Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	Submittals. The following documents and shop drawings shall be submitted in accordance with subsection 105.02. Shotcrete shall not be placed on the project before the submittals have been reviewed and approved by the Engineer.		Necessary submittals have been included, and reviewed and approved by IQC.	Conformance	10/2/2019 12:23:56 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	A shotcrete mix design meeting the requirements of subsection 601.05 been submitted & approved by IQC.		Shotcrete mix design has been reviewed and approved by IQC.	Conformance	10/2/2019 12:23:56 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	A shotcrete mix design meeting the requirements of subsection 601.05 been submitted & approved by IQC.		The mix design was approved and received by the department on 10/1/2018.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	Shotcrete Application Method Statement. The Shotcrete Application Method Statement shall indicate dry-mix process or wet-mix process and shall include drawings and notes describing equipment, procedures and sequences for shotcrete production, application, curing plan, and applicable manufacturer's literature and recommendations.		Shotcrete Application Process Control Plan includes a statement for wet mix process, and the nozzlemen are certified for this type of vertical work.	Conformance	10/2/2019 12:23:56 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	The Shotcrete Application Statement shall also include written documentation that verifies the qualifications of the nozzlemen that will be performing the work. All nozzlemen shall have had at least one year of experience in the application of shotcrete and hold a current certification for ACI Shotcrete Nozzleman for the methods and orientations to be used.		Documentation included within the Process Control Plan for Shotcrete Lagging at Caisson Wall to show individuals performing the work hold the required ACI Shotcrete Nozzleman certification.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	Has a complete PC Plan been submitted which is compliant with 641.03 (c)?		Process Control Plan submitted includes statements on equipment to be used, procedures to be followed, application, curing, etc., and is compliant with the specifications.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Has a complete PC Plan been submitted which is compliant with 641.03 (c)?		A PC plan has been approved and received by the department on 8/22/2019.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Shotcrete Pre-placement conference held?		A repair procedure related to "filling unused holes" should have been submitted and approved by the department by the time the pre-placement conference was held. The attachment clarifies the path moving forward. The existing work will remain as is and the future holes will be filled appropriately.	Repair procedure should be submitted.	12/17/2019 7:25:08 AM -07:00	NC-2		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Shotcrete not slumping excessively?		During my observation, excessive slumping was not an issue.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	Shotcrete not slumping excessively?		Shotcrete not slumping excessively. Minor areas observed to be slumping were removed and shotcrete was reapplied to ensure areas were covered with the required thickness.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	General. Shotcrete shall be applied at the locations and to the thicknesses shown on the plans. The thickness of shotcrete shall not be less than the dimensions shown on the plans.		Shotcrete was applied for the first lift at wall 302-W1 (West of York St) to the thicknesses and dimensions shown on the plans.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	General. Shotcrete shall be applied at the locations and to the thicknesses shown on the plans. The thickness of shotcrete shall not be less than the dimensions shown on the plans.		Nails placed accurately by Thorcon to show where adequate depth would be reached.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:55:30 PM - 07:00	General. Shotcrete shall be applied at the locations and to the thicknesses shown on the plans. The thickness of shotcrete shall not be less than the dimensions shown on the plans.		To ensure the appropriate IQC inspections are conducted before work proceeds. Shotcrete will need to be a two-phase inspection. The first inspection will be to ensure the excavation is adequate before the sheet drain is placed and the dowel bar holes are to the proper depth before epoxying the bars in place is allowed. The second inspection will be conducted to ensure all reinforcing steel was installed correctly and no adverse changes have occurred from the initial inspection to the time the placement of shotcrete has occurred.	process was addressed.	6/3/2021 9:24:33 AM -06:00	Audit Comment		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:55:30 PM - 07:00	Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		The mix was homogeneous and free of discernible weaknesses.	Conformance	11/11/2019 1:41:47 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		The mixture was uniformly placed between abutment 3 drilled shafts 16 to 51. The first layer of shotcrete was placed between 1:00pm to 2:30pm. The first layer was hard before the second layer was sprayed. A 1" final layer was placed starting at 3:30pm. The 1 hour gap between trucks is not an issue.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	Did the applied shotcrete consist of a dense and uniform mixture without rebound, inclusions, segregation, or discernable weakness of bond?		Applied shotcrete consisted of dense and uniform mixture, and segregation or discernable weakness of bond was not observed.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	For rock and soil cuts, surfaces shall be prepared to the line and grade shown on the plans. The Contractor shall provide documentation, including survey data, to show that the excavated face conforms to the plans so that the minimum thickness is achieved. If the Engineer determines that irregularities are excessive, additional reinforcing may be required. All costs associated with additional shotcrete required to bring an over excavated cut to the proper line and grade shall be borne by the Contractor.		Shafts along this portion of Caisson Wall 302-W1 were previously excavated and backfilled multiple times, including Shafts C001 thru approximately C004 that were cleaned out more so than the rest. Did the Engineer determine if these areas were in excess and in need of additional reinforcing? No additional reinforcement was installed in this top lift.	IQC approved these locations	10/21/2019 8:26:24 AM -06:00	Audit Comment	It was not determined that the area has excessive or irregular by IQC therefore no additional reinforcement was installed.	Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:55:30 PM - 07:00	For rock and soil cuts, surfaces shall be prepared to the line and grade shown on the plans. The Contractor shall provide documentation, including survey data, to show that the excavated face conforms to the plans so that the minimum thickness is achieved. If the Engineer determines that irregularities are excessive, additional reinforcing may be required. All costs associated with additional shotcrete required to bring an over excavated cut to the proper line and grade shall be borne by the Contractor.		As described in Comment #4, excessive irregularities were found and additional reinforcing was not present.	NCR was written and addressed.	6/3/2021 9:24:30 AM -06:00	NC-2		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	For rock and soil cuts, surfaces shall be prepared to the line and grade shown on the plans. The Contractor shall provide documentation, including survey data, to show that the excavated face conforms to the plans so that the minimum thickness is achieved. If the Engineer determines that irregularities are excessive, additional reinforcing may be required. All costs associated with additional shotcrete required to bring an over excavated cut to the proper line and grade shall be borne by the Contractor.		The soil cut was back to the grout column which is sufficient.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	The Contractor shall fill all voids, holes or pits created during the excavation process. Where additional shotcrete is in excess of the plan thickness is required to make the final shotcrete face conform to the plans, the Contractor shall provide a plan and method statement for applying the additional shotcrete. The work shall not proceed until the proposed plan and methods have been reviewed and approved by the Engineer.		Minor cave ins have occurred due to the drying soil. The crew is using stay-form to fix these areas.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:55:30 PM - 07:00	The Contractor shall fill all voids, holes or pits created during the excavation process. Where additional shotcrete is in excess of the plan thickness is required to make the final shotcrete face conform to the plans, the Contractor shall provide a plan and method statement for applying the additional shotcrete. The work shall not proceed until the proposed plan and methods have been reviewed and approved by the Engineer.		The soil cuts behind the sheet drain were out of tolerance. Large voids behind the drainage board were found during the pre-pour inspection. The work was not complete by the time an inspection should have been done. IQC documented the some of deficiencies but a proper inspection was not completed. IQC let the placement of the shotcrete to proceed after a discussion with IQC management.	NCR was written and addressed.	6/3/2021 9:24:36 AM -06:00	NC-2		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	The Contractor shall fill all voids, holes or pits created during the excavation process. Where additional shotcrete is in excess of the plan thickness is required to make the final shotcrete face conform to the plans, the Contractor shall provide a plan and method statement for applying the additional shotcrete. The work shall not proceed until the proposed plan and methods have been reviewed and approved by the Engineer.		All voids, holes or pits created during the excavation process were filled with shotcrete.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:55:30 PM - 07:00	A light application of water may be used to clean the surface of all dry soil or rock surfaces prior to application of the shotcrete.		Compressed air was used to remove loose debris and dirt from the placement.	Conformance	11/11/2019 1:41:47 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:55:30 PM - 07:00	Shotcrete shall not be applied to frozen surfaces. De-icing compounds shall not be used to thaw ice, snow, or frost.		No frozen surfaces were observed before placement.	Conformance	11/11/2019 1:41:47 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Before patching concrete structures, loose material shall be removed, and surfaces shall be dampened to a saturated surface dry condition. Prior to the placement of new shotcrete, the Contractor shall sandblast exposed reinforcing steel clean.		Some patching did occur at drilled shaft 48. The need for the patch is included in the placement log of drilled shaft 48. This was a previous NCR.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Rebound shall be removed and disposed of by the Contractor. Rebound shall not be worked back into the surface, and shall not be salvaged and included in later batches.		During my observations, the minimal rebound was removed and disposed of properly.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Weep holes and the drainage system shall be installed as shown on the plans.		Details from the AWS installation guide related to the vertical edges and pipe penetrations need be followed to ensure backfill material is not able to enter the core.	Area walked	12/17/2019 7:24:52 AM -07:00	Audit Comment	Noted, If there is a concern KIC is not following the installation guide we would like to walk the area in question.	Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	When multiple layers of shotcrete are to be applied, each layer of shotcrete shall be cleaned. If curing compound is used the curing compound shall be removed by sandblasting or a method approved by the Engineer.		Since the concrete layers were placed in a relative short period of time, cleaning was not required. No curing compound was used between subsequent layers.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:55:30 PM - 07:00	When multiple layers of shotcrete are to be applied, each layer of shotcrete shall be cleaned. If curing compound is used the curing compound shall be removed by sandblasting or a method approved by the Engineer.		Multiple layers of shotcrete were required. The crew was able to place the first layer of shotcrete from drilled shaft 50 to 75. The final coat to meet the appropriate thickness was not placed. The shotcrete sprayer was clogged and the crew was unable to complete the operation. The crew spent the rest of the day cleaning out the machine.	Conformance	11/11/2019 1:41:47 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Does the shotcrete have deficiencies such as segregation, honeycombing, delamination, or excessive cracking?		There were no discernible deficiencies with the shotcrete that was placed.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	Polyethylene sheeting shall completely cover the surfaces and the Contractor shall overlap the sheeting edges. Joints between sheets shall be sealed.		Plastic sheeting was used to cover all vertical surfaces appropriately.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	Polyethylene sheeting shall completely cover the surfaces and the Contractor shall overlap the sheeting edges. Joints between sheets shall be sealed.		Polyethylene sheeting completely covers the surfaces, and any joints with the sheeting are sealed tight.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	The Contractor shall promptly repair any tears, holes, and other damage. Anchor sheeting shall be installed as necessary to prevent billowing.		No damage was found during my observation.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	The minimum curing period shall be from the time the shotcrete has been placed until the concrete has met a compressive strength of 80 percent of the required field compressive strength. Compressive strength shall be determined by coring information panels. Information panels shall be constructed by the Contractor on the final portion of a placement and stored as close to the structure as possible. If the information panels are lost, mislabeled, damaged or destroyed in the field, the minimum curing period shall be seven days.		Test panel was created and kept as close to the structure as possible.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed
Central 70	C 0704-241	Shotcrete	Walls	10/3/2019 9:55:37 AM - 06:00	The minimum curing period shall be from the time the shotcrete has been placed until the concrete has met a compressive strength of 80 percent of the required field compressive strength. The Contractor shall develop a maturity relationship for the shotcrete mix design in accordance with CP 69. The Contractor shall provide the maturity meter and all necessary thermocouples, thermometers, wires and connectors. The Contractor shall be responsible for the placement, protection and maintenance of the maturity meters and associated equipment. Locations where the maturity meters are placed shall be protected in the same manner as the rest of the shotcrete. The Contractor shall install the thermocouples at locations designated by the Engineer. The Contractor shall monitor the temperature at intervals acceptable to the Engineer. If the maturity meter malfunctions the minimum curing period shall be seven days.		All necessary wires and connections were provided by the contractor for the maturity meters that were installed to ensure that the compressive strength of the shotcrete reached 80% of the required strength.	Conformance	10/2/2019 12:23:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Shotcrete	Walls	11/11/2019 1:54:23 PM - 07:00	When the ambient temperature is expected to fall below 35 °F during the curing period the Contractor shall maintain the shotcrete internal temperature above 50 °F during the curing period. The Contractor shall monitor the internal shotcrete temperature by the use of maturity meters or high/low thermocouples. Maturity meter probes or thermocouples shall be located 2 feet from the edge of the final portion of the concrete placed for the day and be located at mid-depth of the layer.		Heaters were onsite to ensure the appropriate temperature was maintained throughout the curing period.	Conformance	11/11/2019 1:44:19 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The entire deck and the sides of the curbs for a height of 2 inches above the plan thickness of the hot mix asphalt shall be free of all foreign material such as dirt, grease, old pavement and primer.		The entire deck and the sides of curbs (barrier) for a height of 2 inches above the plan thickness (3 inches) of the hot mix asphalt were free of all foreign material.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All decks shall be sandblasted or shot blasted.		I observed the deck being shot blasted.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Immediately prior to the application of primer or any type of membrane, all dust and loose material shall be removed.		I observed the contractor removing all the dust and loose material after shot blasting.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The deck condition will be approved before application of the membrane.		The IQC inspector on site checked and approved the deck condition before application of the membrane.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Weather and Moisture Limitations for Application of Waterproofing Membrane. Application of primer or membrane shall not be done during inclement weather conditions, or when deck and ambient air temperatures are below 50 °F.		The temperature during application of primer and membrane was well over 50 degrees F.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		The deck surface shall be dry at the time of application of primer and membrane.		IQC and PC checked the deck surface and it was from 4.0 to 4.2% moisture, under the maximum of 5.0% moisture.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Placement of the membrane shall not begin until the volatile material in the primer has dissipated.		The volatile material in the primer flashed out before placement of the membrane.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The membrane shall be placed in such a manner that a shingling effect will be achieved and any accumulation of water will be directed toward curbs and drains.		The membrane was placed in a manner that a shingling effect was achieved and water would be directed toward the curbs and drains.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Primer and membrane shall be placed on the curb faces for a height of 2 inches above the plan thickness of the hot mix asphalt.		Primer and membrane was placed on curb faces for a height of two inches above the plan thickness (3 inches) of the HMA.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The entire membrane shall be essentially free of wrinkles, air bubbles and other placement defects.		The membrane was free of wrinkles, air bubbles and other placement defects.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		During application the thickness may be measured by the Engineer. Lack of uniform application shall be cause for termination of the work until remedial measures are taken.		IQC inspected the application thickness and found it to be sufficient and uniform.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		As soon as practical, but in all cases the same day as membrane application, protective coating shall be placed gutter line to gutter line.		The protective coating was placed as soon as practical and within the same work day from gutter line to gutter line.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Protective covering shall be laid parallel to the centerline of the bridge.		The protective coating was laid parallel to the centerline of the bridge.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		The protective covering shall be butted together at longitudinal and transverse joints.		The protective coating was butted together at longitudinal and transverse joints.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Upon completion of the membrane and protective covering the Engineer will inspect the membrane system.		I checked the membrane and protective coating and found it to meet specifications.	Conformance	8/8/2019 2:35:15 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	8/13/2019 2:25:15 PM -06:00	This work consists of constructing a Concrete Panel Facing Mechanically Stabilized Earth (MSE) Retaining Wall System at the locations and to the lines and grades shown on the plans.		The MSE wall appears to be installed at the correct location and to the lines and grades shown on the plans.	Conformance	8/8/2019 2:36:57 PM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		The shop drawings shall provide the details necessary to demonstrate compliance with the Contract, including the items listed in 504.02 (a) through (m).		The shop drawings provide all the details necessary to demonstrate compliance with the Contract. The subcontractor had a set of the shop drawings out where the panels were being constructed.	Conformance	4/20/2020 2:40:34 PM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		The shop drawings shall provide the details necessary to demonstrate compliance with the Contract, including the items listed in 504.02 (a) through (m).		The shop drawings for wall 425-W1 provide all the details necessary to comply with the Contract and include the items listed in 504.02.	Conformance	7/15/2019 9:29:14 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	8/13/2019 2:25:15 PM -06:00	Unless otherwise specified on the plans, wall backfill material in the reinforced structure backfill zone and the associated trapezoidal retained structure backfill zone shall conform to the requirements for Structure Backfill (Class 1) of Section 206.		The wall backfill material in the reinforced structure backfill zone conforms to the requirements for Class 1 structure backfill.	Conformance	8/8/2019 2:36:57 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		Concrete for the leveling pad shall be Concrete (Class D) conforming to the requirements of Section 601.		Concrete met specifications required, as tested by PC and IQC.	Conformance	9/3/2019 3:20:26 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		Precast panels conformed to plans.	Conformance	1/22/2020 8:12:43 AM -07:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		I checked several of the panels and they conformed to the requirements shown on the plans and specifications, including the color, texture, dimensions and pattern.	Conformance	4/20/2020 2:40:34 PM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		The pre-cast concrete panels shall conform to the requirements shown on the plans and these specifications including the color, texture, dimensions and pattern.		The forms and form liners conform to the requirements shown on the plans and were correct in dimension, texture and pattern.	Conformance	7/15/2019 9:29:14 AM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		Panel thickness shall be a minimum of 6 inches plus the depth of rustication.		I measured the panel thickness and found it to be correct.	Conformance	7/15/2019 9:29:14 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Panel thickness shall be a minimum of 6 inches plus the depth of rustication.		Panels measured were over 6 inches including depth of rustication.	Conformance	9/3/2019 3:20:26 PM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		Soil reinforcement attachment devices shall be within 1 inch of shop drawing locations.		I checked several panel forms that had not been cast yet and the soil reinforcement attachment devices were installed with the 1" tolerance.	Conformance	4/20/2020 2:40:34 PM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		Soil reinforcement attachment devices shall be within 1 inch of shop drawing locations.		The strap connection devices were in the correct locations according to the shop drawings.	Conformance	7/15/2019 9:29:14 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Fabricate MSE Panels	Walls		All unit dimensions shall be within ¼ inch of plan.		I measured the panel being cast with the IQC representative and the dimensions were correct.	Conformance	7/15/2019 9:29:14 AM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		All unit dimensions shall be within ¼ inch of plan.		I checked several panels and all unit dimensions were within 1/4" of the plan dimensions.	Conformance	4/20/2020 2:40:34 PM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		Squareness determined by the difference between two diagonals, shall not exceed ½ inch.		I checked several of the forms diagonally and the difference did not exceed 1/2".	Conformance	4/20/2020 2:40:34 PM -06:00	C		Closed
Central 70	C 0704-241	Fabricate MSE Panels	Walls		Squareness determined by the difference between two diagonals, shall not exceed ½ inch.		The panel being cast had the correct dimensions when measured diagonally.	Conformance	7/15/2019 9:29:14 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls	6/19/2019 9:14:01 PM -06:00	The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		M.S.E. Wall Subgrade (entire footprint = 2.0' in front of wall alignment to 2.0' beyond the end of the designed length of soil reinforcement and along the entire length), should be proof rolled as required by the specifications, subsection 203.07. More than 2.0' of area was excavated away from front face of leveling pad for 18" RCP Storm Sewer Installation. A proof roll will need to be completed on subgrade prior to any work continuing with MSE Wall Construction.	Proof roll completed and required compaction was achieved.	2/10/2020 8:07:48 AM -07:00	Audit Comment		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		Base of leveling pad was compacted and proofrolled according to specifications.	Conformance	1/22/2020 8:12:43 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The base of leveling pad shall receive the same compaction as cut area required by subsection 203.07.		Base of leveling pad was compacted and proofrolled identically and simultaneously as the cut area.	Conformance	10/22/2019 8:42:56 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Subgrade for wall was not excavated to length shown on plans (reinforcement plus 18 inches). As a result, crews excavated pockets into slope to fit each strap. Foreman was contacted, plans were created to resolve issue.		9/3/2019 7:28:28 AM -06:00	Audit Comment	Going forward, before straps are installed and before the start of the backfill of a wall, it will be verified that there is a 1.5' addition to the cut of the strap zone. This will prevent cutting into the slope for each strap as shown in attachment 5 of Hunter's Audit. Please let me know if there's something else I need to get to you.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls		The Contractor shall grade the foundation for the bottom of the wall for a width equal to or exceeding the limits of the Reinforcement Length (RL) plus 18 inches as shown on the plans.		Foundation and cut section of wall was equal to or greater than the RL plus 2 feet to allow for construction of drain system.	Conformance	1/22/2020 8:12:43 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		This graded area shall be compacted with an appropriate vibratory roller weighing a minimum of 8 tons for at least five passes or as directed by the Engineer.		smooth drum roller compactor was used, and took at least 5 passes on observed lifts.	Conformance	9/3/2019 3:20:26 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		Maximum vertical step was below 36 inches, unless called for on plans. All steps observed were constructed according to plans.	Conformance	9/3/2019 3:20:26 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls		Unless specified on the plans, the maximum vertical step shall be no greater than 36 inches. The leveling pad shall be reinforced only at the steps.		Maximum step was under 36 inches.	Conformance	1/22/2020 8:12:43 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	6/19/2019 9:07:29 PM - 06:00	Gradation - Sieve Analysis per CP 31 - Nominal Maximum		Nominal Max Aggregate Size as it pertains to soils and Aggregates is defined as ; The size of aggregate in the smallest sieve opening through which the entire amount of specification aggregate is permitted to pass. In this case IAT's nominal max aggregate size is 2.5". IQC's nominal max aggregate size is 2". Problems with matching on nominal maximum aggregate size are derived from sampling and splitting of the aggregate to be tested. It was found that IQC tester Sean Mckay did not meet the minimum sample size requirement for the nominal maximum aggregate size.	The Nominal Max Aggregate size will continue to be an issue to keep an eye on due to the large variation in natural rock present in the Native Class 1. Care has been taken by IQC to reduce the frequency of these occurrences. A retest of 206Class 1 was performed with only minor differences.	8/12/2019 11:27:19 AM -06:00	Audit Comment	IQC lab manger talked to the lab tech and make sure to look at sample before and during splitting to see what the is estimated nominal max agg size.	Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	6/19/2019 9:07:29 PM - 06:00	Gradation - Sieve Analysis per CP 31 - 1-1/2" to #8		A total of 4 sieves (1.5", 0.75", 0.5", & 3/8") exceed the max allowable difference of 5% from IAT testing. The IQC sample was found to be only a fraction of the required size of 7500g per the 2" nominal maximum aggregate size. By not adhering to the minimum sample requirements the oversized/heavier material becomes a larger portion of the sample than if the sample was larger.	The splitting procedures used by IQC will continue to be monitored throughout the project. A Retest Gradation was performed on Sean McKay with only minor differences.	8/12/2019 11:27:15 AM -06:00	Audit Comment	its a split sample between IQC and IAT, samples ended up with different sizes, also when IQC sample was split wrong comparing to IAT. IQC lab manger took time to explain the correct splitting with all new tech.	Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241		IAT Materials Testing		Gradation - Sieve Analysis per CP 31 - 1-1/2" to #8		A total of 3 sieves (0.75",0.5", & 3/8") exceed the max allowable difference of 5% from IAT testing. OVT moisture content from the gradation sample appears to be much higher than IAT's by a factor of 10x(IAT's 0.13% OVT 1.4%). This may have contributed to Significant difference on these sieves.	Care will be taken in the future to keep split samples in similar conditions and run as soon as possible. A retest was performed on the same sample which yielded no significant differences. The IAT Test report is attached.	10/7/2019 1:28:54 PM -06:00	Audit Comment	We have checked to verify the sieves are calibrated operational. Don't exactly know the cause of significant differences, maybe contributed to excessive moisture. Although split samples were used, but different timing of the testing might have contributed to loss of moisture.	Closed
Central 70	C 0704-241		IAT Materials Testing	10/29/2019 9:18:51 AM - 06:00	Soil Compaction - M/D Gauge per CP 80		A difference of greater the 2% of IAT's Relative compaction was observed during a qualification w/Leyla Lawson on 203 Embankment Soil Compaction.The original IQC curve selection could not be verified by 1-point. On previous test it was observed the Leyla's moisture density gauge was giving inconsistent data when the auto depth detection mode was engaged. Leyla was instructed to manually select	A Retest was performed on 203Embankment with Leyla Lawson w/Ground Engineering. The results of the retest indicate that only the gauge was to blame for the Significant Difference discovered on 10/2/2019. The Tester indicated that her	12/30/2019 1:33:55 PM -07:00	Audit Comment	2) The nuclear moisture density gauge that was utilized by Leyla during the IAT testing has since been calibrated per ISO/IEC 17025:2017 requirements by a third party calibration service and found to be in compliance	Closed

the depth of her equipment by Ground manager at that time. It is possible she turned this mode back on which caused a significant difference of greater than 2%.

gauge was reading differently when in manual depth detection mode vs. Auto-detect mode. She will continue to use the manual mode for more reliable and accurate results. A copy of the retest report is attached.

with the appropriate standards. The gauge accuracy was also verified per Colorado Procedure 15. The IQC and IAT one point tests were run utilizing different methods which yielded dry density and moisture content results that were not within a proximity that provided confidence. The IQC one point was run according to the method used to create the moisture density curve that was selected by Leyla. The IQC one point result verified the curve that was selected by Leyla but the IAT one

											point result did not. Due to this one point test result variance a different set of optimum curve values were selected that could be verified by both the IQC and the IAT one point test results. A retest will be scheduled at the IAT testing technician's convenience also taking into account the project embankment placement and IQC testing schedule.	
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		206.02 (a) 1. Structure Backfill (Class 1) and (Class 2).		The proper materials were used in the backfill operation.	Conformance	6/1/2020 11:18:45 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/6/2019 9:01:53 AM - 07:00	206.02 (a) 1. Structure Backfill (Class 1) and (Class 2).		Class 1 and class 2 material is very good with the exception of the material at the front face of the wall on the west end.	Close	12/11/2019 1:18:32 PM -07:00	Audit Comment		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Unsuitable foundation material shall be removed and wasted in a manner acceptable to the Engineer, and the excavated material will be paid for as structure excavation.		Unsuitable material was removed and hauled to proper waste facility.	Conformance	3/17/2020 12:34:23 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Structure Exc	Walls		Unsuitable foundation material which is suitable for embankments and suitable surplus excavated material shall be used in the construction of embankments.		Unsuitable material was removed and suitable material was replaced.	Conformance	3/26/2020 8:04:59 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		This extra depth excavation shall be backfilled with loose Structure Backfill (Class 1) or other approved material.		The backfilled area was between the temporary SOE wall and the back of Abutment 1 at Clayton. The area was back filled with #57 stone. Please see the attached pictures.	Conformance	8/20/2019 1:13:30 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Structure Exc	Walls		The base of structure backfill shall be scarified to a depth of 6 inches and compacted with moisture and density control prior to placement of any structural element or structure backfill.		Base of structure was excavated to proper depth, and compacted.	Conformance	3/26/2020 8:04:59 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		Since #57 stone was used. No compaction methods were used.	Conformance	8/20/2019 1:13:30 PM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/6/2019 9:01:53 AM - 07:00	The excessive use of water during backfilling operations will not be permitted.		Water is used per spec	Conformance	12/5/2019 9:53:43 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		Water was added only as needed to raise moisture content of soil.	Conformance	10/7/2019 8:20:17 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork	8/28/2019 10:45:05 AM - 06:00	The excessive use of water during backfilling operations will not be permitted.		Conformance	Conformance	8/27/2019 3:19:35 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		The excessive use of water during backfilling operations will not be permitted.		I observed no excessive use of water during the backfill operation and saw no water running out of the material.	Conformance	11/8/2019 8:51:23 AM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork	8/28/2019 10:45:05 AM - 06:00	Compaction equipment or methods that produce horizontal or vertical earth pressures, which may cause excessive displacement or overturning, or may damage structures, shall not be used.		Conformance	Conformance	8/27/2019 3:19:35 PM -06:00	C		Closed

Central 70	C 0704-241	Construct MSE Wall	Walls	12/6/2019 9:01:53 AM -07:00	Structure backfill (Class 1) shall be compacted to a density of not less than 95 percent of maximum dry density determined in accordance with AASHTO T 180 as modified by CP 23.		Compaction of Class 1 material is per spec.	Conformance	12/5/2019 9:53:43 AM -07:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/6/2019 9:01:53 AM -07:00	Class 1 backfill shall be compacted at ± 2 percent of Optimum Moisture Content (OMC).		IQC reports that the compaction is good.	Conformance	12/5/2019 9:53:43 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Class 1 backfill shall be compacted at ± 2 percent of Optimum Moisture Content (OMC).		Material was compacted within 2% of optimum moisture content	Conformance	10/7/2019 8:20:17 AM -06:00	C		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	12/6/2019 9:01:53 AM - 07:00	Structure backfill (Class 2) shall be compacted to a density of not less than 95 percent of maximum dry density.		Class 2 material at the front face is not compacted. The vibratory roller is too heavy to be close enough to the wall to be of service and the standard 6" lifts are too thick for the small vibratory plate compactor to compact properly. It has been suggested to use thinner lifts with the plate compactor close to the front face. This work needs to be completed up to finished grade at the front face as the height of the wall exceeds 20'.	Grading crew to place class 2 material to finished grade per spec.	12/11/2019 1:20:27 PM -07:00	Audit Comment		Closed
Central 70	C 0704-241	Construct MSE Wall	Walls	10/29/2019 9:23:12 AM - 06:00	The maximum dry density of class 2 backfill and OMC for all other materials will be determined in accordance with AASHTO T 99 as modified by CP 23. Materials shall be compacted at ± 2 percent of Optimum Moisture Content (OMC).		The subgrade at the front face of the wall had sediment and wet spots that were not addressed prior to being backfilled. Due to weather event the crew was able to address prior to placing subsequent lift.		11/13/2019 1:28:10 PM -07:00	Audit Comment	Area was cleaned prior to backfill as stated	Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Filter material shall be placed behind bridge abutments, wingwalls, and retaining walls as provided in the Contract and in accordance with the following requirements:		The approved filter material was placed behind bridge abutments and wingwalls.	Conformance	11/8/2019 8:51:23 AM -07:00	C		Closed

Central 70	C 0704-241		IAT Materials Testing	5/22/2019 4:41:36 PM - 06:00	Slump Cone per AASHTO T 119		A significant difference of greater than 0.5" (6.5" IQC & 4.75" IAT) was detected during a qualification of Caleb Chee for 601 Concrete. IAT's results closely matched PC's results. Caleb is a newer tech and it is still unknown whether or not he has passed his ACI Field 1 certification. During the testing, there was IQC oversight of the testing by an ACI Field 1 certified person. It was later brought to IAT's attention that the slump cone may not have been pulled vertically at the correct speed and angle.	A retest on Caleb Chee w/Vine Laboratories was performed on 5/30/2019 with results that were within the 0.5" allowable difference for AASHTO T119. It is now known that Caleb has passed the ACI Field certification and can test concrete on his own now.	6/11/2019 11:03:00 AM -06:00	Audit Comment	Due to the significant difference observed between test results, a slump testing training session was held for Caleb on 5/14/2019. Caleb was successfully certified for ACI Field 1 on 4/24/2019. Follow up IAT slump testing will be performed with Caleb pending IAT technician scheduling.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	7/26/2019 10:47:08 AM - 06:00	Slump Cone per AASHTO T 119		<p>IAT Representative Randy Medina observed the IQC technician fail to perform the slump portion of the IAT per AASHTO T119. Instead of following the procedure the Tech was instructed by IQC Representative Matt Brahler to not perform the test and to visually measure the slump. IQC Representative cited the slump section of 601 concrete found in the CDOT Red Book. IAT Representative Randy Medina was asked what he thought the slump was. He stated 3" While IQC guessed 4". IAT Representative Randy Medina did not perform the slump per AASHTO T119 and instead followed IQC lead and reported the visual Slump. The visual interpretation of the slump lead to a significant difference. No where on the IQC report does it state that the slump was visually accepted.</p>	<p>All parties testing 412 Concrete will perform the Slump test per AASHTO T119. A retest on 412 Concrete will be performed on Evan ASAP.</p>	8/12/2019 11:48:47 AM -06:00	Audit Comment	<p>IQC and CDOT discussed this issue in the material meeting. IQC from now on will test slump every time we make cylinders and visually when no cylinders required.</p>	Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	10/29/2019 9:18:27 AM - 06:00	Air Content - Air Meter per AASHTO T 152		A significant difference of greater than 0.5% (5.0% IQC & 5.6% IAT) was detected during the qualification of Leyla Lawson for 601 Concrete. During the test Leyla appeared to follow AASHTO T152. A Retest is needed on this element. Differences in unit weight could indicate sampling as part of the issue. Her guage calibration may also be to blame.	A Retest on 412 Concrete was performed on 11/2/2019 where no significant differences were detected. Leyla's Air meter was observed to be in proper calibration and quite good condition. A copy of the Report is attached.	12/3/2019 9:31:13 AM -07:00	Audit Comment	1) Leyla's Type B air meter was calibrated and observed to be in proper working condition. The equipment was examined and appeared to be in a 'like new condition'. A retest will be scheduled at the IAT testing technician's convenience also taking into account the project concrete placement and IQC testing schedule.	Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241		IAT Materials Testing	10/29/2019 9:17:29 AM - 06:00	Compressive Strength - Compressive Strength per ASTM C 39		A Significant Difference of greater than 10% of the Average IAT 28-day day strength was detected during a qualification of Grant Mathers for 601Lab. IAT 28-day Strength was 21.9% higher than IQC's passing 28-day break strength.	No retest can be performed on the technician, Marcus Carmean as he has left the project. Since there have been several instances where this variability in cylinder breaks has occurred without explanation the quality team has been working to educate and inform all testers making cylinders about proper casting and handling techniques in the first moments of fabricating the samples. We will continue to monitor the situation.	12/10/2019 2:47:56 PM -07:00	Audit Comment	IQC looked at everything to determine the reason behind the difference. IQC 7 days result matched Pc 7 day result but did not match IAT OR PC 28 DAYS results, cylinders might not be cast very well. The tester is no longer in this project, that was the only cylinders he casted.	Closed
Central 70	C 0704-241		IAT Materials Testing	10/29/2019 9:18:02 AM - 06:00	Compressive Strength - Compressive Strength per ASTM C 39		A Significant Difference of greater than 10% of the Average IAT 28-day day strength was detected during a qualification of Leo Rodriguez for 601Lab. IAT 28-day Strength was 14.6%	After conversations with IQC regarding sampling and fabricating of cylinders prior to initial cure, It was	12/6/2019 11:55:05 AM -07:00	Audit Comment	cylinders were cured in the field for the first 24 hours with hi/low temp within the spec between 60 -80 F then	Closed

						<p>higher than IQC's passing 28-day break strength. Both parties' cylinders were cured under similar conditions in the field.</p>	<p>concluded that more care will be taken to insure more closely matching samples. True split samples will be a prerequisite for all testing no matter how difficult it may be to achieve in the field. Also more care in observing the fabrication and handling of compressive strength cylinders by IAT and IQC oversight. In addition to this when Significant differences occur during compressive strength comparison , the technician that fabricated the cylinders will need to be re-tested.</p>		<p>they were brought to the lab, they were stripped and put in the water tank. IQC, PC, AND IAT were all casted cylinders on 3.5 cy truck but all results are far from each other. IQC believe concrete might be the issue due to the small amount of concrete were tested.</p>

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241		IAT Materials Testing	6/19/2019 9:08:36 PM - 06:00	Compressive Strength - Compressive Strength per ASTM C 39		Differences in unit weight & Air Content during field testing are not significant enough in this case to cause such a significant difference of more than 10%. As cure procedures for IQC and IAT vary, that may be what contributed to the large difference. IAT cylinders and fabricated at trailer and placed into a temperature controlled water bath. The following day the cylinders are removed from the molds and placed back into the bath. IQC cylinders are fabricated in the field and left in cure boxes (coolers). It is the responsibility of the tester who fabricated the cylinders to deliver them to the IQC lab where they are stripped and placed into a water bath. Any delay in this process can cause significant changes in strength from that of the design.	All entities (OVT,IAT,IQ C) are taking precautions to eliminate any variation in initial cure that may lead to any further significant differences. No Retest is needed for this item as we concluded that the issue was due to the initial cure/Cylinder fabrication and stripping procedures.	8/12/2019 11:38:29 AM -06:00	Audit Comment	After looking into the issue, we found out the cylinders were left in field more than 2 days. therefore we see this difference. IQC lab Manger print daily sheet of cylinders made the day before, IQC LAB MANGER call field tester at the end of the day if cylinders are not at the lab. we have been doing much better of tracking cylinders daily. Central 70	C 0704-241	Fabricate Girders	Structures		Reports. The PC inspector shall submit the following reports to the QA inspector prior to acceptance: all nondestructive test reports, including tests of all repaired areas, the visual test report for all welds, dimensions, camber, and sweep measurements, welder qualification records, welding procedure specification, procedure qualification records, welding machine settings, material traceability to each main member plate, and paint inspection reports. After each girder has been inspected by process control and has been accepted as conforming to the contract requirements, but prior to painting, the QA inspector shall be notified. The QA inspector shall determine the acceptability of the girder.		PC submitted all of the reports to the QA inspector but as the girders are weathering steel, no painting was involved.	Conformance	5/18/2020 9:07:06 AM -06:00	C		Closed
Central 70	C 0704-241	Fabricate Girders	Structures		Magnetic Particle Testing. Magnetic particle testing shall be performed on areas defined in AWS D1.5 and this subsection. Magnetic particle testing shall be conducted in accordance with ASTM E 709 and AWS D1.5, except as amended herein. Alternating current shall be used. The yoke spacing shall be between 2 and 4 inches. The minimum lifting power shall be 10 pounds. Red dry particles shall be used. The light intensity shall meet ASTM E 709, Section 7.		MT was performed in areas exceeding the requirements of AWS D1.5 due to fillet weld issues found at the girder ends. MT was conducted in accordance with ASTM E 709 and AWS D1.5, except as amended.	Conformance	5/18/2020 9:07:06 AM -06:00	C		Closed
Central 70	C 0704-241	Fabricate Girders	Structures		End Treatment of Webs and Flanges. The ends of webs and flanges shall be flush and within the same plane so as to leave no reentrant corners.		End treatment of webs and flanges were flush and within the same plane as to leave no reentrant corners.	Conformance	5/18/2020 9:07:06 AM -06:00	C		Closed

Central 70	C 0704-241	Fabricate Girders	Structures		Process. Welding of steel structures shall conform to AWS D1.5 as amended herein. All web and flange butt joints and web to flange welds shall be made using the submerged arc welding process (SAW). Alloy "active" fluxes shall not be used in groove welds or fillet welds with more than three passes. Repairs may be made using submerged arc welding or shielded metal arc welding (SMAW). Flux core arc welding (FCAW) will be permitted on secondary to main member attachments when performed in the flat or horizontal positions. Vertical or overhead FCAW shall be limited to only that work approved by the QC inspector.		Welding of the steel girders conformed to AWS D1.5 as amended in the specifications.	Conformance	5/18/2020 9:07:06 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	7/10/2019 2:16:35 PM - 06:00	The bottom of a sign mounted on a barricade, or other portable support, shall be at least 1 foot above the traveled way.		One Vehicle per Green Sign was mounted at least 1 foot above traveled way.	Conformance	7/10/2019 7:38:08 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	7/25/2019 3:23:04 PM - 06:00	The bottom of a sign mounted on a barricade, or other portable support, shall be at least 1 foot above the traveled way.		Barricade mounted signs are at least 1 foot above traveled way.	Conformance	7/25/2019 9:17:47 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	7/16/2019 4:28:51 PM - 06:00	The bottom of a sign mounted on a barricade, or other portable support, shall be at least 1 foot above the traveled way.		Signs mounted on barrier were at least 1 foot above traveled way.	Conformance	7/15/2019 9:28:37 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Concrete for precast or cast-in-place shall conform to the requirements of Section 601.		The concrete used for the cast in place barrier conformed to the requirements of Section 601.	Conformance	8/8/2019 2:36:26 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Concrete for precast or cast-in-place shall conform to the requirements of Section 601.		The concrete for the slip formed barrier conforms to the requirements of Section 601 and is an IQC approved mix design.	Conformance	9/26/2019 2:07:29 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway	7/3/2019 7:16:18 AM - 06:00	Concrete for precast or cast-in-place shall conform to the requirements of Section 601.		Footing concrete was tested and approved by IQC.	Conformance	7/2/2019 9:01:19 AM -06:00	C		Closed

Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		Barrier was not out of tolerance when checked with 10 foot straightedge.	Conformance	10/1/2020 10:36:31 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		The Contractor shall furnish an approved 10 foot straightedge and provide an operator to aid the Engineer in testing the exposed surfaces. All surface tolerances shall be measured in a longitudinal direction. Deviation of any exposed surface in excess of the tolerance specified shall be corrected at the Contractor's expense.		The contractor furnished an approved 10 foot straightedge and an operator to aid in inspection of the barrier.	Conformance	11/8/2019 8:52:24 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Longitudinal surface tolerances for the top of the barrier and the sides of the barrier from the top to a line 7 inches below the top of the barrier are: (1) On tangent roadway alignments and curves with radius greater than 1000 feet: 0.25 inch from the edge of the straightedge. (2) On sharp vertical curves and horizontal curves with radius of 1000 feet or less: 0.25 inch from the edge of the straightedge with allowance made for curve deflection.		Longitudinal surface tolerances met all requirements of the specifications.	Conformance	11/8/2019 8:52:24 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Longitudinal surface tolerances for the top of the barrier and the sides of the barrier from the top to a line 7 inches below the top of the barrier are: (1) On tangent roadway alignments and curves with radius greater than 1000 feet: 0.25 inch from the edge of the straightedge. (2) On sharp vertical curves and horizontal curves with radius of 1000 feet or less: 0.25 inch from the edge of the straightedge with allowance made for curve deflection.		Deviations in excess of those specified (0.25" on 10') were corrected by the contractor.	Conformance	8/8/2019 2:36:26 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Rail	Structures		Longitudinal surface tolerances for the remaining surfaces of the barrier are: (1) On tangent roadway alignments and curves with radius greater than 1000 feet: 0.75 inch from the edge of the straightedge. (2) On sharp vertical curves and horizontal curves with radius of 1000 feet or less: 0.75 inch from the edge of the straightedge with allowance made for curve deflection.		I observed no deviations outside the tolerances that required correction for the remaining surfaces.	Conformance	8/8/2019 2:36:26 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Longitudinal surface tolerances for the remaining surfaces of the barrier are: (1) On tangent roadway alignments and curves with radius greater than 1000 feet: 0.75 inch from the edge of the straightedge. (2) On sharp vertical curves and horizontal curves with radius of 1000 feet or less: 0.75 inch from the edge of the straightedge with allowance made for curve deflection.		Longitudinal surface were checked with a 10' straightedge and was within specified tolerance.	Conformance	10/28/2019 3:58:09 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Patching will not be allowed to correct out of tolerance barrier.		No patching was required on the barrier.	Conformance	11/8/2019 8:52:24 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Patching will not be allowed to correct out of tolerance barrier.		The concrete barrier that was constructed was in tolerance and required no patching.	Conformance	2/7/2020 6:43:38 AM -07:00	C		Closed
Central 70	C 0704-241	Temp Barrier	Maintenance of Traffic (MOT)		Each segment of the precast barrier shall not have spalls, corner breaks, and bottom spalls totaling more than 5 square feet of surface area which includes the base.		Concrete barriers were in acceptable condition.	Conformance	1/13/2020 8:10:26 AM -07:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	9/17/2019 8:32:34 AM -06:00	Each segment of the precast barrier shall not have spalls, corner breaks, and bottom spalls totaling more than 5 square feet of surface area which includes the base.		Barrier walls had less than 5 square feet of spalls, breaks, or cracking.	Conformance	9/16/2019 12:58:18 PM -06:00	C		Closed
Central 70	C 0704-241	Temp Barrier	Maintenance of Traffic (MOT)	9/12/2019 4:33:35 PM -06:00	Each segment of the precast barrier shall not have spalls, corner breaks, and bottom spalls totaling more than 5 square feet of surface area which includes the base.		Barriers placed for Kearney closure had corner spalls over 5 square feet of barrier, cracks full depth and full height, and exposed J hooks.		9/24/2019 7:41:16 AM -06:00	NC-2	NCR 1494 was written to resolve the barrier and closure issues at S Stapleton and Kearney	Closed

Central 70	C 0704-241	Substructure	Cover	7/25/2019 4:42:22 PM - 06:00	Unless otherwise stated in the plans or specifications, tolerances for concrete construction and materials shall be accordance with ACI 117.		This is merely for document tracking. Chris Merrifield has written an RFC for clarification. Once the approval for this clarification comes through, the NCR can be closed. The plans call for a 4' 6" minimum vertical depth (Plan Sheet RP-C1-01). ACI 117 tolerances would not apply due to this specific dimension. Reference "Rebar Shop Drain Cover Abut 3 Cap - For Sections other than the Bridge Section". Approximately 147ft of Abutment 3 was placed from drilled shaft A3-67 to A3-87. There were two 10ft areas that were 1/2" shy of the minimum vertical depth. There were three 10ft areas that were 1/4" shy of the minimum vertical depth. The 3" to 4" mud mat was pour high which in turn caused the issue with the vertical depth of the abutment. Both PC and IQC took place in the measurements that were taken for verification.	1325 created	8/14/2019 12:48:22 PM -06:00	NC-2	NCR 1325 was written to track this issue Per Merrifield	Closed

The Contractor shall rebuild, repair, restore, or replace all contract work that is injured or damaged prior to final written acceptance at no cost to the Department.		The existing concrete pavement behind Wall 621-W1 has been undermined during the construction of the wall. Various location can be found where the existing subgrade of the concrete pavement has either cracked and started sloughing off the vertical cut face, completely sloughed off the wall leaving cavities, or has started settling creating a void between the top of subgrade and bottom of pavement. The department has found several locations where cavities from 1-3' exist under the existing concrete pavement while at the various settlement locations the gap between bottom of pavement is 1/4" to 3/4". Crews have placed	Verified NCR 1285 addressed this issue	4/13/2020 2:06:30 PM -06:00	NC-2	This issue will be resolved in NCR 1285	Closed

							structural backfill inside the caved out locations although the material placed in these areas have not been compacted. Attached are photos of the issues along with the typical section for this area. The area in question is called out for mill and overlay without subgrade reconstruction and runs approximately the full length of the wall. Other members of the department management team brought this issue up with management of the grading team on 05/14/19.					
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	8/14/2020 4:34:48 PM - 06:00	CDOT Standard Specification 107.17 - Contractor's Responsibility for Work. The Contractor shall be responsible for and protect the contract work against injury or damage from all causes whether arising from the execution or nonexecution of the work, including but not limited to action of the elements, traffic, fire, theft, vandalism, or third party negligence, until final written acceptance of the project by the Engineer. The Contractor shall rebuild, repair, restore, or replace all contract work that is injured or damaged prior to final written acceptance at no cost to the Department.		During construction for CIP coping, an area of the sign foundation was chiseled out. Rebar for foundation is now exposed.	See NCR 2201	11/18/2020 12:52:06 PM -07:00	NC-2	NCR 2201 was written to track this issue. Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Construct MSE Wall	Walls	12/6/2019 9:01:53 AM - 07:00	CDOT Standard Specification 107.17 - Contractor's Responsibility for Work. The Contractor shall be responsible for and protect the contract work against injury or damage from all causes whether arising from the execution or nonexecution of the work, including but not limited to action of the elements, traffic, fire, theft, vandalism, or third party negligence, until final written acceptance of the project by the Engineer. The Contractor shall rebuild, repair, restore, or replace all contract work that is injured or damaged prior to final written acceptance at no cost to the Department.		Site is well maintained.	Conformance	12/5/2019 9:53:43 AM -07:00	C		Closed
Central 70	C 0704-241	Girders	Cover		All reinforcing and embedment items supports, bolsters, chairs, and spacers shall be CDOT approved. These items shall be plastic, rubber, or epoxy coated at all areas that will contact external concrete surfaces, unless otherwise shown on the plans.		From visual inspection, all of the embedded items in contact with the forms were plastic or rub coated.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Reinforcing Bars. All reinforcing bar material shall be grade 60 minimum and shall conform to ASTM A615, or ASTM A706; epoxy coated bars shall also meet ASTM D3963. Reinforcing bars that require welding shall conform to ASTM A706. Welding of A706 bars shall be done in accordance with ANSI / AWS D.1.4.		The reinforcing steel was verified to be grade 60.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Steel and metal products shall be free of loose rust and foreign substances before incorporation into the cast product. The presence of rust on strand shall not necessarily be cause for rejection. Light rust and rust that does not result in visible pitting of the prestressing steel with the unaided eye shall be acceptable.		All strands and reinforcing steel were free of rust and foreign materials. The casting area was clean.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Cover		Chemical Admixtures		Each bag of polypropylene fiber was 1.75lbs. 2 bags were added for each cubic yard of concrete that was batched for the casting of the bottom flange. The fiber matches the material submittal in Aconex.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Minimum cover for prestressing steel shall be 1 1/2 inches, unless otherwise shown in the Contract. Minimum clearance for reinforcing steel shall be 1 inch unless otherwise shown in the Contract.		A 1.5" clear cover was verified for the vertical webs. 2" of clear cover was verified for the bottom flange. 1.5" clear cover was verified for the vertical end faces. Reference Plan Sheet 93/94 of 133 "Cover Structure Precast Box Girder Shop Drawings"	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Shop Drawings. The Contractor shall furnish shop drawings in conformity with subsection 105.02 for all prestressed components. When the Contractor's Engineer completes or revises design details or engineering drawings, then those engineering drawings and details that are submitted to the Engineer shall contain the endorsement seal of a Professional Engineer registered in the State of Colorado.		The following shop drawings were used. Plan Sheet 93/94 & 101/102 of 133. "Cover Structure Precast Box Girder Shop Drawings". Each sheet that was used had the appropriate stamp.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Location and arrangement of prestressing strands.		All locations and strands locations were verified with the plans.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Location, description, and detail of structural reinforcing items, excluding minor items used for field erection.		All structural reinforcing items were verified with the shop drawings.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Cover		Provisions for diaphragm connections.		The strands that will be cast into the diaphragm are designated by a star in the shop drawings. The dimensions of the bend/development length is also included.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Location and detail of debonded strands.		Locations of debonded strands were verified with the plans.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Frequency. QC inspection and testing at all intervals of duct anchorage, duct splice operations, forming, tensioning, steel and concrete placement, curing, and storage operations shall be performed in accordance with the accepted QCP.		Since casting began, the first girder had an issue with the foam embed floating. The issue was resolved and has not occurred since. Reference NCR-1114 for further information.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Strands that have received final tensioning shall be protected from temperature fluctuations greater than 40 °F until the time of concrete placement. The Contractor may apply stress corrections at the rate of 1 percent per 11 °F, for temperature variation between final tensioning and concrete placement. This requirement does not apply to self-stressing bed setups.		The concrete operation was started at 7:00 am the day of our observation. This minimized the chance of a 40F degree change occurring.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Tensioned prestressing steel shall be free from dirt, mud, ice, snow build up, oil, grease, paint, loose rust, and all other bond inhibiting substances prior to concrete placement. Visibly pitted strand shall not be used.		All strands were clean and free of foreign material.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	Cover		Equipment. Equipment used for fabrication of pretensioned and combination tensioned members shall conform to the following requirements: Reference the specification for the following: Jacking Equipment and Load Cells. Calibration. Concrete Batching Equipment. Concrete Load Testing Machine. Concrete Cylinder Molds. Forms. Miscellaneous Test Equipment		Reference section 7.B "In-Process Inspection and Testing" of the Process Control Plan for the following items. The concrete testing was complete on behalf of the process control plan. Pre-pour inspections were conducted by Plum Creek Quality and Kiewit IQC Jim Chaney. Plum Creek Quality Control was witnessed conducting Post Pour Inspections.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	Cover		Concrete and Steel for Other Members. Concrete for other members shall conform to the requirements of Section 601 and the plans. Reinforcing steel for other members shall conform to the requirements of Section 602.		FHWA was included in the Plum Creek facility visit. Please reference their attached write-up. The cold joint referred to in the write up was addressed in NCR's 1114, 1115 & 1116.	Conformance	8/5/2019 10:47:15 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Bridge deck concrete on superelevation or grade that exceeds 2 percent, shall be placed from the low point upward.		Under Appendix 3 of Lobato's process control plan, please see the Columbine pour sequence. The deck exceeded 3.5% on span 2 and was placed in accordance with the specification.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		The Contractor shall prepare a written Process Control Plan (PCP) which defines the process control measures the Contractor will use to ensure the placing, consolidating, and finishing, curing and weather protection of the bridge deck conforms to the Contract requirements. The Contractor shall submit the PCP to the Engineer for written approval before the Pre-pour Conference.		The process control plan was submitted and accepted before the placement of the Clayton and Columbine deck pre-pour meeting.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		A Pre-Placement Conference was held, all required parties were in attendance and the required topics were discussed.		Please see the last page of Lobato's Process Control Plan. It includes all of the names and associated parties that attended the pre-pour meeting.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		A Pre-Placement Conference was held, all required parties were in attendance and the required topics were discussed.		A pre-placement conference was held with all applicable parties in attendance. The required topics were discussed prior to deck placement at Monroe Bridge. Central 70	C 0704-241	Bridge Deck	Structures	1/22/2020 11:49:01 AM - 07:00	A Pre-Placement Conference was held, all required parties were in attendance and the required topics were discussed.		A pre-placement conference was held, and all required parties were in attendance to discussed required topics.	Conformance	1/21/2020 1:06:49 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	1/22/2020 11:49:01 AM - 07:00	Tops of girders, precast deck panels, pier caps, and abutments that will come into contact with bridge deck concrete shall be heated to raise the temperature above 35 °F prior to concrete placement.		Entire top of girder bridge deck should be a minimum of 35 degF and should not rely on sun to warm up the girders prior to concrete placement. Span 1 only was covered with blanket and heated, and once Span 2 was reached the required temperature was just reached. Adequate measures should be in place moving forward.	Changing circumstances regarding weather and temperatures will be accounted for when planning moving forward.	1/28/2020 10:45:39 AM -07:00	Audit Comment	The phasing of the deck looked at during planning and the ambient temperature forecast. The deck was covered with thermal blankets and ground heaters. After uncovering the deck the ambient temps dropped below the anticipated temperature. As soon as the sun came up the deck was per specification.	Closed
Central 70	C 0704-241	Bridge Deck	Structures		Tops of girders, precast deck panels, pier caps, and abutments that will come into contact with bridge deck concrete shall be heated to raise the temperature above 35 °F prior to concrete placement.		Temperature of top of girders and pier caps was above the required 35 degF prior to concrete placement.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Tops of girders, precast deck panels, pier caps, and abutments that will come into contact with bridge deck concrete shall be heated to raise the temperature above 35 °F prior to concrete placement.		Top of girders, pier caps, and abutments were all above the minimum 35 degF temperature prior to concrete placement.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		Tops of girders, precast deck panels, pier caps, and abutments that will come into contact with bridge deck concrete shall be heated to raise the temperature above 35 °F prior to concrete placement.		The bridge deck surface was well above 35F prior to the concrete placement.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Concrete shall be placed in such manner as to require as little handling as possible being, as near to final location as practical, placed in such a manner that lateral flow will be minimized, and at sufficient depth to provide adequate material for screeding and finishing operations.		All areas of the deck were consolidated with a mechanical vibrator. Due to the complex slopes at span 2, the western and eastern edges were finished by hand while the large middle area was finished with the bid well. Due to the complex slope at span 1, the western edge was finished by hand. The rest of the surface was finished with the bid well. Please reference the attached photos.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Concrete shall be placed in such manner as to require as little handling as possible being, as near to final location as practical, placed in such a manner that lateral flow will be minimized, and at sufficient depth to provide adequate material for screeding and finishing operations.		Concrete was placed in a manner so as to require as little handling as possible, and to provide sufficient depth of material for screeding and finishing operations.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	1/22/2020 11:49:01 AM - 07:00	Concrete shall be placed in such manner as to require as little handling as possible being, as near to final location as practical, placed in such a manner that lateral flow will be minimized, and at sufficient depth to provide adequate material for screeding and finishing operations.		Concrete being placed in a manner to require as little handling as possible, while also have adequate material for screeding and finishing operations.	Conformance	1/21/2020 1:06:49 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		When the evaporation rate is equal to or above 0.2 pounds per square foot per hour, the Contractor shall take actions (such as cooling the concrete, installing wind breaks, sun screens, etc.) to create and maintain an evaporation rate less than 0.2 pounds per square foot per hour on the entire bridge deck.		By using the ACI Evaporation Chart, I was able to determine that the evaporation rate was not over 0.2 pounds per square foot per hour so no mitigation measures were required.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		If fogging is required by the Engineer, the Contractor shall not allow water to drip, flow, or puddle on the concrete surface during fogging, placement of absorptive material, or at any time before the concrete has achieved final set.		A power washer was used to fog the surface of the concrete as well as moisten the dry concrete deck surface before placement. Since a power washer was used, the amount of water for fogging was excessive. This would have helped finishing the surface from Comment #18.	Closed	9/3/2019 7:49:14 AM -06:00	Audit Comment	We will add the amount of fogging water used to next pre deck placement meeting.	Closed
Central 70	C 0704-241	Bridge Deck	Structures		If fogging is required by the Engineer, the Contractor shall not allow water to drip, flow, or puddle on the concrete surface during fogging, placement of absorptive material, or at any time before the concrete has achieved final set.		Fogging equipment required did not result in water dripping, flowing, or puddling on concrete surfaces prior to concrete achieving final set.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		If fogging is required by the Engineer, the Contractor shall not allow water to drip, flow, or puddle on the concrete surface during fogging, placement of absorptive material, or at any time before the concrete has achieved final set.		Fogging equipment did not result in puddling of water prior to concrete setting.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		If placement is delayed or work is not progressing in a satisfactory manner 601.15 (c) for joints is being followed.		The placement was continuous throughout the entire pour.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Cover		The Contractor shall provide suitable mechanical vibrators to disperse the batch at the point of discharge and to densify the concrete within the forms.		The number of vibrators was adequate for the placement.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The Contractor shall provide suitable mechanical vibrators to disperse the batch at the point of discharge and to densify the concrete within the forms.		Suitable mechanical vibrators were provided by the contractor to densify the concrete at point of discharge within the forms.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The Contractor shall provide suitable mechanical vibrators to disperse the batch at the point of discharge and to densify the concrete within the forms.		Suitable mechanical vibrators were provided and used appropriately.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	1/22/2020 11:49:01 AM -07:00	The Contractor shall provide suitable mechanical vibrators to disperse the batch at the point of discharge and to densify the concrete within the forms.		Suitable mechanical vibrators were provided by the contractor.	Conformance	1/21/2020 1:06:49 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		A combination of immersion vibration and surface consolidation shall be used.		Only immersion vibrators were used to consolidate the concrete.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Following consolidation, the concrete shall be struck off and finished by mechanical longitudinal floating, mechanical rolling, surface vibration, or a combination of any of these methods.		A bid well was used as the mechanical rolling device.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Following consolidation, the concrete shall be struck off and finished by mechanical longitudinal floating, mechanical rolling, surface vibration, or a combination of any of these methods.		Following consolidation, the concrete was struck off and finished with mechanical longitudinal rolling and surface vibration through the use of bidwell.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	1/22/2020 11:49:01 AM -07:00	Following consolidation, the concrete shall be struck off and finished by mechanical longitudinal floating, mechanical rolling, surface vibration, or a combination of any of these methods.		Following vibration and consolidation operations, the concrete is being struck off and finished with screed and finishing machine.	Conformance	1/21/2020 1:06:49 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Following consolidation, the concrete shall be struck off and finished by mechanical longitudinal floating, mechanical rolling, surface vibration, or a combination of any of these methods.		Following consolidation, concrete was finished by screed conforming to the plan.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		If the surface of the deck slab becomes dry immediately following finishing operations, due to an excessive evaporation rate, it shall be covered with wet burlap or fogged with water covering the entire deck surface using pneumatic atomizing nozzles. The fog spray shall be just enough to retard surface evaporation and shall not change the water-cement ratio. During periods of excessive drying, a cover of wet burlap or plastic sheeting shall be maintained on the slab at all times until final cure is placed.		Reference comment #33. Since the evaporation rate was insignificant, a membrane curing compound was adequate until wet burlap was placed on the surface.	Conformance	8/13/2019 1:17:19 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		For the final finish a seamless strip of plastic turf shall be dragged longitudinally over the full width of bridge deck after a seamless strip of burlap or other approved fabric has been dragged longitudinally over the full width of bridge deck to produce a uniform surface of gritty texture.		Burlap was dragged longitudinally over the full width of the bridge deck to produce a uniform gritty texture on the surface.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		The drags shall be mounted on a bridge other than the bridge to be furnished for Department use. The dimensions of the drags shall consist of sufficient material and be maintained in such a condition that the resultant surface finish is of uniform appearance and reasonably free from grooves over 1/16 in depth. Where more than one layer of burlap drag is required, the bottom layer shall be approximately 6 inches wider than the layer above. Drags shall be maintained clean and free from encrusted mortar. Drags that cannot be cleaned shall be discarded and new drags installed.		Drags were of sufficient material and maintained in a condition to produce a result with uniform appearance and reasonably free from grooves.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed

Curing compound method was used and applied in conformance with the specifications and manufacturers recommendations.	Conformance	11/18/2019 7:38:49 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Water Curing Method. The water cure method shall be applied as soon as it can be without marring the surface. The surface of the concrete, including bridge curbs and bridge sidewalks, shall be entirely covered with wet burlap and polyethylene sheeting. Prior to being placed, the burlap shall be thoroughly saturated with water. The wet burlap and polyethylene sheeting shall extend at least twice the thickness of the bridge deck beyond the edges of the slab and shall be weighted to remain in contact with the surface. The wet burlap and polyethylene sheeting shall remain in contact and be kept wet for the entire curing period.		Entire length and width of bridge deck was covered with wet polyethylene sheeting, and remained in place for entirety of curing period.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed

Central 70	C 0704-241	Bridge Deck	Structures		<p>When the ambient temperature is expected to fall below 40 °F during the curing period, the Contractor shall maintain the internal concrete temperature above 50 °F during the curing period. The Contractor shall maintain the internal concrete temperature above 50 °F during the curing period. The Contractor shall provide suitable measures such as straw, additional burlap, or other suitable blanketing materials, and/or housing and artificial heat to maintain the concrete temperatures between 50 °F and 75 °F as measured on the upper and lower surfaces of the concrete. The Contractor shall enclose the area underneath the deck and heat it so that the temperature of the surrounding air is as close as possible to the temperature of the concrete and between 50 °F and 75 °F. When artificial heating is used to maintain the concrete, adequate ventilation shall be provided to limit exposure to carbon dioxide. The Contractor shall maintain the wet burlap and polyethylene cover during the curing period. Heating may be stopped after the first 72 hours if the time of curing is lengthened to account for periods when the ambient air temperature is below 40 °F. For every day the ambient temperature is below 40 °F, an additional day of curing with a minimum ambient air temperature of 50 °F will be required. After completion of the required curing period, the Contractor shall remove the curing and protection so that the temperature of the concrete during the first 24 hours does not fall more than 25 °F.</p>		Internal concrete temperature was maintained throughout the curing period.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures	1/22/2020 11:49:01 AM - 07:00	Internal concrete temperature shall be determined by using thermocouples. Thermocouple wire, connectors and hand held thermometer shall be supplied by the Contractor. The Contractor shall install the thermocouples at locations designated by the Engineer.		Internal concrete temperature being determined through the use of maturity meters. All wiring and connectors were supplied by the contractor and installed at each abutment and pier diaphragm.	Conformance	1/21/2020 1:06:49 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		During the curing period, the Contractor shall monitor the enclosure at intervals acceptable to the Engineer. The Contractor shall monitor concrete temperature, and the structural integrity of the enclosure. Artificial heat sources shall not be placed in such a manner as to endanger formwork or expose any area of concrete to drying due to excessive temperatures.		During the curing period, the contractor monitored the concrete temperature and structural integrity of the enclosed area.	Conformance	4/4/2020 3:54:56 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures	9/6/2019 2:38:30 PM - 06:00	Acceptability of the deck surface will be determined as follows: The Contractor shall furnish a 10 foot straightedge or other approved device. When the concrete is sufficiently hard, the Contractor shall test the bridge deck surface with the 10 foot straight edge or other approved device. Areas showing high spots of more than 1/8 inch but not exceeding 1/2 inch in 10 feet shall be marked. The marked areas shall be immediately ground with an approved grinding tool so that the surface deviation will not be in excess of 1/8 inch in 10 feet. Grinding shall not reduce the concrete cover on reinforcing steel to less than 1 3/4 inches, (2 3/4 inches for bare decks without an overlay). Decks that require additional corrective action shall be corrected with a concrete overlay approved by the Engineer.		Pablo Mitjans and I straightedged the 270 bridge deck and found seven locations that exceeded 1/4". All of these locations were marked like the picture attached.	NCR was written to address the issue.	9/16/2019 12:54:17 PM -06:00	NC-2	NCR 1452 was written to address this issue	Closed

Work behind barrier was completed prior to barrier removal.	Conformance	5/19/2020 1:42:18 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover	9/30/2019 3:27:17 PM - 06:00	All work was completed in accordance with the appropriate Plans and Specifications		The pipe was placed in accordance with appropriate details on plan sheet BS010. The foreslope and backslope was checked for conformance. 3" thick low density foam polystyrene was placed at a height of 24". The first lift of cellular concrete will be poured to a depth of 24". The vertical abutment expansion joints required a gasket on behalf of NDC-151 plan sheet B050.125. These were installed at each expansion joint. There was an optional construction joint between drilled shafts A3-33 and A3-34 (Girder G47-2 & G48-2). There was no expansion joint material present at this joint. So the crew did not believe this gasket was required. Please see the attached pictures.	closed	10/21/2019 8:43:50 AM -06:00	Audit Comment	The detail called for gaskets at the expansion joints No gaskets at the construction joints. not required per the drawings.	Closed

Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	8/14/2020 4:34:48 PM - 06:00	Before construction, ensure that the ground surrounding the substructure is well-drained and that the overhead sign will have a minimum vertical clearance required above the finished roadway surface. The inspection guidance provided in Section 614.4.3 for traffic signal substructures is also applicable to overhead sign substructures. Consider the following additional guidelines: 1. Anchor Bolts. Ensure that anchor bolts are accurately located, have the proper orientation, and project above the top of the drilled caisson concrete the specified length. For bridge type overhead signs, verify that anchor bolts are placed such that the distance between drilled caissons, as referenced between the centerline of anchor bolt groups, complies with that specified on the shop drawings. 2. As-Constructed Survey. The Contractor is required to perform an As-Constructed Survey of the substructure as soon as practical after it has been completed. The requirements for the As-Constructed Survey are defined in the notes on the plan sheets for the overhead sign.		Anchor bolts had proper dimensions, and were installed per standards.	Conformance	8/3/2020 1:16:29 PM -06:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		Bolted connections are used to connect the superstructure to the substructure and to fasten structural elements within the superstructure itself. Bolts must be tightened as specified without gaps between connection plates and without overtightening.		Bolted connections were utilized and were tightened without gaps between the connection plates	Conformance	5/28/2020 2:49:34 PM -06:00	C		Closed
Central 70	C 0704-241	Sign Structures	Signing & Striping		1. Bolt Tightening. Verify that bolts in field splices are tightened in an incremental and progressive manner. This must be performed while the splice connections are not carrying load. To create this no-load condition, a crane will be necessary to lift fabricated components during tightening.		Bolts were tightened in a progressive manner while the crane was utilized to create the no load condition.	Conformance	5/28/2020 2:49:34 PM -06:00	C		Closed

education, training, skills, and experience to meet the requirements of the Project Agreement

with this requirement to provide further clarity on the issue) In reviewing the IQC checklists for the past few months errors have been observed regarding IQC stationing in the field. These issues have been observed in regard to both core layout and on the IQC checklists showing the limits of paving performed. QCATs have confirmed with the PC team and performed back checks from two points to ensure that the stationing QCATs derived is correct. Differences have been observed of 400 feet to 4,000 feet; attached are two examples of checklists with limits that are incorrect.

--Checklist
06/11/2020: Station 2282+00 to 2332+00 (QCAT Actual Stations 2262+10 to 2327+90
--Checklist
07/16/2020: Station 2272+94 to 2247+72 (QCAT Actual Stations 2272+50 to 2265+70

As a result all IQC checklists for Alpha Balde shall be compared to the station documented by the PC inspectors

							(Amanda Tabor and John Myers and any errors corrected). A meeting was held in June to address this issue and progress was seen in the issue getting better. Although in July the issue has gotten worse and on 7/10/20 the issue was brought up to IQC management. Due to the recent SMA shutdown and IQC stationing defining limits of removal the accuracy of these limits is extremely important. The department expects that IQC checklists accurately reflect the location work is being performed at all times.					
Central 70	C 0704-241	Building	Cover	10/8/2020 9:00:52 AM - 06:00	a. The Developer shall invite the Department to each of these meetings		A Pre-activity meeting was held for the CMU Masonry installation. A more comprehensive meeting is required to ensure other items of work are included such as Electrical, Doors, and Fire Alarm that may affect the CMU installation.	Adequate.	2/8/2021 9:55:48 AM -07:00	Audit Comment	It is not feasible to invite every related trade to a pre-activity meeting. It is incumbent of the GC to coordinate in the field with the different trades involved.	Closed

He does not plan on getting the WAQTC certification as his main function in the Lab has been breaking cylinders and training. Moving forward he will continue not performing and of the following tests: AASHTO T89, T90, T99, T180, T310, T85, or T255. His training and oversight will be limited to tests in which he has certifications for.	Field Resolved	7/10/2020 9:07:29 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241		IAT Materials Testing	9/21/2020 1:42:30 PM - 06:00	CDOT Field Materials Manual		Griffin Strecker a Field Tech for Kiewit does not and has not had a WAQTC,	Griffen was removed testing and inspecting	12/28/2020 5:25:36 PM -07:00	NC-2	After the Audit, Quality team set up	Closed

						<p>CAPA A & B or ACI Aggregate certification and is performing acceptance testing as well as inspection duties mainly on drainage operations but also grading on occasion. In addition, Per CP 10 in the CDOT Field Materials Manual only those who have the WAQTC Certification can perform acceptance testing on soils per CP 80 on a CDOT project without oversight during each acceptance test. Since early June he has been performing Nuclear Density Testing by himself after failing to pass the WAQTC certification. IAT made several attempts to perform qualification testing with Griffin from June 10th to June 24th. After speaking to his supervisor about my reservations regarding his lack of certification and experience a test was scheduled, performed, and observed by qualified individuals. Griffin appears daily on the IQC POD Schedule Sheet as tester and inspector for several drainage operations.</p>	<p>operations that he did not have the required certifications for. Griffin is no longer a part of the IQC team.</p>			<p>a meeting with CDOT and IAT to discuss the finding. During the meeting IQC decided to remove Griffin from Drainage and grading operation. Griffin was moved to Asphalt since he had CAPA A & I. Griffin is no longer with IQC.</p>

Central 70	C 0704-241	Wall Facing	Aesthetics	11/11/2020 7:54:41 AM - 07:00	AASHTO Roadside Design Guide		In addition to the aesthetic concerns referenced in requirement 1, the Department also has potential safety concerns that need to be assessed by KMP. The design guidance in the AASHTO Roadside Design Guide (RDG) section 5.5.2 states that the Zone of Intrusion (ZOI) should be considered as part of the barrier layout and design. Since the wall transitions did not end up flush per the original design, the lip now creates a potential snag hazard within the ZOI. The AASHTO RDG does not explicitly define what constitutes a "snag", but states that 4" protrusion is the maximum for other applications (i.e. metal guardrail and sign post break-aways.) Please address this potential safety concern within response to this audit comment.	As shown in the attached email, the max protrusion as determined by the EOR is 3". Any protrusion larger will require further EOR evaluation to ensure that there is not a ZOI snag hazard.	4/21/2021 7:17:13 AM -06:00	Audit Comment	As stated in number 1 the safety concerns have been discussed and the design team is working on the final solution. The solution will be documented in design documents. UDPATE 4/8/21 The final solution was to leave the panels as installed.	Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	BMPs	Environmental		The Contractor shall coordinate the construction of temporary BMPs with the construction of permanent BMPs to assure effective and continuous erosion and sediment control throughout the Construction Period.		During the March MAR, it was discovered that either by construction activities, or by nearby snow-melt from the DRIR property, a sediment discharge had occurred onto a neighboring private property. After discussion with CDOT Environmental Staff and Kiewit Environmental Staff, it was decided that all sediment was to be removed from property, and perimeter controls and BMPs were to be moved away from ROD limits and back onto permanent ROW limits, definitively showing that all future discharges were entirely the responsibility of 3rd parties, not Central 70 construction activities.	Field Resolved	4/5/2021 10:32:35 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	BMPs	Environmental	7/28/2020 8:58:20 AM - 06:00	New inlets and culverts shall be protected during their construction. Appropriate protection of each culvert and inlet shall be installed immediately. When riprap is called for at the outlet of a culvert, it shall be installed within 24 hours of completion of each pipe. The Contractor shall remove sediment, millings, debris, and other pollutants from within the newly constructed drainage system in accordance with the CDPS-SCP, prior to use, at the Contractor's expense. All removed sediment shall be disposed of outside the project limits in accordance with all applicable regulations.		Adequate BMPs were not installed to prior to commencing milling operations as a result millings were not prevented from entering the drainage systems in the East Segment. Various inlets on the east segment have been found with millings inside. Millings have also been found in flared ends, rip rap, and ditches. The first	NCR entered	9/9/2020 2:33:47 PM -06:00	NC-2	Expedited NCR entered and assigned to paving. Crews are working to schedule vac-truck and sweeping to remove excess millings.	Closed

						<p>photo attached is an example of one of the inlets showing a pipe that is 2/3 plugged with millings. The second photo is millings which are piled in the flow-line of the barrier wall and millings that have washed into the drainage system.</p> <p>The department was informed that sweeping is occurring. Although based on past observations sweeping does not capture the millings from the flow-line of the barrier wall. The department was informed that the O&M team is also sweeping millings. But based on conversations earlier this year regarding sweeping the O&M team does not sweep up construction debris that responsibility falls on KIC.</p>					
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	(6) Concrete waste, liquid and solid, shall not exceed 2/3 the storage capacity of the washout structure.	Construction crews were not prepared for concrete placement operations to include concrete washout bins. Bins exceeded the allowable storage capacity of 2/3 of washout structure, and overflowing was observed.	1815 was written	1/2/2020 9:35:40 AM -07:00	NC-2	NCR 1815 was written to track this issue	Closed

Central 70	C 0704-241	Wall Facing	Aesthetics	11/11/2020 7:54:41 AM - 07:00	b. The Developer's design shall create visually appealing transitions between various Project Elements. (For example, the transition between a noise wall adjacent to a bridge and the noise wall on the bridge shall blend together.)		KMPs original design of caisson walls in the lowered section included a Z-factor that predicted that the walls would shift during excavation from the top of the walls down to I-70 roadway elevation. Bridge walls did not have Z factor as they were braced by girders prior to excavation. The movement in the Caisson walls did not occur which resulted in a lip at the transition from Caisson walls to Bridge walls instead of the anticipated flush transition between walls. See attached for examples at Fillmore, Clayton, Columbine. The as-built condition is not as visually appealing as a flush transition would be. In February 2020, KMP discussed this issue with the Department. At that time, the understanding by the Department was that the lip would not exceed 3".	After discussion, Department feels that leaving as is will be the best aesthetic decision.	4/14/2021 8:21:49 AM -06:00	Audit Comment	KIC, KMP and the department held 2 separate meetings since this assessment to discuss aesthetic and safety concerns along with options. The design team is working on the final solution. UDPATE 4/8/21 The final solution was to leave the panels as installed.	Closed

Central 70	C 0704-241	ITS	Electrical		viii. CDOT's duct bank consists of five 2-inch conduits along I-70 Mainline between Airport Blvd. and the pull box west of I-25; one of the 2-inch conduits is for CDOT's backbone and the other four 2-inch conduits are spare for CDOT's future use and not to be used on this Project.		Five 2" Orange HDPE installed as required	Conformance	3/20/2020 8:43:01 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		viii. CDOT's duct bank consists of five 2-inch conduits along I-70 Mainline between Airport Blvd. and the pull box west of I-25; one of the 2-inch conduits is for CDOT's backbone and the other four 2-inch conduits are spare for CDOT's future use and not to be used on this Project.		The appropriate types and amounts of conduits were installed for the CDOT ITS duct bank.	Conformance	4/6/2020 1:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		viii. CDOT's duct bank consists of five 2-inch conduits along I-70 Mainline between Airport Blvd. and the pull box west of I-25; one of the 2-inch conduits is for CDOT's backbone and the other four 2-inch conduits are spare for CDOT's future use and not to be used on this Project.		5 2" orange CDOT conduits installed per plan.	Conformance	3/23/2020 3:27:03 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		viii. Any conduits needed for ITS or ETC fiber laterals or power shall be installed in addition to CDOT's five 2-inch conduits;		A Terracotta 2" conduit is within the duct bank as a lateral conduit.	Conformance	4/6/2020 1:37:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ix. All references to conduits in this Section 3 shall be either polyvinyl chloride (PVC) schedule 80 or high-density polyethylene (HDPE) schedule 80 and ETL/UL listed.		Conduit is HDPE schedule 80	Conformance	1/2/2020 8:15:08 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ix. The conduits shall be factory lubricated, low friction, high-density conduit constructed of virgin schedule 80		Conduit is factory lubricated with Silacore technology	Conformance	3/20/2020 8:43:02 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		ix. The conduits shall be factory lubricated, low friction, high-density conduit constructed of virgin schedule 80		Conduits are factory lubricated with Silocore technology	Conformance	3/27/2020 8:18:05 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ix. The conduits shall be factory lubricated, low friction, high-density conduit constructed of virgin schedule 80		Conduit is factory lubricated with Sila-Core technology	Conformance	7/24/2020 12:23:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ix. The conduits shall be factory lubricated, low friction, high-density conduit constructed of virgin schedule 80		HDPE conduit is factory lubricated with Silocore technology	Conformance	3/27/2020 8:42:08 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		xi. All conduits shall comply with the CDOT Standard Specifications;		All conduits are in conformance with CDOT standards	Conformance	3/27/2020 8:42:08 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		xi. All conduits shall comply with the CDOT Standard Specifications;		All conduit comply with CDOT standard specifications	Conformance	7/24/2020 12:23:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		xi. All conduits shall comply with the CDOT Standard Specifications;		In Conformance with CDOT Specification for conduit	Conformance	3/20/2020 8:43:02 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A. Separate 2-inch lateral conduits for fiber laterals shall be required to the ETC and ITS equipment. These shall be in addition to the five 2-inch conduits for CDOT;		One 2" Terracotta (Brown) lateral installed as required	Conformance	3/27/2020 8:42:08 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		A. Separate 2-inch lateral conduits for fiber laterals shall be required to the ETC and ITS equipment. These shall be in addition to the five 2-inch conduits for CDOT;		A separate 2" CDOT terracotta lateral installed as required	Conformance	5/29/2020 8:13:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		F. CDOT and Zayo require manholes for backbone conduits. Pull boxes will not be allowed for CDOT or Zayo backbone conduits, unless otherwise Approved by the Department (*CO-011). See the Pull Boxes and Manholes section in this Section 3 for spacing requirements;		Zayo conduit and CDOT go into separate CDOT and Zayo manholes respectively.	Conformance	4/13/2020 3:04:41 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		O. If the conduit duct bank is trenched (*CO-049) under proposed or existing live traffic, a concrete (Class BZ) encased trench to the bottom of the pavement structural section is required; except under local roads, where the conduits shall be encased with concrete (Class BZ), and structure backfill (flow-fill) or Approved compacted backfill shall be installed from the conduit encasement to the bottom of the pavement structural section (*CO-049);		Conduit that is to cross Colorado to the East is cast in BZ	Conformance	3/20/2020 8:43:33 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		(l) The Developer shall furnish and install five 2-inch conduits for CDOT, comprised of 4 spare conduits and one conduit for the CDOT backbone, along the I-70 Mainline, which shall terminate in the new node building at I-70/ Airport Blvd.;		Five 2" Orange HDPE bored in	Conformance	4/2/2020 10:37:14 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		(cc) Provide a manhole for CDOT's splice location at I-70/Airport Blvd. next to Zayo's facility;		Manhole installed	Conformance	4/2/2020 10:37:14 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		(l) Eight (*CO-026, *CO-049) conduits shall be stacked in a trench that shall be no more than 22-inches in width, except as Approved by the Department.		Trench is 22 inches wide.	Conformance	3/20/2020 8:43:33 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		(l) Eight (*CO-026, *CO-049) conduits shall be stacked in a trench that shall be no more than 22-inches in width, except as Approved by the Department.		Trench is no more than 22" wide	Conformance	3/27/2020 8:17:01 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		(l) The eight (*CO-026, *CO-049) conduits are as follows: (aa) Two (*CO-026, *CO-049) 6-inch conduits, both conduits equipped with seven 1 1/4-inch innerducts for Zayo (*CO-049). These conduits are inclusive of Zayo's 432-strand (*CO-049) fiber optic cable which includes 36 strands of fiber allocated to CDOT and are a shared resource between Zayo and CDOT. An agreement between Zayo and CDOT allows for this 36 strands of fiber to extend through the entire length of the conduit;		Two 6" grey Zayo installed as required. Previous ECN changed the requirement from four to two 6" conduits	Conformance	3/27/2020 8:17:01 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	ITS	Electrical		i. Wet Utilities are not allowed above or below the conduit duct bank except for crossings		Crossed CCD Parks water line but no other wet utility interference present	Conformance	4/2/2020 10:37:14 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Wet Utilities are not allowed above or below the conduit duct bank except for crossings		Duct bank was installed approx 4' north of the new water line.	Conformance	3/17/2020 3:14:58 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		Conduit duct bank is no more than 22" wide and is buried at 4'6"	Conformance	7/24/2020 8:57:34 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		Conduit DB is no more than 22" wide	Conformance	7/24/2020 8:58:53 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		Trench does not exceed 22inches	Conformance	4/13/2020 3:04:41 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit		ITS DB is less than 22" wide	Conformance	7/24/2020 12:23:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit DB is installed at 5'3" depth	Conformance	7/24/2020 12:23:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		ITS DB is <6' deep	Conformance	3/20/2020 8:43:02 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Trench depth does not exceed 6'	Conformance	3/20/2020 8:43:33 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		ITS DB is < 6'	Conformance	3/18/2020 2:17:24 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		ITS DB installed at a depth of 5.5 feet as provided in model.	Conformance	4/13/2020 3:04:41 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit DB depth measure 70" deep	Conformance	7/24/2020 8:57:34 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit DB is less than 6' deep	Conformance	7/24/2020 8:58:53 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit depth was measured between 5'6" and 6'.	Conformance	4/22/2020 10:31:27 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit installed per elevation plansheet	Conformance	4/30/2020 4:44:07 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Duct bank was measured between 4' and 5' deep at several locations.	Conformance	3/17/2020 3:14:58 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Duct bank was measured between 4' and 5'.	Conformance	3/23/2020 3:27:03 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit DB measures 67" in depth	Conformance	5/29/2020 8:13:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Conduit duct bank shall be no deeper than 6 feet		Conduit was bored under I-70 Westbound lanes from inside shoulder. Conduit was no deeper than 5'.	Conformance	5/22/2020 10:00:16 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. Cover and placement requirements for utilities, conduit, and duct bank shall be followed or as Approved by the Department;		Cover and placement requirements followed	Conformance	4/30/2020 4:46:43 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. Any interference between other conduits, drainage pipes and outlets shall be mitigated. The fiber conduits perpendicular to any drainage outlets shall be cast in concrete (Class BZ) to prevent it from floating upward to the surface. A design by the Developer shall be submitted for Acceptance if at least a 48-inch depth from the top of the conduit trench to the surface cast in concrete (Class BZ) cannot be accommodated. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore;		All interference's were handled correctly and also cast in BZ as well as flow-fill	Conformance	4/30/2020 4:44:07 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		ii. Any interference between other conduits, drainage pipes and outlets shall be mitigated. The fiber conduits perpendicular to any drainage outlets shall be cast in concrete (Class BZ) to prevent it from floating upward to the surface. A design by the Developer shall be submitted for Acceptance if at least a 48-inch depth from the top of the conduit trench to the surface cast in concrete (Class BZ) cannot be accommodated. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore;		Drainage line that runs perpendicular to duct bank was avoided by going underneath line and then was concreted in using BZ mix	Conformance	7/24/2020 8:57:34 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore.		Conduit within bore are bundled through the entirety of the bore shot	Conformance	7/24/2020 8:58:53 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore.		All bored conduits were bundled together when necessary.	Conformance	4/6/2020 1:34:26 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore.		Conduit was bundled within boreshot	Conformance	4/2/2020 10:37:14 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore.		Conduit within bore shot are bundled together for the entirety of bore	Conformance	3/20/2020 8:43:02 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		ii. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore.		Three 1" conduits were pulled from the north side of I-70 and Havana to the inside shoulder for the loops lead in wires for the tolling point.	Conformance	5/22/2020 10:00:16 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit Plugs were installed immediately after conduits were pulled back and set. Conduit was then paved over for future loop cutting.	Conformance	5/22/2020 10:00:16 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately upon install	Conformance	4/30/2020 4:46:43 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed upon completion of pull box installation and cabinet base installation.	Conformance	5/14/2020 1:01:28 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately upon completion	Conformance	3/20/2020 8:43:02 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately after being cut and run into manholes.	Conformance	3/20/2020 8:43:33 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduits in area run directly in a Zayo and CDOT ITS manhole respectively and are plugged in each manhole.	Conformance	3/18/2020 2:17:24 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately upon completion	Conformance	7/24/2020 12:23:32 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed as required	Conformance	3/27/2020 8:18:05 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately upon completion	Conformance	4/13/2020 3:04:41 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed	Conformance	1/2/2020 8:15:08 AM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		All conduits installed were plugged as soon as they were installed	Conformance	4/6/2020 1:34:26 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed in all conduits in Ramp meter comm box and electrical box.	Conformance	3/23/2020 3:27:24 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed after installation	Conformance	3/23/2020 3:27:03 PM -06:00	C		Closed
Central 70	C 0704-241	Ramp Meter	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were not installed all conduits in 3 pull boxes. Some pull boxes had the plugs in the box, but not in the conduit. Issue was brought up to Chris Wilson and he sent a crew to install conduit plugs in all empty conduits.	Field Resolved	3/17/2020 3:14:22 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately upon completion	Conformance	5/29/2020 8:13:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs installed immediately upon completion	Conformance	7/24/2020 8:57:34 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Plugs installed immediately upon completion	Conformance	7/24/2020 8:58:53 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed immediately upon completion	Conformance	4/30/2020 4:44:07 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation.		Conduit plugs were installed upon conduit installation.	Conformance	4/22/2020 10:31:27 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iv. The conduit shall not be considered complete until the conduit plugs, pull tape, tracer wire have been installed, and all requirements in Appendix A to this Section 3, Revision of Section 613 – CDOT Electrical Conduit have been met;		Conduit plugs installed immediately upon completion	Conformance	4/2/2020 10:37:14 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical	10/22/2020 8:43:07 AM - 06:00	i. The Developer shall be responsible for locating all underground facilities to avoid or minimize conflicts with these facilities. If any facilities are damaged during construction, the Developer shall be responsible for all repairs;		Upon further investigation, project provided phone number to call CDOT for private locates(for irrigation)is an invalid phone number. Colorado 811 and project provided phone number both called but no field response to locate utilities in mousetrap area. Please provide explanation of reasoning that work continued regardless of the fact that utilities(irrigation in this instance) were clearly in area as well as why the phone number was not reported as invalid.		12/11/2020 1:38:55 PM -07:00	Audit Comment	Discussions in task force with Matt Blackburn have addressed this concern.	Closed
Central 70	C 0704-241	ITS	Electrical		i. The Developer shall be fully responsible for the furnishing and installation of all DMS signs.		SMVMS supplied and installed by Sturgeon Electric crew.	Conformance	4/29/2020 8:10:43 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. The DMS shall be installed in accordance with manufacturer's recommendations		SMVMS installed in accordance with plan sheet SSTR-228.	Conformance	4/29/2020 8:10:43 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		iii. The CCTV cameras shall be mounted on minimum of a 50 feet steel poles as described below and shall have a lowering device that allows CCTV cameras to be lowered to the ground, unless otherwise Approved by the Department;		CCTV is mounted on 60 ft. lowering device that is a two piece pole per CDOT standards and specifications.	Conformance	1/25/2022 3:31:32 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	ITS	Electrical		i. The Developer shall design the DTD ATR counting station. Each new DTD ATR must collect data for all lanes of travel, including the General Purpose Lanes, auxiliary Lanes, and Tolleed Express Lanes in both directions.		DTD ATR loop install covers all 13 lanes (Eastbound and Westbound) and totaled 26 saw cuts for 2 sensors for each lane.	Conformance	6/1/2020 11:46:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical	5/12/2020 10:57:11 AM - 06:00	All Construction Work will be inspected by CDOT's Traffic Data Collection Unit (TDC) during installation for Approval		CDOT's Traffic Data collection manager was not notified of to conduit installation work that was completed on the night of 5/11/2020 until the evening the work was to take place so was not able to inspect the work.	Response acceptable	6/5/2020 10:01:17 AM -06:00	Audit Comment	The notification issue was discussed in the Electrical task force on Monday's. It is my understanding that this has been addressed.	Closed
Central 70	C 0704-241	ITS	Electrical	6/8/2020 12:24:01 PM - 06:00	B. A friction sensor shall only include the remote processing unit, air temperature/relative humidity sensor, ultrasonic wind sensor, non-intrusive pavement condition sensor, non-intrusive pavement temperature sensor, cabinet, mounting of sensor, and communications to CTMC. See Section 3 Appendix A, Revision of Section 614 -Weather Monitoring System, for the environmental friction sensor items.		All equipment supplied and installed per the contract.	Conformance	6/8/2020 10:19:52 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		i. All cabinets shall be installed per the manufacturer requirements or the requirements found in the Project Special Provisions, Appendix A to this Section 3; and		Type 2 pole mount cabinet installed per plan and in accordance with all CDOT standards and specifications.	Conformance	1/25/2022 3:31:32 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		utilize fiberglass reinforced, polymer concrete pull boxes and pre-cast concrete manholes with the interior dimensions of 4 feet (width) by 4 feet (length) by 4 feet (depth), with a cast iron frame ring and cover		Manhole is 5'x5'x5' which is conformance with project specifications.	Conformance	1/2/2020 8:15:08 AM -07:00	C		Closed

Central 70	C 0704-241	Deep Foundatio ns	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		Survey was provided	Conformanc e	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundatio ns	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		I checked the stakes, which have the correct information on them.	Conformanc e	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundatio ns	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		Survey correctly staked the pile locations.	Conformanc e	1/16/2020 1:30:22 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		Pile locations were properly staked with the correct information.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile locations are properly staked (i.e. Correct flange orientation, skew, batter, driving depth, etc.)?		I checked the stakes and the two piles in the ground and the orientation and stake information appeared to be correct.	Conformance	2/5/2021 10:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been completed prior to driving pile?		Excavation was completed prior to driving the piling.	Conformance	2/5/2021 10:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been completed prior to driving pile?		Excavations were completed prior to install.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been completed prior to driving pile?		Excavation was completed prior to driving piling.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been completed prior to driving pile?		Excavation was completed before the start of driving piles.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been completed prior to driving pile?		Excavation was completed before driving piling.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been completed prior to driving pile?		Excavation was completed	Conformance	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile tips have been attached according to the plans when required.		Tips attached	Conformance	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile tips have been attached according to the plans when required.		Pile tips are required on the plans and were attached according to the plans.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile tips have been attached according to the plans when required.		Pile tips were attached before beginning pile driving.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Pile tips have been attached according to the plans when required.		Pile tips were attached according to the plans.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile tips have been attached according to the plans when required.		Pile tips were attached according to the plans.	Conformance	2/5/2021 10:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Has IQC approved the piling & if used bitumen and primer materials through the MMR process & it matches the MMR?		IQC approved materials.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile Driving Analyzer test has been run on two piles and these two piles were at different elements of the bridge (i.e. Abutment, pier, etc)		I observed the Ground technician perform this PDA and observed a previous one on the other abutment on a previous phase.	Conformance	2/5/2021 10:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The piles match those shown on the plans (size, type, and tips installed if required).		The piling being installed matches those shown on the plans in size, type and tips installed.	Conformance	2/5/2021 10:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The piles match those shown on the plans (size, type, and tips installed if required).		The piles match those on the plans in size, type and tips installed.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The piles match those shown on the plans (size, type, and tips installed if required).		The piling used matched the size, type and tips installed according to the plans.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The piles match those shown on the plans (size, type, and tips installed if required).		The piles match those on the plans in size, type, and tips.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The piles match those shown on the plans (size, type, and tips installed if required).		Per plan.	Conformance	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile driving equipment has been submitted and approved by IQC.		Pile driving equipment has been submitted and approved by IQC.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Pile driving equipment has been submitted and approved by IQC.		Pile driving equipment was submitted and approved by IQC.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile driving equipment has been submitted and approved by IQC.		Pile driving equipment has been submitted and approved by IQC.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile driving equipment has been submitted and approved by IQC.		The pile driving equipment has been submitted and approved by IQC.	Conformance	2/5/2021 10:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Pile driving equipment has been submitted and approved by IQC.		Equipment was approved.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The equipment in the field matches the approved equipment and is in good working order.		Equipment was verified and was acceptable.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The equipment in the field matches the approved equipment and is in good working order.		The equipment in the field matches the approved equipment and is in good working order.	Conformance	2/5/2021 10:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The equipment in the field matches the approved equipment and is in good working order.		The field equipment matches the approved equipment and is in good working order.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The equipment in the field matches the approved equipment and is in good working order.		The equipment used in the field matches the approved equipment and is in good working order.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The equipment in the field matches the approved equipment and is in good working order.		The equipment in the field matches the approved equipment and is in good working order.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Driving leads are adequate to prevent horizontal movement. (Swinging leads have a pile gate fitted at the bottom and leads are long enough to be securely fixed at the ground at all times.		Driving leads are adequate to prevent horizontal movement and have a pile gate fitted at the bottom. The leads are long enough to be securely fixed at the ground at all times.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Driving leads are adequate to prevent horizontal movement. (Swinging leads have a pile gate fitted at the bottom and leads are long enough to be securely fixed at the ground at all times.		Driving leads are adequate to prevent horizontal movement and have a gate fitted at the bottom. The leads are long enough to be securely fixed at the ground at all times.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Driving leads are adequate to prevent horizontal movement. (Swinging leads have a pile gate fitted at the bottom and leads are long enough to be securely fixed at the ground at all times.		Driving leads are adequate to prevent horizontal movement and have a pile gate fitted at the bottom. The leads are long enough to be securely fixed at the ground at all times.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Driving leads are adequate to prevent horizontal movement. (Swinging leads have a pile gate fitted at the bottom and leads are long enough to be securely fixed at the ground at all times.		Driving leads are adequate to prevent horizontal movement and have a pile gate fitted at the bottom of the leads. The leads are long enough to be securely fixed at the ground at all times.	Conformance	2/5/2021 10:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The hammer cushion is suitable to prevent damage to the hammer or pile.		The hammer cushion is suitable to prevent damage to the piling and the hammer.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The hammer cushion is suitable to prevent damage to the hammer or pile.		The hammer cushion is suitable to prevent damage to the hammer and the piling.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		The hammer cushion is suitable to prevent damage to the hammer or pile.		The hammer cushion is suitable to prevent damage to the hammer and pile.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Hammer cushion is not made of wood, wire rope, or asbestos cushion material.		The hammer cushion is made of a suitable material.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Hammer cushion is not made of wood, wire rope, or asbestos cushion material.		The hammer cushion is not made of wood, wire rope, or asbestos cushion material.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Hammer cushion is not made of wood, wire rope, or asbestos cushion material.		The hammer cushion is not made of wood, wire rope or asbestos material.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Piles were driven to minimum specified tip elevation.		Piles were driven to the minimum tip elevation.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Piles were driven to refusal in natural ground at or below the estimated minimum tip elevations.		Piles were driven to refusal in natural ground.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Piles were driven to refusal in natural ground at or below the estimated minimum tip elevations.		The piles were driven to refusal in natural ground.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Piles were driven to refusal in natural ground at or below the estimated minimum tip elevations.		Driven to refusal at Approximately 102'	Conformance	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Piles were driven to refusal in natural ground at or below the estimated minimum tip elevations.		Piles were driven to refusal in natural ground.	Conformance	2/5/2021 10:52:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Piles were driven to refusal in natural ground at or below the estimated minimum tip elevations.		Piles were driven to refusal.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		During driving the pile was monitored for sudden changes between blows for abnormal activity and the engineer of record was contacted if any occurred. (I.e. Sudden loss of pile confirming subsurface voids)		Pile driving was monitored by IQC.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		During driving the pile was monitored for sudden changes between blows for abnormal activity and the engineer of record was contacted if any occurred. (I.e. Sudden loss of pile confirming subsurface voids)		No sudden changes	Conformance	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Piles have been installed with a 1/4" or less per foot from vertical or from batter on the plans & within 6" of Plan position for foundation piles post driving.		Piles were installed with a 1/4" or less per foot from vertical and within 6" of plan position.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Piles have been installed with a 1/4" or less per foot from vertical or from batter on the plans & within 6" of Plan position for foundation piles post driving.		Piles were installed with a 1/4" or less per foot from vertical and within 6" of plan position.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All commercial splices have been approved by the Engineer.		All commercial splices are from the approved products list and are approved by the Engineer.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All commercial splices have been approved by the Engineer.		Commercial splices are from the APL and approved by the Engineer.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All commercial splices have been approved by the Engineer.		The commercial splices used are from the APL and are approved by the Engineer.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All commercial splices have been approved by the Engineer.		Splices were approved by engineer.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welders are qualified and have been approved prior to starting welding.		Welders were certified.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welders are qualified and have been approved prior to starting welding.		All welders are qualified and have been approved prior to starting welding.	Conformance	2/5/2021 10:52:50 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Deep Foundations	Structures		All welders are qualified and have been approved prior to starting welding.		All welders are qualified and were approved prior to starting welding.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welders are qualified and have been approved prior to starting welding.		All welders are qualified and have been approved prior to starting welding.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welders are qualified and have been approved prior to starting welding.		All welders are qualified and have been approved prior to the start of welding.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welders are qualified and have been approved prior to starting welding.		Lawrence welders were certified. IQC CWI on site	Conformance	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The PC CWI has inspected all stages of the welded splice.		IQC CWI also was on site	Conformance	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The PC CWI has inspected all stages of the welded splice.		The IQC CWI has inspected all stages of the welded splice.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The PC CWI has inspected all stages of the welded splice.		The IQC CWI inspected all stages of the welded splice.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The PC CWI has inspected all stages of the welded splice.		The IQC CWI inspected all stages of the welded splice.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The PC CWI has inspected all stages of the welded splice.		The IQC CWI has inspected all stages of the welded splice.	Conformance	2/5/2021 10:52:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The PC CWI has inspected all stages of the welded splice.		PC inspection during pile placement was acceptable.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		PC inspector is a qualified CWI.		CWI performed inspections.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		PC inspector is a qualified CWI.		The IQC inspector is a qualified CWI.	Conformance	2/5/2021 10:52:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		PC inspector is a qualified CWI.		The IQC inspector is a qualified CWI.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		PC inspector is a qualified CWI.		The IQC inspector (Gene Johnson) is a qualified CWI.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		PC inspector is a qualified CWI.		The IQC inspector is a qualified CWI.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Full length piles have been used unless otherwise approved.		Full length piles were used.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Full length piles have been used unless otherwise approved.		Full length piles were used.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Full length piles have been used unless otherwise approved.		50' pile were used	Conformance	9/16/2020 11:08:08 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds were made using a prequalified joint design and a WPS has been submitted by the contractor.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welders were made using a pre-qualified joint design and a WPS has been submitted by the contractor.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds were made using a prequalified joint design and a WPS was submitted by the contractor prior to welding.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		All welds are made using a prequalified joint design and a WPS has been submitted by the contractor.	Conformance	2/5/2021 10:52:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All welds are made by using a prequalified joint design and a Welding Procedure Specification has been submitted by the contractor.		Welding procedures appeared acceptable.	Conformance	3/5/2021 7:07:36 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		All cuts have been made normal to the longitudinal axis of the pile.		All cuts were made normal to the longitudinal axis of the piles.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		Welded splices were performed with low hydrogen electrodes.	Conformance	1/16/2020 1:30:22 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		Welded splices were performed with low hydrogen electrodes.	Conformance	2/27/2020 6:44:32 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		Welded splices were performed with low hydrogen electrodes.	Conformance	4/30/2020 2:13:21 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Welded splices are performed with low hydrogen electrodes.		The contractor was using low hydrogen electrodes for the welded splices.	Conformance	2/5/2021 10:52:50 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM -07:00	IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC has reviewed and approved the on-site supervisors and drill rig operators.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		IQCM has reviewed and approved the on-site supervisors & drill rig operators.		IQC has reviewed and approved the on-site supervisors and drill rig operators.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		IQCM has reviewed and approved the Drilled Shaft Installation Plan.		IQC and UPRR has reviewed and approved the drilled shaft installation plan.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed

Excavation was completed prior to shift ending.	Conformance	8/16/2021 7:33:07 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		Shaft was drilled (32B) and protected overnight; the rebar cage was set and the caisson poured the next day.	Conformance	4/16/2021 7:46:19 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		Operation was completed by end of shift.	Conformance	7/28/2021 4:28:22 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		Concrete was placed prior to shift ending.	Conformance	7/23/2021 3:06:32 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		The excavation was conducted over two days so the contractor protected the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.	Conformance	2/5/2021 3:19:00 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM - 06:00	If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		The shaft was filled with flowfill once the drilling operation was stopped. The drilled shaft was left to complete on the date in Comment #1.	Adequate	4/15/2020 9:22:16 AM -06:00	Audit Comment	Flow fill was used to stabilize the excavation.	Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		When stoppages occurred during drilled shaft operations, the shaft was protected through the use of casing and polymer slurry for up to 72 hours. The 72 hour timeframe was not exceeded and concrete was placed.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	If the drilled shaft excavation is not complete at the end of the shift or series of continuous shifts, the drilled shaft excavation operation may be stopped provided the Contractor protects the shaft as indicated in subsection 503.13.(b) of the Specification before the end of the work day.		When stoppages occurred during drilled shaft operations, the shaft was protected through the use of casing and polymer slurry for up to 72 hours.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Polymer slurry test results conformed to the required tolerances for viscosity, density, pH, and sand content percentage.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		The applicable specifications for polymer slurry are being followed.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM - 06:00	If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Slurry was used to maintain the drilled shaft during the drilling of the shaft and concrete placement.	Conformance	3/31/2020 5:06:03 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		If mineral (Std. Spec. Prov. Sec. 503.08), polymer (Std. Spec. Prov. Sec. 503.09), or water (Std. Spec. Prov. Sec. 503.11) slurry is used the applicable specifications are being followed.		Applicable specifications were followed for polymer slurry.	Conformance	3/27/2020 8:23:14 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		All slurry was collected as concrete was placed.	Conformance	4/8/2020 8:59:36 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Slurry and water displaced during final cleanout is being adequately protected from entering any railroad area.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed

Central 70	C 0704-241	Deep Foundations	Structures		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		as the concrete was poured the slurry was pumped out into a holding tank.	Conformance	9/30/2020 10:16:54 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		All slurry and water displaced during final cleaning and concrete placement was collected.	Conformance	9/21/2021 8:37:18 AM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		All slurry and water displaced during the final cleaning and concrete placement was pumped off and into a tank truck.	Conformance	12/29/2020 5:15:57 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		All slurry and water displaced during final cleaning and concrete placement was vacuumed into a tanker truck for disposal.	Conformance	2/5/2021 3:19:00 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		All slurry was collected.	Conformance	7/28/2021 4:28:22 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		All slurry and water was removed and pumped to a storage tank.	Conformance	4/16/2021 7:46:19 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All slurry and water displaced during final cleaning and concrete placement has been collected. Preventing it from entering travel lanes, railroad, water way, and environmentally sensitive or restricted area.		Slurry and water was collected and treated.	Conformance	8/16/2021 7:33:07 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		Slurry was vacuumed out of shaft as required.	Conformance	7/28/2021 4:28:22 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		Minimum level of polymer slurry was maintained within the excavation.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		Minimum level of polymer slurry was maintained within the excavation.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM - 06:00	If slurry is present in the shaft excavation, the Contractor shall conform to the requirements of subsection 503.13 (b).5 of this Specification regarding the maintenance of the minimum level of drilling slurry throughout the stoppage of the shaft excavation operation, and shall recondition the slurry to the required slurry properties in accordance with Sections 503.09, 503.10 and 503.11 of this Specification prior to recommencing shaft excavation operations.		The minimum level of slurry was maintained through the entire drilling and placement operation.	Conformance	3/31/2020 5:06:03 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The dry shaft construction method is being followed for shafts which meet the following conditions: less than 12 inches of water accumulates above the base of excavation over a period of one hour when no pumping is performed, the sides and bottom of the hole remain stable without detrimental caving, sloughing or swelling between the completion of excavation and concrete placement, all loose material and water can be satisfactorily removed prior to inspection and concrete placement (no more than 2 inches of water will be permitted in the bottom of the shaft excavation at the time of concrete placement), and the Engineer can visually inspect the sides and bottom of the shaft prior to placing the concrete.		dry shaft construction method was being used and small amount of water in the bottom of the shaft was observed. it was observed that no sloughing or swelling occurred in the shaft before concrete placement.	Conformance	11/2/2020 12:27:57 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been protected to prevent material or persons from falling into the hole.		red metal cages where placed around the hole after 5' of depth had been reach to prevent people or materials from falling into the hole.	Conformance	11/2/2020 12:27:57 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Excavation has been protected to prevent material or persons from falling into the hole.		The excavation was protected by a rail and was covered overnight.	Conformance	2/5/2021 3:19:00 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Excavation has been protected to prevent material or persons from falling into the hole.		The excavations were protected when the contractor was not working in them.	Conformance	12/29/2020 5:15:57 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Excavation has been protected to prevent material or persons from falling into the hole.		The excavation was protected with a steel cover	Conformance	4/16/2021 7:46:19 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation was protected.	Conformance	8/16/2021 7:33:07 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM - 06:00	Excavation has been protected to prevent material or persons from falling into the hole.		The drilled shaft edges were left open. The crew was using inflatable life jackets. Please reference the attached pictures in Comment #1	The hole was roped off after the drilled shaft was abandoned until it could be completed at a later date. Still no tie off was present for the crew members completing the work.	4/15/2020 9:25:27 AM -06:00	Audit Comment	It is my understanding that the hole was roped off to protect the leading edge when work was not performed within the 6 foot leading edge of the shaft.	Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been protected to prevent material or persons from falling into the hole.		The work caisson was installed with enough out of the ground to prevent anyone from falling in the hole.	Conformance	3/27/2020 8:23:14 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Building	Cover	5/14/2020 4:32:12 PM - 06:00	Excavation has been protected to prevent material or persons from falling into the hole.		The casing was left 3.5ft out of the ground to ensure one would fall in.	Conformance	5/14/2020 1:31:49 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Excavation has been protected to prevent material or persons from falling into the hole.		Excavation has been protected to prevent material or any persons from falling into the shoring/ drilled shaft casing.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	Excavation has been protected to prevent material or persons from falling into the hole.		Excavation has been protected to prevent material or any persons from falling into the shoring/ drilled shaft casing.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Excavation has been protected to prevent material or persons from falling into the hole.		The excavation had a 360 degree railing around it to prevent materials or persons from falling into the hole.	Conformance	9/21/2021 8:37:18 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Excavation has been protected to prevent material or persons from falling into the hole.		typically they have been leaving the casing at 4 feet above grade, but then instead they used a fall arrest system that was attached to the crew members body harness.	Conformance	6/9/2020 9:00:23 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Excavation has been protected to prevent material or persons from falling into the hole.		steel plates were placed on top of the drill shafts to prevent any material or persons from falling into the shaft.	Conformance	9/30/2020 10:16:54 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Verified IQC paperwork and inspections. Full temporary casing was used. Level was used to verify plumbness of casing.	Conformance	11/3/2020 2:30:46 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		a plum bob was used frequently during the drilling of the shaft. the diameter of the shaft was measured at 42". IQC was there during the time of the drilling and they verified that bedrock had been reached and then continued down 11' to hit planned depth.	Conformance	9/30/2020 10:16:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		this was performed by IQC.	Conformance	9/16/2020 11:05:52 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Diameter and depth checked upon completion of shaft excavation	Conformance	9/8/2020 12:44:52 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		yes, please reference the form 1333 and the attached documents. in comment #2	Conformance	6/9/2020 9:00:23 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb and drilled with the correct diameter. The excavated material was compared with the geological borings taken to ensure adequate bearing material was reached with proper embedment.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Drilled shaft is plumb and drilled with the correct diameter. The excavated material was compared with the geological borings taken to ensure adequate bearing material was reached with proper embedment.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	5/14/2020 4:32:12 PM -06:00	Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		The shaft was drilled plum and was the appropriate diameter for the caisson.	Conformance	5/14/2020 1:31:49 PM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		Diameter appears correct	Conformance	6/10/2020 5:13:52 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		The drilled shaft is plumb and the diameter is correct according to the plans. The inspector observing the excavation is certified to call rock.	Conformance	3/27/2020 8:23:14 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM -06:00	Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		The drilled shaft was measured to be the correct depth and diameter.	Conformance	3/31/2020 5:06:03 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		The shafts are plumb, have the correct diameter and the excavated material was compared with the borings. A representative from Shannon & Wilson called rock.	Conformance	12/29/2020 5:15:57 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft is plumb, diameter is correct, & the excavated material has been compared with geological information to ensure that adequate bearing material has been reached.		while present IQC checked the diameter of the shaft and if it was plum. once the drilling was close to theoretical bedrock IQC inspected the material to see where bedrock actual depth was.	Conformance	11/2/2020 12:27:57 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		The shaft was drilled to the proper elevation and the minimum embedment obtained.	Conformance	12/29/2020 5:15:57 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Minimum embedment was verified by IQC.	Conformance	7/28/2021 4:28:22 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Minimum embedment was verified by IQC.	Conformance	8/16/2021 7:33:07 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM -06:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		IQC was onsite to verify the depth of the shaft once it was completely drilled on Thursday, March 26th.	Conformance	3/31/2020 5:06:03 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		The shaft was drilled to the proper elevation and minimum embedment was obtained and documented.	Conformance	3/27/2020 8:23:14 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Building	Cover	5/14/2020 4:32:12 PM - 06:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		The depths for the drilled shafts that were observed were in accordance with Cover Architecture Plan Sheet S101.	Conformance	5/14/2020 1:31:49 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft 36 at Pier 3 was drilled to proper elevation, and minimum embedment was obtained and documented to ensure proper embedment depth into bearing material.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Shaft 26 at Pier 2 was drilled to proper elevation, and minimum embedment was obtained and documented to ensure proper embedment depth into bearing material.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		It was observed that a weighted tape was used periodically while drilling the hole until the final depth was reached.	Conformance	6/9/2020 9:00:23 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		The shaft was drilled to the proper elevation.	Conformance	9/21/2021 8:37:18 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Shaft has been drilled to proper elevation, and minimum embedment obtained and documented. (Embedment into bearing material)		Verified IQC paperwork and inspections. IQC wrote an NCR on that the cages sank and concrete was finished low. Process worked. Shaft was overdrilled to prevent having to cut cage length down.	Conformance	11/3/2020 2:30:46 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		there were problems with the concrete pump and they had to leave a drill shaft open over night, but the slurry protected the shaft of any sidewall instability. the next day the crew verified that the shaft was still in a condition to be poured and they proceeded with the concrete pour.	Conformance	9/30/2020 10:16:54 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM -07:00	The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shaft excavation was left open overnight, however polymer slurry was used to protect against sidewall instability. The use of polymer slurry was approved for up to 72 hours. This timeframe was closely monitored.	Noted	1/2/2020 9:33:22 AM -07:00	Audit Comment	The timeline of open sockets is closely monitored by both PC and IQC. In the event the shaft cannot be placed over reaming will be performed prior to placement.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Drilled shaft excavation left open overnight is cased and protected against sidewall instability through the use of polymer slurry. The 72 hour timeframe for the use of polymer slurry is closely monitored by production and IQC teams.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM - 06:00	The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		The shaft was filled with flowfill to eliminate the side instability until it was finish at the later date in Comment #1.	Conformance	3/31/2020 5:06:03 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		Shaft was not left open.	Conformance	7/28/2021 4:28:22 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		the drill shaft was excavated and poured in the same day.	Conformance	11/2/2020 12:27:57 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The drilled shaft excavations shall not be left open overnight unless cased full depth or otherwise protected against sidewall instability.		the shaft side walls were protected by slurry.	Conformance	11/30/2020 2:59:10 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		The casing appeared to be watertight and was clean prior to placement in the excavation.	Conformance	12/21/2020 9:23:29 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		The casing was watertight and clean prior to placement in the excavation.	Conformance	2/5/2021 3:19:00 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		All casing (including splices) shall be watertight and clean prior to placement in the excavation.		Casing was acceptable.	Conformance	7/23/2021 3:06:32 PM -06:00	C		Closed

Central 70	C 0704-241	UPRR	Railroads		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was tied 100% at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, and rigidly braced to retain its configuration during construction. Ben Changnon and I checked for ties and measured the length of each cage.	Conformance	12/29/2020 5:15:57 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Lighting Foundations	Electrical		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		the cage was observed to be 100% tie off and double tied at intersections for at least 4 vertical bars. the cage was free of all loose bars, retained its configuration during placement, and was suspended off the bottom of the hole	Conformance	5/5/2021 9:17:00 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		it was inspected that all intersections on the cage were tied.	Conformance	11/2/2020 12:28:41 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		This was witnessed and documented. IQC also verified on their checklists. See attached.	Conformance	9/16/2020 11:05:52 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		Rebar cage is tied at all intersections and was suspended in shaft without touching bottom.	Conformance	9/8/2020 12:44:52 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		Verified IQC paperwork and inspections. Witnessed 100% tie.	Conformance	11/3/2020 2:30:46 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM - 06:00	The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing cage was 100% tied at every intersection. The handling and placement of the cage was in conformance with the specification.	Conformance	3/31/2020 5:06:03 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing steel cage was tied correctly.	Conformance	3/27/2020 8:23:14 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		A rebar inspection was conducted on shaft C63. All of the rebar was tied 100%.	Conformance	4/8/2020 8:59:36 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	5/14/2020 4:32:12 PM - 06:00	The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The cages that were placed on the first day were not tied 100%. Please see the attached photos. Cedric Kashosi was the IQC inspector on the second day who notified the crew that the entire cage must be tied. Please reference the attached pictures.	Addressed with NCR-2085	5/29/2020 4:51:02 PM -06:00	Audit Comment	An NCR was generated for the first 2 shafts and discussed in the Building task force.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		PC and IQC inspected and approved reinforcing cages, and inspected to ensure tied 100% at all intersections to ensure configuration is maintained during transport and installation of cage in hole. Due to the cage having to be pulled when the cage lifted during concrete placement operations on 1/17/2020, the drilled shaft cage and column embedment were both reinspected to ensure compliance prior to installation.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		I checked the reinforcing steel cage and it complies with all tying requirements.	Conformance	3/4/2020 7:30:42 AM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM -07:00	The reinforcing cage shall be 100% tied at all intersections, double tied at intersections for at least 4 vertical bars, free from loose bars, rigidly braced to retain its configuration during handling and construction, and suspended off the bottom of the hole.		The reinforcing drilled shaft cage was reviewed and accepted by both PC and IQC. The cage was tied 100% at all intersections, and was adequately braced to retain its configuration during handling, installation, and splicing; as well as during suspension of cage during concrete placement operations.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Reinforcement cage was spliced, as shown in approved splice detail plan, due to low overhead drilled shaft construction underneath the existing viaduct.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		The contractor overdrilled the hole just enough that the cage had to be spliced and Spartan performed that work before the cage was placed into the hole.	Conformance	3/27/2020 8:23:14 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Due to overhead restraints this was performed in the shaft. IQC witnessed.	Conformance	9/16/2020 11:05:52 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		they placed the first section into the hole due to the low overhead then spliced the second portion with mechanical couplers above ground, and moved hoop steel down to the appropriate dimensions, then tied it down.	Conformance	6/9/2020 9:00:23 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		the low overhead drill shaft plans say that the cage can be spliced while in the shaft as long as the cage is secured at the top from a fixed point on the ground. This was the case for both splices that had to occur due to the viaduct overhead.	Conformance	11/30/2020 2:59:10 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Reinforcing cage was spliced prior to placement into shaft.	Conformance	11/6/2020 1:39:16 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Due to the low overhead conditions under the viaduct, the cage was placed in two section using bar couplers.	Conformance	2/5/2021 3:19:00 PM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Splice was completed prior to placement.	Conformance	7/28/2021 4:28:22 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Splices appeared acceptable.	Conformance	7/23/2021 3:06:32 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Reinforcing cage was spliced prior to placement into the shaft unless otherwise shown on the plans.		Slices were acceptable.	Conformance	8/16/2021 7:33:07 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		Reinforcing cage was held securely during concrete placement..	Conformance	7/23/2021 3:06:32 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The steel reinforcing cage shall be securely held in position throughout the concrete placement operation & supported from the top.		The steel cage for column C06 was securely held in position throughout concrete placement and supported from the top	Conformance	6/23/2021 4:15:44 PM -06:00	C		Closed

Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	The access tubes shall have a round, regular inside diameter free of defects and obstructions, including all pipe joints, in order to permit the free, unobstructed passage of 1.35 inch maximum diameter source and receiver probes used for the CSL tests.		CSL Access tubes installed have a round, regular inside diameter that is free of defects and obstructions. All pipe joints additionally are free of defects to ensure probes for testing will pass through entirety of tubes freely.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	The access tubes shall be schedule 40 steel, watertight, free from corrosion, and with clean internal and external faces to ensure good bond between the concrete and the access tubes. The access tubes shall be fitted with watertight shoe on the bottom and removable cap on the top		Access tubes installed are 2" nominal steel pipes (ASTM A53, Grade B) which are per plan and approved within RFC and CSL Testing Procedure Plans.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		The access tubes shall be schedule 40 steel, watertight, free from corrosion, and with clean internal and external faces to ensure good bond between the concrete and the access tubes. The access tubes shall be fitted with watertight shoe on the bottom and removable cap on the top		Access tubes installed are 2" nominal steel pipes (ASTM A53, Grade B) which are per plan and approved within RFC and CSL Testing Procedure Plans.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		The access tubes shall be schedule 40 steel, watertight, free from corrosion, and with clean internal and external faces to ensure good bond between the concrete and the access tubes. The access tubes shall be fitted with watertight shoe on the bottom and removable cap on the top		Access tubes were acceptable.	Conformance	8/16/2021 7:32:31 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Class BZ w/ 9" slump was used for drilled shaft concrete.	Conformance	1/11/2021 8:19:08 AM -07:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		concrete mix was confirmed by IQC and the slump was observed to be from PC 7.25", and from IQC 7".	Conformance	11/30/2020 2:59:10 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete used is a BZ mix which has been approved for the project and has a slump range of 6 to 9 inches.	Conformance	12/29/2020 5:15:57 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		The drilled shaft concrete used is a BZ mix which is approved for the project.	Conformance	2/5/2021 3:19:00 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		BZ mix was used	Conformance	6/25/2021 10:53:00 AM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Contractor used an approved mix.	Conformance	7/28/2021 4:28:22 PM -06:00	C		Closed
Central 70	C 0704-241	Drill Caissons	Walls		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled shaft concrete was class BZ and was between 8" and 9", depending on the truck. Most of the trucks came in around 6.75", but what water was added to achieve a wetter slump for the tremie tube.	Conformance	4/16/2021 7:46:19 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled Shaft Concrete used is a class BZ mix which has been reviewed and approved by IQC and UPRR for use.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		The drilled shaft concrete being used is a BZ mix.	Conformance	3/4/2020 7:30:42 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM - 07:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Drilled Shaft Concrete used is a class BZ mix which has been reviewed and approved by IQC and UPRR for use.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		Fillmore Bridge Pier 2 Drilled Caisson C3. Each load of concrete that was placed was tested to be within conformance of the specifications for the class BZ mix.	Conformance	12/28/2019 1:02:05 PM -07:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM - 06:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		The shaft was placed with BZ concrete. Please see the attached pictures in Comment #1.	Conformance	3/31/2020 5:06:03 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	5/14/2020 4:32:12 PM - 06:00	Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		The BZ special Mix Design #94099097 that was submitted by Ludwig was not approved by IQC before the placement. Please see the attached submittal and batch tickets.	The mix design was making it through the appropriate Aconex workflow for the specific Sub-Contractor. Mix design is already approved job wide	5/29/2020 4:52:20 PM -06:00	Audit Comment	BZ special was approved for the project and the placement was allowed to proceed while the specific approval for Ludwig to use the approved mix was in process.	Closed
Central 70	C 0704-241	Deep Foundations	Structures		Drilled shaft concrete used is a class BZ mix which has been approved for the project (6-9" slump).		the concrete mix was verified by the field engineer and also by IQC once it arrived on site.	Conformance	9/30/2020 10:14:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Deep Foundations	UPRR Structures	12/17/2019 1:27:53 PM -07:00	If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Drilled shaft operation meets criteria for wet placement with slurry being used, and concrete is being placed with a tremie.	Conformance	12/17/2019 1:06:52 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		Drilled shaft operation meets criteria for wet placement with slurry being used, and concrete is being placed with a tremie.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		The operation used a tremie pipe to place the mix. The placement of the concrete was not considered a wet process.	Conformance	12/28/2019 1:02:05 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		The concrete was placed by the tremie method.	Conformance	4/8/2020 8:59:36 AM -06:00	C		Closed
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping	4/2/2020 1:38:00 PM -06:00	If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		The concrete was placed by the tremie method with the aid of a pump truck.	Conformance	3/31/2020 5:06:03 PM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		If the shaft meets the criteria for wet placement slurry is being used and concrete is placed with a tremie.		the drill shaft concrete placement utilized a tremie pipe since slurry was used.	Conformance	9/30/2020 10:14:15 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Deep Foundations	Structures		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		during the placement the rebar cage did not displace any in either the upward or downward direction.	Conformance	9/30/2020 10:14:15 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		the rebar cage was observed to move .5" after placement had commenced.	Conformance	11/2/2020 12:26:27 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		Less than an inch of movement was documented in the upward direction. 0.07'. This was witnessed and documented on IQC checklist.	Conformance	9/16/2020 11:05:52 AM -06:00	C		Closed
Central 70	C 0704-241	Deep Foundations	Structures		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		There was no displacement of the cage during the placement of concrete.	Conformance	12/28/2019 1:02:05 PM -07:00	C		Closed
Central 70	C 0704-241	Deep Foundations	UPRR Structures		During concrete placement the drilled shaft steel has not exceeded upward displacement of the rebar cage by 2 inches, or downward displacement by 6 inches.		During concrete placement operations on 1/17/2020, the cage exceeded upward displacement and the pour was stopped. The cage was able to be removed, cleaned, and reinspected. The shaft was re-drilled just past tip of planned elevation, cage installed, and concrete placed on 1/18/2020. The cage did not exceed upward or downward displacement during operations this date.	Conformance	1/21/2020 1:08:38 PM -07:00	C		Closed

Some reinforcing steel had minor rust. This was mentioned to PC before placement. The placement was free of dirt and other debris.	Conformance	3/19/2020 2:47:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All of the rebar was free of damage and debris.	Conformance	3/31/2020 7:38:45 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		The rebar and placement were free of dirt and debris.	Conformance	4/22/2020 7:26:09 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All the rebar was epoxy coated free of damage and debris.	Conformance	6/4/2020 7:39:12 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All of the reinforcing steel is black uncoated rebar. Reference general notes of pump station plans. All rebar was free of dirt and debris.	Conformance	3/31/2020 7:37:50 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		General note 16 on Plan Sheet DL50-01 notes. "All reinforcing steel shall be non-coated (black) reinforcing steel unless noted otherwise." There was slurry slab that was poured at the bottom of the wet well. This allowed for lattice water to be collected. The area was clean a free of debris.	Conformance	3/20/2020 4:00:16 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	2/18/2020 12:00:00 AM - 07:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All of the rebar was protected against damage and free of dirt and debris.	Conformance	2/18/2020 4:35:53 PM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	2/13/2020 2:33:22 PM - 07:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All epoxy coated reinforcing steel was protected from damage and free of dirt and loose foreign material.	Conformance	2/13/2020 1:33:39 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures	12/19/2019 2:55:53 PM - 07:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		The reinforcing steel and the epoxy coating that I checked in the barrier rail had been protected from damage and I observed no issues with it.	Conformance	12/19/2019 9:19:47 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel and its epoxy coating have been protected from damage.	Conformance	6/22/2020 8:57:58 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All epoxy coated rebar that was required was included. All the black steel was free of dirt and foreign substances.	Conformance	1/7/2020 4:52:04 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		There was some dirt found of some pieces of rebar. The crew was notified and cleaned in on the spot. The rest of the placement was free of dirt and debris.	Conformance	3/24/2020 3:47:04 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel and its epoxy coating has been protected from damage and was free of any deleterious materials.	Conformance	12/9/2019 1:38:50 PM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM - 06:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		The steel was free of damage and debris.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/13/2020 12:00:00 AM - 06:00	All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All of the reinforcing was epoxy coated in accordance with the plans and specifications. All foreign debris was removed from the deck before and during my observation.	Conformance	5/14/2020 1:31:05 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		All reinforcing steel and its epoxy coating, if applicable, have been protected from damage at all times from damage and is free from dirt, loose mill scale & rust, paint, oil, or other foreign substance.		All reinforcing steel and its epoxy coating were protected from damage and foreign material substances.	Conformance	2/27/2020 6:45:07 AM -07:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover	1/21/2020 4:08:14 PM - 07:00	Reinforcement has been inspected and approved by before concrete placement by IQC.		IQC checked the steel in a rebar inspection conducted on Thursday, 1/16/2020 at 10:00am. I checked the reinforcing steel on Friday, 1/17/2020 at 1:00pm. Approximately 60 shear ties (#3 @ 8") were missing at the interior edge of the sump pit. I notified PC and IQC of the missing steel. PC had Spartan come back out to install the missing rebar. I completed a second inspection on Saturday, 1/18/2020 to verify they were placed. Please see the attached plan sheet #DLS3-04.	Through discussions with PC IQC and designers, it was agreed that what was tied in the field was correct.	2/13/2020 1:44:11 PM -07:00	Audit Comment	Acknowledged.	Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM - 06:00	Reinforcement has been inspected and approved by before concrete placement by IQC.		The rebar was approved by IQC before my inspection. The inspection was conducted with IQC (Civil/Electrical, PC and the CCD Building Inspector. Please see the attached inspection reports completed by AEC and IQC.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Reinforcement has been inspected and approved by before concrete placement by IQC.		The reinforcing steel was checked by IQC (Tommy Harmon) before concrete placement.	Conformance	12/9/2019 1:38:50 PM -07:00	C		Closed

Central 70	C 0704-241	Substructure	UPRR Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement has a clear cover of a minimum of two inches.	Conformance	5/6/2020 1:16:15 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		2 inches of clear cover was created at all edges, unless otherwise called for on plans.	Conformance	4/24/2020 8:55:39 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement, including splices, has a clear cover of 2 inches. Some reinforcement was adjusted during inspection to comply.	Conformance	7/20/2020 8:17:07 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcing steel had a minimum cover of 2".	Conformance	7/2/2020 8:49:01 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All of the rebar had the required clear cover.	Conformance	4/3/2020 10:13:01 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM -06:00	All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		The placement had the required clear cover.	Conformance	4/20/2020 2:39:18 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		all sides had 2 inches of clear cover with 3 inches of top and bottom clearance.	Conformance	11/3/2020 1:28:58 PM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	4/30/2020 11:58:54 AM -06:00	All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All of the reinforcing steel had the appropriate clear cover in conformance with the plans and shop drawings.	Conformance	4/29/2020 5:04:09 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Pegs at the bottom of the forms and form chairs were used to ensure that the 2" minimum clear cover was maintained.	Conformance	6/4/2020 7:40:12 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		The crew had to lift the cage to get the appropriate clear cover. This was completed before the concrete was delivered.	Conformance	3/19/2020 2:47:44 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		The East end of the placement required an additional rebar chair to ensure the 2" clear cover was met. All other locations had the required 2" of clear cover.	Conformance	3/31/2020 7:38:45 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		The stands for the screed supports were adjusted during the dry run maintain the 2" clear cover.	Conformance	6/4/2020 7:39:12 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		The clear cover was in conformance of the plans and specifications.	Conformance	4/22/2020 7:26:09 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All the rebar in place had the required 2" of clear cover.	Conformance	3/31/2020 7:37:50 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		The shop drawings require a 2.5" clear cover on the top and bottom mat. The sides against the secant wall shafts require 2". Both of these dimensions were verified during the inspection.	Conformance	3/20/2020 4:00:16 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	2/18/2020 12:00:00 AM - 07:00	All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All of the formwork was supported from the rebar by 2" rebar chairs.	Conformance	2/18/2020 4:35:53 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MSE Moment Slab	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		These problems consisted of clear cover for the operation which was called out to be 3" of clear on top and bottom (in some cases it was only 2"), and that where the rebar had ben cut the ends were not coated with epoxy spray. these problems were easily corrected on the spot before pouring concrete.	Field Resolved	6/25/2020 11:38:18 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Bridge Rail	Structures	12/19/2019 2:55:53 PM - 07:00	All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		I inspected the forms and reinforcing steel and saw no instances of cover less than 2 inches.	Conformance	12/19/2019 9:19:47 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcement, including splices, has clear cover of 2 inches.	Conformance	6/22/2020 8:57:58 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		Rebar chairs were used to hold the forms off the rebar. The clear cover was measured to be at least 2" at all areas.	Conformance	1/7/2020 4:52:04 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All of the rebar met the clear cover spelled out in the plans. Measurements were taken from a level to ensure all clear cover was appropriate.	Conformance	3/24/2020 3:47:04 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All reinforcement (including splices) has clear cover of 2 inches, unless otherwise noted on the plans.		All reinforcing steel had a minimum of two inch concrete cover.	Conformance	12/9/2019 1:38:50 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The rebar cage was tied multiple times to ensure the location and spacing conformed to the plans and shop drawings.	Conformance	3/31/2020 7:38:45 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		All of the reinforcing steel was in conformance with plans and specifications. Please see the attached pictures.	Conformance	4/22/2020 7:26:09 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The rebar and layout were in conformance of the plans and shop drawings.	Conformance	3/31/2020 7:37:50 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		All of the reinforcing steel was tied in accordance with the plans and shop drawings besides the additional steel that was added around the construction joints. The rebar were bunched together and require additional space for concrete to flow. Please see the attached pictures and email string related to the field resolved issue. The field resolved issue will be verified before concrete is placed.	Field Resolved	3/20/2020 4:00:16 PM -06:00	Field Resolved		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Spartan had many struggles to get this steel tied in accordance with the plans. PC delayed the placement of concrete many times to ensure the rebar was correct.	Conformance	3/19/2020 2:47:44 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	2/13/2020 2:33:22 PM - 07:00	Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The Department Field Assessor brought to the attention of Production/ PC/ IQC that there were a total of 8 missing #11 bars missing from within the structure. The concrete placement was ongoing when this was determined, however, these 8 bars were able to be installed. The bars installed were short by 18", and an FDC is to be created to address the splice length or need for couplers.	Field Resolved NCR 2005 Created and FDC written.	2/18/2020 11:57:44 AM -07:00	Field Resolved		Closed
Central 70	C 0704-241	Pump Station	Cover	2/18/2020 12:00:00 AM - 07:00	Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		This is a QCAT Field Issue Conversation. The construction joints were missing the appropriate projection steel. An NCR was developed with a leave as-is disposition. Please see the attached email string.	Conformance	2/18/2020 4:35:53 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover	1/21/2020 4:08:14 PM - 07:00	Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		<p>RFC Plans – only 3 shear ties are required by the plans to a distance twice the depth of the placement (3'0" out from the interior concrete wall face). Extra shear ties were used in the placement not required by the RFC plans. Plan Sheet #DLS3-04.</p> <p>Shop Drawings – Due to the 8" spacing of the top/bottom rebar mat, 6 shear ties (0", 8", 16", 24", 32" & 40") were placed to the minimum distance from the face (3'0" ft). The shop drawings depicted a shear tie at every intersection for a total of 7. Shop Drawing Plan Sheet #RP-F1-6.</p> <p>All other reinforcing steel was tied within conformance of the plans and specifications.</p>	This was verified with conversations with PC IQC KMP and designers	2/13/2020 1:44:44 PM -07:00	Audit Comment	KIC and IQC held a meeting with Isaac Anthony the EOR. The correct number of shear ties (6) were installed. The 7th bar shown on the shops were not needed and a mistake by a detailer.	Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/13/2020 12:00:00 AM - 06:00	Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The rebar was in conformance with the plans (B050.122) and Labato Shop Drawings. Please see attached plans and pictures.	Conformance	5/14/2020 1:31:05 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Cap	Walls		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed bars match the grade, type, size, number of bars, and spacing as required on the plans.	Conformance	2/27/2020 6:45:07 AM -07:00	C		Closed
Central 70	C 0704-241	Building	Cover	8/27/2020 12:00:00 AM - 06:00	Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The rebar matched the following items in the specification.	Conformance	8/27/2020 2:05:12 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed bars match the grades, size, type, number of bars and location as required on the plans.	Conformance	12/9/2019 1:38:50 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Installed bars match the grade, size, type, number of bars, location and spacing as required on the plans.	Conformance	6/22/2020 8:57:58 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		All rebar that was inspected matched the plans and shop drawings.	Conformance	3/24/2020 3:47:04 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The rebar that was checked was the appropriate grade, size and location. The number of bars was correct as required by the plans and shop drawings.	Conformance	1/7/2020 4:52:04 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures	12/19/2019 2:55:53 PM - 07:00	Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		The installed reinforcing steel matches the grade, size, type, number of bars, location and spacing as shown on the plans.	Conformance	12/19/2019 9:19:47 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		Rebar matches what is called out in the plans	Conformance	2/26/2021 12:58:00 PM -07:00	C		Closed
Central 70	C 0704-241	Slope Paving	Roadway		Installed bars match the grade, size type, number of bars, location, and spacing as required on the plans.		all bars matched the requirements shown in the plans.	Conformance	3/12/2021 1:19:45 PM -07:00	C		Closed

All rebar that is included in the placement was epoxy coated.	Conformance	5/14/2020 1:31:05 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	2/13/2020 2:33:22 PM - 07:00	All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		All reinforcement at Pier 2 Cap was epoxy-coated reinforcing steel per plan.	Conformance	2/13/2020 1:33:39 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	2/18/2020 12:00:00 AM - 07:00	All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The FFFS tank walls will be buried underground and are not affected by the splash zone.	Conformance	2/18/2020 4:35:53 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		This is a wall cap between Sta 22+00 and 23+00 (Abutment 3 wall cap) (North West corner of Fillmore bridge headed West). The rebar in the plans are denoted by "N" so epoxy steel was not required on behalf of the splash zone.	Conformance	3/19/2020 2:47:44 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The FFFS tank will be below grade so the concrete is not in the splash zone.	Conformance	3/31/2020 7:37:50 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The pier 2 cap is not in the splash zone so epoxy coated steel was not required.	Conformance	3/31/2020 7:38:45 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	4/30/2020 11:58:54 AM -06:00	All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		All of the steel included in this placement was epoxy coated.	Conformance	4/29/2020 5:04:09 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		all bar used for the coping was epoxy coated bar.	Conformance	7/14/2020 12:14:54 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM -06:00	All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The only rebar that required the epoxy coating were the projection bars for barrier rail. Some of the placement had epoxy coated steel. Please reference the attached pictures in Comment #4	Conformance	4/20/2020 2:39:18 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The FFFS tank top is no subject to the splash zone.	Conformance	4/3/2020 10:13:01 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM -06:00	All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		All of the rebar was black steel in accordance with the drawings.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		All bar used was epoxy coated.	Conformance	5/11/2020 11:09:34 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The pump station is a water holding structure. All of the rebar was black steel in accordance with the Pump Station Spec 03 30 00.	Conformance	5/8/2020 4:21:40 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		all reinforcing steel that was in the direction of S. Stapleton was epoxy coated bars, all reinforcing steel in the direction of main line was black steel since it is backfilled with dirt.	Conformance	10/1/2020 10:39:41 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		All bars in deck were epoxy coated.	Conformance	8/21/2020 4:24:25 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		Conformance	Conformance	9/23/2020 12:42:01 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The placement was black steel for the wall cap and epoxy steel for the barrier in accordance with the plans.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		the median barrier is in the splash zone and therefore all reinforcing steel was epoxy coated.	Conformance	9/30/2020 10:13:29 AM -06:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The reinforcing steel on plan sheet FCST-300A is denoted by "N" for non-epoxy coated reinforcing steel.	Conformance	9/28/2020 4:51:26 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		Epoxy coated steel was used.	Conformance	11/2/2020 3:48:01 PM -07:00	C		Closed
Central 70	C 0704-241	General Work	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The egress doors areas will be in the splash zone. All the rebar in the placement was epoxy coated.	Conformance	9/17/2020 5:20:36 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The barrier is within the splash zone. The rebar was epoxy coated.	Conformance	8/27/2020 3:31:20 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		All abutments, pier columns, barriers, retaining walls, and any other reinforced concrete structures exposed to splash from adjacent roadway shall use epoxy-coated reinforcing steel.		The rebar in the following placement is in the splash zone. All rebar was epoxy coated.	Conformance	8/27/2020 3:42:08 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		The splices were in conformance with the rebar shop drawings.	Conformance	8/27/2020 2:07:03 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		all splices on epoxy coated #4 bars are at or above the 1'-10" minimum splice length. with the black steel #6 bar having splices at or above 2'10" in length.	Conformance	10/1/2020 10:40:27 AM -06:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		The projection steel had the appropriate lap slice for the future CIP vault walls.	Conformance	9/28/2020 4:51:26 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All splices are at the locations shown on the plans.	Conformance	11/2/2020 12:25:35 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Conformance	Conformance	9/23/2020 12:42:01 PM -06:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads	8/14/2020 4:30:49 PM -06:00	Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are at the location shown on the plans.	Conformance	8/10/2020 8:38:36 AM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices were in accordance with the plans and shop drawings.	Conformance	5/26/2020 1:53:13 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are at the locations shown on the plans.	Conformance	5/6/2020 1:15:29 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM -06:00	Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Not all splices followed the plans. The rebar around the blockouts had to be spliced instead of being the full length required by NDC-510 (Plan Sheet CAS-220). The Class "B" splice table was followed in the shop drawings. Please see attached pictures.	Addressed	7/28/2020 12:24:08 PM -06:00	Audit Comment	The class B splice table was reviewed by design. The splice locations should be updated in the as built.	Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		The splices were the appropriate locations with the appropriate lap length.	Conformance	6/3/2020 7:41:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Several lap splices at various locations were not lapped in a traditional manner. The projecting bar was offset 3-6" from the bar which was to be spliced on too. As a result crews had to shift bars to tie the splice together.	Field Resolved	6/10/2020 7:54:44 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Pump Station	Cover		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All of the splices were inspected were in conformance of the plans and specifications.	Conformance	4/3/2020 10:13:01 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		All splices were at the locations shown on the plans.	Conformance	8/10/2020 8:37:30 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		Splices are at the location shown on the plans or if a location is not called out the location is in conformance with the spacing defined in paragraph 10 of CDOT Specification Section 602.06.		Splices are located as shown on the plans.	Conformance	5/6/2020 1:16:15 PM -06:00	C		Closed

Splices were staggered in accordance with the plans and specifications.	Conformance	12/18/2020 11:02:03 AM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		Splices were acceptable.	Conformance	1/18/2021 9:11:23 AM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	1/21/2020 4:08:14 PM -07:00	Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		All rebar splices were found to be alternating with the appropriate lap splice.	Conformance	1/21/2020 12:59:09 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/13/2020 12:00:00 AM -06:00	Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		The splices were staggered in accordance with the plans and specification.	Conformance	5/14/2020 1:31:05 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	1/21/2020 4:05:53 PM -07:00	Unless otherwise shown on the plans or approved, splices in adjacent lines of reinforcing bars shall be staggered and space at the length required for a lapped splice in the bar.		The staggered rebar lap splice for the top reinforcing does not match the call out in the plans and shop drawings. The middle splice was tied in a line due to the rebar dimensions that were on the plans. From discussions with the Designer this is a Class B splice, so a staggered splice was not required. The configuration of the staggered lap splice should match the definition in ACI 318 and CRSI Engineering Technical Note ETN-D-2-13.	The staggered lap splices were not required because of the actual class of lap that was required. If this wasn't the case, then the staggered lap splice wouldn't have been achieved. PC/IQC should have verified prior to the pour. In this case, it worked out.	2/13/2020 2:08:27 PM -07:00	Audit Comment	This concern was discussed and addressed in a meeting on 1/14/2020 with the EOR and field crews. The splice lengths were installed lapped in the field but the design length of the bar landed the splices within 6" of each other	Closed

Conformance	8/31/2021 9:36:41 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		Embedded bars are adequately supported to eliminate field damage and displacement.		Embedded bars were adequately supported to eliminate field damage and displacement.	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		The embedded rebar was adequately protected throughout construction.	Conformance	7/12/2021 3:29:28 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Embedded bars are adequately supported to eliminate field damage and displacement.		Fin wall rebar embedded into barrier is reinforced with horizontal bars and tied to forms to eliminate displacement	Conformance	3/9/2021 1:18:27 PM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		Embedded bars are adequately supported to eliminate field damage and displacement.		The embedded rebar was adequately supported and free of damage.	Conformance	6/15/2020 5:10:30 PM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM -06:00	Embedded bars are adequately supported to eliminate field damage and displacement.		The embedded rebar for masonry was supported with the appropriate splice to ensure they were free of damage or displacement.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		Embedded bars are adequately supported to eliminate field damage and displacement.		All of the embedded steel for the sidewalks and railing were supported appropriately.	Conformance	5/21/2020 8:15:46 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		The embedded rebar was free of field damage and displacement.	Conformance	5/8/2020 4:21:40 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Embedded bars are adequately supported to eliminate field damage and displacement.		The embedded bars adequately support and free of displacement.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		Embedded reinforcing steel for the pump station roof were supported appropriately and free of damage.	Conformance	8/27/2020 2:07:03 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Embedded bars are adequately supported to eliminate field damage and displacement.		Bars embedded in the coping were adequately supported to eliminate damage and displacement.	Conformance	12/9/2019 1:38:50 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		Instead of using a 2" galvanized corrugated metal pipe to set the epoxy #8 at 1ft O.C.. This bar was cast-in-place. Place sheet B050.142.	Conformance	1/7/2020 4:52:04 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	1/21/2020 4:08:14 PM -07:00	Embedded bars are adequately supported to eliminate field damage and displacement.		All embedded bars had the adequate support and free of damage.	Conformance	1/21/2020 12:59:09 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM -06:00	Embedded bars are adequately supported to eliminate field damage and displacement.		The barrier epoxy coated rebar was supported tied and supported appropriately.	Conformance	4/20/2020 2:39:18 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	4/30/2020 11:58:54 AM -06:00	Embedded bars are adequately supported to eliminate field damage and displacement.		There were loose rebar consistently throughout the placement that were either loose or shifting from the proper position. After discussions with Tony McAplin, he noticed the same thing.	Addressed	5/29/2020 4:58:07 PM -06:00	Audit Comment	Acknowledged. IQC and PC will pay attention to tie wire placement during pre placement walks and future placement methods.	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		All rebar projections around the FFFS tank opening were supported to ensure no damage or displacement would occur.	Conformance	4/3/2020 10:13:01 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		All embedded rebar was adequately supported to minimize damage and displacement.	Conformance	3/20/2020 4:00:16 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		The embedded epoxy coated projection dowels were adequately supported.	Conformance	4/22/2020 7:26:09 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Embedded bars are adequately supported to eliminate field damage and displacement.		The projection steel and the corrugated sleeves were fixed in position. No visible displacement occurred.	Conformance	3/31/2020 7:38:45 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	2/18/2020 12:00:00 AM - 07:00	Embedded bars are adequately supported to eliminate field damage and displacement.		The embedded bars that were at the top of the placement were adequately supported and free of damage or displacement.	Conformance	2/18/2020 4:35:53 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	2/18/2020 12:00:00 AM - 07:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Tying alternating intersections was appropriate for the placement.	Conformance	2/18/2020 4:35:53 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All of the steel was tied at alternating intersections in accordance with the specifications.	Conformance	3/31/2020 7:38:45 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The rebar was tied at alternating intersections.	Conformance	4/22/2020 7:26:09 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The reinforcing steel was tied at alternating intersections in accordance with this specification.	Conformance	3/31/2020 7:37:50 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Alternating intersections were tied since the spacing between intersections was smaller than 1ft by 1ft square.	Conformance	4/3/2020 10:13:01 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Due to the spacing of the steel, alternating intersections were tied.	Conformance	6/4/2020 7:39:13 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement was 100% tied due to the spacing (18" x 12").	Conformance	7/20/2020 8:17:07 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	4/30/2020 11:58:54 AM -06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The rebar was tied at alternating intersections for the deck steel. Due to the large spacing, the diaphragms were tied at every intersection.	Conformance	4/29/2020 5:04:09 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM -06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The rebar was tied at alternating intersections in accordance with this specification.	Conformance	4/20/2020 2:39:18 PM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		all bars were 100% tied.	Conformance	10/21/2020 7:42:51 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover	1/21/2020 4:08:14 PM - 07:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All intersection were tied appropriately.	Conformanc e	1/21/2020 12:59:09 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/13/2020 12:00:00 AM - 06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The rebar was tied at alternating intersections.	Conformanc e	5/14/2020 1:31:05 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		were there were larger then 12 in spaces each reinforcement was tied at 100%. were spaces were less then 12 in reinforcements were tied at no less then 50%.	Conformanc e	6/1/2020 7:33:10 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The ties were alternating.	Conformanc e	3/24/2020 3:47:04 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All the required rebar intersections were tied at the appropriate locations. 100% tie was not required.	Conformanc e	1/7/2020 4:52:04 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Due to the close rebar spacing, alternate intersections were tied.	Conformanc e	8/27/2020 3:31:20 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Alternating intersections were tied in accordance with this spec.	Conformanc e	8/27/2020 2:07:03 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	General Work	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Due to the rebar spacing, all intersections were tied.	Conformance	8/27/2020 3:42:08 PM -06:00	C		Closed
Central 70	C 0704-241	Electrical	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Due to the proximity of the block out and the amount of steel, every intersection was tied.	Conformance	1/4/2021 5:27:29 PM -07:00	C		Closed
Central 70	C 0704-241	General Work	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Each intersection was tied in accordance with the following specification.	Conformance	9/17/2020 5:20:37 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		since the spacing is at 16" and 18" all intersections were ties for the epoxy rebar. the black steel spacing was 6" and 18" so only 50% of the intersections were tied.	Conformance	10/1/2020 10:40:27 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Reinforcing was all tied properly.	Conformance	11/3/2020 2:17:00 PM -07:00	C		Closed
Central 70	C 0704-241	Approach Slabs	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement was tied at all intersections due to the spacing specified on the plans.	Conformance	11/2/2020 12:25:35 PM -07:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Due to the space of the rebar, alternating intersections were tied.	Conformance	9/28/2020 4:51:26 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Reinforcing was properly tied.	Conformance	8/21/2020 4:24:25 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The rebar was tied at alternating intersections since the spacing was smaller than 1ft by 1ft in each direction.	Conformance	5/8/2020 4:21:40 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Alternating intersections were tied useless the space was larger than 1ft by 1ft. Then all intersections were tied.	Conformance	5/26/2020 1:53:13 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The rebar was tied at alternating intersections.	Conformance	5/21/2020 8:15:46 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Bars were properly tied and supported.	Conformance	5/11/2020 11:09:34 AM -06:00	C		Closed
Central 70	C 0704-241	Approach Slabs	UPRR Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Reinforcement was tied at 100% of the intersections.	Conformance	8/10/2021 10:32:49 AM -06:00	C		Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM -06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Alternating intersections were tied due to rebar spacing.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	6/25/2020 1:37:08 PM -06:00	All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		since the spacing of the bars are over 12" it calls for 100% tie on rebar. there were multiple ties missing that myself and IQC noticed. This was fixed immediately after finding it.		10/1/2020 9:11:11 AM -06:00	Audit Comment	We will re-iterate with Spartan to adequately inspect prior to scheduling a hold point with the department or IQC	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement was tied at all intersections.	Conformance	9/21/2021 8:37:18 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Various bars were found in the mat that did not have adequate ties preventing them from displacing during concrete placement.	Field Resolved	6/10/2020 7:54:44 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The intersections were tied in accordance with this specification.	Conformance	6/3/2020 7:41:35 AM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All tied rebar spacing at intersections per spec	Conformance	3/9/2021 1:18:27 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement is tied at all intersections.	Conformance	2/3/2021 8:11:33 AM -07:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Ties were acceptable.	Conformance	1/18/2021 9:11:23 AM -07:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The rebar was tied at alternating intersections.	Conformance	11/5/2020 11:35:09 AM -07:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Alternating intersections were tied in accordance with this specification.	Conformance	10/20/2020 10:26:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Emergency Power	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Alternating intersections were tied in accordance with the following specification and plans. The rebar spacing was 10" max between bars in each direction.	Conformance	12/18/2020 11:02:03 AM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement was tied at all intersections.	Conformance	2/8/2021 2:25:18 PM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Rebar was tied properly at the spacing required	Conformance	2/16/2021 8:47:52 AM -07:00	C		Closed
Central 70	C 0704-241	Cover Top / Swansea Elementary	Cover		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		The rebar was tied at alternating intersections following this requirement.	Conformance	7/12/2021 3:29:28 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement was tied at all intersections.	Conformance	7/19/2021 7:17:52 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Ties were placed at alternating intersections and appeared acceptable.	Conformance	9/28/2021 9:39:00 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	UPRR Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Alternate intersections were tied due to spacing of less than 1 foot in each direction.	Conformance	7/23/2021 1:04:51 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Overhead Sign Foundations	Signing & Striping		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement was tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.	Conformance	5/19/2022 8:39:14 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	UPRR Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Reinforcement is tied at all intersections.	Conformance	6/29/2021 10:55:02 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Rebar was tied at alternating intersections.	Conformance	3/9/2021 3:55:47 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	UPRR Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement was tied at every intersection.	Conformance	2/15/2021 3:19:54 PM -07:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		All reinforcement is tied at all intersections.	Conformance	2/8/2021 2:25:48 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		All reinforcement shall be tied at all intersections except where spacing is less than 1 foot in each direction, in which case alternate intersections shall be tied.		Rebar was tied at alternating intersections.	Conformance	8/31/2021 9:36:41 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		Ties were placed by hand and appeared acceptable.	Conformance	9/28/2021 9:39:00 AM -06:00	C		Closed
Central 70	C 0704-241	Fire Protection	Fire & Life Safety		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All reinforcing steel was tied by hand.	Conformance	11/5/2020 11:35:09 AM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The rebar was tied by hand.	Conformance	5/8/2020 4:21:40 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Electrical	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The reinforcing steel was tied by hand.	Conformance	1/4/2021 5:27:29 PM -07:00	C		Closed
Central 70	C 0704-241	General Work	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All rebar was tied by hand.	Conformance	8/27/2020 3:42:08 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All rebar present in the placement was tied by hand.	Conformance	8/27/2020 3:31:20 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The rebar was tied by hand. No automatic tying devices were observed.	Conformance	8/27/2020 2:07:03 PM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The pier cap was manually tied. No automated devices were used.	Conformance	1/7/2020 4:52:04 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/13/2020 12:00:00 AM -06:00	Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All of the rebar was tied manually.	Conformance	5/14/2020 1:31:05 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	1/21/2020 4:08:14 PM -07:00	Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The steel was tied by hand. No mechanical methods were used.	Conformance	1/21/2020 12:59:09 PM -07:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The rebar was tied by hand. No automated devices were used.	Conformance	4/3/2020 10:13:01 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All of the reinforcing steel was tied by hand.	Conformance	3/31/2020 7:37:50 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The rebar was tied by hand as well as with automated devices.	Conformance	6/4/2020 7:39:12 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The placement was manually tied.	Conformance	4/22/2020 7:26:09 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		All of the reinforcing steel was tied by hand.	Conformance	3/31/2020 7:38:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Pump Station	Cover	2/18/2020 12:00:00 AM - 07:00	Tie wire installed by automated devices shall be roughly equal to the area of manually installed tie wire.		The rebar was tied by hand and not mechanically.	Conformance	2/18/2020 4:35:53 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Structures		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All ties and supports were epoxy coated to match bars.	Conformance	4/24/2020 8:55:39 AM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures	4/30/2020 11:58:54 AM - 06:00	If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		From my inspections, all of the supports and ties I observed were epoxy coated.	Conformance	4/29/2020 5:04:09 PM -06:00	C		Closed
Central 70	C 0704-241	Bridge Deck	Cover	5/13/2020 12:00:00 AM - 06:00	If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All rebar, ties and chairs were epoxy coated.	Conformance	5/14/2020 1:31:05 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		everywhere that epoxy bars were used, appropriate epoxy coated ties, and supports were used.	Conformance	6/1/2020 7:33:10 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All ties that were used to support the epoxy coated steel was plastic coated tie wire.	Conformance	1/7/2020 4:52:04 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures	12/19/2019 2:55:53 PM - 07:00	If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated tie wire and rebar supports are being used.	Conformance	12/19/2019 9:19:47 AM -07:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All rebars, supports and ties were epoxy coated.	Conformance	8/27/2020 3:31:20 PM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All rebar and ties were epoxy coated.	Conformance	8/27/2020 3:42:08 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		all form spacer chairs were plastic. all rebar chairs to keep spacing from the black steel to the epoxy steel were epoxy coated.	Conformance	10/1/2020 10:40:27 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		The rebar chairs were plastic and steel which were epoxy coated.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Deck	Structures		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Tie wire and supports are epoxy coated.	Conformanc e	5/6/2020 1:15:29 PM -06:00	C		Closed
Central 70	C 0704-241	Barrier Walls	Roadway		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All the epoxy coated reinforcing steel was tied with epoxy coated tie wire.	Conformanc e	10/7/2020 5:28:59 PM -06:00	C		Closed
Central 70	C 0704-241	Rebar	Structures		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Supports were epoxy coated.	Conformanc e	1/18/2021 9:11:23 AM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All supports and ties are epoxy coated	Conformanc e	2/26/2021 12:58:01 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		All supports and ties are plastic or plastic coated.	Conformanc e	2/3/2021 8:11:33 AM -07:00	C		Closed
Central 70	C 0704-241	Substructu re	Structures		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated ties were placed.	Conformanc e	9/28/2021 9:39:00 AM -06:00	C		Closed
Central 70	C 0704-241	Substructu re	Structures		If expoy coated rebar is being used all supports, ties, and splicers used are plastic or epoxy coated.		Epoxy coated rebar is being used so all supports and ties are plastic or epoxy coated.	Conformanc e	7/19/2021 7:17:52 AM -06:00	C		Closed

Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		A field restricted activity meet was held at North Stapleton and Dahila on Tuesday, March 3rd 2020 and all parties agreed that CDOT, CCD ITS and Signals and power crossings would be all installed in a joint trench and later captured in an FDC. It was decided that CCD's signal conduit would be installed above the CDOT backbone duct bank. Upon arriving on site on Wednesday, March 4th, it was noticed that the CCD backbone conduit was not installed in the backbone duct bank as it had been throughout the rest of the project. Phone calls were made to Sturgeon and CCD management and it was determined that the 2" green backbone conduit should be added to the duct bank. Sturgeon promptly added the conduit to the trench. Field resolution process worked efficiently.	Issue was resolved in the field.	3/5/2020 8:37:32 AM -07:00	Field Resolved		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	3/6/2020 3:47:03 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		LCR Update details that the Havana closure was to be a MHT 111. This was not implement. MHT 111 applies only to normal right lane closures on thru streets. The closure set was on an auxiliary entrance/exit lane to a local road.	See Smartsheet NCR 0013	4/8/2020 11:57:11 AM -06:00	NC-2	NCR 0013 created	Closed
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	2/18/2020 12:03:41 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		MHT 129 states that rolling slowdown must maintain minimum speed of 5mph. TMA and UTC vehicles were observed being completely stopped from 3:27AM-3:39AM. No VMB was placed 1 day prior to mobile operations.	See NCR 2012	3/9/2020 9:54:19 AM -06:00	NC-2	NCR 2012 was generated to address this issue	Closed
Central 70	C 0704-241	Lighting Conduit	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Lighting installed per plan sheets LI-13 and LI-14.	Conformance	6/18/2020 6:20:53 AM -06:00	C		Closed
Central 70	C 0704-241	Lighting Poles and Wire	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Streetlight poles installed per plan sheet LI-014.	Conformance	6/24/2020 8:19:11 AM -06:00	C		Closed
Central 70	C 0704-241	Lighting Poles and Wire	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Streetlight installed per plan sheet LI-015.	Conformance	6/24/2020 8:19:32 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Sidewalk placed on josephine bridge was per plan/grade.	Conformance	10/1/2020 10:45:59 AM -06:00	C		Closed

Central 70	C 0704-241	Girders	UPRR Structures	5/11/2020 7:52:39 AM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All girder and incidental materials supplied have the correct documentation with heat and melt numbers. Rotational capacity charts for all bolts are included in the documentation.	Conformance	5/6/2020 1:37:55 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures	5/11/2020 7:52:39 AM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The shop drawing camber is 2 7/16" for girder 3F2 and the plan drawing camber is 1 5/8". This is in tolerance using the AREMA formula $\{(1/16") * (136.0573/10)\}$, which is .850", and the difference between plan and shop drawings is .8125".	Conformance	5/6/2020 1:37:55 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures	5/11/2020 7:51:15 AM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The shop drawing length for girder 3B2 is 136'-0 11/16" and the plan length is 136'-0 15/16". This is out of tolerance with AREMA MRE Ch. 15, Art. 3.1.7.1e (1) which is equal to +/- 1/32" but in tolerance with "Other Members" with a tolerance of +/- 1/4" as specified by AREMA MRE Ch. 15 Art. 3.1.7.1e(1).	UPRR approved the 1/4" tolerance.	5/18/2020 3:07:06 PM -06:00	Audit Comment		Closed

Central 70	C 0704-241	Dry	Utilities		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		A 307 - fasteners were used per the plans, with lock washers and nuts.	Conformance	5/11/2020 11:12:09 AM -06:00	C		Closed
Central 70	C 0704-241	Dry	Utilities		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		4" split duct casing was installed per plan	Conformance	5/11/2020 11:12:09 AM -06:00	C		Closed
Central 70	C 0704-241	Dry	Utilities		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		BNSF conduit was installed per plan	Conformance	5/11/2020 11:12:09 AM -06:00	C		Closed
Central 70	C 0704-241	General Work	Cover		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The crew is using a paddle mixer to mix soil 15' down from grade. The soil mixing is being performed on West side of Clayton St bridge in Cover section. The work area is between columns P2-50 through P-63. A total of 18 soil sections were completed during today's observation. All of the lines and grades were followed throughout my days of observation. Please see my attached pictures and the soil mixing configuration.	Conformance	4/7/2020 2:53:48 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	UPRR Structures	5/11/2020 7:50:16 AM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All girder and incidental materials supplied have the correct documentation with heat and melt numbers. Rotational capacity charts for all bolts are included in the documentation.	Conformance	5/6/2020 1:23:46 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures	5/11/2020 7:50:16 AM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The shop drawing length of girder 3A2 is 136'-0 11/16" and the plan drawing length is 136'-0 15/16" which is out of tolerance for AREMA MRE Ch. 15, Art. 3.1.7.1e (1) which is equal to +/- 1/32" but is in tolerance for "Other Members" with a tolerance of +/- 1/4" as specified by AREMA MRE Ch. 15 Art. 3.1.7.1e(1).	UPRR approved the 1/4" tolerance.	5/18/2020 3:06:11 PM -06:00	Audit Comment		Closed
Central 70	C 0704-241	Girders	UPRR Structures	5/11/2020 7:50:16 AM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The shop drawing camber for girder 3A2 is 2.5625" and the plan sheet camber is 1.750". According to the AREMA formula of $\{(1/16") * (136.0573/10)\}$ which equals 0.850 variation, the camber is in at .8125" difference.	Conformance	5/6/2020 1:23:46 PM -06:00	C		Closed
Central 70	C 0704-241	Remove Temporary Barrier	Maintenance of Traffic (MOT)		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Barrier was removed from 2506.	Conformance	5/11/2020 10:58:04 AM -06:00	C		Closed

Central 70	C 0704-241	Pavement/ Surface Removals	Removal		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Conformance	Conformance	6/16/2020 12:05:09 PM -06:00	C		Closed
Central 70	C 0704-241	Lowered Section Wall Panels	Walls		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All of the grades, lines and dimensions were in accordance with the plans and shop drawings. The coping was placed from the expansion joint at drilled shaft A3-15/A3-16 50ft moving to the East. There were two eyelets cast into the each section of coping. To ensure the coping matched the face of the abutment expansion. The eyelets were cut. The cut rebar was covered with epoxy paint before the wall coping was installed. The eyelets will be removed from future coping pieces. This field resolved issue was generated to ensure everyone agrees with the painted coating on these 5 pieces of coping. Please reference the email and photos attached.	Field Resolved	4/4/2020 4:04:08 PM -06:00	Field Resolved		Closed

Central 70	C 0704-241	MOT Plan Implementation	Maintenance of Traffic (MOT)	8/21/2020 4:50:01 PM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The barrier wall installation at construction accesses did not follow the detail shown on EMT-1010A. Accesses were missing the offset run of barrier behind the drums, the downstream run at the opening also did not have the 4ft by 60ft skew on the plans and appeared shorter than 125 feet. Attached is a marked up plan sheet showing items which were not followed. The issue of not following the detail was brought up by the Department in the Cat 1 whatsapp on 7/13 at 3:05PM. Please respond to this NC-2 with an NCR number. The NCR can be closed with a disposition to process an FDC or TCR as described in the attached email. The NCR action to prevent recurrence should explain why the Department identified this issue and KMP did not self report their noncompliance with the detail. How will KMP self-inspect their access and other MOT details in the future?	resolved through ENCR 300	4/2/2021 1:22:46 PM -06:00	NC-2		Closed

Central 70	C 0704-241	Electrical	Cover	8/12/2020 4:57:01 PM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The attached RFC required that the RIO cabinet can be attached to the back of a wall panel "provided that the cabinet may be removed and replaced...." The comments and documentation in the "RIO Cabinet Installation Detail" submittal need to be altered. As installed in the field, the RIO cabinet cannot be removed from the wall panel without causing damage.	Resolved	10/19/2020 10:28:06 AM -06:00	Audit Comment	Acknowledged. KIC will work with Sturgeon to address the submittal to match the installation detail	Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Below is a list of items brought up in a field resolved that IQC/PC committed to writing up in an NCR. Attached is the Bridge Standard for Ped Lights (BS062). Steele Bridge Ped Light Issues The NW nut on the NW ped light pole does not have full engagement of the threads. On all poles we may not have enough threads to allow for the 1" grout pad. The SW pole is shimmed to height with washers wedged under the base plate between the anchor bolts. Colorado Bridge Ped Light Issues	Field Resolved	7/9/2020 10:18:23 AM -06:00	Field Resolved		Closed

							<p>Several nuts on the SW light at Colorado bridge do not have full engagement of the nut.</p> <p>The NW pole on the Colorado Bridge has washers wedged under the base plate between the anchor bolts to shim the light pole.</p> <p>The protruding anchor bolts will not allow for the installation of the 1" grout pad shown on the plans.</p> <p>Monroe Bridge Ped Lights</p> <p>The light poles are installed and have enough anchor bolt exposed to allow for the 1" grout pad the poles will just need to be raised up.</p>

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Sign Installation	Signing & Striping	7/9/2020 4:52:28 PM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The permanent signing installed on Monroe does not have nylon washers installed to protect the retroreflective sheeting. The sheeting manufacturer requires nylon washers when twist style fasteners are being used. The washers utilized to fasten the signs were metal. As a result the sheeting on the signs has been damaged. The department has concerns that this may be a project wide issue outside of the signage on Monroe. Attached is a photo and the sheet from the 3M material submittal.	ENCR 250	9/16/2020 8:47:49 AM -06:00	NC-2	ENCR 250 was written to address this issue.	Closed

Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Temporary barrier was installed on the left shoulder of the left turn lane from NB Colorado to 48th. The barrier was installed beyond the limits shown on the plans and as a result the left turn movements from NB & SB Colorado were caused to overlap resulting in vehicles stopping in the intersection and not completing the controlled left turn. In discussions with the MOT a TCR was under way to extend the barrier and separate the turning movements to two different phases of the signal although the work was performed prior to the TCRs being issued. Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	7/9/2020 4:48:18 PM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		At approximately 12:30, a UTC was observed completely blocking the West side of the N Stapleton and Dahlia Intersection. This forced any southbound Dahlia traffic to make a U turn into the intersection, because Dahlia under I-70 was closed. UTC usage in this situation also did not follow MHT 365, typical mobile operation with a UTC.	NCR written	6/26/2021 12:26:01 PM -06:00	NC-2		Closed
Central 70	C 0704-241	Temp Lighting	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Temp lighting removed per plan	Conformance	7/2/2020 2:19:19 PM -06:00	C		Closed
Central 70	C 0704-241	Fencing	Roadway		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All fencing matched grade line and installed per plan.	Conformance	4/5/2021 10:33:19 AM -06:00	C		Closed
Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The ductbank matched the lines, cross-sections and materials required by the plans (EL-102 & EL-150) and specs. Please reference the attached pictures.	Conformance	9/8/2020 9:27:40 AM -06:00	C		Closed

Central 70	C 0704-241	Bridge Rail	Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		<p>The concrete bridge railing at the flared ends of Fillmore does not match the radius on Plan Sheet B060.124. Please reference the attached pictures. This issue was walked and discussed with Jose Sosa on Thursday, June 25th. The following discussion was discovered after the walk on June 25th.</p> <p>Lucas Camp (KMP) and Jerry Waterman (Atkins) agreed that the bridge rail along the flared ends at Fillmore, Josephine and York could be chords instead of a radius. But not Josephine has a radius and Fillmore was placed with chords. Discussions will have to take place to ensure a uniform finish is present across all bridges with flared ends.</p>	Field Resolved	7/28/2020 12:52:03 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Facing Panels	Walls		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All wall panels were placed in accordance with the plans and shop drawings.	Conformance	11/30/2020 3:02:17 PM -07:00	C		Closed

Central 70	C 0704-241	Remove Detour Paving	Maintenance of Traffic (MOT)	2/3/2021 1:10:58 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Asphalt pavement from the temporary off ramp to Central Park Blvd from EB I-270 was left in place on the left shoulder of the final off ramp. Discussion have been had with Mike Svoboda regarding removal of the temp pavement. This comment is being written for tracking of the removal and to track evaluation of the shoulder post asphalt removal. Attached is a photo before asphalt detour pavement placement & during the detour being in place.	Item being tracked on the punchlist	5/17/2021 9:25:31 AM -06:00	Audit Comment	This item was added to the MS-1 Punch list	Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Temporary Tie in cross slopes did not match the original ramp Design/existing conditions. There was a transition from existing 10% to new 1% over only approximately 35'. This was discussed with PC and IQC. Crews are currently performing layout and repair procedures to address concerns. As this is a very tight ramp, cross slopes needed to be maintained for the design speed.	Field Resolved	9/23/2020 10:56:02 AM -06:00	Field Resolved		Closed

Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Conduit installed using directional bore. Confirmed installed per plan sheet ITS-014 on 11/4/2020.	Conformance	11/18/2020 2:36:58 PM -07:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices installed as required	Conformance	10/6/2020 12:40:30 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Node building foundation was started in June of 2020 and completed in July of 2020.	Conformance	5/27/2021 2:03:19 PM -06:00	C		Closed
Central 70	C 0704-241	Lighting Conduit	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Lighting conduit installed per plan sheet LI-02.	Conformance	12/9/2020 2:55:33 PM -07:00	C		Closed
Central 70	C 0704-241	Lighting Foundations	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Streetlights installed per plan sheets LI-015, LI-016 and LI-017.	Conformance	11/11/2020 1:43:40 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		I checked the steel lagging installed and it matched the size and grade required on the shop drawings.	Conformance	6/26/2020 8:36:18 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	Approach Slabs	Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		<p>The approved shop drawing called for a 3 foot gap in the sleeper slab centered over the water line casing. QCATs found that the crew had installed a 6.5' gap in the sleeper slab which was not in accordance with the approved drawings. The crews subsequently had plans to install a wider thinned section of the approach slab. After the issue was brought up production agreed to generate an FDC. Since the FDC is forthcoming the FDC number is unknown.</p> <p>Attached is the field resolution email for this issue.</p>	Field Resolved	6/22/2020 6:50:42 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Excavation per plan	Conformance	7/12/2020 2:48:02 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Conformance	Conformance	9/28/2020 4:50:18 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Fire & Life Safety Commissioning	Fire & Life Safety		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The ductbank was placed in accordance with the following specification. Please reference Plan Sheet EL-106 & EL-150 as well as FDC-400 for Cover Equipment yard layout and changes. Please reference the attached pictures.	Conformance	10/21/2020 1:17:10 PM -06:00	C		Closed
Central 70	C 0704-241	Electrical	Cover		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work was performed in accordance with the following requirements. Reference plan sheet EL-102 and EI-150 for more detail. The duct bank concrete was placed to within 1 foot of the CDOT Basement penetrations. After the waterproofing for these openings is complete the final foot of duct bank concrete will be poured. Please see the attached pictures.	Conformance	10/8/2020 9:21:53 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Installed as required	Conformance	10/1/2020 1:21:52 PM -06:00	C		Closed

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Barrier for the WB On Ramp was omitted, and drums used in place of drums. This is acceptable, due to the edge drop off requirements, and no active work was occurring behind drums.	Conformance	7/14/2020 12:17:16 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All Devices and wiring installed as required.	Conformance	10/5/2020 11:56:50 AM -06:00	C		Closed
Central 70	C 0704-241	Traffic Switch	Maintenance of Traffic (MOT)	9/9/2020 3:33:09 PM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		CMT-1124 details that there should be a dedicated right turn lane from S Stapleton to Holly. This lane was not created in the shift.	ENCR-0268	6/26/2021 12:53:41 PM -06:00	NC-2		Closed
Central 70	C 0704-241	Girders	UPRR Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All girder and incidental materials supplied have the correct documentation with heat and melt numbers. Rotational capacity charts for all bolts are included in the documentation.	Conformance	6/1/2020 3:47:13 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Girders	UPRR Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The fabricated length for girder 4K2 is 68'-5 3/4" which matches the bottom center line to center line measurement on shop drawing sheet 004-WS1. This is in tolerance with "Other Members" with a tolerance of +/- 1/4" as specified by AREMA MRE Ch. 15 Art. 3.1.7.1e(1).	Conformance	6/1/2020 3:51:13 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The shop drawing camber is 7/8" for girder 4M2 and the plan drawing camber is 1/2". This is in tolerance using the AREMA formula $\{(1/16") * (68.47916667)\}$, which is .4280", and the difference between plan and shop drawings is .375".	Conformance	6/1/2020 3:51:47 PM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All girder and incidental materials supplied have the correct documentation with heat and melt numbers. Rotational capacity charts for all bolts are included in the documentation.	Conformance	6/1/2020 3:51:47 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	7/9/2020 4:55:22 PM -06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Expansion joints are located per plan, at 90' intervals	Conformance	6/30/2020 1:57:29 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Lines/Grades and dimensions match the plans	Conformance	6/3/2020 12:20:18 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical	6/8/2020 12:24:01 PM -06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		ITS pole Caisson, 40' ITS steel pole and Environmental Friction Sensor(FES) equipment all installed per plan sheets ITS-050 & ITSXS-62.	Conformance	6/8/2020 10:19:52 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The shop drawing camber is 5/8" for girder 1A1 and the plan drawing camber is 5/8". This is in tolerance using the AREMA formula $\{(1/16") * (69.55208333)\}$, which is .4347", and the difference between plan and shop drawings is 0".	Conformance	6/9/2020 9:50:01 AM -06:00	C		Closed
Central 70	C 0704-241	Girders	UPRR Structures		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The fabricated length for girder 1A1 is 69'-6 1/2" which matches the bottom center line to center line measurement on shop drawing sheet 001-WS1. This is in tolerance with "Other Members" with a tolerance of +/- 1/4" as specified by AREMA MRE Ch. 15 Art. 3.1.7.1e(1).	Conformance	6/9/2020 9:50:01 AM -06:00	C		Closed

Central 70	C 0704-241	General Work	Cover	5/12/2020 4:43:37 PM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The issue was highlighted in a QCAT Field Resolution Email on Tuesday, April 7th. Sturgeon was using 4ft sticks of rebar to support the stayform for the ductbank. Sturgeon ran out of 4ft sticks and started to use 6ft sticks. By using 6ft sticks and my measurements, the structural underdrain was likely damaged. The underdrain was not a consistent 4ft from the back of the abutment as shown in the plans and photos. I inspected both the underdrain installation and ductbank installation. I have pictures with measurements and the associated plans sheets attached. Further investigation is required to ensure the Cover structural underdrain was not damaged. Please reference attached supporting information. PC group will address with point-man information.	By digging up the under drain for investigation will cause more damage than good.	5/29/2020 4:42:11 PM -06:00	Audit Comment	KIC conducted an investigation based on elevations and as built shots. It is KIC survey department the conclusion was that the underdrain should have maintained a minimum 1 foot clear cover from the driving rebar supports. This information was discussed with Adam Mercer.	Closed

All ITS devices installed per plan on sheet ITS-029 and in accordance with all CDOT standards and specifications.	Conformance	6/28/2021 3:00:50 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Conduit installed per plan under existing viaduct(In National Western Center lot) and in accordance with all CDOT standards and specifications.	Conformance	6/28/2021 3:06:49 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		ITS devices and structure installed per plan-sheet ITS-017 and in more detail on sheet SSTR-31. All devices and wiring installed in accordance with all CDOT standards and specifications.	Conformance	9/28/2021 2:07:29 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All ITS devices installed per plan on sheet ITS-021 and in accordance with all CDOT standards and Specifications.	Conformance	6/29/2021 8:11:58 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Lighting Foundations	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		it was observed the the foundation was placed per plan and matched all lines, grades, cross sections, dimensions, and materials requirements.	Conformance	5/5/2021 9:17:00 AM -06:00	C		Closed
Central 70	C 0704-241	Strip/Place Topsoil	Earthwork		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Approved Topsoil was placed per plan in median sections.	Conformance	10/7/2021 1:27:03 PM -06:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All work performed and all materials furnished conform to the lines, grades, cross sections, dimensions and material requirements, including tolerances, shown in the Contract.	Conformance	2/3/2021 8:09:49 AM -07:00	C		Closed
Central 70	C 0704-241	Communications	Cover	3/1/2021 4:31:33 PM -07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		CM-024 CCTV Riser Diagram Note #6 - Fiber Optic Cable shall be routed in 1-2"C in Cover with 120V Power routed in other 1-2"C. The installation in the field matches the CCTV Camera Shop Drawings. Aconex #C70-SECO-SYC-SHD-000042.	Conformance	2/25/2021 9:53:03 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Communications	Cover		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Reference the Aconex submittal (# C70-SECO-SYC-SHD-000017) for the following shop drawing sheets (GE-011, GE-012 & GE-013). The materials as well as installation tolerances follow the appropriate shops drawings for the AM & FM Antennas on the CDOT Building Roof. Please see the pictures attached to this assessment.	Conformance	4/21/2021 3:05:01 PM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All Device have been installed and tested. One(1) CCTV, Six(6) Lane Usage Signs and Two(2) Side-Mount VMS have been installed per plan sheet ITS-012 and in more detail on sheet SSTR-17. All devices and their respective cabinet hardware have been installed in accordance with all CDOT standards and specifications.	Conformance	3/10/2022 1:54:33 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Communications	Cover		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Cut Sheet GE-006 Tensioning Brace Installation Detail - The installation and hardware conform to the cut sheet provided. Please see the attached pictures for the associated pictures. Cut Sheet GE-007 Recommended Tensioning Equipment - The tensioning equipment conform to the cut sheet provided. Please see the attached pictures for the associated pictures. The equipment is as follows: a 8000lb working load sure clamp wire and cable grip, a ratchet wire rope hoist single line, slimline hanging scale with minimum 110 lbs capacity. Please reference the attached pictures. Please see the attached pictures.	Conformance	2/23/2021 9:43:47 AM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The fabricated length for girder 4A6 is 68'-5 3/4" which matches the bottom center line to center line measurement on shop drawing sheet 004-WS2. This is in tolerance with "Other Members" with a tolerance of +/- 1/4" as specified by AREMA MRE Ch. 15 Art. 3.1.7.1e(1).	Conformance	1/19/2021 4:05:14 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All girder and incidental materials supplied have the correct documentation with heat and melt numbers. Rotational capacity charts for all bolts are included in the documentation. The documentation notes that heat treatment was not used on the girder for camber adjustment.	Conformance	1/19/2021 4:05:14 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		The fabricated length for girder 3P5 is 136'-0 5/8" which is the 1/16" less than the bottom center line to center line measurement on shop drawing sheet 003-WS2. This is in tolerance with "Other Members" with a tolerance of +/- 1/4" as specified by AREMA MRE Ch. 15 Art. 3.1.7.1e(1).	Conformance	1/20/2021 3:01:07 PM -07:00	C		Closed
Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All girder and incidental materials supplied have the correct documentation with heat and melt numbers. Rotational capacity charts for all bolts are included in the documentation. The documentation notes that heat treatment was not used on the girder for camber adjustment.	Conformance	1/20/2021 3:01:07 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	UPRR	Railroads		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All girder and incidental materials supplied have the correct documentation with heat and melt numbers. Rotational capacity charts for all bolts are included in the documentation. The documentation notes that heat treatment was not used on the girder for camber adjustment.	Conformance	1/20/2021 3:14:33 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	1/29/2021 2:11:26 PM - 07:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		Plan Sheet DTLCT-03, Note #9 – Solid wall pipe and fittings shall be trenched in accordance with CDOT M-206-1 for flexible. DP-CT2 depicts the location of the solid pipe in question. The backfill for the solid wall pipe (P-TT-46W6030C) does not follow M-206-1. The following pipe was backfilled using #6 stone with a geotextile fabric. Please reference the attached photos. More investigation will need to be done to ensure other locations that have solid pipe tying into the cover underdrain are backfilled appropriately.	Addressed through NCR	4/9/2021 3:57:54 PM -06:00	NC-2	NCR 2523 were written to address this issue	Closed

Central 70	C 0704-241	Guardrail	Roadway	6/24/2021 2:11:17 PM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		<p>The junction box cast into the barrier is not per plan. Plan sheet RDDT-002 shows the box should a minimum of 1ft from the edge. The junction box was installed 6" from the edge.</p> <p>Also after reviewing the detail utilized for the reinforcement of the vertical face concrete at the light pole the original design intent shown on RDDT-002 was for a typical median light with a Type 7 transition on either side of the light pole. Since the light foundation is now the start of the barrier (ie. end anchorage) and will have an attenuator transition anchored to it design evaluation is needed to confirm the reinforcement for a typical light transition is adequate or if additional reinforcement is required (ie. similar to the verticals typically installed in end anchorages).</p> <p>Attached are marked up plan sheets.</p>	NCR written	8/10/2021 9:49:33 AM -06:00	Audit Comment	KIC is writing an NCR for the location of the Junction box. NCR is entered in the NCR log has not been numbered yet but is expected to be 1324	Closed

Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	7/19/2021 6:38:26 AM - 06:00	All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		MHT 489d was used for waterline work on Steele and 45th on the weekend of 10 July. This MHT was not sent to the Department for acceptance until 12 July. For future process, all MHTs must be submitted to the department for acceptance 14 days prior to planned utilization in the field.	Training was complete and should prevent this from happening in the future.	7/20/2021 12:47:39 PM -06:00	Audit Comment	MHT Submittal started on 6/22. Between updating changes and going through IQC, the plan was resubmitted on 6/28. Pete left on vacation on 7/2 when the plan came back to my court and the sub-workflow was ready to be sent to CDOT. The plan stayed in my court until I returned and in the meantime the work had proceeded. I have since taught Suzi and Mitch Cassles how to push through the submittals in my absence.	Closed

Conformance	7/2/2021 10:32:58 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		All devices installed as required on plan sheet ITS-019 and in more detail on sheet SSTR-36. All devices installed in accordance with all CDOT standards and specifications.	Conformance	7/2/2021 10:28:40 AM -06:00	C		Closed
Central 70	C 0704-241	ITS	Electrical		All work performed and all materials furnished shall conform to the lines, grades, cross sections, dimensions, and material requirements, including tolerances, shown in the Contract.		CDOT ITS Cienna 3926 installed into CDOT Type 332 cabinet and installed in accordance with all CDOT standards and specifications. Install data can be referenced on sheet ITS-016.	Conformance	7/2/2021 9:55:13 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Upon delivery, verify receipt of proper material certifications. Inspect pipe and coating material for cracks, defects, and damage that may have occurred during shipping. Verify that smooth lined pipe is being used for irrigation and storm drain systems.		none of the pipe was damaged, and the correct pipe material was used.	Conformance	10/23/2020 7:36:50 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Upon delivery, verify receipt of proper material certifications. Inspect pipe and coating material for cracks, defects, and damage that may have occurred during shipping. Verify that smooth lined pipe is being used for irrigation and storm drain systems.		Pipe delivered was in acceptable condition.	Conformance	1/20/2020 7:31:29 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	11/21/2019 3:48:03 PM - 07:00	Has a Safety Critical Plan for trenching been submitted and approved? 2. Is the work in conformance with this plan?		<p>1. From Restricted Activity 0002- Temp Wall at Swansea, General Note K. No support maybe cut without prior approval. No approval was given.</p> <p>2. NDC-000235 was related to the cut allowed behind the Swansea Wall to install the Cover structure under drain. This NDC was not incorporated in the plans and still is in "Preliminary" Status. The detail should have been adjusted from the original NDC above for the new work planned in the area. The cut was created by the drainage crew without a work plan to addresses excavation concerns. Please see the following documents.</p>	It should be noted that the trench box was only used when there was a best being performed or men in the hole. However, we find this acceptable.	12/5/2019 9:30:14 AM -07:00	Audit Comment	The Swansea temporary sound wall designers were consulted about the work taking place in front of the wall. The Crew used a trench box which stabilized the material on exterior of the trench. The supports on the West end of the wall that were removed for trenching were put back in place after the work progressed past that section of wall. In the future KIC crews will get written approval via email from the EOR and attach it to the work plan	Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Has a Safety Critical Plan for trenching been submitted and approved? 2. Is the work in conformance with this plan?		Previous safety critical approved.	Conformance	10/1/2020 10:32:42 AM -06:00	C		Closed

Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Alignment and elevation of trench matches the plans and specifications		meets planned grades	Conformance	6/9/2020 4:48:28 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Alignment and elevation of trench matches the plans and specifications		Trench was aligned properly.	Conformance	5/11/2020 10:29:10 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Alignment and elevation of trench matches the plans and specifications		Alignment matched the plans and the elevation of the trench matched the plans and what was staked.	Conformance	2/21/2020 3:24:47 PM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Alignment and elevation of trench matches the plans and specifications		Tench line appears to be correct.	Conformance	6/24/2020 8:12:39 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		Trench met requirements for width and depth.	Conformance	5/11/2020 10:26:56 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		Trench bed matched M&S Standards for dimensions.	Conformance	3/17/2020 11:51:15 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		Trench dimension were adequate.	Conformance	5/11/2020 10:28:30 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		Trench dimension were in conformance with specifications.	Conformance	5/11/2020 10:29:10 AM -06:00	C		Closed
Central 70	C 0704-241	Wet (Sanitary Sewer)	Utilities		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		trench properly excavated	Conformance	6/16/2020 12:03:28 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Excavation meets the following criteria: A. Trench width is 1'-6" from each outside face of the drainage element (ie. box, pipe, culvert) B. Trench depth from bottom of pipe is in compliance with the M&S Plans (3" in soil or 12" in rock)		Trench met width and depth criteria.	Conformance	5/11/2020 10:27:58 AM -06:00	C		Closed

Survey was present and being verified by crews	Conformance	10/1/2020 10:32:42 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Trench excavation correctly aligned and proper width. Verify that pipe placement begins at the downstream end. Perform frequent alignment and elevation checks. Be exacting on sanitary sewer grades and flow-line smoothness.		The trench excavation is correctly aligned and the proper width and the pipe placement begins at the downstream end.	Conformance	12/21/2020 9:22:34 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Trench excavation correctly aligned and proper width. Verify that pipe placement begins at the downstream end. Perform frequent alignment and elevation checks. Be exacting on sanitary sewer grades and flow-line smoothness.		Trench excavation was correctly aligned and at the proper depth.	Conformance	4/15/2021 10:15:59 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	11/3/2020 2:15:01 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	10/8/2020 11:20:59 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		pipe was laid south from the pumpstation to the north.	Conformance	10/23/2020 7:36:50 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	9/21/2020 1:41:47 PM - 06:00	Pipe placement begun at downstream end?		Pipe was laid west to East.	Conformance	9/16/2020 11:03:23 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	8/12/2020 12:20:35 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Placement began at downstream end.	Conformance	8/12/2020 12:27:53 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Conformance	Conformance	6/10/2020 5:13:10 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement begun at downstream end. At the time of the audit, pipe placement was approximately halfway into the run, and pipe was being installed from downstream end.	Conformance	6/5/2020 2:01:35 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	6/24/2020 9:55:57 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began downstream working there way upstream.	Conformance	7/7/2020 12:28:40 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	3/6/2020 7:40:16 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	1/20/2020 7:31:29 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Placement of RCP began at the downstream end.	Conformance	12/28/2019 12:58:22 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	5/11/2020 10:26:56 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	11/17/2020 2:08:39 PM -07:00	Pipe placement begun at downstream end?		Monaco NW Corner at Safeway Bottling: Pipe was being installed from the high side instead of beginning at the downstream end.	Agreed	4/16/2020 11:30:58 AM -06:00	Audit Comment	Pipe was removed and placed to proper direction.	Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Placement began at downstream end.	Conformance	3/17/2020 11:51:15 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	5/11/2020 10:28:30 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Pipe placement began at downstream end.	Conformance	5/11/2020 10:29:10 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe placement begun at downstream end?		Placement began at upstream end. Production has written expedited NCR 126, meeting was held discussing process for laying pipe downhill in April.	Field Resolved	5/11/2020 10:27:58 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe rested in contact with bedding material.	Conformance	5/11/2020 10:27:58 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Pipe rested in contact with bedding.	Conformance	5/11/2020 10:29:10 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe rested in bedding.	Conformance	5/11/2020 10:28:30 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe rested in contact with bedding material at springline.	Conformance	3/17/2020 11:51:15 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe rested in bedding material up to springline.	Conformance	5/11/2020 10:26:56 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		The entire length of the pipe rested in contact with the bedding material at the proper flow line.	Conformance	2/21/2020 3:24:47 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entirety of RCP rests in contact with trench bedding material at the proper flow line.	Conformance	12/28/2019 12:58:22 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Bedding material was placed to springline of pipe for entire length.	Conformance	1/20/2020 7:31:29 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire pipe rests on bedding material.	Conformance	3/6/2020 7:40:16 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Length of pipe run witnessed was in full contact with bedding.	Conformance	7/7/2020 12:28:40 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe rested in contact with bedding material.	Conformance	6/24/2020 9:55:57 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Pipe being installed was resting in full contact with the bedding material.	Conformance	6/5/2020 2:01:35 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		The pipe for both the 30" line and Purina tie-in were in contact with the bedding.	Conformance	5/31/2020 3:46:41 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe rested in contact with bedding material.	Conformance	8/12/2020 12:27:53 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe rested in contact with bedding material.	Conformance	8/12/2020 12:20:35 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe was in bedding material.	Conformance	11/3/2020 2:15:01 PM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		Entire length of pipe was in contact with bedding material. Class 1 material will be placed through entire reinforced backfill strap zone.	Conformance	10/8/2020 11:20:59 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Check that the entire length of pipe rests in contact with the bedding material at the proper flow line.		The entire length of the pipe rests in contact with the bedding material at the proper flow line.	Conformance	12/21/2020 9:22:34 AM -07:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		Outside lap of pipe was placed upstream.	Conformance	10/8/2020 11:20:59 AM -06:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		CBC was placed in proper direction	Conformance	10/1/2020 10:32:42 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		Bell end of pipe was placed upstream.	Conformance	8/12/2020 12:20:35 PM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Bell or grooved end of concrete pipe or outside lap of metal or plastic pipe placed upstream?		Outside lap of pipe was placed upstream.	Conformance	8/12/2020 12:27:53 PM -06:00	C		Closed

Conformance	12/15/2020 8:52:58 AM -07:00	C		Closed
Central 70	C 0704-241	CBC (Box Culvert)	Drainage	9/21/2020 1:41:47 PM -06:00	In-place pipe checked for damage prior to backfilling and again before accepting project		No damage was witnessed.	Conformance	9/16/2020 11:03:23 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage		Pipe and structures must be cleaned prior to acceptance		The pipe and manholes were clean when installed. Final visual inspection required for acceptance.	Conformance	5/31/2020 3:46:41 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Archaeological and paleontological materials encountered during the work shall be handled in accordance with subsection 107.23.		Paleo Solutions visits the site to confirm location of all excavations and are monitoring if any materials are encountered.	Conformance	5/11/2020 10:39:45 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		If the material is found to be unsuitable, it must be replaced with a material that is suitable for use as an embankment foundation.		No materials have been found to be unsuitable during this mass excavation.	Conformance	5/11/2020 10:39:45 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		If the material is found to be unsuitable, it must be replaced with a material that is suitable for use as an embankment foundation.		Material was cement treated to ensure suitability for paving operations.	Conformance	3/11/2020 1:25:47 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		If the material is found to be unsuitable, it must be replaced with a material that is suitable for use as an embankment foundation.		No unsuitable material was used.	Conformance	6/9/2020 10:42:02 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		When material becomes saturated due to poor surface drainage, it must be dried.		Material was not saturated.	Conformance	6/9/2020 10:42:02 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		When material becomes saturated due to poor surface drainage, it must be dried.		Saturated material was removed, and suitable material was replaced.	Conformance	2/27/2020 6:47:42 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		When material becomes saturated due to poor surface drainage, it must be dried.		Embankment was graded to prevent water from ponding on grade, and saturated material was removed.	Conformance	3/11/2020 1:25:47 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		When material becomes saturated due to poor surface drainage, it must be dried.		Team is drying the saturated soils prior to excavation or transportation.	Conformance	5/11/2020 10:39:45 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify the location of utilities and the status of any relocation work. Note any encroachment permits. Backfilling shall be accomplished in accordance with subsection 206.03.		Utilities were located, and conflicts were resolved.	Conformance	5/11/2020 10:41:58 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify the location of utilities and the status of any relocation work. Note any encroachment permits. Backfilling shall be accomplished in accordance with subsection 206.03.		Utilities had been cleared in this area.	Conformance	9/16/2020 11:09:34 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify the location of utilities and the status of any relocation work. Note any encroachment permits. Backfilling shall be accomplished in accordance with subsection 206.03.		Conformance	Conformance	9/28/2020 4:50:18 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify the location of utilities and the status of any relocation work. Note any encroachment permits. Backfilling shall be accomplished in accordance with subsection 206.03.		All utilities where potholed, located, and marked prior to excavation.	Conformance	10/26/2021 8:24:13 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify the location of utilities and the status of any relocation work. Note any encroachment permits. Backfilling shall be accomplished in accordance with subsection 206.03.		All utilities and other permanent work were marked and protected.	Conformance	12/7/2021 11:49:23 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify the location of utilities and the status of any relocation work. Note any encroachment permits. Backfilling shall be accomplished in accordance with subsection 206.03.		Utilities were located prior to excavation of pond.	Conformance	8/16/2021 7:30:37 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		All applicable erosion and sediment controls were in place.	Conformance	12/7/2021 11:49:23 AM -07:00	C		Closed
Central 70	C 0704-241	Pavement/Surface Removals	Removal		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		conformance	Conformance	12/4/2020 9:04:42 AM -07:00	C		Closed
Central 70	C 0704-241	Install Temporary Drainage	Drainage		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		Environmental controls were placed prior to excavation.	Conformance	3/9/2021 3:54:25 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		Conformance	Conformance	9/28/2020 4:50:18 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		New inlets were protected before excavation	Conformance	9/16/2020 11:09:34 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		Conformance	Conformance	9/16/2020 1:41:30 PM -06:00	C		Closed
Central 70	C 0704-241	Pavement/Surface Removals	Removal		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		inlet protection was in place	Conformance	12/15/2020 8:55:37 AM -07:00	C		Closed
Central 70	C 0704-241	Pavement/Surface Removals	Removal		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		Inlet protection was in place	Conformance	12/15/2020 8:55:09 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify compliance with respect to erosion and sedimentation control, vegetation and tree protection, wetlands, and other environmental requirements including mitigation measures committed to in the Environmental Assessment or Environmental Impact Statement.		All BMPs were placed and maintained during operation.	Conformance	5/11/2020 10:41:58 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Become familiar with the typical sections of the Contract Plans.		Excavation was performed according to plan and phase for caisson wall lagging.	Conformance	12/7/2021 11:49:23 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that slope stakes are properly set		Stakes were observed being placed by the survey crew.	Conformance	10/26/2021 8:24:13 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Visually check staking for obvious irregularities (e.g., off right of way).		Did not witness any irregularities. All stakes were placed within the project limits.	Conformance	10/26/2021 8:24:13 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Observe the area for unsuitable material and wet spots.		Areas of soft and unsuitable material were removed and cement treated.	Conformance	2/5/2021 9:39:43 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Base	Earthwork		Observe the area for unsuitable material and wet spots.		No unsuitable or wet spots were observed.	Conformance	11/6/2020 1:37:51 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Observe the area for unsuitable material and wet spots.		No wet spots were noted on the assessment	Conformance	5/11/2020 10:45:05 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Observe the area for unsuitable material and wet spots.		No unsuitable material was observed, soft spots found during proof roll were identified and corrected.	Conformance	7/20/2020 8:16:29 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Verify removal or treatment based on the direction given by the Project Engineer.		Removals were conducted in accordance with plans	Conformance	2/5/2021 9:39:43 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Make certain the Contractor preserves slope stakes and control point references during the operation		Contractor is using GPS. However, as they get closer to subgrade, survey stakes are typically used.	Conformance	5/11/2020 10:39:45 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Make certain the Contractor preserves slope stakes and control point references during the operation		Control point references were maintained throughout operation.	Conformance	6/9/2020 10:42:02 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Site was properly cleared and grubbed.	Conformance	6/9/2020 10:42:02 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Verify that the site has been properly cleared and grubbed		Site was properly prepared for curb and gutter.	Conformance	2/27/2020 6:47:42 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Area was cleared and grubbed.	Conformance	5/11/2020 10:39:45 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Verify that the site has been properly cleared and grubbed		Site was properly cleared and grubbed.	Conformance	9/16/2020 11:14:30 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Verify that the site has been properly cleared and grubbed		Conformance	Conformance	6/4/2020 7:41:26 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Top 1' material was removed	Conformance	9/16/2020 11:09:34 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Conformance	Conformance	9/16/2020 8:07:06 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Conformance	Conformance	9/16/2020 1:41:30 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Site was properly cleared and grubbed.	Conformance	5/10/2021 2:58:10 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		conformance	Conformance	10/28/2020 11:13:01 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the site has been properly cleared and grubbed		Site was properly cleared and grubbed.	Conformance	10/26/2021 8:24:13 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		All excavation activities in areas where asbestos is encountered or expected to be encountered shall conform to...		No asbestos was encountered during excavation operation.	Conformance	5/10/2021 2:58:10 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		All excavation activities in areas where asbestos is encountered or expected to be encountered shall conform to...		No asbestos was observed in this area. Monitors techs were onsite during excavations.	Conformance	9/16/2020 11:09:34 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		All excavation activities in areas where asbestos is encountered or expected to be encountered shall conform to...		No asbestos encountered in this location	Conformance	5/11/2020 10:39:45 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Materials that contain organics or that cannot be dried or moisture conditioned, then compacted to the required density shall be disposed of and shall not be reused as embankment fill		No organics were in material.	Conformance	9/16/2020 11:14:30 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Materials that contain organics or that cannot be dried or moisture conditioned, then compacted to the required density shall be disposed of and shall not be reused as embankment fill		No organics found in this location after top 1' was removed.	Conformance	5/11/2020 10:39:45 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Materials that contain organics or that cannot be dried or moisture conditioned, then compacted to the required density shall be disposed of and shall not be reused as embankment fill		No organics were observed	Conformance	9/16/2020 11:09:34 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Materials that contain organics or that cannot be dried or moisture conditioned, then compacted to the required density shall be disposed of and shall not be reused as embankment fill		Conformance	Conformance	9/28/2020 4:50:18 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Materials that contain organics or that cannot be dried or moisture conditioned, then compacted to the required density shall be disposed of and shall not be reused as embankment fill		No unsuitable material was stockpiled for reuse.	Conformance	12/7/2021 11:49:23 AM -07:00	C		Closed
Central 70	C 0704-241	Install Temporary Drainage	Drainage		Verify removal based on directives from the Project Engineer.		Material removed was hauled to proper sites for reuse or stockpiling.	Conformance	3/9/2021 3:54:25 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Overburden shall be removed to the depth required for the production of acceptable material, and at least 5 feet beyond are being excavated. Where topsoil stripping is specified, ensure that topsoil is properly salvaged (see Section 207)		No overburden was located in this area. Top 1' was removed to be used elsewhere on the project or offsite.	Conformance	5/11/2020 10:39:45 AM -06:00	C		Closed
Central 70	C 0704-241	Install Drainage (Permanent)	Drainage	4/7/2021 4:28:05 PM -06:00	Verify ditch construction (e.g., typical sections, staking, natural drainage, interceptor ditches at tops of cuts).		Business drainage pipe was covered during concrete ditch construction.	NCR 2601 written	6/3/2021 9:18:35 AM -06:00	NC-2	NCR 2601 was written to address this issue.	Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Watch for damage to the embankment (e.g., unexpected high water with respect to design, improperly drained foundation or roadbed, damage from precipitation).		Embankment was protected from damage.	Conformance	12/10/2020 2:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Watch for damage to the embankment (e.g., unexpected high water with respect to design, improperly drained foundation or roadbed, damage from precipitation).		Embankment was protected from weather.	Conformance	6/9/2020 10:42:02 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Watch for damage to the embankment (e.g., unexpected high water with respect to design, improperly drained foundation or roadbed, damage from precipitation).		Embankment was not damaged by improper drainage.	Conformance	6/18/2020 10:21:24 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Ensure that the Best Management Practices for water quality control are monitored as required		Conformance	Conformance	9/16/2020 8:07:06 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Ensure that the Best Management Practices for water quality control are monitored as required		conformance	Conformance	10/28/2020 11:13:01 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that slopes and transition areas are being treated as specified with regard to keying the new material		Slopes and transition areas were treated with regard to keying new material.	Conformance	2/5/2021 10:37:41 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that slopes and transition areas are being treated as specified with regard to keying the new material		Material was keyed in properly.	Conformance	5/11/2020 10:41:58 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Criteria is meet for Soil Embankment, Rock Embankment, and Rock Fill		Soil embankment was performed with respect to the specifications.	Conformance	12/10/2020 2:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		No organic or frozen materials were used in the embankment.	Conformance	12/10/2020 2:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Subgrade was maintained free of organic or frozen materials.	Conformance	2/5/2021 9:37:47 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was maintained free of organic and frozen materials.	Conformance	11/11/2020 1:34:50 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		No frozen or organic materials were placed.	Conformance	11/19/2020 2:14:46 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was kept free of organic and frozen material.	Conformance	2/5/2021 10:37:41 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was maintained free of organic materials.	Conformance	4/27/2021 8:25:03 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was maintained free of organic and frozen materials.	Conformance	3/9/2021 3:55:09 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment material was clean and free of organic and frozen material.	Conformance	6/15/2021 7:40:49 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment had no organic materials or frozen materials.	Conformance	5/11/2020 10:41:58 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was free of organic and frozen materials.	Conformance	6/24/2020 8:18:23 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		The subgrade material was in accordance with this specification. Please reference the attached pictures.	Conformance	11/6/2020 1:37:51 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was maintained free of unsuitable materials.	Conformance	6/16/2020 12:01:10 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was kept free of organic and frozen materials.	Conformance	8/12/2020 12:29:29 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		No organic or frozen material was present in backfill.	Conformance	4/6/2020 7:10:55 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		No organic material was observed in embankment.	Conformance	6/9/2020 10:42:02 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was free of any deleterious material.	Conformance	4/6/2020 7:10:37 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was free of organic and frozen materials.	Conformance	2/27/2020 6:47:42 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment material was free of organics and was uniformly mixed	Conformance	10/21/2020 1:15:11 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		Embankment was kept free of organic material.	Conformance	7/14/2020 12:17:46 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		No organic material was observed in embankment.	Conformance	6/18/2020 10:21:24 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		No organic material was observed in subgrade.	Conformance	8/3/2020 11:25:38 AM -06:00	C		Closed
Central 70	C 0704-241	Lowered Roadway Dry Standpipe	Cover	5/19/2020 11:37:15 AM -06:00	Check to ensure that the embankment is maintained free of organic and frozen materials and uniformly mixed.		The granular bedding material was free of organics and frozen material.	Conformance	5/18/2020 10:51:57 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		No large rocks or other material was kept in embankment.	Conformance	7/14/2020 12:17:46 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Any large rocks or asphalt was removed.	Conformance	2/27/2020 6:47:42 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		All large rocks were removed.	Conformance	6/9/2020 10:42:02 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		No large chunks of rock, concrete, or asphalt were kept in embankment.	Conformance	8/12/2020 12:29:29 PM -06:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		No chunks were in the fill material as it was select and uniformly graded.	Conformance	9/8/2020 9:26:46 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		No large rocks, concrete, or asphalt chunks were placed.	Conformance	6/16/2020 12:01:10 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Large pieces of material were removed from embankment.	Conformance	2/5/2021 9:34:17 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		No large pieces of rock, asphalt, or concrete were in embankment.	Conformance	6/24/2020 8:18:23 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		All rocks, concrete, and asphalt chunks were within allowable dimensions.	Conformance	5/11/2020 10:41:58 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		Rocks were disposed of properly.	Conformance	4/27/2021 8:25:03 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Rocks, concrete, and asphalt chunks larger than allowable dimensions must be removed and disposed of properly.		No large rocks, concrete, or asphalt was found in embankment material.	Conformance	11/11/2020 1:34:50 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Uniform horizontal lifts were placed.	Conformance	11/19/2020 2:14:46 PM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Uniform horizontal lifts were placed.	Conformance	2/5/2021 9:37:47 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Embankment was placed in uniform horizontal lifts.	Conformance	12/10/2020 2:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Uniform horizontal lifts were placed.	Conformance	2/5/2021 10:37:41 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Embankment was placed in uniform horizontal lifts.	Conformance	4/27/2021 8:25:03 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Embankment material was placed in uniform horizontal lifts.	Conformance	3/9/2021 3:55:09 PM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Embankment material was placed in horizontal lift and did not exceed allowable maximum thickness.	Conformance	6/15/2021 7:40:49 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Material was placed in uniform horizontal lifts.	Conformance	5/11/2020 10:41:58 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Uniform horizontal lifts were placed in up to 8 inch loose lifts.	Conformance	6/24/2020 8:18:24 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		6" of ABC was placed in accordance with lift thickness. Reference plan sheet TS-003A for roadway cross-section.	Conformance	11/6/2020 1:37:51 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Emankment material was placed in uniform horizontal lifts.	Conformance	6/16/2020 12:01:10 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Uniform lifts were placed.	Conformance	2/5/2021 9:34:17 AM -07:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		I observed the contractor placing uniform lifts that did not exceed the allowable maximum thickness.	Conformance	9/8/2020 9:26:46 AM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Uniform lifts of 6-8" inch loose were placed.	Conformance	8/12/2020 12:29:29 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Embankment material was place in uniform lifts and within allowable maximum thickness	Conformance	10/21/2020 1:15:11 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Embankment was placed in lifts	Conformance	12/1/2020 12:27:13 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Verify that the embankment material is placed in uniform horizontal lifts that do not exceed the allowable maximum thickness.		Uniform horizontal lifts were placed.	Conformance	6/18/2020 10:21:24 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Embankment material shall be classified into one of the material groups listed below, and placed and compacted in accordance with the appropriate methods specified		Material was compacted with proper equipment. PC and IQC achieved passing densities on material after compaction.	Conformance	6/18/2020 10:21:24 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Embankment material shall be classified into one of the material groups listed below, and placed and compacted in accordance with the appropriate methods specified		compaction was tested and passed.	Conformance	12/1/2020 12:27:13 PM -07:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Embankment material shall be classified into one of the material groups listed below, and placed and compacted in accordance with the appropriate methods specified		Embankment material was appropriately compacted. The top foot of material was cement treated for subgrade preparation.	Conformance	8/12/2020 12:29:29 PM -06:00	C		Closed
Central 70	C 0704-241	Structure Exc/Backfill	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Target densities and moisture contents were achieved.	Conformance	8/12/2020 12:29:29 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Target density and moisture content was achieved.	Conformance	2/5/2021 9:34:17 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Embankment was compacted to target densities.	Conformance	6/9/2020 10:42:02 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction operation was uniform. IQC and PC achieved passing density tests.	Conformance	2/27/2020 6:47:42 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		compaction was uniform and controlled.	Conformance	12/1/2020 12:27:13 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction operation was observed. Density tests were taken, moisture content and target density were achieved.	Conformance	10/21/2020 1:15:11 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Adequate compaction effort was applied to embankment. PC and IQC achieved passing moisture densities on embankment.	Conformance	7/14/2020 12:17:46 PM -06:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		I observed PC and IQC running nuclear density tests and all results were acceptable for moisture content and target density.	Conformance	9/8/2020 9:26:46 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction operation was uniformly performed with respect to moisture content and target density.	Conformance	6/15/2021 7:40:49 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction to proper density and moisture was completed.	Conformance	3/9/2021 3:55:09 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		IQC confirmed density/moisture tests were passing.	Conformance	5/10/2021 2:58:38 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction was performed with respect to target densities and moisture content.	Conformance	2/5/2021 10:37:41 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction operation was observed and target moisture and density was achieved.	Conformance	4/5/2021 10:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Compaction operation was uniform.	Conformance	8/10/2021 9:25:57 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Observe the compaction operation for uniformity with respect to moisture content and target density.		Subgrade was compacted to target density.	Conformance	2/5/2021 9:37:47 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Monitor the operation of specialized compaction equipment for compliance.		Proper compaction equipment was used.	Conformance	3/9/2021 3:55:09 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Monitor the operation of specialized compaction equipment for compliance.		Proper compaction equipment was used.	Conformance	2/5/2021 9:34:17 AM -07:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		Monitor the operation of specialized compaction equipment for compliance.		Compaction equipment was in accordance with this specification.	Conformance	11/6/2020 1:37:51 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		No rock material was in top 2 feet of embankment.	Conformance	6/24/2020 8:18:24 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		Top two feet of embankment were rock free.	Conformance	5/11/2020 10:41:58 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		The top two feet of embankment was constructed with rock free material.	Conformance	10/21/2020 1:15:11 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		no rocks were witnessed in the top 2 feet.	Conformance	12/1/2020 12:27:13 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		Top 2 feet of material was rock free.	Conformance	4/27/2021 8:25:03 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Check that the top two feet of embankment is constructed with rock free material.		Top two feet of embankment material placed was free of rock material.	Conformance	6/15/2021 7:40:49 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		Top 2 feet of material was rock free.	Conformance	8/10/2021 9:25:57 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		Top 2 feet of embankment was rock free.	Conformance	12/1/2020 12:25:13 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		Top 2 feet of material was rock free.	Conformance	11/11/2020 1:34:50 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		Checked top two feet of embankment material as area was being constructed. Material was rock free.	Conformance	4/5/2021 10:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Check that the top two feet of embankment is constructed with rock free material.		Top two feet of material was rock free.	Conformance	2/5/2021 10:37:41 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		The proof roll was conducted in conformance with the specification?		Proof roll was conducted and was in conformance to spec.	Conformance	4/5/2021 10:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		The proof roll was conducted in conformance with the specification?		Proof roll was conducted and soft spots identified and corrected.	Conformance	11/19/2020 2:14:46 PM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		The proof roll was conducted in conformance with the specification?		Informational proof rolls were conducted, and soft spots were corrected.	Conformance	12/10/2020 2:29:39 PM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		The proof roll was conducted in conformance with the specification?		Proof roll was conducted in conformance to spec.	Conformance	6/15/2021 7:40:49 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		The proof roll was conducted in conformance with the specification?		Proof roll was conducted in accordance with specifications.	Conformance	4/27/2021 8:25:03 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		The proof roll was conducted in conformance with the specification?		IQC performed a proof roll.	Conformance	5/10/2021 2:58:38 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		The proof roll was conducted in conformance with the specification?		proof roll was performed and passed before base was placed. Also performed after base and passed.	Conformance	12/1/2020 12:27:13 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		The proof roll was conducted in conformance with the specification?		Proof Roll was conducted and no soft spots were identified.	Conformance	10/21/2020 1:15:11 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		The proof roll was conducted in conformance with the specification?		Proof Roll was conducted in conformance with specification prior to placement of base course.	Conformance	6/24/2020 8:18:24 AM -06:00	C		Closed
Central 70	C 0704-241	Base	Earthwork		The proof roll was conducted in conformance with the specification?		Initial inspections were complete by Dan Cannan of IQC on October 21, 22, 23 and 24. The final inspection with proof roll was completed by Arlo Carpenter of IQC on October 28th. Please see attached.	Conformance	11/6/2020 1:37:51 PM -07:00	C		Closed
Central 70	C 0704-241	Railroad Grading	Earthwork		The proof roll was conducted in conformance with the specification?		I observed the proof roll and it was in conformance with the specifications.	Conformance	9/8/2020 9:26:46 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Ensure that embankment material is being placed to avoid damage to adjacent structures.		Material was placed to avoid damage to adjacent structures.	Conformance	6/16/2020 12:01:10 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Ensure that embankment material is being placed to avoid damage to adjacent structures.		Embankment material was placed to avoid damage to inlets and other structures.	Conformance	4/6/2020 7:10:55 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Ensure that embankment material is being placed to avoid damage to adjacent structures.		No structures were damaged during compaction.	Conformance	5/10/2021 2:58:38 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Ensure that embankment material is being placed to avoid damage to adjacent structures.		Material was placed to avoid damage to structures.	Conformance	11/11/2020 1:34:50 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Roots, logs, and other unsuitable materials must be disposed of in designated areas outside the fill area.		Unsuitable materials were removed from embankment.	Conformance	11/19/2020 2:14:46 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Roots, logs, and other unsuitable materials must be disposed of in designated areas outside the fill area.		No unsuitable material was used.	Conformance	8/10/2021 9:25:57 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Roots, logs, and other unsuitable materials must be disposed of in designated areas outside the fill area.		No unsuitable materials were placed.	Conformance	12/1/2020 12:25:13 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Roots, logs, and other unsuitable materials must be disposed of in designated areas outside the fill area.		No unsuitable material was placed in subgrade.	Conformance	4/6/2020 7:10:55 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		Area was checked for conformance.	Conformance	10/21/2020 1:15:11 PM -06:00	C		Closed
Central 70	C 0704-241	Earthwork	Earthwork		Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		QCATs met with PC (John T and Hannah) on site to discuss the non-conformance in regards to the ditch grading and side-slopes not matching sheet RDGD-036 in the EB Off Ramp - Peoria gore. This will lead to further investigation on the elevation and orientation of Inlet. Due to the grading not matching the plans and in the location it was, KIC was to set out a shoulder closure to delineate/protect the slope and area.	Field Resolved	6/5/2020 6:18:49 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		Cross section was formed in conformance with plans.	Conformance	2/5/2021 9:37:47 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		Cross section was in conformance in regards to tolerances of typical section for the area.	Conformance	4/5/2021 10:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		Frequently monitor the earthwork cross-section (e.g., width, side slopes, grade) for conformance with regard to tolerance of typical sections.		Cross sections were maintained.	Conformance	2/5/2021 10:37:41 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		After construction, verify that the roadway grade and prism are within specified tolerance and that embankment construction meets the density requirements of the Contract.		Roadway grade was as-built and met density requirements.	Conformance	2/5/2021 10:37:41 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		After construction, verify that the roadway grade and prism are within specified tolerance and that embankment construction meets the density requirements of the Contract.		Roadway grade and prism were within tolerance. Embankment construction met density requirements of the contract.	Conformance	4/5/2021 10:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		After construction, verify that the roadway grade and prism are within specified tolerance and that embankment construction meets the density requirements of the Contract.		Grade was constructed properly, and passing densities were achieved.	Conformance	8/3/2020 11:25:38 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		The Department's inspectors have a responsibility to thoroughly inspect all subgrade in cooperation with the Contractor's forces.		Subgrade was walked down with iqc and observed by CDOT.	Conformance	9/16/2020 11:09:34 AM -06:00	C		Closed
Central 70	C 0704-241	BNSF	Railroads	5/20/2020 2:31:05 PM - 06:00	The Department's inspectors have a responsibility to thoroughly inspect all subgrade in cooperation with the Contractor's forces.		PC, IQC, BNSF reps, and CDOT reps were on site during testing and final proofroll	Conformance	5/20/2020 9:39:51 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		The Department's inspectors have a responsibility to thoroughly inspect all subgrade in cooperation with the Contractor's forces.		IQC and QCATs inspected subgrade prior to concrete placement.	Conformance	12/1/2020 12:25:13 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Subgrade was constructed to proper elevation and grade, and as-built.	Conformance	12/16/2020 11:49:37 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Subgrade was constructed to the required cross slope elevation.	Conformance	5/10/2021 2:58:10 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Subgrade was inspected to ensure conformity to slope and elevation.	Conformance	8/10/2021 9:25:57 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Subgrade was as built by survey and inspected by IQC.	Conformance	2/5/2021 9:39:43 AM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Subgrade was checked for slope, elevation, and alignment prior to curb placement.	Conformance	7/23/2021 1:03:11 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Subgrade was inspected and elevations checked for conformance. An area of approximately 100' starting from the RTD bridge tie in going north was found to be at the incorrect elevation, and was not approved by IQC for pour.	Conformance	4/5/2021 10:31:10 AM -06:00	C		Closed
Central 70	C 0704-241	BNSF	Railroads	5/20/2020 2:31:05 PM -06:00	1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		GPS and survey were used to verify the grade/elevations of the sub-ballast. It was graded to drain appropriately.	Conformance	5/20/2020 9:39:51 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Subgrade was checked string line and levels off of forms.	Conformance	4/6/2020 7:10:37 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Grade was checked after construction.	Conformance	4/6/2020 7:10:55 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Survey stakes were present at time of base placement.	Conformance	5/11/2020 10:45:05 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		1. Check that subgrade/base has been constructed, string-lined and inspected to assure that the required cross-slope, elevation, and alignment has been obtained as required pursuant to the contract.		Typical Sections for 46 North and Josephine were not followed. This resulted in the removal of all 46 N Pavement.	Field Resolved	7/16/2020 3:28:41 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	HMA	Roadway		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade did not meet 203.4 Spec which states: Where asphalt or concrete surfacing materials are to be placed directly on the subgrade. The subgrade plane shall not vary more than 0.04 foot.	Field Resolved	7/16/2020 3:28:41 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Grade was met.	Conformance	9/16/2020 11:09:34 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was free of ruts and irregularities	Conformance	7/20/2020 8:16:29 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		No ruts were present at time of base placement.	Conformance	5/11/2020 10:45:05 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to required grade. Survey performed as built of detour.	Conformance	3/11/2020 1:25:47 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to required section.	Conformance	4/6/2020 7:10:37 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to required grade and section.	Conformance	6/15/2020 5:12:37 PM -06:00	C		Closed
Central 70	C 0704-241	BNSF	Railroads	5/20/2020 2:31:05 PM -06:00	2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		No irregularities were noted. It was uniformly compacted.	Conformance	5/20/2020 9:39:51 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		After IQC Grading approval, several areas of the grade were observed to have excessive amount of moisture, possibly caused from snowmelt runoff. After this was identified and communicated to IQC Flatwork Inspector and Flatwork Foreman, the saturated material was removed and replaced, and area re-inspected by WAQTC qualified IQC inspector.	Field Resolved	4/5/2021 10:31:10 AM -06:00	Field Resolved		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		The CTS was shaped to the required grade and section.	Conformance	2/8/2021 2:09:24 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was free from irregularities.	Conformance	7/23/2021 1:03:11 PM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to the required grade and the CTS operation commenced.	Conformance	5/10/2021 2:58:10 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to required grade and section, and was rut free.	Conformance	12/1/2020 12:24:19 PM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		2. The subgrade shall be shaped to the required grade and section, free from all ruts, corrugations, or other irregularities, and uniformly compacted and approved in accordance with Section 203.		Subgrade was shaped to required section.	Conformance	12/1/2020 12:25:13 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		3. Ensure that the specified materials have been incorporated into the work in accordance with .		New materials and dry cement were incorporated properly with grade.	Conformance	2/5/2021 9:39:43 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to at least 95% max density within optimum moisture content.	Conformance	2/5/2021 9:39:43 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required moisture and density.	Conformance	12/1/2020 12:24:19 PM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required moisture/density.	Conformance	12/16/2020 11:49:37 AM -07:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade (CTS) and base were compacted and met density and moisture when tested.	Conformance	5/10/2021 2:58:10 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required moisture density.	Conformance	8/10/2021 9:25:57 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted properly, met density and moisture requirement.	Conformance	4/5/2021 10:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	BNSF	Railroads	5/20/2020 2:31:05 PM - 06:00	4. Check that the subgrade/base has been compacted to the required moisture/density.		OVT, IQC and PC struggled getting their required densities. They each took a sample to verify proctors which in turn should verify their tests as acceptable. OVT took a one-point sample in this location. To close this audit comment, please included passing test #'s and new proctor information.	OVT results also passed.	6/1/2020 4:13:24 PM -06:00	Audit Comment	PC results were sent to the Department team. My understanding is this issue is resolved VIA the OVT/IQC whats APP.	Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted properly, density tests performed and passed.	Conformance	6/22/2020 8:56:52 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required density.	Conformance	4/6/2020 7:10:37 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required density.	Conformance	6/15/2020 5:12:37 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		PC/IQC was onsite during compaction operations.	Conformance	5/11/2020 10:45:05 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Subgrade was compacted to required density.	Conformance	4/6/2020 7:10:55 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		4. Check that the subgrade/base has been compacted to the required moisture/density.		Base and Subgrade was compacted to required moisture/density.	Conformance	10/1/2020 10:35:48 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		No soft spots or rutting was found during proof rolling operation.	Conformance	10/1/2020 10:35:48 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		Softs spots were identified and corrected.	Conformance	11/5/2020 11:32:18 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		IQC was onsite for proof rolling operations, soft spots were identified and corrected.	Conformance	7/20/2020 8:16:29 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		No soft spots or ruts were observed in subgrade.	Conformance	3/11/2020 1:25:47 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		During proof roll operation a soft spot was identified and corrected.	Conformance	6/22/2020 8:56:52 AM -06:00	C		Closed
Central 70	C 0704-241	BNSF	Railroads	5/20/2020 2:31:05 PM - 06:00	5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		Only two minor soft spots were noted during the proofroll. These areas were recompacted until movement ceased.	Conformance	5/20/2020 9:39:51 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		Soft spots identified during proof rolling operation were corrected prior to paving.	Conformance	8/10/2021 9:25:57 AM -06:00	C		Closed
Central 70	C 0704-241	Roadway Exc/Embank	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		Proof roll was conducted and no soft spots were identified.	Conformance	5/10/2021 2:58:10 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		Proof rolling operation occurred, and soft spots identified.	Conformance	12/16/2020 11:49:37 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		No soft spots were identified during proof roll.	Conformance	12/1/2020 12:24:19 PM -07:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		5. During the proof rolling operation, check for soft spots and ruts, and ensure that the contractor corrects these deficiencies.		No soft spot were identified during proof roll operation.	Conformance	6/15/2021 7:40:49 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		IQC identified a few soft spots during the proof roll; Material was removed from the subgrade and was replaced with aggregate base course.	Conformance	5/10/2021 2:58:38 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		All soft spots were corrected prior to paving.	Conformance	12/16/2020 11:49:37 AM -07:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Any soft spots should be corrected before the paving operation begins.		No soft spots were observed prior to curb placement.	Conformance	7/23/2021 1:03:11 PM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		Soft spots were corrected prior to paving.	Conformance	4/5/2021 10:31:51 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		Soft spots identified during proof rolling operation were fixed prior to paving.	Conformance	6/15/2020 5:12:37 PM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		Any soft spots should be corrected before the paving operation begins.		No soft spots were identified during inspection.	Conformance	4/6/2020 7:10:37 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		No soft spots were found at the southern tie in. Pavement took place.	Conformance	5/11/2020 10:45:05 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		Softs spots were identified and corrected.	Conformance	11/5/2020 11:32:18 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		Soft spots were corrected prior to paving	Conformance	7/20/2020 8:16:29 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Subgrade	Earthwork		Any soft spots should be corrected before the paving operation begins.		No soft spots were found.	Conformance	10/1/2020 10:35:48 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		6. Ensure that the work has been adequately protected once the subgrade has been approved in accordance with the specification.		Work was adequately protected.	Conformance	10/1/2020 10:35:48 AM -06:00	C		Closed
Central 70	C 0704-241	Finegrade Flatwork	Earthwork		6. Ensure that the work has been adequately protected once the subgrade has been approved in accordance with the specification.		Site was graded so that water would drain away from area, and protected with blanket prior to concrete placement.	Conformance	2/27/2020 6:47:42 AM -07:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		7. Upon approval of the proof rolling, the subbase, base course, or initial pavement course shall be placed within 48 hours.		Pavement was placed within 48 hours of proof roll.	Conformance	6/15/2020 5:12:37 PM -06:00	C		Closed
Central 70	C 0704-241	BNSF	Railroads	5/20/2020 2:31:05 PM -06:00	7. Upon approval of the proof rolling, the subbase, base course, or initial pavement course shall be placed within 48 hours.		Ballast was being placed in this area on 5/15/2020.	Conformance	5/20/2020 9:39:51 AM -06:00	C		Closed
Central 70	C 0704-241	Subgrade	Earthwork		7. Upon approval of the proof rolling, the subbase, base course, or initial pavement course shall be placed within 48 hours.		HMA was placed within the allowable time frame allowed per spec.	Conformance	6/22/2020 8:56:52 AM -06:00	C		Closed

Conformance	8/19/2021 1:48:35 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Is the application uniform and continuous at the specified rate? Does the spray bar nozzles deliver without streaking? Was excess application corrected? Was overspraying an issue? (curb, gutters, and barrier)		Tack coat was uniform, continuous, no streaking, no excess application, no overspray.	Conformance	8/3/2020 11:29:50 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was tack placed under the following two conditions? Prime coat and tack coat shall not be applied under the following conditions: 1. When the surface is wet. 2. When weather conditions would prevent the proper construction of the prime or tack coat		Tack was placed on clean and dry surface, weather conditions were acceptable.	Conformance	8/21/2020 4:22:58 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was tack placed under the following two conditions? Prime coat and tack coat shall not be applied under the following conditions: 1. When the surface is wet. 2. When weather conditions would prevent the proper construction of the prime or tack coat		Surface was dry and clean, temperature was 55 degrees.	Conformance	4/24/2020 8:46:09 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	11/25/2019 12:00:00 AM - 07:00	Was tack placed under the following two conditions? Prime coat and tack coat shall not be applied under the following conditions: 1. When the surface is wet. 2. When weather conditions would prevent the proper construction of the prime or tack coat		The pavement area and the weather were appropriate for the placement of tack. Tack was properly place on all vertical faces before asphalt was placed.	Conformanc e	11/25/2019 1:18:59 PM -07:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	Was tack placed under the following two conditions? Prime coat and tack coat shall not be applied under the following conditions: 1. When the surface is wet. 2. When weather conditions would prevent the proper construction of the prime or tack coat		Weather conditions were dry and warm.	Conformanc e	8/19/2021 1:48:35 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was tack placed under the following two conditions? Prime coat and tack coat shall not be applied under the following conditions: 1. When the surface is wet. 2. When weather conditions would prevent the proper construction of the prime or tack coat		Tack coat was placed when the surface was dry, weather conditions were acceptable for tack coat and asphalt pavement placement.	Conformanc e	9/30/2021 7:25:05 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	7/14/2021 2:09:06 PM - 06:00	Was tack placed under the following two conditions? Prime coat and tack coat shall not be applied under the following conditions: 1. When the surface is wet. 2. When weather conditions would prevent the proper construction of the prime or tack coat		The surface of the previously placed asphalt mat was not wet, and no adverse weather conditions noted.	Conformanc e	7/14/2021 2:01:02 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was tack placed under the following two conditions? Prime coat and tack coat shall not be applied under the following conditions: 1. When the surface is wet. 2. When weather conditions would prevent the proper construction of the prime or tack coat		Tack was placed under proper weather conditions.	Conformanc e	6/28/2021 2:39:54 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	Equipped with proper spread rate and temperature controls? Capable of positive cut-off? Spray width properly set (15 feet)?		The tack truck was equipped with proper spread rate and temperature controls, capable of positive cut-off, spray width set to match roadway width.	Conformanc e	8/19/2021 1:48:35 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Central 70	C 0704-241	SMA	Roadway	8/14/2020 4:34:13 PM - 06:00	Differing appearance in subsequent loads may indicate an unacceptable change in mix proportions or temperature. The Project Inspector should notify the Construction Manager if any of the previous conditions occur. 1) Is the appearance of the load seam peaking or flat, dull or shiny, white or blue smoke? 2) Does the mix look segregated or is the aggregate improperly coated with asphalt? 3) The SMA mixture shall be transported and placed on the roadway without drain-down or flushing		Delivered SMA was uniform in appearance, not segregated, no drain down observed.	Conformance	8/3/2020 11:51:09 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Differing appearance in subsequent loads may indicate an unacceptable change in mix proportions or temperature. The Project Inspector should notify the Construction Manager if any of the previous conditions occur. 1) Is the appearance of the load seam peaking or flat, dull or shiny, white or blue smoke? 2) Does the mix look segregated or is the aggregate improperly coated with asphalt? 3) The SMA mixture shall be transported and placed on the roadway without drain-down or flushing		No differing appearance in loads being placed. Asphalt delivery tickets were being checked periodically by QCAT.	Conformance	4/15/2021 10:18:39 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Differing appearance in subsequent loads may indicate an unacceptable change in mix proportions or temperature. The Project Inspector should notify the Construction Manager if any of the previous conditions occur. 1) Is the appearance of the load seam peaking or flat, dull or shiny, white or blue smoke? 2) Does the mix look segregated or is the aggregate improperly coated with asphalt? 3) The SMA mixture shall be transported and placed on the roadway without drain-down or flushing		Did not observe any differing appearance in subsequent loads.	Conformance	8/16/2021 7:31:22 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		The first truck charged the hopper when the load was delivered, removed any mix dumped on the roadway.	Conformance	8/16/2021 7:31:22 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SMA	Roadway		Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		The haul truck charged the hopper when the load was delivered, and mix dumped on the roadway was cleaned.	Conformance	7/27/2021 8:32:04 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		The first truck was used to charge the hopper when the load was delivered, no mix was dumped on the roadway.	Conformance	8/19/2021 1:48:35 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway	8/14/2020 4:34:13 PM - 06:00	Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		First load delivered charged the hopper, no mix dumped on roadway.	Conformance	8/3/2020 11:51:09 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		First truck charged the hopper, no mix dumped on the roadway.	Conformance	10/1/2020 10:28:19 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		First truck charged the hopper, no mix was dumped on the roadway.	Conformance	6/5/2020 2:02:50 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/7/2020 7:37:50 AM - 07:00	Did the truck charge the hopper when the load was delivered? Remove any mix dumped on the roadway?		Trucks were observed charging the hopper when load was delivered. Dumped mix was removed.		2/10/2020 8:12:58 AM -07:00	Audit Comment	KIC paving teams have placed a focus on this process.	Closed
Central 70	C 0704-241	SX	Roadway	4/14/2020 8:04:52 AM - 06:00	Was one of the following paving control devices used? (1) Ski-type device at least 30 feet in length. Automatic leveling ski of proper length? (2) Short Ski or short shoe. (3) At least 5,000 feet of control line and stakes. However, the following instances of manual operation are acceptable:		30' Ski was used during paving operation.	Conformance	4/13/2020 1:43:49 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	4/2/2020 1:36:28 PM - 06:00	Was one of the following paving control devices used? (1) Ski-type device at least 30 feet in length. Automatic leveling ski of proper length? (2) Short Ski or short shoe. (3) At least 5,000 feet of control line and stakes. However, the following instances of manual operation are acceptable:		Short ski was used during this operation.	Conformance	4/1/2020 7:39:06 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	11/22/2019 12:21:18 PM - 07:00	Was one of the following paving control devices used? (1) Ski-type device at least 30 feet in length. Automatic leveling ski of proper length? (2) Short Ski or short shoe. (3) At least 5,000 feet of control line and stakes. However, the following instances of manual operation are acceptable:		Automatic leveling ski was not being used during operation.		12/10/2019 8:15:22 AM -07:00	Audit Comment	An automatic leveling ski is a best practice on typical mainline paving operations. The paving ski will not be used on 1st lift side roads to ensure proper pavement thickness is followed. The crew runs depth. The ski will be used on successive lifts.	Closed
Central 70	C 0704-241	SX	Roadway		Was one of the following paving control devices used? (1) Ski-type device at least 30 feet in length. Automatic leveling ski of proper length? (2) Short Ski or short shoe. (3) At least 5,000 feet of control line and stakes. However, the following instances of manual operation are acceptable:		Ski type at least 30 ft. long attached to paver.	Conformance	4/24/2020 8:46:09 AM -06:00	C		Closed

The paver was operating at a forward speed consistent with uniform and continuous laying of the mixture.	Conformance	7/9/2021 8:04:32 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	7/14/2021 2:09:06 PM - 06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		The paver did not operate at a consistent forward speed, observed several instances of stop- and- go motion, due to haul trucks being delivered with 10- 15 minute intervals between trucks. Paving operations need more delivery trucks to prevent this issue.	The stop and go motion of the paver is being monitored after this audit comment. Not having the appropriate amount of trucks was observed during the EB paving shutdown week from 7/16 to 7/19.	7/21/2021 2:44:40 PM -06:00	Audit Comment	Delivery trucks are constantly monitored and adjusted based on plant production, cycle times and traffic. Adding more trucks a lot of the time isn't the option best suited for the overall quality of the pavement. KIC utilizes the Shuttle buggy to minimize as much stop and go as possible.	Closed
Central 70	C 0704-241	SX	Roadway		Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		Paver operated in a consistent forward motion.	Conformance	6/14/2021 1:43:10 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	Was the paver operating at a forward speed consistent with uniform and continuous laying of the mixture? Or was the paver operated in a Stop and go motion?		The paver was not operating at a forward speed consistent with uniform and continuous laying of asphalt, the paver operated in a stop and go motion. Not enough haul trucks for the paver to operate in a consistent forward motion.	Adequate	9/15/2021 4:21:38 PM -06:00	Audit Comment	Trucking is monitored daily and adjusted based on truck turn around time. If traffic, lay down or plant issues cause truck stacking gaps in trucks can happen. KIC utilizes the shuttle buggy and/or a large hopper to minimize the affects of truck gaps.	Closed
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	(a) Was the hopper kept more than half-full at all times? (b) Material kept at midpoint of augers? Head of material in auger chamber 1/2 to 2/3 full? (c) Placing material at cross-slope or crown shown on typical section?		The hopper was kept more than half-full at all times, material was kept at midpoint of augers, head of material in auger chamber was kept 1/2 to 2/3 full, material was placed at cross-slope or crown shown on typical section. Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Is the screed vibrator functioning?		The screed vibrator was functioning during operation.	Conformance	1/26/2021 9:09:42 AM -07:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		The paver should be equipped with a full-width vibratory screed. Was the screed checked for trueness with a string line?		The paver was equipped with a full-width vibratory screed, and has been checked with a stringline.	Conformance	7/27/2021 8:32:04 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		The paver should be equipped with a full-width vibratory screed. Was the screed checked for trueness with a string line?		Vibratory screed was full width, checked with stringline for trueness.	Conformance	6/5/2020 2:02:50 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was flushing observed behind the screed? All flushed areas behind the paver shall be removed immediately upon discovery. Reference specification for further requirements.		No flushing was observed.	Conformance	11/3/2020 2:32:08 PM -07:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was flushing observed behind the screed? All flushed areas behind the paver shall be removed immediately upon discovery. Reference specification for further requirements.		No flushing was observed behind the paver.	Conformance	4/24/2020 8:48:24 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	4/14/2020 8:04:52 AM -06:00	Was flushing observed behind the screed? All flushed areas behind the paver shall be removed immediately upon discovery. Reference specification for further requirements.		No flushing was observed behind the paver during operation.	Conformance	4/13/2020 1:43:49 PM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Was flushing observed behind the screed? All flushed areas behind the paver shall be removed immediately upon discovery. Reference specification for further requirements.		No flushing was observed.	Conformance	3/11/2020 1:28:46 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was flushing observed behind the screed? All flushed areas behind the paver shall be removed immediately upon discovery. Reference specification for further requirements.		No flushing was observed behind screed.	Conformance	12/12/2019 1:23:47 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	11/19/2019 8:35:25 AM - 07:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Milled surface does not meet minimal lift thickness for placing HMA. (See Pic 2) No longitudinal or transverse joints were done prior to placing HMA. (See Pic 3)		12/10/2019 8:13:47 AM -07:00	NC-2	NCR 1742 was written to track this issue	Closed
Central 70	C 0704-241	SX	Roadway	4/14/2020 8:04:52 AM - 06:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was placed within the required surface tolerance and produced an acceptable finish without segregation.	Conformance	4/13/2020 1:43:49 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material was placed within the required surface tolerance without segregation.	Conformance	4/13/2020 1:41:58 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/7/2020 7:37:50 AM - 07:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Segregation, drag marks, roller marks, and cracking are clearly visible throughout material placed.		2/10/2020 8:12:49 AM -07:00	NC-2	NCR 1993 was written to address this issue	Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SX	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		HMA was placed within the required surface tolerance and produced an acceptable finish. Placed HMA was uniform in appearance with no visible signs of segregation.	Conformance	4/24/2020 8:48:24 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material was placed within the required surface tolerance and produced an acceptable finish without segregation.	Conformance	4/24/2020 8:46:58 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	4/2/2020 1:37:09 PM -06:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material placed produced an acceptable finish. Paver distributed the HMA at the required thickness and established grade.	Conformance	4/1/2020 7:39:32 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was placed within required surface tolerance.	Conformance	9/16/2020 11:01:55 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was placed in an acceptable manner. No mat defects were observed.	Conformance	11/3/2020 1:12:14 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was placed with an acceptable finish.	Conformance	11/3/2020 2:32:08 PM -07:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material was placed within required surface tolerance and produced an acceptable finish without segregation. The surface of the mat was uniform with no segregation. The surface of the mat was uniform in appearance and texture, and the paver distributed the mixture to the established grade and required thickness over the entire width.	Conformance	10/1/2020 10:28:19 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was placed within required tolerance, and mat was uniform.	Conformance	11/3/2020 2:31:46 PM -07:00	C		Closed
Central 70	C 0704-241	SMA	Roadway	8/14/2020 4:34:13 PM - 06:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material was placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat was uniform in appearance and texture	Conformance	8/3/2020 11:51:09 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The surface of the material placed was not uniform in appearance, specifically around manholes and valves. Appeared to not have been properly hand finished.	Field Resolved	7/16/2020 3:28:41 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	SMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Surface of mat was uniform in appearance and texture, the paver distributed the material to established grade and required thickness.	Conformance	6/5/2020 2:02:50 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The surface of the mat was uniform in appearance and texture (without holes, tears, gouges, drags, or segregation, and the paver distributed the mixture to the established grade and required thickness over the entire width.	Conformance	9/16/2020 11:01:06 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was placed and produced an acceptable finish.	Conformance	6/16/2020 11:45:07 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		SMA was placed within the required surface tolerance with an acceptable finish, no segregation was noted.	Conformance	5/28/2020 2:24:19 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material was placed within required surface tolerance and produced an acceptable finish without segregation. The surface of the mat was uniform in appearance and texture, and the paver distributed the mixture to the established grade and required thickness over the entire width or partial width as practical.	Conformance	7/27/2021 8:32:04 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material was placed within required surface tolerance and produced an acceptable finish without segregation, the surface of the mat was uniform in appearance and texture, without holes, tears, gouges, drags, or segregation.	Conformance	8/16/2021 7:31:22 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material placed was within the required surface tolerance and produced a beautiful finish without segregation.	Conformance	4/15/2021 10:18:39 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SX	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was placed within required surface tolerance for the majority of areas. Around select manholes, water valves, and other utility access points, the required 1/4"-1/2" tolerance for the structure surface was not achieved, however this is being tracked through ENCR 1229.	Field Resolved	6/14/2021 1:43:10 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material was placed within required surface tolerance and produced an acceptable finish without segregation, the surface of the mat was uniform in appearance and texture, without holes, tears, gouges, drags, or segregation.	Conformance	8/19/2021 1:48:35 PM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material placed produced an acceptable finish with no segregation.	Conformance	6/15/2021 7:40:49 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The material was placed within required surface tolerance and produced an acceptable finish without segregation. The surface of the mat was uniform in appearance and texture, with no holes, tears, gouges, drags, or segregation observed, the paver distributed the mixture to the established grade and required thickness over the entire width.	Conformance	7/9/2021 8:04:33 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	7/14/2021 2:09:06 PM - 06:00	Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		The delivered material was placed within required surface tolerance and produced an acceptable finish with no segregation noted. The surface of the mat was uniform in appearance and texture, with no holes, tears, gouges, drags, or segregation. The paver distributed the mixture to the established grade and required thickness over the entire width.	Conformance	7/14/2021 2:01:01 PM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SMA	Roadway		Was the material placed within required surface tolerance and produced an acceptable finish without segregation? The surface of the mat should be uniform in appearance and texture (without holes, tears, gouges, drags, or segregation)? Did the paver distribute the mixture to the established grade and required thickness over the entire width or partial width as practical?		Material was mostly placed within required surface tolerance. Several manholes and water valves in pavement section were set below mat outside of allowable tolerance, and at several sections of CD barrier, the haunch was above acceptable heights. NCRs were issued by Quality team after conversations in the field.	Field Resolved	6/28/2021 2:39:54 PM -06:00	Field Resolved		Closed
Central 70	C 0704-241	HMA	Roadway		Was segregation is observed? (windrow, hopper, behind the paver, after rolling, etc.) 1) If Yes, was the Construction Manager and the Contractor notify immediately? Was the segregated material replaced with specification material before initial rolling has taken place? 2) Did the QMP (Quality Management Plan) address how the Contractor will address unacceptable segregation by stopping paving operations and corrected action before paving can resume?		No segregation was observed behind the paver after rolling.	Conformance	4/15/2021 10:18:39 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was segregation is observed? (windrow, hopper, behind the paver, after rolling, etc.) 1) If Yes, was the Construction Manager and the Contractor notify immediately? Was the segregated material replaced with specification material before initial rolling has taken place? 2) Did the QMP (Quality Management Plan) address how the Contractor will address unacceptable segregation by stopping paving operations and corrected action before paving can resume?		No segregation of material was observed behind the paver or after rolling.	Conformance	11/8/2021 9:53:47 AM -07:00	C		Closed

No segregation was observed behind the paver or after rolling.	Conformance	2/4/2020 9:29:49 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	1/6/2020 4:01:48 PM - 07:00	Was segregation is observed? (windrow, hopper, behind the paver, after rolling, etc.) 1) If Yes, was the Construction Manager and the Contractor notify immediately? Was the segregated material replaced with specification material before initial rolling has taken place? 2) Did the QMP (Quality Management Plan) address how the Contractor will address unacceptable segregation by stopping paving operations and corrected action before paving can resume?		No segregation was observed behind the paver or after rolling.	Conformance	12/30/2019 10:38:20 AM -07:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Was stationing established to allow yield checks and material placement?		Stationing was established to allow yield checks and material placement.	Conformance	10/1/2020 10:28:19 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was stationing established to allow yield checks and material placement?		Stationing was established to allow yield checks and material placement.	Conformance	9/16/2020 11:01:06 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was stationing established to allow yield checks and material placement?		Stationing was established to allow yield checks and material placement.	Conformance	8/16/2021 7:31:22 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was stationing established to allow yield checks and material placement?		Stationing was established to allow yield checks and material placement.	Conformance	7/9/2021 8:04:33 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	7/14/2021 2:09:06 PM - 06:00	Was stationing established to allow yield checks and material placement?		Stationing was established to allow yield checks, for core locations and material placement.	Conformance	7/14/2021 2:01:01 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	Was stationing established to allow yield checks and material placement?		Stationing was established to allow yield checks and material placement.	Conformance	8/19/2021 1:48:35 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	What type of grade control was used? Is it functioning properly?		Skis and laser were used for grade control.	Conformance	8/19/2021 1:48:35 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		What type of grade control was used? Is it functioning properly?		Automatic ski grade control was used.	Conformance	4/27/2021 8:22:33 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Material placement location, thickness, yield checks and temperature documented?		Temperature and yield checks were conducted by IQC.	Conformance	4/27/2021 8:22:33 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Material placement location, thickness, yield checks and temperature documented?		IQC and PC were on site during paving operation documenting location, thickness, and temperature.	Conformance	11/8/2021 9:53:47 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Material placement location, thickness, yield checks and temperature documented?		Material placement location, thickness, yield checks, and temperatures were being documented by IQC and PC.	Conformance	4/15/2021 10:18:39 AM -06:00	C		Closed
Central 70	C 0704-241	Detour Paving	Maintenance of Traffic (MOT)		Material placement location, thickness, yield checks and temperature documented?		Thickness and temperature was being documented by PC and IQC.	Conformance	6/15/2021 7:40:49 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Material placement location, thickness, yield checks and temperature documented?		Material placement location, thickness, yield checks and temperature were documented by IQC.	Conformance	7/9/2021 8:04:33 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	7/14/2021 2:09:06 PM -06:00	Material placement location, thickness, yield checks and temperature documented?		Material placement location, thickness, yield checks and temperature documented by PC/ IQC.	Conformance	7/14/2021 2:01:01 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Material placement location, thickness, yield checks and temperature documented?		IQC and PC were on site documenting location, thickness, yield, and temps.	Conformance	2/15/2021 3:19:21 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Material placement location, thickness, yield checks and temperature documented?		Material placement, thickness, yield, and temperatures were being documented by IQC, and PC.	Conformance	1/26/2021 9:09:42 AM -07:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Material placement location, thickness, yield checks and temperature documented?		Material placement location, thickness, yield checks and temperature were documented.	Conformance	8/16/2021 7:31:22 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Material placement location, thickness, yield checks and temperature documented?		Material placement location, thickness, yield checks and temperature were documented by IQC and PC.	Conformance	9/16/2020 11:01:06 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Material placement location, thickness, yield checks and temperature documented?		Material placement location, thickness, yield checks and temperature were documented and recorded by IQC and/or PC.	Conformance	10/1/2020 10:28:19 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway	8/14/2020 4:34:13 PM - 06:00	Material placement location, thickness, yield checks and temperature documented?		When I asked the night shift IQC Inspector if he had the yield check numbers, he told me he didn't. The night shift IQC Inspector did not know material placement locations/ Stas., did not know the thickness of mat, and did not record temperatures of the SMA mat.	ENCR Verified	6/7/2021 8:48:53 AM -06:00	NC-2	ENCR 306 was written to address this issue	Closed
Central 70	C 0704-241	HMA	Roadway	8/27/2020 4:16:44 PM - 06:00	Material placement location, thickness, yield checks and temperature documented?		IQC was onsite documenting the following information.	Conformance	8/25/2020 9:33:29 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		When the placement of hot mix asphalt is on a waterproofed bridge deck, ensure the equipment did not damage the membrane or protective covering.		Waterproofing membrane was not damaged during paving operation.	Conformance	11/3/2020 1:12:14 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/6/2020 8:19:02 AM - 07:00	When the placement of hot mix asphalt is on a waterproofed bridge deck, ensure the equipment did not damage the membrane or protective covering.		A visual observation was done before and during paving operation. No visible damage was done to the membrane/protective covering.	Conformance	2/4/2020 9:29:49 AM -07:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		When the placement of hot mix asphalt is on a waterproofed bridge deck, ensure the equipment did not damage the membrane or protective covering.		Waterproofing membrane was not damaged during paving operation.	Conformance	12/10/2020 2:30:41 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Mat temperature was acceptable.	Conformance	11/3/2020 2:31:23 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperatures were checked by PC for conformance before rolling.	Conformance	1/26/2021 9:09:42 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temps were being checked by IQC, PC, and QCAT.	Conformance	2/15/2021 3:19:21 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	7/14/2021 2:09:06 PM - 06:00	Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		IQC and PC checked the temperature of the mat behind the paver screed for conformance, and confirmed the mixture was at proper temperature before rolling.	Conformance	7/14/2021 2:01:02 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		The temperature of the mat behind the paver screed, was at proper temperature prior to rolling.	Conformance	7/9/2021 8:04:33 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	8/20/2021 12:52:03 PM - 06:00	Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		The temperature of the mat was checked behind the paver screed for conformance, the mixture was at proper temperature before rolling.	Conformance	8/19/2021 1:48:35 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature checks were being performed before rolling operation.	Conformance	4/15/2021 10:18:39 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature of mat was in conformance.	Conformance	4/27/2021 8:22:33 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Mat temperatures were acceptable.	Conformance	5/11/2021 11:40:17 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		PC and IQC checked the temperature of the mat behind the paver screed for conformance, and ensured the mixture was at proper temperature before rolling.	Conformance	8/16/2021 7:31:22 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/6/2020 8:19:02 AM - 07:00	Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature was being checked behind the mat by IQC.	Conformance	2/4/2020 9:29:49 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature was being checked by QCAT, IQC, and PC.	Conformance	4/13/2020 1:41:58 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway	4/14/2020 8:04:52 AM - 06:00	Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature were taken by QCAT, IQC, and PC	Conformance	4/13/2020 1:43:49 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	4/2/2020 1:36:28 PM - 06:00	Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature was being checked by IQC and PC and was in spec.	Conformance	4/1/2020 7:39:06 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/7/2020 7:37:50 AM - 07:00	Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature was checked by IQC. Temperature was within Spec before rolling mat.	Conformance	2/7/2020 6:42:53 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	1/6/2020 4:01:48 PM - 07:00	Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature was being checked by IQC and PC.	Conformance	12/30/2019 10:38:20 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	11/22/2019 12:21:18 PM - 07:00	Check the temperature of the mat behind the paver screed for conformance. Ensure the mixture is at proper temperature before rolling.		Temperature was being checked by IQC before rolling operations began.	Conformance	11/22/2019 10:11:54 AM -07:00	C		Closed

Central 70	C 0704-241	SMA	Roadway	8/14/2020 4:34:13 PM -06:00	Does the sloped safety edge conform to the details in the plans?		Safety edge conformed to the details in the plans.	Conformance	8/3/2020 11:51:09 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Does the sloped safety edge conform to the details in the plans?		The safety edge conforms to the details in the plans.	Conformance	8/3/2020 11:29:51 AM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway	8/14/2020 4:34:13 PM -06:00	Was the approved proposed paver wedge system used and followed during construction?		Paver used approved wedge system.	Conformance	8/3/2020 11:51:09 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the approved proposed paver wedge system used and followed during construction?		The approved paver wedge system was used on the RoadWidener spreader.	Conformance	10/7/2020 7:48:38 AM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the approved proposed paver wedge system used and followed during construction?		Wedge system was used and followed during construction.	Conformance	9/16/2020 11:10:48 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the approved proposed paver wedge system used and followed during construction?		Paver wedge system used for sloped edge.	Conformance	9/16/2020 11:01:06 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Where cores taken?		Cores were taken for PC and IQC acceptance.	Conformance	12/12/2019 1:23:47 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SMA	Roadway		SMA pavement shall be placed and compacted in accordance with the temperatures listed in subsection 401.07 as revised for this project.		Temperatures at time of SMA placement were within specification.	Conformance	5/28/2020 2:24:19 PM -06:00	C		Closed
Central 70	C 0704-241	SX	Roadway		Was the Compaction Test Section completed by Contractor? Reference Specification for the requirements of the CTS (Compacted Test Section)		CTS was performed on the first 500 tons in conformance with specifications.	Conformance	6/14/2021 1:43:10 PM -06:00	C		Closed
Central 70	C 0704-241	SMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers operated according to CTS.	Conformance	6/28/2021 2:39:54 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers operated in accordance with CTS.	Conformance	4/27/2021 8:23:39 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers were operating according to CTS rolling pattern.	Conformance	6/7/2021 8:12:43 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers were operating in accordance with approved CTS.	Conformance	2/15/2021 3:19:21 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers were operating in accordance to the CTS.	Conformance	1/26/2021 9:09:42 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers were operating in accordance to the CTS.	Conformance	11/6/2020 1:38:24 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers were operating in accordance to approved CTS.	Conformance	5/18/2020 8:37:52 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers operated in accordance with CTS.	Conformance	8/10/2021 9:27:44 AM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers operated in accordance with approved rolling pattern.	Conformance	10/1/2020 10:29:06 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	HMA	Roadway	2/7/2020 7:37:50 AM - 07:00	Were rollers operating in accordance with approved Compacted Test Section?		Test section has not been completed.		2/10/2020 8:12:06 AM -07:00	Audit Comment	KIC is scheduling the 500 ton test section to verify gauges. During the materials task force the team discussed the WMA vs HMA is the same mix properties and should not change the gauge correlation. IQC will verify gauges with random or fixed cores.	Closed
Central 70	C 0704-241	SX	Roadway	4/14/2020 8:04:52 AM - 06:00	Were rollers operating in accordance with approved Compacted Test Section?		Rollers were being operated in accordance with the CTS.	Conformance	4/13/2020 1:43:49 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were rollers operating in accordance with approved Compacted Test Section?		Rollers were operating with approved CTS	Conformance	4/13/2020 1:41:58 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/6/2020 8:19:02 AM - 07:00	Were rollers operating in accordance with approved Compacted Test Section?		Rollers were operating in accordance with the approved CTS.	Conformance	2/4/2020 9:29:49 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Were there any deviations from the procedures established by the compaction test section? (Note conversations with the Contractor)		There were no deviations from the approved CTS.	Conformance	2/15/2021 3:19:21 PM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	SMA	Roadway		When placing hot mix over bridge decks covered by waterproofing membrane, was the minimum temperature of the mixutre when rolling operations began 250 F? The job-mix formula temperature may be increased up to 30 F to obtain this temperature.		Minimum temperature for bridge deck rolling operation was met.	Conformanc e	12/10/2020 2:30:41 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/6/2020 8:19:02 AM - 07:00	When placing hot mix over bridge decks covered by waterproofing membrane, was the minimum temperature of the mixutre when rolling operations began 250 F? The job-mix formula temperature may be increased up to 30 F to obtain this temperature.		Rolling operation began when temperature was within spec.	Conformanc e	2/4/2020 9:29:49 AM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	2/6/2020 8:19:02 AM - 07:00	Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is preformed while the mix is warm enough to permit the removal of roller marks.		Compaction operation of rolling sequence was followed.	Conformanc e	2/4/2020 9:29:49 AM -07:00	C		Closed
Central 70	C 0704-241	SX	Roadway	4/14/2020 8:04:52 AM - 06:00	Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is preformed while the mix is warm enough to permit the removal of roller marks.		Compaction operation rolling sequence was followed.	Conformanc e	4/13/2020 1:43:49 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	4/2/2020 1:36:28 PM - 06:00	Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is preformed while the mix is warm enough to permit the removal of roller marks.		Compaction rolling sequence was followed.	Conformanc e	4/1/2020 7:39:06 PM -06:00	C		Closed
Central 70	C 0704-241	HMA	Roadway		Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is preformed while the mix is warm enough to permit the removal of roller marks.		Compaction rolling sequence was followed, and mat was compacted at acceptable temperatures.	Conformanc e	12/12/2019 1:23:47 PM -07:00	C		Closed
Central 70	C 0704-241	HMA	Roadway	11/25/2019 12:00:00 AM - 07:00	Was the compaction operation rolling sequence followed? 1. Initial Breakdown Rolling. 2. Intermediate Rolling. 3. Finish rolling. It is preformed while the mix is warm enough to permit the removal of roller marks.		A plate compactor was used initially to tighten each layer that was placed. A steel wheel roller was then used to properly compact each lift.	Conformanc e	11/25/2019 1:18:59 PM -07:00	C		Closed

Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	8/21/2020 4:49:06 PM - 06:00	Traffic control devices are used to warn the traveling public of hazards, advise them of the proper path through the work zone, delineate areas where they may not operate, and separate them from construction workers.		Drainage flash filled a sanitary abandonment from a live lane of traffic on the EB I-70 off ramp to Stapleton S without any traffic control in place. Since this work to place from 8:45am to 9am it caused significant backups. These backups resulted in the EB On ramp from Colorado being stopped up and motorist not being able to safely enter the lanes of I-70 which were moving at highway speeds. Attached are two photos of the incident.	NCR written	6/26/2021 12:28:05 PM -06:00	NC-2		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)		Temporary traffic control devices are subjected to wear during use, storage, shipment, installation, relocation, and removal. A large number of worn devices on a project are unacceptable. Require removal and replacement of unacceptable devices in accordance with subsections 630.02 and 105.01 of the Standard Specifications.		TCD's were not worn, damaged, and were readable, did not observe any devices needing replacement.	Conformance	6/17/2020 5:02:19 PM -06:00	C		Closed
Central 70	C 0704-241	Set Traffic Control	Maintenance of Traffic (MOT)		Temporary traffic control devices are subjected to wear during use, storage, shipment, installation, relocation, and removal. A large number of worn devices on a project are unacceptable. Require removal and replacement of unacceptable devices in accordance with subsections 630.02 and 105.01 of the Standard Specifications.		Noted that temporary traffic control devices were in useable condition.	Conformance	3/29/2021 2:22:22 PM -06:00	C		Closed

Central 70	C 0704-241	MHT Implementation	Maintenance of Traffic (MOT)	3/19/2020 2:51:34 PM - 06:00	Ensure that channelizing devices conform to the requirements of the Contract Specifications, Manual of Uniform Traffic Control Devices, Method of Handling Traffic, and the project's Traffic Control Plan. Pay particular attention to the following: a. correct dimensions in a clean, serviceable condition, b. proper retroreflectorized sheeting or collars, c. correct placement with proper taper lengths and spacing, d. proper and functioning warning lights that are set in the correct mode, and e. weighting by acceptable methods.		Channelizing devices for the full closure of Monaco were adequate.	Conformance	3/19/2020 10:40:22 AM -06:00	C		Closed
Central 70	C 0704-241	Set Temporary Barrier	Maintenance of Traffic (MOT)	3/19/2020 2:55:54 PM - 06:00	Check that temporary concrete barriers are correctly placed with proper treatment at end sections. Pay particular attention to the acceptability of connecting pins and the color and retroreflectorization of sheeting.		Originally the department found a crew had opened a hole on the right shoulder of the EB Colorado On Ramp to install a 60" drainage run. The hole was located within the clear zone of the ramp and the curb at this location had been removed/damaged beyond being considered effective. The crew had constructed a short berm of dirt in an attempt to make the work area safe. This berm is not considered a crash test form of barrier and actually made the work area even more dangerous. (The department is electing to issue this as an NC-2 instead of an NC-1 since the superintendent had a plan to address it immediately.)	EX NCR 044	4/20/2020 4:57:04 PM -06:00	NC-2	Expedited NCR 044 was written to address this issue	Closed

Central 70	C 0704-241	Substructure	Cover		The Concrete mix design for the concrete being placed has been reviewed and approved by IQC.		with the mix design that was being used the air content out of the pump truck needs to be between 5% and 8%. during the cover deck pour there is an additional test straight out of the concrete truck in order to correlate the air difference from the concrete truck to the deck. on the third truck the test from the concrete truck was 7.3% and the concrete on the other side out of the pump	Field Resolved	7/27/2020 1:02:15 PM -06:00	Field Resolved		Closed

							was measured to be 2.3%. while the correlation had been around a 1% difference 2.3% made zero sense and with miss communication between the foreman on the deck placing concrete and the superintendent with the concrete truck they added 3oz of air and then reperformed the test. this test showed that the concrete at the deck was 9% which is out of spec. they ended up waiting 15 minutes to let the air come down and then performed a third test which passed at 7.8% air content. during this long process a total amount of 2 cubic yards of none spec concrete was discharged onto the deck with IQC saying they see no problem with that concrete. see pictures attached for the highlighted area this concrete was placed.

Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight.	Conformance	6/16/2020 11:55:51 AM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		all forms were mortar tight.	Conformance	11/3/2020 1:28:58 PM -07:00	C		Closed
Central 70	C 0704-241	Diaphragms	Structures	4/23/2020 12:00:00 AM -06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Form were mortar tight and sufficiently rigid.The foreman was measuring the formwork after each lift to ensure form displacement was not occurring.	Conformance	4/23/2020 3:01:47 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		There was some minor leaking at the bottom of the forms. It was addressed at soon as it was noticed.	Conformance	6/4/2020 7:40:13 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Approach Slabs	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were adequate.	Conformance	4/24/2020 8:53:19 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	11/21/2019 12:01:51 PM -07:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were mortar tight and no distortion was observed during my observation.	Conformance	11/21/2019 11:14:47 AM -07:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight.	Conformance	5/11/2020 11:17:11 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms are mortar tight and sufficiently braced to prevent distortion due to concrete loading and vibration.	Conformance	2/13/2020 2:53:35 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Cover		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were mortar tight. No leaking was observed.	Conformance	4/22/2020 7:24:10 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Formwork installed is mortar tight and sufficiently rigid to prevent distortion due to concrete pressures, and other loads including vibration.	Conformance	2/27/2020 6:45:07 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms are mortar tight and sufficiently rigid to prevent distortion due to loads and pressures of concrete.	Conformance	3/4/2020 8:11:06 AM -07:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms in place are mortar tight and rigid to prevent movement from the pressure loads of concrete within, and from vibrations during placement operations.	Conformance	3/2/2020 9:52:49 AM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight and sufficiently rigid.	Conformance	7/14/2020 12:13:41 PM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		From visual inspection throughout the placement, the form were sufficiently rigid and free of distortion.	Conformance	5/4/2020 8:55:08 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		all forms were mortared tight, had no seep holes, and stayed rigid during the pour.	Conformance	7/14/2020 12:16:24 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		all forms were mortar tight, with no distortion due to pressure from the concrete.	Conformance	11/3/2020 1:14:03 PM -07:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight.	Conformance	6/1/2020 11:17:51 AM -06:00	C		Closed
Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were tight and rigid throughout observation.	Conformance	6/3/2020 7:41:35 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	F/P/S Wall	Walls	7/9/2020 4:55:22 PM - 06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Form liner issues were noted. It appears some type of repair was performed to eliminate lines. This material should be submitted. A repair procedure should have been submitted and discussed as well by EOR.		9/9/2020 2:29:59 PM -06:00	Audit Comment	KIC PC has communicated to the production teams that any repair procedure that does not follow 601.14 needs to be submitted to the EOR. In addition the form liner concern and any repair to aesthetic items will be walked and discussed during punchlist.	Closed
Central 70	C 0704-241	Building	Cover	7/2/2020 4:24:53 PM - 06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were tight and sufficiently rigid throughout the placement.	Conformance	6/30/2020 1:14:45 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	6/25/2020 1:37:08 PM - 06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		all forms were mortar tight and stayed in place through entire operation	Conformance	6/25/2020 11:34:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		The forms were tight and rigid during my inspection and observation during the placement.	Conformance	7/27/2020 1:03:21 PM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls	8/31/2020 12:00:00 AM - 06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		forms showed no signs of kick out or bulges.	Conformance	9/2/2020 7:49:39 AM -06:00	C		Closed

Project Construction Assessments Overview as of September, 2022

Project	Contract	Process	Schedule	Date Performed	Requirement	Reference	Objective Evidence	Closed Reason	Closed Date	Result	Response	Status
Central 70	C 0704-241	Bridge Rail	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight and rigid.	Conformance	8/3/2020 11:28:04 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Wall	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		during and after the placement all the forms were inspected to verify that they continued to be mortar tight, and that the forms stayed rigid.	Conformance	10/1/2020 10:39:41 AM -06:00	C		Closed
Central 70	C 0704-241	F/P/S Cap	Walls		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		all forms were mortar tight and rigid so that the forms stayed in place during the concrete pour.	Conformance	7/16/2020 10:37:59 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover	7/9/2020 4:46:15 PM - 06:00	Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		south west form pushed out during the pour, they get the form somewhat back to plum with more reinforcements to the form on that side. the wall is within tolerance of 1/2". see attached pictures for reference.		9/9/2020 2:32:21 PM -06:00	Audit Comment	Form moved during placement and was remediated while the concrete was still plastic. as stated the wall is still within tolerance.	Closed
Central 70	C 0704-241	Approach Slabs	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight.	Conformance	11/11/2020 1:32:38 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		Forms shall be mortar tight and sufficiently rigid to prevent distortion due to the pressure of the concrete and other loads incidental to the concrete operations, including vibration.		Forms were mortar tight and rigid.	Conformance	10/8/2020 11:21:40 AM -06:00	C		Closed

Central 70	C 0704-241	Bridge Finishes (Drains, Rail, Barrier, Joints)	Structures	5/14/2020 12:00:00 AM - 06:00	Forms shall be constructed and maintained so as to prevent the opening of joints due to shrinkage of the lumber. The use of ties consisting of twisted wire loops to hold forms in position will not be permitted.		Forms were adequate.	Conformance	5/14/2020 4:38:21 PM -06:00	C		Closed
Central 70	C 0704-241	MSE Moment Slab	Walls		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Inside of forms were clean.	Conformance	4/2/2020 6:51:18 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		All formed surfaces were free of debris and foreign material.	Conformance	2/13/2020 1:34:53 PM -07:00	C		Closed
Central 70	C 0704-241	Bridge Rail	Structures		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		Forms were clean	Conformance	4/24/2020 8:58:17 AM -06:00	C		Closed
Central 70	C 0704-241	Pump Station	Cover		The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The forms were clean before they were installed. They were visually inspected the day of the placement.	Conformance	6/4/2020 7:40:13 AM -06:00	C		Closed
Central 70	C 0704-241	Substructure	Structures	4/21/2020 3:51:34 PM - 06:00	The inside surfaces of forms shall be cleaned of all dirt, mortar and foreign material. (ie. dirt, chips, sawdust, water and other foreign material)		The crew spent time before the pour removing dirt on the rebar. Due to the varying height of the drilled caisson concrete. Some of top of drilled caissons had a good amount of dirt on them. The crew used a vacuum and water from the concrete truck to remove most of it. More care should be taken to ensure no foreign materials enter the placement while the rebar is tied. Please see attached pictures.	Addressed	5/30/2020 12:47:19 PM -06:00	Audit Comment	Acknowledged. My understanding is the rebar was cleaned prior to concrete placement.	Closed

Project Construction Assessments Overview as of September, 2022
