrete pump truck was primed by pumping and discarding enough concrete from the first truck to ensure a uniform mix would be exiting the pump during placement operations.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		the contractor used a pump truck for the placement and was primed in a washout.	Conformance	3/12/2021 1:22:23 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump Truck Chute was primed with atleast 0.25 CY of concrete and discarded prior to concrete placement operations. This allowed for a uniform mix to exit the pump during placement in the columns.	Conformance	7/9/2019 11:25:17 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Pump was primed at the contractors expense by discarding enough concrete to produce a uniform flow of concrete from discharge end of pump.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		I observed the concrete pump operator prime the pump into a waste container and the volume was over 0.25 CY and sufficient to get good concrete out of the pump.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM -06:00	The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		The pump was primed correctly and there was a uniform mix exiting the pump afterwards.	Conformance	6/7/2019 9:36:52 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be primed at the Contractor's expense by pumping and discarding enough concrete to produce a uniform mix exiting the pump. At least 0.25 cubic yard of concrete shall be pumped and discarded to prime the pump.		Concrete pump truck primed its chute prior to concrete placement operations began at the columns.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	6/11/2019 3:36:41 PM -06:00	Water shall not be added directly into the concrete pump hopper after placement has commenced.		No water was added to the hopper after placement commenced.	Conformance	6/7/2019 9:36:52 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		I observed no water being added to the concrete pump hopper.	Conformance	7/22/2019 12:35:37 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		Water was not added directly into the concrete hopper after placement began.	Conformance	8/26/2019 4:31:13 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		Water shall not be added directly into the concrete pump hopper after placement has commenced.		No water adjustment was witnessed during my observation.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM -06:00	Water shall not be added directly into the concrete pump hopper after placement has commenced.		No additional water was added to the first 5 concrete loads I witnessed.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Water shall not be added directly into the concrete pump hopper after placement has commenced.		No water was added directly into the concrete pump hopper after placement operations began.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Water shall not be added directly into the concrete pump hopper after placement has commenced.		No water was added directly to the hopper after the placement started.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Pump was operated in a manner to produce a continuous stream of concrete during placement operations.	Conformance	3/2/2020 9:53:48 AM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Drainage	3/24/2020 4:20:22 PM -06:00	The pump shall be operated so that a continuous stream of concrete is produced.		The truck spacing and concrete placement was appropriate to maintain a continuous stream of concrete.	Conformance	3/24/2020 3:43:18 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was stopped when the concrete load was tested and when the pump hose would transition between the columns for each lift.	Conformance	10/25/2019 2:41:55 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	The pump shall be operated so that a continuous stream of concrete is produced.		A continuous concrete stream was witnessed for each load of concrete. The truck spacing was 25 minutes.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		The concrete pump was operated in a manner to best ensure a continuous stream of concrete during placement.	Conformance	7/22/2019 1:43:42 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		The pump shall be operated so that a continuous stream of concrete is produced.		The pump was operated in a continuous stream. The only times the discharge from the truck stopped was due to testing the beginning and the required random truck.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Pump was operated with a continuous stream of concrete being produced.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Concrete pump operated in one continuous operation so that a continuous placement of concrete is achieved.	Conformance	6/6/2019 10:56:51 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The pump shall be operated so that a continuous stream of concrete is produced.		Pump was operated so that a continuous stream was produced.	Conformance	5/14/2020 4:41:57 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		No metal pump lines or couplings came in contact with the forms during the placement.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	Metal pump lines or couplings shall not rest directly on epoxy coated reinforcing steel.		A rubber hose was attached to the pump truck. So no adverse affects to the epoxy coated reinforcing were observed.	Conformance	7/18/2019 11:39:17 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The point of discharge of the pump shall be as close to the bridge deck elevation as possible.		The discharge end of the pump was as close to bridge deck elevation as possible.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls	11/15/2019 12:37:31 PM - 07:00	This work consists of constructing a permanent soil nailed wall (also referred to as ground nail wall) as specified herein, and as shown on the plans. Temporary soil nail walls and the final facing are not covered in this specification. The work includes:		No RFC Wall Standard Detail to be found to depict a wall transition from Caisson Wall to Soil Nail Wall which exists East of Monroe Bridge after Wall Shaft C127. The closest RFC Standard Detail can be found on Sheet WS708. See attached for differences between RFC and Shop Drawings. What has been installed to date does not conform to the shop drawings either.	NCR 1771 created to resolve issue.	12/20/2019 8:14:02 AM -07:00	NC-2	NCR 1771 was written to track the design issue	Closed
Central 70	C 0704-241	Cap Beams	Walls	11/15/2019 12:37:31 PM - 07:00	This work consists of constructing a permanent soil nailed wall (also referred to as ground nail wall) as specified herein, and as shown on the plans. Temporary soil nail walls and the final facing are not covered in this specification. The work includes:		RFC Plan Sheets and Shop Drawings depict expansion joints in place. No expansion joints observed to be in place through the soil nail wall shotcrete placed to date. See attached for RFC & Shop Drawing.	NCR 1771 created to resolve issue.	12/20/2019 8:13:58 AM -07:00	NC-2	NCR 1771 was written to track the design issue	Closed

Central 70	C 0704-241	Cap Beams	Walls	11/15/2019 12:37:31 PM - 07:00	This work consists of constructing a permanent soil nailed wall (also referred to as ground nail wall) as specified herein, and as shown on the plans. Temporary soil nail walls and the final facing are not covered in this specification. The work includes:		Reinforcement installed for cap beam does not match RFC Plans. See attached for differences between RFC and Shop Drawings.	NCR 1771 created to resolve issue.	12/20/2019 8:14:05 AM -07:00	NC-2	NCR 1771 was written to track the issue	Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		Soil nail bars were properly stored and no damage was noticed prior to installation.	Conformance	5/28/2020 2:49:47 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		Soil nail bars were properly stored and did not appear to have any damage.	Conformance	5/28/2020 2:49:18 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		Bars were properly stored.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be stored and handled in such a manner to avoid damage, excessive bending, permanent deformation, or corrosion.		Bars were stored adequately.	Conformance	5/19/2020 2:36:02 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Bars exhibiting abrasions, cuts, welds, weld splatter, corrosion, or pitting shall be replaced.		No damaged bars were used.	Conformance	5/19/2020 2:36:02 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Bars exhibiting abrasions, cuts, welds, weld splatter, corrosion, or pitting shall be replaced.		Bars did not exhibit any cuts, corrosion, etc.	Conformance	5/28/2020 2:49:18 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Bars exhibiting abrasions, cuts, welds, weld splatter, corrosion, or pitting shall be replaced.		Bars did not exhibit any pitting, corrosion, etc.	Conformance	5/28/2020 2:49:47 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		During construction of the soil nail wall, excavation not associated with the soil nail wall construction shall not be performed within a horizontal distance equal to the total height of the final soil nail wall face excavation.		Only excavation for wall was performed within required distance.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		Each lift excavation shall be completed to the final wall excavation line and shotcrete applied in the same work shift, unless otherwise approved by the Engineer. Application of the shotcrete may be delayed up to 24 hours if the Contractor can demonstrate that the delay will not adversely affect the excavation face stability.		Excavation for wall face and shotcrete was completed the same day.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail length and drill hole diameter used shall be those necessary to develop the specified load capacity to satisfy the acceptance criteria, but not less than the lengths or diameters shown on the plans.		Nail length and hole were in conformance with specifications.	Conformance	5/19/2020 2:36:02 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail length and drill hole diameter used shall be those necessary to develop the specified load capacity to satisfy the acceptance criteria, but not less than the lengths or diameters shown on the plans.		Length of soil nails matched plans.	Conformance	5/28/2020 2:49:47 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		soil nail location matched the submitted installation plan.	Conformance	5/28/2020 2:49:47 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were drilled according to plans.	Conformance	5/19/2020 2:36:02 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Holes shall be drilled for the soil nails at the locations, elevations, orientations, and minimum lengths shown on the plans.		Holes were drilled according to plans.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Drilling equipment and methods shall be suitable for the ground conditions and conform to the installation methods submitted by the soil nailing Contractor.		The drilling equipment and methods matched the installation plan.	Conformance	5/28/2020 2:49:47 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Drilling muds or other fluids shall not be used to removed cuttings.		No fluids were used to remove cuttings.	Conformance	5/19/2020 2:36:02 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Soil nail bars shall be as shown on the plans.		Bars were installed per plans.	Conformance	5/19/2020 2:36:02 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Provide centralizers per Section 504.03 (e).		Centralizers were used.	Conformance	5/19/2020 2:36:02 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Support of Excavation	Earthwork		Provide centralizers per Section 504.03 (e).		Centralizers were installed on nails.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Provide centralizers per Section 504.03 (e).		Centralizers were provided and utilized.	Conformance	5/28/2020 2:49:47 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be grouted after installation of the soil nail bar and within 2 hours of completion of drilling.		Hole was grouted within acceptable time frame.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected at lowest point of hole.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The grout shall be injected at the lowest point of each drill hole through a tremie pipe, grout tube, or casing.		Grout was injected through a grout tube.	Conformance	5/28/2020 2:49:47 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		The drill hole shall be completely filled in one continuous operation. Cold joints in the grout column are not allowed except at the top of the test bond length of proof tested production soil nails.		Hole was filled in 1 continuous operation.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed
Central 70	C 0704-241	Cap Beams	Walls	11/15/2019 12:37:31 PM -07:00	Wall Drainage Network. All elements of the wall drainage network shall be installed and secured as shown on the plans. The drainage network shall consist of installing geocomposite strip drains, PVC connection pipes, wall footing drains, and weepholes as shown on the plans. Exclusive of the wall footing drains, all elements of the drainage network in the current lift shall be installed prior to shotcreting.		Reinforcement installed at drainage inlet locations around 10" PVC does not match RFC Plans. See attached for differences between RFC and Shop Drawings.	NCR 1771 created to resolve issue.	12/20/2019 8:14:10 AM -07:00	NC-2	NCR 1771 was written to track the design issue	Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Initial Face Finish. Shotcrete finish shall be either an undisturbed gun finish as applied from the nozzle or a rod, broom, wood float, rubber float, steel trowel or rough finish as shown on the Plans.		Undisturbed gun finish was applied.	Conformance	5/28/2020 2:49:47 PM -06:00	C		Closed
Central 70	C 0704-241	Support of Excavation	Earthwork		Initial Face Finish. Shotcrete finish shall be either an undisturbed gun finish as applied from the nozzle or a rod, broom, wood float, rubber float, steel trowel or rough finish as shown on the Plans.		Shotcrete finish was an undisturbed gun finish.	Conformance	4/6/2020 7:09:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Slopes are free of debris, roots, heavy clay, hard clods, brush and stones larger than six inches prior to placement of topsoil.		Slopes were free of all deleterious material prior to placement of topsoil.	Conformance	8/12/2020 12:33:36 PM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Slopes are free of debris, roots, heavy clay, hard clods, brush and stones larger than six inches prior to placement of topsoil.		Slopes are free of debris, brush, and stones larger than six inches.	Conformance	1/8/2020 3:46:31 PM -07:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Slopes are free of debris, roots, heavy clay, hard clods, brush and stones larger than six inches prior to placement of topsoil.		Slopes were free of debris, brush, and stones larger than six inches.	Conformance	1/8/2020 3:46:53 PM -07:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Slopes are free of debris, roots, heavy clay, hard clods, brush and stones larger than six inches prior to placement of topsoil.		Slope was free of debris, roots, and brush.	Conformance	1/6/2020 3:21:05 PM -07:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork	7/16/2019 4:05:44 PM -06:00	Slopes are free of debris, roots, heavy clay, hard clods, brush and stones larger than six inches prior to placement of topsoil.		All debris was removed from slope prior to placement of topsoil	Conformance	7/16/2019 7:23:36 AM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Slopes are free of debris, roots, heavy clay, hard clods, brush and stones larger than six inches prior to placement of topsoil.		Slopes were free of debris, roots, and brush.	Conformance	1/6/2020 3:21:37 PM -07:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Slopes are free of debris, roots, heavy clay, hard clods, brush and stones larger than six inches prior to placement of topsoil.		Slopes were free of debris, roots, brush, and stones.	Conformance	1/6/2020 3:20:31 PM -07:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		All topsoil shall be placed at the minimum depth as specified in the plans and evenly distributed.		Topsoil was placed per plans.	Conformance	8/12/2020 12:33:36 PM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Topsoil shall not be over compacted.		Topsoil was not over compacted.	Conformance	8/12/2020 12:33:36 PM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork	7/16/2019 4:05:44 PM -06:00	Topsoil shall not be over compacted.		Topsoil was not overly compacted.	Conformance	7/16/2019 7:23:37 AM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork	7/16/2019 4:05:44 PM -06:00	Topsoil shall be placed at final grade allowing for adequate drainage. Grades/Slopes are within conformance and tolerances.		Topsoil was placed to proper grade to allow for adequate drainage.	Conformance	7/16/2019 7:23:36 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Topsoil shall be placed at final grade allowing for adequate drainage. Grades/Slopes are within conformance and tolerances.		Topsoil was placed at final grade. Adequate drainage was kept.	Conformance	8/12/2020 12:33:36 PM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork	7/16/2019 4:05:44 PM - 06:00	Topsoil shall be placed at locations and to the thickness provided in the Contract and shall be keyed and tracked to the underlying material without creating a compacted surface by the use of harrows, bulldozers, rollers, or other equipment suitable for the purpose.		Tracked equipment was used to track material to underlying subgrade	Conformance	7/16/2019 7:23:37 AM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork	7/16/2019 4:05:44 PM - 06:00	After placement of topsoil, all BMP's were in place to ensure slope stability.		Silt fence was placed perpendicular to slope at bottom of grade to ensure slope stability.	Conformance	7/16/2019 7:23:36 AM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		After placement of topsoil, all BMP's were in place to ensure slope stability.		BMP's are in place	Conformance	1/15/2020 2:05:35 PM -07:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		Permanent stabilization shall begin within 48 hours after topsoil placement, soil conditioning or combination thereof starts and shall be pursued to completion.		Permanent stabilization in progress	Conformance	1/15/2020 2:05:35 PM -07:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork	7/16/2019 4:05:44 PM - 06:00	Permanent stabilization shall begin within 48 hours after topsoil placement, soil conditioning or combination thereof starts and shall be pursued to completion.		Temporary stabilization was observed with tracking/surface roughening. IQC stated plans were in place for permanent seeding in September.		11/1/2021 7:48:32 AM -06:00	Audit Comment	Acknowledged!	Closed
Central 70	C 0704-241	Wet (Water)	Utilities	1/6/2020 4:03:53 PM - 07:00	Local utility company has been contacted to ensure installation in in compliance with local standards and specifications.		Inspector onsite to review and approve construction. Outstanding Punchlist items remain to be completed	Conformance	1/2/2020 9:41:16 AM -07:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Local utility company has been contacted to ensure installation in in compliance with local standards and specifications.		Jerry (Denver Water) was onsite to inspect crossing of 46th	Conformance	6/24/2019 3:26:57 PM -06:00	C		Closed
Central 70	C 0704-241	Wet (Water)	Utilities		Local utility company has been contacted to ensure installation in in compliance with local standards and specifications.		DWD inspector has performed inspection	Conformance	4/15/2020 9:40:38 AM -06:00	C		Closed

Central 70	C 0704-241	Base	Earthwork		Maximum compacted thickness of any one layer shall not exceed 6".		Only one lift of 4" compacted base course required per plan. Depth did not exceed 6".	Conformance	10/14/2019 3:22:19 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Maximum compacted thickness of any one layer shall not exceed 6".		One layer of 4" compacted ABC Class 6 material was put into place throughout this block, and fine graded to required elevation while ensuring 4" of material throughout.	Conformance	6/9/2020 11:22:32 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Maximum compacted thickness of any one layer shall not exceed 6".		Thickness was compacted to meet the 6" lift thickness	Conformance	7/8/2019 9:53:49 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Maximum compacted thickness of any one layer shall not exceed 6".		Base course was compacted in 6" lifts.	Conformance	10/7/2019 10:04:04 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Maximum compacted thickness of any one layer shall not exceed 6".		All lifts place were noticed to be 6" compacted.	Conformance	8/8/2019 2:29:13 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Vibratory or special compacting equipment is used, depth of single layer may be increased to 8" provided density is still achieved and written approval is given.		Vibratory compacting equipment utilized to ensure proper compaction was achieved.	Conformance	6/9/2020 11:22:32 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Vibratory or special compacting equipment is used, depth of single layer may be increased to 8" provided density is still achieved and written approval is given.		Vibratory compacting equipment was utilized for compaction effort to ensure density was achieved.	Conformance	10/14/2019 3:22:19 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Aggregates mixed by method to insure thorough and homogeneous mixture.		Aggregate mixed prior to placement during loading on trucks.	Conformance	8/15/2019 1:06:08 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Aggregates mixed by method to insure thorough and homogeneous mixture.		ABC was properly mixed and was homogeneous.	Conformance	7/8/2019 9:53:49 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		PC/IQC was present during the compaction and testing of base.	Conformance	7/8/2019 9:53:49 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		All density tests performed passed.	Conformance	8/8/2019 2:29:13 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		All density tests performed passed.	Conformance	10/7/2019 10:04:04 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Densities performed and passed.	Conformance	8/15/2019 1:06:08 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Compaction of single lift was performed until density of not less than 95% of maximum density was achieved.	Conformance	10/14/2019 3:22:19 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Required moisture density of not less than 95% of maximum density was achieved. Proof-roll of areas to receive concrete paving performed prior to concrete placement.	Conformance	6/9/2020 11:22:32 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Compaction of each layer shall continue until a density of not less than 95% of the maximum density determined with AASHTO T 180 as modified by CP 23 has been achieved.		Density tests were performed and passed per spec.	Conformance	11/11/2019 3:09:20 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Optimum moisture content was achieved.	Conformance	11/11/2019 3:09:20 PM -07:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Moisture content within the allowable tolerance of optimum moisture content. Surface of the base layer is being maintained leading up to placement of concrete paving.	Conformance	6/9/2020 11:22:32 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Moisture content did not exceed +/- 2% of optimum moisture.	Conformance	8/15/2019 1:06:08 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Moisture content was within the allowable +/- 2% of optimum moisture content. Base course layer was maintained throughout compaction operations.	Conformance	10/14/2019 3:22:19 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		Test showed +/- 2% of optimum moisture.	Conformance	10/7/2019 10:04:04 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		All tests performed passed density and moisture content.	Conformance	8/8/2019 2:29:13 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		The moisture content shall be at +/- 2% of optimum moisture content. The surface of each layer shall be maintained during the compaction operations so that a uniform texture is produced and the aggregates are firmly keyed.		PC/IQC was present to confirm moisture.	Conformance	7/8/2019 9:53:49 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		The base appeared uniform.	Conformance	7/8/2019 9:53:49 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Water truck was on site and being used.	Conformance	10/7/2019 10:04:04 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Moisture conditioning was performed uniformly during compaction operation.	Conformance	8/8/2019 2:29:13 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Water truck was used to perform moisture conditioning during compaction.	Conformance	8/15/2019 1:06:08 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Moisture conditioning was performed uniformly during compaction operations, and maintained prior to PCCP paving operations.	Conformance	10/14/2019 3:22:19 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Moisture conditioning shall be performed uniformly during compaction.		Moisture is being provided uniformly during compaction operations, and thoroughly worked into base layer.	Conformance	6/9/2020 11:22:32 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Water truck was on site performing moisture conditioning.	Conformance	11/11/2019 3:09:20 PM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Moisture conditioning shall be performed uniformly during compaction.		Moisture conditioning was being performed during compaction.	Conformance	9/5/2019 11:50:06 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Surface base course was tested with a 10' straightedge and witnessed.	Conformance	9/5/2019 11:50:06 AM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Base course was tested and accepted by IQC prior to concrete pavement being placed.	Conformance	6/9/2020 11:22:32 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Base course layer was tested with a 10' Straightedge by IQC, to approve the area prior to any application of PCCP.	Conformance	10/14/2019 3:22:19 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		Base course was tested with 10' straightedge. Low spots were observed and fixed by the contractor.	Conformance	8/15/2019 1:06:08 PM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		10' straightedge was used and areas were corrected.	Conformance	10/7/2019 10:04:04 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Surface base course tested with a 10 foot straightedge, or other approved device, prior to any application of primver or pavement.		IQC confirmed 10' straight-edge was performed.	Conformance	7/8/2019 9:53:49 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Variation of surface from testing edge of straightedge between any two points of contact not to exceed 1/4".		IQC confirmed 10' straight-edge was performed.	Conformance	7/8/2019 9:53:49 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Variation of surface from testing edge of straightedge between any two points of contact not to exceed 1/4".		Variation of the straightedge between any two points did not exceed 1/4".	Conformance	10/14/2019 3:22:19 PM -06:00	C		Closed
Central 70	C 0704-241	Flatwork	Roadway		Variation of surface from testing edge of straightedge between any two points of contact not to exceed 1/4".		IQC performed 10' Straightedge testing and accepted the grade after no points of contact were observed to exceed 1/4".	Conformance	6/9/2020 11:22:32 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)	9/30/2019 8:30:14 AM - 06:00	Delineators.		Barrier delineators should match the respective striping, whether yellow of white. Not all delineators currently do so. Additionally, inadequate amount of delineators currently installed.	NCR 1553 Created to track issue.	10/10/2019 10:15:28 AM -06:00	NC-2	NCR-1553 Created	Closed
Central 70	C 0704-241	Set Traffic Control	Maintenance of Traffic (MOT)	8/20/2019 7:19:20 AM - 06:00	Spacing, location, color of reflectors and placement of delineator posts shall be as shown on the plans.		Reflector strips were placed according to specification and plans.	Conformance	8/19/2019 3:07:38 PM -06:00	C		Closed
Central 70	C 0704-241	Set Traffic Control	Maintenance of Traffic (MOT)	8/20/2019 7:20:09 AM - 06:00	(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Reflector strips were installed on barriers.	Conformance	8/19/2019 3:08:37 PM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Barrier reflector strips were installed according to specifications.	Conformance	10/17/2019 6:49:51 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	1/16/2020 4:00:40 PM - 07:00	(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Barrier reflector strips installed on barrier west of Leyden do not have proper reflector strips.	Reflectors fixed 17 Jan	1/23/2020 9:08:30 AM -07:00	Audit Comment	Fixed the following night	Closed
Central 70	C 0704-241	Remove Temporary Barrier	Maintenance of Traffic (MOT)	11/21/2019 3:46:54 PM - 07:00	(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Reflector strips on the left barriers were missing at random locations, as well as on last three barrier segments.		12/3/2019 4:06:34 PM -07:00	Audit Comment	Reflectors are monitored and tracked as part of the MOT teams on going maintenance list.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	8/20/2019 7:23:30 AM - 06:00	(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Reflector strips were installed as per standards.	Conformance	8/19/2019 4:13:36 PM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)		(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Reflector strips were installed according to M&S standards.	Conformance	7/16/2019 9:32:13 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	7/29/2019 10:05:35 AM - 06:00	(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Reflector strips were installed according to specifications.	Conformance	7/25/2019 9:05:20 AM -06:00	C		Closed
Central 70	C 0704-241	Detours	Maintenance of Traffic (MOT)	9/30/2019 8:30:14 AM - 06:00	(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Barrier reflector strips should match the respective striping, whether yellow or white. Not all reflector strips currently do so. Reflector strips should be addressed that are not fully attached to barrier sides.	NCR 1553 Created to track issue.	10/10/2019 10:15:55 AM -06:00	NC-2	NCR-1553 Created	Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	7/3/2019 1:20:49 PM - 06:00	(b) Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet;		Reflector Strips were installed according to requirements.	Conformance	7/3/2019 1:15:58 PM -06:00	C		Closed
