

Project Agreement for the Central 70 Project

**COLORADO BRIDGE ENTERPRISE,
HIGH PERFORMANCE TRANSPORTATION ENTERPRISE,
and
KIEWIT MERIDIAM PARTNERS LLC**

Dated November 21, 2017

Table of Contents

PART A:	DEFINITIONS AND ABBREVIATIONS; INTERPRETATION; PROJECT INFORMATION	1
1.	DEFINITIONS AND ABBREVIATIONS.....	1
2.	INTERPRETATION OF THIS AGREEMENT.....	1
2.1.	Interpretation of Certain Terms, Phrases and Language.....	1
2.2.	Terminology for Agreements and Assents.....	3
2.3.	Indexation of Amounts	4
2.4.	Resolution of Conflicts Among, and Prioritization of, Terms.....	5
3.	PROJECT INFORMATION, RELIANCE AND DILIGENCE.....	7
3.1.	Limited Reliance on Project Information	7
3.2.	Responsibility for Independent Diligence.....	8
3.3.	Limitations on Site Condition Claims	8
3.4.	Residual Enterprise Liability.....	9
PART B:	EFFECTIVENESS AND TERM; REPRESENTATIONS AND WARRANTIES; FINANCIAL CLOSE; GRANT OF RIGHTS.....	10
4.	EFFECTIVENESS AND TERM.....	10
4.1.	Effectiveness.....	10
4.2.	Term.....	10
5.	REPRESENTATIONS AND WARRANTIES.....	10
5.1.	Representations and Warranties	10
5.2.	Mutual Reliance	10
5.3.	Notice of Untrue, Incorrect or Misleading Representations and Warranties.....	10
5.4.	Special Remedies for Mutual Breach of Warranty.....	10
5.5.	Survival of Representations and Warranties	11
6.	FINANCIAL CLOSE	11
6.1.	Financial Close Process	11
6.2.	Achievement of, or Failure to Achieve, Financial Close	11
7.	GRANT OF RIGHTS AND PROJECT LICENSE	11
7.1.	Grant of Right to Develop Project	11
7.2.	Developer's Project License	11
7.3.	Ownership and Liability.....	13
PART C:	OBLIGATIONS TO DESIGN, CONSTRUCT, OPERATE, MAINTAIN AND HANDBACK THE PROJECT	15
8.	DEVELOPER'S PROJECT OBLIGATIONS.....	15
8.1.	General Undertakings	15
8.2.	Assumption of Risk and Responsibility	16
8.3.	Federal and State Requirements	16

8.4. Governmental Approvals and Permits 18

8.5. Third Party Agreements 20

8.6. Compliance with Project Standards 21

9. DEVELOPER’S CONSTRUCTION PERIOD OBLIGATIONS 22

9.1. Obligation to Perform Construction Work; Restrictions on Construction Work... 22

9.2. Schedule Management, Completion and Commissioning 23

9.3. Payment and Performance Security 23

9.4. Warranties and Liability for Defects 25

9.5. Assignment of Certain Causes of Action 27

10. DEVELOPER’S OPERATING PERIOD OBLIGATIONS 27

11. PAYMENTS IN CONSIDERATION OF WORK PERFORMED AND PAYMENT ASSURANCES 28

11.1. Payments in Consideration of Work Performed..... 28

11.2. Enterprise Credit Related Covenants 28

12. COOPERATION AND COORDINATION WITH RELATED TRANSPORTATION FACILITIES, ON LIMITED O&M WORK SEGMENTS AND WITH OTHER DEPARTMENT PROJECTS 29

12.1. Duty to Cooperate and Coordinate 29

12.2. Compatibility and Integration with Related Transportation Facilities 29

12.3. Procurement of Other Department Projects 29

12.4. Enterprises’ Assistance..... 30

12.5. Traffic Management 30

13. HANDBACK 31

PART D: CHANGES AND SUPERVENING EVENTS 32

14. CHANGE PROCEDURE 32

14.1. Right to Initiate Changes..... 32

14.2. Directive Letters 32

15. SUPERVENING EVENTS..... 32

15.1. Submission of Supervening Event Notices and Submissions 32

15.2. Limitations on Supervening Event Submissions 33

15.3. Resolution 34

15.4. Payment of Change in Costs 36

15.5. Financing..... 37

15.6. Delay Financing Costs and Milestone Payment Delay Costs..... 37

15.7. Compensation Exclusions and Limitations 38

15.8. Special Provisions for Force Majeure Events 40

PART E: KEY PERSONNEL, SUBCONTRACTORS AND WORKFORCE 41

16. PERSONNEL 41

16.1. Developer’s Key Personnel Obligations.....41

16.2. Removal or Replacement of Key Personnel.....41

16.3. Developer’s Personnel Qualifications41

17. SUBCONTRACTING REQUIREMENTS41

17.1. Subcontracting Terms and Requirements41

17.2. Self-Performance45

17.3. Subcontracting with Affiliates45

17.4. Relationship with Subcontractors.....45

17.5. Prompt Payment of Subcontractors46

PART F: PROJECT MANAGEMENT48

18. DELEGATION OF AUTHORITY48

18.1. Delegations Among Enterprises and to CDOT48

18.2. Use of Representatives.....48

PART G: PUBLIC OVERSIGHT50

19. RECORD KEEPING AND OVERSIGHT.....50

19.1. Project Records.....50

19.2. Financial Statements.....52

19.3. Enterprise Board Meeting Attendance52

20. COLORADO OPEN RECORDS ACT52

21. INSPECTIONS AND AUDITS.....53

21.1. Site Inspections and Annual Survey and Audit Rights.....53

21.2. Right to Conduct Physically Intrusive Inspections55

21.3. Increased Oversight.....55

PART H: PERFORMANCE MANAGEMENT57

22. PERFORMANCE-BASED PAYMENT DEDUCTIONS AND PERSISTENT BREACH....57

22.1. Performance-based Payment Deductions57

22.2. Persistent Breach by Developer57

23. SAFETY COMPLIANCE, SUSPENSION OF THE WORK AND PUBLIC SECTOR RIGHTS TO INTERVENE58

23.1. Safety Compliance58

23.2. Refusal of Access58

23.3. Suspension of Work.....58

23.4. Self-Help59

PART I: INDEMNIFICATION AND INSURANCE61

24. INDEMNIFICATION AND NOTICE AND DEFENSE OF CLAIMS.....61

24.1. No Obligation to Indemnify Developer61

24.2. Developer Indemnity61

24.3.	Exclusions from Developer Indemnity.....	62
24.4.	Claims by Employees.....	62
24.5.	Notice of Claims and Tender of Defense	63
24.6.	Defense of Claims.....	63
25.	INSURANCE	64
25.1.	Obligation to Obtain and Maintain Insurance.....	64
25.2.	General Insurance Requirements	65
25.3.	Verification of coverage	67
25.4.	Reporting and Handling of Claims	68
25.5.	Reinstatement	69
25.6.	Unavailability of Insurance	71
25.7.	Benchmarking of Insurance Costs	73
PART J:	EQUITY AND PROJECT DEBT	75
26.	EQUITY REQUIREMENTS.....	75
26.1.	Equity Contribution Requirements	75
26.2.	Equity Transfer and Change of Control Restrictions	75
27.	DEBT FINANCING	76
27.1.	Developer Responsibilities for Financing.....	76
27.2.	Mandatory Terms of Financing Documents	76
27.3.	Limited Permission to Grant Security.....	77
27.4.	Limitations on Enterprise Involvement in and Liability for any Financing	77
28.	FINANCIAL MODEL.....	78
28.1.	General	78
28.2.	No Better and No Worse.....	79
28.3.	Amendments to Logic and/or Formulae.....	79
28.4.	Financial Model Audits and/or Accuracy.....	79
28.5.	Copies of the Revised Financial Model	79
28.6.	Replacement of Financial Model.....	80
28.7.	Financial Model License	80
29.	REFINANCINGS	80
29.1.	Enterprises' Approval, and Sharing in the Gains of Qualifying Refinancings	80
29.2.	Refinancing Details	80
29.3.	Receipt of Enterprises' Share	81
29.4.	Costs	81
29.5.	Notifiable Refinancings	81
29.6.	Delivery of Changed Financing Documents	81
30.	TAXES.....	81

31.	RESTRICTIONS ON REVENUE GENERATING ACTIVITIES.....	83
31.1.	Restrictions on Tolling.....	83
31.2.	Restrictions on Advertising	83
PART K:	DEFAULTS, REMEDIES AND TERMINATION.....	84
32.	DEFAULTS AND REMEDIES.....	84
32.1.	Developer Defaults and Cure Periods	84
32.2.	Enterprises Remedies for Developer Default	89
32.3.	Enterprise Defaults and Cure Periods	90
32.4.	Developer Remedies for Enterprise Default	92
33.	TERMINATION	92
33.1.	Termination Events	92
33.2.	Consequences of Termination	96
33.3.	No Increased Termination Liabilities.....	96
33.4.	Exclusivity of Remedy	97
34.	HANDOVER PREPARATIONS AND ACTIVITIES	98
34.1.	Preparations for Handover	98
34.2.	Assignments and Transfers	99
34.3.	No Contrary Activities.....	100
PART L:	LIMITATIONS ON LIABILITY.....	101
35.	REMEDIES AND LIABILITY	101
35.1.	Developer's Sole Remedies.....	101
35.2.	No Double Recovery	101
35.3.	Enterprises' Sole Remedy for Certain Developer Failures to Perform Work....	101
35.4.	Non-financial Remedies	101
35.5.	Available Insurance.....	101
35.6.	Waiver of Consequential Damages	102
PART M:	CHOICE OF LAW, JURISDICTION AND DISPUTE RESOLUTION	103
36.	CHOICE OF LAW	103
37.	JURISDICTION; WAIVER OF JURY TRIAL.....	103
37.1.	Jurisdiction	103
37.2.	Consent to Service of Process.....	103
37.3.	Waiver of Jury Trial	103
38.	DISPUTE RESOLUTION	104
PART N:	MISCELLANEOUS.....	105
39.	ASSIGNMENTS AND TRANSFERS	105
39.1.	Assignments and Transfers by Developer	105
39.2.	Assignments and Transfers by the Enterprises	105

40. BINDING EFFECT; SUCCESSORS AND ASSIGNS 105

41. SURVIVAL 105

42. CONSTRUING THIS AGREEMENT 106

 42.1. Entire Agreement 106

 42.2. Interpretation 106

 42.3. Severability..... 107

43. AMENDMENTS AND WAIVERS 107

 43.1. Amendments 107

 43.2. Rights and Remedies Cumulative..... 107

 43.3. Waivers 107

44. SET-OFF AND DEFAULT INTEREST 107

45. LIMITATION ON THIRD-PARTY BENEFICIARIES..... 107

46. INDEPENDENT DEVELOPER 108

 46.1. Developer as an Independent Project Contractor..... 108

 46.2. No Partnership or Similar Relationship 108

 46.3. No Relationship with Developer’s Employees and Subcontractors 108

47. NO PERSONAL LIABILITY..... 108

48. NO FEDERAL GOVERNMENT OBLIGATIONS..... 109

49. NOTICES 109

 49.1. Methods of Notice Submission 109

 49.2. Time and Date of Notice Submission..... 110

 49.3. Changes in Address..... 110

50. FURTHER ASSURANCES 110

51. COSTS AND EXPENSES OF THE PARTIES..... 110

52. INTELLECTUAL PROPERTY RIGHTS 110

 52.1. Grant of License, Ownership and Use 110

 52.2. Right to Purchase..... 111

 52.3. Intellectual Property Escrow Agreement..... 111

53. SPECIAL PROVISIONS..... 112

 53.1. Controller’s Approval..... 112

 53.2. Governmental Immunity 112

 53.3. Compliance with Law 112

 53.4. Binding Arbitration Prohibited 112

 53.5. Software Piracy Prohibition 113

 53.6. Employee Financial Interest / Conflict of Interest 113

 53.7. Vendor Offset (C.R.S. §§ 24-30-202 (1) and 24-30-202.4) 113

 53.8. Public Contracts for Services..... 113

54. COUNTERPARTS 114

ANNEXES

Annex A: Definitions and Abbreviations

SCHEDULES

Commencement and Completion

- Schedule 1: Financial Close
- Schedule 2: Representations and Warranties
- Schedule 3: Commencement and Completion Mechanics

Payments

- Schedule 4: Payments
- Schedule 5: Milestone Payments
- Schedule 6: Performance Mechanism
- Schedule 7: Compensation on Termination

Administrative and Process Requirements

- Schedule 8: Project Administration
- Schedule 9: Submittals

Design, Construction, Operations, Maintenance and Handback Requirements

- Schedule 10: Design and Construction Requirements
 - Schedule 10A: Applicable Standards and Specifications
 - Schedule 10B: Contract Drawings
- Schedule 11: Operations and Maintenance Requirements
- Schedule 12: Handback Requirements

Insurance Requirements

- Schedule 13: Required Insurances

Communications and Compliance Requirements

- Schedule 14: Strategic Communications
- Schedule 15: Federal and State Requirements

Subcontracting and Financing Requirements

- Schedule 16: Mandatory Terms

Environmental Requirements

- Schedule 17: Environmental Requirements

Right-of-Way

- Schedule 18: Right-of-Way

Forms

- Schedule 19: Forms of Direct Agreements
- Schedule 20: Forms of Contractor Bond
- Schedule 21: Forms of Supervening Event Notices and Submissions
- Schedule 22: Forms of Legal Opinions
- Schedule 23: Form of Financial Model Escrow Agreement

Procedures

- Schedule 24: Change Procedure
- Schedule 25: Dispute Resolution Procedure

Financial Model and Proposal Commitments

- Schedule 26: Base Financial Model
- Schedule 27: Key Personnel
- Schedule 28: Proposal Extracts

Reference Documents

- Schedule 29: Reference Documents

This Project Agreement (this “Agreement”) is made, entered into and effective as of the date it is approved and signed by the Colorado State Controller or its designee below (the “Agreement Date”) among:

- (1) Colorado High Performance Transportation Enterprise (“HPTE”), a government-owned business within and a division of the Colorado Department of Transportation (“CDOT”);
- (2) Colorado Bridge Enterprise, a government-owned business within CDOT (“BE” and, together with HPTE, each individually an “Enterprise” and, together, the “Enterprises”); and
- (3) Kiewit Meridiam Partners LLC, a limited liability company formed under the laws of the State of Delaware (“Developer”).

RECITALS

Whereas:

- (A) CDOT has determined that the deteriorating condition and inadequate capacity of the I-70 East corridor requires a comprehensive transportation solution to resolve such challenges and to address other stakeholder and community concerns.
- (B) Based on a review process conducted in accordance with the National Environmental Policy Act of 1969 (“NEPA”), CDOT identified a preferred alternative, the Preferred Alternative, to address these challenges and concerns.
- (C) HPTE was created to pursue innovative means of more efficiently financing important surface transportation projects to improve the safety, capacity, and accessibility of the surface transportation system in the State, which means include public-private partnerships, user fee-based project financing, and availability payment and design-build contracting.
- (D) BE was created for the purpose of financing, repairing, reconstructing, and replacing designated bridges that have been identified by CDOT as being structurally deficient or functionally obsolete.
- (E) Pursuant to the State’s Funding Advancements for Surface Transportation and Economic Recovery legislation, C.R.S. §§ 43-4-801, *et seq.*, the Enterprises were created as government-owned businesses within CDOT, each with certain limited statutory powers and duties necessary to accomplish their respective business purposes.
- (F) Pursuant to Resolution #TC-15-2-5 approved February 19, 2015 by the State’s Transportation Commission (the “Transportation Commission”), the Transportation Commission delegated to the Enterprises the responsibility for procurement of the design, construction, financing, operation and maintenance of a portion of the I-70 East corridor in Greater Denver (such portion, the “Project”), the scope of which Project is reflected by the scope of the Work required to be performed by Developer pursuant to this Agreement.
- (G) The design, construction, financing, operation and maintenance method of procurement for the Project is intended to reduce overall Project cost and maximize the improvements that can be constructed, in part, by requiring private parties to assume and manage certain risks associated with the Project, including risks related to utilities, railroads, environmental conditions and financial and market conditions.
- (H) On March 25, 2015, the Enterprises issued a Request for Qualifications for the Project, as subsequently amended on May 29, 2015.
- (I) On June 22, 2015, the Enterprises received five responsive statement of qualification submittals from potential project developer groups, and then shortlisted four such groups on July 24, 2015 (each a “Proposer” and, collectively, the “Proposers”) for purposes of proceeding to the next stage in the procurement process for the Project.

- (J) Subsequently, the Enterprises issued to the Proposers for their review and comment a draft Request for Proposals (“RFP”), which included the Instructions to Proposers (“ITP”), first issued on September 15, 2015, and a draft of this Agreement, first issued on September 29, 2015. The Enterprises subsequently issued a number of addenda to the draft RFP, pursuant to the procedures set out in the ITP. On March 6, 2017 the Enterprises issued the final RFP, which was subsequently amended by addenda issued on April 25, 2017, May 25, 2017 and July 22, 2017.
- (K) On January 15, 2016, the Federal Highway Administration (the “FHWA”) issued the Final Environmental Impact Statement (“FEIS”). On January 19, 2017 the FHWA issued the Record of Decision (the “ROD”) for Phase 1 of the Partial Cover Lowered Alternative, which is also known as the Central 70 Project. The ROD was published in the Federal Register (Vol. 82, No. 27) on February 10, 2017.
- (L) On June 1, 2017 and August 1, 2017, the Enterprises received, respectively, the Proposers’ technical and financial proposals in response to the RFP.
- (M) On August 24, 2017, the Enterprises issued a notice identifying Kiewit Meridiam Partners as the successful Proposer (the “Preferred Proposer”) to which the Project was awarded, subject to satisfaction of certain conditions precedent under the ITP to execution of this Agreement by Developer.
- (N) As of the Agreement Date, the Equity Members of the Preferred Proposer, which as of such date are Meridiam I-70 East CO, LLC (as holder of a 60% direct membership interest) and Kiewit C70 Investors, LLC (as holder of a direct 40% membership interest), have formed Developer for purposes of executing this Agreement with the Enterprises, and have otherwise satisfied the conditions precedent under the ITP to execution of this Agreement.
- (O) This Agreement and the further agreements referred to herein set out or, as applicable, will set out the terms and conditions pursuant to which Developer will implement the Project and perform the Work in consideration for the payments to be made by the Enterprises to Developer under this Agreement.

Now, therefore, in consideration of their mutual undertakings and agreements hereunder, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties undertake and agree as follows:

PART A: DEFINITIONS AND ABBREVIATIONS; INTERPRETATION; PROJECT INFORMATION

1. DEFINITIONS AND ABBREVIATIONS

Except as otherwise specified herein or as the context may otherwise require:

- a. terms set out in Part A of Annex A (*Definitions and Abbreviations*) have the respective meanings set out therein for all purposes of this Agreement;
- b. terms defined in either the CDOT Standard Specifications or the Standard Special Provisions have the respective meanings set out in the CDOT Standard Specifications and the Standard Special Provisions for purposes of the Construction Standards, provided that, if any term used in any Construction Standard is defined in both:
 - i. Part A of Annex A (*Definitions and Abbreviations*); and
 - ii. either the CDOT Standard Specifications or the Standard Special Provisions,then such term shall have the meaning set out in Part A of Annex A (*Definitions and Abbreviations*); and
- c. abbreviations set out in Part B of Annex A (*Definitions and Abbreviations*) are provided as references for purposes of the Technical Requirements, Table 6A.1 and Table 6A.2 only.

2. INTERPRETATION OF THIS AGREEMENT

2.1. Interpretation of Certain Terms, Phrases and Language

2.1.1. Headings and other internal references

- a. Headings are inserted for convenience only and shall not affect interpretation of this Agreement.
- b. Except as the context may otherwise provide, the words “herein”, “hereof” and “hereunder”, and words of similar import, shall be construed to refer to this Agreement in its entirety and not to any particular provision of it.
- c. Except as otherwise expressly provided or as the context may otherwise provide, a reference to any Section within this Agreement (including in Part A of Annex A (*Definitions and Abbreviations*) and the Schedules) is a reference to such Section of this Agreement (excluding the Schedules).
- d. Any reference to “Section X of the Project Agreement” (where “X” is a number) in any Schedule is a reference to the corresponding numbered Section in this Agreement (including Annex A (*Definitions and Abbreviations*), but excluding the Schedules).

2.1.2. Common terms and references

- a. The singular includes the plural and vice versa.
- b. Words preceding “include”, “includes”, “including” and “included” shall be construed without limitation by the words that follow.
- c. The verb “will” has the same meaning and effect as the verb “shall.”
- d. The word “promptly” means as soon as reasonably practicable in light of then-prevailing circumstances.

2.1.3. References to agreements, documents, Law, Governmental Approvals and Permits

Except as otherwise expressly provided in this Agreement, and subject to Section 8.6.2 with respect to the Project Standards, a reference:

- a. to an agreement or other document shall be construed to be a reference to such agreement or other document (including any schedules, annexes or exhibits thereto) as it may be amended, modified or supplemented from time to time pursuant to its terms; and
- b. to any Law, Governmental Approval or Permit shall be construed as a reference to such Law, Governmental Approval or Permit as amended, replaced, consolidated or re-enacted (as applicable) from time to time.

2.1.4. References to Persons

Except as otherwise expressly provided in this Agreement:

- a. a reference to a Person includes such Person's permitted successors, assigns and transferees;
- b. the feminine includes the masculine and vice-versa; and
- c. the words "they", "them", "themselves" and "their" when used to refer to a single Person or a grammatically singular antecedent shall be construed to mean an individual of unknown gender or whose gender is irrelevant.

2.1.5. Professional language and terms of art

Except as otherwise expressly provided in this Agreement:

- a. words and phrases not otherwise defined herein:
 - i. that have well-known technical, insurance or construction industry meanings shall be construed pursuant to such recognized meanings; and
 - ii. of an accounting or financial nature shall be construed pursuant to GAAP, in each case taking into account the context in which such words and phrases are used;
- b. all statements of, or references to, dollar amounts or money, including references to "\$" and "dollars", are to the lawful currency of the United States of America;
- c. all references to "digital" or "electronic" media or communications shall include all technology or services having electrical, digital, magnetic, wireless, optical, electromagnetic or similar capabilities that are used to facilitate the storage or dissemination of data and information as of the Setting Date, and all other successor forms of technology that serve the same or equivalent purposes which come into existence or widespread use after the Setting Date; and
- d. all references to reimbursement of another Person's "cost and expense" or "costs and expenses" shall be deemed to be references to reimbursement of all relevant third-party fees, costs and expenses incurred by such Person, including for those of external legal counsel and other external advisors.

2.1.6. Deadlines occurring on Calendar Days

Whenever this Agreement requires either Party (including CDOT acting as the Enterprises' designee pursuant to Section 18.1.2) to make any payment, or provide or deliver any Acceptance, Approval, consent, approval or like assent, notice, Deliverable, comment or any information or material, or otherwise complete any action or performance, in each case on or no later than a date that is a Calendar Day that is not also a Working Day, then such deadline shall automatically be extended to the next Working Day to occur after such Calendar Day.

2.2. Terminology for Agreements and Assents

2.2.1. Agreements and determinations

Where this Agreement provides that a matter shall be “Agreed or Determined”, such reference shall mean either that:

- a. the Parties have agreed to the matter in writing; or
- b. that the matter has been finally determined pursuant to the Dispute Resolution Procedure.

2.2.2. Consents, approvals and like assents

Except as otherwise expressly provided in this Agreement, where this Agreement provides that any consent, approval or like assent:

- a. shall not be “unreasonably withheld” by a Person, then it shall not be unreasonably withheld, delayed or made subject to the imposition of unreasonable conditions by such Person, and “unreasonably withhold” shall be similarly construed; and
- b. is to be made or given in the “discretion” of a Person, it shall be made or given only in the sole and absolute discretion of such Person (which discretion includes the ability to refrain from giving, or to impose conditions on, such consent, approval or like assent), which discretionary decision regarding any consent, approval or like assent shall be final and binding and not subject to the Dispute Resolution Procedure other than with respect to:
 - i. a good faith dispute concerning whether the consent, approval or like assent was discretionary; or
 - ii. a breach of the implied covenant of good faith and fair dealing.

2.2.3. Acceptance, Approval and Information

Where this Agreement provides that any matter or information shall be submitted to the Enterprises (or to CDOT acting as their designee pursuant to Section 18.1.2) for their:

- a. “Acceptance”, then the Enterprises shall give their determination in writing and may not unreasonably withhold their Acceptance, after having a reasonably sufficient opportunity to review and comment on such submission, where the only bases for withholding such Acceptance shall be if the Enterprises determine, acting reasonably, that the subject-matter of such submission:
 - i. does not comply with this Agreement;
 - ii. does not comply with any Law, Governmental Approval or Permit;
 - iii. is not made pursuant to, or otherwise is not compliant with, Good Industry Practice;
 - iv. would give rise to a material risk to the health or safety of any person, the Environment or Improvements, the community or property; and/or
 - v. would have an adverse impact on:
 - A. the performance by Developer of its obligations under this Agreement;
 - B. the rights of the Enterprises under this Agreement; and/or
 - C. the Project,

(where any failure to respond within a time period expressly provided in this Agreement shall be deemed an Acceptance of such submission by the Enterprises);

- b. “Approval”, then the Enterprises shall give their determination in writing and may reject such submission in their discretion (where any failure to respond within a time period

expressly provided in this Agreement shall be deemed a rejection of such submission by the Enterprises); and

- c. “Information”, then no Acceptance, Approval, or other consent, approval or like assent, is required and the matter or information is being submitted for the Enterprises’ information, review and comment only.

2.2.4. Default standards for consents, approvals and like assents

Where this Agreement requires one Party (including CDOT acting as the Enterprises’ designee pursuant to Section 18.1.2) to provide a consent, approval or like assent to the other Party (excluding any waiver, for which purposes Section 43.3 shall apply, and any matter or submission expressly requiring Acceptance or Approval) and no express standard for such consent, approval or like assent is given, then such consent, approval or like assent shall be in writing and:

- a. with respect to Developer, not be unreasonably withheld; and
- b. with respect to the Enterprises, be in their discretion.

2.2.5. Limited Developer reliance

- a. Developer may rely on Acceptances and Approvals, any other consent, approval or like assent, and any notice, from the Enterprises (including from CDOT acting as their designee pursuant to Section 18.1.2) only for the limited purpose of establishing that the Acceptance or Approval, or any other consent, approval or like assent, occurred, or any notice was given.
- b. Except as otherwise expressly provided in this Agreement, no:
 - i. Acceptance or Approval, other consent, approval or like assent, or notice;
 - ii. comment, review, certification, concurrence, verification or oversight; or
 - iii. payment,
 or the absence of any of the foregoing, shall in any case:
 - iv. constitute acceptance of materials, Work or any Element as satisfying the requirements of this Agreement;
 - v. relieve Developer from, or diminish Developer’s liability for, the performance of its obligations under this Agreement;
 - vi. prevent the Enterprises from subsequently exercising their rights under this Agreement without being bound by the manner in which they previously exercised (or refrained from exercising) such rights; or
 - vii. constitute a waiver of any rights under this Agreement of any legal or equitable right of the Enterprises or of any other Person.

2.3. Indexation of Amounts

2.3.1. Contract Year Indexation

Subject to Section 2.3.2 and Section 4.2(d)(i) of Schedule 1 (Financial Close), where in this Agreement an amount is expressed to be “indexed”, such expression means that the relevant amount will be changed on the first Calendar Day of each Contract Year (the “Relevant Contract Year”) by applying the following formula:

$$V_{\text{new}} = V_{\text{old}} \times (1 + (I_{\text{new}} - I_{\text{old}}) / I_{\text{old}})$$

Where:

- a. V_{new} is the new amount for the Relevant Contract Year;
- b. V_{old} is the amount for the Contract Year immediately preceding the Relevant Contract Year;
- c. I_{new} is the value for CPI most recently published prior to the first Calendar Day of the Relevant Contract Year; and
- d. I_{old} is the value for CPI most recently published prior to the first Calendar Day of the Contract Year immediately prior to the Relevant Contract Year, or, in the case of the first occasion on which this calculation is carried out, the value of CPI most recently published prior to July 1, 2017,

provided that, if I_{new} is less than or equal to I_{old} , then no calculation shall be carried out and V_{new} shall be deemed to be equal to V_{old} .

2.3.2. For purposes of:

- a. the definitions of Base Benchmarked Insurance Cost and Proposal Insurance Cost in Part A of Annex A (Definitions and Abbreviations); and
- b. Section 2.8.b of Schedule 13 (Required Insurances),

references to “Contract Years” in Section 2.3.1 shall be deemed to refer to the corresponding annual period referred to in such definitions or, as applicable, multi-year periods referred to in Section 2.8.b of Schedule 13 (Required Insurances).

2.4. Resolution of Conflicts Among, and Prioritization of, Terms

2.4.1. Integrated and binding agreement

- a. Subject to Section 42.3, the Enterprises and Developer agree and expressly intend that this Agreement, which includes its Annex, Schedules and any valid amendments, constitutes a single, non-severable, integrated agreement whose terms are interdependent and non-divisible.
- b. Subject to Sections 2.4.2 and 2.4.3 and the express terms of this Agreement, any term, condition, requirement, criteria or specification set out or referenced in any part of this Agreement is a binding contractual obligation.

2.4.2. Standards for resolving conflicts and inconsistencies

- a. If there is any conflict, ambiguity or inconsistency between or among any provision(s) of (A) this Agreement (including Annex A (Definitions and Abbreviations), but excluding the Schedules) and/or (B) any provision(s) of the Schedules and/or (C) any provision(s) of the Project Standards, in each case that cannot be reconciled by reading all relevant provisions of this Agreement, the Schedules and/or the Project Standards as mutually explanatory of one another, then the order of precedence shall be as follows:
 - i. this Agreement (including Annex A (Definitions and Abbreviations), but excluding the Schedules) shall prevail over any of the Schedules and any of the Project Standards;
 - ii. Schedule 17 (Environmental Requirements) shall prevail over any other Schedule and any of the Project Standards;
 - iii. subject to Section 2.4.2.a.ii, Schedules 3 (Commencement and Completion Mechanics), 4 (Payments), 5 (Milestone Payments), 6 (Performance Mechanism), 8 (Project Administration), and 9 (Submittals) shall prevail equally over all remaining Schedules;

- iv. Part B of Schedule 28 (Proposal Extracts) shall prevail over all other remaining Schedules; and
- v. subject to Sections 2.4.2.a.ii, iii, and iv, all Schedules (including the Project Special Provisions) shall prevail equally over any of the Project Standards (excluding the Project Special Provisions);

provided that:

- vi. if there is any conflict, ambiguity or inconsistency between or among any provision(s) of the Construction Standards, the order of precedence set out in Section 105.09 of the CDOT Standard Specifications shall apply;
- vii. Changes made pursuant to any Change Order or Directive Letter and amendments made pursuant to Section 43.1 shall prevail over such portions of this Agreement that they modify or amend;
- viii. in the event of any conflict, ambiguity or inconsistency between or among the provisions of this Agreement (including, for certainty, the Schedules) with an equal order of precedence, the most stringent requirement shall take precedence;
- ix. notwithstanding anything to the contrary contained in this Agreement, in the event of any conflict, ambiguity or inconsistency between or among any applicable requirement under Law and any other requirement of this Agreement, the applicable requirement under Law shall take precedence;
- x. except where expressly referred to in this Agreement, the Financial Model and its contents shall not be used to interpret this Agreement and shall not otherwise affect the meaning of this Agreement; and
- xi. additional or supplemental requirements that Developer is required to comply with pursuant to this Agreement (including such requirements pursuant to any of the Project Standards) with a lower order of precedence relative to other parts of this Agreement (including, for certainty, the Schedules) as determined pursuant to this Section 2.4.2 shall be given effect except to the extent such requirements conflict or are inconsistent with, or otherwise create an ambiguity in relation to, the provisions contained in a part of this Agreement with a higher order of precedence.

b. *[Reserved.]*

2.4.3. Interpretation and resolution of conflicts

- a. Each Party shall notify the other Party promptly after it identifies or becomes aware of any conflict, ambiguity or inconsistency:
 - i. of a type described in Section 2.4.2;
 - ii. between or among any Deliverable and the provisions of this Agreement and/or the Project Standards; or
 - iii. regarding the interpretation of any Deliverable,

and each Party agrees to not take advantage of any such conflict, ambiguity or inconsistency, or of any other error or omission in or to this Agreement. Furthermore, in the event of any such conflict, ambiguity or inconsistency, the Parties agree that the relevant terms of this Agreement shall not be construed against the Person that prepared them and the Parties waive any Law with contrary effect which would otherwise be applicable in connection with the construction and interpretation of this Agreement.

- b. To the extent that the Parties disagree on the reconciliation of any conflict, ambiguity or inconsistency of a type described in Section 2.4.3.a.ii to the extent such relates to a

Technical Deliverable, the Enterprises may, in their discretion, notify Developer of their determination regarding such reconciliation, which determination shall be binding, unless such determination is Agreed or Determined to:

- i. substantively amount to a unilateral amendment to this Agreement or to a Change not made pursuant to Section 14; or
- ii. breach the implied covenant of good faith and fair dealing.

3. PROJECT INFORMATION, RELIANCE AND DILIGENCE

3.1. Limited Reliance on Project Information

Developer acknowledges and agrees that:

- a. prior to the Final Project Information Date, the Reference Documents (including, for certainty, the Reference Design) and certain other documents, information, reports and materials (together, the “Project Information”) were made available to the Preferred Proposer for information only as contemplated in Section 2.5.1 of Part C of the ITP;
- b. prior to the Agreement Date, the Preferred Proposer, the Core Proposer Team Members and Developer each conducted their own due diligence on the accuracy, completeness, relevance, fitness for purpose and adequacy of the Project Information;
- c. the Reference Documents have not been incorporated into this Agreement either as a result of being listed in Schedule 29 (Reference Documents) or as a result of being referenced in any provision of this Agreement that requires Developer to comply with a specific Reference Document (or part thereof); and
- d. neither the Enterprises, nor any other Person that produced or provided any Project Information, gives or has given any representation, warranty, undertaking or guarantee as to the accuracy, completeness, relevance, fitness for purpose or adequacy of any Project Information, and as such:
 - i. Developer is not entitled to rely on any Project Information, except with respect to any Reference Document, to the extent such Reference Document is either expressly or implicitly and necessarily the basis for determining the occurrence of a Supervening Event or whether any risk, information, matter or thing was Known or Knowable; and
 - ii. subject to Section 3.4, neither the Enterprises, nor any other Person that produced or provided any Project Information, shall have any responsibility or liability to Developer or any other Developer-Related Entity in respect of, and Developer shall not be relieved of any obligation under this Agreement as a result of:
 - A. any lack of accuracy, utility, completeness, relevance, fitness for purpose or adequacy of any kind whatsoever of any such Project Information;
 - B. any interpretations of, or conclusions drawn from, any such Project Information;
 - C. any failure by the Enterprises, or by any other Person that produced or provided any such Project Information, to update such Project Information, the contents of which may reflect information available as of the date that such Project Information was prepared or as of such other date indicated therein;
 - D. any failure by the Enterprises or any other Person to reference or otherwise make available any materials, documents, drawings, plans or other information relating to the Project; or

- E. any causes of action or claims of, or Losses whatsoever suffered by, Developer or any other Developer-Related Entity by reason of any use of, or any action or forbearance in reliance on, such Project Information.

3.2. Responsibility for Independent Diligence

3.2.1. Sufficient diligence

Subject to the terms of this Agreement, Developer is deemed to have satisfied itself as to:

- a. the sufficiency and (as applicable) condition of the Right-of-Way, the ROD Construction Limits and the Project License, and of all other property, assets and rights that it is entitled to receive under this Agreement;
- b. the nature and extent of the risks assumed by it under this Agreement;
- c. the sufficiency of the Preferred Proposer's and the Developer-Related Entities' opportunities to conduct due diligence, including in relation to the condition of each ROW Parcel, on or prior to the Setting Date pursuant to Good Industry Practice; and
- d. the precautions and times and methods of working necessary to prevent or, if it is not possible to prevent, to mitigate or reduce any nuisance or interference, whether public or private, being caused to any third parties through the performance of the Work.

3.2.2. No reliance on unincorporated statements or representations and warranties

Developer acknowledges and agrees that:

- a. it has not entered into this Agreement on the basis of, and has not relied upon, any statement, representation or warranty or other provision (in each case whether oral or written, express or implied) made or agreed to by the Enterprises or by any other Person, or any of their agents or employees, except those expressly set out or repeated in this Agreement; and
- b. the only remedies available in respect of any untrue statement, misrepresentation or breach of warranty made to Developer in this Agreement shall be any remedies expressly available under this Agreement.

3.3. Limitations on Site Condition Claims

3.3.1. General prohibition of Claims, subject to limited exceptions

Neither Developer nor any other Developer-Related Entity shall be entitled to make any Claim against any Person in relation to the condition of any ROW Parcel or any Additional ROW Parcel at the time such parcel first became subject to Developer's Possession or Developer first acquired any interest or right in respect of such parcel, except, with respect to Developer Claims only:

- a. with respect to Claims against the Enterprises and CDOT, to the extent expressly provided for in this Agreement; and
- b. with respect to Claims against any other Person:
 - i. to the extent that such Claims are against the relevant contractor pursuant to Colo. Rev. Stat. §§ 13-20-801 *et seq.* in relation to such contractor's construction of Structure No. E-17-VD (I-70 over Havana Street) or Structure No. E-17-VE (I-70 over UPRR spur track) (for purposes of this Section 3.3, any such Claim, a "Relevant Claim" and any such contractor, a "Relevant Contractor"), subject only to Developer providing five Working Days' prior notice to the Enterprises that it intends to make a Relevant Claim (or such longer period of notice as is reasonable in the circumstances in the event that Developer has made a request to the Enterprises pursuant to Section 3.3.2.c);

- ii. to the extent that such Claims are with respect to:
 - A. any Unexpected Hazardous Substances (where, for purposes of this Section 3.3.1.b.ii.A, the exclusions in paragraphs b., c., d., e., f. and g.iii. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) shall not apply); or
 - B. any Unexpected Groundwater Contamination Conditions;
 subject to the prior written consent of the Enterprises (such consent not to be unreasonably withheld); and
- iii. otherwise, subject to the prior Approval of the Enterprises.

3.3.2. Assignment of and assistance with certain Claims

In connection with the assertion or potential assertion of a Relevant Claim by Developer:

- a. as of the Agreement Date, the Enterprises shall have procured the assignment by CDOT to the Enterprises of any right of CDOT to assert a Relevant Claim against any Relevant Contractor;
- b. the Enterprises hereby assign to Developer:
 - i. the rights of CDOT that were previously assigned to the Enterprises as referenced in Section 3.3.1.b.i; and
 - ii. any other right of the Enterprises to assert a Relevant Claim against any Relevant Contractor; and
- c. the Enterprises shall, upon the reasonable request of Developer, use (and shall procure that CDOT shall use) Reasonable Efforts to cooperate with Developer in the assertion of any Relevant Claim against a Relevant Contractor, including by making available any relevant documents or materials in the Enterprises' or CDOT's possession.

3.4. Residual Enterprise Liability

Nothing in this Section 3 shall exclude any liability which the Enterprises would otherwise have to Developer:

- a. in respect of any statements, representations or warranties made fraudulently, recklessly or in bad faith or constituting willful misconduct or gross negligence; or
- b. to the extent expressly provided for in this Agreement.

PART B: EFFECTIVENESS AND TERM; REPRESENTATIONS AND WARRANTIES; FINANCIAL CLOSE; GRANT OF RIGHTS

4. EFFECTIVENESS AND TERM

4.1. Effectiveness

This Agreement (including Annex A (*Definitions and Abbreviations*) and the Schedules) shall come into effect on and from the Agreement Date.

4.2. Term

The “Term” shall commence on the Agreement Date and end on the earliest to occur of:

- a. the Expiry Date; and
- b. the Termination Date.

5. REPRESENTATIONS AND WARRANTIES

5.1. Representations and Warranties

5.1.1. Developer hereby represents and warrants to the Enterprises that each representation and warranty set out in Part A of Schedule 2 (*Representations and Warranties*) is true and correct as of the Agreement Date and, as applicable, is true and correct as of the effective date of the relevant Principal Subcontract.

5.1.2. Each Enterprise hereby represents and warrants to Developer that each representation and warranty made by it and set out in Part B of Schedule 2 (*Representations and Warranties*) is true and correct as of the Agreement Date.

5.2. Mutual Reliance

Developer and each Enterprise acknowledge that, respectively, the Enterprises and Developer enter into this Agreement in reliance on the representations and warranties made pursuant to Section 5.1.

5.3. Notice of Untrue, Incorrect or Misleading Representations and Warranties

Notwithstanding that the representations and warranties made by the Parties pursuant to Section 5.1 are made and, pursuant to Sections 2.2(b) and 2.3(a) of Schedule 1 (*Financial Close*), repeated, only at particular times:

- a. Developer shall promptly inform the Enterprises after it becomes aware that any of its representations and warranties either was false, misleading or inaccurate in any material respect when made (or repeated) or omitted material information when made (or repeated); and
- b. each Enterprise shall promptly inform Developer after it becomes aware that any of the representations and warranties made by it either was false, misleading or inaccurate in any material respect when made (or repeated) or omitted material information when made (or repeated).

5.4. Special Remedies for Mutual Breach of Warranty

If any circumstance or event exists or occurs that constitutes or results in concurrent breaches of any of the parallel representations and warranties made pursuant to Section 5.1, or thereafter repeated pursuant to Schedule 1 (*Financial Close*), by Developer and one or both Enterprises, but which breaches do not also constitute or result in any other breach or default by either Party, including, subject to the passage of time and giving of notice, a Developer Default or an Enterprise Default, then:

- a. such breaches shall not result in a Supervening Event or form the basis for a damages claim by either Party against the other; and
- b. each Party's only remedy shall be to:
 - i. take action as permitted under this Agreement to rectify or mitigate the effects of such circumstance or event;
 - ii. if applicable, exercise its rights to pursue severance and/or substitution of any invalid clause, condition, term, provision, section, subsection or part of this Agreement pursuant to Section 42.3;
 - iii. if applicable, pursue a Termination by Court Ruling; and/or
 - iv. exercise its rights pursuant to Section 43.3.

5.5. Survival of Representations and Warranties

Pursuant to Section 41, each Party's liability with respect to its representations and warranties made pursuant to Section 5.1, or thereafter repeated pursuant to this Agreement, shall survive the end of the Term.

6. FINANCIAL CLOSE

6.1. Financial Close Process

The Parties agree to comply with their respective obligations with respect to the achievement of Financial Close pursuant to Schedule 1 (Financial Close).

6.2. Achievement of, or Failure to Achieve, Financial Close

- 6.2.1. Financial Close shall occur subject to, and in accordance with, Sections 2 and 3 of Schedule 1 (Financial Close).
- 6.2.2. A failure to achieve Financial Close by the Financial Close Deadline shall have the effects set out in, and may result in termination of this Agreement pursuant to, Section 5 of Schedule 1 (Financial Close).

7. GRANT OF RIGHTS AND PROJECT LICENSE

7.1. Grant of Right to Develop Project

Subject to the terms and conditions of this Agreement:

- a. the Enterprises hereby grant to Developer the exclusive right to design, construct, finance, operate and maintain the Project in each case pursuant to this Agreement; and
- b. Developer accepts such right and acknowledges its obligations under this Agreement, in each case during the Term.

7.2. Developer's Project License

7.2.1. Grant of Project License

- a. Subject to the terms and conditions of this Agreement:
 - i. the Enterprises grant to Developer a license (the "Project License") over, under, upon and in the Right-of-Way, and any Additional Right-of-Way, for the sole purpose of exercising its rights and performing its obligations under this Agreement pursuant to the terms hereof; and
 - ii. Developer acknowledges and accepts such Project License.
- b. Without limiting Developer's conditional, limited rights to obtain early access to and use of (but, for certainty, not Possession of) ROW Parcels pursuant to Section 1.2 of Schedule 18 (Right-of-Way), the Enterprises shall deliver, and Developer shall be entitled to have, Possession of:

- i. each ROW Parcel on and from the Possession Date specified in the Notice of Possession with respect to such ROW Parcel until such ROW Parcel's Project License End Date; and
- ii. any Additional ROW Parcel on and from the Possession Date specified in the Notice of Possession with respect to such Additional ROW Parcel until such Additional ROW Parcel's Project License End Date,

without prejudice to Developer's rights arising as a result of the occurrence of any Compensation Event as described in paragraph b. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) and, for certainty, subject to such rights and restrictions of access and use of certain third parties that fall within the definition of Possession in Part A of Annex A (*Definitions and Abbreviations*) from time to time during the Term.

- c. The Project License shall automatically be revoked upon the occurrence of the end of the Term.
- d. The Enterprises may, in their discretion, by not less than 365 Calendar Days' notice to Developer, terminate the Project License with respect to the ROW Parcels (or any part thereof) on which the Maintenance Yard is located in the event that the Enterprises or CDOT require the use of such ROW Parcels (or part thereof) in connection with the development of the ultimate planned-for improvements to the I-70 East corridor as described in the FEIS, provided that:
 - i. any such termination shall not be effective prior to the Final Acceptance Date;
 - ii. prior to exercising such termination rights, the Enterprises shall consult with Developer to consider the extent to which there may be alternative solutions that:
 - A. do not require the termination of the Project License with respect to any or all such ROW Parcels (or any part thereof) in connection with such development; and
 - B. are acceptable to the Enterprises in their discretion.

Following any such termination pursuant to this Section 7.2.1.d, Developer shall, without limiting its other obligations under this Agreement, cooperate and coordinate with the transfer of such ROW Parcels (or any part thereof) to the Enterprises, CDOT or any other Person designated by the Enterprises. Developer shall not be entitled to any compensation, extension of time and/or relief with respect to any exercise by the Enterprises of their rights pursuant to this Section 7.2.1.d.

7.2.2. Sublicensing

Developer shall have the right to issue sub-licenses under the Project License to Subcontractors as necessary to carry out Developer's obligations under this Agreement.

7.2.3. Limitations and qualifications on the grant of rights and Project License

- a. The Project License is personal property, and not an interest in real property, and shall not be recorded in the City of Denver's Clerk and Recorder's Office or in any other county.
- b. Developer shall not use any part of the Site, or exercise its rights with respect to the Project License, in either case, for any purpose other than carrying out its obligations under this Agreement.
- c. Developer's interest in the Right-of-Way, and any Additional Right-of-Way, is limited by the Project License and the other terms and conditions of this Agreement. Developer is not and shall not be, and shall not be treated as or be deemed to be, the legal or

equitable owner of the Right-of-Way, or any Additional Right-of-Way, in whole or in part, for any purpose.

- d. This Agreement does not, and shall in no way be deemed to, constitute a lease (regardless of the characterization of such lease, including as an operating lease or a financing lease) to Developer or, except as expressly provided in Section 7.1, a grant (regardless of the characterization of such grant, including by way of easement, purchase option, conveyance, lien or mortgage), in each case, of any right, title, interest or estate, including any fee simple, leasehold estate, easement or property interest of any kind, in or to the Right-of-Way, any Additional Right-of-Way, the Project or of any Assets incorporated into, or appurtenant to, the Project.
- e. Without limiting its rights under this Agreement arising as a result of the occurrence of any Compensation Event as described in paragraph b. of the definition thereof in Part A of Annex A (Definitions and Abbreviations), Developer acknowledges and agrees that its Possession of each ROW Parcel and any Additional ROW Parcel pursuant to Section 7.2.1.b is subject to the rights and restrictions of access and use of certain third parties that fall within the definition of Possession in Part A of Annex A (Definitions and Abbreviations) from time to time during the Term. Developer shall reasonably facilitate access to and through the Site by all Persons with such rights of access and use, and shall not take any action (or refrain from taking any action) in a manner that is calculated or intended to directly or indirectly prejudice or frustrate such rights of access and use.

7.3. Ownership and Liability

7.3.1. Right-of-Way

All of the Right-of-Way, and any Additional Right-of-Way, shall be held or acquired, as applicable, in the name of CDOT (or in such other name(s) as the Enterprises may otherwise determine in their discretion). Subject to the terms of this Agreement, the Enterprises reserve to themselves and their designees, including CDOT, the rights of use, occupancy and, as applicable, ownership over, under, upon and in the Right-of-Way and any Additional Right-of-Way.

7.3.2. Developer's responsibilities

Following either Developer's Possession of any ROW Parcel or any Additional ROW Parcel pursuant to Section 7.2.1.b (and for such period of time as Developer is entitled to have Possession thereto pursuant to such Section), or Developer's acquisition of any interest or right with respect to any Temporary Property or Permit Area (and for such period of time as such interest or right is maintained), Developer shall (as among the Parties):

- a. have sole responsibility for such part of the Site (and for all Elements located thereon), including risk of damage and loss; and
- b. bear any costs and expenses incurred in relation to such part of the Site (and in relation to all Elements located thereon), including all fees, expenses and taxes associated with such part of the Site,

in each case subject to the express terms of this Agreement.

7.3.3. Transfer of Ownership

- a. With respect to any part of any Element that is to be affixed to any ROW Parcel or any Additional ROW Parcel (or any infrastructure already affixed thereto) as part of the Project, ownership of and title to each such part shall automatically vest in CDOT (or, in the Enterprises' discretion, their designee) free from all Encumbrances, other than Permitted Encumbrances, immediately upon such part being affixed thereto.

- b. Any Work Product, including all property interests therein, shall be considered “works made for hire” pursuant to Law and, accordingly, shall be the property of the Enterprises, excluding only:
 - i. the Financial Model;
 - ii. any Project Records that are exempt from disclosure in compliance with CORA and other Laws applicable to the disclosure of Public Records, but only to the extent identified in the disclosure protocol Accepted by the Enterprises pursuant to Section 20.1.2 as being excluded from the application of this Section 7.3.3.b; and
 - iii. any Proprietary Intellectual Property.
- c. Notwithstanding Section 7.3.3.a:
 - i. the vesting of ownership of and title to any part of any Element pursuant to Section 7.3.3.a and any Work Product pursuant to Section 7.3.2.b shall not imply acceptance of such part of such Work Product by the Enterprises (or by such part’s or such Work Product’s current or future owner) as to the compliance of such part with the requirements set out in this Agreement, nor shall Developer be relieved of its obligation to comply with any of its obligations under this Agreement with respect to such Element or such Work Product, as applicable, the Work or otherwise; and
 - ii. subject to the terms of this Agreement, the risk of loss or damage to such part of any Element and any Work Product held by Developer shall remain with Developer pursuant to Section 7.3.2.
- d. Developer shall not do any act or thing that will create any Encumbrance (other than with respect to any Element or other real property, a Permitted Encumbrance) against any Element (or part thereof), any Work Product or any part of the Right-of-Way or of any Additional Right-of-Way, and shall promptly remove any such Encumbrance (including such a Permitted Encumbrance that falls within paragraph b. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*), but excluding any other Permitted Encumbrances), unless such Encumbrance came into existence as a result of an act of or omission by the Enterprises or CDOT, or a Person claiming through any of them, which in turn was not caused by an act or omission of Developer or any other Developer-Related Entity.

PART C: OBLIGATIONS TO DESIGN, CONSTRUCT, OPERATE, MAINTAIN AND HANDBACK THE PROJECT

8. DEVELOPER'S PROJECT OBLIGATIONS

8.1. General Undertakings

8.1.1. Developer hereby undertakes to perform the Work pursuant to and in compliance with:

- a. the terms, conditions and requirements of this Agreement, including each of the Schedules;
- b. the Project Standards;
- c. Law;
- d. all Governmental Approvals and all Permits in effect from time to time; and
- e. Good Industry Practice.

8.1.2. Furthermore, Developer hereby undertakes that it shall:

- a. not adopt or, once adopted, change its legal form or name of organization without the Enterprises' prior consent, such consent:
 - i. in the Enterprises' discretion, if such change would adversely affect the Enterprises' rights, obligations or interests under this Agreement or with respect to the Project; and
 - ii. otherwise, not to be unreasonably withheld;
- b. not carry out any business or other activities other than business and activities solely related to the performance of its obligations pursuant to this Agreement in relation to the Project;
- c. not permit any other Person to carry out any business activities on the Site or in relation to the Project, except as expressly permitted by this Agreement;
- d. not commit or otherwise facilitate, and not permit any other Developer-Related Entity to commit or otherwise facilitate, the commission of any Prohibited Acts;
- e. maintain and, as applicable, comply with, and ensure that each Principal Subcontractor maintains and complies with, all licenses, certifications and accreditations and related standards, as well as all other required professional abilities, skills and capacity, in each case required to perform the Work; and
- f. subject to any rights of Developer arising as a result of the occurrence of any Developer Change documented in a Change Order or any Supervening Event, bear all risk, including of delay and/or increased cost, resulting from or arising out of the use of the Reference Design or the I-70 Cover Plans or any differences between its design for any portion of the Project and the Reference Design or such plans.

8.1.3. Without limiting its other obligations under this Agreement, Developer shall use Reasonable Efforts to cooperate and coordinate with the Enterprises, CDOT and all other Governmental Authorities with jurisdiction in matters relating to the Work, including their review, inspection and oversight of the Project as contemplated herein, in accordance with any Law granting such jurisdiction or as contemplated by any of the Third Party Agreements.

8.2. Assumption of Risk and Responsibility

- 8.2.1. Except to the extent otherwise expressly provided for in this Agreement (including as the result of the occurrence of any Developer Change documented in a Change Order or Supervening Event), all risks, costs and expenses in relation to the performance by Developer of the Work are allocated to, and accepted by, Developer as its entire and exclusive responsibility.
- 8.2.2. As among the Parties, Developer shall be solely responsible for the selection, pricing and performance of all Subcontractors (of every tier) and all other Persons for whom or for which Developer is responsible by contract or pursuant to Law, and for the performance, acts, defaults, omissions, breaches and negligence of the same, as fully as if any such performance, acts, defaults, omissions, breaches or negligence were those of Developer.
- 8.2.3. In the event that the inclusion in this Agreement of any ATC (as defined in the ITP) that was included in the Preferred Proposer's Proposal was made subject to any express condition, as such conditions are set out, and defined as ATC Conditions, in Part B of Schedule 28 (Proposal Extracts), Developer shall be solely responsible for satisfying such condition. If any such condition is not satisfied, and without limiting the Enterprises' other rights hereunder, Developer shall comply with the requirements of this Agreement (unmodified by such ATC) without any resulting entitlement to an extension of time, relief and/or compensation.

8.3. Federal and State Requirements

- 8.3.1. Compliance with Federal requirements
- a. Developer shall, and shall ensure that in respect of the Project and the Work each of its Subcontractors and each of their respective Subcontractors shall, comply with all Federal Law requirements applicable to transportation projects that receive Federal credit or funds, including the requirements set out in Schedule 15 (Federal and State Requirements).
 - b. In the event of any conflict between any applicable Federal Law requirement and the other requirements of this Agreement, Section 2.4.2.a.ix shall apply.
- 8.3.2. False or fraudulent statements and claims
- a. Developer recognizes that the requirements of the Program Fraud Civil Remedies Act of 1986, 31 U.S.C. § 3801 *et seq.*, and the US DOT regulations, "Program Fraud Civil Remedies," 49 CFR Part 31, apply to its actions under this Agreement.
 - b. Accordingly, by signing this Agreement, Developer certifies and affirms the truthfulness and accuracy of any claim, statement, submission or certification it has made pertaining to this Agreement and the Project.
 - c. Developer acknowledges that, if it makes a false, fictitious or fraudulent claim, statement, submission or certification, then, in addition to any other penalties that may be applicable, the Federal government reserves the right to impose the penalties of the Program Fraud Civil Remedies Act of 1986, 31 U.S.C. § 3801 *et seq.*, on Developer to the extent the Federal government deems appropriate.
- 8.3.3. Federal status of Project
- a. Developer acknowledges that:
 - i. the FHWA has designated the Project as a "Major Project" under 23 U.S.C. § 106, which designation, as applied to the Project by the FHWA (including pursuant to the FHWA's "Major Project Financial Plan Guidance" (December 2014)), requires:
 - A. submission by the Enterprises to, and approval by, FHWA of a project management plan; and
 - B. subject to Section 8.4.3.a, submission by Developer of:

- I. promptly following Financial Close, an initial financial plan; and
 - II. during the Construction Period, annual updates to such financial plan,
- in each case to, and for approval by, FHWA; and
- C. submission by the Enterprises to, and approval by, FHWA of a supplement to each financial plan submitted by Developer pursuant to Section 8.3.3.a.i.B; and
- ii. portions of the Project are and will be part of the National Highway System, as defined in 23 CFR § 470.
- b. Accordingly:
 - i. to facilitate subsequent submission to, and approval by, FHWA pursuant to Section 8.3.3.a.i.B.I, no later than 30 Calendar Days after the Agreement Date Developer shall submit to FHWA, for initial FHWA review (but not approval), a draft initial financial plan as Approved by the Enterprises; and
 - ii. Developer acknowledges and agrees that the Enterprises may submit documents based on or including the Proposal and/or Project Records to the FHWA in order for the Enterprises to comply with the requirements of 23 U.S.C. § 106(h) as applied to the Project by FHWA, including as part of any submission made by the Enterprises to the FHWA as described in Sections 8.3.3.a.i.A and 8.3.3.a.i.C, and Developer shall also use Reasonable Efforts to cooperate with and assist the Enterprises in the Enterprises complying with such requirements as reasonably requested by the Enterprises from time to time.

8.3.4. Emergency Repair Work

- a. As a condition to receiving payment of any Change in Costs for performing Emergency Repair Work as a result of the occurrence of any Compensation Event as described in paragraphs c., (with respect to relevant Public Safety Orders), d., e. and k. of the definition thereof in Part A of Annex A (Definitions and Abbreviations), Developer shall competitively bid and contract for such Emergency Repair Work as FHWA's or FEMA's or any other equivalent Governmental Authority's applicable regulations, policies or procedures may require in order for the Enterprises or CDOT to obtain reimbursement for eligible costs.
- b. Developer shall:
 - i. ensure that any Emergency Repair Work is performed pursuant to the requirements of this Agreement, Law and FHWA's, FEMA's and any other equivalent Governmental Authority's applicable regulations, policies or procedures, including (as applicable) the FHWA's "Emergency Relief Manual"; and
 - ii. maintain estimates, cost records and supporting documentation pursuant to such applicable regulations, policies or procedures, and otherwise in form and substance as reasonably required by the Enterprises.
- c. Without limiting Developer's obligations under Sections 8.3.4.a and 8.3.4.b, the Enterprises may, in their discretion, provide oversight of Emergency Repair Work as may be required by FHWA, FEMA or any other equivalent Governmental Authority, or by Law, to preserve eligibility for reimbursement of eligible costs.

8.3.5. Restrictions on communications with FHWA and US DOT

Developer shall only communicate with the FHWA and the US DOT in relation to the Project and the Work indirectly through the Enterprises, except for direct communications:

- a. with respect to the TIFIA Financing;
- b. as required by Law;
- c. expressly permitted or required by this Agreement; or
- d. made with the Enterprises' prior Approval,

in each of which cases Developer shall provide the Enterprises with regular and reasonably detailed written updates regarding such communications.

8.4. Governmental Approvals and Permits

8.4.1. Department Provided Approvals

The Department Provided Approvals were obtained prior to the Agreement Date by CDOT and, subject to Section 8.4.3.b, shall be maintained by the Enterprises, acting in coordination with CDOT, at their cost and expense (excluding any cost or expense borne by Developer pursuant to Section 8.4.3.b).

8.4.2. Developer's responsibility to obtain Governmental Approvals and Permits

- a. Subject to Section 8.4.4.a, and without limiting its rights under this Agreement arising as a result of the occurrence of any Developer Change documented in a Change Order or any Supervening Event (including any such rights that relate to obtaining any new or amending any existing Governmental Approval or Permit as a result of any such Change Order or Supervening Event), Developer shall be responsible for obtaining all Governmental Approvals (other than the Department Provided Approvals) and all Permits, and for arranging any necessary amendments to any Governmental Approvals (including, pursuant to Section 8.4.3.b, Department Provided Approvals) and any Permits, in each case as necessary to perform its obligations hereunder at the time and in the manner when they fall due for performance.
- b. Without limiting its obligations under Section 19.1, Developer shall deliver to the Enterprises copies of all Governmental Approvals and Permits for which it is responsible pursuant to Section 8.4.2.a (and copies of any modifications, renewals, extensions and waivers to or of any thereof) promptly following receipt by Developer of the same.
- c. Developer's obligations under Section 8.4.2.a shall not be limited by any Law placing responsibility for the same upon either or both of the Enterprises, CDOT or another Person.

8.4.3. Submissions to the FHWA and involving Department Provided Approvals; process for obtaining and modifying Governmental Approvals

- a. Prior to submitting an application for any Governmental Approval or Permit (or for any proposed termination, modification, renewal, extension or waiver of a Governmental Approval or Permit) or (with respect to FHWA only) any other Deliverable to:
 - i. the FHWA; or
 - ii. any Person with respect to all such submissions that involve a Department Provided Approval,

Developer shall first submit the same, together with any supporting environmental or other studies, analyses and data, to the Enterprises for Approval. Developer shall submit each other application for a Governmental Approval or Permit (or for any proposed termination, modification, renewal, extension or waiver of a Governmental Approval or

Permit) for, except as otherwise provided in this Agreement, Information to the Enterprises in accordance with Section 5(a) of Schedule 9 (Submittals).

- b. As between the Enterprises and Developer, Developer shall perform all necessary actions and shall bear all risk of delay and/or all risk of cost and expense, in either case, associated with Governmental Approvals and with Permits, including:
- i. without limiting the Enterprises', CDOT's and FHWA's rights to independently evaluate all environmental and other studies and documents and fulfil the other responsibilities assigned to them by 23 CFR Part 771, conducting all necessary environmental or other studies and preparing all necessary environmental or other documents in compliance with Law (provided that the Enterprises may, in their discretion, elect to conduct any such studies or to prepare any such documents at the Enterprises' cost and expense);
 - ii. obtaining and complying with all necessary new Governmental Approvals and Permits, or all necessary modifications, renewals and extensions of existing Governmental Approvals and Permits, or of pending applications for Governmental Approvals and Permits; and
 - iii. all risk and cost of litigation,

where such risk of delay and/or risk of cost and expense:

- iv. either:
 - A. relates to:
 - I. a Governmental Approval that is not a Department Provided Approval; or
 - II. a Permit; or
 - B. results from:
 - I. Developer's use of the Reference Design or the I-70 Cover Plans (except to the extent that any such risk of delay and/or cost and expense relates solely to a Department Provided Approval);
 - II. any differences between Developer's design and the Reference Design or the I-70 Cover Plans
 - III. differences between the design, construction, operations and/or maintenance means and methods Developer chooses for any portion of the Project and those set out, referred to or contemplated in any Governmental Approval (including, for certainty, any Department Provided Approval) or Permit, or in the application for any Governmental Approval or Permit;
 - IV. the incorporation of any ATC (as defined in the ITP) into this Agreement;
 - V. the acquisition of any Additional ROW Parcel, Developer-risk Permit Area or Temporary Property Rights; and/or
 - VI. any breach of Law, Governmental Approval, Permit or this Agreement, or fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity; and
- v. does not otherwise result from the occurrence of any Supervening Event (including where such Supervening Event results in a requirement to obtain any new or amend any existing Governmental Approval or Permit) or to the extent otherwise agreed in any Change Order.

- c. If Developer is unable to obtain, modify, renew or extend any Governmental Approval or Permit for which it is responsible pursuant to Section 8.4.2.a, then, without limiting its rights under this Agreement arising as a result of the occurrence of any Developer Change documented in a Change Order or any Supervening Event (including as a result of the Enterprises' breach of their obligations under Section 8.4.4.a, and including any such rights that relate to obtaining any new or amending any existing Governmental Approval or Permit as a result of any such Change Order or Supervening Event), Developer shall promptly notify the Enterprises and proceed or continue to design, build, operate and maintain the Project according to the requirements of this Agreement and the design, construction, operations and maintenance means and methods set out, referred to or contemplated in the Department Provided Approvals, and any other Governmental Approvals and any Permits that have been or are subsequently obtained.
- d. No such inability of Developer to obtain, modify, renew or extend any Governmental Approval or Permit for which it is responsible pursuant to Section 8.4.2.a shall itself constitute a Supervening Event or other legal or contractual basis for any claim or relief hereunder by or for Developer to the extent that the cause of, or reason for, such inability does not otherwise constitute a Supervening Event or such other basis for any claim or relief.

8.4.4. Enterprise assistance in obtaining and modifying Governmental Approvals and Permits

- a. The Enterprises shall, as and when expressly provided in this Agreement and otherwise at the reasonable request of Developer, where necessary to obtain, modify, renew or extend any Governmental Approval or Permit for which Developer is otherwise responsible pursuant to Section 8.4.2.a, use Reasonable Efforts to:
 - i. execute (or, as applicable, facilitate execution by CDOT of) such documents as can only be executed by the Enterprises or, as applicable, CDOT;
 - ii. make such applications or recordings (or, as applicable, facilitate such applications or recordings by CDOT), either in its own name or jointly with Developer, as can only be made by the Enterprises or, as applicable, CDOT, or in joint names of Developer and the Enterprises or, as applicable, CDOT; and
 - iii. attend meetings and cooperate with any relevant Governmental Authority, Utility Owner or Railroad as reasonably requested by Developer (or, as applicable, facilitate such attendance and cooperation by CDOT), in each case within a reasonable period of time after being requested to do so by Developer.
- b. Subject to any pre-agreed scope of Work and budget and to any rights of Developer that arise as a result of the occurrence of any Developer Change documented in a Change Order or Supervening Event, Developer shall fully reimburse the Enterprises for all reasonable costs and expenses they and, as applicable, CDOT, incur as a result of the Enterprises complying with their obligations pursuant to Section 8.4.4.a, provided that, except to the extent provided pursuant to Section 8.4.3.b, Developer shall not be responsible for the payment of the Enterprises' and, as applicable, CDOT's costs and expenses incurred in obtaining, modifying, renewing or extending any Department Provided Approval.

8.5. Third Party Agreements

8.5.1. Compliance with Third Party Agreements and performance of related Work

Developer shall not, and shall ensure that each of its Subcontractors and each of their respective Subcontractors shall not, take any action (or refrain from taking any action) in a manner that is calculated or intended to directly or indirectly prejudice or frustrate the performance by any party to a Third Party Agreement of its obligations thereunder.

8.5.2. Designation of third party agreements

The Enterprises may, in their discretion and at any time, by notice to Developer require Developer to comply with the terms (to the extent specified in such notice) of:

- a. an agreement (a copy of which shall be attached to such notice) that is not prior to such notice a Third Party Agreement and to which either or both of the Enterprises and/or CDOT is a party with:
 - i. any Governmental Authority, Utility Owner or Railroad; or
 - ii. any property owner or other Person:
 - A. having jurisdiction over any aspect of the Project or Work; or
 - B. having any property interest affected by the Project or the Work; and
- b. any amendment or modification of an existing Third Party Agreement (a copy of which amendment or modification shall be attached to such notice),

and, following delivery of any such notice, such agreement, amendment or modification shall become a Third Party Agreement or amend or modify the existing Third Party Agreement, as the case may be, for purposes of this Agreement.

8.5.3. Restrictions on new third party agreements

Unless expressly Approved by the Enterprises, Developer shall not enter into, and shall ensure that no other Developer-Related Entity enters into, any agreement with any Person referred to in [Section 8.5.2.a.i](#) or [8.5.2.a.ii](#), that in any way purports to, or reasonably could be interpreted to, obligate the Enterprises, CDOT or the State. For certainty, this [Section 8.5.3](#) shall not apply to any Sprint Reimbursement Agreement, to which [Section 4.6.1.b](#) of [Schedule 10 \(Design and Construction Requirements\)](#) shall apply.

8.5.4. Sharing of Recovery

Subject to [Section 15.7.3](#), if either Party shall, by exercising any right under any URA, any Utility Work Order, any RRA or the Cover Maintenance Agreement, or by asserting any Claim against any Utility Owner, Railroad or Cover Top Maintainer in connection with the same, obtains payment in respect of Losses incurred by the other Party which (in aggregate together with other amounts obtained) are in excess of its own Losses (which, for such purposes, shall be deemed to include any reasonable costs and expenses incurred by it in obtaining such payment), then the recovering Party shall promptly release such excess payment to the other Party up to an amount equal to such other Party's Losses, provided that (without prejudice to [Section 15.7.3.a](#)) this [Section 8.5.4](#) shall not be interpreted as meaning that any Party shall be obliged to exercise any such right or assert any such Claim.

8.5.5. Enforcement of RRAs

The Enterprises shall, upon the reasonable request of Developer, use Reasonable Efforts to enforce their rights under each RRA against the Railroad that is party to such agreement.

8.6. Compliance with Project Standards

8.6.1. Monitoring of Project Standards

- a. Developer shall, and shall ensure that each of its Subcontractors and each of their respective Subcontractors shall, monitor and familiarize themselves with changes or additions to, or replacements of, the Project Standards (in the case of Subcontractors, to the extent applicable to their portion of the Work).
- b. Developer shall notify the Enterprises of any change or addition to, or replacement of, any Project Standard promptly after it becomes aware of such change, addition or replacement.

8.6.2. Changes, additions or replacements to or of Project Standards

- a. Subject to Section 8.6.2.b, Developer shall not be required to comply with any change or addition to, or replacement of, a Project Standard, except pursuant to an Enterprise Change documented in a Change Order or a Directive Letter.
- b. If and to the extent that compliance by Developer with any change or addition to, or replacement of, a Project Standard is required for Developer's continued compliance with Law (the burden of establishing which shall be on Developer), but without limiting Developer's obligation to at all times comply with Law, the Enterprises shall be required to issue an Enterprise Change Notice to require compliance by Developer with such change or addition to, or replacement of, a Project Standard.
- c. Notwithstanding any Enterprise Change documented in a Change Order or a Directive Letter in relation to any change or addition to, or replacement of, an O&M Standard, Developer shall only be entitled to compensation for Change in Costs resulting from any such Enterprise Change if and to the extent such Enterprise Change:
 - i. is initiated to conform the O&M Standards with a Discriminatory Change in Law or a Qualifying Change in Law;
 - ii. requires Developer to incur any expenditure that would be treated as a capital expenditure in accordance with GAAP (in which event, for certainty, Developer shall be entitled to compensation for any resulting Change in Costs and not only any resulting capital expenditure); or
 - iii. is materially more onerous as applied to the Project, Developer or any Principal Subcontractor than the application thereof to (A) Similar Projects of either Enterprise or CDOT or (B) the principal contractors responsible for such projects,

provided that, in each case, such Enterprise Change does not arise as a result of or is not made in response to any breach of Law, Governmental Approval, Permit or this Agreement, or fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity.

9. DEVELOPER'S CONSTRUCTION PERIOD OBLIGATIONS

9.1. Obligation to Perform Construction Work; Restrictions on Construction Work

- a. Developer shall perform:
 - i. the NTP1 Work on and from (but (other than, for certainty, those preparatory activities referenced in paragraphs b. and c. of the definition of NTP1 Work in Part A of Annex A (*Definitions and Abbreviations*)) not prior to) the date of issuance of NTP1;
 - ii. subject to Section 9.1.a.i, all the Construction Work and all the O&M Work During Construction (other than the performance of Snow and Ice Control Services) on and from (but not prior to) the date of issuance of NTP2; and
 - iii. Snow and Ice Control Services, on and from the Snow and Ice Control Commencement Date (subject to any obligation of Developer to perform such services prior to such date pursuant to Section 2.2.2.b of Schedule 11 (*Operations and Maintenance Requirements*)),

pursuant to and in compliance with the terms, conditions and requirements of this Agreement.
- b. Unless expressly Approved by the Enterprises, Developer shall not perform any Construction Work (other than Utility Work) consisting of activities that disturb, alter or otherwise physically impact any part of the Right-of-Way (or of any Additional Right-of-Way) that is outside the ROD Construction Limits.

9.2. Schedule Management, Completion and Commissioning

9.2.1. Milestone Completion, Substantial Completion and Final Acceptance

- a. Subject to Section 9.2.2, Developer shall achieve:
 - i. Substantial Completion by the Baseline Substantial Completion Date (and, by doing so, achieve Milestone Completion of each Payment Milestone); and
 - ii. Final Acceptance by the Final Acceptance Deadline Date.
- b. The Baseline Substantial Completion Date and the Final Acceptance Deadline Date shall only be extended pursuant to this Agreement as Agreed or Determined either pursuant to a Change or following the occurrence of a Relief Event or a Compensation Event.

9.2.2. Project Schedule

Notwithstanding anything to the contrary in this Agreement, including Section 9.2.1.a, and without prejudice to the rights of the Enterprises:

- a. that arise as a result of the Noncompliance Event specified in item 2.32 in Table 6A.2; or
- b. that arise as a result of the occurrence of Developer Default number (5) in Section 32.1.1,

Developer's failure to comply with the Project Schedule (including its failure to comply with Sections 9.2.1.a.i or 9.2.1.a.ii) in carrying out the Construction Work shall not constitute a breach of this Agreement or a Developer Default.

9.2.3. Float

- a. Float shall be considered as a jointly owned, expiring resource available to the Project for the benefit of all Parties (and not for the exclusive benefit of either the Enterprises or Developer), available to each of them as needed to absorb delays caused by Supervening Events or other events to achieve interim completion dates and deadlines set out in the Project Schedule and, ultimately, to achieve Milestone Completion of each Payment Milestone by the relevant Milestone Completion Target Date, Substantial Completion by the Baseline Substantial Completion Date and Final Acceptance by the Final Acceptance Deadline Date.
- b. Notwithstanding Section 9.2.3.a, Float shall not be available to the Enterprises to absorb delays caused by the occurrence of a Compensation Event as described in paragraphs a.i. (but only with respect to a material breach of this Agreement by the Enterprises), a.ii., g., i.i., j., l., m. or o. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*).

9.3. Payment and Performance Security

9.3.1. Obligation to obtain and maintain Contractor Bonds

- a. Developer shall deliver to the Enterprises Contractor Bonds with respect to:
 - i. collectively (or, to the extent Accepted pursuant to Section 9.3.3, separately), the Construction Work and the O&M Work During Construction; and
 - ii. the O&M Work After Construction,
 in each case as and when required pursuant to Schedule 3 (*Commencement and Completion Mechanics*).
- b. Thereafter, Developer shall ensure that each such Contractor Bond shall remain in full force and effect, and in full compliance with the definition of Contractor Bond set out in Part A of Annex A (*Definitions and Abbreviations*), provided that, subject to Sections 9.3.1.c and 9.3.1.d, the terms of the Principal Subcontractor Direct Agreements and the Enterprises' rights to draw on any Contractor Bond in accordance with its terms

and the terms of this Agreement, promptly following the earlier of the Termination Date and:

- i. the Final Acceptance Date, the Enterprises shall release or return to Developer each Contractor Bond delivered pursuant to Section 9.3.1.a.i; and
 - ii. the Expiry Date, the Enterprises shall release or return to Developer each Contractor Bond delivered pursuant to Section 9.3.1.a.ii.
- c. Notwithstanding Section 9.3.1.a, Developer acknowledges and agrees that, to the extent required by Law in connection with Work to be performed during the Term, or as otherwise required in connection with a Change Order or Directive Letter, Developer shall obtain and maintain additional payment and/or performance security in such amounts, for such periods of time and in such form (if any) as required by Law or in connection with a Change. For purposes of this Agreement, references to a Contractor Bond shall be deemed to include any such additional security and any such additional security shall, subject to compliance with Law or the terms of any Change Order or Directive Letter, be provided by and maintained with an Eligible Surety or otherwise pursuant to Section 9.3.3. The Enterprises shall release or return to Developer any such additional security obtained and maintained pursuant to this Section 9.3.1.c at the end of the relevant period during which Developer is obligated to obtain and maintain the same.
- d. Developer shall be entitled to replace any Contractor Bond delivered pursuant to Section 9.3.1.a or otherwise obtained and maintained pursuant to Section 9.3.1.c. Promptly following such replacement, and subject to Developer's continued compliance with Section 9.3.1.a or Section 9.3.1.c, as applicable, the Enterprises shall release or return to Developer such replaced Contractor Bond.

9.3.2. Methods of providing Contractor Bonds

Subject to Section 9.3.3, Developer may, in its discretion (but subject always to compliance with any Law referred to in Section 9.3.1.c), satisfy its obligations to provide Contractor Bonds under Sections 9.3.1.a and 9.3.1.c by:

- a. procuring Contractor Bonds from an Eligible Surety which provide security for:
 - i. Developer's performance obligations to the Enterprises under this Agreement; and
 - ii. Developer's payment obligations to Subcontractors and laborers,
- in which case the Enterprises shall be the primary obligees, and the Lenders or their Collateral Agent may be additional obligees, under such Contractor Bonds; or
- b. procuring such Contractor Bonds from its Principal Subcontractors so that such bonds as provided by an Eligible Surety are security for:
 - i. such Principal Subcontractor's performance obligations to Developer under its Subcontract; and
 - ii. such Principal Subcontractor's payment obligations to lower tier Subcontractors and to laborers,

in which case Developer shall be the primary obligee under such Contractor Bonds and the Enterprises shall be, and the Lenders or their Collateral Agent may be, additional obligees.

9.3.3. Alternative Forms of Security

Developer may satisfy its obligations under Section 9.3.1.a in a manner that provides security at least equivalent (including with respect to the amount thereof) to the security required to be provided pursuant to either Section 9.3.2.a or Section 9.3.2.b by delivering to the Enterprises for their Acceptance:

- a. alternative form(s) of payment and/or performance surety bond(s) that are not in substantially the form set out in Schedule 20 (*Forms of Contractor Bonds*);
- b. one or more irrevocable on demand letters of credit from Eligible Financial Institutions which, with respect to satisfaction of Developer's obligations under Section 9.3.1.a.i, may only be in relation to the O&M Work During Construction (and not, for certainty, the Construction Work); and
- c. one or more parent company guarantees with respect to satisfaction of Developer's obligations under Section 9.3.1.a.ii only (but not, for certainty, Section 9.3.1.a.i),

provided that in each case Developer shall deliver any such proposed alternative form(s) of security to the Enterprises for their Acceptance at least 30 Calendar Days prior to the date on which Developer is required, or otherwise proposes, to have such security in full force and effect for purposes of compliance with its obligations under this Agreement.

9.3.4. No Release

Any demand made by an obligee under any Contractor Bond shall not serve to waive, or release Developer from, any of Developer's obligations under this Agreement.

9.4. Warranties and Liability for Defects

9.4.1. Warranties

Developer warrants that each Warrantied Element:

- a. shall be designed, constructed and completed in a manner that:
 - i. complies with Good Industry Practice; and
 - ii. meets or exceeds all other applicable requirements of this Agreement;
- b. shall, except as otherwise expressly permitted under this Agreement, be comprised of new materials; and
- c. shall be of good quality and free from faults and Defects,

(a., b. and c., together with the Additional Warranties, the "Warranties"). For certainty, all provisions of this Section 9.4 shall apply to the Additional Warranties, except to the extent expressly specified otherwise.

9.4.2. Warranty Beneficiaries

- a. The Warranties (including, for certainty, the Additional Warranties) are for the express benefit of the Enterprises, CDOT and, with respect to those Warrantied Elements to be maintained by each of them, the City of Denver and Denver Public Schools (all such beneficiaries, together, the "Warranty Beneficiaries"). Developer acknowledges and agrees that the Enterprises shall have the right, on behalf of any Warranty Beneficiary, to enforce the Warranties relating to such Warranty Beneficiary's Warrantied Elements and Developer's obligations under Sections 9.4.1 to 9.4.5 as such obligations apply to such Warrantied Elements. The Enterprises shall coordinate the exercise of such right of enforcement with each Warranty Beneficiary, with a view to the Enterprises being the primary party with which Developer is required to interface in connection with any such enforcement.
- b. The rights and remedies of the Enterprises or any Warranty Beneficiary arising with respect to any breach of the Warranties shall not limit Developer's liability or responsibility, or the Enterprises' rights and remedies, under this Agreement or Law with respect to the Work, including with respect to any Defect, Nonconforming Work, Noncompliance Event, Non-Permitted Closure, breach, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence.

9.4.3. Warranty Period

- a. Subject to Section 9.4.3.b:
 - i. the Warranties (other than the Additional Warranties) shall remain in effect until:
 - A. with respect to Warranties for the benefit of:
 - I. CDOT or the Enterprises (and no other Person); or
 - II. the City of Denver (excluding Warranties with respect to that portion of the Cover that is within the scope of the Cover Top O&M Work),

the first anniversary of the Final Acceptance Date; and
 - B. with respect to Warranties for the benefit of:
 - I. Denver Public Schools; or
 - II. the City of Denver with respect to that portion of the Cover that is within the scope of the Cover Top O&M Work,

the second anniversary of the Final Acceptance Date; and
 - ii. the Additional Warranties shall each remain in effect until the expiry date of the applicable warranty period specified in Schedule 10 (Design and Construction Requirements),

in the case of each Warranty, the "Warranty Period".
- b. Following Approval pursuant to Section 9.4.4.a by the Enterprises of any work performed to remedy a Defect or any other breach of the Warranties in relation to a Warrantied Element, the Warranties as to each affected part of a Warrantied Element shall automatically extend beyond the original Warranty Period to the extent less than one year remains of such original period, such that each affected part of such Warrantied Element shall have a one-year extended Warranty Period ending on the first anniversary of the completion of such remedial work. For certainty, the extended Warranty Period in relation to any part of the Warrantied Elements cannot exceed the first anniversary of the end of the original Warranty Period.

9.4.4. Developer obligation to remedy Warrantied Elements

- a. Developer shall (at its own risk, cost and expense, including the risk, cost and expense of associated design work) promptly (and, to the extent applicable, no later than any required date of completion specified in any Warranty Defects List) investigate, repair, replace or otherwise correct and fully remedy any Defect in the Warrantied Elements or any other breach of the Warranties notified to it by the Enterprises prior to the expiry of the applicable Warranty Period (including, for certainty, as such period may be extended pursuant to Section 9.4.3). The Enterprises shall Approve the completion of all work with respect to any such Defect in the Warrantied Elements or any other such breach of the Warranties on the basis that the relevant Construction Work completed as a result of the correction and remedy of such Defect or breach is in full compliance with the applicable requirements of this Agreement. The Enterprises shall be entitled to take action to investigate, repair, replace or otherwise correct and fully remedy any Defect in the Warrantied Elements and any other breach of the Warranties pursuant to Section 23.4.1.c if Developer fails to comply with its obligations pursuant to this Section 9.4.4.a.
- b. Developer acknowledges and agrees that the Enterprises, CDOT and each Warranty Beneficiary may perform work on any Warrantied Element during the Warranty Period, to the extent they or it otherwise have or has rights to do so, without voiding any Warranty, provided that Developer:

- i. shall not be liable for any Defect or any other breach of the Warranties caused, or to the extent exacerbated by, such work; and
- ii. does not hereby waive any defenses, rights, claims or remedies to which it may otherwise be entitled as a result of the performance of such work.

9.4.5. Warranty Defects List

- a. At any time prior to the expiry of the applicable Warranty Period (including, for certainty, as extended pursuant to Section 9.4.3) the Enterprises and, with respect to any Warranted Element maintained by it, each Warranty Beneficiary shall, in their discretion, have the right to access and conduct an inspection of each Warranted Element. Following such inspection, the Enterprises, in consultation with any relevant Warranty Beneficiary, shall have the right, but not the obligation, to identify Defects and breaches of the Warranties in relation to the relevant Warranted Element and to prepare and deliver to Developer a list of such Defects and breaches (the "Warranty Defects List") and a required date of completion of the required Warranty work, provided that any such list shall be delivered to Developer prior to the expiry of the applicable Warranty Period.
- b. Developer shall notify the Enterprises within 10 Working Days of receipt of any Warranty Defects List whether it agrees with or disputes the contents of such Warranty Defects List. If Developer fails to provide such notice within such period, then Developer shall be deemed to agree with the contents and requirements of such Warranty Defects List.
- c. Developer shall reimburse the Enterprises (and, at the Enterprises' direction, any applicable Warranty Beneficiary) for all reasonable costs and expenses incurred in conducting an inspection pursuant to Section 9.4.4.a, this Section 9.4.5, or otherwise pursuant to this Agreement, that identifies a Defect in the Warranted Elements or any other breach of the Warranties.

9.4.6. Standard Warranties

In addition to the Warranties, Developer shall in accordance with Good Industry Practice use Reasonable Efforts to procure for itself customary supplier, manufacturer and other third party warranties, which warranties shall, to the extent commercially available, be fully transferrable and assignable to the Enterprises (and, to the extent that any such warranty is in respect of a Warranted Element, the relevant Warranty Beneficiary) upon the Expiry Date or, if earlier, the Termination Date (or, in the case of any such warranty in respect of a Warranted Element, if earlier, upon expiry of the applicable Warranty Period).

9.5. Assignment of Certain Causes of Action

Developer agrees to assign to the Enterprises all rights, title, and interest in and to all causes of action Developer may have under Section 4 of the Clayton Act (15 U.S.C. § 15) or under comparable State Law, arising from purchases of goods, services or materials pursuant to this Agreement. This assignment shall be made and become effective automatically upon payment of the Substantial Completion Payment, without further acknowledgment by the Parties.

10. DEVELOPER'S OPERATING PERIOD OBLIGATIONS

Developer shall perform the O&M Work After Construction from and after the Substantial Completion Date pursuant to and in compliance with the terms, conditions and requirements of this Agreement.

11. PAYMENTS IN CONSIDERATION OF WORK PERFORMED AND PAYMENT ASSURANCES**11.1. Payments in Consideration of Work Performed**

11.1.1. Milestone Payments

The Enterprises shall pay the Milestone Payments to Developer in accordance with Part 1 of Schedule 4 (*Payments*) and Schedule 5 (*Milestone Payments*).

11.1.2. Performance Payments

The Enterprises shall pay the Performance Payments to Developer in accordance with Part 2 of Schedule 4 (*Payments*) and Schedule 6 (*Performance Mechanism*).

11.2. Enterprise Credit Related Covenants

11.2.1. Maintenance of Bridge Surcharges

BE agrees that it shall not reduce any Bridge Surcharges charged during the Term below the maximum rates authorized by C.R.S. § 43-4-805, as in effect as of the Setting Date.

11.2.2. Maintenance of Enterprise status

Neither Enterprise shall take any action that would cause it to fail (or refrain from taking any action that would prevent it from failing) to qualify as a government-owned business within CDOT or an enterprise under Article X, Section 20 of the State Constitution unless such failure will not adversely affect the interests of Developer or any Lender.

11.2.3. IAA enforcement, amendments and waivers

a. The Enterprises agree that they shall not, without Developer's prior written consent (such consent not to be unreasonably withheld), amend or waive any of the following provisions of the IAA:

- i. Section III., subsections 2, 4-7, 9, and 11-12;
- ii. Section IV., subsections 2-5, 6 (excluding d-f) and 8;
- iii. Section V., subsections 5-8;
- iv. Section VI.;
- v. Section VII.;
- vi. Section VIII., subsections 1-4;
- vii. Section IX., subsections 1-3, 7, 12, and 14; and
- viii. Exhibits A and B,

except that such consent shall not be required in respect of any such amendment or waiver that will not adversely affect the interests of Developer or any Lender (a copy of which amendment or waiver the Enterprises shall in each case deliver to Developer promptly following execution thereof).

b. The Enterprises shall at all times enforce their rights under the provisions of the IAA specified in Section 11.2.3.a as necessary to ensure CDOT's compliance with the terms of such provisions, unless any failure of the Enterprises to do so will not adversely affect the interests of Developer or any Lender.

12. COOPERATION AND COORDINATION WITH RELATED TRANSPORTATION FACILITIES, ON LIMITED O&M WORK SEGMENTS AND WITH OTHER DEPARTMENT PROJECTS

12.1. Duty to Cooperate and Coordinate

Without limiting its other obligations under this Agreement, Developer shall:

- a. cooperate and coordinate with the Enterprises, CDOT and any relevant third party (including the City of Denver in relation to the Denver Planned Projects) as reasonably requested by the Enterprises, with regard to the design, construction, operation and/or maintenance of, respectively, the Project (including with regard to the Limited O&M Work Segments) and the Related Transportation Facilities; and
- b. otherwise use Reasonable Efforts in order to minimize any adverse impact:
 - i. on the Work or the operation of the Project as a result of the design, construction, operation and/or maintenance of any Related Transportation Facility and the Limited O&M Work Segments; and
 - ii. on (A) any Related Transportation Facility, (B) the Limited O&M Work Segments and (C) any Other Department Project, as a result of the Work.

12.2. Compatibility and Integration with Related Transportation Facilities

Developer shall:

- a. as part of the Construction Work, locate, configure, design and construct the endpoints, interfaces, interchanges, ramps, intersections, crossings, entrances and exits of the Project so that the Project will be compatible and integrated with the location, configuration, design, operation and maintenance of, and provide a smooth, safe and orderly transition of traffic to and from, each Related Transportation Facility that:
 - i. exists on the Setting Date; or
 - ii. is a CCD Identified Future Improvement,
 in each case in accordance with Good Industry Practice and to the extent possible in light of the Known or Knowable configuration, design and use of such facilities;
- b. as part of the O&M Work, and without prejudice to Developer's right arising as a result of the occurrence of any Compensation Event as described in paragraph n. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*), provide for, facilitate and accommodate such compatibility, integration and transition with, to and from Related Transportation Facilities in accordance with Good Industry Practice; and
- c. not take any action (or refrain from taking any action) in a manner that is calculated or intended to directly or indirectly prejudice or frustrate the construction, operation and maintenance of any Related Transportation Facility.

12.3. Procurement of Other Department Projects

- 12.3.1. In response to the Enterprises' written request, Developer shall inform the Enterprises within 20 Working Days of receipt of such request of all material facts or circumstances of which it is aware that might reasonably be expected to affect the procurement, design, construction, operation or maintenance of any Other Department Project, or any other Related Transportation Facility, in the light of the details concerning such project or facility that the Enterprises have provided to Developer or that are otherwise known by Developer.
- 12.3.2. If the Enterprises are preparing to issue or have issued any Other Department Project Procurement Materials or are otherwise seeking offers from any Person or negotiating with any Person in respect of any proposed Other Department Project, then Developer shall use Reasonable Efforts as the Enterprises may reasonably request to assist such procurement, including providing access to the Enterprises, CDOT and each of their respective designees to:

- a. each part of the Site for the purpose of surveying, inspecting or investigating the relevant parts thereof (provided that the Enterprises shall, and shall require that other parties requiring access at the Enterprises' request shall, at all times comply with all relevant site rules and safety regulations in relation to the Site); and
- b. Project Records, but only to the extent that the Enterprises may otherwise require Developer to deliver or to procure the delivery of such records under the terms of this Agreement,

in each case solely and to the extent necessary to procure and award the relevant Other Department Project.

12.3.3. If the Enterprises or CDOT award or otherwise undertake any Other Department Project other than with Developer, then Developer shall:

- a. use Reasonable Efforts to cooperate and coordinate with the Enterprises, CDOT and each of their respective designees engaged in such Other Department Project as required pursuant to Section 12.1;
- b. not take any action (or refrain from taking any action) in a manner that is calculated or intended to directly or indirectly prejudice or frustrate such Other Department Project; and
- c. at reasonable times and upon reasonable notice, allow access to the Enterprises, CDOT and each of their respective designees to each part of the Site as is reasonably necessary to facilitate the carrying out of and interface with the Other Department Project (provided that the Enterprises shall, and shall require that CDOT and all other parties requiring access shall, at all times comply with all relevant site rules and safety regulations in relation to the Site),

provided that Developer shall not be required to take (or refrain from taking) any action (including allowing access pursuant to Section 12.3.3.c) that would reasonably be anticipated to adversely affect the Work or the carrying out of Developer's other obligations under this Agreement.

12.4. Enterprises' Assistance

The Enterprises shall:

- a. at reasonable times and upon reasonable notice, and subject to CORA, provide to Developer reasonable access to plans, surveys, drawings, specifications, reports and other documents and information in the possession of, or otherwise accessible by, the Enterprises pertaining to Related Transportation Facilities and Other Department Projects, including the use of Reasonable Efforts to provide Developer with copies of the same; and
- b. at Developer's request, use Reasonable Efforts to provide assistance to Developer in fulfilling its obligations under Sections 12.1 through 12.3, provided that in no event shall the Enterprises be required to bring any legal action or proceeding against any third party.

12.5. Traffic Management

12.5.1. Developer acknowledges that the Enterprises, CDOT, the City of Denver, Emergency Services and other Governmental Authorities with traffic management authority under Law, shall have, without obligation or liability to Developer, the right to conduct traffic management activities pursuant to standard practices and procedures in effect from time to time:

- a. on the Right-of-Way, any Additional Right-of-Way and any other part of the Site that is open for use by the traveling public;
- b. in connection with the conduct of operations and maintenance activities by CDOT in relation to the Limited O&M Work Segments;
- c. in connection with any Other Department Project; and

- d. on any Related Transportation Facility,
which activities shall not, for certainty, themselves constitute a Supervening Event.
- 12.5.2. Except in the case of an Emergency, the Enterprises shall use Reasonable Efforts to notify Developer in advance of any Person conducting any traffic management activities as permitted by Section 12.5.1 to the extent that the Enterprises are aware of such activities, provided that no such notice shall be required as to activities of which Developer is known by the Enterprises to be aware (whether due to prior notice, the terms of this Agreement or otherwise). To the extent that any such traffic management activities prevent Developer from accessing locations for the purpose of curing any Category 1 Defect or Category 2 Defect, the Defect Remedy Period applicable to the relevant Category 1 Defect or Category 2 Defect shall be extended by the period of time that such access is prevented.

13. HANDBACK

Developer shall prepare to hand back the Project, and at the Expiry Date hand back the Project, in accordance with its obligations under Schedule 12 (*Handback Requirements*).

PART D: CHANGES AND SUPERVENING EVENTS

14. CHANGE PROCEDURE

14.1. Right to Initiate Changes

Subject to the limitations set out in Schedule 24 (*Change Procedure*), either Party may (and, with respect to the Enterprises, pursuant to Section 8.6.2.b shall) propose a Change by submitting a notice to the other Party. Such a notice:

- a. submitted by the Enterprises to Developer (an “Enterprise Change Notice”) shall be processed pursuant to Sections 1 and 3 of Schedule 24 (*Change Procedure*); and
- b. submitted by Developer to the Enterprises (a “Developer Change Notice”) shall be processed pursuant to Sections 2 and 3 of Schedule 24 (*Change Procedure*).

14.2. Directive Letters

Pursuant to Section 1.4 of Schedule 24 (*Change Procedure*), the Enterprises may deliver a Directive Letter to Developer at any time after the Enterprises’ submission of a related Enterprise Change Notice to Developer.

15. SUPERVENING EVENTS

15.1. Submission of Supervening Event Notices and Submissions

15.1.1. Developer shall (and shall ensure that each of its Principal Subcontractors shall) develop and maintain procedures pursuant to Good Industry Practice to anticipate, identify and notify the Enterprises (or, in the case of the Principal Subcontracts, Developer) of the occurrence of Supervening Events, provided that:

- a. such obligation, and Developer’s obligations under Sections 15.1.2 through 15.1.5, shall not apply to any Enterprise Change initiated pursuant to a Change Order; and
- b. Section 15.1.2.a shall not apply to any Enterprise Change initiated pursuant to a Directive Letter.

15.1.2. If Developer becomes aware or determines that a Supervening Event has occurred (regardless of whether such event has concluded or is continuing, and without limiting any other obligation Developer may have to notify the Enterprises or any other Person of, or in relation to, such event pursuant to this Agreement, Law, any Permit or Governmental Approval or otherwise) or, with respect to Section 15.1.2.a only, is likely to occur, then, subject to Section 15.1.4, it shall:

- a. promptly, and in any event no later than 10 Working Days, after becoming aware of such occurrence or making a determination that such event is likely to occur submit to the Enterprises a notice in the form provided in Part A of Schedule 21 (*Forms of Supervening Event Notices and Submissions*) (a “Supervening Event Notice”); and
- b. thereafter, and to the extent a Supervening Event has occurred:
 - i. promptly, and in any event no later than 20 Working Days, after becoming aware of such occurrence submit to the Enterprises a submission in the form provided in Part B of Schedule 21 (*Forms of Supervening Event Notices and Submissions*) (a “Preliminary Supervening Event Submission”); and
 - ii. promptly after becoming aware of such occurrence, and in any event no later than the later of (A) 80 Working Days after becoming aware thereof and (B) 40 Working Days after the conclusion of such Supervening Event, submit to the Enterprises a submission in the form provided in Part B of Schedule 21 (*Forms of Supervening Event Notices and Submissions*) (a “Detailed Supervening Event Submission”),

provided that, for purposes of determining when Developer is required to submit any notice or submission under this Section 15.1.2, Developer shall be deemed to be aware of any

Supervening Event on the date of its occurrence to the extent Developer failed to comply with its obligations under Section 15.1.1.

- 15.1.3. The Enterprises shall respond promptly to any Supervening Event Submission submitted by Developer pursuant to Section 15.1.2.b and, as applicable, to any notice or submission in relation thereto subsequently submitted by Developer pursuant to Section 15.1.5, in each case for the purpose of attempting, together with Developer, to reach an agreement pursuant to Section 15.3.2.
- 15.1.4. Developer may satisfy its obligation under Section 15.1.2.b.i by instead submitting a Detailed Supervening Event Submission promptly and in any event no later than the expiry of the applicable period that would have otherwise applied under Section 15.1.2.b.i.
- 15.1.5. After Developer submits any notice or submission to the Enterprises pursuant to Section 15.1.2 or 15.1.4, Developer shall, with respect to any Supervening Event that has occurred, promptly:
- a. notify the Enterprises if at any time it becomes aware of any further material information relating to the Supervening Event, to the extent that such information is new or renders information previously submitted materially inaccurate or misleading; and
 - b. following the Enterprises' reasonable request, or as required pursuant to the terms of any written agreement previously made pursuant to Section 15.3.2 (including with respect to a continuing Supervening Event), submit to the Enterprises additional information related to the relevant Supervening Event.

15.2. Limitations on Supervening Event Submissions

15.2.1. Failure to provide timely notice

If, following the occurrence of a Supervening Event, Developer fails to comply with its obligations under any of Sections 15.1.2.a, 15.1.2.b and 15.1.5 within the applicable time period (in each case measured from the date on which Developer first became aware (or, in accordance with the proviso to Section 15.1.2, is deemed to have become aware) or determined that a Supervening Event had occurred) specified in such Sections, then Developer shall be deemed to have irrevocably and forever waived and released:

- a. the portion of any claim or right with respect to such event (including the right to take into account for calculation purposes, pursuant to (i) Section 15.7 or (ii) the definition of Appendix B Parcel Costs in Part A of Annex A (Definitions and Abbreviations), the amount of certain Losses whether or not the Enterprises would owe Developer compensation in respect of any such Loss as a result of such calculation) that would relate to adverse effects accruing, persisting or increasing after the expiry of the applicable period or otherwise due to such failure and until Developer complies with the relevant obligation; and
- b. any and all claim or right with respect to such event (including the right to take into account for calculation purposes, pursuant to (i) Section 15.7 or (ii) the definition of Appendix B Parcel Costs in Part A of Annex A (Definitions and Abbreviations), the amount of certain Losses whether or not the Enterprises would owe Developer compensation in respect of any such Loss as a result of such calculation) if Developer has failed to:
 - i. submit a Supervening Event Notice on or before the 30th Working Day after Developer became aware (or, in accordance with the proviso to Section 15.1.2, is deemed to have become aware) of the occurrence of a Supervening Event;
 - ii. submit a Preliminary Supervening Event Submission on or before the 80th Working Day after Developer became aware (or, in accordance with the proviso to Section 15.1.2, is deemed to have become aware) of the occurrence of a Supervening Event; or

- iii. submit a Detailed Supervening Event Submission on or before the later of (A) the 140th Working Day after becoming aware (or, in accordance with the proviso to Section 15.1.2, is deemed to have become aware) of the occurrence of a Supervening Event and (B) the 100th Working Day after the conclusion of such Supervening Event.

15.2.2. Duty to mitigate

- a. Without modifying its other obligations under this Agreement, Developer shall use Reasonable Efforts to mitigate the effects of any Supervening Event, including by re-sequencing, reallocating or redeploying its forces to other parts of the Work.
- b. Developer shall not be entitled to any extension of time, compensation or other relief pursuant to this Section 15 to the extent such extension of time, compensation or other relief would have been avoided by its compliance with Section 15.2.2.a.

15.2.3. Events affecting Financial Close

Without prejudice to Developer's rights and the Enterprises' obligations under Schedule 1 (Financial Close), Developer shall not be entitled to claim or receive:

- a. an extension of the Financial Close Deadline; and/or
- b. any relief from and/or compensation in connection with Developer's performance of its obligations with respect to Financial Close pursuant to Sections 27.1 and 27.2 and Schedule 1 (Financial Close),

pursuant to this Section 15.

15.3. Resolution

15.3.1. If Developer has complied with its obligations under Section 15.1 and, through the submission of a Detailed Supervening Event Submission, has demonstrated that the Supervening Event occurred (regardless of whether such event has concluded or is continuing) then, subject to Section 15.2:

- a. in the case of any Relief Event or Compensation Event, Developer shall be relieved from the performance of its obligations under this Agreement to the extent, and only to the extent, that Developer's inability to perform such obligations is due directly to, and limited to the duration of the direct effects of, such Relief Event or Compensation Event, provided that Developer shall not be excused from timely compliance with any obligation to make a payment pursuant to this Agreement due to the occurrence of any Relief Event or Compensation Event;
- b. in the case of any Relief Event or Compensation Event:
 - i. to the extent that any Noncompliance Event is directly attributable to the occurrence of such Relief Event or Compensation Event, subject to Section 15.3.1.a, no Noncompliance Points shall accrue in respect of such Noncompliance Event; and
 - ii. to the extent that any Closure is directly attributable to the occurrence of such Relief Event or Compensation Event, subject to Section 15.3.1.a, such Closure shall be an Excused Closure, but only to the extent that paragraphs g. and h. of the definition thereof in Part A of Annex A (Definitions and Abbreviations) are satisfied;
- c. in the case of any Relief Event or Compensation Event occurring prior to the Final Acceptance Date that:
 - i. affects or will affect the Critical Path, after taking into account any available Float pursuant to Section 9.2.3.a (but subject always to Section 9.2.3.b) and excluding any previous or concurrent unrelated delay for which Developer is responsible

(the resulting period of delay, measured in Calendar Days, being the “Schedule Delay Period”); and/or

- ii. delays or will delay completion of the Construction Work (after taking into account any available Float pursuant to Section 9.2.3.a (but subject always to Section 9.2.3.b) and excluding any previous or concurrent unrelated delay for which Developer is responsible) required to achieve:
 - A. Milestone Completion of any Payment Milestone by the Milestone Completion Target Date; and/or
 - B. Substantial Completion by the Baseline Substantial Completion Target Date,

and, as a result, Milestone Completion of such Payment Milestone or Substantial Completion occurs or will occur, as applicable, after the relevant Milestone Completion Target Date or the Baseline Substantial Completion Target Date (the resulting period of delay with respect to such Payment Milestone or Substantial Completion, measured in Calendar Days, being a “Milestone Delay Period” and, together with any Schedule Delay Period, each a “Delay Period”);

then:

- iii. with respect to any such Relief Event or Compensation Event that affects or will affect the Critical Path:
 - A. if such Relief Event or Compensation Event occurred prior to the Baseline Substantial Completion Date, then the Baseline Substantial Completion Date shall be extended by the number of Calendar Days equal to the Schedule Delay Period;
 - B. if such Relief Event or Compensation Event occurred after the Baseline Substantial Completion Date but prior to the Substantial Completion Date, then the Longstop Date shall be extended by the number of Calendar Days equal to the Schedule Delay Period; or
 - C. if such Relief Event or Compensation Event occurred after the Baseline Substantial Completion Date but prior to the Final Acceptance Date, then the Final Acceptance Deadline Date shall be extended by the number of Calendar Days equal to the Schedule Delay Period;
- d. in the case of any Relevant Event, the Enterprises shall compensate Developer pursuant to Sections 15.4 and 15.6 (without double-counting), as applicable, for Compensable Costs, in each case subject to Section 15.7; and
- e. in the case of any Relief Event or Compensation Event that occurs or is continuing during the Operating Period, the Enterprises shall be entitled to deduct from any Performance Payment otherwise payable pursuant to Schedule 6 (Performance Mechanism) (and after taking into account any adjustment otherwise to be made to such payments pursuant to Sections 15.4 and/or 15.6, as applicable, as a result of any compensation payable pursuant to Section 15.3.1.d):
 - i. Developer’s actual avoided costs of Work not being performed as a direct result of the occurrence or, as the case may be, continuation of such Relief Event or Compensation Event during the Operating Period; and
 - ii. the amount that Developer is (or, pursuant to Section 35.5.a, should be) entitled to recover under any “business interruption” coverage under the Available Insurance as a direct result of the occurrence or, as the case may be, continuation of such Relief Event or Compensation Event during the Operating Period.

- 15.3.2. Upon agreement between the Parties, such agreement not to be unreasonably withheld, as to:
- a. the extension of time, relief and/or compensation (including the payment terms of, and documentation required for, any such compensation) to which Developer is then entitled (including, as necessary, on a retroactive basis) in respect of any Relief Event or Compensation Event as determined pursuant to Section 15.3.1; and/or
 - b. the amount of any Loss that Developer is then entitled to take into account for calculation purposes pursuant to (i) Section 15.7 or (ii) the definition of Appendix B Parcel Costs in Part A of Annex A (Definitions and Abbreviations), whether or not the Enterprises owe Developer compensation in respect of any such Loss as a result of such calculation,
- the Parties shall execute a written memorandum (or, with respect to any Supervening Event that was continuing when a prior such memorandum was executed, a written addendum to such prior memorandum) in a form to be prepared by the Enterprises setting out the details of such agreement.
- 15.3.3. If the Parties do not reach agreement as contemplated in Section 15.3.2 and any dispute in relation to the relevant matters is resolved pursuant to the Dispute Resolution Procedure, to the extent that the Dispute Resolution Procedure does not result in a written record of such resolution equivalent to such a memorandum, the Parties shall execute such a memorandum to document such resolution.
- 15.3.4. Pursuant to Section 1.3.b.ii of Schedule 24 (Change Procedure), a Change Order implementing an Enterprise Change shall constitute an agreed memorandum for purposes of Section 15.3.2.

15.4. Payment of Change in Costs

- a. Subject to this Section 15 (including, for certainty, Section 15.7), the Enterprises shall pay to Developer all Change in Costs (as documented pursuant to Section 15.4.c and, as applicable, subject to any limitations in accordance with the definition of Change in Costs in Part A of Annex A (Definitions and Abbreviations)) actually incurred by it as a direct result of a Compensation Event, through one, or any combination of more than one, of the following methods as determined in the Enterprises' discretion (subject to Section 15.5):
 - i. as a lump sum payment for work already performed (or, in the Enterprises' discretion, as a series of progress payments for payment of work as it is performed) within 45 Calendar Days of Developer's written demand for such payment;
 - ii. as deferred installment payments over the Term for work performed within 45 Calendar Days of Developer's written demand for any such installment payment (provided that, at any time after electing such payment method, the Enterprises may choose to accelerate compensation for work already performed through a (or a series of) lump sum payment(s) equal to the present value as of the date of payment of the remaining compensation), which deferred installment payments will leave Developer in a No Better and No Worse position; and/or
 - iii. as an adjustment to the "Base CPP" and/or "Base OMRP" set out in Section 2(f) of Part 2 of Schedule 6 (Performance Mechanism), which adjustment will leave Developer in a No Better and No Worse position.
- b. Developer shall maintain (and shall ensure that each of its Subcontractors and each of their respective Subcontractors shall maintain) cost records, supporting documentation and such other Project Records as necessary to calculate and document any Change in Costs payable pursuant to Section 15.4.a.
- c. Any Developer written demand for payment pursuant to Section 15.4.a shall be made in form, and accompanied by such documentation, as necessary to comply with the terms of any written memorandum executed pursuant to Section 15.3.2 (including, pursuant to

Section 15.3.4, any Change Order implementing an Enterprise Change), as applicable, and otherwise as reasonably required by the Enterprises.

15.5. Financing

15.5.1. If, pursuant to Section 15.4 or Section 15.6.3.b, the Enterprises elect to compensate Developer through Deferred Compensation, Developer shall use Reasonable Efforts to obtain:

- a. funding from the Lenders, or other lenders if permitted by the Financing Documents; and/or
- b. equity support from existing Equity Members of Developer,

in either case:

- c. if, and only if, and to the extent necessary; and
- d. on terms Acceptable to the Enterprises (and, for certainty, acceptable to Developer (acting reasonably)),

in advance of receiving the Deferred Compensation payments from the Enterprises.

15.5.2. If, despite such efforts and any compensation that is or would be paid pursuant to Section 15.4, Developer is unable to obtain such funding and/or equity support (or the Enterprises do not Accept the terms under which Developer is able to obtain additional financing), then, notwithstanding its prior election, the Enterprises shall pay the required compensation pursuant to Section 15.4.a.i or Section 15.6.3.a, as applicable.

15.6. Delay Financing Costs and Milestone Payment Delay Costs

15.6.1. To the extent that, pursuant to Section 15.3.1.d and subject to this Section 15 (including, for certainty, Section 15.7), the Enterprises are obligated to compensate Developer in respect of:

- a. any Milestone Payment Delay Costs in respect of any relevant Milestone Delay Period as determined pursuant to Section 15.3.1.c.ii; or
- b. any Delay Financing Costs in respect of any relevant Schedule Delay Period as determined pursuant to Section 15.3.1.c.i,

as the case may be, the Enterprises shall pay to Developer an amount equal to such Milestone Payment Delay Costs or Delay Financing Costs, as applicable, less any amount Developer is (or, pursuant to Section 35.5.a, should be) entitled to recover under any “delay in startup” coverage under the Available Insurance as a direct result of the occurrence of the Relevant Event promptly, and in any event no later than the later of:

- c. 45 Calendar Days after such net amount (or any part thereof) has been Agreed or Determined; and
- d. five Working Days prior to the date that such Milestone Payment Delay Costs or Delay Financing Costs become due for payment or repayment by Developer pursuant to the Financing Documents.

15.6.2. No later than 45 Calendar Days after the Substantial Completion Date, the Parties shall determine pursuant to Section 28.2 (such determination being referred to in this Section 15.6 as the “Reconciliation”), the extent to which Developer was left in a position that was No Better and No Worse as a direct result of the Delay Periods caused by any one or more Relevant Events taking into account (without double-counting):

- a. payments made by the Enterprises to Developer pursuant to Section 15.6.1;
- b. Milestone Payment Delay Costs and Delay Financing Costs incurred by Developer as a direct result of the occurrence of all such Relevant Events but which were not previously taken into account in any payments made by the Enterprises to Developer pursuant to Section 15.6.1;

- c. Developer's actual avoided costs of Work not being performed as a direct result of the occurrence of all such Relevant Events; and
- d. the amount Developer is (or, pursuant to Section 35.5.a, should be) entitled to recover under any "delay in startup" coverage under the Available Insurance as a direct result of the occurrence of all such Relevant Events.

15.6.3. To the extent that the Reconciliation demonstrates that Developer was left in a worse position as determined pursuant to Section 28.2 notwithstanding the payments made to Developer by the Enterprises pursuant to Section 15.6.1, the Enterprises shall, through one, or any combination, of the following methods as determined in the Enterprises' discretion (subject to Section 15.5):

- a. make a lump sum payment to Developer within 45 Calendar Days after completion of the Reconciliation; or
- b. notify Developer of an adjustment to the "Base CPP" set out in Section 2(f) of Part 2 of Schedule 6 (*Performance Mechanism*), which adjustment shall take effect from the date specified in such notice,

in either case in a manner that would result in Developer being left in a No Better and No Worse position after taking into account the Reconciliation.

15.6.4. To the extent that the Reconciliation demonstrates that Developer was left in a better position as determined pursuant to Section 28.2 as a result of the payments made to Developer by the Enterprises pursuant to Section 15.6.1, Developer and the Enterprises shall, as applicable, through one, or any combination, of the following methods as determined in the Enterprises' discretion:

- a. with respect to Developer, make a lump sum payment to the Enterprises within 30 Calendar Days after completion of the Reconciliation; or
- b. with respect to the Enterprises, notify Developer of an adjustment to the "Base CPP" set out in Section 2(f) of Part 2 of Schedule 6 (*Performance Mechanism*), which adjustment shall take effect from the date specified in such notice,
- c. with respect to the Enterprises, by way of set-off pursuant to Section 5 of Part 3 of Schedule 4 (*Payments*) against amounts otherwise payable by the Enterprises to Developer,

in each case in a manner that would result in Developer being left in a No Better and No Worse position after taking into account the Reconciliation.

15.7. Compensation Exclusions and Limitations

15.7.1. With respect to any Compensable Costs incurred by Developer in respect of any Relevant Event (other than any No-deductible Event, to which this Section 15.7.1 shall not apply) that occurs during the Construction Period, if the aggregate amount of such Compensable Costs directly resulting from the occurrence of such event is greater than \$20,000 (any such event, a "Compensable Construction Period Event"), then, subject to Section 15.7.3, the Enterprises shall compensate Developer (as applicable):

- a. with respect to the occurrence of all Compensable Construction Period Events (other than such events that are subject to Sections 15.7.1.b, 15.7.1.c or 15.7.1.d), for the amount by which the aggregate amount of Compensable Costs directly resulting from the occurrence of all such events is greater than \$500,000;
- b. with respect to all Unexpected Utility Condition Events that are Compensable Construction Period Events, for the aggregate amount of Compensable Costs directly resulting from the occurrence of all such events as follows:
 - i. 50% of the first \$5,000,000 of such aggregate amount of Compensable Costs (while, for certainty, Developer shall bear the remaining 50% of such costs); and

- ii. 100% of any and all such aggregate amount of Compensable Costs in excess of such first \$5,000,000 of such aggregate amount; and
 - c. with respect to all Non-Appendix B Parcel Unexpected Hazardous Substances Events that are Compensable Construction Period Events, for the aggregate amount of Compensable Costs directly resulting from the occurrence of all such events as follows:
 - i. 50% of the first \$6,000,000 of such aggregate amount of Compensable Costs (while, for certainty, Developer shall bear the remaining 50% of such costs); and
 - ii. 100% of any and all such aggregate amount of Compensable Costs in excess of such first \$6,000,000 of such aggregate amount; and
 - d. with respect to all Appendix B Parcel Unexpected Hazardous Substances Events that are (or, as the case may be, to the extent they are) Compensable Construction Period Events, for the aggregate amount of Compensable Costs directly resulting from the occurrence of all such events as follows:
 - i. none of the first \$25,000,000 of all Appendix B Parcel Costs; and
 - ii. 100% of any and all such aggregate amount of Compensable Costs that are:
 - A. incurred as a direct result of the occurrence of all Appendix B Parcel Unexpected Hazardous Substances Events that are (or, as the case may be, to the extent that they are) Compensable Construction Period Events; and
 - B. in excess of the dollar amount specified in Section 15.7.1.d, where, for purposes of this Section 15.7.1.d.ii, Change in Costs as a component of such aggregate amount of Compensable Costs shall be determined in accordance with paragraph a. of the definition thereof in Part A of Annex A (Definitions and Abbreviations) (and not paragraph b. of such definition)).
- 15.7.2. With respect to any otherwise Compensable Costs incurred by Developer in respect of any Relevant Event (other than any No-deductible Event, to which this Section 15.7.2 shall not apply) that occurs during the Operating Period, if the aggregate amount of such Compensable Costs directly resulting from the occurrence of such event is greater than \$10,000 (indexed), then, subject to Section 15.7.3, the Enterprises shall compensate Developer, with respect to the occurrence of all such events, for the amount by which the aggregate amount of such Compensable Costs directly resulting from the occurrence of all such events in any given Contract Year is greater than \$100,000 (indexed).
- 15.7.3. With respect to any Change in Costs (excluding any such costs as described in paragraph a.viii. of the definition thereof in Part A of Annex A (Definitions and Abbreviations)) incurred by Developer as a result of the occurrence of a Compensation Event as described in paragraph f.vi. of the definition thereof in Part A of Annex A (Definitions and Abbreviations):
- a. the Enterprises shall, following consultation with Developer, use Reasonable Efforts to assert a Claim against the relevant Utility Owner in respect of the Losses incurred by Developer as a result of the occurrence of any such Compensation Event which Losses constitute Change in Costs to which this Section 15.7.3 applies;
 - b. Developer's rights under Sections 15.3.1.d, 15.4, 15.7.1 and 15.7.2 to be compensated with respect to any and all Change in Costs to which this Section 15.7.3 applies shall (subject to Section 15.7.3.c) be limited to the amount of such Change in Costs (if any) that the Enterprises recover from the relevant Utility Owner;
 - c. the Enterprises shall be entitled to be reimbursed by Developer for the reasonable cost and expense of pursuing any Claim against a Utility Owner pursuant to Section 15.7.3.a (whether or not the Enterprises make any recovery from the relevant Utility Owner as a result of making such Claim), including by deducting the amount thereof from any amount

otherwise payable to the Developer under this Agreement including as contemplated by Section 15.7.3.b; and

- d. provided that the Enterprises have complied with their obligations under Section 15.7.3.a, Developer:
- i. agrees to be bound by the outcome of the Enterprises' use of Reasonable Efforts to assert a Claim pursuant to Section 15.7.3.a in connection with the occurrence of any such Compensation Event; and
 - ii. hereby waives any right that it may have to recover from the Enterprises any Change in Costs to which this Section 15.7.3 applies to the extent that any such Change in Costs that it has incurred as a result of the occurrence of any such Compensation Event exceed the amount recovered by it pursuant to Sections 15.7.3.b and 15.7.3.c,

provided that, for certainty, this Section 15.7.3:

- e. shall not apply to any:
- i. Change in Costs as described in paragraph a.viii. of the definition thereof in Part A of Annex A (Definitions and Abbreviations);
 - ii. Milestone Payment Delay Costs; or
 - iii. Delay Financing Costs,
- in any such case arising as a result of any such Compensation Event; and
- f. is without prejudice to Developer's rights under any other provision of this Section 15 to be compensated for costs referenced in Sections 15.7.3.e.i, 15.7.3.e.ii and 15.7.3.e.iii.

15.8. Special Provisions for Force Majeure Events

15.8.1. Following the occurrence of a Force Majeure Event:

- a. Developer, if an Affected Party with respect to such Force Majeure Event, shall promptly notify the Enterprises of the Force Majeure Event pursuant to Sections 15.1 and 15.2.2.a; and
- b. the Enterprises, if Affected Parties with respect to such Force Majeure Event, shall promptly notify Developer of the Force Majeure Event, including the date of its commencement, evidence of its effect on the obligations of the Affected Party and any action proposed to mitigate its effect.

15.8.2. Whether or not any notice has been given pursuant to Section 15.8.1:

- a. Developer, if an Affected Party, shall comply with Sections 15.1 and 15.2.2.a with respect to the treatment of the relevant Force Majeure Event as a Relief Event pursuant to Section 15.3; and
- b. the Enterprises, if an Affected Party, may require Developer to consult with them in good faith, and to use all Reasonable Efforts, to agree on appropriate terms to mitigate the effects of the relevant Force Majeure Event and facilitate the continued performance of this Agreement.

15.8.3. To the extent either of the Enterprises is an Affected Party, the Enterprises shall be relieved from the performance of their affected obligations under this Agreement (and shall not incur liability to Developer for Losses in connection with a Force Majeure Event), provided that, notwithstanding the foregoing, the Enterprises shall not be excused from timely payment of any monetary obligations under this Agreement due to the occurrence of any Force Majeure Event.

PART E: KEY PERSONNEL, SUBCONTRACTORS AND WORKFORCE

16. PERSONNEL

16.1. Developer's Key Personnel Obligations

Subject to Section 16.2, Developer shall ensure that all Key Personnel are at all relevant times (as determined by reference to the periods set out in Schedule 27 (Key Personnel)):

- a. seconded to or employed by such Person; and
- b. occupying the role and performing the function of their position,

in each case as required by or set out in such Schedule and any other relevant provisions of this Agreement.

16.2. Removal or Replacement of Key Personnel

16.2.1. Developer shall not remove and/or replace any of the Key Personnel without the Enterprises' prior Approval, provided that Developer may, as required by Law or pursuant to Good Industry Practice, terminate, suspend or limit the duties of any Key Personnel individual (and, promptly thereafter, notify the Enterprises of such action).

16.2.2. If for any reason Developer wishes to remove and/or replace any Key Personnel and such removal and/or replacement requires the Enterprises' Approval under Section 16.2.1, Developer shall promptly deliver a notice to the Enterprises for Approval, setting out the reason for such removal and/or replacement, together with:

- a. the identity, expertise and experience of the proposed replacement; and
- b. any such support information or evidence as the Enterprises may reasonably require in relation to such matters.

16.3. Developer's Personnel Qualifications

Developer shall ensure that all Work shall be performed and, as applicable, supervised by personnel:

- a. who are careful, skilled, experienced and competent in their respective trades or professions;
- b. who are professionally qualified to, and who hold all necessary registrations, permits, approvals and licenses to, perform or supervise the relevant part Work pursuant to this Agreement; and
- c. who shall assume professional responsibility for the accuracy and completeness of the relevant part Work performed or supervised by them.

17. SUBCONTRACTING REQUIREMENTS

17.1. Subcontracting Terms and Requirements

17.1.1. Each Subcontract, and any amendments or supplements thereto, shall comply with, and, as applicable, incorporate the terms set out in, Part A of Schedule 16 (Mandatory Terms).

17.1.2. Without prejudice to Section 17.1.3, the Parties acknowledge and agree that:

- a. Developer has entered into a Construction Contract dated as of the Agreement Date with Kiewit Infrastructure Co. and an O&M Contract dated as of the Agreement Date with Roy Jorgensen Associates, Inc., and the Enterprises hereby confirm that they Accept the terms of such contracts pursuant to Section 17.1.3.b.i;

- b. as of and with effect from the Agreement Date:
- i. Kiewit Infrastructure Co. is the Construction Contractor;
 - ii. Roy Jorgensen Associates, Inc. is, subject to Section 17.1.2.c and Section 17.1.2.e, the O&M Contractor;
 - iii. Kiewit Infrastructure Group Inc. is the Guarantor with respect to the Construction Contract and there is no Guarantor with respect to the O&M Contract; and
 - iv. neither Roy Jorgensen Associates, Inc. nor Kiewit Infrastructure Group Inc. is a joint venture of which there are separate members;
- c. for purposes of the definitions of O&M Contract and of O&M Contractor set out in Part A of Annex A (Definitions and Abbreviations), and subject to Section 17.1.2.e, as of and with effect from the Agreement Date, Developer shall be considered to be self-performing:
- i. all Handback Work; and
 - ii. such part of the Renewal Work that is not allocated to Roy Jorgensen Associates, Inc. as O&M Contractor in accordance with the “Scope of Services” as defined in the O&M Contract in effect on the Agreement Date,
- and the Enterprises hereby confirm that they Accept Developer’s self-performance of such elements of the Work pursuant to Section 17.1.3.b.iii;
- d. Developer may only enter into replacements to the Accepted Principal Subcontracts referred to in Section 17.1.2.a, or any new Principal Subcontract, pursuant to this Section 17; and
- e. after the expiration (but not early termination for breach or default) of the O&M Contract previously Accepted pursuant to Section 17.1.2.a, for purposes of the definitions of O&M Contract and of O&M Contractor set out in Part A of Annex A (Definitions and Abbreviations), as of and with effect from the expiration date of such O&M Contract (the “Initial O&M Contract Expiration Date”), Developer shall be considered to be self-performing such portion of the O&M Work:
- i. that was previously performed by Roy Jorgensen Associates, Inc. as the O&M Contractor under the terms of such O&M Contract; and
 - ii. which is not otherwise to be performed under a separate third-party Principal Subcontract,
- without the requirement for an Acceptance by the Enterprises pursuant to Section 17.1.3.b.iii, provided that as a condition to the foregoing:
- iii. 18 months prior to the Initial O&M Contract Expiration Date and every 6 months thereafter until such date, and otherwise at such other times within such 18 month period as the Enterprises may reasonably require, Developer shall meet with the Enterprises to discuss the transition to self-performance of such portion of the O&M Work by the Developer and consequential updates to the MMP and OMP to be made and Accepted in accordance with Section 5.1.3 of Schedule 11 (Operations and Maintenance Requirements) and Section 9.1.2 of Schedule 11 (Operations and Maintenance Requirements) prior to the Initial O&M Contract Expiration Date;
 - iv. prior to the initial meeting referred to in Section 17.1.2.e.iii, and otherwise upon the reasonable request of the Enterprises, Developer shall deliver the following (or, as applicable, updates thereto) to the Enterprises:
 - A. a draft organizational chart and staffing plan that shows the personnel including the O&M Manager required for all maintenance activities required in Schedule 11 (Operations and Maintenance Requirements);

- B. details of the technical and financial resources available to Developer to fulfill its obligations in self-performing such portion of the O&M Work, including the names, qualifications, experience and/or technical or other professional competence of its proposed Subcontractors and any personnel referenced in the staffing plan referenced in Section 17.1.2.e.iv.A;
 - C. the location and layout of maintenance and storage facilities, vehicles and equipment, tools, computers, software and other major assets/items to be used by Developer in connection with the performance of the O&M Work;
 - D. drafts of Contractor Bonds required to be provided by the Developer in accordance with Sections 9.3 and 17.1.2.e.v.A;
 - E. a schedule of the insurance to be provided by the Developer in accordance with Sections 17.1.2.e.v.B and 25.1; and
 - F. a draft transition plan with respect to the MMIS required by Section 7 of Schedule 11 (*Operations and Maintenance Requirements*); and
- v. as of the Initial O&M Contract Expiration Date:
- A. Developer shall have delivered to the Enterprises the Contractor Bonds as then required pursuant to Section 9.3.1.a.ii;
 - B. with respect to all Insurance Policies that are required pursuant to Section 25 and Schedule 13 (*Required Insurance*) to be in effect on and from such date:
 - I. such policies have been obtained from Eligible Insurers on terms that comply with Section 25 and Schedule 13 (*Required Insurance*) and are in full force and effect; and
 - II. the Enterprises shall have received binding verifications of coverage from the relevant insurers (or Developer's insurance brokers) of such Insurance Policies, in compliance with Section 25.3.1 as Accepted by the Enterprises;
 - C. Developer shall have submitted and received prior to such date Acceptance, Approval or other consent, approval or like assent, as applicable, of or to each other Deliverable which is required by the terms of this Agreement to be submitted in advance of such date and of such transition to self-performance;
 - D. no Developer Default has occurred and is continuing, the Increased Oversight Threshold has not been met or exceeded and no Initial Warning Notice has been served and remains in effect; and
 - E. Developer has certified to the Enterprises that it has no reason to believe that either (I) it shall be unable to self-perform such O&M Work as of and with effect from the Initial O&M Contract Expiration Date in accordance with this Agreement or (II) such self-performance will have an adverse impact on the continuing performance by Developer of its obligations under this Agreement or on the Project.

17.1.3. Without prejudice to Section 33.3, Developer shall not:

- a. subject to Section 17.1.3.c, without prior notice to the Enterprises, amend, or waive any provision of, any Principal Subcontract, other than to the extent necessary to reflect a corresponding amendment to, or Change under, this Agreement;
- b. without the prior Acceptance of the Enterprises, subject to Section 17.1.3.c.i:
 - i. enter into any Principal Subcontract unless previously Accepted pursuant to this provision or confirmed as Accepted in Section 17.1.2.a;
 - ii. enter into any agreement replacing all or part of any Principal Subcontract, excluding, for certainty, an extension of the O&M Contract previously Accepted pursuant to Section 17.1.2.a in the same or substantially similar form and substance for a period following the Initial O&M Contract Expiration Date; or
 - iii. self-perform any part of the Work, including in replacement of all or part of any Principal Subcontract unless such self-performance has been previously Accepted pursuant to this provision or confirmed as Accepted in Section 17.1.2.c or otherwise does not require Acceptance pursuant to Section 17.1.2.e,
 provided that, if applicable and required by the Enterprises as a condition of such Acceptance, Developer simultaneously executes and delivers (and ensures that the relevant Principal Subcontractor executes and delivers) to the Enterprises for counter-signature a Principal Subcontractor Direct Agreement; or
- c. without the prior Approval of the Enterprises:
 - i. enter into any agreement, amendment or waiver materially and adversely affecting the performance of any Principal Subcontract, other than to the extent necessary to reflect a corresponding amendment to, or Change under, this Agreement;
 - ii. terminate, or permit or suffer any termination of, any Principal Subcontract (in whole or in material part), other than in conjunction with the Enterprises' Acceptance of either a replacement of such Principal Subcontract or Developer's self-performance of any relevant part of the Work, in either case in accordance with Section 17.1.3.b; or
 - iii. assign or transfer any of its, or permit or suffer any assignment or transfer by a Principal Subcontractor of any of such Principal Subcontractor's, rights and/or obligations under any Principal Subcontract (in whole or in material part), other than pursuant to any related Lenders' Subcontract Direct Agreement (as such term is defined in the relevant Principal Subcontractor Direct Agreement); or
 - iv. in any material respect, fail to perform, depart from its obligations, fail to enforce or waive or allow to lapse any rights it may have (or procure that others in any material respect either fail to perform, depart from their obligations, fail to enforce or waive or allow to lapse any rights they may have) under any Principal Subcontract, except to the extent that any such action or failure to act by Developer shall have no material adverse impact on:
 - A. the performance by Developer of its obligations under this Agreement; or
 - B. the rights of the Enterprises under this Agreement or under any Principal Subcontractor Direct Agreement.

17.1.4. Developer shall deliver to the Enterprises a copy of:

- a. any amendment or replacement of any Principal Subcontract promptly following execution of the same; and
- b. each Subcontract other than a Principal Subcontract (and any amendment to any such Subcontract) promptly and in any event no later than 30 Calendar Days after execution of such Subcontract (or amendment).

17.2. Self-Performance

- a. Developer shall ensure that the Construction Contractor self-performs at least 30% of the value of the Construction Work as measured by the amounts payable under the terms of the Construction Contract with respect to such Construction Work (excluding, for certainty, any amounts payable with respect to the O&M Work During Construction).
- b. For purposes of Section 17.2.a, the Construction Contractor shall be considered to be a “design-builder” as described in 23 CFR § 635.116(d)(2).

17.3. Subcontracting with Affiliates

- a. Without limiting its obligations under Sections 17.1 and 17.2, Developer shall have the right to have Work directly or indirectly performed by Affiliates of itself or any of its Equity Members (including any Affiliate that may be a Principal Subcontractor or other Subcontractor as identified in the Preferred Proposer’s Proposal) only if the following conditions are satisfied:
 - i. the Affiliate shall be qualified, experienced and capable in the performance of such part of the Work assigned;
 - ii. Developer shall execute, or have a Subcontractor execute, a written Subcontract with the Affiliate;
 - iii. such Subcontract shall be subject to the Enterprises’ Acceptance, and:
 - A. be on terms consistent with this Agreement and Good Industry Practice;
 - B. be on terms no less favorable to Developer (or, as applicable, its Subcontractor) than those that Developer (or such Subcontractor) could reasonably obtain in an arms’ length, competitive transaction with an unaffiliated Subcontractor;
 - C. be in form and substance similar to Subcontracts then being used by Developer or its Subcontractors, as applicable, for similar work or services with unaffiliated Subcontractors; and
 - D. set out the scope of work and services thereunder and all the pricing, terms and conditions in relation to such scope of work and services.
- b. Developer shall make no payments to Affiliates for work or services in advance of provision of such work or services under the terms of a Subcontract that complies with Section 17.3.a, except for reasonable mobilization payments or other payments consistent with arm’s length, competitive transactions of similar scope.

17.4. Relationship with Subcontractors

- a. Pursuant to Section 8.2, the retention of any Subcontractor (of any tier) by Developer in accordance with this Agreement shall not:
 - i. relieve Developer of its obligations and liabilities, or deprive Developer of any rights, in each case under this Agreement; and
 - ii. relieve the Enterprises of or increase their obligations and liabilities, or deprive the Enterprises of any rights, in each case under this Agreement.

- b. The Enterprises acknowledge and agree that:
 - i. the Principal Subcontracts may provide that the Principal Subcontractors may claim relief from Developer only if and to the extent that such claim or relief is granted to Developer under this Agreement; and
 - ii. Developer will not be precluded from advancing any claim or seeking any relief under this Agreement solely by reason that Developer is not liable to a Principal Subcontractor under a Principal Subcontract until and/or only to the extent that such claim or relief is granted by the Enterprises to Developer under this Agreement,

provided that all such claims shall be made and administered by Developer, and nothing in this Section creates any contract or obligation directly between or among the Enterprises and any Principal Subcontractor or gives any Principal Subcontractor any rights against the Enterprises.

17.5. Prompt Payment of Subcontractors

17.5.1. Developer shall, and shall ensure that each of its Subcontractors and each of their respective Subcontractors shall, pay each of its and their respective Subcontractors (excluding only any Principal Subcontractor as payee) an amount equal to:

- a. 100% of the calculated value of the completed work or the services provided under the relevant Subcontract through and including the last day of the most recently concluded month; *less*
- b. any amounts previously paid in respect of such completed work or provided services; *less*
- c. any amount that is subject to retainage as permitted by Section 17.5.4; *less*
- d. any amount that is subject to a good faith dispute presented in accordance with the terms of the relevant Subcontract,

promptly, which for purposes of this Section 17.5.1 means no later than:

- e. with respect to:
 - i. Developer as payor of any Subcontractor that is not a Principal Subcontractor; or
 - ii. any Principal Subcontractor as payor,

30 Calendar Days following the relevant payee Subcontractor's delivery of an invoice to the relevant payor in compliance with Section 2.(c) of Part A of Schedule 16 (Mandatory Terms) in respect of such amount as determined pursuant to Sections 17.5.1.a through 17.5.1.d and in accordance with the terms of the relevant Subcontract; and
- f. with respect to any Subcontractor (that is not a Principal Subcontractor) as payor, seven Calendar Days following such payor Subcontractor's receipt of a corresponding payment in respect of the relevant work or services, as applicable.

17.5.2. Developer may request Approval for any payee Subcontractor that is not a Principal Subcontractor to be exempt from being paid promptly as provided for in Section 17.5.1. Following the Approval of any such exemption, Section 17.5.1.e (and not Section 17.5.1.f) shall apply to the exempted Subcontractor as a payor Subcontractor as if such exempted Subcontractor was a Principal Subcontractor (except to the extent that any of such exempted Subcontractor's payee Subcontractors are also subject to such an Approved exemption under this Section 17.5.2).

17.5.3. Notwithstanding the provisions of Section 17.5.1 and 17.5.2, Developer shall pay each of its direct Subcontractors (including any Principal Subcontractor as payee) in accordance with 49 CFR § 26.29 no later than 30 Calendar Days following payment from the Enterprises to the Developer of any Milestone Payment, Performance Payment or other payment under this

Agreement to the extent that part of such payment is required under the terms of the relevant Subcontract to be used to pay such Subcontractor the relevant amount.

- 17.5.4. Developer shall, and shall ensure that each of its direct Subcontractors and each of their respective Subcontractors shall, be permitted (but not, for certainty, required) to withhold retainage from payments otherwise due to a payee Subcontractor, provided that:
- a. excluding with respect to payments to be made to (i) any Principal Subcontractor or (ii) any other Subcontractor (subject to the Enterprises' prior Approval), such retainage shall not exceed 5% of the calculated value of the completed work or services provided from time to time; and
 - b. all such retainage shall be paid in full no later than 30 Calendar Days after the work or services performed under the relevant Subcontract is or are satisfactorily completed.

PART F: PROJECT MANAGEMENT

18. DELEGATION OF AUTHORITY

18.1. Delegations Among Enterprises and to CDOT

18.1.1. While, for ease of reference, HPTE and BE are collectively referred to herein as the Enterprises, either one of them may in their discretion act or perform for both of them in their capacity as Enterprises under this Agreement, and Developer shall accept such action or performance as discharging the relevant obligation(s) of both Enterprises, except where this Agreement expressly refers to BE acting as PABs Issuer, and not to an Enterprise or the Enterprises.

18.1.2. Subject to compliance with Law, and without relieving the Enterprises of any obligation hereunder, either Enterprise may also in its discretion delegate the exercise of any right or the performance of any obligation under this Agreement to CDOT.

18.2. Use of Representatives

18.2.1. Appointment of Representatives

- a. Pursuant to this Section 18.2.1, Developer and the Enterprises shall each identify and maintain a person as its and their official representative (respectively, the "Developer's Representative" and the "Enterprise Representative" and, together, the "Representatives" and each a "Representative") with the functions and powers as set out in Section 18.2.2.
- b. The Developer's Representative shall at all times be its "Project Manager", initially as identified in Schedule 27 (Key Personnel), subject to replacement pursuant to Section 16.2. The Enterprise Representative shall initially be their "Project Director" as notified to Developer on or prior to the Agreement Date, subject to replacement pursuant to this Section 18.2.1.
- c. From time to time:
 - i. the Enterprises may replace their Representative; and
 - ii. Developer and the Enterprises may each delegate all or part its or their Representative's responsibilities under this Agreement,
 in either case by notice to the other Party containing:
 - iii. the name, title, mailing address, principal phone numbers, email address (or digital equivalent) and fax number (if any) of the replacement Representative or delegatee;
 - iv. in the case of partial delegations of authority, a schedule setting out the extent to which authority for managing any aspect of this Agreement has been delegated and to whom; and
 - v. in the case of time-limited replacements or delegations, the start and end date for such time-limited replacement or delegation.

18.2.2. Power and authority of Developer Representatives

- a. Except as previously notified by Developer to the Enterprises before any relevant act or instruction occurs or is given:
 - i. the Enterprises shall be entitled to assume that Developer's Representative has, and Developer shall (subject to reasonable exceptions and limitations to be notified to the Enterprises) ensure that Developer's Representative shall have, full authority to act on behalf of Developer for all purposes of this Agreement; and
 - ii. subject to any exceptions or limitations previously notified to them, the Enterprises and the Enterprise Representative shall be entitled to treat any act of Developer's Representative in connection with this Agreement as being

expressly authorized by Developer and the Enterprises and the Enterprise Representative shall not be required to determine whether any express authority has in fact been given.

- b. Any relevant instruction to be given by either party shall be given in accordance with Section 49.1.1.

18.2.3. Power and authority of Enterprise Representative

Except as previously notified by the Enterprises to Developer before any relevant act or instruction occurs or is given:

- a. Developer shall only be entitled to assume that the Enterprise Representative has the functions and powers of the Enterprises (collectively, and pursuant to this Agreement where necessary or permissible, individually) in relation to the Project that are identified in this Agreement as functions or powers to be carried out by the Enterprise Representative; and
- b. Developer and Developer's Representative:
 - i. shall be entitled to treat any written action or instruction by the Enterprise Representative that is authorized by this Agreement as being expressly authorized by the Enterprises (collectively, and pursuant to this Agreement where necessary or permissible, individually) and Developer and Developer's Representative shall not be required to determine whether any express authority has in fact been given; and
 - ii. shall not be entitled to treat any other act or instruction by any other officer, employee or other Person engaged by the Enterprises or CDOT, unless otherwise expressly authorized pursuant to this Agreement, as being authorized by the Enterprises, and upon receiving any such presumptively unauthorized act or instruction from any Person, Developer shall:
 - A. promptly submit a written request to the Enterprises requesting clarification whether and to what extent authority has in fact been given to the relevant Person; and
 - B. pending the Enterprises' response, refrain from taking any related action to the extent reasonable under the circumstances.

PART G: PUBLIC OVERSIGHT

19. RECORD KEEPING AND OVERSIGHT

19.1. Project Records

19.1.1. General obligation to maintain Project Records

Developer shall (and shall require that each of its Subcontractors and each of their respective Subcontractors shall) at all times create and maintain full and complete records, books, documents, papers, databases, files and other documentation of information relating to the Project and, as applicable, Developer's performance of its obligations under this Agreement and the Principal Subcontracts and each Subcontractor's performance under the Subcontracts to which it is a party, including:

- a. as required by Law, including CORA to the extent it is applicable to Project Records in the custody of Developer-Related Entities as a matter of Law;
- b. pursuant to Good Industry Practice;
- c. pursuant to GAAP, as applicable;
- d. as otherwise required by the provisions of this Agreement other than this Section 19.1.1, including pursuant to Section 13 of Schedule 8 (*Project Administration*); and
- e. maintenance of copies of:
 - i. all Principal Subcontracts (and all amendments and waivers thereto) and, with respect to each Subcontractor's records, of each Subcontract to which it is a party (and all amendments and waivers thereto); and
 - ii. all notices, correspondence, submissions, change, purchase or work orders, or other documents and materials expressly referenced as work product in this Agreement, any Principal Subcontract and, with respect to each Subcontractor's records, each Subcontract to which it is a party,

together, the "Project Records".

19.1.2. Standards for maintenance of Project Records

Developer shall (and shall ensure that each of its Subcontractors and each of their respective Subcontractors shall):

- a. create and maintain Project Records in the format or formats (hardcopy, analog, digital or otherwise) determined from time to time by reference to the requirements and standards set out in Sections 19.1.1.a through 19.1.1.e;
- b. maintain originals or copies of all Project Records that are otherwise required to be maintained in a physical format at a location in the State; and
- c. develop and maintain procedures to backup and secure all Project Records that, at a minimum, comply with Law and Good Industry Practice.

19.1.3. Inspection of Project Records

Developer shall, without charge:

- a. make all its Project Records available for inspection by the Enterprises, CDOT or any of their representatives or designees (each, an "Inspecting Party") pursuant to this Section 19.1.3;
- b. make its Project Records available for inspection by the Inspecting Parties at its principal offices in the State, or at such other facilities as the Enterprises may reasonably require on behalf of themselves or any other Inspecting Party to the extent records are maintained at such other facilities:

- i. during normal business hours (and, upon reasonable request, at times outside normal business hours); and
- ii. upon reasonable notice, unless the Enterprises have a good faith suspicion of fraud in which case no prior notice shall be required;
- c. allow any Inspecting Party to make extracts and take notes during any inspection and, upon request, furnish copies of Project Records to any Inspecting Party; and
- d. subject to its obligations to comply with Section 19.1.2.c, and without limiting its obligations pursuant to Schedule 8 (Project Administration), prior to issuance of NTP2 Developer shall submit to the Enterprises for Acceptance, and have received Acceptance of, a written protocol with respect to making all Project Records maintained in digital formats available for real-time, “24/7” secure remote access by the Inspecting Parties to the extent reasonably practicable. Developer shall thereafter comply with such protocol.

19.1.4. Subcontractor Project Records

- a. Developer shall ensure that each of its Subcontractors and each of their respective Subcontractors shall, either directly or through Developer and in either case without charge, make its Project Records available to the Inspecting Parties for inspection on terms equivalent to those set out in Section 19.1.3.a to 19.1.3.c.
- b. To the extent any Project Records are in the exclusive possession of a Subcontractor that fails to make such records available pursuant to Section 19.1.4.a, Developer shall notify the Enterprises of such occurrence, identify the Project Records that are unavailable, and describe what efforts Developer has made to secure compliance or otherwise obtain such Project Records.

19.1.5. Limitations on disclosure

Notwithstanding anything to the contrary contained in this Agreement:

- a. Developer shall not be required to disclose, or to ensure the disclosure by any of its Subcontractors and/or of their respective Subcontractors of, any Project Records protected by attorney-client or other legal privilege or protection under Law based upon an opinion of counsel (such counsel to be Acceptable to the Enterprises) unless such disclosure is otherwise compelled by Law; and
- b. to the extent permitted by Law, the Parties agree that the Financial Model and any Project Intellectual Property that is subject to an Intellectual Property Escrow shall at all times be treated by the Parties as proprietary and confidential commercial non-public information which may only be reviewed by and accessed by the Enterprises pursuant to this Agreement and, as applicable, the Financial Model Escrow Agreement or the relevant Intellectual Property Escrow.

19.1.6. Retention of Project Records

- a. Each individual Project Record shall be retained for a period of at least seven years after such Project Record is first generated, or for such longer period as may be required pursuant to Sections 19.1.1.a through 19.1.1.e or Section 19.1.6.b.
- b. Notwithstanding Section 19.1.6.a, Developer shall (and shall ensure that each of its Subcontractors and each of their respective Subcontractors shall) retain and make available pursuant to this Section 19.1 all Project Records:
 - i. that relate to a Claim or Dispute until any later date that such matters are Agreed or Determined; and
 - ii. in existence on the last Calendar Day of the Term (or the equivalent under any Subcontract) until the later of the seventh anniversary of such day and any date as may be required pursuant to Sections 19.1.1.a through 19.1.1.e.

19.1.7. Survival of obligations

Developer's obligations under this Section 19.1 shall survive until the later of:

- a. the seventh anniversary of the Expiry Date (or, if applicable, the Termination Date); and
- b. with respect to the retention of any Project Record, such date as determined pursuant to Section 19.1.6.

19.2. Financial Statements

In addition to all Developer's other obligations to prepare and deliver reports and other materials under this Agreement, Developer shall provide the Enterprises with copies of the following:

- a. its unaudited quarterly and annual accounts within 20 Working Days after such accounts have been finalized; and
- b. its audited annual accounts within 20 Working Days after publication (or, if not published, after such accounts have been finalized),

each of which may be subject to redactions made in compliance with Section 20 and may be subsequently made available to the public pursuant to CORA.

19.3. Enterprise Board Meeting Attendance

Developer shall appear before and make a separate presentation to each Enterprise's board and the Transportation Commission as and when required by the Enterprises (subject to reasonable prior notice), and, in the case of the boards of the Enterprises, no less frequently than:

- a. during the Construction Period, once in each month with respect to each Enterprise board; and
- b. during the Operating Period, once in each month with respect to the HPTE board only,

for the purpose of informing such bodies about the Project and the Work in connection with their public oversight of the same.

20. COLORADO OPEN RECORDS ACT

20.1.1. Notwithstanding anything to the contrary contained in this Agreement, Developer acknowledges and agrees that this Agreement, except as provided for in Section 19.1.5, shall not be treated as CORA Exempt Materials and may be disclosed by the Enterprises without restriction.

20.1.2. Prior to issuance of NTP1, Developer shall submit to the Enterprises for, and have received, Acceptance of a written protocol for the disclosure and, as applicable, exemption from disclosure of Project Records in compliance with CORA and other Laws applicable to the disclosure of such Project Records. Such protocol shall include provisions to address disclosure and sharing of Project Records among Developer-Related Entities and with any of their Lenders, regulators or rating agencies, in each case in the ordinary course of business and in connection with the Project. Developer shall (and shall ensure that each Developer-Related Entity shall) comply with any such Accepted protocol.

20.1.3. Neither the Enterprises nor CDOT shall be responsible or liable to Developer or any other Person for the disclosure of any Project Records if the disclosure:

- a. is required by Law;
- b. subject to Section 19.1.5 (and excluding, for certainty, any disclosure of CORA Exempt Materials) is permitted by Law;
- c. is required by court order;
- d. occurs through inadvertence or mistake;
- e. is made to the FHWA or the US DOT; or

- f. is compliant with the protocol Accepted pursuant to Section 20.1.2.
- 20.1.4. In the event the Enterprises or CDOT receives a CORA request for Project Records that are in the custody and control of Developer-Related Entities, Developer shall cooperate with the Enterprises, CDOT and, as applicable, the State's Attorney General's office, and shall cause all Subcontractors and each of their respective Subcontractors to cooperate, in responding to such request in a timely manner under CORA or otherwise in accordance with the protocol Accepted pursuant to Section 20.1.2.
- 20.1.5. Developer shall be responsible for all costs associated with defending any request for disclosure of any Project Records claimed by Developer to be exempt from disclosure under CORA, whether such records are in the custody of Developer (or any other Developer-Related Entity), the Enterprises or CDOT. In connection with this obligation, Developer shall:
- a. use Reasonable Efforts to assist the Enterprises (and to secure the assistance of the Enterprises by each of Developer's Subcontractors and of each of their Subcontractors) in such defense;
 - b. pursuant to Section 24.2, indemnify the Enterprises for any Losses incurred or suffered by them in such defense; and
 - c. at the request of the Enterprises or the State Attorney General's office, intervene in any such defense at its own cost and with its own counsel.
- 20.1.6. Developer shall not (and shall ensure that each of its Subcontractors and each of their respective Subcontractors shall not) disclose any Project Records to any Person, other than:
- a. as expressly permitted by this Agreement;
 - b. as required by Law or a court order;
 - c. in compliance with the protocol Accepted pursuant to Section 20.1.2 or, prior to Acceptance of such protocol, among Developer-Related Entities, their Lenders, regulators and rating agencies, in the ordinary course of business in connection with the Project and subject to customary safeguards regarding the confidential treatment of such records; or
 - d. with the Enterprises' prior Approval,
- and, in each case, where such information relates to a member of the public, Developer shall not disclose or make use of any such information otherwise than for the purpose for which it was provided and then only in compliance with Law, unless Developer has obtained the prior written consent of such Person and of the Enterprises.

21. INSPECTIONS AND AUDITS

21.1. Site Inspections and Annual Survey and Audit Rights

21.1.1. Inspections of the Site

- a. Subject to Section 21.1.1.b, the Enterprises, CDOT, the FHWA and their respective authorized agents shall have an unrestricted right to enter the Site from time to time in order to:
 - i. inspect the state and progress of the Work and to monitor compliance by Developer with its obligations under this Agreement, including by conducting inspections, surveys, sampling, measurements, observations, testing and other reasonably necessary oversight activities;
 - ii. conduct routine, in-depth or any other type of inspection or other oversight activity in accordance with their standard practices; and/or
 - iii. any other inspection or oversight activity expressly contemplated by this Agreement,

provided that any such activities are conducted pursuant to Section 21.1.3.

- b. In exercising their rights under this Section 21.1.1, the Enterprises shall at all times comply with all relevant site rules and safety regulations in relation to the Site.

21.1.2. Annual Survey and Audit Rights

- a. Once in every Calendar Year, and at additional times if the Enterprises reasonably believe that Developer is in breach of its obligations under this Agreement, the Enterprises may carry out or cause the carrying out of:
 - i. a survey of the Project and the Work (or part of the Project and the Work) by a suitably qualified independent expert (not being an employee or consultant of either Enterprise or CDOT that has otherwise been materially involved in the Project (except for purposes of conducting a prior survey)); and
 - ii. an audit of Project Records and Developer's compliance with its obligations under this Agreement.
- b. The Enterprises shall notify Developer in writing a minimum of 10 Working Days in advance of the date they wish to carry out a survey or audit described in Section 21.1.2.a, provided that no such prior notice shall be required if the Enterprises reasonably believe that Developer is in breach of its obligations under this Agreement. Unless a Developer Default has occurred and is continuing, the Enterprises shall consider in good faith any reasonable request by Developer for the survey or audit to be carried out on a different date if such request is made at least five Working Days prior to the notified date and Developer (acting reasonably) is able to demonstrate that carrying out the survey on the notified date would materially prejudice Developer's ability to perform its obligations or exercise its rights under this Agreement. The survey and audit described in Section 21.1.2.a may be conducted separately during any relevant Calendar Year.

21.1.3. Rules governing conduct of inspections, surveys and audits

- a. When carrying out any inspection, survey or audit pursuant to Section 21.1.1 or Section 21.1.2, the Enterprises shall use Reasonable Efforts to minimize any unnecessary disruption to the Work and Developer's performance of its obligations under this Agreement.
- b. Subject to Sections 21.1.3.c and 21.1.4.a.iii, as between the Enterprises and Developer, the cost of the inspection, survey or audit conducted pursuant to Section 21.1.1 or Section 21.1.2 shall be borne by the Enterprises.
- c. Developer shall, at its own cost and expense, use Reasonable Efforts to provide assistance to the Enterprises as required from time to time during the carrying out of any inspection, survey or audit conducted pursuant to this Section 21.

21.1.4. Findings of breach

- a. If an inspection, survey or an audit conducted pursuant to Section 21.1.1 or Section 21.1.2 is conducted in response to or identifies any Developer breach or Developer Default, the Enterprises may, as applicable and in their discretion:
 - i. notify Developer of the condition which the Project and the Work (or any part of the Project and the Work) should be in to comply with Developer's obligations under this Agreement or, without altering Developer's obligations hereunder, of other steps the Enterprises believe should be taken with respect to Developer's obligations under this Agreement;
 - ii. without altering Developer's obligations hereunder, specify a reasonable period within which Developer must carry out any rectification and/or maintenance work, or where rectification or maintenance work cannot rectify the non-compliance, to

take reasonable steps to prevent the recurrence of such a non-compliance; and/or

- iii. be entitled to be reimbursed by Developer for the reasonable cost and expense of the inspection, survey or audit and any costs and expenses incurred by the Enterprises in relation to such inspection, survey or audit (or, in the case of a breach that is not a Developer Default, such parts of the inspection, survey or audit that the Enterprises reasonably determine were necessary to identify such breach).
- b. Notwithstanding any action by the Enterprises pursuant to Section 23.4, Developer shall promptly (or within such other period of time as is required or expressly permitted by Law and the provisions of this Agreement) rectify any non-compliance identified by any survey or audit conducted pursuant to this Section 21.1.

21.2. Right to Conduct Physically Intrusive Inspections

21.2.1. Without prejudice to the Enterprises' other rights under this Agreement, the Enterprises shall have the right, at any time prior to the Final Acceptance Date or prior to completion of any Renewal Work and, in either case, upon reasonable notice, to require Developer to permit physically intrusive inspections by the Enterprises of any part or parts of the Construction Work or Renewal Work, as applicable, including by opening up covered or sealed portions of the Work, when the Enterprises reasonably believe that such part or parts of the Construction Work or Renewal Work, as applicable, do not comply with the requirements of this Agreement. In carrying out any such inspection the Enterprises shall use Reasonable Efforts to minimize unnecessary disruption to the Work and Developer's performance of its obligations under this Agreement.

21.2.2. If, following the exercise by the Enterprises of their right pursuant to Section 21.2.1, an inspection shows that the relevant part or parts of the Construction Work or Renewal Work:

- a. does not or do not comply with the requirements of this Agreement, then:
 - i. Developer shall rectify such noncompliance at its own cost and expense; and
 - ii. the Enterprises shall be entitled to be reimbursed by Developer for the reasonable cost and expense incurred by the Enterprises in relation to such inspection conducted pursuant to Section 21.2.1 (or, in the case of a noncompliance that is not a Developer Default, such parts of the inspection that the Enterprises reasonably determine were necessary to identify such noncompliance); and
- b. complies or comply with the requirements of this Agreement, such inspection shall be treated as a Compensation Event, except to the extent that such inspection was carried out in response to Developer breaching its obligation to maintain Project Records pursuant to Section 19.1, which Project Records, if maintained in accordance with this Agreement, would have demonstrated that the relevant part or parts of the Construction Work or Renewal Work complied with the requirements of this Agreement.

21.2.3. Without prejudice to the rights of the Enterprises pursuant to this Section 21.2, the Parties acknowledge that the exercise of such rights pursuant to this Section 21.2 shall not in any way affect the obligations of Developer under this Agreement except as expressly set out in this Section 21.2 or elsewhere in this Agreement.

21.3. Increased Oversight

21.3.1. The Enterprises may, in their discretion, at any time when:

- a. there are material Defects in the Work; or
- b. Developer has materially failed to comply with the Technical Requirements (other than with respect to any breach that constitutes a Noncompliance Event) which failure remains uncured; and/or

- c. the Increased Oversight Threshold has been met or exceeded, without prejudice to any other right or remedy available to them, and without limiting Developer's other obligations under this Agreement (including obligations to remedy Defects and to otherwise perform in accordance with the requirements set out in this Agreement), by notice to Developer:
 - d. require Developer to promptly prepare and submit for Approval a remedial plan to, as applicable:
 - i. remedy such Defects or failure and prevent its recurrence; or
 - ii. improve performance so as to address the causes of the Increased Oversight Threshold being met or exceeded,and, following Approval of such plan, Developer shall be required to comply with such plan; and/or
 - e. increase the level of their monitoring of Developer relative to the prior standard of practice under this Agreement prior to such Defect or failure, or to the Increased Oversight Threshold being met or exceeded, until such time as Developer shall have demonstrated to the reasonable satisfaction of the Enterprises that it is capable of performing and shall perform all its obligations under this Agreement.
- 21.3.2. If the Enterprises, in their discretion, issue a notice pursuant to Section 21.3.1, Developer shall bear its own costs and expenses and pay to the Enterprises on demand all reasonable costs and expenses incurred by or on behalf of the Enterprises in relation to any increased level of monitoring.

PART H: PERFORMANCE MANAGEMENT

22. PERFORMANCE-BASED PAYMENT DEDUCTIONS AND PERSISTENT BREACH

22.1. Performance-based Payment Deductions

22.1.1. Pursuant to Section 3(b) of Schedule 5 (Milestone Payments) and Part 1 of Schedule 6 (Performance Mechanism), certain Construction Period performance related deductions may be made from the Substantial Completion Milestone Payment.

22.1.2. Pursuant to Parts 2 and 3 of Schedule 6 (Performance Mechanism), certain Operating Period performance related deductions may be made from each Performance Payment.

22.2. Persistent Breach by Developer

22.2.1. If a breach of this Agreement by Developer (other than any breach that constitutes a Noncompliance Event or results in the accrual of a Construction Closure Deduction or an Operating Period Closure Deduction or that arises due to a Supervening Event) has:

- a. continued for more than 30 consecutive Calendar Days; or
- b. occurred three or more times in any six consecutive month period,

then the Enterprises may serve a notice (an "Initial Warning Notice") on Developer:

- c. specifying that it is an Initial Warning Notice;
- d. giving reasonable details of the breach; and
- e. stating that the relevant breach is a breach which, if it continues for the period of time specified in Section 22.2.2.a or recurs as specified in Section 22.2.2.b, may result in a Developer Default for Persistent Breach,

provided that an Initial Warning Notice may not be served in respect of any incident of breach which has previously been the subject of a separate Initial Warning Notice or a Final Warning Notice.

22.2.2. If the breach specified in an Initial Warning Notice:

- a. continues beyond 30 consecutive Calendar Days after the date of service of the Initial Warning Notice; or
- b. recurs three or more times within the six consecutive month period after the date of service of the Initial Warning Notice,

then the Enterprises may serve another notice (a "Final Warning Notice") on Developer:

- c. specifying that it is a Final Warning Notice;
- d. stating that the breach specified has been the subject of an Initial Warning Notice; and
- e. stating that:
 - i. the continuation of such breach for more than 30 consecutive Calendar Days after the date of service of the Final Warning Notice; or
 - ii. the recurrence of such breach two or more times within the six consecutive month period after the date of service of the Final Warning Notice,

shall constitute a "Persistent Breach", which itself shall constitute a Developer Default pursuant to Section 32.1.1.

23. SAFETY COMPLIANCE, SUSPENSION OF THE WORK AND PUBLIC SECTOR RIGHTS TO INTERVENE**23.1. Safety Compliance**

23.1.1. Subject to their obligations under Section 23.1.2, the Enterprises may, in their discretion, issue Safety Compliance Orders to Developer from time to time.

23.1.2. Except in the case of an Emergency, the Enterprises shall use Reasonable Efforts:

- a. to promptly inform Developer of any circumstance or information relating to the Project which, in the Enterprises' reasonable judgment, is likely to result in the issuance of a Safety Compliance Order; and
- b. consult with Developer prior to issuing a Safety Compliance Order.

23.1.3. Developer shall promptly implement each Safety Compliance Order that the Enterprises issue pursuant to Section 23.1.1, including through the use of Reasonable Efforts by Developer to overcome any inability to comply with any Safety Compliance Order caused by a Supervening Event. The Enterprises shall be entitled to take action pursuant to Section 23.4.1.d if Developer fails to comply with its obligations pursuant to this Section 23.1.3.

23.2. Refusal of Access

The Enterprises reserve the right to refuse (or, alternatively, authorize the Department to refuse) access to the Right-of-Way by any Person:

- a. if the Enterprises reasonably believe that:
 - i. the presence or activities of such Person on the Right-of-Way or any Additional Right-of-Way represents a material risk to the health or safety of any person, the Environment or Improvements, the community or property;
 - ii. such Person is under the influence of alcohol or drugs; or
 - iii. such Person is acting or threatening to act in a violent, harassing, discriminatory or illegal manner, or such Person previously acted in such a manner; or
- b. who previously committed any of the conduct described in Section 23.2.a while accessing any part of the Site.

23.3. Suspension of Work

23.3.1. The Enterprises shall at all times have the right and authority to suspend, in whole or in part, the Work by written order to Developer. Any such order shall state the Enterprises' reasons for the required suspension of the Work.

23.3.2. Except where any suspension of the Work by the Enterprises pursuant to Section 23.3.1 is made (and continues):

- a. in response to:
 - i. any uncured failure by Developer to comply with any Law, Governmental Approval or Permit; and/or
 - ii. the existence of conditions unsafe for workers, other Project personnel or the general public, including failures to comply with Project Standards related to safety or to comply with any Safety Compliance Order; or
- b. pursuant to Section 25.3.3.b,

the issuance of any such suspension order (or the continuation of any such suspension order) shall constitute a Compensation Event.

23.4. Self-Help

23.4.1. Self-help rights

Without limiting any other rights of the Enterprises under this Agreement, if the Enterprises reasonably believe that they need to take action in connection with the Project or the Work as a result of:

- a. an Emergency having occurred and being continuing;
- b. any Developer Default having occurred and not having been cured within any relevant Developer Default Cure Period;
- c. Developer having failed to comply with its obligations pursuant to Section 9.4.4.a with respect to any Defect in the Warranted Elements or any other breach of the Warranties;
- d. Developer having failed to comply with its obligations pursuant to Section 23.1.3 with respect to any Safety Compliance Order; and/or
- e. being necessary to discharge a constitutional or statutory duty or a duty imposed on the Enterprises, CDOT or the State by any Law, or to facilitate any such discharge by the Enterprises, CDOT or the State,

then, subject to Lenders' rights pursuant to the Lenders Direct Agreement, the Enterprises shall be entitled to take action pursuant to Sections 23.4.2 and 23.4.3.

23.4.2. Notice of election to exercise self-help rights

Except in the case of an Emergency or a Developer Default, in which case the Enterprises shall only be obliged to use Reasonable Efforts to comply with their obligations under this Section 23.4.2, if the Enterprises wish to take action pursuant to Section 23.4.1 they shall notify Developer a reasonable time prior to taking such action, which notice shall include the following:

- a. a description of any action that the Enterprises reasonably believe is necessary for them to take;
- b. the reason for such action;
- c. the date the Enterprises intend to commence such action;
- d. the time period Developer has (if any) to take action before the Enterprises will commence such action;
- e. the time period which the Enterprises believe will be necessary for such action; and
- f. to the extent practicable, the effect on Developer and its obligation to perform the Work during the period such action is being undertaken.

23.4.3. Required actions

- a. Following service of a notice by the Enterprises pursuant to Section 23.4.2 and expiration of any time within which Developer is permitted to take action pursuant to Section 23.4.2.d before the Enterprises will take action pursuant to Section 23.4.1, the Enterprises shall take such action as notified under Section 23.4.2 (or, in the case of an Emergency, as they may otherwise determine in their discretion) and any consequential additional action as they reasonably believe is necessary (together, the "Required Action"), and Developer shall use Reasonable Efforts to give all necessary assistance to the Enterprises while they are taking the Required Action.
- b. Except in the case of an Emergency or a Developer Default, in which case the Enterprises shall only be obliged to use Reasonable Efforts to comply with their obligations under this Section 23.4.3.b, the Enterprises shall provide Developer with prompt notice of completion of the Required Action.

23.4.4. Reimbursement of Enterprises' costs and expenses

If the Enterprises take any Required Action in response to or because of any Developer breach of its obligations under this Agreement or any Developer Default, any costs and expenses of the Enterprises incurred in taking, or as a result of taking, such action shall be payable on demand by Developer to the Enterprises.

PART I: INDEMNIFICATION AND INSURANCE

24. INDEMNIFICATION AND NOTICE AND DEFENSE OF CLAIMS

24.1. No Obligation to Indemnify Developer

Neither the Enterprises, nor CDOT, have any obligation to indemnify Developer.

24.2. Developer Indemnity

Subject to Section 24.3 and Sections 35.2 through 35.6, Developer shall, to the fullest extent permitted by Law, release, protect, defend, indemnify and hold harmless each Enterprise, CDOT and the State (the "Principal Indemnified Parties") and each of their respective officers, directors, agents and employees (each of the Principal Indemnified Parties and each such Person, an "Indemnified Party" and, collectively, the "Indemnified Parties") from and against any and all Claims against an Indemnified Party and/or Losses suffered by an Indemnified Party arising from, or as a consequence of, performance or non-performance of any of Developer's obligations under this Agreement or breach by Developer of this Agreement, including any such Claims and/or Losses that are in respect of:

- a. death or personal injury;
- b. loss of or damage to any Indemnified Party's property (whether personal or real), equipment or facilities, regardless of whether such property, equipment or facilities are owned, leased or otherwise held by such Indemnified Party, including loss of use thereof;
- c. any Claim against the Enterprises or CDOT by any third party in connection with the Enterprises or CDOT's use of any Project Intellectual Property in compliance with the terms of this Agreement;
- d. any violation of Law, including any Federal or state securities Law or similar, or any Environmental Law, by any Developer-Related Entity;
- e. the authorization, issuance, sale, trading, redemption or servicing of the PABs or any other bonds issued to finance the Project;
- f. Developer's failure to comply with any requirement necessary to preserve the tax exempt status of interest paid on the PABs or other tax exempt bond; or
- g. to the extent not otherwise a Claim or Loss that is in respect of any of the matters specified in Sections 24.2.a through 24.2.f, Claims asserted and/or Losses suffered by any third party (including (i) any counterparty to a Third Party Agreement and (ii) any officer, director, agent or employee who is an Indemnified Party), which such third party asserts against and/or claims from one or more of the Principal Indemnified Parties provided that such Claim and/or Loss shall only fall within the scope of this Section 24.2.g if and to the extent that any such Claim and/or Loss arose as a result of either:
 - i. Developer's or any other Developer-Related Entity's breach or failure to perform any obligation that any Principal Indemnified Party owed to such third party (any such obligation, a "Relevant Obligation"); or
 - ii. any act or omission of Developer or any other Developer-Related Entity that renders any Principal Indemnified Party unable to perform any Relevant Obligation or otherwise results in any Principal Indemnified Party having liability for such Claim and/or Loss;
 - iii. the Relevant Obligation or any Principal Indemnified Party's potential liability for such Claim and/or Loss exists or arises under Law or any Governmental Approval, Permit or agreement (including a Third Party Agreement); and

- iv. either:
 - A. if Section 24.2.g.i applies, the Enterprises have delegated performance of the Relevant Obligation to Developer pursuant to this Agreement; or
 - B. if Section 24.2.g.ii applies, the existence of the Relevant Obligation or the Principal Indemnified Party's potential liability for such Claim and/or Loss under any Law, Governmental Approval, Permit or agreement was known (or, with respect to any Relevant Obligation, should have been known) to Developer or such other Developer-Related Entity prior to the occurrence of the relevant breach, failure to perform, act or omission,

provided that nothing in this Section 24.2 shall limit or preclude Developer's right to claim any affirmative defense permitted by Law.

24.3. Exclusions from Developer Indemnity

Developer's indemnification and hold harmless obligations under Section 24.2 shall not extend to any Loss or Claim of an Indemnified Party to the extent that such Loss or Claim:

- a. was, with respect to a Loss only, already the subject of an indemnity claim under Section 24.2 from another Indemnified Party; or
- b. was directly caused by:
 - i. a Supervening Event;
 - ii. the fault, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence of such Indemnified Party (including, for certainty, any such conduct by BE acting in its capacity as PABs Issuer);
 - iii. performance or non-performance by the Enterprises of any of their obligations under this Agreement;
 - iv. such Indemnified Party's violation of any Law (including, for certainty, any such violation by BE acting in its capacity as PABs Issuer); or
 - v. any event described in Section 27.4.4.a through 27.4.4.c; or
- c. is comprised of a Claim asserted and/or Loss suffered by any third party (including (i) any counterparty to a Third Party Agreement and (ii) any officer, director, agent or employee who is an Indemnified Party) which third party asserts a Claim that is:
 - i. against one or more of the Principal Indemnified Parties;
 - ii. otherwise within the scope of the indemnity set out in Section 24.2; and
 - iii. covered by the worker compensation program of the Principal Indemnified Party against which the Claim is asserted; or
- d. is not of a type specifically referenced in Sections 24.2.a through 24.2.f and such Loss or Claim:
 - i. arose from, or as a consequence of, Developer's performance (and not of any non-performance or breach) of its obligations under this Agreement; and
 - ii. could not have been avoided by Developer.

24.4. Claims by Employees

Developer's indemnification obligation under Section 24.2 in relation to Losses and/or Claims against an Indemnified Party by an employee of Developer, a Subcontractor, anyone directly or indirectly employed by them or anyone for whose acts they may be liable, shall not be limited by any limitation on the amount or type of damages, compensation or benefits payable by or for

Developer or a Subcontractor under workers' compensation, disability benefit or other employee benefits laws.

24.5. Notice of Claims and Tender of Defense

If any of the Indemnified Parties receives notice of a Claim or otherwise has actual knowledge of a Claim that it believes is within the scope of the indemnity under Section 24.2, the Enterprises shall, without limiting their obligations under Section 25.4.2:

- a. provide Developer with notice of any such Claim of which they are aware (together with a copy of all written materials that the Indemnified Parties receive asserting such Claim), provided, however, that any failure to give such notice will not constitute a waiver of any rights of the Enterprises except to the extent that the rights of Developer are actually prejudiced by such failure; and
- b. subject to Section 24.6.2:
 - i. tender to any applicable insurers or Developer, as applicable, the Enterprises' defense of any Claim resulting from the same; and
 - ii. use Reasonable Efforts to cause CDOT and each other Indemnified Party to tender to the insurers or Developer, as applicable, CDOT's or such Indemnified Party's defense of any Claim resulting from the same.

24.6. Defense of Claims

24.6.1. Tender of defense

- a. Subject to Section 24.6.2, if and to the extent defense of any Claim that is subject to Developer's indemnity under Section 24.2 is tendered to Developer, then within 30 Calendar Days after the receipt of such tender, Developer shall notify the Indemnified Party whether it has tendered the matter to an insurer (if applicable).
- b. Subject to Section 24.6.2, if the insurer under any Insurance Policy accepts any tender of defense with respect to any Claim that is subject to Developer's indemnity under Section 24.2 or that is otherwise subject to such policy within the applicable time period required by Law:
 - i. the Parties shall use Reasonable Efforts to cooperate in the defense proffered by such insurer, including (with respect to Developer) communication and coordination of Developer's and its insurer's defense strategy with the Enterprises and the Colorado Attorney General's Office; and
 - ii. for purposes of this Agreement, each applicable Indemnified Party shall be deemed to be an insured party under the relevant Insurance Policy.
- c. If any such Claim is not tendered to an insurer, or if an insurer has rejected the tender, Developer shall promptly notify the Indemnified Party whether Developer:
 - i. accepts tender of defense and confirms the Claim is subject to full indemnification under Section 24.2 without any reservation of rights to deny or disclaim full indemnification;
 - ii. accepts tender of defense with a reservation of rights, in whole or in part;
 - iii. is incapable of accepting such tender of defense due to an Indemnified Party's exercise of rights pursuant to Section 24.6.2, or otherwise has not been tendered defense of any relevant Claim by CDOT or any other Indemnified Party pursuant to Section 24.5.b.ii, or;
 - iv. rejects the tender of defense, in which circumstance the Indemnified Party shall be entitled to select its own counsel and control the defense of such Claim, including the right to settle the Claim without Developer's consent:

- A. following consultation by the Enterprises (to the extent they are the relevant Indemnified Parties) with Developer; and
 - B. without prejudice to such Indemnified Party's right to be indemnified by Developer.
- d. If Developer accepts tender of defense pursuant to Section 24.6.1.c.i or Section 24.6.1.c.ii, then, subject to Section 24.6.2, Developer shall have the right to select legal counsel for the Indemnified Party with the prior written consent of such Indemnified Party, provided that Developer shall be responsible for all costs and expenses related to such defense and each such counsel.
 - e. Notwithstanding any Developer acceptance of tender of defense pursuant to Section 24.6.1.c.i or Section 24.6.1.c.ii, Developer acknowledges and agrees that each Indemnified Party retains all rights with regard to settlement of any Claim that is subject to Developer's indemnity under Section 24.2, and Developer (or counsel appointed by Developer or its insurer) shall seek the consent of such Indemnified Party (with respect to the Enterprises as Indemnified Parties, such consent not to be unreasonably withheld) and of the Colorado Attorney General's Office to any settlement terms and conditions.
 - f. Developer shall not be liable for any settlement by an affected Indemnified Party of a Claim that is subject to Developer's indemnity under Section 24.2 except:
 - i. where Developer (or its insurer) has given its prior written consent to such settlement, which consent shall not be unreasonably withheld;
 - ii. with respect to any settlement made pursuant to Section 24.6.1.c.iv; or
 - iii. where the settlement is approved by a court of competent jurisdiction and such court approval has become final and binding.

24.6.2. Reservation of rights

Developer acknowledges and agrees that:

- a. the Colorado Attorney General's Office:
 - i. is required by Law to represent and defend the Enterprises and CDOT; and
 - ii. may appoint counsel of its selection to act as Special Assistant Attorney General in respect of any particular Claim;
- b. certain other Indemnified Parties may have similar statutory representation obligations and rights; and
- c. consequently, the Enterprises and such other Indemnified Parties have the right in their discretion to:
 - i. elect at any time to conduct their own defense with respect to a Claim that is within the scope of the indemnity under Section 24.2; or
 - ii. agree to allow such defense to be conducted in whole, in part or in conjunction with counsel appointed by Developer or its insurer, subject (with respect to the Enterprises, CDOT and the State) to Approval of such counsel by the Colorado Attorney General's Office.

25. INSURANCE

25.1. Obligation to Obtain and Maintain Insurance

- 25.1.1. Developer shall, at a minimum, obtain and maintain, or cause to be obtained and maintained, all insurance policies specified in Schedule 13 (Required Insurances) (the "Insurance Policies") pursuant to the requirements of this Section 25 and Schedule 13 (Required Insurances). Developer may satisfy such requirements by:

- a. placing any of the Insurance Policies on a Project-specific basis; and/or
 - b. relying on corporate policies of Developer-Related Entities (or their Affiliates),
- provided that all other applicable requirements of this Section 25 and Schedule 13 (*Required Insurances*) are satisfied.

25.1.2. Notwithstanding Section 25.1.1, Developer acknowledges and agrees that:

- a. the Enterprises make no representation or warranty as to the adequacy or sufficiency of the minimum Insurance Policy requirements specified in this Agreement, including as to whether such Insurance Policies shall be adequate to protect Developer against:
 - i. the performance or non-performance of its obligations under this Agreement;
 - ii. the risks it is assuming under this Agreement; and
 - iii. its liabilities to any third party;
- b. except as otherwise expressly provided in this Agreement, no limit of liability specified for any Insurance Policy, or approved variances therefrom, shall preclude the Enterprises from exercising any right otherwise available to them under this Agreement or at Law; and
- c. to the extent required by Law in connection with Work to be performed during the Term, Developer shall obtain and maintain, or cause to be obtained and maintained, in addition to the Insurance Policies, such other insurance policies for such amounts, for such periods of time and subject to such terms, as required by Law.

25.1.3. For certainty, the insurance coverage Developer is required to obtain and maintain, or cause to be obtained and maintained, pursuant to Sections 25.1.1 and 25.1.2.c may support but shall not limit Developer's indemnification and defense obligations under this Agreement.

25.2. General Insurance Requirements

25.2.1. Placement of insurance with Eligible Insurers

- a. All Insurance Policies shall be obtained from, and maintained with, Eligible Insurers.
- b. If an insurer providing any Insurance Policy ceases to be an Eligible Insurer, then Developer shall promptly, and in any event within 21 Calendar Days of such event occurring, secure alternate coverage with an Eligible Insurer unless the Enterprises otherwise Approve the continued maintenance of such Insurance Policy with the existing insurer.

25.2.2. Language; governing law

All Insurance Policies shall be issued in the English language and governed by the laws of the State of Colorado or the State of New York.

25.2.3. Developer liability and deductibles

Except to the extent included in any Termination Amount or in any compensation paid with respect to a Supervening Event or Change, as between Developer and the Enterprises, Developer shall be liable for all insurance deductibles, premiums, and liabilities in excess of the coverage provided under any Insurance Policy, and the Enterprises shall have no liability for the same.

25.2.4. Primary coverage

- a. Each Insurance Policy shall provide that the coverage thereof is primary and non-contributory with respect to all named insureds, additional insureds (including the Enterprises, CDOT and the Specified Additional Insureds) and loss payees, as their interests may appear.

- b. Any insurance or self-insurance that is maintained by an insured or any additional insured (including the Enterprises, CDOT and any Specified Additional Insured) in addition to any Insurance Policy shall be in excess of such Insurance Policy and not contribute with it.

25.2.5. Endorsements

Each Insurance Policy (excluding those required pursuant to Section 1.3, Section 1.4, Section 1.6, Section 1.8, Section 1.10, Section 2.3, Section 2.5, and Section 2.6 of Schedule 13 (Required Insurances)) shall be written or endorsed such that:

- a. any:
 - i. failure on the part of a named or any additional insured (including any Specified Additional Insured) to comply with reporting provisions or other conditions of such Insurance Policy;
 - ii. breach of representation or warranty by, breach of any provision in such policy by, or other action or inaction of, a named insured, any additional insured (including any Specified Additional Insured) or others; or
 - iii. change in ownership of all or any portion of the Project or Developer's interest in the same,

shall not affect or vitiate the coverage provided under such Insurance Policy to the other named insureds or any additional insureds (including any Specified Additional Insured) (or to any such named insured's or additional insured's respective members, directors, officers, employees and agents);

- b. such Insurance Policy shall apply separately to each named insured and additional insured (including any Specified Additional Insured) against whom a claim is made or suit is brought, except with respect to the limits of the insurer's liability;
- c. endorsements adding additional insureds (including Specified Additional Insureds) to required policies shall contain no limitations, conditions, restrictions or exceptions to coverage beyond those that apply under the Insurance Policy generally, including, for certainty, any limitation, condition, restriction or exception to coverage due to the absence of a direct contractual relationship between the additional insured and the named insured or, if different, the Person that obtained the insurance; and
- d. Specified Additional Insureds may be added as additional insureds from time to time as anticipated by the definition thereof,

in the case of each of paragraphs a. to d., to the extent not prohibited by Law.

25.2.6. Prior notice of cancellation, suspension, modification etc.

Each Insurance Policy shall be written or endorsed such that coverage under, and limits with respect to, such Insurance Policy cannot be canceled, voided, suspended, lapsed, modified or reduced except following 30 Calendar Days' (or for non-payment of premium, 10 Calendar Days') prior notice to the Enterprises, where the insurer shall not have any limitation of liability for failure to provide such notice.

25.2.7. Waivers of subrogation

- a. The Enterprises waive all rights against each Developer-Related Entity, and Developer waives all rights against the Enterprises, CDOT and each Specified Additional Insured, in each case for any claims to the extent covered and paid by the Insurance Policies, or by any other insurance obtained and maintained pursuant to Section 25.1.2.c, except such rights as they may have to the proceeds of such insurance.
- b. Developer shall require each Principal Subcontractor and all Subcontractors, to the extent applicable, to provide written waivers (equivalent to Developer's waivers set out in

Section 25.2.7.a) in favor of the Enterprises, CDOT and each Specified Additional Insured.

- c. The Enterprises may, at their discretion (provided that such discretion is exercised and notice of the same is given to Developer at least 15 Calendar Days prior to any associated loss), require Developer to provide written waivers equivalent to the waivers set out in Sections 25.2.7.a and 25.2.7.b in favor of the City of Denver (other than in its capacity as Cover Top Maintainer) and Denver Public Schools.

25.2.8. Defense costs

No defense costs shall be included within or erode the limits of coverage under any Insurance Policy, except that defense costs may be included within the limits of coverage under each Insurance Policy required pursuant to Sections 1.2, 1.4, 1.5, 1.6, 2.2, 2.4, 2.5 and 2.6 of Schedule 13 (Required Insurances).

25.2.9. Exhaustion of limits

With respect to each Insurance Policy (excluding those that are specific to this Project) required pursuant to Sections 1.2 and 2.2 of Schedule 13 (Required Insurances), whenever the aggregate limit is exhausted by at least 25% of the required aggregate limit by claims paid or reserved by insurer(s) (such that, for certainty, 75% or less of such required aggregate limit then remains available), Developer shall promptly:

- a. notify the Enterprises of such exhaustion; and
- b. and in any event within five Working Days, deliver evidence to the Enterprises (such evidence reasonable satisfactory to the Enterprises) that Developer has obtained, or caused to be obtained, additional insurance to reinstate the aggregate limit to the minimum amount required by Section 1.2 or Section 2.2 of Schedule 13 (Required Insurances), as the case may be.

25.3. Verification of coverage

25.3.1. Developer shall, not less than five Working Days prior to the effective (or renewal) date of each Insurance Policy, deliver to the Enterprises:

- a. a written certificate of insurance that:
 - i. is on the most recent ACORD form consistent with the required coverage and in standard form;
 - ii. states the identity of all insurers, named insureds and additional insureds;
 - iii. states the type and limits of coverage;
 - iv. includes as attachments all additional insured endorsements; and
 - v. is signed by an authorized representative of the insurer shown on the binder; and
- b. a letter from the Insurance Broker placing the Insurance Policy addressed to the Enterprises certifying that:
 - i. such Insurance Broker has reviewed this Section 25 and Schedule 13 (Required Insurances);
 - ii. the Insurance Policy so certified has been issued in accordance with this Section 25 and Schedule 13 (Required Insurances);
 - iii. all premiums in respect of such Insurance Policy have been paid, or arrangements have been made to pay such premiums in a timely manner; and
 - iv. in the absence of material non-disclosure, misrepresentation or fraud by the named insured, the Enterprises may rely on such letter.

- 25.3.2. Developer shall promptly, and in any event no later than 90 Calendar Days after the effective (or renewal) date of each Insurance Policy, deliver to the Enterprises a true and complete certified copy of each such Insurance Policy, including all endorsements thereto, provided that if any Insurance Policy insures subject matter other than the Work or the Project (or any part of either thereof) any reference to such other subject matter (including any confidential information as determined in compliance with the disclosure protocol Accepted by the Enterprises pursuant to Section 20.1.2) may be removed or redacted from such certified copies so long as such certified copies are accompanied by a letter from the Insurance Broker confirming that such removal or redaction has no effect on the conclusions in the letter that it previously provided pursuant to Section 25.3.1.b in respect of such Insurance Policy.
- 25.3.3. If Developer fails to comply with its obligations under Sections 25.2.1.b, 25.3.1 or 25.3.2, the Enterprises shall, without limiting any of their other rights under this Agreement, have the right, but not the obligation, without notice to Developer, to:
- a. obtain any insurance that is the subject of such failure at Developer's cost and expense; or
 - b. for so long as such failure continues, exercise their right to suspend, in whole or in part, the Work pursuant to Section 23.3.1.

25.4. Reporting and Handling of Claims

25.4.1. Developer's obligations to report and process claims

- a. Unless notified otherwise by the Enterprises pursuant to Section 25.4.2.a with respect to the Enterprises' (or CDOT's) insurance claims (and potential claims), as between the Enterprises and Developer, Developer shall:
 - i. promptly report and process all potential claims under the Insurance Policies;
 - ii. promptly and diligently pursue claims pursuant to the claims procedures specified in such Insurance Policies, whether for defense or indemnity or both; and
 - iii. enforce all legal rights against insurers under the Insurance Policies and under Law in order to collect on all claims, including pursuing necessary litigation and enforcement of judgments, provided that Developer shall be deemed to have satisfied this obligation if a judgment is not collectible through the exercise of lawful and diligent means,

in each case, to the extent applicable, following (x) notice to and regular consultation with the Enterprises pursuant to Section 25.4.1.b and (y) the use by Developer of Reasonable Efforts to reflect Enterprises' resulting input.

- b. Developer shall:
 - i. promptly notify the Enterprises of any incident, potential claim, claim or other matter of which Developer becomes aware that:
 - A. involves or could conceivably involve an Indemnified Party as a defendant;
 - B. involves a claim or potential claim by Developer or any other Person under an Insurance Policy, or any other insurance obtained and maintained pursuant to Section 25.1.2.c, with, in any such case, a potential value of \$25,000 (indexed) or more;
 - C. involves a claim which is being denied by an insurer; or
 - D. involves a fatality, and
 - ii. regularly consult with the Enterprises (as and when reasonably requested by the Enterprises) regarding, and thereafter keep the Enterprises fully informed of, any incident, claim or matter of the type referenced in Sections 25.4.1.b.i.A through

25.4.1.b.i.D (including, for certainty, any such incident, claim or matter of which Developer becomes aware by notice from the Enterprises).

25.4.2. Enterprise involvement in reporting and processing claims

- a. Notwithstanding Section 25.4.1, the Enterprises (and CDOT, to the extent it is a Specified Additional Insured with respect to any relevant Insurance Policy) shall have the right, but not the obligation, to report directly to insurers and, subject to prior notice to Developer, process the Enterprises' (or, as applicable, CDOT's) claims under the Insurance Policies.
- b. The Enterprises agree to promptly:
 - i. notify Developer of any Enterprise and/or CDOT incident, or any Claim or potential Claim against the Enterprises and/or CDOT, and/or any other matters that are reasonably expected to give rise to an insurance claim, in each case of which the Enterprises become aware; and
 - ii. subject to Sections 24.6.1 and 24.6.2, to:
 - A. tender to any applicable insurers the Enterprises' defense of any Claim against the Enterprises; and
 - B. use Reasonable Efforts to procure that CDOT tenders to the insurers its defense of any Claim against it.
- c. The Enterprises shall use Reasonable Efforts to cooperate with Developer as necessary for Developer to satisfy its obligations under Sections 25.4.1 and 24.6.1, including providing Developer a copy of all written materials that the Enterprises receive asserting a Claim against the Enterprises and/or CDOT that is subject to defense by an insurer under an Insurance Policy.

25.4.3. Insurance meetings

Without limiting Developer's obligations under this Section 25.4, Developer and Developer's insurers and control claims adjuster shall provide the Enterprises' with claim updates from designated insurance representatives at such intervals as the Enterprises may reasonably request, but no less than twice in each Calendar Year, to review all incidents, potential claims and claim files together with such other matters related to the Insurance Policies as the Enterprises may reasonably request.

25.5. Reinstatement

25.5.1. Use of Physical Damage Proceeds and conduct of Reinstatement Work

- a. All insurance proceeds received under the Insurance Policies in respect of physical property damage to the Work or the Project (excluding any delay in startup or business interruption insurance maintained as part of such policies, "Physical Damage Proceeds") shall be applied by Developer to perform work ("Reinstatement Work") necessary to repair, reconstruct, reinstate and replace each part of the Work and the Project in respect of which such proceeds were received.
- b. Prior to carrying out Reinstatement Work for which Physical Damage Proceeds have been received or are payable in an amount in excess of \$1,000,000 (indexed) in respect of a single event (or a series of related events), Developer shall:
 - i. prepare, and submit to the Enterprises for Acceptance, a plan (a "Reinstatement Plan") for performing and completing such Reinstatement Work in accordance with this Agreement (for which purposes the requirements of Schedule 10 (Design and Construction Requirements) shall be deemed to apply to the Reinstatement Work); and
 - ii. following the Enterprises' Acceptance of any such Reinstatement Plan, promptly perform the Reinstatement Work in accordance with such plan, while regularly

keeping the Enterprises informed in relation to the progress of such Reinstatement Work,

provided that, pending submission or Acceptance of any Reinstatement Plan, Developer shall promptly begin performing any Reinstatement Work to the extent necessary to comply with Law or to address a material risk to the health or safety of any person or the Environment or any Improvements.

- c. Completion of any Reinstatement Work shall be subject to Acceptance by the Enterprises.
- d. If the Expiry Date or Termination Date occurs prior to the completion of all Reinstatement Work, Developer shall pay, or arrange for payment of, all remaining Physical Damage Proceeds (excluding those held by the Enterprises in the Physical Damage Proceeds Reserve) to the Enterprises. For certainty, the Enterprises may include any such proceeds that are owed but not yet paid to them as part of the Termination Deduction Amount for purposes of calculating any Termination Amount pursuant to Schedule 7 (Compensation on Termination).

25.5.2. Physical Damage Proceeds Reserve

- a. Developer shall ensure that, if the Physical Damage Proceeds received in respect of a single event (or a series of related events) are, in aggregate, in excess of \$1,000,000 (indexed), all such proceeds shall be paid to the Enterprises to be held as a reserve (the "Physical Damage Proceeds Reserve"). The Enterprises shall hold the Physical Damage Proceeds Reserve as a sub-account within its general accounts for purposes of Sections 25.5.2.b and 25.5.2.c and shall only withdraw monies therefrom in accordance with Sections 25.5.2.b and 25.5.2.c. For certainty, Developer shall have no interest in the Physical Damage Proceeds Reserve other than its contractual right to reimbursement pursuant to Section 25.5.2.b.
- b. The Enterprises shall promptly reimburse Developer for reasonable and documented third-party costs and expenses incurred by Developer to effect the Reinstatement Work to the extent that:
 - i. such work complies with the Accepted Reinstatement Plan;
 - ii. funds are available in the Physical Damage Proceeds Reserve; and
 - iii. such funds were paid into such reserve in connection with the event (or series of related events) to which such costs and expenses relate.
- c. Following completion of any Reinstatement Work in respect of which Physical Damage Proceeds are held by the Enterprises as a Physical Damage Proceeds Reserve, the Enterprises shall promptly return any amounts remaining in such Physical Damage Proceeds Reserve to Developer.
- d. If the Termination Date or the Expiry Date occurs prior to the completion of any Reinstatement Work, the Enterprises shall be entitled to retain any amounts then standing to the credit of the Physical Damage Proceeds Reserve, subject to Developer's continuing right to:
 - i. reimbursement pursuant to Section 25.5.2.b after the Expiry Date occurs for such Reinstatement Work performed prior to the Expiry Date; and
 - ii. except in the case of a termination for Developer Default, receive any amounts due under Section 25.5.2.c but not returned prior to the Termination Date or the Expiry Date, as applicable (but without double-counting with respect to the calculation of any Termination Amount).

25.6. Unavailability of Insurance

25.6.1. Unavailability due to an Uninsurable risk

- a. If a risk otherwise covered by any Insurance Policy becomes, or is likely to become, Uninsurable then:
 - i. Developer shall notify the Enterprises promptly, and in any event within five Working Days, after becoming aware of that any such risk has become, or is likely to become, Uninsurable;
 - ii. Developer shall thereafter provide the Enterprises with such information as the Enterprises reasonably request regarding the Uninsurable risk; and
 - iii. the Parties shall promptly meet to discuss the means by which the risk should be managed or shared under the circumstances.
- b. If it is Agreed or Determined that any risk has become Uninsurable, then:
 - i. Developer shall be relieved of its obligations pursuant to Section 25.1.1 to the extent, and only to the extent, that Developer's inability to comply with such obligations is due directly to, and limited to the duration of, such risk having become Uninsurable; and
 - ii. the Enterprises shall (at their discretion):
 - A. terminate this Agreement pursuant to Section 33.1.7 and pay to Developer an amount equal to the amount calculated pursuant to Section 2 of Schedule 7 (*Compensation on Termination*);
 - B. elect to continue this Agreement, in which case, but only for so long as such risk remains Uninsurable:
 - (I) the Enterprises agree that, following the occurrence of such risk, they shall pay Developer an amount equal to the insurance proceeds that would have been payable to Developer under the Insurance Policies had such risk not become Uninsurable, subject to the limitations, conditions and exclusions set out in the certificates and policies of insurance relating to the relevant Insurance Policies most recently provided by Developer to the Enterprises (or, if no such certificates or policies of insurance have previously been provided, such limitations, conditions and exclusions as the Enterprises may reasonably determine would have applied), provided that Developer shall remain responsible for any deductibles; and
 - (II) in respect of each month during any part of which the relevant insurance relating to such risk is not maintained, Developer shall pay to the Enterprises, or (at the Enterprises' discretion during the Operating Period) the Enterprises shall set-off against the Performance Payments pursuant to Section 5 of Part 3 of Schedule 4 (*Payments*), an amount equal to the premium paid by Developer in respect of the relevant risk in respect of the month prior to such risk becoming Uninsurable (using a reasonable estimate of such amount where a precise figure is not available and pro-rating any annual or other premium previously payable where appropriate); or
 - C. issue an Enterprise Change, as a result of which:
 - I. Developer shall be left in a No Better and No Worse position (relative to the position that it would have been in had the

Enterprises elected to proceed under Section 25.6.1.b.ii.B) with respect to such Uninsurable risk; and

- II. the ability of Developer to comply with this Agreement shall not be adversely affected as a consequence,

and, for certainty, this Agreement shall continue.

- c. For so long as any risk remains Uninsurable and this Agreement remains in effect, Developer shall approach the insurance market at least once every three months to establish whether the risk continues to be Uninsurable. Promptly upon Developer becoming aware that the risk is no longer Uninsurable, Developer shall, as soon as is reasonably practicable, take out and maintain, or cause to be taken out and maintained, the insurance required to be maintained for such risk pursuant to this Agreement, and on such insurance becoming effective the provisions of Section 25.6.1.b shall cease to apply in respect of such risk.

25.6.2. Unavailable Terms

- a. If any Insurance Term that would otherwise be included in an Insurance Policy becomes, or is likely to become, an Unavailable Term then:
- i. Developer shall notify the Enterprises promptly, and in any event within five Working Days, after becoming aware of the existence of an Unavailable Term or the likelihood of an Insurance Term becoming an Unavailable Term;
 - ii. Developer shall thereafter provide the Enterprises with such information as the Enterprises reasonably request regarding the Unavailable Term; and
 - iii. the Parties shall promptly meet to discuss the means by which the existence of such Unavailable Term should be managed or its consequences shared under the circumstances.
- b. If it is Agreed or Determined that an Insurance Term has become an Unavailable Term, then:
- i. Developer shall be relieved of its obligations pursuant to Section 25.1.1 to include the relevant Insurance Term in the relevant Insurance Policies to the extent, and only to the extent, that Developer's inability to comply with such obligations is due directly to, and limited to the duration of, such term having become an Unavailable Term; and
 - ii. in respect of each month during any part of which the relevant Insurance Term is an Unavailable Term, Developer shall pay to the Enterprises, or (at the Enterprises' discretion during the Operating Period) the Enterprises shall set-off against the Performance Payments pursuant to Section 5 of Part 3 of Schedule 4 (Payments), an amount of premium equal to the amount paid by Developer in respect of the Unavailable Term in respect of the month prior to such term becoming an Unavailable Term (using a reasonable estimate of such amount where a precise figure is not available and pro-rating any annual or other premium previously payable where appropriate) net of any annual amount paid or payable by Developer with respect to such month to maintain, or cause to be maintained, any (whether full or partial) alternative or replacement term and/or condition in respect of such Insurance Term pursuant to Section 25.6.2.d.
- c. For so long as an Insurance Term is an Unavailable Term, Developer shall approach the insurance market at least once every three months to establish that the relevant term remains an Unavailable Term. Promptly upon Developer becoming aware that the term is no longer an Unavailable Term, Developer shall, as soon as is reasonably practicable, take out and maintain, or cause to be taken out and maintained, the relevant insurance including such previously Unavailable Term pursuant to this Agreement, and on such

insurance becoming effective the provisions of Section 25.6.2.b shall cease to apply in respect of such Insurance Term.

- d. Notwithstanding Section 25.6.2.b, to the extent that it is Agreed or Determined that an alternative to or replacement of the Unavailable Term is available to Developer in the worldwide insurance market with Eligible Insurers, which if included in the relevant Insurance Policy would fully or partially address Developer's inability to fully comply with its obligations pursuant to Section 25.1.1, at a cost which contractors in relation to transportation-related infrastructure projects in the United States are (at such time) generally prepared to pay, Developer shall obtain and maintain, or cause to be obtained and maintained, insurance including such alternative or replacement Insurance Term.

25.7. Benchmarking of Insurance Costs

25.7.1. The procedure set out in this Section 25.7 shall be used to determine how the Parties shall share any increase, or benefit from any decrease, in the cost of Benchmarked Insurances.

25.7.2. Developer shall cause the Insurance Broker to prepare (at Developer's cost and expense) and deliver to the Enterprises (no later than 10 Working Days after the end of the most recent Insurance Review Period a report in respect of such Insurance Review Period (the "Joint Insurance Cost Report"). Each Joint Insurance Cost Report shall be addressed to both Developer and the Enterprises on a reliance basis.

25.7.3. Each Joint Insurance Cost Report shall, at a minimum, contain the following information in respect of the relevant Insurance Review Period:

- a. a full breakdown of the Actual Benchmarked Insurance Cost;
- b. a full breakdown of the Base Benchmarked Insurance Cost;
- c. the Proposal Insurance Cost;
- d. a spreadsheet detailing separately:
 - i. the sum(s) insured/limit(s) of indemnity (i.e. rateable factor) for each of the Benchmarked Insurances;
 - ii. the premium rate for each of the Benchmarked Insurances;
 - iii. the net premium paid (or to be paid) for each of the Benchmarked Insurances (i.e. excluding both insurance premium tax and broker's costs and expenses);
 - iv. the actual deductible(s) applicable to the calculations made in the Joint Insurance Cost Report; and
 - v. details of all claims paid or reserved (including incident date and type and amount of claim);
- e. an assessment, quantification and breakdown of each increase or decrease in insurance costs that, in aggregate, determine the amount of any Project Insurance Change together with an explanation of the reasons therefor;
- f. the calculation of any Insurance Cost Increase or any Insurance Cost Decrease and of any resulting Exceptional Cost or Exceptional Saving arising from this calculation;
- g. the opinion of the Insurance Broker as to the reasons why the Actual Benchmarked Insurance Cost has varied from the Proposal Benchmarked Insurance Cost, specifying the impact of each explanatory factor and quantifying the amount attributable to each such factor; and
- h. such other evidence as reasonably requested by the Enterprises of any changes to circumstances generally prevailing in the Relevant Insurance Markets that the Insurance Broker indicates to account for the Insurance Cost Increase or the Insurance Cost Decrease.

- 25.7.4. The Enterprises, at their discretion and at their cost and expense, may independently assess the accuracy of the information in the Joint Insurance Cost Report and otherwise conduct their own independent insurance review, which review may include retaining advisors and/or performing their own assessment as to, among other things, the impact of the claims history on renewal costs. Developer shall cooperate with respect to any reasonable requests from the Enterprises for additional information in relation to such independent assessment (including, if applicable, by ensuring that the Insurance Broker provides any reasonably requested additional information).
- 25.7.5. No later than 60 Calendar Days' after Developer's submission of any Joint Insurance Cost Report, the Enterprises shall (acting reasonably) determine in respect of the Insurance Review Period to which such report relates, and with reference to such report, whether:
- a. there is an Exceptional Cost, in which case the Enterprises shall within 45 Calendar Days of such determination make a one-off lump-sum payment to Developer equal to 80% of the Exceptional Cost;
 - b. there is an Exceptional Saving, in which case Developer shall within 30 Calendar Days of such determination make a one-off lump-sum payment to the Enterprises equal to 80% of the Exceptional Saving; and
 - c. there is neither an Exceptional Cost nor an Exceptional Saving, in which case any Insurance Cost Increase or any Insurance Cost Decrease shall be borne by or be for benefit of Developer.

PART J: EQUITY AND PROJECT DEBT

26. EQUITY REQUIREMENTS

26.1. Equity Contribution Requirements

26.1.1. Subject to Section 26.1.2, on and from the Financial Close Date through and including the Substantial Completion Date, Developer shall, at all times, have and maintain Committed Investments equal to or greater than 10% of the amount equal to the aggregate of:

- a. the then Committed Investment; *plus*
- b. the total principal amount of the then outstanding Long Term Project Debt.

26.1.2. The minimum amount of Committed Investments required under Section 26.1.1 is subject to reduction only:

- a. with the Approval of the Enterprises; or
- b. with the Acceptance of the Enterprises in the event that the amount of Committed Investments is required to be reduced below such percentage:
 - i. as part of a workout of a breach or default under the Financing Documents that were entered into in connection with Financial Close; or
 - ii. as a result of Developer incurring additional Project Debt pursuant to a Rescue Refinancing.

26.2. Equity Transfer and Change of Control Restrictions

26.2.1. A Developer Default shall occur if an Equity Transfer in relation to Developer is effected:

- a. during the Restricted Transfer Period, unless such Equity Transfer:
 - i. is a Permitted Equity Transfer; or
 - ii. received the prior Approval of the Enterprises;
- b. after the Restricted Transfer Period, if such Equity Transfer results in a Change of Control that has not been consented to by the Enterprises pursuant to Section 26.2.2; and
- c. at any time (other than as a Permitted Equity Transfer under paragraph a of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*)), to a Person that at the time of the proposed transfer is disqualified, suspended or debarred, or subject to a proceeding to suspend or debar such Person, from bidding, proposing or contracting with any Governmental Authority.

26.2.2. After the Restricted Transfer Period, any Equity Transfer that results in a Change of Control shall require the consent of the Enterprises, provided that such consent may be (i) withheld or (ii) made subject to the condition of the provision of reasonable additional security or other reasonable arrangements, in either case (i) and (ii) if (and only if) the Enterprises determine, acting reasonably, that:

- a. the proposed transaction or transactions is or are prohibited by Law; or
- b. after the occurrence of such Change of Control Developer's ability to perform its obligations under this Agreement would be materially diminished, which determination may be based upon, or take into account in addition to other factors that the Enterprises may reasonably determine are relevant, the financial strength, integrity, past performance and relevant experience of the proposed transferee(s) relative to the proposed transferor(s) and the then current performance requirements under this Agreement.

26.2.3. The Enterprises may reasonably request, and following receipt of any such request Developer shall promptly provide to the Enterprises, any or all of the following information regarding a

proposed transferee in connection with any Equity Transfer that would result in a Change of Control in order to enable the Enterprises to determine whether or not to provide their consent to such Equity Transfer pursuant to Section 26.2.2:

- a. the name and address of the proposed transferee;
- b. unless such proposed transferee is a publicly traded entity, the names of the proposed transferee's shareholders or members together with the share capital or partnership or membership interests, as the case may be, held by each of them;
- c. the manner in which the proposed transferee shall be financed and the extent to which such financing is committed (to the extent relevant);
- d. copies of the proposed transferee's financial statements (audited, if available) for its three most recent financial years (or such shorter period as such entity has been in existence) or, in the case of a special purpose company, its opening balance sheet;
- e. a copy of the proposed transferee's organizational documents; and
- f. details of the resources available to the proposed transferee and the proposed transferee's qualifications, experience and/or technical competence to fulfill the obligations of the transferor, as applicable, including the names, qualifications, experience and/or technical or other professional competence of the proposed transferee's directors and any key personnel who shall have responsibility for the day-to-day management of its participation in the Project as transferee.

26.2.4. Developer shall use Reasonable Efforts to provide the Enterprises with at least 30 Calendar Days' prior notice of any Equity Transfer in relation to Developer excluding any Permitted Equity Transfer as described in paragraph a. of the definition thereof in Part A of Annex A (Definitions and Abbreviations).

26.2.5. Any Equity Transfer made or purportedly made in violation of the restrictions set out in Sections 26.2.1 or 26.2.2 shall be null and void.

26.2.6. Developer agrees to reimburse the Enterprises for all reasonable costs and expenses incurred by the Enterprises in connection with its review of any Equity Transfer.

27. DEBT FINANCING

27.1. Developer Responsibilities for Financing

27.1.1. Developer is solely responsible for obtaining and repaying all financing necessary for the Work and the Project, without recourse to the Enterprises except as expressly permitted or specified in this Agreement. Subject to Schedule 1 (Financial Close), Developer exclusively bears the risk of any changes in the interest rate, credit spreads, payment provisions, collateral requirements, financing charges, breakage charges or other terms of any of its financing commitments.

27.1.2. If Developer seeks to utilize PABs or a TIFIA Loan to finance the Work and the Project, then Developer is responsible for obtaining necessary approvals, complying with all applicable Federal, State and local requirements and achieving Financial Close, in each case subject to, and without prejudice to the Enterprises' (including the PABs Issuer's) obligations under, Section 27.4 and Schedule 1 (Financial Close).

27.2. Mandatory Terms of Financing Documents

Each Financing Document, including any amendments or supplements thereto, shall comply with, and, as required, incorporate the terms set out in, Part B of Schedule 16 (Mandatory Terms).

27.3. Limited Permission to Grant Security

27.3.1. Developer may grant security interests in, or assign its interest in, any and all of its rights, title and interests in, to, under or derived from:

- a. this Agreement (including any such rights, title and interests in, to or derived from payments made by the Enterprises to Developer hereunder);
- b. the Subcontracts;
- c. each Contractor Bond;
- d. the Insurance Policies (provided that any such security interest or assignment does not result in a violation of Section 25.5);
- e. the Supplemental Indenture; and
- f. the Central 70 Note,

(excluding any rights or interests to or in the Handback Reserve Account or the Physical Damage Proceeds Reserve) to Lenders exclusively for purposes of securing the Project Debt, subject to the terms and conditions contained in this Agreement.

27.3.2. Developer is strictly prohibited from mortgaging, pledging or encumbering, or creating a lien, charge or security interest on or against, its interest in, and its rights and obligations under, this Agreement, the Subcontracts, any Contractor Bonds, the Insurance Policies, the Supplemental Indenture and the Central 70 Note, or any portion thereof, to secure any indebtedness of any Person other than:

- a. itself;
- b. any special purpose entity that owns Developer but has no other assets and has purposes and powers limited to the Project and the Work;
- c. a special purpose entity subsidiary owned by either Developer or by an entity described in Section 27.3.2.b; or
- d. the PABs Issuer,

and no Security Document or other instrument purporting to do the same shall extend to or affect the right, title and interest of the Enterprises in the Project or the Enterprises' rights or interests under this Agreement.

27.3.3. Notwithstanding the foreclosure or other enforcement of any security interest created by, or assignment made pursuant to, a Security Document, Developer shall remain liable to Enterprises for the payment of all sums owing to the Enterprises under this Agreement and the performance and observance of all of Developer's obligations under this Agreement.

27.4. Limitations on Enterprise Involvement in and Liability for any Financing

27.4.1. The Enterprises shall use Reasonable Efforts in order to assist Developer's efforts to achieve Financial Close with a TIFIA Loan and/or PABs (including, with respect to any TIFIA Loan, by providing such information to the Build America Bureau as the Build America Bureau or Developer may reasonably request from time to time), provided that, subject to Schedule 1 (Financial Close), the Enterprises shall not bear any risk for the failure to obtain funding from either of these potential sources (for certainty, except to the extent expressly provided in Schedule 1 (Financial Close), including following the occurrence of a Key Financial Event), and any such failure shall not diminish Developer's obligations under this Agreement.

27.4.2. None of the Enterprises, CDOT or any other Governmental Authority, other than the PABs Issuer to the extent of its obligations in relation to the PABs issued by it and BE in connection with its obligations in respect of the Central 70 Note, shall:

- a. without prejudice to, and without altering, the Enterprises' obligations pursuant to Sections 15 and 33 and Schedule 7, and subject to the terms of the Lenders Direct

Agreement, have any liability whatsoever for payment of any Project Debt, or of any other indebtedness issued or incurred by any Person in connection with this Agreement or the Project, or any interest accrued thereon or any other sum secured by or accruing under any Financing Document; or

- b. join in, execute or guarantee any note or other evidence of indebtedness incurred in connection with this Agreement, the Project or under any Financing Document.

27.4.3. Any review or comment by the Enterprises of any Financing Document is not:

- a. a guarantee or endorsement of the Project Debt or any other obligations issued or incurred by any Person in connection with this Agreement or the Project; or
- b. a representation, warranty or other assurance as to the ability of any Person to perform its obligations with respect to the Project Debt or with respect to any other obligations of such Person in connection with this Agreement or the Project.

27.4.4. Except in the case of:

- a. default by the PABs Issuer of its express obligations set out in a Financing Document to which it is a party;
- b. a breach by the Enterprises of their express obligations to Lenders set out in the Lenders Direct Agreement;
- c. a default by the Enterprises (including the PABs Issuer) of their express obligations set out in any continuing disclosure agreement related to the PABs to which either or both of them is or are a party; and
- d. any Lender succeeding to the rights and interests of Developer hereunder pursuant to the Lenders Direct Agreement,

the Enterprises shall not have any obligation to any Lender and no Lender is entitled to seek any damages or other amounts from the Enterprises (and, in the case of an event specified in Section 27.4.4.a, then only from BE in its capacity as PABs Issuer), whether for Project Debt or any other amount. For certainty, the foregoing does not affect Enterprises' liability to Developer under Section 33 and Schedule 7 (Compensation on Termination) for the payment of any Termination Amount.

28. FINANCIAL MODEL

28.1. General

28.1.1. Whenever a Relevant Event occurs (except as otherwise provided in this Agreement or where the Parties mutually agree otherwise), the financial consequences of such event shall be determined pursuant to this Section 28.

28.1.2. Where, for the purposes of this Section 28, the Financial Model is to be used to make calculations related to, and/or to be adjusted by reference to, a Relevant Event, this shall be carried out by Developer, in consultation with the Enterprises, to reflect the impact of the Relevant Event in respect of which such calculations and/or adjustment is being undertaken.

28.1.3. In calculating any Change in Costs, Delay Financing Costs or Milestone Payment Delay Costs and in assessing other adjustments to be made to the Financial Model arising from a Relevant Event, Developer shall not be entitled to take into account the financial impact up to or after the date of the Relevant Event of those risks which Developer bears under the terms of this Agreement, including (to the extent so borne by Developer under this Agreement) changes in taxation rates, inflation and the impact of any deductions made by the Enterprises pursuant to Schedules 4 (Payments), 5 (Milestone Payments) and 6 (Performance Mechanism).

28.2. No Better and No Worse

Any reference in this Agreement to “No Better and No Worse” or to leaving Developer in a “No Better and No Worse position” shall be construed by reference to Developer’s:

- a. rights, duties and liabilities under or arising pursuant to the performance of this Agreement, the Financing Documents and the Principal Subcontracts; and
- b. ability to perform its obligations and exercise its rights under this Agreement, the Financing Documents and the Principal Subcontracts,

so as to ensure that:

- c. Developer is left in a position (ascertained in accordance with Section 28.2.d) which is financially no better and no worse in relation to the Key Ratios and the Equity IRR; and
- d. such position shall be ascertained by determining through an adjustment to the Financial Model made pursuant to Sections 28.3 and 28.4 the adjustment or credit to the payments between the Parties hereunder required to maintain Developer in the financial position it would have been in under the version of the Financial Model applicable immediately prior to the relevant adjustment,

provided that, for the purposes of determining whether Developer was left in a No Better and No Worse position pursuant to any Section of this Agreement, any such adjustment or credit shall be reduced to take into account any Loss, suffered or incurred by Developer as a result of the occurrence of the relevant Supervening Event, in respect of which the Enterprises are not required to compensate Developer pursuant to this Agreement and/or any unrelated set-off by the Enterprises pursuant to Section 44.1.1.

28.3. Amendments to Logic and/or Formulae

28.3.1. Where it is necessary to amend the logic or formulae incorporated in the Financial Model to permit calculations and/or adjustments to be made as required by this Section 28, such amendments shall be made to the extent necessary.

28.3.2. If any amendment is to be made to the logic or formulae incorporated in the Financial Model pursuant to Section 28.3.1, the Financial Model shall first be run immediately prior to the making of any such amendment to ensure that the Key Ratios from the Financial Model are maintained at levels that are neither lower nor higher than the Key Ratios existing immediately after making such amendment, and the difference in the Equity IRR after and immediately prior to making such amendment does not differ by more than one basis point (being 0.01%).

28.4. Financial Model Audits and/or Accuracy

28.4.1. In connection with any adjustments made to the Financial Model, including amendments to the logic or formulae incorporated in the Financial Model as contemplated by Section 28.3, and as a condition to any Approval pursuant to Section 28.6, Developer shall deliver to the Enterprises (on a reliance basis) an audit of such amended version of the Financial Model from an independent audit firm that is unaffiliated with Developer, is otherwise free of any conflict of interest and has a nationally recognized reputation.

28.4.2. Developer shall bear the entire risk of any errors in or omissions from the Financial Model and shall not be entitled to any compensation or other relief from the Enterprises in relation to any Loss or damage that it suffers as a result of any such error or omission.

28.5. Copies of the Revised Financial Model

Following any adjustment or other revision to the Financial Model under the provisions of this Section 28 or pursuant to Section 29, Developer shall promptly deliver a copy of the revised Financial Model to the Escrow Agent pursuant to the Financial Model Escrow Agreement in the same form as the version delivered pursuant to Schedule 1 (Financial Close) prior to Financial Close.

28.6. Replacement of Financial Model

Any Financial Model produced following adjustments pursuant to this Section 28 shall, when it is Approved by the Enterprises, become the Financial Model for the purposes of this Agreement until any further amendment pursuant to this Section 28 or 29.

28.7. Financial Model License

- a. Developer grants to the Enterprises a license to use the Financial Model commencing from its delivery pursuant to this Agreement to end of the Term or, if later, the date of full settlement of all mutual claims arising out of this Agreement that the Parties may have against each other if such a date occurs after the end of the Term, for any purpose in connection with this Agreement and/or the Project.
- b. The license granted pursuant to Section 28.7.a shall not be transferable or assignable by the Enterprises except to CDOT or to any Person to whom this Agreement may be transferred in accordance with Section 39.2 and then only for purposes in connection with this Agreement and/or the Project.

29. REFINANCINGS**29.1. Enterprises' Approval, and Sharing in the Gains of Qualifying Refinancings**

- 29.1.1. Developer shall not implement any Qualifying Refinancing without the prior Acceptance of the Enterprises.
- 29.1.2. Following the completion by Developer of any Enterprise Accepted Qualifying Refinancing, the Enterprises shall be entitled to collectively receive a 50% share of any Refinancing Gain arising therefrom, provided that the Enterprises shall not withhold or delay their Acceptance to a Qualifying Refinancing in order to obtain greater than such a 50% share of the Refinancing Gain.

29.2. Refinancing Details

- 29.2.1. Developer shall notify Enterprises of any Qualifying Refinancing at least 30 Working Days (or 15 Working Days, in case of a Rescue Refinancing) in advance of the date that is proposed that such Qualifying Refinancing or Rescue Refinancing, as applicable, becomes effective.
- 29.2.2. The notice to be provided by Developer referred to in Section 29.2.1 shall include details of any changes to Developer's obligations to the Lenders, details of the anticipated Refinancing Gain and details of changes or replacements to the Financing Documents, and shall include a copy of the proposed revised Financial Model relating to the proposed Refinancing (if any) and the basis for the assumptions used in the proposed Financial Model.
- 29.2.3. No later than 10 Working Days (or five Working Days, in the case of a Rescue Refinancing) after delivery of the notice by Developer to the Enterprises pursuant to Section 29.2.1, the Enterprises (following consultation with Developer and good faith consideration of Developer's reasonable recommendations regarding the sharing of any Refinancing Gain) shall notify Developer as to how Enterprises shall elect to receive its share of the Refinancing Gain pursuant to Section 29.3. No later than 10 Working Days (or five Working Days, in the case of a Rescue Refinancing) after delivery of such notice to Developer, Developer shall deliver to the Enterprises a detailed update to its original notice referred to in Section 29.2.1 reflecting any adjustments to the proposed revised Financial Model necessary to take account of the Enterprises' election. With the Enterprises' Approval, such revised Financial Model shall become the Financial Model for purposes of this Agreement until any further amendment pursuant to Section 28 or this Section 29.
- 29.2.4. The Enterprises shall (before, during and at any time after any Refinancing) have unrestricted rights of audit over any Financial Model and documentation (including any aspect of the calculation of the Refinancing Gain) used in connection with that Refinancing, whether or not the Refinancing is a Qualifying Refinancing, provided that:

- a. Developer shall reimburse the Enterprises for all reasonable costs and expenses incurred in conducting any such audit in respect of a Qualifying Refinancing, and such costs and expenses shall be taken into account when calculating the Refinancing Gain; and
- b. the Enterprises shall reimburse Developer for all reasonable costs and expenses incurred in conducting any such audit in respect of a Refinancing that is not and, prior to such audit, was known by the Enterprises to not be a Qualifying Refinancing.

29.3. Receipt of Enterprises' Share

The Enterprises shall have the right to elect to receive their share of any Refinancing Gain described in Section 29.1.2 as either:

- a. to the extent Developer receives a lump sum payment as a result of the Qualifying Refinancing, a lump sum payment, to be paid promptly and in any event no later than five Working Days following the relevant Distribution;
- b. a reduction in the Performance Payments over the remainder of the Term in a manner to be determined by the Enterprises provided that Developer is left in a No Better and No Worse position (after taking into account Developer's share of the relevant Refinancing Gain); or
- c. a combination of paragraphs a. and b.

29.4. Costs

The Refinancing Gain shall be calculated after taking into account the reasonable and proper professional costs that each Party directly incurs in relation to the Qualifying Refinancing and on the basis that all reasonable and proper professional costs incurred by the Enterprises shall be paid to the Enterprises by Developer no later than 20 Working Days after any Qualifying Refinancing.

29.5. Notifiable Refinancings

Without prejudice to the other provisions of this Section 29, Developer shall notify the Enterprises of all Notifiable Refinancings on becoming aware of the same and again when they are entered into and provide full details of the same within 30 Calendar Days of the date the relevant agreements for the Notifiable Refinancing are entered into.

29.6. Delivery of Changed Financing Documents

At any time an amendment is made to any Financing Document or Developer enters into a new Financing Document (or any agreement which affects the interpretation or application of any Financing Document), Developer shall deliver to the Enterprises a conformed copy of each such amendment or agreement within 10 Working Days of the date of its execution or creation (as applicable) certified as a true copy by an officer of Developer.

30. TAXES

- 30.1.1. Developer shall pay, prior to delinquency, all Taxes, including, for certainty, all Ad Valorem and Possessory Interest Taxes and all State Sales Taxes, in each case in respect of Developer's performance of the Work, Developer's obligations under this Agreement, Developer's interests in and rights to the Site and the Project License and any other Developer-Related Entity interest in this Agreement and the Project. Subject to Section 30.1.6 and Developer's rights arising as a result of the occurrence of any Compensation Event as described in paragraph c.i. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*), the Enterprises shall not be responsible for any Taxes levied on Developer or on any other Developer-Related Entities.
- 30.1.2. Subject to Section 30.1.6, Developer accepts sole responsibility for, and agrees that it shall have no right to claim a Supervening Event or to any other Claim for relief due to, its misinterpretation of Laws in relation to Taxes or incorrect assumptions regarding applicability of Taxes.

30.1.3. Developer shall promptly notify the Enterprises after it becomes aware that it (or any other Developer-Related Entity) may be legally obligated to pay:

- a. any:
 - i. ad valorem property tax imposed by a Governmental Authority under the laws of the State; or
 - ii. possessory interest property tax pursuant to Articles 1-14 of Title 39, C.R.S. (including, for certainty, C.R.S. § 39-1-103 (17)),
(each an "Ad Valorem and Possessory Interest Tax"); or
- b. any sales and use tax ("State Sales Tax") imposed by the State under the laws of the State (excluding, for certainty, any sales and use tax imposed by the City of Denver or any other Governmental Authority that is not the State),

in each case in connection with the Work and the Project.

30.1.4. Developer shall:

- a. cooperate and coordinate with the Enterprises in their efforts to reduce or eliminate Developer's liability for any Ad Valorem and Possessory Interest Tax and State Sales Tax for which the Enterprises otherwise would be obligated to reimburse Developer pursuant to Section 30.1.6; and
- b. use (and ensure that each other relevant Developer-Related Entity uses) Reasonable Efforts to mitigate the imposition and amount of the relevant Tax,

provided that Developer shall not be required to disclose any Project Records to the applicable Governmental Authority when complying with its obligations under this Section 30.1.4 to the extent such records are identified as exempt from disclosure under such circumstances in the disclosure protocol Accepted by the Enterprises pursuant to Section 20.1.2.

30.1.5. Following Developer's decision not to disclose any Project Record pursuant to Section 30.1.4, Developer shall assume the Enterprises' efforts to reduce or eliminate Developer's liability for any State Sales Tax and the Enterprises shall be relieved of their obligation to reimburse Developer pursuant to Section 30.1.6 with respect to such State Sales Tax.

30.1.6. Subject to Section 30.1.5, the Enterprises shall reimburse Developer for the actual amount of any Ad Valorem and Possessory Interest Tax and State Sales Tax paid by Developer or any other Developer-Related Entity in connection with the Work and the Project, excluding any such Tax imposed or owing as a result of any breach of Law, Governmental Approval, Permit or this Agreement, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity no later than the date that is 45 Calendar Days after the Enterprises' receipt of a demand for such reimbursement (or, provided that such 45 Calendar Day period has expired, no later than 10 Working Days prior to the final date by which Developer is legally obligated to pay such Tax), which demand shall include:

- a. all supporting evidence necessary to substantiate such demand, including, in the case of any State Sales Tax, evidence that Developer or any relevant Developer-Related Entity submitted the requisite State Sales Tax exemption certificate for the transaction in question; and
- b. evidence of Reasonable Efforts by Developer and any other relevant Developer-Related Entities to mitigate the imposition and amount of the relevant Tax,

and satisfaction of both paragraphs a. and b. shall be conditions precedent to the Enterprises' reimbursement payment to Developer.

31. RESTRICTIONS ON REVENUE GENERATING ACTIVITIES**31.1. Restrictions on Tolling**

31.1.1. The Enterprises (and CDOT) have exclusive rights to impose tolls or any other user fees (in any form) in relation to the Project, including the right to deposit and allocate any resulting revenues as they determine in their discretion.

31.1.2. Developer hereby acknowledges and agrees that:

- a. it has no right to:
 - i. impose tolls or any other user fees (in any form) in relation to the Project; or
 - ii. directly or indirectly engage in any revenue generating business on any part of the Site in connection with the Project, other than the conduct of its business pursuant to Section 8.1.2.b and the revenues it receives from the Enterprises pursuant to this Agreement;
- b. it will not have any lien over or security interest in any toll revenues, user fees or other revenues generated by the Enterprises, CDOT or other Persons on any part of the Site or in connection with the Project.

31.2. Restrictions on Advertising

31.2.1. The Enterprises retain all rights relating to approving, planning and/or selling advertising on the Right-of-Way, any Additional Right-of-Way and any other Assets, and otherwise in connection with the Project.

31.2.2. Developer shall:

- a. use Reasonable Efforts to cooperate with; and
- b. without prejudice to Developer's rights arising as a result of the occurrence of any Compensation Event as described in paragraphs b.iv. and g.iii. of the definition thereof in Part A of Annex A (Definitions and Abbreviations), grant all necessary access to, the Enterprises and any Person authorized by the Enterprises in connection with the exercise of the Enterprises' retained rights under Section 31.2.1.

PART K: DEFAULTS, REMEDIES AND TERMINATION

32. DEFAULTS AND REMEDIES

32.1. Developer Defaults and Cure Periods

32.1.1. The occurrence of any one of the events set out in the column titled “Developer Default” in the table below shall constitute a “Developer Default”. For purposes of this Agreement, “Developer Default Cure Period” means, in respect of a Developer Default, the cure period (if any) specified in the column titled “Cure Period” in the table below in the same row as such Developer Default, subject to extension in accordance with Section 32.1.2.

Developer Defaults

<u>Developer Default</u>	<u>Cure Period</u>
(1) An Insolvency Event occurs in respect of Developer.	None.
(2) An Insolvency Event occurs in respect of a Required Guarantor unless, within 90 Calendar Days after the occurrence of such Insolvency Event: (a) Developer has: (i) replaced such Insolvent Required Guarantor with a guarantor that is Accepted by the Enterprises; or (ii) provided security for such Insolvent Required Guarantor’s guaranty in the form of a cash deposit, other payment or letter of credit in each case in an amount equal to the specified sum or specified maximum liability (or, absent such specified sum or maximum liability, the reasonably estimated maximum liability) under its guaranty; or (b) such Insolvent Guarantor has ceased to be a Required Guarantor.	
(3) An Insolvency Event occurs in respect of a Principal Subcontractor (or any Required Principal Subcontractor Member thereof) whose Work is not completed at the time of such occurrence, unless within 90 Calendar Days after the occurrence of such Insolvency Event: (a) Developer has replaced such Insolvent Principal Subcontractor (or such Insolvent Required Principal Subcontractor Member) with a party Accepted by the Enterprises; or (b) any such Insolvent Required Principal Subcontractor Member has ceased to be a Required Principal Subcontractor Member.	
(4) With respect to any Principal Subcontract pursuant to which Work remains to be performed, Developer fails to enter into: (a) a replacement Principal Subcontract Accepted by the Enterprises pursuant to <u>Section 17.1.3.b</u> and related guaranty (if any) with a counterparty and a Required Guarantor (if any) Accepted by the Enterprises within 90 Calendar Days after termination of such Principal	

<u>Developer Default</u>	<u>Cure Period</u>
<p>Subcontract; or</p> <p>(b) a replacement guaranty Acceptable to the Enterprises within 90 Calendar Days after termination of a guaranty from a Required Guarantor related to a Principal Subcontract that has not also been terminated.</p> <p>(5) The Substantial Completion Date does not occur on or prior to the Longstop Date.</p> <p>(6) A Noncompliance Default Event occurs.</p> <p>(7) A Closure Default Event occurs.</p> <p>(8) A Persistent Breach occurs.</p> <p>(9) Any Developer-Related Entity commits a Prohibited Act and such entity is:</p> <p>(a) Developer; or</p> <p>(b) any other Developer-Related Entity:</p> <p>(i) acting in concert with Developer; or</p> <p>(ii) acting independently of Developer, but with Developer's prior knowledge, unless Developer promptly notifies the Enterprises and, as required by Law, any other relevant Governmental Authorities of such Prohibited Act (in which case Developer Default number (22) in this <u>Section 32.1.1</u> shall apply with respect to such Prohibited Act).</p> <p>(10) After exhaustion of all rights of appeal, there occurs any disqualification, suspension or debarment from bidding, proposing or contracting with any state-level, interstate or Federal Governmental Authority (distinguished from ineligibility due to lack of financial qualifications) (any such event, an "<u>Exclusion</u>") of:</p> <p>(a) Developer;</p> <p>(b) any Equity Member that remains an Equity Member 60 Calendar Days after the date of the relevant Exclusion;</p> <p>(c) any Principal Subcontractor whose work is not completed at the date of the relevant Exclusion that is not replaced with a contractor Accepted by the Enterprises within 90 Calendar Days after the date of the relevant Exclusion;</p> <p>(d) any Guarantor or any member of any Principal Subcontractor whose work is not completed at the date of the relevant Exclusion that is not:</p> <p>(i) replaced with a Guarantor or member Accepted by the Enterprises; or</p> <p>(ii) removed without replacement on the basis that at the relevant time such Guarantor or member was</p>	

<u>Developer Default</u>	<u>Cure Period</u>
<p style="text-align: center;">not a Required Guarantor or Required Principal Subcontractor Member,</p> <p style="text-align: center;">in either case within 90 Calendar Days after the date of the relevant Exclusion; or</p> <p>(e) any other Developer-Related Entity whose work is not completed at the date of the relevant Exclusion and that remains a Developer-Related Entity 90 Calendar Days after the date of the relevant Exclusion.</p> <p>(11) A Developer Default occurs pursuant to <u>Section 26.2.1</u>.</p> <p>(12) Developer makes or permits a transfer or assignment in breach of <u>Section 39.1</u>.</p> <p>(13) Developer fails to procure or maintain any Contractor Bond required to be procured and maintained pursuant to <u>Sections 9.3.1</u> and <u>9.3.2</u> (other than due to the provider of any such bond ceasing to qualify as an Eligible Surety or an Eligible Financial Institution).</p> <p>(14) Developer fails to obtain and maintain, or cause to be obtained and maintained, any Insurance Policy in full compliance with, and as and when required under, this Agreement (other than any non-material deviation from the requirements of this Agreement pertaining to the amounts or terms of such Insurance Policy) and such failure continues for 15 Calendar Days.</p>	
<p>(15) Developer fails to comply with any Safety Compliance Order pursuant to <u>Section 23.1.3</u> and such failure directly results in a material and ongoing risk to:</p> <p>(a) the health or safety of any person;</p> <p>(b) the Environment;</p> <p>(c) Improvements;</p> <p>(d) the community; or</p> <p>(e) property.</p> <p>(16) If Developer has elected pursuant to <u>Section 4.5</u> of <u>Schedule 12 (Handback Requirements)</u> to provide a Handback Letter of Credit, Developer fails to maintain such Handback Letter of Credit in full compliance with the requirements of that <u>Section 4.5</u>:</p> <p>(a) due to the provider of any such Handback Letter of Credit ceasing to qualify as an Eligible Financial Institution, and Developer fails to procure a replacement Handback Letter of Credit within 15 Calendar Days after the provider ceases to so qualify; or</p> <p>(b) for any reason, other than that specified in Developer Default number (16)(a) in this <u>Section 32.1.1</u>,</p> <p>provided that no such failure shall constitute a Developer Default if such failure occurs and is continuing during the Handback Reserve Standstill Period.</p>	<p>15 Calendar Days after the date on which the Enterprises deliver notice to Developer of the occurrence of the relevant Developer Default.</p>

<u>Developer Default</u>	<u>Cure Period</u>
<p>(17) Unless Developer has delivered a Handback Letter of Credit that complies with the requirements of <u>Section 4.5</u> of <u>Schedule 12</u> (<i>Handback Requirements</i>), the amount standing to the credit of the Handback Reserve Account at any time after the commencement of the Handback Period is less than the Handback Reserve Amount, provided that no such failure shall constitute a Developer Default if such failure occurs and is continuing during the Handback Reserve Standstill Period.</p> <p>(18) Developer fails to procure a replacement Contractor Bond pursuant to <u>Sections 9.3.1</u> and <u>9.3.2</u> within 15 Calendar Days after the provider of any such Contractor Bond ceases to qualify as an Eligible Surety or an Eligible Financial Institution.</p>	
<p>(19) A breach of Federal Law or any requirement that in either case, pursuant to the express terms of <u>Schedule 15</u> (<i>Federal and State Requirements</i>), gives rise to a default (excluding, for certainty, a default pursuant to <u>Section 5.4</u> of <u>Schedule 15</u> (<i>Federal and State Requirements</i>)) that may subsequently result in termination of this Agreement by the Enterprises.</p> <p>(20) Developer fails to make any payment to the Enterprises pursuant to or in relation to this Agreement when due (unless such payment is the subject of a good faith Dispute).</p> <p>(21) An Abandonment occurs.</p> <p>(22) Any Developer-Related Entity (other than Developer):</p> <ul style="list-style-type: none"> (a) not acting in concert with Developer; or (b) acting independently of Developer to the extent that Developer Default number (9) in this <u>Section 32.1.1</u> does not apply; <p>commits a Prohibited Act and:</p> <ul style="list-style-type: none"> (i) any Equity Member or any Indirect Equity Member that remains an Equity Member or any Indirect Equity Member, as applicable, 60 Calendar Days after the occurrence of the relevant Prohibited Act; (ii) with respect to any Principal Subcontractor whose work is not completed when the relevant Prohibited Act occurs, such Principal Subcontractor is not replaced with a contractor Accepted by the Enterprises within 90 Calendar Days after the occurrence of the relevant Prohibited Act; (iii) Guarantor or any member of any Principal Subcontractor whose work is not completed at the date of the relevant Prohibited Act: <ul style="list-style-type: none"> (A) is not replaced with a Guarantor or member Accepted by the Enterprises; or (B) removed without replacement on the basis that at the relevant time such Guarantor or 	<p>30 Calendar Days after the date on which the Enterprises deliver notice to Developer of the occurrence of the relevant Developer Default.</p>

<u>Developer Default</u>	<u>Cure Period</u>
<p>member was not a Required Guarantor or Required Principal Subcontractor Member,</p> <p>in either case within 90 Calendar Days after the date of the Prohibited Act; or</p> <p>(iv) with respect to any other Developer-Related Entity, remains a Developer-Related Entity 30 Calendar Days after the occurrence of the relevant Prohibited Act.</p>	
<p>(23) An Organizational Conflict of Interest was known, or should have been known, and was not disclosed to the Enterprises pursuant to the ITP before the Agreement Date.</p> <p>(24) Developer fails to comply with any Governmental Approval, Permit or Law, or any Environmental Requirement, in any such case in any material respect.</p> <p>(25) Developer fails to comply with any requirement of this Agreement pertaining to the amounts, terms, coverage documentation or evidencing of any Insurance Policy, other than:</p> <p>(a) with respect to any failure to submit documents verifying insurance coverage and payment of insurance premiums and renewals that constitutes a Noncompliance Event; or</p> <p>(b) with respect to any failure that results in a Developer Default number (14) in this <u>Section 32.1.1</u>.</p>	<p>30 Calendar Days (subject to extension in accordance with <u>Section 32.1.2.a</u>) after the date on which the Enterprises deliver notice to Developer of the occurrence of the relevant Developer Default.</p>
<p>(26) During the Restricted Transfer Period, an Insolvency Event occurs in respect of any Equity Member and continues for 45 Calendar Days, unless such Equity Member has fully met all financial obligations owing to Developer by providing a Committed Investment and payments or transfers of money or property previously made to or for the benefit of Developer are not subject to any Law respecting the avoidance or recovery of preferences for fraudulent transfers.</p> <p>(27) Subject to <u>Section 5.4</u>, any representation or warranty in this Agreement made by Developer pursuant to this Agreement, or in any certificate, schedule, report, instrument, agreement or other document delivered by or on behalf of Developer to the Enterprises pursuant to this Agreement, is false, misleading or inaccurate in any material respect when made or omits material information when made.</p> <p>(28) A violation by Developer of <u>Section 53.5</u>.</p> <p>(29) A breach by Developer of any of its material obligations under this Agreement, including any written repudiation of this Agreement, other than any breach that:</p> <p>(a) constitutes a Developer Default under any other paragraph of this <u>Section 32.1.1</u>;</p> <p>(b) constitutes a Noncompliance Event;</p> <p>(c) results in the accrual of a Construction Closure</p>	<p>45 Calendar Days (subject to extension in accordance with <u>Section 32.1.2.a</u>) after the date on which the Enterprises deliver notice to Developer of the occurrence of the relevant Developer Default.</p>

Developer Default	Cure Period
(d) Deduction or an Operating Period Closure Deduction; or arises due to a Relief Event or Compensation Event.	

32.1.2. For purposes of determining when any applicable Developer Default Cure Period has expired or when a cure of any relevant Developer Default has been effected the following provisions of this Section 32.1.2 shall apply:

- a. with respect to any Developer Default number (23), (24), (25), (26), (27), (28) or (29) in Section 32.1.1 that requires a longer period to cure than the applicable Developer Default Cure Period, if Developer has within 10 Calendar Days of the start of the relevant Developer Default Cure Period submitted a rectification plan to the Enterprises for Acceptance, then such Developer Default Cure Period shall be extended so that it expires on the earliest of:
 - i. the later of the date on which the Enterprises reject such plan and the end of the Developer Default Cure Period absent any extension;
 - ii. the latest date reasonably necessary to effect the cure thereof as set out in the Accepted plan;
 - iii. if there is an Accepted plan, 120 Calendar Days after the date of the start of the applicable Developer Default Cure Period; or
 - iv. the date on which Developer ceases its good faith efforts to cure such Developer Default in accordance with the Accepted plan;
- b. without prejudice to Section 32.1.2.a, with respect to the Developer Default number (27) in Section 32.1.1, the cure will be complete when all necessary disclosures have been made and all adverse effects (if any) caused by the incorrect disclosure have been cured;
- c. with respect to any Developer Default number (9), (10), (22) or (23) in Section 32.1.1, the cure must be Accepted by the Enterprises;
- d. with respect to Developer Default number (14), (18) or (25) in Section 32.1.1, the Enterprises shall have the right, but not the obligation, to effect a cure, at Developer's expense, if such a Developer Default continues after the end of the applicable Developer Default Cure Period; and
- e. any requirement of prior notice of Developer Default from the Enterprises to Developer to initiate the applicable Developer Default Cure Period shall be automatically waived if:
 - i. Developer knew that the relevant Developer Default had occurred;
 - ii. Developer failed to notify the Enterprises of the relevant Developer Default;
 - iii. Developer knew (or reasonably should have anticipated) that as a result of such failure the Enterprises would not know of such Developer Default; and
 - iv. at the relevant time, the Enterprises did not know of the relevant Developer Default,

in which case the applicable Developer Default Cure Period shall start on the date that Developer first knew that the relevant Developer Default had occurred.

32.2. Enterprises Remedies for Developer Default

32.2.1. If any Developer Default occurs and has not been cured by the expiry of the applicable Developer Default Cure Period, the Enterprises may in their discretion, subject to the Lenders' rights pursuant to the Lenders Direct Agreement, exercise any rights and remedies available to them

(under this Agreement, at Law or otherwise) for so long as such Developer Default continues uncured, including:

- a. terminating this Agreement pursuant to Section 33.1.3;
- b. exercising their rights of self-help pursuant to Sections 23.4.2 to 23.4.4 as provided in Section 23.4.1.b;
- c. by notice to Developer, granting Developer an extended Developer Default Cure Period (in addition to any other extension pursuant to Section 32.1.2.a) which grant may be made subject to such conditions as the Enterprises may require in their discretion;
- d. making a demand upon and enforcing any Contractor Bond in accordance with its terms, with the proceeds of any such action to be applied to the satisfaction of Developer's obligations under this Agreement, including payment of amounts due to the Enterprises; and/or
- e. waiving such default in accordance with Section 43.3.

32.2.2. The Enterprises' rights and remedies with respect to the occurrence of any Developer Default are without limitation to its rights and remedies with respect to the occurrence of any other Developer Default.

32.3. Enterprise Defaults and Cure Periods

32.3.1. The occurrence of any one of the events set out in the column titled "Enterprise Default" in the table below shall constitute an "Enterprise Default". For purposes of this Agreement, "Enterprise Default Cure Period" means, in respect of an Enterprise Default, the cure period specified in the column titled "Cure Period" in the table below in the same row as such Enterprise Default, subject to extension in accordance with Section 32.3.2.

Enterprise Defaults

<u>Enterprise Default</u>	<u>Cure Period</u>
(1) Either Enterprise fails to comply with its obligation under <u>Section 11.2.2</u> and, as a result of such failure, such Enterprise fails to qualify as a government-owned business within CDOT or an enterprise under Article X, Section 20 of the State Constitution with respect to the current Contract Year and such failure is subsequently determined to have continued with respect to the following Contract Year.	None.
(2) The Enterprises fail to make any payment to Developer under this Agreement when due (unless such payment is the subject of a good faith Dispute).	15 Calendar Days with respect to Milestone Payments, and 30 Calendar Days with respect to all other payments, in each case after the date on which Developer delivers notice to the Enterprises of the occurrence of the relevant Enterprise Default.
(3) Either of the Enterprises, CDOT, the State or any other Governmental Authority confiscates, sequesters, condemns or appropriates all or a material part of:	30 Calendar Days after the date on which Developer delivers notice to the

Enterprise Default	Cure Period
(a) the Project; (b) the Assets; (c) ownership interests in Developer; (d) Developer’s interests in this Agreement, excluding the exercise of any right of termination pursuant to this Agreement. (4) BE fails to comply with its obligation under <u>Section 11.2.1</u> . (5) The Enterprises fail to comply with their obligations under <u>Section 11.2.3.a</u> .	Enterprises of the occurrence of the relevant Enterprise Default.
(6) The Enterprises fail to comply with their obligations under <u>Section 11.2.3.b</u> . (7) Either Enterprise makes an assignment or transfer in breach of <u>Section 39.2</u> . (8) A breach or breaches by either Enterprise of any of its or their obligations under this Agreement (other than any breach or breaches that constitute an Enterprise Default under any other paragraph of this <u>Section 32.3.1</u>) that (in the case of more than one breach, when taken together) substantially frustrates or renders it impossible for Developer to perform all or a substantial part of its obligations or to exercise all or a substantial part of its rights under this Agreement in each case for a continuous period of 60 Calendar Days.	45 Calendar Days after the date on which Developer delivers notice to the Enterprises of the occurrence of the relevant Enterprise Default.
(9) Subject to <u>Section 5.4</u> , any representation or warranty made by either Enterprise pursuant to <u>Section 5.1.2</u> is false, misleading or inaccurate in any material respect when made or omits material information when made.	60 Calendar Days after the date on which Developer delivers notice to the Enterprises of the occurrence of the relevant Enterprise Default.

32.3.2. For purposes of determining when any applicable Enterprise Default Cure Period has expired or when a cure of any relevant Enterprise Default has been effected, the following provisions of this Section 32.3.2 shall apply:

- a. with respect to any Enterprise Default number (6) or (9) in Section 32.3.1 that, in the Enterprises’ reasonable determination, requires a longer period to cure than the applicable Enterprise Default Cure Period, if the Enterprises have within the relevant Enterprise Default Cure Period notified Developer of such determination, then, provided that (I) the Enterprises have taken meaningful steps to cure such Enterprise Default before triggering such extension and (II) the Enterprises proceed diligently to cure such Enterprise Default after such extension is made, such Enterprise Default Cure Period shall be extended to the earliest of:
 - i. the latest date reasonably necessary to effect the cure; or
 - ii. with respect to:
 - A. any Enterprise Default number (6) in Section 32.3.1, 45 Calendar Days after the date of the end of the applicable Enterprise Default Cure Period; and

- B. any Enterprise Default number (9) in Section 32.3.1, 130 Calendar Days after the date of the end of the applicable Enterprise Default Cure Period
- b. with respect to Enterprise Default number (9) in Section 32.3.1, the cure will be complete when all necessary disclosures have been made and all adverse effects (if any) caused by the incorrect disclosure have been cured.

32.4. Developer Remedies for Enterprise Default

32.4.1. If any Enterprise Default occurs and has not been cured within the applicable Enterprise Default Cure Period, Developer may in its discretion:

- a. terminate this Agreement pursuant to Section 33.1.4;
- b. by notice to the Enterprises, grant the Enterprises an extended Enterprise Default Cure Period (in addition to any other extension pursuant to Section 32.3.2); and/or
- c. waive such default in accordance with Section 43.3.

32.4.2. Developer's rights and remedies with respect to the occurrence of any Enterprise Default are without limitation to its rights and remedies with respect to the occurrence of any other Enterprise Default.

33. TERMINATION

33.1. Termination Events

33.1.1. Exclusive Rights to Terminate

- a. Prior to Financial Close, the Parties' sole right to terminate this Agreement shall be pursuant to Schedule 1 (Financial Close). On and from the Financial Close, this Agreement is subject to termination pursuant to Sections 33.1.2 through 33.1.7.
- b. This Section 33, together with the other provisions of this Agreement expressly referred to in this Section 33 and the provisions of the Lenders Direct Agreement, contain the entire and exclusive provisions and rights of the Enterprises and Developer regarding termination of this Agreement, and any and all other rights to terminate at Law or in equity are hereby waived to the maximum extent permitted by Law, provided that termination of this Agreement shall not relieve Developer, or any Guarantor, insurer or any surety or other financial institution that provides a Contractor Bond, of its obligation for any Claims arising prior to termination.

33.1.2. Termination for Convenience

- a. The Enterprises may, in their discretion (subject to prior notice in accordance with Section 33.1.2.b and to Section 33.1.2.d), terminate this Agreement at any time on or before the Expiry Date by delivering to Developer a Termination Notice to such effect (a "Termination for Convenience").
- b. Any such Termination for Convenience shall be effective 30 Calendar Days from the date of the Termination Notice, or on such later date as the Enterprises may specify in such notice.
- c. As a consequence of a Termination for Convenience, the Enterprises shall pay the Termination Amount to Developer as determined pursuant to Section 1 of Schedule 7 (Compensation on Termination).
- d. The Enterprises shall only be entitled to exercise their discretion to terminate this Agreement pursuant to Section 33.1.2.a if at such time they have a reasonable expectation that they will be able to pay such Termination Amount in full no later than the date determined pursuant to Section 4.2 of Schedule 7 (Compensation on Termination).
- e. On or about the date of a Termination Notice delivered pursuant to Section 33.1.2.a (and, in any event, prior to the Termination Date), the Enterprises shall deliver to Developer a

written summary of the basis for their reasonable expectation referenced in Section 33.1.2.d.

33.1.3. Termination for Developer Default

- a. If a Developer Default occurs and has not been cured within the applicable Developer Default Cure Period, the Enterprises may, in their discretion and subject to prior notice in accordance with Section 33.1.3.b and the Lenders' rights pursuant to the Lenders Direct Agreement, terminate this Agreement at any time that such default is continuing by delivering to Developer a Termination Notice to such effect.
- b. Subject to the Lenders Direct Agreement, any such termination for Developer Default shall be effective 30 Calendar Days from the date of the Termination Notice, or on such later date as the Enterprises may specify in such notice.
- c. As a consequence of any termination for Developer Default, the Enterprises shall pay the Termination Amount to Developer as determined pursuant to Section 3 of Schedule 7 (*Compensation on Termination*).

33.1.4. Termination for Enterprise Default

- a. If an Enterprise Default occurs and has not been cured within the applicable Enterprise Default Cure Period, Developer may, in its discretion and subject to prior notice in accordance with Section 33.1.4.b, terminate this Agreement at any time that such default is continuing by delivering to the Enterprises a Termination Notice to such effect.
- b. Any such termination for Enterprise Default shall be effective 30 Calendar Days from the date of the Termination Notice.
- c. As a consequence of any termination for Enterprise Default, the Enterprises shall be obligated to pay the Termination Amount to Developer as determined pursuant to Section 1 of Schedule 7 (*Compensation on Termination*).

33.1.5. Termination by Court Ruling

- a. Any Termination by Court Ruling shall become effective and automatically terminate Agreement upon issuance of the final, non-appealable court order by a court of competent jurisdiction.
- b. As a consequence of any Termination by Court Ruling, excluding any such event that arises by reason of a Developer Default or an Enterprise Default, the Enterprises shall pay the Termination Amount to Developer as determined pursuant to Section 2 of Schedule 7 (*Compensation on Termination*).
- c. As a consequence of any Termination by Court Ruling that arises by reason of a Developer Default or an Enterprise Default, the Enterprises shall pay the Termination Amount to Developer pursuant to Section 33.1.3.c or Section 33.1.4.c, as applicable.

33.1.6. Termination for Extended Events

- a. If any of the following conditions is satisfied:
 - i. any single:
 - A. Force Majeure Event; or
 - B. Relief Event as described in paragraphs c., f., h. or i. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*),
causes one or both Parties to be unable to comply with its or their material obligations with respect to all or a material portion of the Project or the Work and such event and inability continues for a continuous period of at least 180 Calendar Days;

- ii. any single Relevant Event results in a Milestone Delay Period of more than 365 Calendar Days, where for purposes of this Section 33.1.6.a.ii only:
 - A. all Compensation Events as described in paragraphs f.i. and f.ii.A. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) shall collectively be deemed to be a single Compensation Event; and
 - B. all Compensation Events as described in paragraph f.iii. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) shall collectively be deemed to be a single Compensation Event; or
- iii. all:
 - A. Force Majeure Events;
 - B. Relief Events as described in paragraphs c., f., h. or l. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*); and
 - C. Relevant Events,
 collectively result in a Milestone Delay Period of more than 730 Calendar Days, then either Party may in its discretion, subject to Sections 33.1.6.b., 33.1.6.c and 33.1.6.d., terminate this Agreement at any time thereafter:
 - iv. during the continuation of the relevant event referred to in Section 33.1.6.a.i or Section 33.1.6.a.ii; or
 - v. during the continuation of the Milestone Delay Period, (any such event referred to in iv. and any such continuation referred to in v., an “Extended Event”) by delivering to the other Party a Termination Notice to such effect (a “Termination for Extended Events”).
- b. Notwithstanding Section 33.1.6.a., the Enterprises shall not be entitled to initiate a Termination for Extended Events in connection with any Extended Event that arises as a result of a Compensation Event as described in paragraphs a., b., g., i.i., j., k., l., m. or o. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*).
- c. Any Termination for Extended Events shall be effective 30 Calendar Days from the date of the Termination Notice, provided that the Enterprises may, in their discretion (and without prejudice to the Enterprises’ right to subsequently issue a Termination Notice pursuant to Section 33.1.6.a at any time thereafter with respect to such Extended Event to the extent then continuing), reject any Termination Notice delivered by Developer within 10 Working Days of receipt, in which case:
 - i. if such Termination Notice was delivered by Developer during the Construction Period and:
 - A. such Termination Notice was delivered as a result of satisfaction of any condition described in Section 33.1.6.a.i or Section 33.1.6.a.ii and the relevant Extended Event was a Force Majeure Event or a Relief Event (and not a Compensation Event), then such Extended Event shall constitute a Compensation Event from the date of the Termination Notice;
 - B. such Termination Notice was delivered as a result of satisfaction of the condition described in Section 33.1.6.a.ii and the relevant Extended Event was caused by the occurrence of either:
 - I. one or more Compensation Events referred to in Section 33.1.6.a.ii.A; or

- II. one or more Compensation Events referred to in Section 33.1.6.a.ii.B,

then, with respect to any then continuing individual such Compensation Event, any resulting Change in Costs shall be determined in accordance with paragraph a. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) (and not, respectively, paragraphs b. or c. of such definition) from the date of the Termination Notice; and

- C. such Termination Notice was delivered as a result of satisfaction of the condition described in Section 33.1.6.a.iii:

- I. any Milestone Payment Delay Costs otherwise payable with respect to any continuing Compensation Event or Delay Relief Event shall include principal in addition to interest from the date of the Termination Notice; and

- II. to the extent that the satisfaction of such condition resulted from the continuation of a Force Majeure Event and/or a Relief Event (which is not also a Delay Relief Event), the relevant ongoing event(s) and any subsequent such event(s) shall constitute Delay Relief Event(s) from the date of the Termination Notice (and, in such event, any Milestone Payment Delay Costs payable with respect thereto shall include principal in addition to interest pursuant to Section 33.1.6.c.i.C.I); and

- ii. if such Termination Notice was delivered by Developer during the Operating Period, the Enterprises shall pay to Developer in respect of the period from the date of the Termination Notice:

- A. monthly Performance Payments as if the Work was being fully performed during such period pursuant to the requirements of this Agreement (net of (I) the actual avoidable costs of Work not being performed as a result of the occurrence of such Extended Event, (II) the amount that Developer is (or, pursuant to Section 35.5.a, should be) entitled to recover under any “business interruption” coverage under the Available Insurance and (III) any Monthly Performance Deductions that the Enterprises are otherwise entitled to make pursuant to Schedule 6 (*Performance Mechanism*); plus

- B. all other Losses incurred during such period (to the extent not covered by insurance proceeds) as a result of any damage or delay (including demobilization and remobilization costs) resulting from such Extended Event; and

- iii. Developer shall remain responsible for the continuation of the Work to the extent not relieved of its obligations pursuant to Section 15.3.1.a as a result of the occurrence of such Extended Event.

- d. As a consequence of any Termination for Extended Events, the Enterprises shall pay the Termination Amount to Developer as determined pursuant to Section 2 of Schedule 7 (*Compensation on Termination*).

33.1.7. Termination for Uninsurable Risk

- a. The Enterprises may, in their discretion and subject to prior notice in accordance with Section 33.1.7.b, terminate this Agreement at any time that they have the right to do so pursuant to Section 25.6.1.b.ii.A by delivering to Developer a Termination Notice to such effect.
- b. Subject to Section 33.1.7.c, any such termination shall be effective 30 Calendar Days from the date of the Termination Notice. As a consequence of any termination pursuant to this Section 33.1.7, the Enterprises shall be obligated to pay the Termination Amount to Developer as determined pursuant to Section 2 of Schedule 7 (*Compensation on Termination*).
- c. Notwithstanding the Enterprises' delivery of a Termination Notice pursuant to Section 33.1.7.a, Developer may choose to continue this Agreement by delivering a notice to the Enterprises within the 30 Calendar Day period specified in Section 33.1.7.b, following which:
 - i. Developer shall, as a condition to effectiveness of its notice (unless such condition is waived on the basis that Developer will self-insure the relevant risk with the Enterprises' Approval), deliver to the Enterprises a cash deposit or an irrevocable on demand letter of credit from an Eligible Financial Institution in either case equal to the Enterprises' reasonable estimate of the aggregate of:
 - A. the maximum amount that the Enterprises could be obligated to pay Developer under Section 25.6.1.b.ii.B as a result of the relevant risk being Uninsurable (such amount to be held and disbursed in place of insurance proceeds by the Enterprises upon the occurrence of the relevant risk); plus
 - B. the maximum amount of Enterprise and CDOT Losses that would have been compensable by insurance proceeds payable under the relevant Insurance Policy had the relevant risk not become Uninsurable (such amount to be held and retained by the Enterprises),
 subject to the Enterprises' obligation to return such deposit or letter of credit (less amounts used or drawn) to Developer promptly after the relevant risk ceases to be Uninsurable and becomes insured under an Insurance Policy; and
 - ii. the Enterprises' Termination Notice shall have no further effect.

33.2. Consequences of Termination

On the Termination Date as determined pursuant to Sections 33.1.2 through 33.1.7, this Agreement shall automatically terminate.

33.3. No Increased Termination Liabilities

- a. Notwithstanding any other provision of this Agreement, but subject to Section 33.3.b:
 - i. no otherwise effective amendment or waiver of any provision of, or exercise of any right under:
 - A. any Principal Subcontract;
 - B. any other Subcontract to which Developer is a party; or
 - C. any Financing Document; and
 - ii. no otherwise effective Refinancing,

shall, as between the Enterprises and Developer, have the effect of increasing the amount of the Enterprises' termination liabilities as of the Termination Date as reflected in any Termination Amount.

- b. Section 33.3.a shall not apply with respect to any such amendment, waiver, exercise of any right or any Refinancing:
- i. to the extent such constitutes:
 - A. an amendment or waiver of any provision of any Principal Subcontract, or any other Subcontract to which Developer is a party, to the extent necessary to reflect a corresponding amendment to, or Change under, this Agreement;
 - B. an Exempt Refinancing described in paragraphs a., b. (provided that, for purposes of this Section 33.3, paragraph b.ii. shall be deemed not to apply), d., e. or f. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*); and
 - C. for certainty, any incurrence of Project Debt through a drawing or disbursement:
 - I. that constitutes an Exempt Refinancing as described in Section 33.3.b.i.B; or
 - II. pursuant to the terms of any Financing Agreement referenced in paragraph a. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) as in effect on the Financial Close Date or that was subsequently amended or entered into with the Enterprises' consent pursuant to Section 33.3.b.
 - ii. if, after giving effect to the implementation thereof, such amendment, waiver, exercise of any right or any Refinancing would not increase the projected (in the case of amounts that may be determined in accordance with the Financial Model) or reasonably estimated maximum amount of the Enterprises' liabilities to Developer as of the Termination Date relative to the projected or reasonably estimated, as applicable, maximum amount of such liabilities without giving effect to the implementation thereof; or
 - iii. if Developer has obtained the Enterprises' prior written consent to the same resulting in a potential increase in the Enterprises' liabilities to Developer of the kind referenced in Section 33.3.b.ii., which consent shall:
 - A. reference this Section 33.3.b.iii.; and
 - B. be subject to the Enterprises' Acceptance, Approval, consent, approval or like assent as otherwise provided for in this Agreement with respect to the relevant amendment, waiver, exercise of any right or any Refinancing, or otherwise (if not so provided) subject to the Enterprises' Approval.

33.4. Exclusivity of Remedy

Any Termination Amount irrevocably paid by the Enterprises to Developer shall be in full and final settlement of Developer's or any Developer-Related Entity's rights and claims against the Enterprises, CDOT and the State for, or in connection with, breaches and/or termination of this Agreement whether under contract, tort, restitution or otherwise, but without prejudice to:

- a. any antecedent liability of the Enterprises to Developer that arose prior to the Termination Date (but not from the termination itself) to the extent such liability has not already been taken into account in the determination of the Termination Amount (which amount, for certainty, shall in all cases be deemed to take into account any otherwise earned or payable Milestone Payment or Performance Payment that remains unpaid on the Termination Date); and

- b. any liabilities arising in respect of any breach by the Enterprises after the Termination Date of any obligation under this Agreement that survives the Termination Date, to the extent such liability has not already been taken into account in the determination of any Termination Amount.

34. HANDOVER PREPARATIONS AND ACTIVITIES

34.1. Preparations for Handover

34.1.1. During:

- a. the final 24 months prior to the Expiry Date; or
- b. the period after the service of any Termination Notice or the occurrence of any Termination by Court Ruling,

as applicable, and in either case for a period of time thereafter as reasonably required by the Enterprises, Developer shall, without limiting its other obligations under this Agreement, use Reasonable Efforts to cooperate and coordinate with the transfer with effect from the Expiry Date or Termination Date, as applicable, of responsibility for the Work to the Enterprises and/or any Person designated by the Enterprises.

34.1.2. For purposes of Section 34.1.1, Developer's obligations to cooperate and coordinate shall include:

- a. cooperating with the Enterprises and/or any Person designated by them, and providing reasonable assistance and advice concerning the Work and its transfer to the Enterprises and/or to such Person;
- b. promptly providing to the Enterprises and/or their designee with:
 - i. Site access pursuant to Section 21.1.1; and
 - ii. pursuant to Section 19.1, access to and, on request pursuant to Section 19.1.3.c, copies of, all Project Records including all:
 - A. information on the identity, terms and conditions of employment of all employees of Developer or any Principal Subcontractor employed in the provision of the Work at such time or, with respect to any early termination of this Agreement, immediately prior to the service of any Termination Notice or the occurrence of any Termination by Court Ruling;
 - B. manuals;
 - C. equipment logs;
 - D. drawings;
 - E. files; and
 - F. specifications,

as reasonably required for the efficient transfer of responsibility of performance of the Project, and Developer shall warrant that, to the best of its knowledge and belief, the information contained in such Project Records is accurate in all material respects;

- c. using Reasonable Efforts to complete all reasonably necessary preliminary acts (including entering into any contracts) to ensure its ability to comply with its obligations under Section 34.2.1 on and from the Expiry Date or the Termination Date, as applicable; and
- d. complying with Section 12.1 where, for such purposes, an Other Department Project shall be deemed to prospectively include the Project following the future occurrence of the Expiry Date or Termination Date, as applicable.

34.1.3. In addition to Developer's obligations under Sections 34.1.1 and 34.1.2, on or before a date falling no earlier than 30 months prior to the Expiry Date, and otherwise in connection with a Termination for Convenience, the Enterprises may, in their discretion, notify Developer whether they wish to retender the provision of the Work (in whole or in part), in which case from the date of such notice, Section 12.3 shall apply where, for such purposes, an Other Department Project shall be deemed to prospectively include this Project following the future occurrence of the Expiry Date or Termination Date, as applicable.

34.2. Assignments and Transfers

34.2.1. Without limiting its other obligations under this Agreement, on the Expiry Date (or, if earlier, on the Termination Date), and subject to the Lenders Direct Agreement and the Principal Subcontractor Direct Agreements, Developer shall, unless the Enterprises elect in writing to the contrary, assign and transfer to the Enterprises, and/or any Person designated by the Enterprises, for no additional payment:

- a. the benefit of any and all Principal Subcontracts, and/or other direct contractual arrangements (as may be reasonably required by the Enterprises) that Developer may have with any third parties in relation to the Project, provided that any such assignment or transfer shall be made subject to such terms and conditions as required by State Law to obtain the consent of the Colorado State Controller;
- b. to the extent not effected pursuant to any assignment and transfer made pursuant to Section 34.2.1.a, all Governmental Approvals and Permits; and
- c. to the extent not effected pursuant to any assignment and transfer made pursuant to Section 34.2.1.a, its rights, title and interest in and to:
 - i. the Transferrable Assets;
 - ii. warranties associated with the Transferrable Assets and any Warranted Elements (including those referenced in Section 9.4.6); and
 - iii. all Project Intellectual Property (excluding any Proprietary Intellectual Property, which shall remain subject to the license granted pursuant to Section 52.1);
in the case of software (which, for certainty, shall remain subject to the license granted pursuant to Section 52.1.1) together with (to the extent not otherwise provided for under the terms of any then existing Intellectual Property Escrow):
 - iv. administrator access to each proprietary system software package and workstation, so that the Enterprises can maintain the software system and create users as required for the use of each software package; and
 - v. an agreement for the use and maintenance of any proprietary software product that is not commercial off-the-shelf software for a period of five years from the Expiry Date (or, if earlier, the Termination Date);

provided that if, for any reason, Developer cannot assign and transfer its interest in any of the foregoing, it shall declare a trust of all its beneficial interest in the same for the benefit of the Enterprises and/or their designee, or use Reasonable Efforts to make equivalent arrangements (including with respect to Transferrable Assets not owned by Developer through a license to use the same as necessary in connection with the Project) to provide the Enterprises with equivalent rights and protections. Developer hereby irrevocably and unconditionally appoints the Enterprises as Developer's lawful attorney (and to the complete exclusion of any rights that Developer may have in such regard) for the purpose of generally executing or approving such deeds or documents and doing any such acts or things necessary to give effect to the provisions of this Section 34.2.1 as the Enterprises may in their discretion think fit.

34.2.2. Developer shall promptly after, and in any event no later than 20 Working Days after, as applicable, the Expiry Date or the Termination Date hand over to the Enterprises all Project Records and other Work Product owned by the Enterprises pursuant to Section 7.3.3.b (or complete and accurate copies to the extent originals are not required by the Enterprises) by whatever means the Enterprises reasonably require that are in the possession, custody or power of Developer or Principal Subcontractors and other Developer-Related Entities.

34.3. No Contrary Activities

Developer shall not take any action (or refrain from taking any action) in a manner that is calculated or intended to directly or indirectly prejudice or frustrate any of the activities contemplated under Section 34.1 or any transfer or assignment contemplated under Section 34.2.

PART L: LIMITATIONS ON LIABILITY

35. REMEDIES AND LIABILITY

35.1. Developer's Sole Remedies

Subject to Section 35.2, Developer's sole remedy in relation to matters for which an express right or remedy is stated in this Agreement, including as the result of the occurrence of any Supervening Event, shall be that right or remedy and Developer shall have no additional right or remedy however arising.

35.2. No Double Recovery

Notwithstanding any other provision of this Agreement, no Party shall be entitled to recover compensation under this Agreement or any other agreement in relation to the Project in respect of any Loss that it has incurred to the extent that it has already been compensated in respect of that Loss pursuant to this Agreement or otherwise.

35.3. Enterprises' Sole Remedy for Certain Developer Failures to Perform Work

Without prejudice to:

- a. any other express right of the Enterprises pursuant to this Agreement (other than the right of a Principal Indemnified Party to be indemnified pursuant to Section 24.2 from and against Claims asserted against it and/or Losses suffered by it, except for its right to be indemnified in respect of Claims and/or Losses referred to in Sections 35.3.c and 35.3.d); and
- b. the Enterprises' right to claim, on or after termination of this Agreement, the amount of its reasonable Losses suffered as a result of, or incurred by it as a result of rectifying or mitigating the effects of, any breach of this Agreement by Developer or the occurrence of any Developer Default, save to the extent that the same has already been recovered by the Enterprises pursuant to this Agreement or has been taken into account in the calculation of any Termination Amount,

the sole remedy of the Enterprises in respect of any Noncompliance Event, Non-Permitted Closure or any failure by Developer specified in any of Sections 1.3.1.a, 1.3.1.b, 1.3.2.a, 1.3.2.b or 1.3.2.c of Schedule 15 (*Federal and State Requirements*) shall be the operation of Schedule 6 (*Performance Mechanism*), provided that such limitation shall not apply in respect of:

- c. Claims asserted against a Principal Indemnified Party by any other Person (including, for certainty, an Indemnified Party who is not a Principal Indemnified Party) and/or Losses suffered by a Principal Indemnified Party as a result of any such Claim; or
- d. Losses suffered by a Principal Indemnified Party as a result of any of the events or circumstances referred to in Sections 24.2.b, 24.2.d, 24.2.e or 24.2.g (other than, in the case of any Non-Permitted Closure, loss of use of any travel lane, ramp, cross street, shoulder, sidewalk or driveway).

35.4. Non-financial Remedies

Without prejudice to the other rights and remedies under the express terms of this Agreement, nothing in Sections 35.2 and 35.3 shall prevent or restrict the right of the Enterprises or Developer to seek any non-financial remedies from the court pursuant to the Dispute Resolution Procedure.

35.5. Available Insurance

Developer shall not be entitled to any payment or credit (or any portion of either thereof) which would have been due, or from which it would have otherwise received a benefit, under this Agreement to the extent that it is (or, with respect to Section 35.5.a only, should be) able to

recover the amount or receive the benefit of such payment or credit (or such portion) under, without duplication:

- a. any Insurance Policy (whether or not such insurance has in fact been effected or, if effected, has been vitiated, cancelled or declared void as a result of any act or omission of Developer (or any other Developer-Related Entity), including due to non-disclosure or under-insurance), but excluding any insurance coverage that is unavailable in respect of any Uninsurable risk or any Unavailable Term or as the result of any breach of this Agreement by the Enterprises or violation of Law by the Enterprises;
- b. any other policy of insurance that Developer has taken out and maintains (excluding, for certainty, any credit enhancement policy related to the Project Debt); or
- c. any other policy of insurance that Developer is entitled to claim under as an additional insured,

paragraphs a., b. and c. together, the “Available Insurance”.

35.6. Waiver of Consequential Damages

- a. Subject to Section 35.6.b., neither Party shall be liable to the other for any punitive, indirect, incidental or consequential damages of any nature (including, for certainty, lost toll revenue), whether arising out of a breach of this Agreement, tort (including negligence) or other legal theory of liability.
- b. The limitation set out in Section 35.6.a shall not apply to:
 - i. any amounts expressly payable pursuant to this Agreement or any amounts entitled to be offset pursuant to Section 53.7;
 - ii. any Monthly Performance Deduction and/or Monthly Construction Closure Deduction the Enterprises are entitled to make pursuant to Schedule 6 (Performance Mechanism);
 - iii. Developer’s liability for:
 - A. Claims and/or Losses (including defense costs) to the extent that they are required to have been covered by Available Insurance;
 - B. fines and/or penalties issued by a Governmental Authority arising out of or relating to any Developer Release of Hazardous Substances; and
 - C. amounts payable by Developer under an indemnity pursuant to this Agreement (but only to the extent such indemnity relates to a Claim asserted and/or Losses suffered by any Person other than a Principal Indemnified Party); and
 - iv. any Party’s liability for Losses arising out of fraud, willful misconduct, criminal conduct, recklessness, bad faith or gross negligence on the part of the relevant Party (including, with respect to Developer, that of any other Developer-Related Entity).

PART M: CHOICE OF LAW, JURISDICTION AND DISPUTE RESOLUTION

36. CHOICE OF LAW

This Agreement shall be governed by and construed in accordance with the laws of the State of Colorado, other than any provision thereof that permits or requires the application of the laws of another jurisdiction, and regardless of any other jurisdiction's choice of law rules. Any provision incorporated herein by reference which purports to negate this or any other Special Provision, in whole or in part, shall not be valid or enforceable or available in any action at law, whether by way of complaint, defense, or otherwise. Any provision rendered null and void by the operation of this provision shall not invalidate the remainder of this Agreement, to the extent capable of execution.

37. JURISDICTION; WAIVER OF JURY TRIAL

37.1. Jurisdiction

- a. Each Party agrees that it shall not be entitled to initiate any court proceedings in respect of a Dispute other than pursuant to Sections 5.g and 7 of Schedule 25 (*Dispute Resolution Procedure*), provided that it shall be so entitled:
 - i. with or without previously referring such Dispute to the Designated Senior Representatives pursuant to Section 2 of Schedule 25 (*Dispute Resolution Procedure*), if
 - A. the Dispute is with respect to the existence or legal validity of this Agreement; or
 - B. it makes a good faith determination that a statute of limitations would expire prior to it becoming so entitled pursuant to Sections 5.g or 7, as applicable, of Schedule 25 (*Dispute Resolution Procedure*); and
 - ii. after referring such Dispute to the Designated Senior Representatives pursuant to Section 2 of Schedule 25 (*Dispute Resolution Procedure*), if the Dispute is with respect to either Party's compliance with Section 5.c.i or Section 5.c.ii of Schedule 25 (*Dispute Resolution Procedure*).
- b. Each of the Parties hereby irrevocably submits to the jurisdiction of the United States District Court of Colorado and the State District Court of Colorado for the City and County of Denver with regard to any Dispute and irrevocably waives, to the fullest extent permitted by applicable Law:
 - i. any objection it may have at any time to the laying of venue of any such action or proceeding in such court in accordance with this Section 37.1;
 - ii. any claim that any such action or proceeding brought in any such court has been brought in an inconvenient forum; and
 - iii. the right to object, with respect to any such action or proceeding, that such court does not have any jurisdiction over such Party.

37.2. Consent to Service of Process

Each Party irrevocably consents to service of process as provided for in Section 49.1.2.

37.3. Waiver of Jury Trial

EACH PARTY HEREBY WAIVES, TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, ANY RIGHT THAT IT MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY PROCEEDING. Each Party hereby:

- a. certifies that no Representative or agent or attorney of any such Person has represented, expressly or otherwise, that any such Person would fail to enforce or would otherwise

challenge the foregoing waiver in the event of any suit, action or proceedings relating to this Agreement; and

- b. acknowledges that it has been induced to enter into this Agreement by, among other things, the mutual waivers and certifications in this Section 37.

38. DISPUTE RESOLUTION

Except as expressly set out in this Agreement and subject to Section 37, any Dispute shall be resolved in accordance with the provisions of Schedule 25 (*Dispute Resolution Procedure*).

PART N: MISCELLANEOUS

39. ASSIGNMENTS AND TRANSFERS

39.1. Assignments and Transfers by Developer

Except to the extent permitted by Sections 26.2 and 27.3 (including as a result of any foreclosure or other enforcement of any security interest that Developer is permitted to grant or create pursuant to Section 27.3), Developer shall not effect, and shall not permit, any assignment, transfer, mortgage, pledge or encumbrance of any of its interests in the Project, the Site or the Work, or its interests in, or rights or obligations under this Agreement, the Subcontracts, any Contractor Bond and the Insurance Policies, without the Enterprises' Approval.

39.2. Assignments and Transfers by the Enterprises

Each Enterprise may assign, transfer, mortgage, pledge and/or encumber its interests in, or rights or obligations under, this Agreement, any Contractor Bond, the Lenders Direct Agreement, any Principal Subcontractor Direct Agreement and/or the Insurance Policies to:

- a. the other Enterprise and/or CDOT so long as:
 - i. such assignment, transfer, mortgage, pledge and/or encumbrance is not prohibited by Law;
 - ii. such assignment, transfer, mortgage, pledge and/or encumbrance does not alter in any material respect Developer's or Lenders' rights and interests with respect to the Supplemental Indenture and/or the Central 70 Note; and
 - iii. following such assignment, transfer, mortgage, pledge and/or encumbrance, the holder(s) of such interests, rights and obligations shall collectively have the same or equivalent:
 - A. legal authority with respect to the Project; and
 - B. legal authority and financial capacity with respect to satisfying, as applicable, its or their payment obligations with respect to the Project,
 as the holder(s) thereof had immediately prior to such assignment, transfer, mortgage, pledge and/or encumbrance; and
- b. any other Person:
 - i. with the prior written consent of Developer, which consent shall not be unreasonably withheld; or
 - ii. otherwise following a Change of this Agreement, but only with respect to such portion of its interest in the Project that is no longer part of the Project as a result of such Change.

40. BINDING EFFECT; SUCCESSORS AND ASSIGNS

This Agreement shall be binding upon and inure to the benefit of each Enterprise and Developer and each of their respective permitted successors and assigns.

41. SURVIVAL

The following provisions of this Agreement shall survive expiration or earlier termination of this Agreement and/or completion of the Work:

- a. each Party's representations and warranties made pursuant to Section 5.1 and, pursuant to Schedule 1 (Financial Close), subsequently repeated;
- b. all rights with respect to Contractor Bonds;
- c. all Warranties with respect to the Warrantied Elements pursuant to Section 9.4;

- d. the indemnifications, limitations and releases set out in Sections 24 and 35;
- e. the Dispute Resolution Procedure;
- f. Sections 25.5.2.b and 25.5.2.c to the extent provided for in Section 25.5.2.d;
- g. the handover and handback provisions set out in Sections 13 and 34 and Schedule 12 (Handback Requirements);
- h. all provisions related to the consequences of termination of this Agreement, including Sections 33.1.7.a, 33.3 and 33.4;
- i. Section 52;
- j. Section 23.6.1 of Schedule 17 (Environmental Requirements);
- k. any provision which obligates Developer or the Enterprises to reimburse the other Party for any cost and expense incurred by them prior to the termination of the Agreement, unless already settled as part of the applicable Termination Amount or otherwise;
- l. any other provisions which, either expressly or by their context, are intended to operate after termination or expiration of this Agreement and/or completion of the Work; and
- m. any other provisions (including Section 15) if and to the extent necessary for the interpretation or application of the foregoing.

42. CONSTRUING THIS AGREEMENT

42.1. Entire Agreement

- 42.1.1. This Agreement constitutes the entire agreement among the Enterprises and Developer concerning the subject matter hereof and supersedes all prior negotiations, representations, and agreements, either oral or written, among the Parties with respect to their subject matter.
- 42.1.2. Each of the Parties acknowledges that, except as expressly provided in this Agreement, no Party enters into this Agreement on the basis of, and no Party relies, or has relied, upon, any statement, representation, warranty or other provision (in any case whether oral, written, express or implied) made or agreed to by any Person (whether a Party to this Agreement or not) except those made pursuant to Section 5.1 and, pursuant to Sections 2.2(b) and 2.3(a) of Schedule 1 (Financial Close), subsequently repeated, where the only remedy or remedies available in respect of any misrepresentation or untrue statement made to it shall be any remedy available under this Agreement), provided that this Section 42.1.2 shall not apply to any statement, representation or warranty made fraudulently, recklessly, in bad faith, as a result of gross negligence, willfully or criminally, or to any provisions of this Agreement which were induced by the same, for which the remedies available shall be all those available under the law governing this Agreement.

42.2. Interpretation

- 42.2.1. The language in all parts of this Agreement shall in all cases be construed simply, as a whole and pursuant to its fair meaning and not strictly for or against any Party.
- 42.2.2. The Parties hereto acknowledge and agree that this Agreement is the product of an extensive and thorough arm's length exchange of ideas, questions, answers information and drafts during the Proposal preparation process pursuant to the ITP.
- 42.2.3. Developer further acknowledges and agrees that it has independently reviewed this Agreement with legal counsel and other advisors and that Developer has, itself or through other arrangements, the requisite experience and sophistication to understand, interpret and agree to this Agreement. Accordingly, in the event of any ambiguity in, or dispute regarding the interpretation of, the provisions of this Agreement, the terms of this Agreement shall not be construed against the Persons that prepared them.

42.3. Severability

42.3.1. Notwithstanding Section 2.4.1, if any provision (or part of any provision) of this Agreement is ruled invalid (including due to Change in Law) by a court having proper jurisdiction, then the Parties shall:

- a. promptly meet and negotiate a substitute for such provision or part thereof which shall, to the greatest extent legally permissible, effect the original intent of the Parties; and
- b. if necessary or desirable, apply to the court which declared such invalidity for an interpretation of the invalidated provision (or part thereof) to guide the negotiations.

42.3.2. If any provision (or part of any provision) of this Agreement shall, for any reason, be held to be invalid, illegal, or unenforceable in any respect, such provision (or part thereof) shall not affect the validity, legality and enforceability of any other provision of (or the other part of such provision) or any other documents referred to in this Agreement, and this Agreement shall be construed as if such invalid, illegal, or unenforceable provision (or part thereof) had never been contained herein.

43. AMENDMENTS AND WAIVERS**43.1. Amendments**

This Agreement may only be amended by a written amendment duly executed by both Parties together with, to the extent required by Law, the Colorado State Controller or its designee, unless the amendment to this Agreement is expressly allowed or required to be made in any other manner pursuant to this Agreement.

43.2. Rights and Remedies Cumulative

Except to the extent otherwise expressly provided in this Agreement, including in Sections 33.4 and 35, the rights and remedies of the Enterprises hereunder are cumulative and are not exclusive of any rights or remedies that the Enterprises would otherwise have.

43.3. Waivers

Except to the extent otherwise expressly provided in this Agreement:

- a. any waiver of, or consent to depart from, the requirements of any provision of this Agreement shall be approved in the discretion of the Party giving it and shall be effective only if it is in writing by such Party, and only in the specific instance, for the specific time, subject to the specific conditions and for the specific purpose for which it has been given;
- b. no failure on the part of any Party to exercise, and no delay in exercising, any right or power under this Agreement shall operate as a waiver of such right or power; and
- c. no single or partial exercise of any right or power under this Agreement, including any right to give or withhold any consent, approval or Acceptance, nor any abandonment or discontinuance of steps to enforce such a right or power, shall preclude or render unnecessary any other or further exercise of such right or the exercise of any other right.

44. SET-OFF AND DEFAULT INTEREST

44.1.1. The Parties shall each have their respective set-off rights pursuant to Section 5 of Part 3 of Schedule 4 (*Payments*) with respect to their respective payment obligations under this Agreement.

44.1.2. In the event that any of the Parties fails to pay any amount under this Agreement on the due date therefor, interest shall apply and be calculated pursuant to Section 3 of Part 3 of Schedule 4 (*Payments*).

45. LIMITATION ON THIRD-PARTY BENEFICIARIES

CDOT is a third-party beneficiary of this Agreement, and each Warranty Beneficiary is a third-party beneficiary of (a) the Warranties in relation to its Warrantied Elements and (b) the obligations of Developer under Sections 9.4.1 to 9.4.5 to the extent that such obligations relate to

its Warranted Elements. It is not otherwise intended by any of the provisions of this Agreement to create any third-party beneficiary rights hereunder, or to authorize anyone not a Party hereto to maintain a suit for personal injury or property damage pursuant to the terms or provisions hereof. Notwithstanding the foregoing, the duties, obligations and responsibilities of the Parties with respect to third parties shall remain as imposed by Law.

46. INDEPENDENT DEVELOPER

46.1. Developer as an Independent Project Contractor

Developer shall perform its duties hereunder as an independent contractor and not as an employee. Neither Developer nor any agent or employee of Developer shall be deemed to be an agent or employee of the State. Developer and its employees and agents are not entitled to unemployment insurance or workers compensation benefits through the State and the State shall not pay for or otherwise provide such coverage for Developer or any of its agents or employees. Unemployment insurance benefits will be available to Developer and its employees and agents only if such coverage is made available by Developer or a third party. Developer shall pay when due all applicable employment taxes and income taxes and local head taxes incurred pursuant to this Agreement. Developer shall not have authorization, express or implied, to bind the State to any agreement, liability or understanding, except as expressly set out herein.

46.2. No Partnership or Similar Relationship

46.2.1. Nothing in this Agreement is intended or shall be construed to create any partnership, joint venture or similar relationship between Developer and the Enterprises.

46.2.2. While the term "public-private partnership" may be used on occasion to refer to relationships of the type created pursuant to this Agreement, the Parties do not have or express any intention to form or hold themselves out as a de jure or de facto partnership, joint venture or similar relationship, to share net profits or net losses, or to give the Enterprises or Developer any rights to direct or control the activities of the other or their respective Affiliates, subcontractors or consultants, except as otherwise expressly provided in this Agreement.

46.3. No Relationship with Developer's Employees and Subcontractors

46.3.1. Other than with respect to the Lenders Direct Agreement and the Principal Subcontractor Direct Agreements, in no event shall the relationship between the Enterprises and Developer be construed as creating any relationship whatsoever, including, for certainty, a contractual relationship, between the Enterprises and:

- a. Developer's employees;
- b. any Subcontractor; or
- c. any other Person.

46.3.2. Neither Developer nor any of its employees or Subcontractors is or shall be deemed to be an employee or Subcontractor of the Enterprises.

46.3.3. Except to the extent as otherwise expressly provided in this Agreement, Developer has sole authority and responsibility to employ, discharge and otherwise control its employees and Subcontractors and has complete and sole responsibility as a principal for its agents, for employees and all Subcontractors and for all other Persons that Developer or any Subcontractor hires to perform or assist in performing the Work.

47. NO PERSONAL LIABILITY

Each Enterprise's authorized representatives, including the Enterprise Representative, are acting solely as agents and representatives of the Enterprises when carrying out the provisions of or exercising the power or authority granted to them under this Agreement, and, as such, none of them shall not be liable either personally or as employees of the Enterprises for actions in their ordinary course of employment.

48. NO FEDERAL GOVERNMENT OBLIGATIONS

Developer acknowledges and agrees that, notwithstanding any concurrence or approval by the United States Federal government in of the solicitation and award of this Agreement, the United States Federal government is not a party to this Agreement and shall not be subject to any obligations or liabilities to the Enterprises, Developer, or any other Person (whether or not a Party to this Agreement) pertaining to any matter resulting from this Agreement.

49. NOTICES**49.1. Methods of Notice Submission**

49.1.1. Subject to Section 49.1.2, any notice, and any other Approval, Acceptance, consent, approval or like assent, comment, Deliverable, election, demand, direction, designation, request, agreement, instrument, certificate, report or other communication required or permitted to be given or made by a Party under this Agreement (each, a “notice” or, alternatively, a “Notice”) to another Party must be given in writing through the then current Document Control System (or, as applicable, the system established pursuant to Section 1.2.7 of Schedule 15 (Federal and State Requirements)), and the terms “notify” and “notified” shall refer to, respectively, the acts of giving and receiving any such notice.

49.1.2. Any:

- a. service of process; and
- b. other notice delivered at a time when the Document Control System or, where required pursuant to Section 1.2.7 of Schedule 15 (Federal and State Requirements), the system referred to in such Section is unavailable,

shall be given in writing by means of physical, digital or electronic communication, but, except to the extent the Enterprises otherwise Approve excluding the use of social media, messaging, broadcast and equivalent services, to the relevant Party at the following addresses, as applicable:

49.2. Time and Date of Notice Submission

49.2.1. A notice shall be deemed to have been delivered and received:

- a. if delivered through the Document Control System (or, as applicable, the system established pursuant to Section 1.2.7 of Schedule 15 (Federal and State Requirements)), when recorded as submitted by such system; and
- b. otherwise:
 - i. upon receipt (confirmed by automatic answer back, read receipt or equivalent evidence of receipt), if validly transmitted by digital or electronic distribution before 3:00 p.m. (local time at the place of receipt) on a Working Day;
 - ii. on the next Working Day following receipt (confirmed by automatic answer back, read receipt or equivalent evidence of receipt), if validly transmitted by digital or electronic distribution on or after 3:00 p.m. (local time at the place of receipt) on a Working Day;
 - iii. upon receipt, if physically delivered in person or by courier; or
 - iv. if delivered by courier or postage pre-paid certified or registered mail, on the date of receipt as shown by the addressee's registry or certification receipt or on the date receipt at the appropriate address is refused, as shown on the records or manifest of the United States Postal Service or independent courier.

49.3. Changes in Address

The Parties will notify each other in writing of any change of address and/or contract information, such notification to become effective five Working Days after notification.

50. FURTHER ASSURANCES

Developer shall promptly execute and deliver to the Enterprises all such instruments and other documents and assurances as are reasonably requested by the Enterprises to further evidence the obligations of Developer hereunder, including assurances regarding the obligations of Subcontractors referenced herein.

51. COSTS AND EXPENSES OF THE PARTIES

Except as otherwise expressly provided in this Agreement, each Party shall bear its own costs and expenses in connection with the preparation, negotiation, execution and performance of this Agreement and all other related agreements.

52. INTELLECTUAL PROPERTY RIGHTS**52.1. Grant of License, Ownership and Use**

52.1.1. Developer hereby grants to (or, with respect to any Third Party Intellectual Property, shall provide to or obtain for) the Enterprises a non-exclusive, non-transferable (other than to CDOT), irrevocable, fully paid up and sub-licensable license to use the Project Intellectual Property and any Third Party Intellectual Property only:

- a. excluding the Proprietary Intellectual Property and any Third Party Intellectual Property, for the purposes of this Project or any other bridge, highway, street and road or other transportation facility of any mode (and any project related thereto) owned and operated by the Enterprises or any other State Governmental Authority, including any Related Transportation Facility; and
- b. in respect of the Proprietary Intellectual Property and, subject to Section 52.1.1.d, any Third Party Intellectual Property:
 - i. to the extent reasonably necessary to effect integration with any Other Department Project; and

- ii. for the purposes of this Project,

provided that:

- c. the granting of such license and the Enterprises' right to exercise their rights thereunder shall not be construed to provide the Enterprises with greater rights to oversee, direct, manage and engage in the Project and the Work than they would otherwise have under this Agreement, and the Enterprises agree that any use of Project Intellectual Property in violation of the same by themselves or any of their sublicenses shall be at their own risk, cost and expense; and
- d. Developer may, to the extent it is reasonably unable to comply with Section 52.1.1.b with respect to any Third Party Intellectual Property, comply with its obligations under Section 52.1.1.b through functionally equivalent alternative arrangements subject to the consent of the Enterprises (such consent not to be unreasonably withheld).

52.1.2. Subject to Section 52.3 and the terms of any Intellectual Property Escrow, Developer shall deliver to the Department copies of all Project Intellectual Property used in providing the Work promptly following delivery of written request from the Enterprises. Subject to the terms of this Agreement, including Sections 7.3.3 and 34.2.1.c.iii, Project Intellectual Property shall remain exclusively the property of Developer (or, as applicable, another Person), notwithstanding any delivery of copies thereof to the Enterprises.

52.2. Right to Purchase

The Enterprises shall have the right to purchase from Developer a non-exclusive, non-transferable, irrevocable, fully paid up and sub-licensable license to use the Proprietary Intellectual Property on any other bridge, highway, street and road or other transportation facility of any mode (and any project related thereto) owned and operated by the Enterprises or CDOT subject to terms and conditions acceptable to the Enterprises and Developer (each acting reasonably). If requested by the Enterprises, Developer shall also use Reasonable Efforts to procure for the Enterprises a right to purchase an equivalent license to use any Third Party Intellectual Property.

52.3. Intellectual Property Escrow Agreement

52.3.1. Developer shall elect either to:

- a. deliver and/or grant access to Project Intellectual Property comprised of software, source code and/or source code documentation directly to the Enterprises for purposes of fulfilling Developer's obligations under Section 52.1, and enabling the Enterprises to exercise their rights pursuant to the license granted to them pursuant to Section 52.1.1; or
- b. Developer may elect to deposit with a neutral custodian any such Project Intellectual Property (including any modification, update, upgrade, correction, revision or replacement made to or in place of the same),

provided that Developer shall not make any such election, or seek or require terms related to any resulting Intellectual Property Escrow, in a manner that is calculated or intended to directly or indirectly prejudice or frustrate the Enterprises' ability to exercise their rights pursuant to the license granted to them pursuant to Section 52.1.1.

52.3.2. If Developer makes an election pursuant to Section 52.3.1.b, Developer shall select, subject to the Enterprises' Approval, one or more escrow companies or other neutral custodian (each an "Intellectual Property Escrow Agent"), and establish one or more escrows (each an "Intellectual Property Escrow") with the Escrow Agent, subject to terms and conditions acceptable to the Enterprises and Developer (each acting reasonably), for the deposit, retention, upkeep and release of such Project Intellectual Property. Intellectual Property Escrows also may include Developer-Related Entities other than Developer as parties.

- 52.3.3. If Developer elects to deliver such Project Intellectual Property to an Intellectual Property Escrow Agent, Developer shall make such delivery not later than the following times:
- a. for pre-existing software, source code and source code documentation, immediately upon execution of this Agreement or, if provided by a Subcontractor, upon execution of the relevant Subcontract;
 - b. for software, source code and source code documentation incorporated into or used on or for the Project or any portion thereof, by the 15th Calendar Day after it is first incorporated or used; and
 - c. for any modification, update, upgrade, correction, revision or replacement made to or in place to or of any software, source code and source code documentation previously delivered pursuant to Section 52.3.3.a or 52.3.3.b, not later than the 15th Calendar Day after the end of the calendar quarter in which it is first incorporated or used.
- 52.3.4. The Enterprises shall be named intended third-party beneficiaries of each escrow agreement and each Intellectual Property Escrow with direct rights of enforcement against Developer (and, if applicable, any other Developer-Related Entity) and the relevant Intellectual Property Escrow Agent. Each escrow agreement shall provide that neither Developer nor the relevant Intellectual Property Escrow Agent (nor, if applicable, any other Developer-Related Entity) shall have any right to amend or supplement it, or waive any provision thereof, without the Enterprises' prior Approval.
- 52.3.5. Intellectual Property Escrows shall provide rights of access, use and inspection (but not, for certainty, possession) to the Parties and their designees at any time to permit the Enterprises fully to exercise their rights pursuant to the license granted to them pursuant to Section 52.1.1 (including, on and from the Expiry Date (or, if earlier, on and from the Termination Date) such rights as are required pursuant to Section 34.2.1.c.iv), subject to terms and conditions reasonably necessary to protect the confidentiality and proprietary nature of the contents of such Intellectual Property Escrows.
- 52.3.6. The Intellectual Property Escrows shall survive Substantial Completion, Final Acceptance and the end of the Term regardless of the reason for a period of five years from the Expiry Date (or, if earlier, the Termination Date), or otherwise until such earlier date such time as the Parties mutually agree, in their respective sole discretion, that the Intellectual Property contained therein is of no further use or benefit to the Project.

53. SPECIAL PROVISIONS

53.1. Controller's Approval

This Agreement shall not be valid until it has been approved by the Colorado State Controller or designee.

53.2. Governmental Immunity

No term or condition of this Agreement shall be construed or interpreted as a waiver, express or implied, of any of the immunities, rights, benefits, protections, or other provisions, of the Colorado Governmental Immunity Act, C.R.S. §§24-10-101 *et seq.*, or the Federal Tort Claims Act, 28 U.S.C. §§1346(b) and 2671 *et seq.*, as applicable now or hereafter amended.

53.3. Compliance with Law

Developer shall strictly comply with all applicable Federal and State laws, rules, and regulations in effect or hereafter established, including, without limitation, laws applicable to discrimination and unfair employment practices.

53.4. Binding Arbitration Prohibited

The State does not agree to binding arbitration by any extra-judicial body or person. Any provision to the contrary in this Agreement or incorporated herein by reference shall be null and void.

53.5. Software Piracy Prohibition

State or other public funds payable under this Agreement shall not be used for the acquisition, operation, or maintenance of computer software in violation of federal copyright laws or applicable licensing restrictions. Developer hereby certifies and warrants that, during the term of this Agreement and any extensions, Developer has and shall maintain in place appropriate systems and controls to prevent such improper use of public funds. If the State determines that Developer is in violation of this provision, the State may exercise any remedy available at law or in equity or under this Agreement, including, without limitation, termination of this Agreement pursuant to Section 32.2.1.a for a Developer Default number (28) in Section 32.1.1, as well as any remedy consistent with Federal copyright laws or applicable licensing restrictions.

53.6. Employee Financial Interest / Conflict of Interest

The signatories aver that to their knowledge, no employee of the State has any personal or beneficial interest whatsoever in the service or property described in this Agreement. Developer has no interest and shall not acquire any interest, direct or indirect, that would conflict in any manner or degree with the performance of Developer's services and Developer shall not employ any person having such known interests.

53.7. Vendor Offset (C.R.S. §§ 24-30-202 (1) and 24-30-202.4)

Subject to C.R.S. § 24-30-202.4 (3.5), the Colorado State Controller, or the Enterprises, may withhold payment under the State's vendor offset intercept system for debts owed to State agencies for:

- a. unpaid child support debts or child support arrearages;
- b. unpaid balances of tax, accrued interest, or other charges specified in C.R.S. § 39-21-101, *et seq.*;
- c. unpaid loans due to the Student Loan Division of the Department of Higher Education;
- d. amounts required to be paid to the Unemployment Compensation Fund pursuant to Articles 70-82 of Title 8, C.R.S.; and
- e. other unpaid debts owing to the State as a result of final agency determination or judicial action.

53.8. Public Contracts for Services

Developer certifies, warrants, and agrees that it does not knowingly employ or contract with an illegal alien who will perform work under this Agreement and will confirm the employment eligibility of all employees who are newly hired for employment in the United States to perform work under this Agreement, through participation in the E-Verify Program or the CDOT program established pursuant to C.R.S. § 8-17.5-102(5)(c), Developer shall not knowingly employ or contract with an illegal alien to perform work under this Agreement or enter into a contract with a Subcontractor that fails to certify to Developer that the Subcontractor shall not knowingly employ or contract with an illegal alien to perform work under this Agreement. Developer:

- a. shall not use E-Verify Program or CDOT program procedures to undertake pre-employment screening of job applicants while this Agreement is being performed;
- b. shall notify the Subcontractor and the contracting State agency within three Calendar Days if Developer has actual knowledge that a Subcontractor is employing or contracting with an illegal alien for work under this Agreement;
- c. shall terminate the subcontract if a Subcontractor does not stop employing or contracting with the illegal alien within three Calendar Days of receiving the notice; and

- d. shall comply with reasonable requests made in the course of an investigation, undertaken pursuant to C.R.S. § 8-17.5-102(5), by the Colorado Department of Labor and Employment.

If Developer participates in the CDOT program, Developer shall deliver to the contracting State agency, institution of higher education or political subdivision a written, notarized affirmation, affirming that Developer has examined the legal work status of such employee, and shall comply with all of the other requirements of the CDOT program. If Developer fails to comply with any requirement of this provision or C.R.S. § 8-17.5-101, *et seq.*, the contracting State agency may terminate this Agreement for breach and, if so terminated, Developer shall be liable for damages.

54. COUNTERPARTS

This Agreement (and an amendment or waiver in respect to this Agreement) may be executed in one or more counterparts. Any single counterpart or a set of counterparts executed, in either case, by each of the Parties and, to the extent required by Law, the Colorado State Controller or its delegate, shall constitute a full and original instrument for all purposes.

ALL AGREEMENTS REQUIRE APPROVAL BY THE STATE CONTROLLER

C.R.S. § 24-30-202 requires the State Controller to approve all State Agreements. This Agreement is not valid until signed and dated below by the State Controller or its delegate. Developer is not authorized to begin performance until such time. If Developer begins performing prior thereto, the State of Colorado is not obligated to pay Developer for such performance and/or for any goods and/or services provided hereunder.

ANNEX A: DEFINITIONS AND ABBREVIATIONS

Part A: Definitions

Except as otherwise specified herein, or as the context may otherwise require, the following terms have the respective meanings set out below for all purposes of this Agreement:

<u>“Abandonment”</u>	means either: <ol style="list-style-type: none"> a. Developer demonstrates through statements, acts or omissions an intent not to perform, or continue to perform, a material part of the Work; or b. the failure to perform a material part of the Work for a continuous period of 45 Calendar Days (except to the extent that such failure is substantially consistent with the then current Project Schedule and does not otherwise constitute a breach of this Agreement), <p>in each case unless such intention or failure is otherwise expressly permitted or excused pursuant to this Agreement, including as a result of the occurrence of any Compensation Event or Relief Event.</p>
<u>“Acceptance”</u>	has the meaning given to it in <u>Section 2.2.3.a</u> and <u>“Accept”</u> , <u>“Acceptable”</u> and <u>“Accepted”</u> shall be similarly construed.
<u>“Accepted Independent Consultant”</u>	has the meaning given to it in <u>Section 3.4.b.i</u> of <u>Schedule 12 (Handback Requirements)</u> .
<u>“Access Permit”</u>	means any Special Permit and any Utility Permit.
<u>“Account Balances”</u>	means, in respect of each bank account and/or trust account held by or on behalf of Developer (for certainty, excluding the Handback Reserve Account and the Physical Damage Proceeds Reserve): <ol style="list-style-type: none"> a. the balance of such account; <i>plus</i> b. to the extent a letter of credit has been issued in partial or full substitution for any amount otherwise required to stand to the credit of any such account pursuant to the Financing Documents, the undrawn principal amount of such letter of credit, <p>in each case as of the Termination Date.</p>
<u>“Active Traffic Management”</u>	means real-time management of traffic using ITS and/or Variable Message Signs.
<u>“Activity”</u>	means each task or sub-task that is identified by Developer as being necessary to complete the Construction Work and the O&M Work During Construction, and that is included in the Project Schedule as a subcomponent of the Work Breakdown Structure.
<u>“Actual Benchmarked Insurance Cost”</u>	means, in respect of any Insurance Review Period, the aggregate of the insurance premiums reasonably incurred by Developer to maintain the Benchmarked Insurances during such period, excluding any broker’s fees and expenses.
<u>“Ad Valorem and Possessory Interest Tax”</u>	has the meaning given to it in <u>Section 30.1.3.a</u> .
<u>“Additional Right-of-Way”</u>	means all Additional ROW Parcels held or acquired in the name of CDOT (or in such other name(s) as the Enterprises may otherwise determine in

	their discretion) pursuant to <u>Section 7.3.1</u> , but in each case with effect only from the Project License Start Date and only until the Project License End Date, in each case, for the relevant Additional ROW Parcel.
<u>“Additional ROW Parcels”</u>	means each parcel of land that Developer proposes, at its discretion, to form part of the Additional Right-of-Way, and that subsequently becomes part of the Additional Right-of-Way, pursuant to <u>Schedule 18 (Right-of-Way)</u> .
<u>“Additional Survey Data”</u>	means any survey data other than the Supplied Survey Data.
<u>“Additional Warranties”</u>	means those warranties that Developer is required to provide pursuant to <u>Schedule 10 (Design and Construction Requirements)</u> .
<u>“ADR”</u>	shall have the meaning given to it in <u>Section 2(b)</u> of <u>Part A</u> of <u>Schedule 16 (Mandatory Terms)</u> .
<u>“Affected Party”</u>	has the meaning given to it in the definition of Force Majeure Event in this <u>Part A</u> of <u>Annex A (Definitions and Abbreviations)</u> .
<u>“Affiliate”</u>	means, in relation to any Person: <ul style="list-style-type: none"> a. any other Person having Control of that Person; b. any other Person over whom that Person has Control; and c. any Person over whom any other Person referred to in paragraph <u>a.</u> of this definition also has Control.
<u>“Age”</u>	means the elapsed time since an Element was first constructed or installed or if applicable, last reconstructed, rehabilitated, restored, renewed or replaced.
<u>“Agreed or Determined”</u>	has the meaning given to it in <u>Section 2.2.1</u> .
<u>“Agreement”</u>	has the meaning given to it in the Preamble and, for certainty, includes this <u>Annex A (Definitions and Abbreviations)</u> and the Schedules.
<u>“Agreement Date”</u>	has the meaning given to it in the Preamble.
<u>“Annual O&M Report”</u>	has the meaning given to it in <u>Section 13.2</u> of <u>Schedule 11 (Operations and Maintenance Requirements)</u> .
<u>“Appendix B Parcel”</u>	means any ROW Parcel listed in <u>Appendix B (Known Hazardous Substances Parcels)</u> of <u>Schedule 17 (Environmental Requirements)</u> .
<u>“Appendix B Parcel Costs”</u>	means the aggregate amount of Excess Costs, Milestone Payment Delay Costs and/or Delay Financing Costs resulting from the occurrence of all Appendix B Parcel Unexpected Hazardous Substances Events (for certainty, whether or not such events are also Compensation Events), excluding any such event: <ul style="list-style-type: none"> a. that resulted in aggregate Excess Costs, Milestone Payment Delay Costs and Delay Financing Costs equal to or less than \$20,000; and b. to the extent that it arose as a result of any breach of Law, Governmental Approval, Permit or this Agreement, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity.
<u>“Appendix B Parcel Relief Start Date”</u>	means the Calendar Day on which the aggregate amount of Appendix B Parcel Costs first equals or exceeds \$25,000,000.

<u>“Appendix B Parcel Unexpected Hazardous Substances Event”</u>	the encountering or discovery of collectively all Unexpected Hazardous Substances on, in or under an individual Appendix B Parcel.
<u>“Applicable Tax”</u>	means any income tax that is imposed on Developer (or, to the extent that Developer is treated as a pass through entity for Applicable Tax purposes, on its Equity Members) by and payable to the United States, any state of the United States or any political subdivision of any state of the United States, excluding, however, any income tax that is payable to any thereof solely due to Developer or any of the Equity Members being incorporated, formed or domiciled outside of any state of the United States.
<u>“Approval”</u>	has the meaning given to it in <u>Section 2.2.3.b</u> and “ <u>Approve</u> ” and “ <u>Approved</u> ” shall be similarly construed.
<u>“As-Built”</u>	means the revised set of drawings, specifications, documents, data and surveys submitted by Developer and Accepted by the Department pursuant to <u>Schedules 8 (Project Administration)</u> and <u>10 (Design and Construction Requirements)</u> and showing the exact dimensions, geometry, and location of completed Construction Work.
<u>“Asset”</u>	means any physical asset used from time to time by Developer or a Subcontractor to perform its obligations under this Agreement or any Subcontract, including any: <ul style="list-style-type: none"> a. Element; b. land or buildings (whether or not part of or on the Site); c. plant or machinery; d. equipment; e. spare parts; and f. tools.
<u>“Asset Condition Inspections”</u>	means those inspections required to be conducted pursuant to <u>Section 8 of Schedule 11 (Operations and Maintenance Requirements)</u> to determine the condition of all Elements and to identify structural and non-structural deficiencies which may present a potential safety hazard.
<u>“Asset Condition Report”</u>	means a report prepared by Developer pursuant to <u>Section 3.5 of Schedule 12 (Handback Requirements)</u> .
<u>“Authority Having Jurisdiction”</u>	means the Denver Fire Department.
<u>“Automated Vehicle Locator (AVL) System”</u>	means the system described in <u>Section 12 of Schedule 11 (Operations and Maintenance Requirements)</u> .
<u>“Automatic License Plate Recognition”</u>	means a camera-based system used to obtain an image of a vehicle’s license plate if a transponder is not detected.
<u>“Automatic Traffic Recorder”</u>	means a system that continuously collects vehicle volume and functional classification data using in-pavement loops and piezoelectric sensors.
<u>“Automatic Vehicle Identification Reader”</u>	means the system that is installed at each tolling point and used to read tag information stored inside each transponder.
<u>“Available Insurance”</u>	has the meaning given to it in <u>Section 35.5</u> .
<u>“Average Daily Traffic”</u>	means the average total traffic, in both directions, in one Calendar Day.

“Bare and Wet Pavement” means when a minimum of 95% of the driving surface (edge line to edge line) including shoulders is free of snow, slush and/or ice.

“Base Benchmarked Insurance Cost” means, in respect of any Insurance Review Period:

- a. the greater of:
 - i. the Proposal Insurance Cost; and
 - ii. either:
 - A. in respect of the first Insurance Review Period, the Actual Benchmarked Insurance Costs for such period; or
 - B. in respect of any other Insurance Review Period, the amount calculated pursuant to paragraph a.ii.A of this definition, indexed annually in respect of each subsequent Insurance Review Period from each Insurance Renewal Date in respect of which such costs were originally paid to the corresponding Insurance Renewal Date in such subsequent Insurance Review Period,

less

- b. any Base Benchmarked Insurance Deduction in respect of such Insurance Review Period.

“Base Benchmarked Insurance Deduction”

means, in respect of any Uninsurable risk or any Unavailable Term that relates to any Benchmarked Insurance, an amount calculated in respect of an Insurance Review Period that equals:

- a. the amount (if any) by which the Base Benchmarked Insurance Cost would have been a lesser amount had:
 - i. such risk been an Uninsurable risk; or
 - ii. such Insurance Term been an Unavailable Term,

in the case of either i. or ii., as of the dates by reference to which the Base Benchmarked Insurance Cost in respect of such Insurance Review Period is calculated; or
- b. if, in the reasonable opinion of the Insurance Broker that prepares the applicable Joint Insurance Cost Report, it is impossible to determine an amount pursuant to paragraph a. of this definition in respect of any such Uninsurable risk or Unavailable Term, the amount (if any) by which it is reasonable to reduce the Base Benchmarked Insurance Cost under such circumstances, having due regard (to the extent possible) to:
 - i. the amount by which the Actual Benchmarked Insurance Cost is less than it would have been as a result of such risk becoming an Uninsurable risk or of such Insurance Term becoming an Unavailable Term; and
 - ii. the amount determined pursuant to paragraph b.i. of this definition as a percentage of the Actual Benchmarked Insurance Cost as calculated

immediately prior to such risk becoming an Uninsurable risk or such Insurance Term becoming an Unavailable Term.

<u>“Base Case Equity IRR”</u>	means the Preliminary Equity IRR as updated pursuant to <u>Schedule 1 (Financial Close)</u> .
<u>“Base CPP”</u>	means the “Base Capital Performance Payment” set out in <u>Section 2(f) of Part 2 of Schedule 6 (Performance Mechanism)</u> .
<u>“Base Financial Model”</u>	means the financial model generated and computed by spreadsheet software as submitted in the Developer’s Proposal (and subsequently replaced in this Agreement, pursuant to the Project Agreement Amendment, by the Financial Model Accepted by the Enterprises pursuant to <u>Section 2.2(h)(i) of Schedule 1 (Financial Close)</u>), a copy of which is attached as <u>Schedule 26 (Base Financial Model)</u> .
<u>“Base MPP”</u>	means the Base CPP plus the Base OMRP.
<u>“Base OMRP”</u>	means the “Base OMR Payment” set out in <u>Section 2(f) of Part 2 of Schedule 6 (Performance Mechanism)</u> .
<u>“Baseline Asset Condition Inspection Plan”</u>	has the meaning given to it in <u>Section 2.3.2 of Schedule 11 (Operations and Maintenance Requirements)</u> .
<u>“Baseline Credit Spreads”</u>	means: <ul style="list-style-type: none"> a. subject to paragraph <u>b.</u> of this definition, the credit spreads in the “Proposer Basis Scale” submitted by the Preferred Proposer pursuant to Section 6.6 of the Financial Proposal Submission Requirements as defined in the ITP; or b. for purposes of <u>Section 5 of Annex A to Schedule 1 (Financial Close)</u>, and where expressly stated that such term shall have the meaning given to it in this paragraph <u>b.</u>, the relevant baseline credit spreads issued by the Enterprises to the Proposers pursuant to Section 4.2.3.c.ii of Part C of the ITP.
<u>“Baseline Inspections”</u>	has the meaning given to it in <u>Section 2.3.1.a of Schedule 11 (Operations and Maintenance Requirements)</u> .
<u>“Baseline Schedule ”</u>	means the logic-based Critical Path schedule for all Construction Work and all O&M Work During Construction which has been prepared by Developer based on the Proposal Schedule and Approved by the Enterprises pursuant to <u>Section 3.3.4.a. of Schedule 8 (Project Administration)</u> .
<u>“Baseline Substantial Completion Date”</u>	means the Baseline Substantial Completion Target Date, as such date may be extended from time to time pursuant to: <ul style="list-style-type: none"> a. <u>Section 15.3.1.c.iii</u>, as a result of the occurrence of a Supervening Event; or b. a Change documented in a Change Order.
<u>“Baseline Substantial Completion Target Date”</u>	means March 4, 2022, as such date shall be modified on a day for day basis to reflect any delay in achieving Financial Close relative to November 30, 2017 (the date assumed in the ITP), as such modification shall be formalized pursuant to the Project Agreement Amendment in accordance with paragraph <u>d.</u> of the definition thereof in this <u>Part A of Annex A (Definitions and Abbreviations)</u> .

<u>“Baseline TIFIA Term Sheet”</u>	means the Baseline TIFIA Term Sheet attached as Exhibit 1 in Part I to the ITP as of the Final Project Information Date.
<u>“BE”</u>	has the meaning given to it in the Preamble.
<u>“BE Trustee”</u>	means Zions Bank, a division of ZB, National Association, the successor trustee under the Master Indenture.
<u>“Benchmark Interest Rates”</u>	means the publicly documented interest rates of each maturity included in the following indices: <ul style="list-style-type: none"> a. the LIBOR swap spot curve, as provided by Bloomberg; b. the Overnight Index Swap curve, as provided by Bloomberg; c. the Interpolated Curve (ICURV), as provided by Bloomberg. d. the U.S. Spot Treasury Yield Curve; e. the Municipal Market Data (MMD) Benchmark, as provided by Thomson Reuters; f. the Securities Industry and Financial Markets Association (SIFMA) Municipal Swap Index (formerly known as the Bond Market Association (BMA) Municipal Swap Index); and g. the State and Local Government Series (SLGS) index, as provided by the US Treasury.
<u>“Benchmarked Insurance Inception Date”</u>	means the Substantial Completion Date.
<u>“Benchmarked Insurance”</u>	means each of the Insurance Policies required pursuant to <u>Section 2</u> of <u>Schedule 13</u> (<i>Required Insurances</i>).
<u>“Beneficial Reuse and Materials Management Plan”</u>	means the “Beneficial Reuse and Materials Management Plan” in the form provided in the Reference Documents.
<u>“Best Management Practices”</u>	has the meaning established by applicable Environmental Law governing the particular environmental media or source of Hazardous Substances such practices are intended to address or, in the absence of a particular definition under Environmental Law, shall refer to best practices commonly used to avoid a Release or exacerbation of a Release with respect to the relevant environmental media or source of Hazardous Substances.
<u>“BNSF”</u>	means BNSF Railway Company.
<u>“BNSF Crossing”</u>	means the existing and/or proposed crossing by the BNSF Railroad through the I-70 East corridor on the Right-of-Way as described in <u>Section 10.1.5</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“BNSF RRA”</u>	means the railroad agreement between CDOT and BNSF in relation to the Project, a draft of which agreement was provided to the Preferred Proposer as one of the Reference Documents numbered 29.10.10.03.
<u>“BNSF Work”</u>	means all duties and services to be furnished and provided by BNSF as required by the BNSF RRA.
<u>“Bond Financing”</u>	means any Project Debt financing to be provided through the capital markets issuance (including through a private placement) of either: <ul style="list-style-type: none"> a. PABs by the PABs Issuer; or

b. taxable bonds,

that, in the case of paragraphs a. or b., is assumed in the Base Financial Model.

“Breakage Costs”

means any prepayment premiums or penalties, make-whole payments or other prepayment amounts, including costs of early termination of interest rate and inflation rate hedging, swap, collar or cap arrangements, that Developer must pay, or that may be payable or credited to Developer, under any Financing Document or otherwise as a result of the payment, redemption, acceleration or reduction of all or any portion of the principal amount of Project Debt prior to its scheduled payment date, excluding, however, any such amounts included in the principal amount of any Refinancing.

“Bridge Surcharges”

means the bridge safety surcharges imposed by BE pursuant to C.R.S. § 43-4-805.

“Build America Bureau”

means the Build America Bureau within the US DOT.

“Calendar Day”

means a calendar day as determined by reference to the time and date in Denver, Colorado, and “day” means any such calendar day.

“Calendar Year”

means each consecutive period of 12 months commencing on January 1 and ending on December 31 as each such day shall be determined by reference to the time and date in Denver, Colorado.

“Category 1 Defect”

means an O&M Defect in an Element or any part of an Element which causes or has the potential to cause any one or more of the following:

- a. an immediate or imminent health or safety hazard, nuisance or other similar immediate or imminent risk to Users or workers (including for example inconveniences such as delays and detours, rough rides, obstacles, slippery conditions, or issues requiring Users to make sudden evasive maneuvers);
- b. an immediate or imminent risk of structural failure;
- c. an immediate or imminent risk of damage to a third party’s property or equipment; and
- d. an immediate or imminent risk of damage to the Environment or any Improvements.

“Category 2 Defect”

means an O&M Defect in an Element or any part of an Element other than a Category 1 Defect.

“CCD Identified Future Improvements”

means all projects listed in Sections 1.17.1 and 1.17.3 of Section 1 of Schedule 10 (*Design and Construction Requirements*).

“CDOT”

has the meaning given to it in the Preamble and, for certainty, refers to the Colorado Department of Transportation acting in its own capacity and not pursuant to a delegation of authority by the Enterprises pursuant to Section 18.1.2.

“CDOT Roadways”

means I-270, I-225, Vasquez Boulevard, Colorado Boulevard and Quebec Street, in each case including the ramps up to the intersecting cross-roadway (including directional island and free-flow turn lane where present).

“CDOT Standard Specifications”

has the meaning given to it in Section 1.1 of Appendix A to Schedule 10A (*Applicable Standards and Specifications*).

- “Central 70 Note” has the meaning given to it in the Supplemental Indenture.
- “Chairperson” has the meaning given to it in Section 5.c.iii of Schedule 25 (*Dispute Resolution Procedure*).
- “Change” means any change in the Work relative to what is otherwise permitted or required under this Agreement, including any change or addition to, or replacement of, a Project Standard.
- “Change in Costs” means:
- a. except to the extent paragraphs b. or c. of this definition apply, in respect of:
 - i. any Compensation Event (but, in the case of a Compensation Event falling within paragraph c.ii of the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*), subject to the proviso to the definition of Qualifying Change in Law in this Part A of Annex A (*Definitions and Abbreviations*)); or
 - ii. any Developer Change documented in a Change Order, but only for purposes of estimating costs pursuant to Sections 2.1 (subject to the proviso to such Section) and 2.2.c of Schedule 24 (*Change Procedure*) and of calculating net savings pursuant to Section 3 of Schedule 24 (*Change Procedure*),
the effect of such Compensation Event or Developer Change (whether such effect is (I) of a one-off or recurring nature and/or (II) positive or negative) on the actual or anticipated losses, charges, liabilities and costs and expenses of Developer, including, as relevant and without double counting:
 - iii. any reasonable external professional costs and expenses incurred:
 - A. in complying with Developer’s obligations under Section 15.2.2;
 - B. in respect of any such Compensation Event (other than any such event as described in paragraphs d. and e., of the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*)), in preparing any related Supervening Event Submission (or any update thereof) in compliance with Section 15.1; and
 - C. in respect of any Compensation Event as described in paragraphs d. or e. of the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*), in complying with Sections 1.1.c and 1.2 of Schedule 24 (*Change Procedure*);
 - iv. any expenditure that is treated as a capital expenditure in accordance with GAAP;
 - v. any life-cycle, operating, maintenance or

- replacement costs;
- vi. any employment and labor costs;
 - vii. with respect to any insurance that Developer is required to obtain and maintain, or cause to be obtained and maintained, pursuant to Sections 25.1.1 and 25.1.2.c, any change in premiums, premium tax or broker's fees and expenses, including any change therein resulting from:
 - A. a change in the amount of any deductible or in any amount of coverage; and
 - B. any other change in such insurance, including to Insurance Terms; and
 - viii. any financing costs (excluding any Delay Financing Costs and any Milestone Payment Delay Costs) incurred by Developer as a result of the occurrence of such Compensation Event, including:
 - A. any reasonable external professional costs and expenses incurred in complying with Developer's obligations under Sections 15.5.1 and 28.4.1;
 - B. any such costs required to ensure Developer's continued compliance with the Financing Agreements;
 - C. any reasonable commitment fees, interest costs and hedging costs, including Breakage Costs;
 - D. any lost interest on any of Developer's own capital; and
 - E. any other such costs for debt or equity finance required pending receipt of a payment from the Enterprises in connection with such Compensation Event; and

in all cases for purposes of this paragraph a. of this definition:

- ix. other than with respect to paragraphs a.iii., a.vii. or a.viii. of this definition, as any amounts falling within this definition of Change in Costs are calculated or otherwise taken into account (including through mark-ups) in accordance with Appendix A to Schedule 24 (Change Procedure); and
- x. excluding:
 - A. any internal costs, fees or expenses of any Developer-Related Entity except to the extent expressly permitted in accordance with Appendix A to Schedule 24 (Change Procedure); and
 - B. any costs or expenses that are expressly

provided to be incidental and excluded pursuant to the terms of Schedule 17 (Environmental Requirements);

- b. subject to Sections 15.7.1.d.ii and 33.1.6.c.i, in respect of any:
 - i. Non-Appendix B Parcel Unexpected Hazardous Substances Event; or
 - ii. Appendix B Parcel Unexpected Hazardous Substances Event, Excess Costs; and
- c. subject to Section 33.1.6.c.i, in respect of any Unexpected Groundwater Contamination Event, Excess Groundwater Costs.

“Change in Law”

means the coming into effect after the Setting Date of:

- a. the enactment, promulgation or adoption of any Law;
- b. a binding change in the judicial or administrative interpretation of any Law; or
- c. any modification (including repeal) of any Law,

in each case, by a Governmental Authority that:

- d. is materially different from or inconsistent with Law as in effect prior to the coming into effect of the relevant change as referenced in paragraphs a., b. or c. of this definition; and
- e. was not (in the same or substantially similar form and substance to that which later comes into effect) pending, passed or adopted, including in the form of a bill or draft, as of the Setting Date,

provided that Change in Law shall exclude any such enactment, promulgation, adoption, change or modification of any (i) Federal Law (other than any Public Safety Order), (ii) State or local labor Law or (iii) State or local tax Law in each of cases (i), (ii) or (iii) of general applicability.

“Change of Control”

means any direct or indirect Equity Transfer of interests in either Developer or any Equity Member that results in or could (upon the occurrence of any condition or exercise of any right or option) result in any change in the Person or Persons that has direct or indirect Control of Developer or such Equity Member, excluding:

- a. any Permitted Equity Transfer; and
- b. a bona fide open market transaction in securities effected on a recognized public stock exchange involving an initial public offering.

“Change Order”

has the meaning given to it in Section 1.2.e of Schedule 24 (Change Procedure).

“Circuit Time for Plowing”

means the total time required to fully service a designated Snow Route calculated from the time the plow vehicle leaves the yard to the time it has completed the plowing operation on the entire plow route.

- “Circuit Time for Spreading” means the total time required to fully service a designated salt or liquid anti-icing/de-icing Snow Route calculated from the time the Spreader vehicle leaves the yard to the time it completes the route.
- “City of Denver” means the City and County of Denver, Colorado.
- “Civil Rights Requirements” has the meaning given to it in Section 1.1.1 of Schedule 15 (*Federal and State Requirements*).
- “Claim” means any claim, demand, action, cause of action, proceeding (legal or administrative), investigation, judgment, demand, suit, dispute or liability.
- “Closed Circuit Television” means cameras used for monitoring travel conditions.
- “Closure” means that all or part of any travel lane, ramp, cross street, shoulder, sidewalk or driveway within the O&M Limits is closed or blocked, or that the use thereof is otherwise restricted, for a period of any duration.
- “Closure Deduction Period” means, in respect of any Non-Permitted Closure, each continuous period of 15 minutes commencing from and including:
- a. subject to paragraph b. of this definition, the commencement time of such Non-Permitted Closure; or
 - b. in the case of any Closure that is deemed to be a Non-Permitted Closure pursuant to Section 2.11.14.c or 2.11.14.d of Schedule 10 (*Design and Construction Requirements*), the expiry of the 30 minute period referred to in the relevant Section,
- provided that, for certainty, the Closure Deduction Period during which the relevant Closure actually ends (or is deemed to end in accordance with the proviso to the definition of Non-Permitted Construction Closure in this Part A of Annex A (*Definitions and Abbreviations*)) will have a duration of less than 15 minutes and any reference in Schedule 6 (*Performance Mechanism*) to a "partial" Closure Deduction Period shall be deemed to refer to such Closure Deduction Period in respect of the relevant Non-Permitted Closure.
- “Closure Default Event” means the occurrence of any of the following:
- a. during the Construction Period, the cumulative amount of Construction Closure Deductions accrued during:
 - i. any rolling 4 month period equals or exceeds \$160,000; or
 - ii. any rolling 12 month period equals or exceeds \$240,000;
 - b. during the Operating Period, the cumulative amount of Operating Period Closure Deductions accrued during:
 - i. any 1 month period equals or exceeds \$600,000 (indexed); or
 - ii. any rolling 4 month period equals or exceeds \$800,000 (indexed); or
 - iii. any rolling 12 month period equals or exceeds \$1,000,000 (indexed),
- provided that, for certainty, any Construction Closure Deduction or

Operating Period Closure Deduction that is being disputed in good faith by Developer shall be disregarded for purposes of determining whether a Closure Default Event has occurred until such time as it has been Agreed or Determined that the relevant deduction was valid.

“Collateral Agent”

means any financial institution designated by the Lenders to act as their trustee or agent pursuant to the Financing Documents.

“Command Control and Monitoring System”

means the integrated overarching system required to monitor, control and implement the various fire, life safety, and other systems located in the Cover.

“Commercial Panel”

means the dispute resolution panel of such name to be established pursuant to Section 5 of Schedule 25 (*Dispute Resolution Procedure*).

“Committed Investment”

means:

- a. any form of direct investment by Equity Members in Developer, including the purchase of equity shares in Developer;
- b. any Equity Member Debt; or
- c. any irrevocable on-demand letter of credit issued by an Eligible Financial Institution for the account of an Equity Member naming Developer and/or Collateral Agent as beneficiary and securing the provision of any direct investment or debt referenced in paragraph a. of this definition.

“Compensable Construction Period Event”

has the meaning given to it in Section 15.7.1.

“Compensable Costs”

means:

- a. with respect to a Compensation Event only, any Change in Costs; and;
- b. with respect to any Relevant Event:
 - i. if Section 15.3.1.c.iii.A or 15.3.1.c.iii.B applies, any Delay Financing Costs; and
 - ii. if Section 15.3.1.c.ii applies, any Milestone Payment Delay Costs,

in each case for which the Enterprises are otherwise obligated to compensate Developer in respect of such event as determined pursuant to Section 15.3 (for certainty, net of any amount that Developer is (or, pursuant to Section 35.5.a, should be) entitled to recover under any Available Insurance).

“Compensation Event”

means:

- a. any:
 - i. breach of this Agreement by the Enterprises; or
 - ii. violation of Law by the Enterprises,

except to the extent such breach or violation is a Compensation Event under any other paragraph of this

- definition;
- b. any:
- i. failure by the Enterprises to provide Developer with Possession of any ROW Parcel by:
 - A. other than with respect to the Existing CDOT Right-of-Way, the applicable date specified in the "Date First Available for Possession" column in the table in Appendix A to Schedule 18 (Right-of-Way);
 - B. with respect to the Existing CDOT Right-of-Way, issuance of NTP2; and
 - C. with respect to the Maintenance Yard, the Snow and Ice Control Commencement Date;
 - ii. failure by the Enterprises to continuously provide Developer with Possession of any ROW Parcel or any Additional ROW Parcel from the applicable Project License Start Date to the applicable Project License End Date;
 - iii. failure by the Enterprises to comply with their obligation to complete Property Management of certain ROW Parcels pursuant to Sections 2.2.2 and 2.2.3 of Schedule 18 (Right-of-Way); or
 - iv. provision by the Enterprises to Developer of Possession of any ROW Parcel subject to the rights of other Persons, restrictions or qualifications that were not identified, disclosed, expressly anticipated or in existence on or prior to the Setting Date as determined by reference to:
 - A. the terms of this Agreement and each Third Party Agreement;
 - B. Law;
 - C. any title commitment in relation to this Project in the possession of or made available to the Preferred Proposer and/or the Developer-Related Entities;
 - D. the Reference Documents;
 - E. Beneficial Reuse and Materials Management Plan; and
 - F. Public ROW Records;
- c. any:
- i. Discriminatory Change in Law; or
 - ii. Qualifying Change in Law,
- (excluding any resulting Enterprise Change made pursuant to Section 8.6.2);
- d. delivery of a Directive Letter pursuant to Section 1.4.a of

Schedule 24 (Change Procedure);

- e. an Enterprise Change documented in a Change Order;
- f. any of the following:
 - i. any Non-Appendix B Parcel Unexpected Hazardous Substances Event;
 - ii. any Appendix B Parcel Unexpected Hazardous Substances Event that:
 - A. occurs during the Construction Period and:
 - I. prior to the Appendix B Parcel Relief Start Date, but only with respect to, and to the extent of, the effects of such event on the Construction Work that are continuing on or after the Appendix B Parcel Relief Start Date; or
 - II. on or after the Appendix B Parcel Relief Start Date; or
 - B. occurs during the Operating Period;
 - iii. any Unexpected Groundwater Contamination Event;
 - iv. any Unexpected Utility Condition Event;
 - v. the encountering or discovery of any:
 - A. Unexpected Geological Conditions;
 - B. Unexpected Historically Significant Remains; or
 - C. Unexpected Endangered Species; or
 - vi. any Unexcused Utility Owner Delay; or
- g. any incident of physical damage to an Element of the Project or delay of or disruption to the Work caused by:
 - i. installation, testing or maintenance of any ETC or ITS Elements by the ETC System Integrator pursuant to the E-470 TSA or the E-470 Installation Agreement;
 - ii. the construction, operation or maintenance of any Other Department Project, or any other facility, infrastructure or project constructed, operated and/or maintained by or on behalf of either Enterprise and/or CDOT, within or in the vicinity of the Right-of-Way, but only to the extent not constructed, operated or maintained by Developer (or another Person under common Control with Developer) pursuant to this Agreement or otherwise; or
 - iii. the installation by the Enterprises of any advertising on the Right-of-Way or any Additional Right-of-Way;
- h. any breach by the City of Denver of the Denver IGA that

results in:

- i. the assessment of fees or expenses on Developer (or any Subcontractor) that are waived or suspended by the City of Denver under Section 4.A.(i)-(iii) and Exhibit B of the Denver IGA; or
 - ii. the City of Denver not accepting the quantum of fill dirt specified in Section 4.D of the Denver IGA, provided that such fill dirt satisfies the requirements specified in the Denver IGA and Reference Document 29.17.11;
- i. any:
- i. Enterprise Release of Hazardous Substances;
 - ii. Loss by Developer as a result of it being held liable as generator under 40 CFR Part 262 or arranger under CERCLA Section 107(a) with respect to any Hazardous Substances for which the Developer is not identified as the generator and arranger pursuant to Section 23.6.1.a of Schedule 17 (Environmental Requirements) notwithstanding the Parties' agreement pursuant to Section 23.6.1.b of Schedule 17 (Environmental Requirements); or
 - iii. Third Party Release of Hazardous Substances that occurs during the Operating Period;
- j. any physically intrusive inspection conducted pursuant to Section 21.2.1 to the extent such inspection constitutes a Compensation Event pursuant to Section 21.2.2.b;
- k. the issuance of any Safety Compliance Order, excluding any such order or part thereof that orders or directs Safety Compliance that Developer is otherwise obligated to implement pursuant to this Agreement;
- l. any suspension by the Enterprises pursuant to Section 23.3.1 to the extent such suspension constitutes a Compensation Event pursuant to Section 23.3.2;
- m. any Required Action by the Enterprises that is not taken in response to or because of Developer's breach of its obligations under this Agreement or any Developer Default;
- n. Developer's obligation to comply with Section 12.2.b with respect to any Related Transportation Facility that:
- i. existed on the Setting Date to the extent the relevant configuration, design and use of such facility was not Known or Knowable on such date; or
 - ii. did not exist on the Setting Date and:
 - A. is not a CCD Identified Future Improvement; or
 - B. is a CCD Identified Future Improvement, but only to the extent the configuration, design and/or use of such improvement

- was not Known or Knowable on such date,
in the case of either i. or ii., to the extent such obligation requires any expenditure that would be treated as a capital expenditure in accordance with GAAP;
- o. any:
- i. execution of:
 - A. *[Reserved.]*;
 - B. an RRA on terms not materially consistent with the terms set out in the most recent draft of such agreement provided to the Preferred Proposer as one of the Reference Documents numbered 29.10.10.03 on or prior to the Final Project Information Date; or
 - C. the Cover Maintenance Agreement on terms not materially consistent with the terms set out in the most recent draft of such agreement provided to the Preferred Proposer as Reference Document numbered 29.10.14.10 on or prior to the Final Project Information Date;
 - ii. designation by the Enterprises of a new Third Party Agreement pursuant to Section 8.5.2;
 - iii. material amendment or modification to a Third Party Agreement (other than any Sprint Reimbursement Agreement);
 - iv. 100% Trackwork Plans and Specifications in respect of the UPRR Crossing as referred to in Section 10.1.2.b.i of Schedule 10 (*Design and Construction Requirements*) is approved by UPRR after the Setting Date on terms not materially consistent with the most recent version of such plans and specifications provided as Reference Document 29.10.10.01 on or prior to such date; or
 - v. *[Reserved.]*;
- p. the issuance of any temporary restraining order, preliminary or permanent injunction or other form of interlocutory relief by a court of competent jurisdiction that prohibits the prosecution of a material part of the Work;
- q. any failure by the City of Denver:
- i. to have the EADP (as defined in the Denver IGA) segment from Pond 7A (Brighton West Pond) to the South Platte River operational by June 1, 2018;
 - ii. to have the portion of the EADP not referred to in paragraph q.i. of this definition operational by September 1, 2019;
 - iii. to have the TBDP (as defined in the Denver IGA)

operational by September 1, 2019; or

- iv. to construct the TBDP (including, for certainty, the EADP) materially in accordance with the specifications in the Denver IGA; and
- r. any Extended Event that is not otherwise a Compensation Event specified in any of paragraphs a. to g. of this definition to the extent that such Extended Event constitutes a Compensation Event pursuant to Section 33.1.6.c.i.A;

in each case unless and to the extent such event arises as a result of any breach of Law, Governmental Approval, Permit or this Agreement, or fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity.

“Construction Closure Deduction”

means, in respect of each full or partial Closure Deduction Period that commences in respect of:

- a. any Non-Permitted Construction Closure on I-70 Mainline, I-270 or I-225, \$5,000 in respect of the Closure of each lane, shoulder or ramp; or
- b. any other Non-Permitted Construction Closure, \$2,000 in respect of the Closure of each lane, shoulder, ramp, sidewalk or driveway.

“Construction Contract”

means the contract for the performance of the Construction Work and of the O&M Work During Construction entered into between Developer and the Construction Contractor in compliance with Section 17.

“Construction Contractor”

means the design and construction contractor engaged by Developer under the Construction Contract.

“Construction Period”

means the period that begins on the earlier to occur of the date of issuance of NTP1 and the Financial Close Date and ends on (and including) the Substantial Completion Date.

“Construction Goal Deduction”

means the amount determined as “CGD” in accordance with Section 1(c) of Part 1 of Schedule 6 (*Performance Mechanism*).

“Construction Period OJT Goal”

has the meaning given to it in Section 6.3.1.a of Schedule 15 (*Federal and State Requirements*).

“Construction of Relocation Acceptance Letter” or “CRAL”

means a letter in the form set out in Appendix D to Section 4 of Schedule 10 (*Design and Construction Requirements*).

“Construction Price”

\$811,355,600.

“Construction Standards”

means:

- a. the standards and specifications listed in Schedule 10A (*Applicable Standards and Specifications*) including, for certainty:
 - i. the CDOT Standard Specifications; and
 - ii. the Standard Special Provisions;
- b. the Project Special Provisions;
- c. any other standards and specifications expressly referenced

in this Agreement as applicable to the Construction Work (for certainty, excluding any Laws, Governmental Approvals or Permits); and

- d. any other standards and specifications that apply to the Construction Work (excluding, for certainty, any Laws, Governmental Approvals or Permits), including as a result of Developer's methods of performing the Construction Work,

in each case in the form published or otherwise in effect as of the Final Project Information Date and as modified by the express terms of this Agreement (subject to change, addition or replacement made pursuant to [Section 8.6](#)).

"Construction Work"

means all administrative, design, installation, compliance, permitting, support services, Utility Work, construction related obligations and all other tasks to be performed and provided by Developer required to comply with all requirements set out in [Schedule 10 \(Design and Construction Requirements\)](#) and any other provisions of this Agreement applicable to the performance of the Construction Work.

"Construction Work Small Business Goals"

has the meaning given to it in [Section 6.2.1](#) of [Schedule 15 \(Federal and State Requirements\)](#).

"Construction Work Value"

means:

- a. the Construction Price; *minus*
- b. the Cost to Complete; *minus*
- c. the amount of any Milestone Payments previously paid to Developer, where (for purposes of this paragraph c.) any amounts set-off by the Enterprises against any such payments pursuant to [Section 5](#) of [Part 3](#) of [Schedule 4 \(Payments\)](#) shall be counted as having been paid to Developer.

"Consumptive Use"

means water that is permanently withdrawn from its source system, as further defined by Law.

"Contract Drawings"

means the documents included in [Schedule 10B \(Contract Drawings\)](#).

"Contract Year"

means a period of twelve months commencing on (and including) July 1 of each Calendar Year, provided that:

- a. the first Contract Year shall be the period commencing on (and including) the Agreement Date and ending on the immediately following June 30; and
- b. the final Contract Year shall be the period commencing on (and including) July 1 immediately preceding the last Calendar Day of the Term and ending on that last Calendar Day of the Term,

where each of June 30 and July 1 shall be determined by reference to the time and date in Denver, Colorado.

"Contractor Bond"

means any:

- a. payment and performance surety bond(s) which bonds shall be:
 - i. provided by and maintained with an Eligible Surety;

- ii. comprised either of:
 - A. a single payment and performance surety bond substantially in the form set out in Part A of Schedule 20 (Forms of Contractor Bonds); or
 - B. separate payment and performance surety bonds substantially in the forms set out in, respectively, Parts B and C of Schedule 20 (Forms of Contractor Bonds); and
- iii. in a penal amount of not less than:
 - A. with respect to any individual bond delivered pursuant to Section 9.3.1.a.i (for purposes of which, each bond delivered in accordance with paragraph a.ii.B. of this definition shall constitute a separate individual bond), 50% of the aggregate value of all the Construction Work and the O&M Work During Construction to be performed during the Construction Period under the Principal Subcontracts (provided that, in the event of any self-performance of the O&M Work During Construction by Developer, the value of the O&M Work During Construction shall be deemed to equal (or, in the event that Developer is only partially self-performing such Work, for purposes of determining such penal amount, the value of the O&M Work During Construction shall be the value thereof to be performed under the Principal Subcontracts added to) Developer's budgeted amount for such self-performed O&M Work During Construction, as such budgeted amount shall be verified by the Enterprises (acting reasonably)); and
 - B. with respect to any individual bond delivered pursuant to Section 9.3.1.a.ii (for purposes of which, each bond delivered in accordance with paragraph a.ii.B. of this definition shall constitute a separate individual bond), 100% of the maximum amount payable by Developer to the O&M Contractor under the O&M Contract in the then current Contract Year (provided that, in the event of any self-performance of the O&M Work by Developer, such maximum amount shall be deemed to equal (or, in the event that Developer is only partially self-performing such Work, such penal amount shall be determined by adding such maximum amount to) Developer's budgeted amount for such self-performed O&M Work in such Contract Year, as such budgeted

amount shall be verified by the Enterprises (acting reasonably)),

or, in any case, if greater or with respect to any other part of the Work, the minimum required by Law, including C.R.S. § 38-26-106; and

- iv. otherwise provided in compliance with Section 9.3.1; or
- b. any alternative form of payment and/or performance security provided with the Enterprises' Acceptance pursuant to Section 9.3.3.

“Control”

of a Person by another Person means that other Person (whether directly or indirectly):

- a. holds either:
 - i. at least 25% or more of the equity interests in such Person; or
 - ii. a percentage of the equity interests in such Person that is either equal to or greater than the percentage held by any other holder; or
- b. has the right to appoint, approve or remove:
 - i. at least 25% of the board of directors (or equivalent) of such Person; or
 - ii. a percentage of the board of directors (or equivalent) of such Person either equal to or greater than the percentage appointed, approved or removed by any other holder; or
- c. exercises control over the direction of the business, management and/or policies of such Person, including through:
 - i. preferred or minority equity holder veto or voting rights (whether such rights are provided by Law or by such Person's organizational documents or related member or shareholder agreements or similar agreements); or
 - ii. any other means,

in the case of paragraphs c.i and c.ii. to the extent such rights or other means circumvent, or appear intended to circumvent, any restrictions or obligations that would otherwise arise if this definition of Control applied.

“Control Center”

means Developer's control center for controlling the Cover MEP Systems.

“Controlling Work Item”

means the Activity or work item on the Critical Path (or any Payment Milestone critical path) having the least amount of Float.

“CORA”

means the Colorado Open Records Act.

“CORA Exempt Materials”

means any trade secrets, privileged information and confidential commercial, financial, geological or geophysical data exempt from public disclosure under C.R.S. §§ 24-72-204(3)(a)(IV) or information that is

otherwise exempt from disclosure under CORA.

“Core Proposer Team Member”

means each of the following in its capacity as a “Core Proposer Team Member” as defined in the ITP:

- a. Meridiam I-70 East CO, LLC;
- b. Kiewit Development Company;
- c. Kiewit C70 Investors, LLC;
- d. Kiewit Infrastructure Co.;
- e. Parsons Brinckerhoff;
- f. Roy Jorgensen Associates, Inc.
- g. Meridiam Infrastructure North America Fund II; and
- h. Kiewit Infrastructure Group, Inc.

“Corrective Action”

has the meaning given to it in Section 6.5.8 of Schedule 8 (*Project Administration*).

“Corrective Action Plan”

means Developer’s plan for taking Corrective Action in respect of systemic Nonconforming Work.

“Cost to Complete”

means (without double-counting):

- a. those costs (internal and external) that the Enterprises reasonably and properly project that they (and/or CDOT) will incur in carrying out any process to request bids from any parties interested in entering into one or more contracts with the Enterprises (and/or CDOT) to conduct all Work prior to and as necessary to achieve Final Acceptance, including all costs related to the preparation of bid documentation, evaluation of bids and negotiation and execution of relevant contracts; *plus*
- b. the costs that the Enterprises reasonably and properly project that they (and/or CDOT) will incur in performing or having performed all Work prior to and as necessary to achieve Final Acceptance; *plus*
- c. any Losses resulting from the actions of Developer and any other Developer-Related Entity that the Enterprises (and/or CDOT) would, but for the termination of this Agreement, not have incurred prior to Final Acceptance; *minus*
- d. any insurance proceeds and proceeds of Contractor Bonds available to the Enterprises (and, for certainty, not available to the Lenders) for the purposes of achieving Final Acceptance.

“Courtesy Patrol Service Plan”

means the plan referred to in Section 9.2.2.c of Schedule 11 (*Operations and Maintenance Requirements*).

“Cover”

means the Elements to be constructed by Developer within the limits depicted in the I-70 Cover Plans, which (except to the extent otherwise specified in this Agreement) includes both “Planning Area 1” and “Planning Area 2” as depicted in the I-70 Cover Plans.

- “Cover Maintenance Agreement” means the Intergovernmental Agreement among CDOT, HPTE, BE and the City of Denver in relation to the Project, a draft of which agreement was provided to the Preferred Proposer as Reference Document number 29.10.14.10.
- “Cover MEP System” means the mechanical, electrical, and plumbing system and ITS and communications systems identified in Section 12 of Schedule 10 (*Design and Construction Requirements*) required for the Cover and the Lowered Section between Brighton Blvd. and Dahlia St.
- “Cover O&M Work” means all O&M Work with respect to the Cover in relation to:
- a. the Cover MEP System and associated Elements thereof described in Section 12 of Schedule 10 (*Design and Construction Requirements*);
 - b. fencing and associated support Elements at the east and west limits of the Cover;
 - c. all structural connections or anchors that connect to structures on top of the Cover and are embedded in or connect through the deck slab;
 - d. until the end of the Landscape Warranty period (as described in Section 14.11 of Schedule 10 (*Design and Construction Requirements*)), all landscaping, plant, soil and other vegetation and all irrigation systems; and
 - e. all Elements at and below (A) the protection course and root barrier protection at landscape areas and (B) the protection course at vehicular and pedestrian traffic areas (including, for certainty, the Elements referred to in paragraphs h.i to h.iv of the definition of Cover Top O&M Work in this Annex A), including:
 - i. structural Elements, such as deck, girders, bearings, abutments, deck joints, retaining walls, columns, piers, pier caps and approach slabs;
 - ii. foundation, backfill, and subsurface Elements;
 - iii. drainage Elements;
 - iv. roadway Elements; and
 - v. all Elements identified as Developer’s responsibility in Appendix E to Section 4 of Schedule 10 (*Design and Construction Requirements*).
- “Cover Top Maintainer” means the City of Denver and any entity contracted by the City of Denver from time to time to carry out the Cover Top O&M Work.
- “Cover Top O&M Manual” has the meaning given to it Section 3.2.3.e of Schedule 11 (*Operations and Maintenance Requirements*).
- “Cover Top O&M Work” means any and all operations, management, administration, maintenance, repair, preservation, modification, reconstruction, rehabilitation, restoration, renewal and replacement work and activities undertaken after the Final Acceptance Date or (in the case of the elements referred to in paragraphs a. and b. of this definition) after the end of the Landscape Warranty period (as described in Section 14.11 of Schedule 10 (*Design and Construction Requirements*)) in relation to all Elements with respect to the Cover above

(A) the protection course and root barrier protection at landscape areas and
 (B) the protection course at vehicular and pedestrian traffic areas, including:

- a. all landscaping, planting, soil, and other vegetation;
- b. all irrigation systems;
- c. all drainage systems;
- d. all park, pedestrian, cyclist, and other aesthetic and urban amenities, features, site furnishings, buildings and structures, such as any shade coverage and any walls;
- e. all lighting, electrical and mechanical components and equipment;
- f. all road, cycling, pedestrian, and park, playground, and field surfaces (including, for example, unit paving, concrete or asphalt paving, curbs, crush stone surfacing, playground surfacing, and synthetic field) and any associated grading and overlay;
- g. all barriers, gates, fences (other than the fencing referred to in paragraph b. of the definition of Cover O&M Work in this Part A of Annex A (*Definitions and Abbreviations*)), bollards, posts, poles and railings;
- h. all elements of the Project Special Provision Section 519 Garden Roof Assembly (as described in Appendix A of Section 14 of Schedule 10 (*Design and Construction Requirements*)), excluding:
 - i. the monolithic waterproofing membrane;
 - ii. any reinforcing and flashing;
 - iii. the protection course and root barrier protection at landscape areas;
 - iv. the protection course at vehicular and pedestrian traffic areas,

and, for certainty, including all other elements of such "Garden Roof Assembly" including:

- v. insulation (EPS geofoam);
- vi. drainage / water retention components;
- vii. filter fabrics;
- viii. soil;
- ix. garden roof accessory components; and
- x. erosion control materials; and
- i. all other elements described in Section 14 of Schedule 10 (*Design and Construction Requirements*) that do not fall within the scope of the Cover O&M Work,

provided that Cover Top O&M Work shall exclude:

- j. any O&M Work that falls within paragraphs a., b., c. and d. of the definition of Cover O&M Work in this Part A of Annex A (*Definitions and Abbreviations*); and

- k. any Work required to be undertaken by Developer pursuant to Section 9 as a result of any breach of any Warranty in relation to any of the elements of the Cover falling within the scope of this definition.

<u>“CP Deduction Month”</u>	has the meaning given to it in <u>Section 1(a)</u> of <u>Part 1</u> of <u>Schedule 6</u> (<i>Performance Mechanism</i>).
<u>“CPI”</u>	means the Consumer Price Index All items (BES Series ID CUUR0000SA), as published by the United States Department of Labor, Bureau of Labor Statistics, for which the base year is 1982-84 = 100, or if such publication ceases to be in existence, a comparable index selected by the Enterprises and approved by Developer, acting reasonably, provided that: <ol style="list-style-type: none"> a. if the CPI is revised so that the base year differs from that set out above, the CPI shall be converted in accordance with the conversion factor published by the Bureau of Labor Statistics; and b. if the Bureau of Labor Statistics otherwise alters its method of calculating such index, the Parties shall mutually determine appropriate adjustments in the affected index.
<u>“Critical Path”</u>	means the longest sequence, in terms of time, of logically connected Activities on the Project Schedule ending with Final Acceptance, and, for certainty, the Project Schedule shall include only a single Critical Path.
<u>“Critical Path Method”</u>	means the scheduling technique showing all Activities required to complete a task, complete with durations and relationships between Activities.
<u>“Critical Velocity”</u>	means the minimum longitudinal air velocity required to prevent backflow of smoke, and which is a function of tunnel geometry and design fire characteristics.
<u>“Cross Drain”</u>	means pipes or culverts that convey water without interruption from one side of a road to the other.
<u>“CRPM”</u>	has the meaning given to it in <u>Section 1.1.1</u> of <u>Schedule 15</u> (<i>Federal and State Requirements</i>).
<u>“Cure Period”</u>	means, for any Noncompliance Event, the “Cure Period” (if any) specified for such Noncompliance Event in <u>Table 6A.1</u> or <u>Table 6A.2</u> , as applicable, which shall commence on and from the Noncompliance Start Time of such Noncompliance Event.
<u>“Default Interest”</u>	means interest accruing at the Default Interest Rate on a payment that is due but unpaid.
<u>“Default Interest Rate”</u>	means, for each Calendar Day during which Default Interest accrues pursuant to this Agreement, the rate per annum equal to the 30 Calendar Day British Bankers Association LIBOR Rate (“ <u>BBA LIBOR</u> ”), as published by Reuters (or other commercially available source providing quotations of BBA LIBOR as designated by the Enterprises from time to time) at approximately 11:00 a.m., London time for dollar deposits (for delivery on the first Calendar Day on which Default Interest is due) plus 200 basis points, provided that if such rate is not available at such time for any reason, then the Default Interest rate shall be the rate per annum determined by the Enterprises as provided by a similar organization.

- “Defect” means a defect, howsoever caused, affecting the condition, use, functionality or operation of any Element.
- “Defect Remedy Period” means (subject to any extension pursuant to Section 12.5.2):
- a. for a Category 1 Defect, the maximum time period for taking and completing the action required by Section 4.2.2 of Schedule 11 (*Operations and Maintenance Requirements*), being the time period set out in the column headed “Cat 1 Immediate Action” in the Performance and Measurement Tables; or
 - b. for a Category 2 Defect, the maximum time period for taking and completing the action required by Section 4.2.3 of Schedule 11 (*Operations and Maintenance Requirements*), being the time period set out in the column headed “Cat 2 Permanent Repair” in the Performance and Measurement Tables,
- in each instance commencing from the time that Developer first becomes (or should have become) aware of the existence of the relevant O&M Defect, provided that, for certainty, if any such period is specified as “N/A”, the relevant O&M Defect shall be deemed to have no remedy period or, for the purposes of Schedule 6 (*Performance Mechanism*), no Cure Period.
- “Deferred Compensation” means any adjustment made under Sections 15.4.a.iii or 15.6.3.b or any deferred payments made under Section 15.4.a.ii.
- “Deferred Equity Amounts” means any unfunded or undisbursed amount of any Committed Investment that is shown in the Financial Model to be available for use prior to the anticipated Substantial Completion Date, which amount is:
- a. of a type defined in paragraph a. of the definition of Committed Investment in this Part A of Annex A (*Definitions and Abbreviations*); or
 - b. of a type defined in paragraph b. of the definition of Committed Investment in this Part A of Annex A (*Definitions and Abbreviations*).
- “Delay Financing Costs” means, in respect of any Delay Period, the aggregate of:
- a. all amounts of principal that accrue with respect to the Long Term Project Debt under the Financing Documents during such period;
 - b. all amounts of interest (excluding default interest), together with any commitment or standby fees on undrawn loan facilities that will accrue under the Financing Documents with respect to the Long Term Project Debt during such period; and
 - c. reasonable financing costs and expenses that accrue during such period with respect to the Long Term Project Debt in connection with any of the foregoing.
- “Delay Period” has the meaning given to it in Section 15.3.1.c.ii.
- “Delay Relief Events” has the meaning given to it in paragraph a. of the definition of Relief Event in this Part A of Annex A (*Definitions and Abbreviations*).

<u>“Deliverable”</u>	means any written document, drawing, report, plan or other material or information, regardless of form and including any draft, required pursuant to this Agreement to be submitted or resubmitted to the Enterprises or the Department, as applicable, for Approval, Acceptance, any other consent, approval or like assent, or Information, excluding, for certainty, notices and correspondence.
<u>“Deliverables Tables”</u>	has the meaning given to it in <u>Section 1(a)</u> of <u>Part 1</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Denver IGA”</u>	means the Intergovernmental Agreement among CDOT, HPTE, BE and the City of Denver dated as of September 14, 2015, as supplemented by the letters dated February 21, 2017 and April 21, 2017, copies of which were included in the Reference Documents.
<u>“Denver Planned Projects”</u>	means the projects listed in <u>Appendix B</u> to <u>Section 9</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“Department”</u>	means: <ul style="list-style-type: none"> a. CDOT acting pursuant to a delegation of authority by the Enterprises pursuant to <u>Section 18.1.2</u>; or b. the Enterprises, but only if and to the extent that: <ul style="list-style-type: none"> i. the context may require; or ii. the Enterprises otherwise notify Developer.
<u>“Department Provided Approvals”</u>	means: <ul style="list-style-type: none"> a. each of the Governmental Approvals listed in <u>Table 9-1</u> in <u>Section 9.4.15</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>); b. each of the Governmental Approvals listed in <u>Table 17-1</u> of <u>Schedule 17</u> (<i>Environmental Requirements</i>); and c. the “Interstate Access Request” identified in the Reference Documents.
<u>“Design of Relocation Acceptance Letter”</u> or <u>“DRAL”</u>	means a letter in the form set out in <u>Appendix C</u> to <u>Section 4</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“Designated Senior Representative”</u>	means: <ul style="list-style-type: none"> a. in the case of Developer, its Project Manager (or, if none, an equivalent successor representative as notified by Developer to the Enterprises from time to time); and b. in the case of the Enterprises, the director of HPTE (or an equivalent successor representative of HPTE or BE as notified by the Enterprises to Developer from time to time).
<u>“Detailed Supervening Event Submission”</u>	has the meaning given to it in <u>Section 15.1.2.b.ii</u> .
<u>“Deterioration Fraction”</u>	has the meaning set out in <u>Section 4.3.a</u> of <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Developer”</u>	has the meaning given to it in the Preamble.

<u>“Developer Change”</u>	means a Change initiated by Developer pursuant to a Developer Change Notice.
<u>“Developer Change Notice”</u>	has the meaning given to it in <u>Section 14.1.b</u> .
<u>“Developer Conditions Precedent”</u>	means the conditions set out in <u>Section 2.2</u> of <u>Schedule 1</u> (<i>Financial Close</i>).
<u>“Developer Default”</u>	has the meaning given to it in <u>Section 32.1.1</u> .
<u>“Developer Default Cure Period”</u>	has the meaning given to it in <u>Section 32.1.1</u> .
<u>“Developer Employee Redundancy Payments”</u>	means the amount of all payments of wages earned, accrued unused vacation time, and any other payments required by Law or required by Developer’s employment agreement with Developer’s employees, which in each case have been or will be reasonably incurred by Developer as a direct result of termination of this Agreement.
<u>“Developer-Related Entities”</u>	means: <ul style="list-style-type: none"> a. Developer; b. the Equity Members; c. any Indirect Equity Members; d. Subcontractors (of any tier); e. any other Persons (except, for certainty, the Enterprises) performing any of the Work for or on behalf of Developer; f. any other Persons (except, for certainty, the Enterprises and any members of the general public that use or access the Project) for whom Developer may be legally or contractually responsible; and g. the employees, agents, officers, directors, representatives and consultants of any of the foregoing.
<u>“Developer Release of Hazardous Substances”</u>	means any Release of Hazardous Substances on, in, under, from or in the vicinity of the Site caused by Developer or any other Developer-Related Entity to the extent such Release: <ul style="list-style-type: none"> a. arises as a result of any breach of Law, Governmental Approval, Permit or this Agreement, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of Developer or any other Developer-Related Entity; or b. constitutes the Release of Hazardous Substances arranged to be brought onto the Site by Developer or any other Developer-Related Entity.
<u>“Developer Retained Expansion”</u>	means any Other Department Project, or other facility, constructed by a Person other than Developer, that the Enterprises require Developer to operate and/or maintain pursuant to this Agreement, including pursuant to an Enterprise Change documented in a Change Order.

<u>“Developer-risk Permit Area”</u>	means any Permit Area: <ol style="list-style-type: none"> a. which is adjacent to the Additional Right-of-Way but not the Right-of-Way; and/or b. for which access and/or use is required to be procured by Developer pursuant to a Permit for which Developer bears all risk of delay and/or all risk of cost pursuant to <u>Section 8.4.3.b.</u>
<u>“Developer’s Enterprise Change Response”</u>	has the meaning given to it in <u>Section 1.1.c.i</u> of <u>Schedule 24</u> (<i>Change Procedure</i>).
<u>“Developer’s Representative”</u>	has the meaning given to it in <u>Section 18.2.1.a.</u>
<u>“Directive Letter”</u>	has the meaning given to it in <u>Section 1.4.a</u> of <u>Schedule 24</u> (<i>Change Procedure</i>).
<u>“Disadvantaged Business Enterprise”</u>	a State-certified “Disadvantaged Business Enterprise” listed on the Colorado Unified Certification Program DBE Directory.
<u>“discretion”</u>	has the meaning given to it in <u>Section 2.2.2.b.</u>
<u>“Discriminatory Change in Law”</u>	means a Change in Law, the terms of which only apply to: <ol style="list-style-type: none"> a. the Project, or the Project and Similar Projects; and/or b. Developer or any Principal Subcontractor and not to other Persons (unless such Persons are public-private partnership project developers or design-build contractors engaged in Similar Projects (and in roles similar to Developer or such Principal Subcontractor on such projects)), <p>and in the case of each of paragraphs <u>a.</u> and <u>b.</u> excluding any Change in Law to the extent such is made in response to any breach of Law, Governmental Approval, Permit or this Agreement, or fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence of any Developer-Related Entity.</p>
<u>“Dispute”</u>	means any dispute between the Enterprises and Developer arising out of or in connection with this Agreement.
<u>“Dispute Resolution Panel”</u> or <u>“Panel”</u>	means either the Commercial Panel or the Technical Panel.
<u>“Dispute Resolution Procedure”</u>	means the procedure for the resolution of Disputes set out in <u>Section 38</u> and <u>Schedule 25</u> (<i>Dispute Resolution Procedure</i>).
<u>“Distribution”</u>	means, whether in cash or in kind any: <ol style="list-style-type: none"> a. dividend or other distribution by Developer in respect of share capital (or the equivalent); b. reduction of capital, redemption or purchase of shares or any other reorganization or variation to share capital; c. payments by Developer under any Equity Member Funding Agreements (whether of principal, interest, Breakage Costs or otherwise); d. payment, loan, contractual arrangement or transfer of assets or rights to the extent (in each case) was neither in the ordinary course of business nor on reasonable

commercial terms; or

- e. the receipt of any other benefit that is not received in the ordinary course of business and on reasonable commercial terms.

<u>“Document Control System”</u>	means the system established and maintained by Developer pursuant to <u>Section 13.1.1</u> of <u>Schedule 8</u> (<i>Project Administration</i>).
<u>“DRIR”</u>	means the Denver Rock Island Railroad.
<u>“DRIR Crossing”</u>	means the existing and/or proposed crossing by the DRIR Railroad through the I-70 East corridor on the Right-of-Way as described in <u>Section 10.1.6</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“DRIR RRA”</u>	means the railroad agreement between CDOT and DRIR in relation to the Project, a draft of which agreement was provided to the Preferred Proposer as one of the Reference Documents numbered 29.10.10.03.
<u>“DRIR Work”</u>	means all duties and services to be furnished and provided by the DRIR as required by the DRIR RRA.
<u>“Drop Site”</u>	has the meaning given to it in <u>Section 1.2 B</u> of <u>Appendix B</u> of <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>).
<u>“DPS MOA”</u>	means the Memorandum of Agreement between CDOT and School District No. 1 of the City and County of Denver dated as of October 11, 2016.
<u>“DRTL”</u>	has the meaning given to it in <u>Section 7</u> of <u>Schedule 9</u> (<i>Submittals</i>).
<u>“Durability Plan”</u>	means Developer’s plan for addressing the durability of all Residual Elements prepared and updated in accordance with <u>Section 8</u> of <u>Schedule 8</u> (<i>Project Administration</i>).
<u>“E-470 Installation Agreement”</u>	means the installation task order in relation to the Project to be executed between HPTE and the ETC System Integrator pursuant to the E-470 TSA.
<u>“E-470 TSA”</u>	means the tolling services agreement between HPTE and the ETC System Integrator dated May 7, 2015.
<u>“ECMTP”</u>	has the meaning given to it in <u>Section 6.1.1</u> of <u>Schedule 17</u> (<i>Environmental Requirements</i>).
<u>“ECWP”</u>	has the meaning given to it in <u>Section 2.1.1</u> of <u>Schedule 17</u> (<i>Environmental Requirements</i>).
<u>“Electronic Toll Collection System”</u>	means the barrier free, non-cash road charging system, including all signage, civil and telecommunications infrastructure and back-office facilities, that allows free-flow movement for I-70 Mainline users to enter and exit the Tolloed Express Lanes without having to stop to pay cash tolls.
<u>“Element”</u>	means an individual component, system or subsystem of the Project, which shall, when used in relation to the O&M Work, include at a minimum a breakdown into the items described in the column headed “Element” in the Performance Requirements (as such items are further subdivided into subsections where appropriate).
<u>“Eligible Financial Institution”</u>	means a bank or financial institution: <ol style="list-style-type: none"> a. having an office in Denver, Colorado or New York, New York at which a letter of credit issued by it can be presented for payment by hand delivery, electronic means or fax; and

- b. having a Minimum Issuer Rating from at least two Rating Agencies,

where for purposes of this definition “Minimum Issuer Rating” means a long-term unsecured debt rating of at least:

- i. “A-” by Standard & Poor’s Ratings Services;
- ii. “A-” by Fitch, Inc.;
- iii. “A3” by Moody’s Investors Service, Inc.; or
- iv. “A low” by DBRS, Inc.,

in each case with an outlook of “stable” or better.

“Eligible Insurer”

means an insurer that:

- a. is either:
 - i. admitted or authorized in the State; or
 - ii. if not admitted or authorized in the State, based in Bermuda, the United Kingdom or the Republic of Ireland;
- b. except as otherwise Approved by the Enterprises, has either (i) a policyholder’s management and financial size category rating of not less than “A-X” according to A.M. Best’s Financial Strength Rating and Financial Size Category or (ii) a rating of not less than “BBB” according to Standard and Poor’s Ratings Services;
- c. is not the subject of:
 - i. an Insolvency Event; or
 - ii. a Governmental Authority order or directive limiting its business activities as related to or affecting any Insurance Policies placed or to be placed with such insurer; and
- d. satisfies any conditions imposed by the Enterprises as a condition to any Approval given pursuant to paragraph b. of this definition.

“Eligible Surety”

means a surety authorized to issue bonds in the State having either:

- a. a Minimum Eligible Surety Rating from at least two Rating Agencies; or
- b. a rating of at least “A-” and “Class VIII” from A.M. Best Company, Inc. (but only if it is at the relevant time a Registered Rating Agency),

where for purposes of this definition “Minimum Eligible Surety Rating” means a long-term unsecured debt rating of at least:

- i. “A” by Standard & Poor’s Rating Services;
- ii. “A” by Fitch, Inc.;
- iii. “A2” by Moody’s Investors Service, Inc.; or
- iv. “A” by DBRS, Inc.,

in each case with an outlook of “stable” or better.

- “Emergency” means any non-ordinary course event affecting the Project, whether directly or indirectly, that:
- a. is an immediate or imminent threat, or, if not promptly addressed, a potential threat, to the safety of the public;
 - b. causes disruption or, if not promptly addressed, has the potential to cause disruption, to the free flow of traffic on or about the Project;
 - c. is an immediate or imminent threat to the long term integrity of any part of the infrastructure of the Project, to the Environment, any Improvements or to property adjacent to the Project;
 - d. is recognized by the Enterprises or CDOT as an emergency pursuant to Fiscal Rule 2-2 of the State of Colorado Fiscal Rules; or
 - e. is recognized or declared as an emergency by the Governor of the State, FEMA, the U.S. Department of Homeland Security or any other Governmental Authority with legal authority to recognize or declare an emergency.
- “Emergency Repair Work” means temporary and/or permanent repair work that results from an Emergency of the type specified in paragraph d. or e. of the definition thereof in this Part A of Annex A (Definitions and Abbreviations).
- “Emergency Services” means any Federal, State or local police, fire, emergency or other public safety Governmental Authorities (including the National Guard), and any other security or emergency personnel acting at the direction of any Governmental Authority.
- “Emerging Small Businesses” any business certified by CDOT to participate in CDOT’s ESB program that has not otherwise lost such certification due to graduation or revocation.
- “Encumbrance” means any mortgage, pledge, hypothecation, deed of trust, mortgage, security interest, lien, financing statement, charge, option, assignment or encumbrance of any kind or any arrangement to provide priority or preference, including any easement, right-of-way, restriction (whether on voting, sale, transfer, disposition, use or otherwise), right, lease and other encumbrance on title to real or personal property (whether or not of record), whether voluntary or imposed by Law, and any agreement to give any of the foregoing.
- “Enterprise” and “Enterprises” each has the meaning given to it in the Preamble.
- “Enterprise Change” means a Change initiated by the Enterprises pursuant to an Enterprise Change Notice.
- “Enterprise Change Notice” has the meaning given to it in Section 14.1.a.
- “Enterprise Closing Agreements” means:
- a. the Project Agreement Amendment;
 - b. the Lenders Direct Agreement;
 - c. each of the Principal Subcontractor Direct Agreements;

- d. the bond purchase agreement with respect to any PABs;
- e. the continuing disclosure agreement of the Enterprises with respect to any PABs;
- f. the trust indenture, and any related supplement indenture, with respect to any PABs;
- g. the tax compliance agreement with respect to the PABs;
- h. any PABs; and
- i. the loan agreement pursuant to which the BE as PABs Issuer loans the proceeds from the sale of any PABs to the Developer.

“Enterprise Conditions Precedent” means the conditions set out in Section 2.3 of Schedule 1 (*Financial Close*).

“Enterprise Default” has the meaning given to it in Section 32.3.1.

“Enterprise Default Cure Period” has the meaning given to it in Section 32.3.1.

“Enterprise Release of Hazardous Substances” means any Release of Hazardous Substances on, in, under, from or in the vicinity of the Site caused by the Enterprises, CDOT or any other State Governmental Authority, including any such Release caused by any Person (other than a Developer-Related Entity) in the course of acting on behalf of the Enterprises, CDOT or any other State Governmental Authority, which Release:

- a. occurs:
 - i. with respect to any ROW Parcel, after the Setting Date; and
 - ii. with respect to any Additional ROW Parcel, on or after its Project License Start Date;
- b. is required to be investigated, removed, treated, stored, transported, managed and/or remediated pursuant to Law, any Governmental Approval or Developer’s obligations under this Agreement,

excluding any such Release to the extent such results in the presence of Hazardous Substances in groundwater.

“Enterprise Representative” has the meaning given to it in Section 18.2.1.a.

“Environment” means air, soils, submerged lands, surface waters (including wetlands), groundwaters, land, stream sediments, surface or subsurface strata, biological resources, including endangered, threatened and sensitive species, and natural systems, including ecosystems, historic, archeological and paleontological resources.

“Environmental Approval” means any Governmental Approval or Permit required for the Project or the Work pursuant to Environmental Law (including, for certainty, the FEIS, the ROD and any Reevaluation).

“Environmental Law” means any Law applicable to the Project or the Work requiring consideration of impacts on the Environment or addressing, regulating or imposing liability, actions or standards of conduct that pertains to the Environment, Hazardous

Substances, contamination of any type whatsoever, or environmental health and safety matters, and any lawful requirements and standards that pertain to the Environment, Hazardous Substances, contamination of any type whatsoever, or environmental health and safety matters, set out in any permits, licenses, approvals, plans, rules, regulations, administrative or judicial orders, ordinances or other Governmental Approvals adopted, or other criteria and guidelines promulgated, pursuant to such Law, including in each case those relating to:

- a. the manufacture, processing, use, distribution, existence, treatment, storage, disposal, generation, transportation and Release of Hazardous Substances;
- b. protection of wildlife, animal or plant species listed as threatened or endangered under and subject to an applicable threatened or endangered species Law, species, other sensitive species, wetlands, water courses and water bodies, antiquities, fossils, coins, articles of value, precious minerals, cultural artifacts, human burial sites and remains and other similar remains of archaeological, cultural or paleontological interest, natural resources, and of the Environment generally;
- c. the operation and closure of underground storage tanks;
- d. human health and safety; and
- e. notification documentation and record keeping requirements relating to the foregoing.

“Environmental Manager” means the “Environmental Manager”, initially as identified in Schedule 27 (Key Personnel), subject to replacement pursuant to Section 16.2.

“Environmental Requirements” means the requirements set out in Schedule 17 (Environmental Requirements), including the obligation to comply with Environmental Law and all Environmental Approvals.

“Equity IRR” means, as of any date of calculation, the nominal post-tax internal rate of return on the total amount of Committed Investment described in paragraphs a. and b. of the definition of Committed Investment in this Part A of Annex A (Definitions and Abbreviations) made and projected, as of such date, to be made over the full Term, which rate of return shall be calculated, using the Financial Model, as the discount rate that, when applied to the equity cash flows calculated as of the relevant date, results in a net present value of zero. For purposes of this definition:

- a. the phrase “post-tax” refers only to U.S. Federal and state income tax liability of Developer or its Equity Members, calculated at no greater than the maximum rate charged to domestic corporations and taking into account the deductibility of state and local taxes for Federal purposes, and specifically excludes:
 - i. any foreign income tax and other tax of any kind; and
 - ii. any withholding tax for Federal, state or local purposes, including any tax that Developer or an Equity Member is obligated to withhold on Distributions (whether actual or constructive) or

other payments or allocations to Equity Members or holders of debt of or equity interests in an Equity Member under 26 U.S.C. §§ 1441–1446, notwithstanding 26 U.S.C. § 1461;

- b. the phrase “equity cash flows” refers to:
 - i. the total amount of Distributions that, as of the date of calculation, have been made and are projected to be made during the Term; *minus*
 - ii. the total amount of Investment described in paragraphs a. and b. of the definition of Committed Investment in this Part A of Annex A (*Definitions and Abbreviations*) that, as of the date of calculation, has been made and is projected to be made during the Term; and
- c. the Equity IRR as of the Financial Close Date is equal to the Base Case Equity IRR.

“Equity Market Value”

means the net present value of the future nominal Distributions (post-tax on the part of Developer but pre-tax on the part of any Equity Member) of the kind referenced in paragraphs a., b. and c. of the definition of Distribution in this Part A of Annex A (*Definitions and Abbreviations*) as anticipated as of the Termination Date, as such net present value is determined by an Independent Market Value Appraiser:

- a. utilizing a discount rate that is based on both the performance of the Project and of other projects that are more similar than not to the Project with respect to:
 - i. risk allocation (including credit risk); and
 - ii. payment mechanisms (including the absence of any transfer of usage risk to Developer); and
- b. assuming:
 - i. that no Termination for Convenience, termination of this Agreement for Enterprise Default or Termination by Court Ruling that arises by reason of an Enterprise Default, as applicable, has occurred; and
 - ii. that the shares in Developer are freely transferable and are being sold in the open market; and
 - iii. that the estimated anticipated future nominal Distributions of the kind referenced in paragraphs a. and c. of the definition of Distribution in this Part A of Annex A (*Definitions and Abbreviations*) (post-tax on the part of Developer but pre-tax on the part of any Equity Member) are based on the performance of the Project up to the Termination Date employing an approach that considers the Financial Model and making any adjustments for positive or negative operating performance that are not yet reflected in the Financial Model,

where such determination:

- c. shall be made by such Independent Market Value Appraiser within 90 Calendar Days of its appointment; and
- d. except in the case of manifest error or fraud, shall be final and binding on the Parties, unless challenged by either Party within 30 Calendar Days of the date of determination by submission to the Commercial Panel for resolution in accordance with the Dispute Resolution Procedure.

<u>“Equity Member”</u>	means any Person with a direct equity interest in Developer.
<u>“Equity Member Debt”</u>	means any bona fide indebtedness of Developer for borrowed money that: <ul style="list-style-type: none"> a. is held by any Equity Member or an Affiliate thereof; and b. is subordinated in priority of payment and security to all Project Debt held by Persons who are not Equity Members.
<u>“Equity Member Funding Agreement”</u>	means any loan agreement, credit agreement or other similar financing agreement or subordination agreement providing for or evidencing Equity Member Debt.
<u>“Equity Transfer”</u>	means: <ul style="list-style-type: none"> a. any sale, transfer, assignment, conveyance, or other disposal of any direct or indirect legal, beneficial or equitable ownership interests in a Person; or b. any agreement, whether or not subject to the occurrence of any condition or exercise of any right or option, to effect any transaction specified in paragraph <u>a.</u> of this definition, including any pledge, mortgage, grant of any security interest, lien or other encumbrance.
<u>“Escrow Agent”</u>	means the escrow agent appointed by the Parties pursuant to the Financial Model Escrow Agreement.
<u>“ETC System Integrator”</u>	means the E-470 Public Highway Authority, a political subdivision of the State formed under the Public Highway Authority Law, Part 5 of Article 4 of Title 43, C.R.S.
<u>“Exceptional Cost”</u>	means, in respect of an Insurance Review Period, the amount, if positive (and, if not, \$0), calculated as: <u>“Exceptional Cost”</u> = Insurance Cost Increase – (20% x Base Benchmarked Insurance Cost in respect of that Insurance Review Period).
<u>“Exceptional Saving”</u>	means, in respect of an Insurance Review Period, the amount if positive (and, if not, \$0), calculated as: <u>“Exceptional Saving”</u> = Insurance Cost Decrease – (20% x Proposal Benchmarked Insurance Cost in respect of that Insurance Review Period).
<u>“Excess Costs”</u>	means costs and expenses of the following activities as incurred by Developer as a result of the occurrence of a Non-Appendix B Parcel Unexpected Hazardous Substances Event or an Appendix B Parcel Unexpected Hazardous Substances Event in connection with: <ul style="list-style-type: none"> a. the off-site transportation and disposal of the relevant Unexpected Hazardous Substance(s): <ul style="list-style-type: none"> i. trucking costs from the Site to the applicable disposal site, as such costs and expenses are calculated in accordance with <u>Sections 2.1, 2.3, 2.5</u>

- and 2.6 (as applicable) of Appendix A to Schedule 24 (*Change Procedure*); and
- ii. tipping fees at such disposal site, as such costs and expenses are calculated in accordance with Sections 2.5 and 2.6 of Appendix A to Schedule 24 (*Change Procedure*); and
- b. the on-site investigation, removal, treatment, management and/or remediation of any:
- i. non-naturally occurring radioactive waste (excluding such waste resulting from lawful household or medical uses); or
 - ii. lost or abandoned military-grade munitions (excluding firearms and firearms ammunition) that are at such time primed, fused, armed or otherwise prepared for use and which remain unexploded,

following advance notice of such activities to the Enterprises and other Governmental Authorities in accordance with Law, and with respect to which the Enterprises have not exercised their rights under Section 23.1.3 of Schedule 17 (*Environmental Requirements*) with respect to such materials,

in all cases excluding:

- c. any internal costs, fees or expenses of any Developer-Related Entity except to the extent expressly permitted in accordance with Section 2.6 of Appendix A to Schedule 24 (*Change Procedure*) as and to the extent provided for in paragraphs a. and b. of this definition; and
- d. any costs or expenses that are expressly provided to be incidental and excluded pursuant to the terms of Schedule 17 (*Environmental Requirements*).

“Excess Groundwater Costs”

means any costs and expenses for the following as incurred by Developer:

- a. as a result of the occurrence during the Construction Period of any Unexpected Groundwater Contamination Event of the type referenced in paragraph a. of the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*):
 - i. acquisition or rental costs for equipment used in the treatment and/or remediation (including directly related storage) of groundwater, as such costs and expenses are calculated in accordance with Sections 2.3 and 2.6 of Appendix A to Schedule 24 (*Change Procedure*); and
 - ii. parts and materials (including chemicals and other substances necessary for the treatment of any Unexpected Groundwater Contamination) necessary for the operation and use of such equipment, or any previously acquired or rented equipment, as such costs and expenses are calculated in accordance with Sections 2.2, 2.3 and 2.6 of Appendix A to Schedule 24 (*Change*

Procedure);

- b. as a result of the occurrence during either the Construction Period or the Operating Period of any Unexpected Groundwater Contamination Event of the type referenced in paragraph b. of the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*), any capital expenditure in accordance with GAAP incurred to treat and/or remediate any Unexpected Groundwater Contamination Condition to enable Developer to perform O&M Work After Construction (whether such expenditure is incurred either during the Construction Period or during the Operating Period, provided that such expenditure (even if required to be incurred during the Construction Period) solely and exclusively relates to the performance of O&M Work After Construction) is in excess of that required to be incurred by Developer in complying with its obligations pursuant to Sections 8.4.4.e.iv and 8.4.4.h. of Schedule 10 (*Design and Construction Requirements*); and
- c. as a result of the occurrence during the Operating Period of any Unexpected Groundwater Contamination Event of the type referenced in paragraph b. of the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*), any other costs or expenses as described in paragraphs a.v., a.vi. and a.vii. of the definition of Change in Costs in this Part A of Annex A (*Definitions and Abbreviations*) to the extent the incurrence of any such costs or expenses by Developer is necessary as a result of it having incurred any capital expenditure referenced in paragraph b. of this definition (including, for certainty, as a result of the occurrence during either the Construction Period or the Operating Period of any Unexpected Groundwater Contamination Event of the type referenced in paragraph b. of the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*)) and such costs and expenses relate to such capital expenditure,

in all cases:

- d. to the extent applicable with respect to paragraphs b. and c. of this definition, as any such amounts are calculated in accordance with Appendix A to Schedule 24 (*Change Procedure*); and
- e. excluding:
 - i. any internal costs, fees or expenses of any Developer-Related Entity except to the extent expressly permitted in accordance with Section 2.6 of Appendix A to Schedule 24 (*Change Procedure*) either (A) as and to the extent provided for in paragraphs a.i. and a.ii. of this definition or (B) with respect to the costs and expenses calculated pursuant to paragraphs b. and c. of this definition; and
 - ii. any costs or expenses that are expressly provided to be incidental and excluded pursuant to the terms

of Schedule 17 (*Environmental Requirements*).

“Exclusion” has the meaning given to it in Developer Default number (10) in Section 32.1.1.

“Excused Closure”

means:

- a. any Closure arising as a direct result of:
 - i. a Compensation Event;
 - ii. a Relief Event;
 - iii. an Emergency;
 - iv. the performance of Snow and Ice Control Services in accordance with the requirements of Section 11 of Schedule 11 (*Operations and Maintenance Requirements*); or
 - v. Work required to be performed in connection with the removal of debris or obstructions, patrols or inspections that requires the Closure of a shoulder where such Closure is too brief to require the implementation of a Closure in accordance with Developer’s most recently Approved Transportation Management Plan;
- b. any Closure under the control of the Emergency Services;
- c. any Closure that:
 - i. was previously under the control of the Emergency Services; and
 - ii. continues to subsist after the Emergency Services have returned operational control of all parts of the Project affected by such Closure to Developer, provided that, if any such Closure continues to subsist for a period in excess of 30 minutes after such control has been returned to Developer, any such excess period shall not be an Excused Closure;
- d. any Closure expressly ordered by, and continuing only for so long as ordered by, the Enterprises, CDOT or any Governmental Authority;
- e. any Closure of a shoulder that is required for the sole purpose of performing the repair of a Category 1 Defect, but only to the extent that any such Closure persists for no longer than the Defect Remedy Period applicable to the relevant Category 1 Defect; or
- f. any Closure required solely by the ETC System Integrator for the performance of its obligations pursuant to the E-470 TSA or the E-470 Installation Agreement, provided that, for certainty, to the extent that Developer performs any Work on the portion of the Project that is subject to such a Closure during such Closure, such Closure shall not be an Excused Closure within this paragraph f.;

but only to the extent that, in the case of any such Closure:

- g. such Closure does not arise as a result of any breach of Law, Governmental Approval, Permit or this Agreement, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity; and
- h. Developer is using its Reasonable Efforts to:
 - i. mitigate the impact of the relevant Closure;
 - ii. reopen the affected part(s) of the Project as quickly as possible to traffic; and
 - iii. if such Closure arose as the direct result of an Emergency, respond to the Emergency in accordance with the requirements of this Agreement.

“Exempt Refinancing”

means:

- a. any Refinancing that was fully and specifically identified and taken into account in the Base Financial Model and calculation of the Base Case Equity IRR and that, at the time of Refinancing, does not lead to a Refinancing Gain greater than zero;
- b. amendments, modifications, supplements or consents to Financing Documents, excluding extensions and renewals, and the exercise by a Lender of rights, waivers, consents and similar actions, in each case:
 - i. in the ordinary course of day-to-day loan administration and supervision; and
 - ii. that do not individually or in the aggregate provide a financial benefit to Developer;
- c. any changes in taxation or Developer’s accounting treatment or policies; and
- d. any of the following acts by a Lender of senior lien priority Project Debt (including, for certainty, any TIFIA Loan):
 - i. the syndication of any of such Lender’s rights and interests in the senior Financing Agreements;
 - ii. the grant by such Lender of any rights of participation, or the disposition by such Lender of any of its rights or interests, in respect of the senior Financing Agreements in favor of any other Lender of senior lien Project Debt or any other investor; or
 - iii. the grant by such Lender of any other form of benefit or interest in either the senior Financing Agreements or the revenues or assets of Developer,
 - whether by way of security or otherwise, in favor of any other Lender of senior lien Project Debt or any investor;
- e. any amendment, modification, or supplement of any Financing Document entered into:
 - i. in connection with the financing of Deferred

Compensation pursuant to Section 15.5; or

- ii. to reflect a corresponding amendment to, modification of, or Change under, this Agreement;
- f. a reset of an interest rate and/or mandatory tender pursuant to the express terms of any Financing Documents; or
- g. any sale of any equity interests in Developer by an Equity Member or securitization of the existing rights and/or interests attaching to any equity interests in Developer or any of its Equity Members, if any.

<u>“Existing CDOT Right-of-Way”</u>	means that portion of CDOT’s existing I-70 East corridor right-of-way identified in the Right-of-Way Exhibits in the Contract Drawings.
<u>“Exit Zone”</u>	means the length of roadway between the Interior Zone and the exit Portal and which has variable illumination based upon the scene luminance exiting the Portal.
<u>“Expiry Date”</u>	means the 30 th anniversary of the Baseline Substantial Completion Date.
<u>“Extended Event”</u>	has the meaning given to it in <u>Section 33.1.6.a</u> .
<u>“Federal Law”</u>	means all Law of the Federal government of the United States of America.
<u>“FEIS”</u>	has the meaning given to it in the Recitals.
<u>“FEMA”</u>	means the Federal Emergency Management Agency.
<u>“FHWA”</u>	has the meaning given to it in the Recitals.
<u>“FHWA 1273”</u>	has the meaning given to it in <u>Section 2.5.1</u> of <u>Schedule 15</u> (<i>Federal and State Requirements</i>).
<u>“Final Acceptance”</u>	means the satisfaction of all Final Acceptance Conditions, as confirmed by the Enterprises’ issuance of the Final Acceptance Certificate.
<u>“Final Acceptance Certificate”</u>	has the meaning given to it in <u>Section 5(a)</u> of <u>Part 6</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Final Acceptance Conditions”</u>	has the meaning given to it in <u>Section 1</u> of <u>Part 6</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Final Acceptance Date”</u>	has the meaning given to it in <u>Section 5(a)</u> of <u>Part 6</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Final Acceptance Deadline Date”</u>	means the date which is 120 Calendar Days after the Substantial Completion Date, as such deadline may be extended from time to time pursuant to: <ul style="list-style-type: none"> a. <u>Section 15.3.1.c.iii.C</u>, as a result of the occurrence of a Supervening Event; or b. a Change documented in a Change Order.
<u>“Final Handback Inspection Report”</u>	means the report prepared by Developer in accordance with <u>Section 3.12</u> of <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Final Payment Month”</u>	means the final month that commences during the Operating Period.

- “Final Project Information Date” means the Setting Date, except that in respect of:
- a. the Baseline TIFIA Term Sheet, it means July 22, 2017;
 - b. the IAA, it means August 22, 2017, other than with respect to the first amendment to such agreement referenced in the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*) in which case it means November 15, 2017;
 - c. the Supplemental Indenture, it means July 7, 2017;
 - d. the Central 70 Note, it means July 7, 2017;
 - e. the Cover Maintenance Agreement, it means July 27, 2017;
 - f. the Beneficial Reuse and Materials Management Plan, it means September 12, 2017;
 - g. the CDOT Standard Specifications, it means October 1, 2017;
 - h. the URA with Phillips 66 Company, it means June 6, 2017;
 - i. the UPRR RRA, it means October 23, 2017, other than with respect to the exhibits to such agreement in which case it means October 31, 2017; and
 - j. the DRIR RRA, it means October 23, 2017, other than with respect to the exhibits to such agreement in which case it means November 15, 2017.
- “Final Warning Notice” has the meaning given to it in Section 22.2.2.
- “Financial Close” has the meaning given to it in Section 2.1(a) of Schedule 1 (*Financial Close*).
- “Financial Close Base CPP” has the meaning given to it in Section 5(d) of Annex A to Schedule 1 (*Financial Close*).
- “Financial Close Date” means the date on which Financial Close occurs.
- “Financial Close Deadline” means January 28, 2018, as such deadline may be extended from time to time pursuant to:
- a. Sections 4.2(d) or 4.3(c) of Schedule 1 (*Financial Close*); or
 - b. a Change documented in a Change Order.
- “Financial Close Security” means:
- a. either:
 - i. one or more letters of credit in the aggregate amount of at least \$20,000,000, each issued by an Eligible Financial Institution; or
 - ii. one or more surety bonds in the aggregate amount of at least \$20,000,000, each issued by an Eligible Surety,
 in either case delivered by Developer pursuant to Section 7.3.1.f. of Part C of the ITP on or prior to the Agreement Date; and
 - b. any replacement letter of credit or surety bond, as applicable, delivered pursuant to Section 1.2(b) of

Schedule 1 (Financial Close) that is in the same form as any letter of credit or surety bond, as applicable previously delivered pursuant to Section 7.3.1.f. of Part C of the ITP or otherwise in such other form as the Enterprises may Approve,

where, for certainty, the Financial Close Security may not be in the form of both (x) one or more such letters of credit and (y) one or more such surety bonds.

“Financial Close Termination Amount”

means:

- a. \$2,500,000; *plus*
- b. the lesser of:
 - i. Developer’s reasonable and documented costs and expenses incurred in connection with:
 - A. execution of this Agreement;
 - B. the performance of any NTP1 Work; and
 - C. its efforts to achieve Financial Close (including, for certainty, any cost and expense of extending the expiration date of the Financial Close Security pursuant to Section 4.2(d) of Schedule 1 (Financial Close)),

after the issuance of the Notice of Award and through but not including the date of delivery of any notice of termination pursuant to Schedule 1 (Financial Close); and
 - ii. \$500,000 (or, in the event that the Enterprises extend the Financial Close Deadline pursuant to Section 4.2(d) of Schedule 1 (Financial Close), \$2,000,000).

“Financial Model”

means the updated Base Financial Model delivered by Developer pursuant to Schedule 1 (Financial Close), as subsequently replaced from time to time pursuant to Section 28.6 or Section 29.2.3.

“Financial Model Escrow Agreement”

means the Financial Model Escrow Agreement executed by the Parties and U.S. Bank National Association as Escrow Agent in substantially the form of Schedule 23 (Form of Financial Model Escrow Agreement) on or about the date hereof or any replacement agreement entered into by the Parties.

“Financial Proposal Deadline”

means August 1, 2017.

“Financing Agreements”

means:

- a. the documents listed in Section A of Annex A to the Lenders Direct Agreement, executed on or about the Financial Close Date;
- b. any other loan or credit agreement, trust indenture, hedging agreement, interest rate swap agreement or other agreement by, with or in favor of any Lender pertaining to Project Debt (including any Refinancing), other than

Security Documents;

- c. any note, bond or other negotiable or non-negotiable instrument evidencing the indebtedness of Developer for Project Debt (including any Refinancing); and
- d. any amendment, supplement, variation or waiver of any of the foregoing agreements or instruments.

“Financing Documents” means the Financing Agreements and the Security Documents.

“First Payment Month” means the month referred to in paragraph b. of the definition of Payment Month in this Part A of Annex A (*Definitions and Abbreviations*).

“Float” means the amount of time that any given Activity or logically connected sequence of Activities shown on the Project Schedule may be delayed before it delays the occurrence of:

- a. the Milestone Completion Date for any Payment Milestone;
- b. the Substantial Completion Date; and/or
- c. the Final Acceptance Date,

where such Float is identified as the amount of time between the early start date and the late start date, or the early finish date and the late finish date, for each and every Activity shown on the Project Schedule.

“Force Majeure Event” means any:

- a. war, civil war, invasion or armed conflict;
- b. act of terrorism or sabotage;
- c. nuclear, chemical or biological contamination or emissions (including as applicable associated radiation), excluding such contamination, the source or cause of which is the result of any actions of, inaction by, or breach of contract or Law by, the Affected Party;
- d. blockade or embargo; or
- e. labor dispute, including a strike, lockout or slowdown, generally affecting the road construction industry in the Denver metropolitan area or a significant sector of it,

that occurs after the Agreement Date and that materially and adversely affects the performance by either Party or both Parties (each an “Affected Party”) of its or their obligations under this Agreement.

“GAAP” means Generally Accepted Accounting Principles in the US as in effect from time to time.

“General Purpose Lane” means a non-tolled travel lane on the I-70 Mainline within the O&M Limits.

“General Requirements” means the requirements set out in the column headed “General Requirement” in the Performance and Measurement Tables.

“Good Industry Practice” means that degree of skill, care, prudence, foresight and practice which would reasonably and ordinarily be expected from time to time of a skilled and experienced professional designer, engineer, constructor, maintainer or operator, as applicable, engaged in the same type of activity in North America as that of Developer, or any other Person to which such term

relates, seeking to comply with all Law and the same type of obligations and responsibilities in North America as the obligations and responsibilities of Developer under this Agreement and/or the obligations and responsibilities of such Person under the same or similar circumstances.

“Governmental Approval” means any approval, authorization, certification, consent, decision, exemption, filing, license, permit, agreement, concession, grant, franchise, registration or ruling issued, granted or required by or with any Governmental Authority (excluding, for certainty, any Public Utility or Railroad) for the performance of any of Developer’s obligations under this Agreement.

“Governmental Authority” means any:

- a. United States Federal, State or local government, and any political subdivision of any of them; and
- b. any interstate, governmental, quasi-governmental, judicial, public, regulatory or statutory instrumentality, administrative agency, authority, body or entity of, or formed by, any such government or subdivision thereof,

in each case other than the Enterprises.

“Grace Period” means, subject to Section 1.2(b)(i) of Part 6 of Schedule 6 (*Performance Mechanism*), for any Noncompliance Event, the “Grace Period” (if any) specified for such Noncompliance Event in Table 6A.1 or Table 6A.2, as applicable, which period shall commence on and from the Noncompliance Start Time of such Noncompliance Event and shall end at the same time of day as such Noncompliance Start Time on the day which is the number of days specified as the “Grace Period” for such Noncompliance Event after the day on which such Noncompliance Start Time occurs.

“Groundwater Contamination Event Period” means, with respect to any Unexpected Groundwater Contamination Condition that occurs during the Construction Period, the then current three month period ending on March 31, June 30, September 30 or December 31, as applicable.

“Guarantor” means any parent company guarantor of a Principal Subcontractor’s obligations under its Principal Subcontract.

“Handback Certificate” has the meaning given to it in Section 3.12.d of Schedule 12 (*Handback Requirements*).

“Handback Deliverable” means any of the following:

- a. the Handback Schedule ;
- b. the Residual Life Methodology Report;
- c. each Asset Condition Report;
- d. the Initial Handback Inspection Report;
- e. the initial calculation of the Handback Reserve Amount;
- f. the Second Handback Inspection Report;
- g. the second calculation of the Handback Reserve Amount;
- h. the Third Handback Inspection Report;
- i. the third calculation of the Handback Reserve Amount; and

j. the Final Handback Inspection Report.

- “Handback Inspections” means inspections carried out pursuant to Sections 3.7, 3.10 and 3.12.a of Schedule 12, in accordance with the requirements of Section 3.6 of Schedule 12 (*Handback Requirements*).
- “Handback Inspection Reports” means the Initial Handback Inspection Report, the Second Handback Inspection Report, the Third Handback Inspection Report, and the Final Handback Inspection Report.
- “Handback Letter of Credit” has the meaning given to it in Section 4.5.a of Schedule 12 (*Handback Requirements*).
- “Handback Period” means the period beginning on the date which is 34 months before the Expiry Date.
- “Handback Renewal Elements Amount” has the meaning given to it in Section 4.3.a of Schedule 12 (*Handback Requirements*).
- “Handback Requirements” means the requirements set out in Section 1 of Schedule 12 (*Handback Requirements*).
- “Handback Reserve Account” has the meaning given to it in Section 4.1 of Schedule 12 (*Handback Requirements*).
- “Handback Reserve Amount” means the sum of:
- a. the Handback Renewal Elements Amount;
 - b. the Handback Residual Elements Amount; and
 - c. the estimated costs of performing any other Handback Work necessary to meet the Handback Requirements,
- in each case as determined in accordance with Sections 4.2 and 4.3 of Schedule 12 (*Handback Requirements*).
- “Handback Reserve Proceeds” means the aggregate of:
- a. all amounts paid to the Enterprises from the Handback Reserve Account pursuant to Sections 4.4.d. and 4.4.e. of Schedule 12 (*Handback Requirements*); *plus*
 - b. all amounts drawn by the Enterprises on any Handback Letter of Credit pursuant to Section 4.5.b. of Schedule 12 (*Handback Requirements*),
- in the case of each of paragraphs a. and b., on or following the occurrence of the Termination Date.
- “Handback Reserve Standstill Period” means the period on and from the date on which Developer is first required to fund the Handback Reserve Account pursuant to Section 4.2.b of Schedule 12 (*Handback Requirements*) to the earlier of:
- a. the date two Calendar Years prior to the Expiry Date; and
 - b. the date on which no TIFIA Loan is outstanding.
- “Handback Residual Elements Amount” has the meaning given to it in Section 4.3.b of Schedule 12 (*Handback Requirements*).
- “Handback Schedule” means the schedule prepared by Developer in accordance with Section 3.2 of Schedule 12 (*Handback Requirements*).

<u>“Handback Work”</u>	has the meaning given to it in <u>Section 3.7.a.</u> of <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Handback Work Period”</u>	means the period beginning on the date which is 58 months before the Expiry Date.
<u>“Handback Work Schedule ”</u>	has the meaning given to it in <u>Section 3.8.b.v.</u> of <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Hazardous Substances”</u>	means any of the following: <ul style="list-style-type: none"> a. any substance, product, waste or other material of any nature whatsoever which is or becomes listed, regulated, or addressed pursuant to Environmental Law; b. any substance, product, waste or other material of any nature whatsoever that exceeds maximum allowable concentrations for elemental metals, organic compounds or inorganic compounds for the protection of human health and safety and/or the Environment, as defined by any Environmental Law; c. any substance, product, waste or other material of any nature whatsoever which may give rise to liability pursuant to Environmental Law, as defined by any Environmental Law, or under any statutory or common law theory based on negligence, trespass, intentional tort, nuisance or strict liability or under any reported decisions of a State or Federal court; d. petroleum or crude oil excluding <i>de minimis</i> amounts and excluding petroleum and petroleum products contained within regularly operated motor vehicles; e. lead or lead-containing materials; and f. asbestos or asbestos-containing materials.
<u>“High Occupancy Vehicle”</u>	means a vehicle occupied by more than two persons.
<u>“Holiday”</u>	means any Calendar Day that is declared or considered to be a holiday pursuant to C.R.S. §§ 24-11-101(1)-(2).
<u>“HPTE”</u>	has the meaning given to it in the Preamble.
<u>“IAA”</u>	means the intra-agency agreement among the Enterprises and CDOT dated as of August 22, 2017, as subsequently amended by the first amendment thereto dated on or about the Agreement Date.
<u>“I-70 Cover Plans”</u> or <u>“Cover Plans”</u>	means the plans for the Cover included in <u>Schedule 10B</u> (<i>Contract Drawings</i>).
<u>“I-70 East EIS”</u>	means all versions of the NEPA documentation for the Project, including all draft and supplemental draft environmental impact statements, the FEIS and the ROD.
<u>“I-70 Mainline”</u>	means Interstate 70, including the Tolloed Express Lanes, General Purpose Lanes, auxiliary lanes, buffers, enforcement areas, shoulders, hard capped surface, ramps up to the intersecting cross-roadway (including directional island and free-flow turn lane where present) and associated collector-distributor roads.

<u>“Improvement”</u>	means any building or structure, including any sewer or septic system, storm drain, publicly owned treatment work or waste treatment, storage or disposal system.
<u>“Incident”</u>	means any event that impedes the normal flow of traffic.
<u>“Incident Response Plan”</u>	has the meaning given to it in <u>Section 9.4</u> of <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>).
<u>“Incidental Utility Work”</u>	has the meaning given to it in the applicable URA.
<u>“Increased Oversight Threshold”</u>	<p>means the occurrence of any of the following:</p> <ul style="list-style-type: none"> a. during the Construction Period, the cumulative number of Noncompliance Points accrued during: <ul style="list-style-type: none"> i. any rolling 12 month period equals or exceeds 90; or ii. any rolling 36 month period equals or exceeds 180; or b. during the Operating Period, the cumulative number of Noncompliance Points accrued during: <ul style="list-style-type: none"> i. any rolling 12 month period equals or exceeds 120; or ii. any rolling 36 month period equals or exceeds 240; <p>provided that, for certainty, any Noncompliance Point that is being disputed in good faith by Developer shall be disregarded for purposes of determining whether the Increased Oversight Threshold has been met or exceeded until such time as it has been Agreed or Determined that the relevant Noncompliance Point was validly assigned.</p>
<u>“Indemnified Party”</u>	has the meaning given to it in <u>Section 24.2</u> .
<u>“Independent Assurance”</u>	means the reviews and tests described in <u>Schedule 8</u> (<i>Project Administration</i>).
<u>“Independent Market Value Appraiser”</u>	means an independent third party expert appraiser that is nationally recognized for the conduct of valuation exercises as such appraiser is jointly appointed by the Parties, provided that, if the Parties fail to agree on the identity of such appraiser or otherwise fail to complete such appointment within 15 Working Days following any relevant Termination Date, either Party may request that the Commercial Panel select and appoint such appraiser within 15 Working Days of such Party’s request.
<u>“Independent Quality Control”</u>	means all those planned and systematic actions necessary for Developer to certify to the Department that all Work fully complies with the requirements of this Agreement and that all materials incorporated in the Work, all equipment used, and all elements of the Work will perform satisfactorily for the purpose(s) intended.
<u>“indexed”</u>	has the meaning given to it in <u>Section 2.3.2</u> .
<u>“Indirect Equity Member”</u>	<p>means each of:</p> <ul style="list-style-type: none"> a. Meridiam Infrastructure North America Fund II in its capacity as a holder of an indirect equity interest in Developer and any intermediate Person (other than an Equity Member) through which it holds such indirect equity interest in

Developer; and

- b. Kiewit Development Company in its capacity as a holder of an indirect equity interest in Developer and any intermediate Person (other than an Equity Member) through which it holds such indirect equity interest in Developer,

and each of their permitted successors, assigns and transferees as holders of an indirect equity interest in Developer.

“Information”

has the meaning given to it in Section 2.2.3.c.

“Initial Handback Inspection Report”

means the report prepared by Developer in accordance with Section 3.8 of Schedule 12 (Handback Requirements).

“Initial Warning Notice”

has the meaning given to it in Section 22.2.1.

“Initial O&M Contract Expiration Date”

has the meaning given to it in Section 17.1.2.e.

“Insolvency Event”

means, in respect of any Person,

- a. any of:
- i. the commencement of a voluntary case under Federal bankruptcy law;
 - ii. the filing of a petition seeking to take advantage of any other law, domestic or foreign, relating to bankruptcy, insolvency, reorganization, winding up or composition for adjustment of debts;
 - iii. the application for or the consent to the appointment of, or the taking of possession by, a receiver, custodian, trustee, or liquidator of itself or of a substantial part of its property, domestic or foreign;
 - iv. the admission in writing of its inability to pay its debts as they become due;
 - v. the making of a general assignment for the benefit of creditors; or
 - vi. the taking of any corporate (or equivalent) action for the purpose of authorizing any of the foregoing; or
- b. the commencement of a case or other proceeding against such Person in any court of competent jurisdiction seeking:
- i. relief under Federal bankruptcy law or under any other law, domestic or foreign, relating to bankruptcy, insolvency, reorganization, winding up or adjustment of debts; or
 - ii. the appointment of a trustee, receiver, custodian, liquidator or the like for such Person or for all or any substantial part of their respective assets, domestic or foreign,

and:

- A. the petition that commenced such case or proceeding is not contested by such Person within the amount of time provided under

Law; or

- B. either: (I) such case or proceeding continues without dismissal or stay for a period of 60 Calendar Days; or (II) an order granting the relief requested in such case or proceeding (including, but not limited to, an order for relief under such Federal bankruptcy law) is entered and not appealed to the extent that the order for relief is stayed.

“Insolvent” means the condition of a Person in respect of whom an Insolvency Event has occurred.

“Inspection” means the organized examination or formal evaluation of Work, including manufacturing, design, and maintenance practices, processes, and products, document control and shop drawing review, to ensure that the practices, processes, and products comply with the quality requirements contained in this Agreement.

“Inspecting Parties” has the meaning given to it in Section 19.1.3.a and “Inspecting Party” means any one of them.

“Insurance Broker” means Developer’s insurance broker, provided that such broker shall at all times be a reputable international insurance broker of good standing.

“Insurance Cost Decrease” means, if (a) the Actual Benchmarked Insurance Cost minus the Project Insurance Change (which, for certainty, can be less than \$0) is less than (b) the Proposal Benchmarked Insurance Cost, subject to the procedure set out in Section 25.7, the amount determined as follows:

$$\text{“Insurance Cost Decrease”} = (\text{PBIC} - \text{ABIC}) - (\text{PIC}),$$

where:

“PBIC” is the Proposal Benchmarked Insurance Cost;

“ABIC” is the Actual Benchmarked Insurance Cost; and

“PIC” is any Project Insurance Change (which, for certainty, can be less than \$0).

“Insurance Cost Increase” means, if (a) the Actual Benchmarked Insurance Cost minus the Project Insurance Change (which, for certainty, can be less than \$0) is greater than (b) the Base Benchmarked Insurance Cost, subject to the procedure set out in Section 25.7, the amount determined as follows:

$$\text{“Insurance Cost Increase”} = (\text{ABIC} - \text{BBIC}) - (\text{PIC}),$$

where:

“ABIC” is the Actual Benchmarked Insurance Cost;

“BBIC” is the Base Benchmarked Insurance Cost; and

“PIC” is any Project Insurance Change (which, for certainty, can be less than \$0).

“Insurance Policies” has the meaning given to it in Section 25.1.1.

<u>“Insurance Renewal Date”</u>	means the first anniversary of the Benchmarked Insurance Inception Date and, thereafter, each date falling on the anniversary of the prior Insurance Renewal Date.
<u>“Insurance Review Period”</u>	means: <ul style="list-style-type: none"> a. the two year period commencing on the Benchmarked Insurance Inception Date and ending on the Calendar Day immediately prior to the second Insurance Renewal Date; and b. each subsequent two year period commencing on each even-numbered anniversary of the Benchmarked Insurance Inception Date and ending on the Calendar Day immediately prior to the second anniversary of the first day of such two year period, <p>in the case of either paragraphs <u>a.</u> or <u>b.</u>, except where the end of such period lies beyond the last Calendar Day of the Term, in which case the relevant Insurance Review Period shall end on the last Calendar Day of the Term.</p>
<u>“Insurance Term”</u>	means a provision that must be included in one or more of the Insurance Policies in order for Developer to comply with <u>Section 25.1.1.</u>
<u>“Intellectual Property”</u>	means all current and future legal and/or equitable rights and interests in or to know-how, patents (including applications), copyrights (including moral rights), trademarks (registered and unregistered), service marks, trade secrets, designs (registered and unregistered), utility models, circuit layouts, business and internet domain names, inventions, solutions embodied in technology and other intellectual activity and applications of or for any of the foregoing subsisting in or relating to the Project or Project design data including: <ul style="list-style-type: none"> a. algorithms, software, source code and source code documentation used in connection with the Project; and b. the Financial Model (including (i) formulas and (ii) data (such data including all back-up information in any media or format (digital or otherwise) regarding the basis for Developer’s assumptions, estimates, projections and calculations contained in or derived from the Financial Model)).
<u>“Intellectual Property Escrow”</u>	has the meaning given to it in <u>Section 52.3.2.</u>
<u>“Intellectual Property Escrow Agent”</u>	has the meaning given to it in <u>Section 52.3.2.</u>
<u>“Intelligent Transportation Systems” or “ITS”</u>	means the information and communication technologies used to inform roadway users, collect data and collect tolls.
<u>“Interior Zone”</u>	means the length of roadway between the Transition Zone and the Exit Zone and which has constant illumination.
<u>“Internal Revenue Code”</u>	means the Internal Revenue Code of 1986, and the Regulations promulgated by the U.S. Department of Treasury.
<u>“ITP”</u>	has the meaning given to it in the Recitals.

“Joint Insurance Cost Report”

has the meaning given to it in Section 25.7.2.

“Key Financial Event”

means any of the following:

- a. the Preferred Proposer:
 - i. assumed a TIFIA Financing in its Base Financial Model and a TIFIA Event occurs; and/or
 - ii. assumed a Bond Financing using PABs in its Base Financial Model and a PABs Event occurs; or
- b. on any Calendar Day in any applicable Protection Period the cumulative effect of fluctuations in applicable Benchmark Interest Rates, together with any changes in credit spreads applicable to a Bond Financing (excluding any private placement that is not also an offering under Rule 144A and Regulation S of the Securities Act of 1933), during the applicable Protection Period would result in an increase to the Base CPP in an amount that would result in an upward adjustment to the Base MPP of more than 10% as determined pursuant to Annex A to Schedule 1 (*Financial Close*) assuming, for such purposes, that such adjustment were to be made on such day;
- c. the Enterprises conclude, in their reasonable opinion, that either of the foregoing events referred to in paragraphs a. or b. of this definition is likely to occur and, in the case of paragraph b., is likely to occur on the Financial Close Date;
- d. the issuance of any temporary restraining order, preliminary or permanent injunction or other form of interlocutory relief by a court of competent jurisdiction that prohibits the prosecution of a material part of the Work, which order, injunction or other relief remains in effect on the Financial Close Deadline;
- e. the Enterprises, in their reasonable discretion, notify Developer that there is an unacceptable risk that any lawsuit filed in a court of competent jurisdiction could result in a Termination by Court Ruling; or
- f. if any prospective Lender (including, for certainty, any underwriter) reasonably invokes a condition in its “Debt Commitment Letter” (as defined in the ITP) provided with the Preferred Proposer’s Proposal that, as of the Financial Close Date, there be an absence of:
 - i. any Material Litigation filed after the Financial Proposal Deadline; or
 - ii. any new orders, rulings or other actions by the court presiding over any Material Litigation filed on or prior to the Financial Proposal Deadline that would, as reasonably determined by the prospective Lenders (including, for certainty, any underwriters), materially increase the likelihood that such Material Litigation could result in a Termination by Court Ruling,

by giving written notice thereof to Developer (with a copy to the Enterprises) at least 30 Calendar Days prior to the Financial Close Deadline (or, with respect to any new order, ruling or other action which occurs within 30 Calendar Days of the Financial Close Deadline, promptly after the occurrence of such event),

in each case unless and to the extent such event arises as a result of any breach of Law, Governmental Approval, Permit or this Agreement, or fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity.

“Key Milestone”

means each of the dates for issuance of NTP1 and NTP2, the Snow and Ice Control Commencement Date, each of the Milestone Completion Target Dates, the Baseline Substantial Completion Date, the Final Acceptance Date and each of the dates for submission of Deliverables by Developer as specified in the DRTL.

“Key Personnel”

means the individuals identified in Schedule 27 (Key Personnel) to fill the various job positions set out in that Schedule, and any replacement personnel Accepted pursuant to Section 16.1.

“Key Ratios”

means:

- a. the Total Debt Service Coverage Ratio ((i) prior to Financial Close, as such term is defined in the Baseline TIFIA Term Sheet and (ii) following Financial Close, as such term is defined in the TIFIA Loan Agreement), or any equivalent ratio calculated with respect to Project Debt that is not comprised of a TIFIA Loan; and
- b. at any time that a TIFIA Loan is outstanding, the Project Life Coverage Ratio ((i) prior to Financial Close, as such term is defined in the Baseline TIFIA Term Sheet and (ii) following Financial Close, as such term is defined in the TIFIA Loan Agreement).

“Known or Knowable”

means any risk, information, matter or thing that on or prior to the Setting Date:

- a. was identified, described or expressly anticipated in the Project Information or the I-70 East EIS, or in any Department Provided Approval;
- b. was otherwise disclosed to or known by the Preferred Proposer or a Developer-Related Entity; or
- c. could reasonably have been known, identified, discovered, observed or anticipated by the Preferred Proposer (and, to the extent in existence at such time, Developer) undertaking due diligence pursuant to Good Industry Practice, and taking into account (without limitation):
 - i. the provisions of the ITP with respect to the conduct of due diligence;
 - ii. the Enterprises’ approval of and response to Proposers’ diligence-related requests and comments submitted pursuant to the ITP to the

extent such diligence-related request or comment was:

- A. submitted by the Preferred Proposer; or
 - B. submitted by other Proposers and made available to the Preferred Proposer prior to the Setting Date;
- iii. the availability and contents of all Project Information, Department Provided Approvals, the I-70 East EIS and all other available Environmental Approvals, Governmental Approvals, and all other requirements, manuals, guidance, reports and other information referenced by:
- A. any of the Environmental Requirements;
 - B. the Phase I environmental site assessments included in the Reference Documents; or
 - C. this Agreement; and
- iv. the opportunity to review all Law.

“Laboratory”

means the testing laboratory of Developer, CDOT or any other certified testing laboratory.

“Law”

means:

- a. any:
 - i. statute, law (including common law), code, regulation, ordinance or rule;
 - ii. binding judgment, judicial or administrative order or decree (other than one rendered pursuant to the Dispute Resolution Procedure);
 - iii. written directive, guideline, policy requirement, methodology or other governmental restriction or requirement (including those resulting from an initiative or referendum process, but excluding those by the Enterprises within the scope of their administration of this Agreement); and
 - iv. similar form of decision of or determination by, or any written interpretation or administration of any of the foregoing by, any Governmental Authority,

in each case that is applicable to or has an impact on the Project or the Work (where such applicability or impact shall be determined by reference to the context in which the term Law is used), whether taking effect before or after the Agreement Date, including Environmental Laws, but excluding Governmental Approvals and Permits; and

- b. any Public Safety Order.

- “Lender” means any Person that provides or holds and is owed repayment of Project Debt, together with their respective successors, assigns, participating parties, trustees and agents, including any Collateral Agent.
- “Lenders Direct Agreement” means the agreement in substantially the form attached in Schedule 19 (Forms of Direct Agreements) by and among the Enterprises, Developer, and the Lender (or if there is more than one Lender, the Collateral Agent on behalf of the Lenders).
- “Lenders’ Liabilities” means, as of the Termination Date, the aggregate of (without double-counting):
- a. all:
 - i. principal;
 - ii. capitalized interest, accrued interest and default interest (but, with respect to default interest, only to the extent that it arose as a result of the Enterprises making any payment later than the date that it was due under this Agreement);
 - iii. customary and reasonable lender, agent and trustee fees, costs and expenses; and
 - iv. lease financing obligations,

owing or outstanding to the Lenders by Developer under or pursuant to the Financing Documents on the Termination Date; *plus*
 - b. any Breakage Costs payable by Developer that arise as a result of the early termination of this Agreement on the Termination Date; *minus*
 - c. any Breakage Costs payable or credited to Developer that arise as a result of the early termination of this Agreement on the Termination Date,

provided that, with respect to the period from the Termination Date to and including the date of payment by the Enterprises of the undisputed portion of the Termination Amount:

 - d. any net payments or net receipts under any interest rate or inflation rate hedging agreement or other derivative facility that is in effect on the Termination Date but not terminated until such date of payment; and
 - e. other than with respect to any termination as a consequence of a Developer Default, any amount of interest that falls within paragraph a.ii. of this definition, that will accrue during such period,

shall also be taken into account in the calculation of the Lenders’ Liabilities.
- “Level of Service” means, in relation to the O&M Work, the level of service as described in CDOT’s Maintenance Level of Service Manual.
- “Limited O&M Work” means any and all operations, management, administration, maintenance and Routine Maintenance activities, in each case required to be carried out by Developer to:

- a. comply with all the requirements set out in Schedule 11 (Operations and Maintenance Requirements) (including, for certainty, the requirements set out in Appendix A-1 and Appendix A-2 thereto) associated with:
 - i. Snow and Ice Control Services;
 - ii. performance of the courtesy patrol service pursuant to Section 10 of, and Appendix B to, Schedule 11 (Operations and Maintenance Requirements);
 - iii. sweeping and cleaning (including complying with Section 1.1 and Section 17 of each of Appendix A-1 and Appendix A-2 of Schedule 11 (Operations and Maintenance Requirements));
 - iv. Incident response;
 - v. its obligations with respect to ITS and ETC facilities as set out in Sections 2.2.6.b and 3.2.8.d. of Schedule 11 (Operations and Maintenance Requirements); and
 - vi. its obligations with respect to lighting as set out in Sections 2.2.8 and 3.2.11.b. of Schedule 11 (Operations and Maintenance Requirements), other than graffiti removal on lighting;
- b. comply with any other provisions of this Agreement applicable to the performance of all activities that fall within paragraph a. of this definition; and
- c. without prejudice to any of its other notification or reporting obligations under this Agreement (including under Schedule 6 (Performance Mechanism) or Schedule 11 (Operations and Maintenance Requirements)), provide the Department with notification of O&M Defects (assuming for the purposes of this paragraph c. that the definition of O&M Defects in this Part A of Annex A (Definitions and Abbreviations) applies to all Elements within or forming part of the Limited O&M Work Segments, regardless of whether the Developer is required to perform Limited O&M Work thereon or not) within the Limited O&M Work Segments as observed by Developer while performing any activity that falls within paragraph a. or b. of this definition,

during the Construction Period or the Operating Period, as applicable.

“Limited O&M Work Segments”

means:

- a. the segment of the I-70 Mainline from the I-25/I-70 interchange to I-70 Brighton Boulevard interchange (including its associated infrastructure (including all roadway lanes, ramps, shoulders, and structures));
- b. the segment of the I-70 Mainline from I-70 Chambers Road interchange to I-70 Tower Road interchange (including its associated infrastructure (including all roadway lanes, ramps, shoulders, and structures)); and
- c. the structure, with number E-17-AED, on the I-70

westbound entrance ramp from Central Park Boulevard,

in the case of each of paragraphs a. to c. of this definition, to the extent within the O&M Limits.

- “Local Agency” means any local Governmental Authority other than the State or an agency thereof.
- “Local Agency Roadway” means roadways (whether owned by a Local Agency or CDOT) excluding CDOT Roadways and the I-70 Mainline.
- “Local Hiring Goal” has the meaning given to it in Section 6.3.1.b of Schedule 15 (*Federal and State Requirements*).
- “Long Term Project Debt” means the aggregate amount of Project Debt that by its terms or pursuant to the Financial Model:
- a. is scheduled to remain outstanding after the Substantial Completion Date; and
 - b. not scheduled to be repaid with a Milestone Payment (including the Substantial Completion Payment).
- “Longstop Date” means the date that occurs 585 Calendar Days after the Baseline Substantial Completion Date (for certainty, as the Baseline Substantial Completion Date may be extended from time to time), as such Longstop Date may be extended from time to time pursuant to:
- a. Section 15.3.1.c.iii, as a result of the occurrence of a Supervening Event; or
 - b. a Change documented in a Change Order.
- “Loss” or “Losses” means any loss, damage, cost, expense, charge, fee, injury, liability, obligation, judgment, penalty or fine, in each case including attorneys’, accountants’ and expert witnesses’ fees and expenses (including those incurred in connection with the enforcement of any indemnity or other provision of this Agreement).
- “Lowered Section” means the segment of the I-70 Mainline between Brighton Boulevard and Dahlia Street where the proposed vertical profile is modified below existing ground.
- “Maintenance Management Information System” means the system required to be established and maintained by Developer in accordance with of Section 7 of Schedule 11 (*Operations and Maintenance Requirements*).
- “Maintenance Management Plan” or “MMP” means the plan referred to in Section 5 of Schedule 11 (*Operations and Maintenance Requirements*) that sets out how Developer will comply with its maintenance obligations under this Agreement (as updated in accordance with Schedule 11 (*Operations and Maintenance Requirements*)).
- “Maintenance Rectification Costs” means:
- a. all Losses that the Enterprises determine they and/or CDOT are reasonably likely to incur as a direct result of the termination of this Agreement after the Substantial Completion Date, including (without double-counting):
 - i. those costs (internal and external) that the Enterprises reasonably and properly project that they (and/or CDOT) will incur in carrying out any process to request bids from any parties interested

in entering into one or more contracts with the Enterprises (and/or CDOT) to conduct all remaining Work, including all costs related to the preparation of bid documentation, evaluation of bids and negotiation and execution of relevant contracts; plus

- ii. those costs (internal and external) that the Enterprises reasonably and properly project that they (and/or CDOT) will incur in relation to:
 - A. remediation or, if remediation is not possible or would cost more than renewal, renewal of any Nonconforming Work performed by Developer; and
 - B. rectification or cure of any breach of this Agreement by Developer; *plus*
 - iii. those costs (internal and external) that the Enterprises reasonably and properly project they (and/or CDOT) will incur through the remainder of the Term in order to perform the Work in accordance with the terms of this Agreement, but only to the extent such projected costs exceed the costs assumed in the Financial Model if the Work had been performed by Developer; *minus*
- b. any Handback Reserve Proceeds; *minus*
 - c. any amounts standing to the credit of the Physical Damage Proceeds Reserve that the Enterprises are entitled to retain pursuant to Section 25.5.2.d.

<u>“Maintenance Yard”</u>	means the maintenance yard located within the southeast quadrant of the interchange at Havana Street and within the Existing CDOT Right-of-Way.
<u>“Managed Lanes”</u>	has the same meaning as Tolerated Express Lanes.
<u>“Master Indenture”</u>	means the Master Trust Indenture, dated as of December 15, 2010, between BE and the BE Trustee.
<u>“Material Litigation”</u>	means any lawsuit filed in a court of competent jurisdiction that: <ul style="list-style-type: none"> a. seeks to overturn, set aside, enjoin, or otherwise inhibit the implementation of any Department Provided Approval based on alleged non-compliance with Law, including NEPA; or b. could result in a Termination by Court Ruling.
<u>“Materials Management Plan”</u>	means the “MMP” prepared by Developer in accordance with <u>Section 23.8</u> of <u>Schedule 17 (Environmental Requirements)</u> .
<u>“Measurement Criteria”</u>	means, in respect of an Element, the measurement criteria applicable to such Element specified in the “Measurement Criteria” column in the Performance and Measurement Tables (as updated in accordance with <u>Schedule 11 (Operations and Maintenance Requirements)</u>).
<u>“Microwave Vehicle Radar Detection”</u>	means a side fire radar used to collect point data of volume, occupancy, speed and classification on each lane of travel.
<u>“Mile High Courtesy Patrol”</u>	is the courtesy patrol program operated by CDOT.

<u>“Milestone 1”</u>	means the Construction Work between Sand Creek Bridge and Chambers Road (Station 2192+00 to 2448+00) comprising the addition of one Tolle Express Lane in each direction within the limits.
<u>“Milestone 2”</u>	means the Construction Work between Dahlia Street and Sand Creek Bridge (Station 2091+00 to 2192+00) comprising the addition of one Tolle Express Lane in each direction within the limits.
<u>“Milestone 3”</u>	means the Construction Work between Brighton Blvd and Dahlia Street (Station 2000+00 to 2091+00) comprising westbound I-70 and 46th Avenue/Stapleton Drive (north of I-70), and the UPRR Crossing.
<u>“Milestone 4”</u>	means the Construction Work between Brighton Blvd and Dahlia Street (Station 2000+00 to 2091+00) comprising eastbound I-70 and 46th Avenue/Stapleton Drive (south of I-70).
<u>“Milestone Completion”</u>	means the satisfaction of all Milestone Completion Conditions, as confirmed by the Enterprises’ issuance of the Milestone Completion Certificate.
<u>“Milestone Completion Certificate”</u>	has the meaning given to it in <u>Section 5(a)</u> of <u>Part 4</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Milestone Completion Conditions”</u>	has the meaning given to it in <u>Section 1</u> of <u>Part 4</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Milestone Completion Date”</u>	has the meaning given to it in <u>Section 5(a)</u> of <u>Part 4</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Milestone Completion Punch List”</u>	has the meaning given to it in <u>Section 2(a)</u> of <u>Part 7</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Milestone Completion Punch List Items”</u>	has the meaning given to it in <u>Section 2(a)</u> of <u>Part 7</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Milestone Completion Target Date”</u>	<p>means each of:</p> <ol style="list-style-type: none"> a. for Milestone 1, November 18, 2019; b. for Milestone 2, October 20, 2020; c. for Milestone 3, September 26, 2020; and d. for Milestone 4, September 5, 2021, <p>as each such date shall be modified on a day for day basis to reflect any delay in achieving Financial Close relative to November 30, 2017 (the date assumed in the ITP), as such modification shall be formalized pursuant to the Project Agreement Amendment in accordance with paragraph <u>d.</u> of the definition thereof in this <u>Part A</u> of <u>Annex A</u> (<i>Definitions and Abbreviations</i>).</p>
<u>“Milestone Delay Period”</u>	has the meaning given to it in <u>Section 15.3.1.c.ii</u> .
<u>“Milestone Payment”</u>	has the meaning given to it in <u>Section 1</u> of <u>Schedule 5</u> (<i>Milestone Payments</i>).
<u>“Milestone Payment Delay Costs”</u>	<p>means, in respect of any Milestone Delay Period, the aggregate of:</p> <ol style="list-style-type: none"> a. all amounts (excluding default interest) of interest, together with any commitment or standby fees on undrawn loan facilities, that will accrue under the Financing Documents during such Milestone Delay Period; and b. only if <u>Section 33.1.6.c.i.C.I</u> applies, all amounts of principal that will fall due for payment from the date on which

termination of this Agreement would have otherwise been effective,

in each case with respect to the Project Debt scheduled (as determined by reference to the Financial Model) to have been repaid by the Milestone Payment (or a portion thereof) (including, for certainty, the Substantial Completion Payment) following Milestone Completion of the relevant Payment Milestone or, as applicable, Substantial Completion.

<u>“Milestone Payment Request Due Date”</u>	has the meaning given to it in <u>Section 2</u> of <u>Schedule 5</u> (<i>Milestone Payments</i>).
<u>“Milestone Payment Request”</u>	has the meaning given to it in <u>Section 2</u> of <u>Schedule 5</u> (<i>Milestone Payments</i>).
<u>“month”</u>	means a month as determined by reference to the time and date in Denver, Colorado.
<u>“Monthly Construction Closure Deduction”</u>	means, for any month, an amount equal to the sum of the Construction Closure Deductions that accrued during such month, calculated in accordance with <u>Section 3</u> of <u>Part 1</u> of <u>Schedule 6</u> (<i>Performance Mechanism</i>).
<u>“Monthly Deductions Report”</u>	means a report submitted by Developer to the Enterprises pursuant to <u>Section 2.1</u> of <u>Part 1</u> of <u>Schedule 4</u> (<i>Payments</i>), <u>Section 3.1</u> of <u>Part 2</u> of <u>Schedule 4</u> (<i>Payments</i>) or <u>Section 4(b)(ii)</u> of <u>Schedule 5</u> (<i>Milestone Payments</i>).
<u>“Monthly Noncompliance Deduction”</u>	means, for any month, an amount equal to the sum of the deductions that accrued during such month in respect of Noncompliance Events, calculated in accordance with, as applicable, <u>Section 2</u> of <u>Part 1</u> of <u>Schedule 6</u> (<i>Performance Mechanism</i>) or <u>Section 2</u> of <u>Part 3</u> of <u>Schedule 6</u> (<i>Performance Mechanism</i>).
<u>“Monthly O&M Report”</u>	has the meaning given to it in <u>Section 13.1</u> of <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>).
<u>“Monthly Operating Period Closure Deduction”</u>	means, for any month, an amount equal to the sum of the Operating Period Closure Deductions that accrued during such month, calculated in accordance with <u>Section 3</u> of <u>Part 3</u> of <u>Schedule 6</u> (<i>Performance Mechanism</i>).
<u>“Monthly Performance Deduction”</u>	means, for any month, an amount equal to the aggregate of the Monthly Noncompliance Deduction and the Monthly Operating Period Closure Deduction, in each case, for such month.
<u>“Monthly Progress Schedule ”</u>	means the monthly updated program schedule submitted pursuant to <u>Section 3.3.5</u> of <u>Schedule 8</u> (<i>Project Administration</i>).
<u>“MOT Task Force”</u>	means a team established by Developer pursuant to <u>Section 2.2.6</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>) to assume proper coordination with Governmental Authorities affected by the Work, in relation to maintenance of traffic.
<u>“MOT Variance”</u>	means a variance to the requirements applicable to Closures, detours and any other restrictions set out in <u>Section 2</u> (<i>Maintenance of Traffic</i>) of <u>Schedule 10</u> , as Approved by the Department or approved by the relevant Local Agency, as applicable, in accordance with <u>Section 2.3</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).

- “NEPA” has the meaning given to it in the Recitals.
- “New Environmental Approvals” means any of the following:
- a. a new Environmental Approval; and
 - b. a modification, renewal or extension of an existing Environmental Approval.
- “No Better and No Worse” shall be interpreted pursuant to Section 28.2.
- “No Conflict Form” means a form set out in Appendix A to Section 4 of Schedule 10.
- “No-deductible Event” means any Compensation Event described in paragraphs a., b.i., b.ii., b.iii., d., e., i.i., l. or o. of the definition thereof in this Part A of Annex A (*Definitions and Abbreviations*).
- “Noncompliance and Closure Database” means the database described in Section 2 of Part 6 of Schedule 6 (*Performance Mechanism*).
- “Noncompliance Cure Period” means:
- a. for any Noncompliance Event for which the Cure Period is specified in days, each continuous period of “x” days commencing from and including:
 - i. if such Noncompliance Event does not have a Grace Period, the Noncompliance Start Time of such Noncompliance Event; or
 - ii. if such Noncompliance Event has a Grace Period, the expiry of such Grace Period,
 in the case of i. and ii., to and excluding the Noncompliance Rectification Time of such Noncompliance Event, where “x” equals the number of days specified as the Cure Period for such Noncompliance Event; and
 - b. for any Noncompliance Event for which the Cure Period is specified in hours or months, each continuous period of “x” hours or months, respectively, commencing from and including the Noncompliance Start Time of such Noncompliance Event to and excluding the Noncompliance Rectification Time of such Noncompliance Event, where “x” equals the number of hours or months, as applicable, specified as the Cure Period for such Noncompliance Event,
- provided that, for certainty, the Noncompliance Cure Period during which the Noncompliance Rectification Time occurs in respect of the relevant Noncompliance Event will have a duration of less than “x” days, hours or months, as applicable, and any reference in Schedule 6 (*Performance Mechanism*) to a “partial” Noncompliance Cure Period shall be deemed to refer to such Noncompliance Cure Period for the relevant Noncompliance Event.
- “Noncompliance Default Event” means the occurrence of any of the following:
- a. during the Construction Period, the cumulative number of Noncompliance Points accrued during:
 - i. any rolling 12 month period equals or exceeds 135; or
 - ii. any rolling 36 month period equals or exceeds 270;

or

- b. during the Operating Period, the cumulative number of Noncompliance Points accrued during:
 - i. any rolling 12 month period equals or exceeds 180; or
 - ii. any rolling 36 month period equals or exceeds 360;

provided that, for certainty, any Noncompliance Point that is being disputed in good faith by Developer shall be disregarded for purposes of determining whether the Noncompliance Default Event has occurred until such time as it has been Agreed or Determined that the relevant Noncompliance Point was validly assigned.

<u>“Noncompliance Event”</u>	means any failure: <ul style="list-style-type: none"> a. set out in <u>Table 6A.1</u> which occurs during the Construction Period; and b. set out in <u>Table 6A.2</u> which occurs during the Operating Period.
<u>“Noncompliance Points”</u>	means the points accrued by Developer in respect of the occurrence of Noncompliance Events in accordance with <u>Part 4</u> of <u>Schedule 6</u> (<i>Performance Mechanism</i>).
<u>“Noncompliance Rectification Time”</u>	means, in respect of any Noncompliance Event which has a Cure Period, the date and time that the Noncompliance Event is fully cured.
<u>“Noncompliance Start Time”</u>	means, for any Noncompliance Event, whether or not such Noncompliance Event has a Cure Period, the date and time that the Noncompliance Event occurs, provided that, for certainty, for any Noncompliance Event that is a failure to remedy a Category 1 Defect or a Category 2 Defect within the Defect Remedy Period, the Noncompliance Start Time shall be the date and time that the applicable Defect Remedy Period expires.
<u>“Nonconforming Work”</u>	means Work performed by Developer that does not meet the requirements of this Agreement.
<u>“Nonconforming Work Change”</u>	has the meaning given to it in <u>Section 2.1.b.ii</u> of <u>Schedule 24</u> (<i>Change Procedure</i>).
<u>“Nonconforming Work Remedy”</u>	means action taken by Developer to ensure that any Nonconforming Work meets the requirements of this Agreement.
<u>“Non-Appendix B Parcel Unexpected Hazardous Substances Event”</u>	the encountering or discovery of collectively all Unexpected Hazardous Substances on, in or under: <ul style="list-style-type: none"> a. an individual ROW Parcel that is not an Appendix B Parcel; or b. a Permit Area (excluding any Developer-risk Permit Area).
<u>“Non-Permitted Closures”</u>	means: <ul style="list-style-type: none"> a. during the Construction Period, any Non-Permitted Construction Closure; or b. during the Operating Period, any Non-Permitted Operating Period Closure.
<u>“Non-Permitted</u>	means any Closure that occurs during the Construction Period:

Construction Closure

- a. that:
- i. results in any breach of, or is not permitted by, any of Sections 2.5.3, 2.6, 2.7, 2.9, 2.11.5, 2.11.6, 2.11.7.a, 2.11.9, 2.11.10, 2.11.11, 2.11.12 or 2.11.19 of Schedule 10 (Design and Construction Requirements), unless such Closure has been Approved by the Department or approved by the relevant Local Agency, as applicable, as a MOT Variance; and
 - ii. is not an Excused Closure; or
- b. is deemed to be a Non-Permitted Construction Closure pursuant to Section 2.11.14.c of Schedule 10 (Design and Construction Requirements),

provided that, if any Closure that occurs during the Construction Period is not a Non-Permitted Construction Closure when it starts, but during such Closure circumstances commence to apply that would have resulted in such Closure being a Non-Permitted Construction Closure if such circumstances had applied to such Closure when it started, then the portion of such Closure that continues while such circumstances apply shall be deemed to be a Non-Permitted Construction Closure (and such deemed Non-Permitted Construction Closure shall be deemed to start when such circumstances commence to apply and to end when they cease to apply).

“Non-Permitted Operating Period Closure”

means a Closure that occurs during the Operating Period in an O&M Segment:

- a. that:
- i. is not a Permitted Operating Period Closure; and
 - ii. is not an Excused Closure; or
- b. is deemed to be a Non-Permitted Operating Period Closure pursuant to Section 2.11.14.d of Schedule 10 (Design and Construction Requirements),

provided that, if any Closure that occurs during the Operating Period is not a Non-Permitted Operating Period Closure when it starts, but during such Closure circumstances commence to apply that would have resulted in such Closure being a Non-Permitted Operating Period Closure if such circumstances had applied to such Closure when it started, then the portion of such Closure that continues while such circumstances apply shall be deemed to be a Non-Permitted Operating Period Closure (and such deemed Non-Permitted Operating Period Closure shall be deemed to start when such circumstances commence to apply and to end when they cease to apply).

“notice” (or “Notice”)

has the meaning given to it in Section 49.1.1.

“Notice of Award”

means the notice issued on August 24, 2017 by the Enterprises notifying the Preferred Proposer of its selection as the Preferred Proposer.

“Notice of Possession”

means a notice delivered by the Enterprises to Developer specifying the Calendar Day (the “Possession Date”) on which the Enterprises shall deliver to Developer Possession of one or more ROW Parcels or Additional ROW Parcels identified in such notice.

<u>“Notifiable Refinancing”</u>	means any Refinancing that is not a Qualifying Refinancing.
<u>“NTP1”</u>	has the meaning given to it in <u>Section 4</u> of <u>Part 1</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“NTP1 Conditions”</u>	has the meaning given to it in <u>Section 1</u> of <u>Part 1</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“NTP1 Work”</u>	means: <ol style="list-style-type: none">the design Work;preparatory testing and Right-of-Way investigation Work that is authorized by CDOT right of entry permits obtained by Developer pursuant to Section 1.2 of <u>Schedule 18</u> (<i>Right-of-Way</i>) prior to the issuance of NTP1; andpreparatory Work necessary to develop the Deliverables required to be submitted by Developer to satisfy the NTP1 Conditions.
<u>“NTP2”</u>	means the notice that constitutes “NTP2” in accordance with <u>Sections 4(a)</u> and <u>5</u> of <u>Part 2</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“NTP2 Conditions”</u>	has the meaning given to it in <u>Section 1</u> of <u>Part 2</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“NTP3”</u>	has the meaning given to it in <u>Section 3</u> of <u>Part 3</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“NTP3 Conditions”</u>	has the meaning given to it in <u>Section 1</u> of <u>Part 3</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>“Offsite Outfall System”</u>	means the drainage system to be constructed pursuant to <u>Section 8.4.9.a</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>) conveying flows generated from outside the Site and capturing the flow preventing it from draining into the Lowered Section, that will be located to the south of I-70 Mainline and consists of ponds and large Storm Drains, routed through Globeville Park and with a discharge into the South Platte River.
<u>“Onsite Outfall System”</u>	means the drainage system to be constructed pursuant to <u>Section 8.4.9.b</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>) conveying flows generated from the onsite roadway area located within the Lowered Section to the north, with a discharge into the South Platte River.
<u>“O&M Contract”</u>	means the contract for the performance of the O&M Work excluding the O&M Work During Construction entered into between Developer and the O&M Contractor in compliance with <u>Section 17</u> , provided that, if and to the extent of any self-performance of the O&M Work by Developer, references to such term shall be construed either as references to this Agreement, or as inapplicable, as the context may require.
<u>“O&M Contractor”</u>	means the Subcontractor engaged by Developer under the O&M Contract, provided that, if and to the extent of any self-performance of the O&M Work by Developer, references to such term shall be construed either as references to Developer, or as inapplicable, as the context may require.
<u>“O&M Defect”</u>	means: <ol style="list-style-type: none">any Defect in an Element or any part of an Element;any failure of an Element or any part of an Element to

comply with the applicable General Requirement or any other requirement set out in this Agreement, in any such case as a result of Developer’s failure to perform any of its obligations under Schedule 11 (*Operations and Maintenance Requirements*); and

- c. any failure of an Element or any part of an Element to meet or exceed the Target for the applicable Measurement Criteria, in any such case as a result of Developer’s failure to perform any of its obligations under Schedule 11 (*Operations and Maintenance Requirements*).

“O&M Limits” means:

- a. prior to (and including) the Substantial Completion Date, the O&M Limits during Construction; and
- b. after the Substantial Completion Date, the O&M Limits After Construction.

“O&M Limits After Construction” means the limits specified in the drawings referred to in Section 3.1 of Schedule 11 (*Operations and Maintenance Requirements*), as Accepted by the Department (as updated in accordance with Schedule 11 (*Operations and Maintenance Requirements*)).

“O&M Limits During Construction” means the limits specified in the drawings referred to in Section 2.1 of Schedule 11 (*Operations and Maintenance Requirements*), as Accepted by the Department (as updated in accordance with Schedule 11 (*Operations and Maintenance Requirements*)).

“O&M Limits Reference Drawings” means the drawings provided as Reference Documents and listed in document number 29.11.01 of Schedule 29 (*Reference Documents*).

“O&M Period During Construction” means the period commencing on the date of issuance of NTP2 and ending on (and including) the Substantial Completion Date (or, if earlier, the Termination Date).

“O&M Quality Management Plan” means the plan described in Section 5.4 of Schedule 11 (*Operations and Maintenance Requirements*) (as updated in accordance with Schedule 11 (*Operations and Maintenance Requirements*)).

“O&M Safety Plan” means the plan described in Section 5.3 of Schedule 11 (*Operations and Maintenance Requirements*), (as updated in accordance with Schedule 11 (*Operations and Maintenance Requirements*)).

“O&M Segment” means any one of the following segments of the Project within the Site along I-70 Mainline including I-70 Mainline and associated ramps, cross streets, CDOT Roadways and Local Agency Roadways:

O&M Segment	Start	End
1	274.000 (I-25 Interchange)	276.572 (Colorado Blvd)
2	276.572 (Colorado Blvd.)	278.548 (Quebec St.)
3	278.548 (Quebec St.)	282.563 (I-225)
4	282.563 (I-225)	285.727 (Tower Road)

“O&M Standards” means:

- a. any standards and specifications expressly referenced in this Agreement (including in Section 1.1.5 of Schedule 11 (*Operations and Maintenance Requirements*)) as applicable

to the O&M Work (excluding, for certainty, any Laws, Governmental Approvals or Permits); and

- b. any standards and specifications that apply to the O&M Work (excluding, for certainty, any Laws, Governmental Approvals or Permits), including as a result of Developer's methods of performing the O&M Work,

in each case in the form published or otherwise in effect as of the Final Project Information Date (subject to change, addition or replacement pursuant to Section 8.6).

"O&M Work"

means any and all operations, management, administration, maintenance, repair, preservation, modification, reconstruction, rehabilitation, restoration, renewal and replacement work and activities, including Routine Maintenance, Renewal Work and Work undertaken pursuant to the Handback Requirements, in each case required to be carried out by Developer to comply with all requirements set out in Schedule 11 (Operations and Maintenance Requirements) and any other provisions of this Agreement applicable to the performance of the O&M Work during the Construction Period or the Operating Period, as applicable, provided that, for certainty:

- a. O&M Work shall only include Limited O&M Work with respect to the Limited O&M Work Segments; and
- b. O&M Work shall exclude Cover Top O&M Work.

"O&M Work After Construction"

means any and all O&M Work required to be performed by Developer during the Operating Period pursuant to Section 3 and other provisions of Schedule 11 (Operations and Maintenance Requirements).

"O&M Work During Construction"

means any and all O&M Work required to be performed by Developer during the O&M Period During Construction pursuant to Section 2 and other provisions of Schedule 11 (Operations and Maintenance Requirements).

"OP Deduction Month"

has the meaning given to it in Section 3.2 of Part 2 of Schedule 4 (Payments).

"Operations Goal Deduction"

means the amount calculated in accordance with Section 1(d) of Part 2 of Schedule 6 (Performance Mechanism).

"Operating Period"

means the period that begins on the Calendar Day after the Substantial Completion Date and ends on the earlier of the Expiry Date and the Termination Date.

"Operating Period Closure Deduction"

means, in respect of each full or partial Closure Deduction Period that commences in respect of any Non-Permitted Operating Period Closure:

- a. if such Closure Deduction Period commences on a Calendar Day that is not during a Weekend and is not a Holiday, the amount set out in the Operating Period Closure Deductions Table for the type of Closure that caused such Non-Permitted Operating Period Closure;
- b. if such Closure Deduction Period commences on a Calendar Day that is during a Weekend, 50% of the amount set out in the Operating Period Closure Deductions Table for the type of Closure that caused such Non-Permitted Operating Period Closure; or

- c. if such Closure Deduction Period commences on a Calendar Day that is a Holiday, 150% of the amount set out in the Operating Period Closure Deductions Table for the type of Closure that caused such Non-Permitted Operating Period Closure,

subject, in the case of paragraphs a., b. and c., to the provisions of Section 2 of Part 5 of Schedule 6 (Performance Mechanism).

“Operating Period Closure Deductions Table”

means the table set out in Section 3.2 of Part 3 of Schedule 6 (Performance Mechanism) (subject to amendment pursuant to Section 3.3 of Part 3 of Schedule 6 (Performance Mechanism)).

“Operating Period Small Business Goals”

has the meaning given to it in Section 6.2.2.a of Schedule 15 (Federal and State Requirements).

“Operations Management Plan (OMP)”

means the plan referred to in Section 9 of Schedule 11 (Operations and Maintenance Requirements) that sets out how Developer will comply with its operations obligations under this Agreement (as updated in accordance with Schedule 11 (Operations and Maintenance Requirements)).

“Organizational Conflict of Interest”

means an organizational conflict of interest as described in 2 C.C.R. 601-15 Sec. 7 or as defined under 23 CFR § 636.116, where for purposes of 23 CFR § 636.116:

- a. the “person” referred to in that definition was a Core Proposer Team Member or a contractor, subcontractor, advisor, consultant or subconsultant to the Preferred Proposer or any Core Proposer Team Member; and
- b. the “owner” referred to in that definition is each Enterprise and CDOT.

“Other Construction Work”

has the meaning given to it Section 2.a of Part II of Appendix A to Schedule 15 (Federal and State Requirements).

“Other Department Project”

means any Related Transportation Facility that is:

- a. constructed and operated and/or maintained by or on behalf of the Enterprises and/or CDOT (other than by Developer to the extent such project is not a Developer Retained Expansion) during the Term; and
- b. not otherwise incorporated in the Project under the terms of this Agreement.

“Other Department Project Procurement Material”

means any design brief, specification, information memorandum, request for qualification, request for proposal, contract or other documentation issued or otherwise made available by the Enterprises and/or CDOT in connection with the tender or procurement of any Other Department Project.

“PABs”

means bonds, notes or other evidence of indebtedness issued by the PABs Issuer in the form of “private activity bonds” that are also “exempt facility bonds” under the Internal Revenue Code, where such issuance is made pursuant to the provisions of Internal Revenue Code Sections 142(a)(15) and (m).

“PABs Event”

means, at any time after the issuance of the Notice of Award, either:

- a. the relevant allocation of PABs is rescinded or reduced by US DOT or otherwise expires without renewal with the effect that the PABs allocation shall not be available to Developer

to the extent assumed in its Base Financial Model; or

- b. the PABs Issuer unreasonably (i) delays issuance (including through an unreasonable delay in release of the PABs Issuer's legal opinion or in the delivery of any other document reasonably necessary for such issuance) of, or (ii) refuses to issue the PABs in the amount that Developer's underwriters are otherwise prepared to underwrite, provided that Developer's time schedule for the issuance of the PABs includes normal and customary time periods for the PABs Issuer to issue the PABs as a conduit issuer,

provided that neither of the events referred to in paragraphs a. and b. of this definition shall be deemed to be a PABs Event if such event arises as a result of any breach of Law, Governmental Approval or this Agreement, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of the Preferred Proposer or any Developer-Related Entity.

<u>"PABs Issuer"</u>	means BE acting solely in the capacity of a conduit issuer of PABs under the authority of Law.
<u>"Parties"</u>	means, collectively, the Enterprises and Developer, and <u>"Party"</u> means either the Enterprises (taken together) or Developer.
<u>"Payment Milestone"</u>	means any of Milestone 1, Milestone 2, Milestone 3 or Milestone 4.
<u>"Payment Month"</u>	means: <ol style="list-style-type: none"> a. each month that commences during the Operating Period; and b. the month during which the Substantial Completion Date occurs.
<u>"Payment Request"</u>	means a payment request submitted by Developer to the Enterprises pursuant to <u>Section 2.1</u> or <u>2.2</u> of <u>Part 2</u> of <u>Schedule 4</u> (<i>Payments</i>).
<u>"Performance and Measurement Tables"</u>	means the performance and measurement tables set out in <u>Appendix A-1</u> and <u>Appendix A-2</u> to <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>) for, respectively, the O&M Period During Construction and the Operating Period (as the same may be updated from time to time in accordance with <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>)).
<u>"Performance Payment"</u>	means any monthly payment payable by the Enterprises pursuant to <u>Section 1</u> of <u>Part 2</u> of <u>Schedule 6</u> (<i>Performance Mechanism</i>).
<u>"Performance Requirements"</u>	means the requirements set out in the column headed "Performance Requirements" in the Performance and Measurement Tables.
<u>"Permission to Enter Property Form"</u>	means CDOT Form 730 "Permission to Enter Property".
<u>"Permit Area"</u>	means any area adjacent to any ROW Parcel or any Additional ROW Parcel for which access and/or use is required to be procured by Developer pursuant to a Permit in order to perform the Work.
<u>"Permits"</u>	means any permit, license, temporary crossing agreement or right-of-entry agreement issued, granted or entered into by or with any Governmental Authority, Utility Owner or Railroad in connection with the performance of

any of Developer's obligations under this Agreement.

"Permitted Encumbrances"

means:

- a. any Encumbrance expressly permitted by Section 27.3;
- b. any Encumbrance for taxes, assessments or governmental charges or levies not yet due and payable, or any Encumbrance for taxes, assessments or governmental charges or levies being contested in good faith and by appropriate proceedings for which adequate reserves have been established in accordance with GAAP; and
- c. sublicenses expressly permitted under Section 7.2.2.

"Permitted Equity Transfer"

means an Equity Transfer arising as a direct result of:

- a. a bona fide open market transaction in securities effected on a recognized public stock exchange, excluding such transactions involving an initial public offering of Developer (whether through a direct offering or an offering of an intermediate holding company);
- b. a bona fide crowdfunding transaction in securities issued pursuant to an exemption from registration in compliance with the JOBS Act of 2012 or any equivalent or successor Law provided that:
 - i. no Change of Control occurs as a result of such transaction; and
 - ii. the Enterprises have provided their prior consent to such transaction, such consent not to be unreasonably withheld;
- c. the grant or enforcement of security over the membership interests in Developer to Lenders pursuant to the Financing Documents exclusively for purposes of securing the Project Debt, subject to the terms and conditions contained in this Agreement;
- d. a transfer of interests between:
 - i. managed funds that are under common ownership or control; or
 - ii. the general partner or the manager (or the parent company of such general partner or manager) and any managed funds under common ownership or control with such general partner or manager (or parent company of such general partner or manager),

provided that the relevant funds and the general partner or manager of such funds (or the parent company of such general partner or manager) have been approved by the Enterprises in writing prior to the Agreement Date;

- e. a reorganization or transfer of interests within a group of Persons under common Control of direct or indirect ownership interests in any Person or of any intermediate entity in the chain of ownership of such Person so long as there is no substantive change in the entity or group of

entities that ultimately have (individually or collectively) Control of such Person; or

- f. a donation of legal, beneficial or equitable ownership interests in a Person to an independent non-profit organization registered with the State and exempt from taxation under Section 501(c)(3) of the Internal Revenue Code provided that:
- i. no Change of Control occurs as a result of such transaction; and
 - ii. the Enterprises have provided their prior consent to such transaction, such consent not to be unreasonably withheld.

“Permitted Operating Period Closure”

means any Closure which occurs during the Operating Period and is required for the purposes of Developer performing O&M Work in compliance with the most recently Accepted Maintenance Management Plan (including, for certainty, in the case of Renewal Work, the most recently Accepted Renewal Work Plan) that:

- a. does not result in a breach of any of, and is permitted by, Sections 2.5.3, 2.6, 2.7, 2.9, 2.11.5, 2.11.9, 2.11.10, 2.11.11, 2.11.12 or 2.11.19 of Schedule 10 (Design and Construction Requirements), as if the provisions of such Sections applied to the performance of O&M Work, as applicable, during the Operating Period (and, for certainty, any Closure that is permitted by Section 2.11.6 of Schedule 10 (Design and Construction Requirements) during the Construction Period shall not constitute a Permitted Operating Period Closure); or
- b. if such Closure does not satisfy the requirement set out in the first sentence of paragraph a. of this definition, has been Approved by the Department or approved by the relevant Local Agency, as applicable, as a MOT Variance.

“Persistent Breach”

has the meaning given to it in Section 22.2.2.e.

“Person”

means any of a natural person, a corporation, a limited liability company, a trust, a partnership, a limited liability partnership, a joint stock company, a consortium, a joint venture, an unincorporated association or any other entity recognized as having legal personality under the laws of the State, in each case as the context may require.

“Physical Damage Proceeds”

has the meaning given to it in Section 25.5.1.a.

“Physical Damage Proceeds Reserve”

has the meaning given to it in Section 25.5.2.a.

“Point of Slope Selection”

means the location at which the roadside slope adjacent to the pavement ends, and the cut, or fill slope begins.

“Portal”

means the face of the Cover where the Threshold Zone begins.

“Possession”

means, in relation to any ROW Parcel or any Additional ROW Parcel, the right to access and use such ROW Parcel or Additional ROW Parcel in accordance with the terms of this Agreement, subject to:

- a. rights, including statutory or public franchise rights, of

Governmental Authorities, Utility Owners, Railroads and third parties, including:

- i. as contemplated by the Third Party Agreements; and
 - ii. as such access and use may be permitted and regulated by CDOT including through the issuance of Access Permits;
- b. rights, including rights of access, granted to the Enterprises and CDOT and each of their employees, agents, consultants and subcontractors and to other Persons under this Agreement;
 - c. restrictions on access and/or use applicable to any such ROW Parcel or any such Additional ROW Parcel set out in:
 - i. easement deeds, right of entry permits and/or any Governmental Approval or Permit;
 - ii. any title commitments or American Land Title Association maps related to the Right-of-Way as set out in the Reference Documents; or
 - iii. the Beneficial Reuse and Materials Management Plan or the Materials Management Plan, and in either case later recorded;
 - d. any other easements, zoning restrictions, regulations, rights of way and similar restrictions on real property imposed by Law, any Governmental Approval or Permit;
 - e. any other restrictions or qualifications set out in Schedule 18 (Right-of-Way), including the establishment of hold off zones pursuant to Section 5.1 thereof; or
 - f. any other express restrictions or qualifications set out in this Agreement, including in Section 9.1.b.

<u>“Possession Date”</u>	has the meaning given to it in the definition of Notice of Possession in this Part A of <u>Annex A (Definitions and Abbreviations)</u> .
<u>“Pre-Refinancing Equity IRR”</u>	means, in relation to a Refinancing, the nominal post-tax Equity IRR calculated (using the Financial Model as updated, including as to the actual revenue and cost performance of the Project, so as to be current immediately prior to the Refinancing) on the date immediately preceding the date on which such Refinancing is put into place.
<u>“Precipitation Event”</u>	means any type of event or occurrence causing slippery road conditions including snow, drifting snow, freezing rain, sleet, ice and frost.
<u>“Preferred Alternative”</u>	means the alternative identified as the “Preferred Alternative” pursuant to NEPA in the FEIS related to the Project.
<u>“Preferred Proposer”</u>	has the meaning given to it in the Recitals.
<u>“Preliminary Equity IRR”</u>	means 9.52%.
<u>“Preliminary Supervening Event Submission”</u>	has the meaning given to it in <u>Section 15.1.2.b.i</u> .
<u>“Principal Indemnified”</u>	has the meaning given to it in <u>Section 24.2</u> .

Parties

“Principal Subcontractor Direct Agreement” means any agreement in substantially the form attached as Schedule 19 (Forms of Direct Agreements) by and among the Enterprises, Developer and a Principal Subcontractor.

“Principal Subcontractors” means:

- a. the Construction Contractor;
- b. the O&M Contractor; and
- c. any other Subcontractor under a Principal Subcontract of the type referenced in paragraph c. of the definition thereof in this Part A of Annex A (Definitions and Abbreviations).

“Principal Subcontracts” means:

- a. the Construction Contract;
- b. the O&M Contract; and
- c. any other Subcontract between Developer and another Subcontractor that individually, or in aggregate with all other Subcontracts between Developer and such Subcontractor, has a value as determined by the Enterprises (acting reasonably) in excess of (A) 10% of the Construction Work in aggregate, (B) 40% of the O&M Work in any given Contract Year or (C) 15% of the O&M Work in any given consecutive five Contract Year period during the Operating Period, as applicable.

“Private Utility” means a Utility that is owned by a Private Utility Owner.

“Private Utility Owner” means each of:

- a. AT&T Corp.;
- b. Comcast Holdings Corporation;
- c. Level 3 Communications, Inc.;
- d. MCI Communications Services, Inc. d/b/a Verizon Business Services;
- e. NuStar Logistics, L.P.;
- f. Phillips 66 Company;
- g. Public Service Company of Colorado;
- h. Qwest Corporation d/b/a CenturyLink QC;
- i. Sprint; and
- j. Zayo Group, LLC,

or any Affiliate of the same with which the CDOT enters into a URA.

“Process Control” means the activities performed by or on behalf of Developer to ensure and document that a product meets the requirements of this Agreement, which activities may include checking, materials handling and construction procedures, calibrations and maintenance of equipment, shop drawing review, document control, production process control, and any sampling, testing, and inspection done for such purposes.

“Programmatic means the Programmatic Agreement Among Federal Highway

- Agreement" Administration, Colorado State Historic Preservation Officer, and Colorado Department of Transportation Regarding Implementation of The Interstate 70 East Corridor Project - Interstate 25 to Tower Road.
- "Progress Report" means Developer's progress submittal described in Section 4 of Schedule 8 (*Project Administration*).
- "Progress Schedule " means the Project Schedule provided with the Progress Report as set out in Section 3.3.5 of Schedule 8 (*Project Administration*).
- "Prohibited Act" means:
- a. an act committed in contravention of Section 8.3.2;
 - b. offering, giving or agreeing to give to any Governmental Authority (including either Enterprise or CDOT) or any public official, civil servant, officer, director, agent or employee of any such Governmental Authority, any bribe, gift or consideration of any kind as an inducement, commission or reward:
 - i. for doing or not doing (or for having done or not having done) any act in relation to the obtaining or performance of this Agreement or any other related contract with either Enterprise or the Federal government or the State, or any other Governmental Authority (including CDOT);
 - ii. for showing or not showing favor or disfavor to any Person in relation to this Agreement or any other related contract with either Enterprise or the Federal government or the State, or any other Governmental Authority (including CDOT); or
 - c. defrauding or attempting to defraud or conspiring to defraud either Enterprise or the Federal government or the State, or any division, subdivision or agency of either of them (including CDOT),
- in each case regardless of whether or not it is a criminal offence pursuant to Law.
- "Project" has the meaning given to it in the Recitals.
- "Project Agreement" shall have the same meaning as Agreement.
- "Project Agreement Amendment" means an amendment to this Agreement to become effective on the Financial Close Date, which shall reflect any adjustments or amendments that have been accepted or agreed, as applicable, by the Enterprises and Developer pursuant to Annex A to Schedule 1 (*Financial Close*), including:
- a. the Financial Close Base CPP calculated pursuant to Section 4(g) of Annex A to Schedule 1 (*Financial Close*);
 - b. the Base Case Equity IRR calculated pursuant to Section 4(h) of Annex A to Schedule 1 (*Financial Close*);
 - c. the replacement of the Base Financial Model attached as Schedule 26 (*Base Financial Model*) with a copy of the Financial Model Accepted by the Enterprises pursuant to Section 2.2(h)(i) of Schedule 1 (*Financial Close*); and
 - d. amendments to the definitions of "Baseline Substantial

Completion Target Date” and “Milestone Completion Target Date” in this Part A of Annex A (*Definitions and Abbreviations*) in each case to reflect, on a day for day basis, any delay in achieving Financial Close relative to November 30, 2017 (the date assumed in the ITP).

“Project Debt”

means bona fide indebtedness (including subordinated indebtedness) under the Financing Agreements for or in respect of funds borrowed or incurred (including bona fide indebtedness with respect to any financial insurance issued for funds borrowed) or for the value of goods or services rendered or received, the repayment of which has specified payment dates and, in any such case, is secured by one or more Security Documents, where such Project Debt:

- a. includes, subject to the exclusions in paragraph b. of this definition:
 - i. principal, capitalized interest, accrued interest, customary and reasonable lender, financial insurer, agent and trustee fees, costs, expenses and premiums with respect thereto, payment obligations under interest rate and inflation rate hedging agreements or other derivative facilities with respect thereto, reimbursement obligations with respect thereto, lease financing obligations, and Breakage Costs; and
 - ii. PABs and TIFIA Loans (and TIFIA guaranties and credit support), together with the obligations arising thereunder; and
- b. excludes:
 - i. Equity Member Debt;
 - ii. any indebtedness of Developer or any Equity Member of Developer that is secured by any interests less than Developer’s entire interest in, and its rights and obligations under, this Agreement, such as indebtedness secured only by an assignment of economic interest in Developer or of rights to cash flow or dividends from Developer;
 - iii. any increase in indebtedness to the extent resulting from an agreement or other arrangement Developer enters into or first becomes obligated to repay after it was aware (or should have been aware, with reasonable due diligence) of the occurrence or prospective occurrence of an event of termination under the Agreement, including Developer’s receipt of a Termination Notice and/or occurrence of an Enterprise Default of the type entitling Developer to terminate the Agreement; and
 - iv. any such indebtedness that would otherwise be Project Debt to the extent the Collateral Agent has not notified the Enterprises of such indebtedness and the related Financing Documents in accordance with this Agreement.

- “Project Directory” means the directory described in Section 12 of Schedule 8 (*Project Administration*).
- “Project Information” has the meaning given to it in Section 3.1.a.
- “Project Insurance Change” means any net increase or net decrease in the Actual Benchmarked Insurance Cost relative to the Proposal Insurance Cost (including any such increase or decrease resulting from a change in the amount of any deductible or resulting from Developer’s claims history in relation to the Project), excluding only any increase or decrease:
- a. arising from:
 - i. any unavoidable circumstances generally prevailing in the Relevant Insurance Markets; and
 - ii. any claims history in relation to the Project resulting from the acts or omissions of the Enterprises and/or CDOT; or
 - b. taken into account in any calculation of Change in Costs made pursuant to this Agreement,
- with the amount of any such net increase or net decrease to be expressed as a positive number in the event of a net increase and a negative number in the event of a net decrease.
- “Project Intellectual Property” means Intellectual Property created, used, applied or reduced to practice by Developer or any other Developer-Related Entity in connection with the Project or the Work, but excluding that which is:
- a. owned by the Enterprises, CDOT, or otherwise made available to Developer by the Enterprises pursuant to this Agreement and as a result of its performance of the Work; or
 - b. owned by any Person other than the Enterprises, CDOT or a Developer-Related Entity.
- “Project License” has the meaning given to it in Section 7.2.1.a.
- “Project License End Date” means, for each ROW Parcel and each Additional ROW Parcel, the earliest of:
- a. the date on which the Project License is revoked pursuant to Section 7.2.1.c;
 - b. the Substantial Completion Date with respect to any ROW Parcels and any Additional ROW Parcels (or any portion of any thereof) that are outside the O&M Limits After Construction;
 - c. with respect to any such ROW Parcel and any Additional ROW Parcel that is provided in the form of a Temporary ROW Easement, the date specified in or required by the terms of such easement; and
 - d. with respect to any ROW Parcel on which the Maintenance Yard is located, the effective date of any termination of the Project License with respect thereto pursuant to Section 7.2.1.d.

<u>“Project License Start Date”</u>	means, for each ROW Parcel and each Additional ROW Parcel, the Possession Date specified in the Notice of Possession delivered by the Enterprises to Developer pursuant to <u>Section 7.2.1.b</u> with respect to such parcel.
<u>“Project Records”</u>	has the meaning given to it in <u>Section 19.1.1</u> .
<u>“Project Schedule ”</u>	means, initially, the Baseline Schedule and, once Approved pursuant to <u>Section 3.3</u> of <u>Schedule 8 (Project Administration)</u> , the then current Revised Baseline Schedule.
<u>“Project Special Provisions”</u>	means the Project Special Provisions set out in <u>Appendix A</u> to any Section of <u>Schedule 10 (Design and Construction Requirements)</u> .
<u>“Project Standards”</u>	means: <ul style="list-style-type: none"> a. the Construction Standards; and b. the O&M Standards.
<u>“Project Third Parties”</u>	means each counterparty (excluding any Party to this Agreement and CDOT) to a Third Party Agreement.
<u>“Property Management”</u>	has the meaning given to it in <u>Section 2.1.1</u> of <u>Schedule 18 (Right-of-Way)</u> .
<u>“Proposal”</u>	means the Preferred Proposer’s Proposal, as defined in, and submitted by it in response to, the ITP.
<u>“Proposal Benchmarked Insurance Cost”</u>	means, in respect of any Insurance Review Period: <ul style="list-style-type: none"> a. the Proposal Insurance Cost with respect to the applicable Insurance Review Period; <i>minus</i> b. the Base Benchmarked Insurance Deduction in respect of the applicable Insurance Review Period.
<u>“Proposal Insurance Cost”</u>	means, in respect of any Insurance Review Period: <ul style="list-style-type: none"> a. \$921,689, indexed annually from July 1, 2017 to the first day of such Insurance Review Period; <i>plus</i> b. the amount calculated pursuant to paragraph <u>a.</u> of this definition, indexed from the first day of such Insurance Review Period to the second Insurance Renewal Date in such Insurance Review Period.
<u>“Proposal Schedule ”</u>	means the draft Baseline Schedule submitted by the Preferred Proposer with Developer’s Proposal pursuant to Section 2.3.3. of Part F of the ITP.
<u>“Proposer”</u> and <u>“Proposers”</u>	each has the meaning given to it in the Recitals.
<u>“Proprietary Intellectual Property”</u>	means Project Intellectual Property that is patented or copyrighted by any Developer-Related Entity (other than Developer), or, if not patented or copyrighted, is created, held and managed as a trade secret or confidential, proprietary information by the relevant Developer-Related Entity, excluding any item of Project Intellectual Property that is produced for multiple purposes and is not unique to the technology that is being applied to or for the Project.
<u>“Protection in Place”</u>	subject to <u>Section 4.1.4</u> of <u>Schedule 10 (Design and Construction Requirements)</u> , has the meaning given to it in the applicable URA.

- “Protection Period” means the period from 3:00 pm Eastern Standard Time on July 18, 2017 to and including:
- a. with respect to any TIFIA Financing, the date that any loan agreement evidencing TIFIA Financing is entered into between Developer and US DOT; and
 - b. with respect to any Bond Financing, the date of the signing of the bond purchase agreement among Developer, the underwriters as bond purchasers and, in respect of any issuance of PABS, the PABS Issuer.
- “Public ROW Records” means any record affecting a ROW Parcel that is maintained by:
- a. the Colorado Department of Public Health and Environment, the Colorado Department of Labor and Employment, Division of Oil and Public Safety, or the EPA; or
 - b. the:
 - i. County Assessor’s office;
 - ii. County Treasurer’s office; or
 - iii. office of the Clerk and Recorder,
 with respect to paragraph b., for the county in which the ROW Parcel is located, to the extent that such records were referenced in any title commitment in the possession of or made available to the Preferred Proposer and/or the Developer-Related Entities on or prior to the Setting Date.
- “Public Safety Order” means a rule, order or directive from the U.S. Department of Homeland Security, the State Department of Public Safety (including the Division of Homeland Security and Emergency Management) or by any Emergency Service regarding specific security threats to the Project or the region within the State in which the Project is located or which the Project serves, to the extent such rule, order or directive:
- a. requires specific changes in Developer’s normal design, construction, operation or maintenance procedures in order to comply therewith; and
 - b. must be complied with by Developer (or any Principal Subcontractor in connection with performance of the Work) as a matter of Law.
- “Public Utility” means a Utility that is owned by a Publicly Owned Utility.
- “Publicly Owned Utility” means each of:
- a. Aurora Water;
 - b. the City and County of Denver, acting through its Board of Water Commissioners;
 - c. the City and County of Denver Wastewater Management Division; and
 - d. the Metropolitan Wastewater Reclamation District.

- “Punch List” means each Milestone Completion Punch List and the Substantial Completion Punch List.
- “Punch List Item” means any minor Defect or Nonconforming Work which individually, and in aggregate with all other such Punch List Items, will not have any material or adverse effect on the normal, uninterrupted and safe use and operation of the affected Element of the Project for its intended purpose.
- “Qualifying Change in Law” means:
- a. a Change in Law that requires Developer to incur any additional expenditure that (i) would be treated as a capital expenditure in accordance with GAAP and (ii) is in connection with the performance of O&M Work After Construction (whether such expenditure is required to be incurred either during the Construction Period or during the Operating Period); or
 - b. any enactment, promulgation, adoption, change or modification of Federal Law with respect to the investigation, removal, treatment, storage, transportation, management and/or remediation of (i) Unexpected Groundwater Contamination Conditions or (ii) Unexpected Hazardous Substances that would, in the case of (i) or (ii), constitute a Change in Law if proviso (i) to the definition of Change in Law in this Part A of Annex A (*Definitions and Abbreviations*) were disregarded that requires Developer to incur any additional expenditure that (A) would be treated as a capital expenditure in accordance with GAAP and (B) is in connection with the performance of O&M Work After Construction (whether such expenditure is required to be incurred either during the Construction Period or during the Operating Period),
- excluding in the case of a. and b. any:
- c. Discriminatory Change in Law; and
 - d. Change in Law that is made in response to any breach of Law, Governmental Approval, Permit or this Agreement, or fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence of any Developer-Related Entity,
- provided that any Change in Costs payable to Developer as a result of the occurrence of a Compensation Event falling within this definition shall not include any Change in Costs of Developer that do not solely and exclusively relate to the performance of O&M Work After Construction.
- “Qualifying Refinancing” means any Refinancing that will give rise to a Refinancing Gain greater than zero which is not an Exempt Refinancing.
- “Quality Assurance Oversight” means the act of testing or inspecting of the Work performed by qualified testing or inspecting personnel employed by the Department or its designated agent to independently establish conformity to this Agreement.
- “Quality Management Plan” means, from time to time, the then current plan that satisfies the requirements of Section 6 of Schedule 8 (*Project Administration*) and has been submitted by Developer and Approved by the Department pursuant to Schedule 8 (*Project Administration*).

- “Quality Records Database” means the secure web-based application for recording results of the Department verification reviews and responses to nonconformance notices, as described in Schedule 8 (Project Administration).
- “Railroad” means either the tracks, bridges and systems used for rail traffic in the vicinity of I-70 Mainline, or the UPRR, BNSF or DRIR, as the context may require.
- “Railroad Forces” means Railroad engineering and construction personnel, or Railroad designated contractors employed or contracted directly by the respective Railroad.
- “Rating Agency” means each of:
- a. Fitch, Inc.;
 - b. Moody’s Investors Service, Inc.;
 - c. Standard & Poor’s Ratings Services; and
 - d. DBRS, Inc.,
- provided in each case that such entity is at the relevant time a Registered Rating Agency.
- “Reasonable Efforts” means all those steps in the power of the relevant Party that are capable of producing the desired result, being steps which a prudent, determined and reasonable person desiring to achieve that result would take, provided that, subject to its other express obligations under this Agreement:
- a. where the relevant Party is either the Enterprises or Developer, the relevant Party shall not be required to expend funds except for those:
 - i. reasonably incidental or ancillary to the steps to be taken by the relevant Party (including its reasonable travel expenses, correspondence costs and general overhead expenses); or
 - ii. that the other Party agrees to reimburse in advance; and
 - b. where the relevant Party is the Enterprises (or the Department), the Enterprises (or, as applicable, the Department) shall not be required to:
 - i. take any action to the extent uncommitted budgeted funds are unavailable to undertake such action;
 - ii. take any action that is contrary to this Agreement, Law, any Governmental Approval or the public interest, or decline, refrain or abstain from taking any action that is in the public interest, as determined by the Enterprises in their discretion;
 - iii. exercise or refrain, decline or abstain from exercising any statutory or administrative law power, authority or discretion;
 - iv. undertake any mitigation measure that might be available as a result of its status as a Governmental Authority, and that would not normally be available to a private commercial counterparty to an

agreement such as this Agreement;

- v. take a position that would not be usual and customary for the Enterprises or CDOT to take in addressing similar circumstances affecting other projects (except for usual and customary arrangements that are incompatible with the Project's contracting methodology); or
- vi. refrain from concurring with a position taken by any Governmental Authority if the Enterprises believe that position to be correct.

"Recognized Hazardous Materials" has the meaning given to it in Section 23.1.1 of Schedule 17 (Environmental Requirements).

"Reconciliation" has the meaning given to it in Section 15.6.2.

"Reevaluation" means any NEPA evaluation required or prepared pursuant to 23 CFR § 771.129.

"Reference Design" means the preliminary technical blueprint and description of essential design elements for the Project set out in the Reference Documents.

"Reference Document" means each of the materials, documents and data listed in Schedule 29 (Reference Documents) and made available prior to the Final Project Information Date pursuant to Section 3.1.a.

"Refinancing" means:

- a. any amendment, variation, novation, supplement or replacement of any Financing Document;
- b. the exercise of any right, or the grant of any waiver or consent, under any Financing Document;
- c. the disposition of any rights or interests in, or the creation of any rights of participation in respect of, any Financing Document (other than any Equity Member Funding Agreement) or the creation or granting of any other form of benefit or interest in either a Financing Document or the contracts, revenues or assets of Developer whether by way of security or otherwise; or
- d. any other arrangement put in place by Developer or another person which has an effect which is similar to any of a. to c. above or which has the effect of limiting Developer's ability to carry out any of a. to c. above.

"Refinancing Gain" means an amount equal to the greater of zero and an amount equal to (A-B-C), where:

A = the net present value (using the Base Case Equity IRR as the discount rate) of the Distributions projected immediately prior to the Refinancing (taking into account the effect of the Refinancing and using the Financial Model as updated (including as to the performance of the Project) so as to be current immediately prior to the Refinancing) to be made over the remaining term of this Agreement following the Refinancing;

B = the net present value (using the Base Case Equity IRR as the discount rate) of the Distributions projected immediately prior to the Refinancing (but without taking into account the effect of the Refinancing and using the

Financial Model as updated (including as to the performance of the Project) so as to be current immediately prior to the Refinancing) to be made over the remaining term of this Agreement following the Refinancing; and

C = any adjustment required to increase the Pre-Refinancing Equity IRR to the Base Case Equity IRR, if applicable.

“Registered Rating Agency”

means a nationally recognized statistical rating organization registered with the Office of Credit Rating of the U.S. Securities and Exchange Commission.

“Reinstatement Plan”

has the meaning given to it in [Section 25.5.1.b.i.](#)

“Reinstatement Work”

has the meaning given to it in [Section 25.5.1.a.](#)

“Related Transportation Facility”

means any existing and future bridge, highway, street and road or other transportation facility of any mode, including:

- a. directly related component facilities; and
- b. upgrades and expansions thereof,

that, in any such case, are or will be connecting with, or crossing under or over, the Project, but which is not (at the relevant time) part of the Project, including:

- c. Denver Planned Projects; and
- d. all CCD Identified Future Improvements.

“Release”

means any emission, spill, seepage, leak, escape, leaching, discharge, injection, pumping, pouring, emptying, dumping, disposal, migration, or release of Hazardous Substances from any source into or upon the Environment or any Improvement, including any of the foregoing, or any other action, that exacerbates an existing Release or condition of Hazardous Substances contamination.

“Release for Construction Documents”

means the drawings (including plans, elevations, sections, details and diagrams), specifications, shop drawings, drawings, samples, reports and calculations approved by Developer for construction as required by [Schedule 8 \(Project Administration\)](#).

“Relevant Contract Year”

has the meaning given to it in [Section 2.3.](#)

“Relevant Event”

means any Delay Relief Event or Compensation Event.

“Relevant Insurance Markets”

the insurance markets which collectively insure the majority of transportation related infrastructure projects in the United States from time to time, which as of the Agreement Date are New York, Bermuda and London.

“Relevant Milestone Payment Request Due Date”

has the meaning given to it in [Section 2\(a\)](#) of [Schedule 5 \(Milestone Payments\)](#).

“Relevant Obligation”

has the meaning given to it in [Section 24.2.g.i.](#)

“Relief Event”

means:

- a. any of the following (“[Delay Relief Events](#)”):
 - i. any Unexcused Railroad Delay;
 - ii. any Unexpected Governmental Approval Delay;
 - iii. any breach by the City of Denver of the Denver IGA

that results in:

- A. the duration of any street occupancy permit issued by the City of Denver not being for a duration equal to the Reasonable Construction Time Period (as defined in Section 4.A.(iii) of the Denver IGA) plus 10% of that time period; or
- B. the City of Denver unreasonably withholding or delaying any permit that it is required to issue in connection with the Construction Work pursuant to Section 4.A.(iv) of the Denver IGA,

provided that Developer has complied with the City of Denver permit process set out in Reference Document number 29.8.01; and

- iv. any Force Majeure Event or any Relief Event to the extent that such event constitutes a Delay Relief Event pursuant to Section 33.1.6.c.i.C.II;
- b. any Force Majeure Event;
- c. any:
 - i. fire or explosion;
 - ii. geomagnetic storm; or
 - iii. earthquake;
- d. riot or illegal civil commotion;
- e. any Change in Law (excluding (i) any Discriminatory Change in Law and (ii) any Qualifying Change in Law);
- f. any Third Party Release of Hazardous Substances that occurs during the Construction Period;
- g. any accidental loss or damage to the Right-of-Way, any Additional Right-of-Way or any Permit Areas (excluding Developer-risk Permit Areas) in respect of which Developer holds Permits;
- h. any failure by the City of Denver:
 - i. to provide to Developer within 15 Working Days any comments in connection with the Construction Work that it is required to provide in relation to any submittal within 10 “business days” pursuant to the Preamble in Exhibit K of the Denver IGA; or
 - ii. in the event that any 10 “business day” period referred to in the Preamble in Exhibit K of the Denver IGA is adjusted as contemplated in such Preamble, to provide to Developer within five Working Days of the expiry of such adjusted period comments in connection with the Construction Work that is the subject of the relevant submittal;
- i. any incident of physical damage to an Element of the Project or delay of or disruption to the Work caused by a

failure by the Cover Top Maintainer to perform the City of Denver's obligations in accordance with the applicable terms of the Cover Maintenance Agreement during the Operating Period;

- j. Developer's obligation to comply with Section 12.2.b with respect to any Related Transportation Facility that is not Known or Knowable (other than with respect to any required capital expenditure, to which paragraph n. of the definition of Compensation Event in this Part A of Annex A (*Definitions and Abbreviations*) shall apply);
- k. any weather event manifesting severe and historically unusual wind and/or liquid precipitation conditions directly affecting any part of the Site that is recognized as a "severe local storm", or "flood" event by the National Oceanic and Atmospheric Administration's National Weather Service in a published notice, alert or warning (a "Severe Weather Event");
- l. any delay of or disruption to the Work caused by the operation or maintenance of the Limited O&M Work Segments, but only to the extent such operation or maintenance is not the responsibility of Developer (or another Person under common Control with Developer) pursuant to this Agreement or otherwise; or
- m. any unusual and unreasonable delay by the Colorado Department of Public Health and Environment in issuing, agreeing to modify, renewing or extending any Remediation Activities Discharging to Surface Waters Permit, Stationary Source Air Quality Permit or Subterranean Dewatering or Well Development Permit,

in each case unless and to the extent such event arises as a result of any breach of Law, Governmental Approval, Permit or this Agreement, or fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of any Developer-Related Entity.

"Renewal Element"

means an Element which has a Useful Life Baseline Requirement specified in Appendix B to Schedule 12 (*Handback Requirements*).

"Renewal Work"

means maintenance, repair, reconstruction, rehabilitation, restoration, renewal or replacement of any Element (excluding any Element within or that forms part of the Limited O&M Work Segments) or part thereof that is not normally included, in accordance with Good Industry Practice, as an annually recurring cost in maintenance and repair budgets for transportation facilities (and associated equipment) of a similar nature and located in a similar environment to the Project.

"Renewal Work DBE Goal"

has the meaning given to it in Section 6.2.2.f of Schedule 15 (*Federal and State Requirements*).

"Renewal Work OJT Goal"

has the meaning given to it in Section 6.3.2 of Schedule 15 (*Federal and State Requirements*).

"Renewal Work Plan"

means the plan described in Section 6.1 of Schedule 11 (*Operations and Maintenance Requirements*) (as updated in accordance with Schedule 11 (*Operations and Maintenance Requirements*)).

<u>“Renewal Work Schedule”</u>	means the schedule required as part of the Renewal Work Plan.
<u>“Representatives”</u>	has the meaning given to it in <u>Section 18.2.1.a.</u>
<u>“Requested Relocation”</u>	subject to <u>Section 4.1.4</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>), means any Utility Relocation of a Private Utility that the relevant Private Utility Owner requests be performed by Developer pursuant to the terms of any URA.
<u>“Required Action”</u>	has the meaning given to it in <u>Section 23.4.3.</u>
<u>“Required Environmental Approvals”</u>	has the meaning given to it in <u>Section 8</u> of <u>Schedule 17</u> (<i>Environmental Requirements</i>).
<u>“Required Guarantor”</u>	means any Guarantor for a Principal Subcontractor (or any member thereof) whose Work is not completed at the relevant time, provided that such Guarantor shall cease to be a Required Guarantor at such time that the Enterprises Accept written evidence submitted by Developer that the relevant Principal Subcontractor (taking into account any other guaranties) possesses the financial and technical capability to perform or cause the performance of all remaining Work under the relevant Principal Subcontract in full compliance with its terms in the absence of the support of such Guarantor.
<u>“Required Principal Subcontractor Member”</u>	means any member of a Principal Subcontractor which Principal Subcontractor’s Work is not completed at the relevant time, provided that such member shall cease to be a Required Principal Subcontractor Member at such time that the Enterprises Accept written evidence submitted by Developer that the relevant Principal Subcontractor (absent such member, and taking into account any guaranties) possesses the financial and technical capability to perform or cause the performance of all remaining Work under the relevant Principal Subcontract in full compliance with its terms in the absence of such member.
<u>“Rescue Refinancing”</u>	means a Refinancing by the Lenders upon the occurrence of a default or an event of default under the Financing Agreements.
<u>“Residual Element”</u>	means an Element which has a specified Residual Life Minimum Requirement in <u>Appendix A</u> to <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Residual Life”</u>	means, for an Element, the period remaining until the Element will next require reconstruction, rehabilitation, restoration, renewal or replacement.
<u>“Residual Life at Handback”</u>	means the Residual Life of an Element calculated at the Expiry Date determined through the application of the Residual Life Methodology and Residual Life inspections and by assuming that the Element is subject to maintenance after the Expiry Date to the same standards and requirements, and at the same frequency, as Developer is required to perform Routine Maintenance on such Element in accordance with the terms of this Agreement.
<u>“Residual Life Minimum Requirement”</u>	means, for any Residual Element, the number of years of Residual Life at Handback specified in the “Residual Life at Handback” column for such Residual Element in <u>Appendix A</u> to <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Residual Life Methodology”</u> or <u>“RLM”</u>	means the evaluation and calculation methodology by which the Residual Life of any Element will be calculated at the Expiry Date (including (a) the methodology by which any necessary Renewal Work will be identified and (b) in the case of bridge decks, methodology that complies with the

	requirements set out in <u>Section 2.1.a</u> of <u>Schedule 12</u> (<i>Handback Requirements</i>)) to ensure that each Residual Element meets or exceeds its Residual Life Minimum Requirement.
<u>“Residual Life Methodology Report”</u>	means the report prepared by Developer in accordance with <u>Section 3.3</u> of <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Restricted Change”</u>	means any Enterprise Change (or aspect thereof) proposed in an Enterprise Change Notice or a Directive Letter that would, if implemented: <ul style="list-style-type: none"> a. require the Work (as changed by the proposed Enterprise Change) to be performed in a way that: <ul style="list-style-type: none"> i. violates Law; ii. is inconsistent with Good Industry Practice; or iii. gives rise to a material risk to the health or safety of any person; or b. cause the revocation of any existing Governmental Approval, Permit or third party consent that is necessary for the performance of the existing Work under circumstances such that it would be impossible or highly unlikely that Developer would be able to obtain a new or amended equivalent Governmental Approval, Permit or third party consent relating to the Work (as changed by the proposed Enterprise Change); c. materially and adversely affect Developer’s ability to carry out the Work; and/or d. materially and adversely change the nature of the Project (including its risk profile).
<u>“Restricted Transfer Period”</u>	means the period commencing on the Agreement Date and ending on (but not including) the second anniversary of the Substantial Completion Date.
<u>“Reviewable Deliverable”</u>	means any Deliverable that is a Deliverable for Approval, a Deliverable for Acceptance or a Deliverable for Information.
<u>“Revised Baseline Schedule ”</u>	means the then current revision to the Baseline Schedule (including to any prior Revised Baseline Schedule), which has been submitted by Developer and Approved by the Enterprises pursuant to <u>Section 3.3.4.b</u> of <u>Schedule 8</u> (<i>Project Administration</i>).
<u>“RFC Documents”</u>	means Release for Construction Documents.
<u>“RFP”</u>	has the meaning given to it in the Recitals.
<u>“Right-of-Way”</u>	means, collectively, all of the land, improvements and fixtures that are located within all ROW Parcels, but in each case with effect only from the Project License Start Date and only until the Project License End Date, in each case, for the relevant ROW Parcel.
<u>“Right-of-Way Betterment”</u>	means appreciation in the value of a property due to beneficial public works executed in its near vicinity.
<u>“Right-of-Way Relocation”</u>	means displacing a current resident or occupant to a new location.
<u>“ROD”</u>	has the meaning given to it in the Recitals.

<u>“ROD Construction Limits”</u>	means the construction limits of the Project identified in Reference Document 29.10.9.07.
<u>“Routine Maintenance”</u>	means maintenance activities that are scheduled in advance and occur on a regular basis, such as weekly, monthly, quarterly, semi-annually or annually, which are normally included as an annually recurring cost in maintenance and repair budgets for transportation facilities (and associated equipment) of similar natures and in similar environmental conditions as the Project.
<u>“Routine O&M Work ESB Goal”</u>	has the meaning given to it in <u>Section 6.2.2.b</u> of <u>Schedule 15</u> (<i>Federal and State Requirements</i>).
<u>“Routine O&M Work”</u>	means all O&M Work, excluding Renewal Work.
<u>“ROW Parcel”</u>	means each parcel of land that either: <ul style="list-style-type: none"> a. is referred to in the “Parcel #” column in the ROW Schedule, each as identified in the Right-of-Way Exhibits in the Contract Drawings; or b. comprises part of the Existing CDOT Right-of-Way, but, with respect to any partial acquisition identified in the ROW Schedule, only including any part thereof that Developer elects to have the Department acquire and deliver pursuant to <u>Section 1.3</u> of <u>Schedule 18</u> (<i>Right-of-Way</i>).
<u>“ROW Schedule ”</u>	means the table set out in <u>Appendix A</u> to <u>Schedule 18</u> (<i>Right-of-Way</i>).
<u>“RRA”</u>	means any of: <ul style="list-style-type: none"> a. the BNSF RRA; b. the DRIR RRA; and c. the UPRR RRA.
<u>“Safety Compliance”</u>	means any and all improvements, repair, reconstruction, rehabilitation, restoration, renewal, replacement and/or changes in configuration or procedures in relation to the Project to correct a specific safety condition or risk in relation to the Project that the Enterprises, CDOT or another Governmental Authority that has relevant jurisdiction have reasonably determined to exist.
<u>“Safety Compliance Order”</u>	means a written order or directive from the Enterprises to Developer to implement Safety Compliance, provided that such order or directive shall not be used to effect a change to the Technical Requirements or the Project Standards or safety-related portions of the Work affected by a Change in Law.
<u>“Schedule Delay Period”</u>	has the meaning given to it in <u>Section 15.3.1.c.i</u> .
<u>“SDBPP”</u>	has the meaning given to it in <u>Section 5.1</u> of <u>Schedule 15</u> (<i>Federal and State Requirements</i>).
<u>“Second Handback Inspection Report”</u>	means the report prepared by Developer in accordance with <u>Sections 3.11.a.i</u> and <u>3.11.b</u> of <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Security Documents”</u>	means: <ul style="list-style-type: none"> a. the documents listed in Section B of Annex A to the Lenders Direct Agreement executed on or about the Financial Close Date; and b. any other mortgage, deed of trust, guarantee, pledge, lien,

indenture, trust agreement, hypothecation, assignment, collateral assignment, financing statement under the Uniform Commercial Code of any jurisdiction, security instrument or other charge or encumbrance of any kind, including any lease in the nature of a security instrument, given to any Lender as security for Project Debt or Developer's obligations pertaining to Project Debt to the extent permitted by this Agreement.

<u>"Service Line"</u>	means:	<ol style="list-style-type: none"> a. a Utility line, the function of which is to directly connect the improvements on an individual property to another Utility line located off such property, which other Utility line connects more than one such individual line to a larger system; or b. a Utility line on public or private property that services structures located on such property.
<u>"Setting Date"</u>	means	April 25, 2017.
<u>"Severe Weather Event"</u>	has the meaning given to it in paragraph	k. of the definition of Relief Event in this Part A of Annex A (<i>Definitions and Abbreviations</i>).
<u>"Similar Project"</u>	means	any highway facility within the State or elsewhere in the United States, including a construction or reconstruction project involving such a facility, that is more similar than not to the Project based on any one or more of the following elements: size, value, scope, technical complexity, geography, usage and risk profile.
<u>"Site"</u>	means, at any time:	<ol style="list-style-type: none"> a. the Right-of-Way; b. any Additional Right-of-Way; c. any Permit Areas in respect of which Developer holds Permits at that time; and d. any Temporary Properties in respect of which Developer owns or holds Temporary Property Rights at that time.
<u>"Small Business and Workforce Goals"</u>	has the meaning given to it in	Section 6.1 of Schedule 15 (<i>Federal and State Requirements</i>).
<u>"Snow and Ice Control Commencement Date"</u>	has the meaning given to it in	Section 3 of Part 3 of Schedule 3 (<i>Commencement and Completion Mechanics</i>).
<u>"Snow and Ice Control Equipment"</u>	has the meaning given to it in	Section 11.6 of Schedule 11 (<i>Operations and Maintenance Requirements</i>).
<u>"Snow and Ice Control Plan"</u>	means the plan described in	Section 9.3 of Schedule 11 (<i>Operations and Maintenance Requirements</i>).
<u>"Snow and Ice Control Services"</u>	means the snow and ice control services as described in	Section 11 of Schedule 11 (<i>Operations and Maintenance Requirements</i>).
<u>"Snow Route"</u>	means the documented configuration and path(s) traversed by a snowplow or Spreader documented in Developer's Snow and Ice Control Plan.	
<u>"Special Events"</u>	means events expected to produce higher than average traffic on the I-70 East Corridor.	

<u>“Special Permit”</u>	means a Permit issued by CDOT to permit a Person with a right under Law to have access to the Right-of-Way and any Additional Right-of-Way for a purpose which does not include carrying out any excavation in order to exercise that right.
<u>“Special Provisions”</u>	means <u>Sections 36, 46.1 and 53</u> .
<u>“Specialist Inspections”</u>	means inspections of specified Elements or components for which testing, special tools or equipment are necessary, including inspections required to be undertaken in accordance with <u>Section 8.4 of Schedule 11 (Operations and Maintenance Requirements)</u> .
<u>“Specified Additional Insured”</u>	means: <ul style="list-style-type: none"> a. each Indemnified Party; b. any Railroad, including its officers, directors and employees, to the extent required to be treated as an additional insured under any RRA; c. any Utility Owner, including its officers, directors and employees, to the extent required to be treated as an additional insured under any URA, and Sprint; d. any Lender, to the extent required to be an additional insured under any Financing Document; and e. any other Person as and when agreed by the Parties or otherwise reasonably required by the Enterprises.
<u>“Spreader”</u>	means a vehicle capable of spreading salt, de-icers and anti-icers.
<u>“Sprint”</u>	has the meaning given to it in <u>Section 4.1.3 of Schedule 10 (Design and Construction Requirements)</u> .
<u>“Sprint Reimbursement Agreement”</u>	has the meaning given to it in <u>Section 4.1.3 of Schedule 10 (Design and Construction Requirements)</u> .
<u>“Sprint Work Order”</u>	has the meaning given to it in <u>Section 4.1.3 of Schedule 10 (Design and Construction Requirements)</u> .
<u>“Standard Special Provisions”</u>	means the Standard Special Provisions listed in <u>Section 4 of Appendix A to Schedule 10A (Applicable Standards and Specifications)</u> .
<u>“Standard Specifications”</u>	means the CDOT Standard Specifications.
<u>“State”</u>	means the State of Colorado.
<u>“State Sales Tax”</u>	has the meaning given to it in <u>Section 30.1.3.b</u> .
<u>“Storm Drain”</u>	means a network of pipes that connects inlets, manholes, and other drainage features to an outfall.
<u>“Subcontract”</u>	means any contract (at any tier) entered into by Developer, the Construction Contractor, the O&M Contractor or a Subcontractor including a Supplier with one or more third parties directly in connection with the carrying out of the Work or any of Developer’s other obligations under this Agreement.
<u>“Subcontractor”</u>	means any party, other than Developer, to a Subcontract.
<u>“Subcontractor Breakage Costs”</u>	means Losses that have been or will be reasonably and properly incurred by Developer under a Principal Subcontract as a direct result of the termination of this Agreement (and which Losses shall not include lost profit or lost opportunity, but may, for certainty, include payment to a Principal

Subcontractor for work performed prior to the Termination Date, but not yet paid for by Developer), but only to the extent that:

- a. the Losses are incurred in connection with the Project and in respect of the Work required to be performed by Developer, including:
 - i. any materials or goods ordered or Subcontracts placed that cannot be cancelled without such Losses being incurred;
 - ii. any expenditure incurred in anticipation of the performance or the completion of Work in the future; and
 - iii. the cost of demobilization including the cost of any relocation of equipment used in connection with the Project;
- b. the Losses are incurred under arrangements and/or agreements that are consistent with terms that have been entered into in the ordinary course of business and on an arm's length basis, and that otherwise comply with this Agreement; and
- c. Developer and the relevant Principal Subcontractor have each used their Reasonable Efforts to mitigate such Losses.

<u>"Substantial Completion"</u>	means the satisfaction of all Substantial Completion Conditions, as confirmed by the Enterprises' issuance of the Substantial Completion Certificate.
<u>"Substantial Completion Certificate"</u>	has the meaning given to it in <u>Section 5(a)</u> of <u>Part 5</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>"Substantial Completion Conditions"</u>	has the meaning given to it in <u>Section 1</u> of <u>Part 5</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>"Substantial Completion Date"</u>	has the meaning given to it in <u>Section 5(a)</u> of <u>Part 5</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>"Substantial Completion Deduction Amount"</u>	means the amount calculated in accordance with <u>Section 1</u> of <u>Part 1</u> of <u>Schedule 6</u> (<i>Performance Mechanism</i>).
<u>"Substantial Completion Milestone Payment"</u>	means the Milestone Payment payable in respect of the achievement of Substantial Completion.
<u>"Substantial Completion Payment"</u>	has the meaning given to it in <u>Section 3(b)</u> of <u>Schedule 5</u> (<i>Milestone Payments</i>).
<u>"Substantial Completion Punch List"</u>	has the meaning given to it in <u>Section 2(b)</u> of <u>Part 7</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>"Substantial Completion Punch List Items"</u>	has the meaning given to it in <u>Section 2(b)</u> of <u>Part 7</u> of <u>Schedule 3</u> (<i>Commencement and Completion Mechanics</i>).
<u>"Supervening Event"</u>	means any: <ol style="list-style-type: none"> a. Relief Event; b. Compensation Event; or c. Appendix B Parcel Unexpected Hazardous Substances Event to the extent that it does not constitute a

Compensation Event.

“ <u>Supervening Event Submission</u> ”	means any Preliminary Supervening Event Submission or any Detailed Supervening Event Submission.
“ <u>Supervening Event Notice</u> ”	has the meaning given to it in <u>Section 15.1.2.a.</u>
“ <u>Supplemental Indenture</u> ”	means the Supplemental Trust Indenture between BE and the BE Trustee, amending and supplementing the Master Indenture, to be entered into in accordance with <u>Section 2.3(e)(i)</u> of <u>Schedule 1</u> (<i>Financial Close</i>).
“ <u>Supplied Survey Data</u> ”	means the survey data for the Construction Work identified in the Reference Documents.
“ <u>Supplier</u> ”	means a Subcontractor that primarily provides goods and/or materials, but not services, under the terms of its Subcontract.
“ <u>Table 6A.1</u> ”	means Table 6A.1 set out in <u>Appendix A</u> to <u>Schedule 6</u> (<i>Performance Mechanism</i>).
“ <u>Table 6A.2</u> ”	means Table 6A.2 set out in <u>Appendix A</u> to <u>Schedule 6</u> (<i>Performance Mechanism</i>).
“ <u>Target</u> ”	means, in respect of an Element, the condition of such Element specified in the “Target” column in the Performance and Measurement Tables (as updated in accordance with <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>)).
“ <u>Tax</u> ”	means any Federal, State, local or foreign income, margin, gross receipts, sales, use, excise, transfer, consumer, license, payroll, employment, severance, stamp, business, occupation, premium, windfall profits, environmental (including taxes under Section 59A of the Internal Revenue Code of 1986), customs, permit, capital stock, franchise, profits, withholding, social security (or similar), unemployment, disability, real property, personal property, registration, value added, alternative or add-on minimum, estimated or other tax, levy, impost, duty, fee or charge imposed, levied, collected, withheld or assessed at any time, whether direct or indirect, relating to, or incurred in connection with, the Project, the performance of the Work, the Milestone Payments, Performance Payments, other compensation or act, business, status or transaction of any Developer-Related Entity, including any interest, penalty or addition thereto, in all cases whether disputed or undisputed.
“ <u>Technical Deliverable</u> ”	means any Deliverable that Developer is required to submit pursuant to <u>Schedules 8</u> (<i>Project Administration</i>), <u>10</u> (<i>Design and Construction Requirements</i>), <u>11</u> (<i>Operations and Maintenance Requirements</i>), <u>12</u> (<i>Handback Requirements</i>), <u>14</u> (<i>Strategic Communications</i>), <u>17</u> (<i>Environmental Requirements</i>) and <u>18</u> (<i>Right-of-Way</i>).
“ <u>Technical Panel</u> ”	means the dispute resolution panel of such name to be established pursuant to <u>Section 5</u> of <u>Schedule 25</u> (<i>Dispute Resolution Procedure</i>).
“ <u>Technical Proposal Deadline</u> ”	means June 1, 2017.
“ <u>Technical Requirements</u> ”	means the obligations of, and any requirements to be satisfied by, Developer under any of <u>Schedules 8</u> (<i>Project Administration</i>), <u>9</u> (<i>Submittals</i>), <u>10</u> (<i>Design and Construction Requirements</i>), <u>11</u> (<i>Operations and Maintenance</i>), <u>12</u> (<i>Handback Requirements</i>), <u>17</u> (<i>Environmental</i>

Requirements) and 18 (Right-of-Way) and Table 6A.1 and Table 6A.2.

“Temporary Easement” means any temporary easement in an area that is outside the Right-of-Way or any Additional Right-of-Way, but which is required for performing the Construction Work within the Right-of-Way or any Additional Right-of-Way.

“Temporary ROW Easement” means any temporary easement in an area that is part of the Right-of-Way or any Additional Right-of-Way.

“Temporary Property” means:

- a. Temporary Easements; and
- b. other areas not within the Right-of-Way or any Additional Right-of-Way in which Developer is performing Work for a temporary period, such as temporary Construction Work sites, lay down areas, staging areas, storage areas, stockpiling areas, earthwork material borrow sites, equipment parking areas and similar areas.

“Temporary Property Rights” means, in respect of any Temporary Property, any right or interest in, or in respect of, such Temporary Property.

“Term” has the meaning given to it in Section 4.2.

“Termination Amount” means, with respect to any termination of this Agreement prior to the Expiry Date, the amount of compensation, if any, owing from the Enterprises to Developer as determined pursuant to this Agreement.

“Termination by Court Ruling” means the issuance of a final, non-appealable court order by a court of competent jurisdiction:

- a. to the effect that this Agreement is void and/or unenforceable, or impossible to perform in its entirety;
- b. to the effect that either of the Enterprises lacked the authority to execute, deliver and/or perform this Agreement;
- c. permanently enjoining or prohibiting performance or completion of a material portion of the Work;
- d. requiring the Enterprises or CDOT, individually, or in concert with one another and/or the FHWA, to undertake additional or supplemental evaluations, studies or other work under NEPA or other Law that, in the Enterprises’ discretion, is impracticable in light of the purpose and intent of this Agreement; or
- e. upholding the binding effect on Developer or the Enterprises and/or CDOT of a Change in Law that causes impossibility of performance of a fundamental obligation by Developer or the Enterprises under this Agreement or impossibility of exercising a fundamental right of Developer or the Enterprises under this Agreement.

“Termination Date” means the effective date of any early termination of this Agreement as determined pursuant to Schedule 1 (Financial Close) or Sections 33.1.2 through 33.1.7, as applicable.

“Termination Deduction Amount” means, without double-counting, any:

- a. accrued Monthly Construction Closure Deductions, Construction Goal Deductions, Monthly Operating Period

Closure Deductions, Monthly Noncompliance Deductions and Operations Goal Deductions that, as of the Termination Date, have not been taken into account in the calculation of any payment actually made to Developer by the Enterprises prior to the Termination Date; and

- b. any other amount that the Enterprises are entitled to set-off against the Termination Amount pursuant to Section 5(a) of Part 3 of Schedule 4 (Payments).

<u>“Termination for Convenience”</u>	has the meaning given to it in <u>Section 33.1.2.a.</u>
<u>“Termination for Extended Events”</u>	has the meaning given to it in <u>Section 33.1.6.a.</u>
<u>“Termination Insurance Proceeds”</u>	means all proceeds from insurance payable to Developer under any Available Insurance coverage, or that should otherwise be collectible by Developer from that portion of the Available Insurance that is required to be maintained by Developer pursuant to <u>Section 25</u> and <u>Schedule 13 (Required Insurances)</u> , in any such case on or after the Termination Date.
<u>“Termination Notice”</u>	means a notice of termination issued pursuant to <u>Section 33.1.</u>
<u>“Test” or “Testing”</u>	means the procedure and method of acquiring and recording physical data and comparing it to set standards and submitting a statement to such conditions or operations as will lead to its Acceptance or rejection (deficiency, defective condition, nonconformance) of the item.
<u>“Third Handback Inspection Report”</u>	means the report prepared by Developer in accordance with <u>Sections 3.11.a.ii</u> and <u>3.11.b</u> of <u>Schedule 12 (Handback Requirements)</u> .
<u>“Third Party Agreements”</u>	means: <ol style="list-style-type: none"> a. the URAs; b. the RRAs; c. the Denver IGA; d. the E-470 Installation Agreement; e. the E-470 TSA; f. the DPS MOA; g. the Cover Maintenance Agreement; and h. any agreement that is designated as a Third Party Agreement by the Enterprises in a notice delivered pursuant to <u>Section 8.5.2.a</u>, <p style="text-align: center;">in each case as amended or modified pursuant to <u>Section 8.5.2.b.</u></p>
<u>“Third Party Intellectual Property”</u>	means any Intellectual Property used or applied by Developer or any Developer-Related Entity in connection with the Project or the Work which is owned by any Person other than the Enterprises, CDOT or a Developer-Related Entity.
<u>“Third Party Release of Hazardous Substances”</u>	means any Release of Hazardous Substances on, in, under, from or in the vicinity of the Site caused by any Person that is not a Developer-Related Entity, either Enterprise or CDOT, which Release: <ol style="list-style-type: none"> a. occurs:

- i. with respect to any ROW Parcel, after the Setting Date; and
- ii. with respect to any Additional ROW Parcel, on or after its Project License Start Date; and
- b. is required to be investigated, removed, treated, stored, transported, managed and/or remediated pursuant to Law, any Governmental Approval or Developer's obligations under this Agreement,

excluding any such Release to the extent such results in the presence of Hazardous Substances in groundwater.

"Threshold Zone"

means the length of roadway between the Portal and the Transition Zone.

"TIFIA"

means the Transportation Infrastructure Finance and Innovation Act of 1998, codified at 23 U.S.C. §§ 601 et seq.

"TIFIA Betterments"

means all betterments in a financial term of the TIFIA Financing as compared to the Baseline TIFIA Term Sheet, net of any adverse changes in financial terms as compared to the Baseline TIFIA Term Sheet that are required by the Build America Bureau other than as a condition of accepting a change in terms proposed by Developer or made in response to Developer's financial condition or plan.

"TIFIA Event"

means, at any time after the issuance of the Notice of Award, either:

- a. the Build America Bureau decides not to, or is unable to, provide credit assistance to Developer:
 - i. in an amount at least equal to the lesser of:
 - A. 33% of reasonably anticipated "Eligible Project Costs" (as defined in 23 U.S. Code § 601(a)(2)); or
 - B. if the TIFIA Loan does not receive an "Investment Grade Rating", the amount of the "Initial Senior Obligations" (as such terms are defined in the Baseline TIFIA Term Sheet),

in each case as determined by reference to the Preferred Proposer's Proposal; or
 - ii. other than with respect to TIFIA Betterments to the extent such are, in aggregate, positive, on terms materially consistent with the terms of (or, with respect to Key Ratios, identical to or more favorable to Developer than), the Baseline TIFIA Term Sheet; or
- b. after the Agreement Date, the Build America Bureau fails to work diligently and reasonably towards achieving Financial Close by the Financial Close Deadline (including unreasonable negotiation),

provided that neither of the events referred to in paragraphs a. or b. of this definition shall be deemed to be a TIFIA Event if:

- c. the Preferred Proposer, Developer or any other Developer-Related Entity failed to comply with the requirements of

Section 3.3 of Part B of the ITP or otherwise sought to achieve TIFIA Betterments on its own behalf or on behalf of its Lenders;

- d. Developer has failed to use Reasonable Efforts to achieve Financial Close, which Reasonable Efforts shall include:
 - i. complying with Build America Bureau policy requirements to the extent publicly disclosed or of which Developer is otherwise aware;
 - ii. negotiating in good faith mutually agreeable terms and conditions with the Build America Bureau, including by making commercially reasonable concessions in connection with concessions by the Build America Bureau; and
 - iii. furnishing all required information and credit ratings in a timely manner; or
- e. such event arises as a result of any breach of Law, Governmental Approval or this Agreement, fraud, willful misconduct, criminal conduct, recklessness, bad faith or negligence by or of the Preferred Proposer or any Developer-Related Entity.

“TIFIA Financing” means any debt financing to be provided by the US DOT pursuant to TIFIA that is assumed in the Base Financial Model.

“TIFIA Loan” means a loan from the US DOT pursuant to the federal credit assistance program established pursuant to TIFIA.

“TIFIA Loan Agreement” has the meaning given to it in Section A of Annex A to the Lenders Direct Agreement entered into on or about the Financial Close Date.

“Tolled Express Lane” means the lanes on the I-70 Mainline where operational strategies are proactively implemented and managed in response to changing conditions.

“Tow Plow” means a snow plow blade mounted on a ballasted trailer that is towed behind a conventional plow or combination plow/spreader truck, where controls in the towing vehicle deploy the tow plow into an adjacent lane, permitting two lanes to be plowed by a single tow vehicle.

“Transferrable Assets” means all Assets, including all transferrable warranties with respect to such Assets, except:

- a. any Asset that falls within paragraphs c., d., e. or f. of the definition of Assets in this Part A of Annex A (Definitions and Abbreviations) that:
 - i. is not affixed to any Element, the Right-of-Way or any Additional Right-of-Way; and
 - ii. to the extent customarily located or used on any part of the Site in connection with the Project:
 - A. is not owned by Developer;
 - B. was not purchased by another Developer-Related Entity primarily or exclusively funds received, directly or indirectly, from the Enterprises; and

- b. any Temporary Properties, and any buildings located on such properties.

“Transition Zone” means the length of roadway between the Threshold Zone and the Interior Zone and which has variable illumination depending upon the illumination in the Threshold Zone to allow adaption to the Interior Zone illumination, and the length of which is determined by the posted vehicle speed.

“Transportation Commission” has the meaning given to it in the Recitals.

“Transportation Demand Model” means a program that encompasses tools to help with traffic congestion mitigation by offering alternatives to the single occupant vehicle.

“Transportation Management Plan” means, from time to time, the then current plan that satisfies the requirements of Section 2.2.3 of Schedule 10 (*Design and Construction Requirements*) and has been submitted by Developer and Approved by the Department pursuant to Schedule 10 (*Design and Construction Requirements*).

“Travel Time Indicators” means the system of antennas and readers that detect toll tag transponders in vehicles.

“Ultimate” has the same meaning as given to the Preferred Alternative.

“Unavailable Term” means any Insurance Term that, at the time an Insurance Policy is obtained or renewed:

- a. is not available to Developer in the worldwide insurance market from Eligible Insurers on terms required by this Agreement; or
- b. is not generally being incorporated in insurance procured in the worldwide insurance market from Eligible Insurers by contractors in relation to transportation related infrastructure projects in the United States due to the level of the insurance premium payable for insurance incorporating such Insurance Term,

provided that, for certainty, an Unavailable Term shall not include any risk or peril that is Uninsurable.

“Unexcused Railroad Delay” means:

- a. any breach of a RRA by a Railroad; or
- b. to the extent not otherwise constituting such a breach:
 - i. any unexcused delay (as determined by reference to the relevant RRA) by a Railroad in performing any work required to performed by it, or in reviewing or approving any Deliverable for Third Party Review (as such term is defined in Schedule 9 (*Submittals*)) required to be reviewed or approved by it, under the relevant RRA; or
 - ii. any unreasonable withholding by any Railroad with relevant jurisdiction under the terms of a RRA or otherwise of the issuance or renewal of any Permit necessary for the performance of the Work.

“Unexcused Utility Owner Delay” means:

- a. any breach of a URA or Utility Work Order by a Utility Owner; or
- b. to the extent not otherwise constituting such a breach:
 - i. any unexcused delay (as determined by reference to the relevant URA and/or relevant Utility Work Order) by a Utility Owner in performing any work required to be performed by it, or in reviewing or approving any Deliverable for Third Party Review (as such term is defined in Schedule 9 (Submittals)) required to be reviewed or approved by it, under the relevant URA and/or Utility Work Order; or
 - ii. any unreasonable withholding by any Utility Owner with relevant jurisdiction under the terms of a URA or otherwise of the issuance or renewal of any Permit necessary for the performance of the Work,

provided that, for certainty, references in this definition to:

- c. any “URA” shall include any Sprint Reimbursement Agreement; and
- d. a “Utility Work Order” shall include any Sprint Work Order; and
- e. any breach of a Utility Work Order in paragraph a. of this definition shall, as it applies to a Sprint Work Order, mean any failure by Sprint to comply with the terms specified in such Sprint Work Order that apply to Sprint notwithstanding it is not a party to such Sprint Work Order.

“Unexpected Endangered Species”

means any animal or plant species listed as threatened or endangered under and subject to an applicable threatened or endangered species Law found at the Right-of-Way, or at any Permit Areas (excluding Developer-risk Permit Areas) in respect of which Developer holds a Permit, the temporary, continual or habitual presence of which on the Right-of-Way or any such Permit Area was not Known or Knowable at the Setting Date.

“Unexpected Geological Conditions”

means any subsurface or latent geological conditions encountered at the exact bore hole locations identified in:

- a. the boring logs set out in Appendices B and D1 of the Final Preliminary Subsurface Investigation Report I-70 East Corridor Project Partial Cover Lowered Alternative with Managed Lanes Options Brighton Boulevard to Chambers Road Denver, Colorado CDOT Project No: FBR 0709-234 (19631) prepared by Yeh and Associate, Inc. dated September 21, 2015; and
- b. the boring logs set out in Appendix C of the Preliminary Subsurface Investigation Report for Partial Cover Lowered (PCL) Alternative I-70 East Corridor EIS CDOT Region 6 prepared by Yeh and Associates, Inc. dated October 31, 2012; and
- c. the boring logs set out in Appendix B of the Addendum Final Preliminary Subsurface Investigation Report I-70 East Corridor Project Partial Cover Lowered Alternative with

Managed Lanes Options Brighton Boulevard to Chambers Road Denver, Colorado CDOT Project No: FBR 0709-234 (19631) prepared by Yeh and Associate, Inc. dated June 9, 2016,

in each case that differ materially from those conditions indicated in such boring logs for such bore hole locations, which conditions were not Known or Knowable at the Setting Date.

“Unexpected Governmental Approval Delay”

means, in the event that:

- a. the Enterprises have complied with their obligations under Section 8.4.4.a; and
- b. in order so to comply, the Enterprises were, pursuant to paragraph a. or paragraph b. of the definition of Reasonable Efforts in this Part A of Annex A (Definitions and Abbreviations)), not required to take (and did not take) an action necessary to effect issuance, modification, renewal or extension of any Governmental Approval or Permit pursuant to Sections 8.4.4.a.i and/or 8.4.4.a.ii,

any resulting unusual and unreasonable delay by a Governmental Authority in issuing, agreeing to modify, renewing or extending any Governmental Approval or Permit that would have been avoided if the Enterprises had taken the relevant action referred to in paragraph b. of this definition.

“Unexpected Groundwater Contamination Condition”

means, in respect of groundwater present in or under any part of the Right-of-Way and any Permit Areas in respect of which Developer holds a Permit (other than any Developer-risk Permit Area) which groundwater is ultimately subject to discharge through any single discharge point pursuant to an applicable Governmental Approval, any Hazardous Substance contamination in such groundwater at concentration levels that are required to be investigated, removed, treated, stored, transported, managed or remediated pursuant to Law or Developer’s obligations under this Agreement, as and to the extent such contamination and concentration levels are established at such single discharge point pursuant to Section 23.4.4 of Schedule 17 (Environmental Requirements), excluding any such contamination:

- a. by a substance identified in the “Chemical Name” column in Appendix C (Groundwater Benchmark Concentrations) of Schedule 17 (Environmental Requirements) at concentration levels at or below the applicable value set out in the “Value” column in that Appendix C; or
- b. to the extent such contamination constitutes a Developer Release of Hazardous Substances.

“Unexpected Groundwater Contamination Event”

means:

- a. in respect of any single Groundwater Contamination Event Period, the encountering, discovery and/or continued existence (as applicable) of, collectively, all Unexpected Groundwater Contamination Conditions during such period which conditions require temporary treatment or remediation during the Construction Period as part of the performance of the Construction Work; and
- b. during both the Construction Period and the Operating

Period the encountering or discovery of, collectively, all Unexpected Groundwater Contamination Conditions which conditions require permanent and ongoing treatment or remediation pursuant to Law or Developer's obligations under this Agreement during the Operating Period and to enable Developer to perform O&M Work After Construction.

"Unexpected Hazardous Substances"

means any Hazardous Substances (including soil or surface water contaminated with Hazardous Substances) present on, in or under any part of the Right-of-Way, or any Permit Areas in respect of which Developer holds a Permit, at concentration levels or in quantities that are required to be investigated, removed, treated, stored, transported, managed or remediated pursuant to Law or Developer's obligations under this Agreement, excluding any such Hazardous Substances:

- a. present in any groundwater;
- b. present in any soil that (for certainty, absent any treatment) meets criteria for reuse, disposal or release on-Site:
 - i. under Law;
 - ii. pursuant to any Permit or Governmental Approval; or
 - iii. in accordance with the Materials Management Plan and the Beneficial Reuse and Materials Management Plan,

including, for certainty, any such Hazardous Substances that meet such criteria but which cannot be, or are not, reused, disposed of or released on-Site due to:

 - iv. there being no available on-Site location to so reuse, dispose of or release such materials; or
 - v. any action or decision by or of any Developer-Related Entity;
- c. present on, in or under any Developer-risk Permit Area;
- d. present in any "Near Surface Soil" (as defined in the Beneficial Reuse and Materials Management Plan) west of Colorado Boulevard;
- e. required to be investigated, removed, treated, stored, transported, managed and/or remediated by either Party in complying with its Property Management obligations pursuant to Section 2.2 of Schedule 18 (Right-of-Way);
- f. present on or in:
 - i. any building, bridge or structure, including any subsurface structure or facility connected to any such building, bridge or structure; or
 - ii. any underground storage tank registered with the Colorado Department of Labor and Employment, Division of Oil and Public Safety; or
- g. to the extent such constitutes a:
 - i. Developer Release of Hazardous Substances;

- ii. Enterprise Release of Hazardous Substances; or
- iii. Third Party Release of Hazardous Substances.

“Unexpected Historically Significant Remains”

means any antiquities (including structures), fossils, coins, articles of value, cultural artifacts, human burial sites and remains and other similar remains of archaeological, historical, cultural or paleontological interest on or under any part of the Right-of-Way, or of any Permit Areas (excluding Developer-risk Permit Areas) in respect of which Developer holds a Permit, which were not Known or Knowable at the Setting Date.

“Unexpected Utility Condition”

means any Utility present on the Right-of-Way, or on any Permit Areas (excluding Developer-risk Permit Areas) in respect of which Developer holds a Permit, that was not identified or was incorrectly shown, identified or described in the Utility Data, in each case excluding:

- a. any Utility to the extent it was Known or Knowable, which for such purposes shall be deemed to include any Utility that:
 - i. is located at or less than 10 feet distant from the horizontal centerline indicated therefor in the Utility Data (without regard to vertical location); and/or
 - ii. has an actual nominal diameter (excluding casings and any other appurtenances) within 12 inches of the size indicated in the Utility Data;
- b. any Utility installed on any part of the Right-of-Way after the Project License Start Date, or on any Permit Area after Developer secured a Permit providing access and/or use to or of such area; and
- c. any Service Line.

“Unexpected Utility Condition Event”

means the encountering or discovery of any Unexpected Utility Condition.

“Uniform Act”

means the Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act, P.L. 91-646.

“Uninsurable”

means a risk or peril, at the time an Insurance Policy is required to be obtained or renewed:

- a. for which Insurance Policies are not available to Developer in the worldwide insurance market from Eligible Insurers on terms required by this Agreement; or
- b. that is not generally being insured against in insurance procured in the worldwide insurance market from Eligible Insurers by contractors in relation to transportation-related infrastructure projects in the United States due to the level of the insurance premium payable for insuring such risk.

“unreasonably withheld”

has the meaning given to it in Section 2.2.2.a.

“UPRR”

means Union Pacific Railroad Company.

“UPRR Crossing”

means the existing and/or proposed crossing by the UPRR Railroad through the I-70 East corridor on the Right-of-Way as described in Section 10.1.2 of Schedule 10 (Design and Construction Requirements).

“UPRR Pepsi Lead”

means the existing and/or proposed crossing of Brighton Boulevard by the UPRR Railroad through the I-70 East corridor on the Right-of-Way as

<u>Crossing</u>	described in <u>Section 10.1.3</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“UPRR RRA”</u>	means the railroad agreement with respect to the UPRR Crossing, the UPRR Pepsi Lead Crossing and the UPRR York Street Crossing among CDOT, the City of Denver and UPRR in relation to the Project, a draft of which agreement was provided to the Preferred Proposer as one of the Reference Documents numbered 29.10.10.03.
<u>“UPRR Work”</u>	means all duties and services to be furnished and provided by the UPRR as required by the UPRR RRA, as applicable.
<u>“UPRR York Street Crossing”</u>	means the existing and/or proposed crossing of York Street by the UPRR Railroad through the I-70 East corridor on the Right-of-Way as described in <u>Section 10.1.4</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“URA”</u>	means: <ul style="list-style-type: none"> a. the utility relocation agreements (copies of each of which were provided in the Reference Documents) between CDOT and each of the Publicly Owned Utilities and the Private Utility Owners (other than Sprint); and b. any Sprint Reimbursement Agreement.
<u>“US DOT”</u>	means the United States Department of Transportation.
<u>“Useful Life”</u>	means, for an Element, the period following its first construction or installation, or following its last reconstruction, rehabilitation, restoration, renewal or replacement, until the Element will next require reconstruction, rehabilitation, restoration, renewal or replacement.
<u>“Useful Life Baseline Requirement”</u>	means, for any Renewal Element, the number of years specified in the “Useful Life” column for such Renewal Element in <u>Appendix B</u> to <u>Schedule 12</u> (<i>Handback Requirements</i>).
<u>“Useful Life Baseline Requirements Table”</u>	means the table set out in <u>Appendix B</u> to <u>Schedule 12</u> (<i>Handback Requirements</i>) (as updated in accordance with <u>Section 6.1.4</u> of <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>)).
<u>“User”</u>	means any person that is on or about the Project or any portion thereof, or is otherwise making use of the Project for any purpose.
<u>“Utility”</u>	means a privately, publicly or cooperatively owned line, facility and/or system for producing, transmitting or distributing communications, cable television, power, electricity, light, heat, gas, oil, crude products, water, steam, waste, or any other similar commodity including: <ul style="list-style-type: none"> a. the necessary appurtenances to any such line, facility and/or system; and b. any Service Line connecting directly to any such line, facility and/or system, regardless of the ownership of such Service Line, <p>provided that, for certainty, stormwater facilities, irrigation ditches, Intelligent Transportation Systems, Variable Message Signs, video and video detection systems, traffic signals and street lighting shall not constitute “Utilities”.</p>

<u>“Utility Betterment”</u>	subject to <u>Section 4.1.4</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>), has the meaning given to “Betterment” in the applicable URA.
<u>“Utility Data”</u>	means the Utility Drawings, the Utility Matrix, pothole log, manhole tabulation and other Utility information provided in the Reference Documents.
<u>“Utility Drawings”</u>	means the Utility plan design sheets provided in the Reference Documents, as updated from time to time by Developer pursuant to <u>Section 4</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“Utility Matrix”</u>	means the Construction Work “Utility Matrix” provided in the Reference Documents, as updated from time to time by Developer pursuant to <u>Section 4.3.2.c</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“Utility No-Conflict Close Out Form”</u>	means the form provided in <u>Appendix A</u> of <u>Section 4</u> to <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“Utility Owner”</u>	means the owner of a Utility.
<u>“Utility Permit”</u>	means a Permit issued by CDOT to permit a Utility Owner with a right under Law to have access to the Right-of-Way and any Additional Right-of-Way in order to exercise that right.
<u>“Utility Relocation”</u>	subject to <u>Section 4.1.4</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>), has the meaning given to “Relocation” in the applicable URA.
<u>“Utility Relocation Standards”</u>	subject to <u>Section 4.1.4</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>), has the meaning given to “Relocation Standards” in the applicable URA.
<u>“Utility Work”</u>	means any portion of the Construction Work relating to Utility Relocations, Utility Betterments or Requested Relocations, including but not limited to the Activities listed in <u>Section 4.2.9</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“Utility Work Order”</u>	subject to <u>Section 4.1.4</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>), has the meaning given to “Work Order” in the applicable URA and shall be substantially in the form provided in <u>Appendix B</u> of <u>Section 4</u> to <u>Schedule 10</u> (<i>Design and Construction Requirements</i>).
<u>“Variable Message Sign”</u>	means the large dynamic display used for user alerts and notifications.
<u>“Variable Toll Message Sign”</u>	means the static sign with electronic Variable Message Sign inserts that is utilized to display the specific tolls for each segment of the corridor.
<u>“Warrantied Elements”</u>	means the Elements of the Construction Work to be maintained by the applicable Warranty Beneficiaries on and from the Final Acceptance Date (or, in the case of the elements referred to in paragraphs <u>a.</u> and <u>b.</u> of the definition of Cover Top O&M Work in this <u>Part A</u> of <u>Annex A</u> (<i>Definitions and Abbreviations</i>), from the end of the Landscape Warranty period (as described in <u>Section 14.11</u> of <u>Schedule 10</u> (<i>Design and Construction Requirements</i>)) in the areas depicted: <ol style="list-style-type: none">a. with respect to the City of Denver as a Warranty Beneficiary, as “Local Agency Operations & Maintenance Work” in Reference Document 29.11.01 and as “Planning Area 2” in the I-70 Cover Plans;

- b. with respect to Denver Public Schools as a Warranty Beneficiary, as “Planning Area 1” in the I-70 Cover Plans; and
- c. with respect to CDOT as a Warranty Beneficiary, as “Department Operations & Maintenance Work” in Reference Document 29.11.01.

“ <u>Warranties</u> ”	has the meaning given to it in <u>Section 9.4.1</u> .
“ <u>Warranty Beneficiaries</u> ”	has the meaning given to it in <u>Section 9.4.2.a</u> .
“ <u>Warranty Defects List</u> ”	has the meaning given to it in <u>Section 9.4.5</u> .
“ <u>Warranty Period</u> ”	has the meaning given to it in <u>Section 9.4.3</u> .
“ <u>Weekend</u> ”	means the 48 hour period commencing on a Saturday at 12.00am and ending on the next Sunday at 11.59pm.
“ <u>WDP</u> ”	has the meaning given to it in <u>Section 5.1</u> of <u>Schedule 15</u> (<i>Federal and State Requirements</i>).
“ <u>Work</u> ”	means all of the work and services and performance of obligations, or any of it, to be undertaken or provided by Developer pursuant to this Agreement, including the Construction Work and the O&M Work.
“ <u>Work Breakdown Structure</u> ”	means the organized hierarchical division of Activities which shall be the basis for organizing all Work, as described in this Agreement. Requirements for the Work Breakdown Structure are set out in <u>Schedule 8</u> (<i>Project Administration</i>).
“ <u>Work Product</u> ”	means any document, drawing, report, plan, application, data, work product or other material or information, regardless of form, and including any draft specifically developed by Developer under the terms of this Agreement on or after the Agreement Date (and excluding, for certainty, any Proprietary Intellectual Property and any Third Party Intellectual Property incorporated therein).
“ <u>Workforce Development Goals</u> ”	has the meaning given to it in <u>Section 6.3</u> of <u>Schedule 15</u> (<i>Federal and State Requirements</i>).
“ <u>Working Day</u> ”	means any Calendar Day that is not a Saturday, a Sunday or Holiday.

Part B: Abbreviations

Except as otherwise specified herein or as the context may otherwise require, the following abbreviations set out below are provided as references for purposes of the Technical Requirements, Table 6A.1 and Table 6A.2 only:

<u>"ABC"</u>	means aggregate base course.
<u>"AC"</u>	means alternating current.
<u>"ACL"</u>	means access control list.
<u>"ADA"</u>	means Americans with Disabilities Act.
<u>"AID"</u>	means automatic incident detection.
<u>"AHJ"</u>	means Authority Having Jurisdiction.
<u>"ALPR"</u>	means Automatic License Plate Recognition.
<u>"AMCA"</u>	means Air Movement and Control Association.
<u>"ANSI"</u>	means American National Standards Institute.
<u>"APCD"</u>	means Air Pollution Control Division.
<u>"APEN"</u>	means Air Pollution Emission Notice.
<u>"AREMA"</u>	means American Railway Engineering and Maintenance-of-Way Association.
<u>"ATM"</u>	means Active Traffic Management.
<u>"ATR"</u>	means Automatic Traffic Recorders.
<u>"AVI"</u>	means Automatic Vehicle Identification.
<u>"AVL"</u>	means Automated Vehicle Locator.
<u>"BACR"</u>	means Baseline Asset Condition Report.
<u>"BMP"</u>	means Best Management Practices.
<u>"BRMMP"</u>	means Beneficial Reuse and Materials Management Plan.
<u>"CCD"</u>	means City and County of Denver.
<u>"CCMS"</u>	means Command, Control, and Monitoring System.
<u>"CCP"</u>	means Crisis Communications Plan.
<u>"CCTV"</u>	means Closed Circuit Television.
<u>"CDPHE"</u>	means Colorado Department of Public Health and Environment.
<u>"CDPS"</u>	means Colorado Discharge Permit System.
<u>"CDPS-SCP"</u>	means Colorado Discharge Permit System-Stormwater Construction Permit.
<u>"CFD"</u>	means Computational Fluid Dynamics Model.
<u>"CLOMR"</u>	means Conditional Letter of Map Revision.
<u>"CMS"</u>	means cable management system.
<u>"COTS"</u>	means conventional, off-the-shelf.
<u>"CPCM"</u>	means Construction Process Control Manager.
<u>"CPM"</u>	means Critical Path Method.
<u>"CPW"</u>	means Colorado Parks and Wildlife.
<u>"CRAL"</u>	means Construction of Relocation Acceptance Letter.
<u>"CSL"</u>	means cross sonic log.
<u>"CSP"</u>	means Colorado State Patrol.
<u>"CTMC"</u>	means Colorado Transportation Management Center.
<u>"CTMS"</u>	means Colorado Transportation Management Software.
<u>"CUHP/EPA-SWMM"</u>	means Colorado Urban Hydrograph Procedure/Environmental Protection Agency Storm Water Management Model.
<u>"CWCP"</u>	means Construction Work Communications Plan.
<u>"CWDM"</u>	means coarse wavelength division multiplexing.
<u>"CVS"</u>	means Cover Ventilation System.
<u>"DBE"</u>	means Disadvantaged Business Enterprise.
<u>"DCS"</u>	means Document Control System.
<u>"DPCM"</u>	means Design Process Control Manager.
<u>"DRAL"</u>	means Design of Relocation Acceptance Letter.
<u>"DRIRR"</u>	means Denver Rock Island Railroad.
<u>"DTD"</u>	means Division of Transportation Development.
<u>"DWDM"</u>	means dense wavelength division multiplexing.
<u>"ECS"</u>	means Erosion Control Supervisor.

<u>“ECWP”</u>	means Environmental Compliance Work Plan.
<u>“EDB”</u>	means extended detention basins.
<u>“EDP”</u>	means electrical distribution panels.
<u>“EIS”</u>	means Environmental Impact Statement.
<u>“EM”</u>	means Environmental Manager.
<u>“EPA”</u>	means Environmental Protection Agency.
<u>“ERP”</u>	means Emergency Response Plan.
<u>“ESAL”</u>	means 18-kip Equivalent Single Axle Loads.
<u>“ESB”</u>	means Emerging Small Business.
<u>“ETC”</u>	means Electronic Toll Collection.
<u>“FCM”</u>	means fracture critical member.
<u>“FDAS”</u>	means Fire Detection and Alarm System.
<u>“FDS”</u>	means Functional Design Specification.
<u>“FEE”</u>	means Fee interest or ownership of the fee simple estate in real property.
<u>“FFFS”</u>	means Fixed Firefighting System.
<u>“FMV”</u>	means Fair Market Value.
<u>“GUI”</u>	means graphical user interface.
<u>“GPS”</u>	means Global Positioning System.
<u>“HBP”</u>	means hot bituminous pavement.
<u>“HDPE”</u>	means high-density polyethylene.
<u>“HGL”</u>	means hydraulic grade line.
<u>“HLMR”</u>	means high load multi-rotational.
<u>“HMA”</u>	means hot mix asphalt.
<u>“HOV”</u>	means high occupancy vehicle.
<u>“HVAC”</u>	means heating, ventilation, and air conditioning.
<u>“IA”</u>	means Independent Assurance.
<u>“IAR”</u>	means Interstate Access Request.
<u>“IBC”</u>	means International Building Code.
<u>“IDQM”</u>	means Independent Design Quality Manager.
<u>“IESNA”</u>	means Illumination Engineering Society North America.
<u>“IGMP”</u>	means Internet Group Management Protocol.
<u>“IMP”</u>	means Incident Management Plan.
<u>“IQC”</u>	means Independent Quality Control, which for certainty is the same as “ICQC” as defined in the CDOT Field Materials Manual.
<u>“IQCF”</u>	means the Independent Quality Control firm or function group, as described in Section 6.2.5.b of Schedule 8 (<i>Project Administration</i>).
<u>“IQCM”</u>	means Independent Quality Control Manager.
<u>“INWMP”</u>	means Integrated Noxious Weed Management Plan.
<u>“IP”</u>	means Internet Protocol.
<u>“IRI”</u>	means International Roughness Index.
<u>“ISO”</u>	means International Organization for Standardization.
<u>“ITS”</u>	means Intelligent Transportation Systems.
<u>“IVR”</u>	means Interactive Voice Response.
<u>“LCD”</u>	means Liquid Crystal Display.
<u>“LED”</u>	means light emitting diode.
<u>“LEP”</u>	means Limited English Proficient.
<u>“LFD”</u>	means load factor design.
<u>“LFR”</u>	means a load factor rating.
<u>“LOMR”</u>	means Letter of Map Revision.
<u>“LP”</u>	means Lighting Protection.
<u>“LRFD”</u>	means load resistance factor design.
<u>“LRFR”</u>	means aggregate base course.
<u>“LSOH”</u>	means low smoke, zero halogen.
<u>“LUS”</u>	means Lane Use Signal.
<u>“M-E”</u>	means mechanistic-empirical.
<u>“MBTA”</u>	means Migratory Bird Treaty Act.

<u>“MEP”</u>	means mechanical, electrical, and plumbing.
<u>“MHCP”</u>	means Mile High Courtesy Patrol.
<u>“MHT”</u>	means Methods of Handling Traffic.
<u>“MMP”</u>	means Materials Management Plan (in the context of Construction Work, and otherwise as the context may provide).
<u>“MMP”</u>	means Maintenance Management Plan (in the context of O&M Work).
<u>“MMIS”</u>	means Maintenance Management Information System.
<u>“MOCP”</u>	means Maintenance and Operations Communications Plan.
<u>“MOT”</u>	means maintenance of traffic.
<u>“MVRD”</u>	means Microwave Vehicle Radar Detection.
<u>“MS4”</u>	means Municipal Separate Storm Sewer System.
<u>“MSE”</u>	means mechanically stabilized earth.
<u>“MTIP”</u>	means Materials Testing and Inspection Plan.
<u>“MW”</u>	means megawatts.
<u>“NCN”</u>	means Nonconformance Notice.
<u>“NCHRP”</u>	means National Cooperative Highway Research Program.
<u>“NCR”</u>	means Nonconformance Report.
<u>“NDRD”</u>	means New Development Redevelopment.
<u>“NEC”</u>	means National Electric Code.
<u>“NEPA”</u>	means the National Environmental Policy Act.
<u>“NFPA”</u>	means National Fire Protection Association.
<u>“NIOSH”</u>	means National Institute for Occupational Safety and Health.
<u>“NIST”</u>	means National Institute of Standards and Technology.
<u>“NSBA”</u>	means National Steel Bridge Alliance.
<u>“NTCIP”</u>	means National Transportation Communications for ITS Protocol.
<u>“NTP”</u>	means Notice to Proceed.
<u>“O&M”</u>	means Operations and Maintenance.
<u>“OCR”</u>	means Optical Character Recognition.
<u>“OJT”</u>	means On the Job Training.
<u>“OMP”</u>	means Operations Management Plan.
<u>“OMQMP”</u>	means O&M Quality Management Plan.
<u>“OTIS”</u>	means Online Transportation Information System.
<u>“PA”</u>	means Public Address.
<u>“PC”</u>	means Process Control.
<u>“PCCP”</u>	means Portland cement concrete pavement.
<u>“PCM”</u>	means Project Communications Manager.
<u>“PDA”</u>	means Pile Driving Analyzer.
<u>“PE”</u>	means Permanent Easement.
<u>“PIARC”</u>	means Permanent International Association of Road Congresses.
<u>“PIP”</u>	means Public Information Plan.
<u>“PLC”</u>	means programmable logic controller.
<u>“PoE”</u>	means Power over Ethernet.
<u>“PMP”</u>	means Project Management Plan.
<u>“PNS”</u>	means Pacific Northwest Snow Fighters.
<u>“POSS”</u>	means Point of Slope Selection.
<u>“PQM”</u>	means Project Quality Manager.
<u>“PSQF”</u>	means Permanent Stormwater Quality Facilities.
<u>“PTFE”</u>	means polytetrafluoroethylene.
<u>“PTI”</u>	means Post-Tensioning Institute.
<u>“PUC”</u>	means Public Utility Commission.
<u>“PVC”</u>	means polyvinyl chloride.
<u>“QC”</u>	means Quality Control.
<u>“QMP”</u>	means Quality Management Plan.
<u>“QMS”</u>	means Quality Management System.
<u>“QRD”</u>	means Quality Records Database.
<u>“RAP”</u>	means Recycled Asphalt Pavement.

<u>“REC”</u>	means Recognized Environmental Condition.
<u>“RFC”</u>	means Release for Construction.
<u>“RFP”</u>	means Request for Proposals.
<u>“RHM”</u>	means Recognized Hazardous Material.
<u>“ROD”</u>	means Record of Decision.
<u>“ROW”</u>	means Right-of-Way.
<u>“RPM”</u>	means Reflective Pavement Markers.
<u>“RTD”</u>	means Regional Transportation District.
<u>“RTK”</u>	means Real Time Kinematic.
<u>“RTM”</u>	means Requirements Traceability Matrix.
<u>“RWIS”</u>	means Road Weather Information System.
<u>“SAP”</u>	means Sampling Analysis Plan.
<u>“SB”</u>	means Colorado Senate Bill.
<u>“SCADA”</u>	means Supervisory Control and Data Acquisition.
<u>“SCP”</u>	means Stormwater Construction Permit.
<u>“SFP”</u>	means small form-factor pluggable.
<u>“SMA”</u>	means stone matrix asphalt.
<u>“SMFO”</u>	means Single-Mode Fiber Optic.
<u>“SMP”</u>	means Safety Management Plan.
<u>“SMVMS”</u>	means Side Mounted Variable Message Signs.
<u>“SOLIT”</u>	means Safety of Life in Tunnels.
<u>“SOV”</u>	means single occupancy vehicle.
<u>“SPCC”</u>	means Spill Prevention Control and Countermeasures.
<u>“TCP”</u>	means Temporary Traffic Control Plan.
<u>“TDC”</u>	means Traffic Data Collection Unit.
<u>“TDM”</u>	means Travel Demand Management.
<u>“TE”</u>	means Temporary ROW Easement.
<u>“TMOSS”</u>	means Terrain Modeling Survey System.
<u>“TMP”</u>	means Transportation Management Plan.
<u>“TOP”</u>	means Transportation Operations Plan.
<u>“TSS”</u>	means total suspended solids.
<u>“TTI”</u>	means Travel Time Indicators.
<u>“UBC”</u>	means Uniform Building Code.
<u>“UDFCD”</u>	means Urban Drainage and Flood Control District.
<u>“UE”</u>	means Utility easements.
<u>“UNCC”</u>	means Utility Notification Center of Colorado.
<u>“UPRR”</u>	means Union Pacific Railroad.
<u>“UPS”</u>	means Uninterruptible Power Supply.
<u>“URA”</u>	means Utility Relocation Agreement.
<u>“USFWS”</u>	means U.S. Fish and Wildlife Service.
<u>“VA”</u>	means Voice Alarm.
<u>“VCS”</u>	means ventilation control system.
<u>“VFD”</u>	means Vacuum Fluorescent Display.
<u>“VMS”</u>	means Variable Message Sign.
<u>“VTMS”</u>	means Variable Toll Message Sign.
<u>“WBS”</u>	means a Work Breakdown Structure.
<u>“WDP”</u>	means Workforce Development Plan.
<u>“WQCV”</u>	means Water Quality Capture Volume.

Schedule 1 Financial Close

1. Financial Close Security

1.1 Delivery of Financial Close Security

The Parties acknowledge that, pursuant to Section 7.3.1.f of Part C of the ITP, on or prior to the Agreement Date Developer delivered the Financial Close Security to the Enterprises for the purposes set out in this Schedule 1.

1.2 Maintenance of Financial Close Security

- (a) Developer shall monitor the status of each issuer of Financial Close Security as an Eligible Financial Institution or Eligible Surety, as applicable. Developer shall promptly notify the Enterprises if at any time prior to Financial Close any issuer of Financial Close Security ceases to be an Eligible Financial Institution or Eligible Surety, as applicable.
- (b) No later than 20 Working Days after Developer becomes aware of such cessation, Developer shall submit to the Enterprises new Financial Close Security issued by an Eligible Financial Institution or Eligible Surety, as applicable that, together with all other outstanding and valid Financial Close Security (if any) issued by one or more Eligible Financial Institutions or Eligible Sureties, as applicable, shall have an aggregate undrawn value of at least \$20,000,000. Promptly following the Enterprises' receipt of such Financial Close Security, they shall return to Developer the undrawn portion of the replaced Financial Close Security issued by any issuer that has ceased to be an Eligible Financial Institution or Eligible Surety, as applicable.

1.3 Drawing on Financial Close Security

- (a) Developer understands and agrees that the Enterprises will be entitled to draw on the Financial Close Security (up to a maximum amount of \$20,000,000) if, and only if:
 - (i) Developer withdraws, or attempts to withdraw, any part or all of the Financial Close Security without the Enterprises' prior Approval (provided that no such Approval shall be required if Developer terminates this Agreement pursuant to Section 5.2(a) of this Schedule 1);
 - (ii) Developer fails to comply with Section 1.2(b) of this Schedule 1; or
 - (iii) the Enterprises have an entitlement to draw on the Financial Close Security pursuant to Section 5.1(b) of this Schedule 1.
- (b) The Parties acknowledge and agree that:
 - (i) forfeiture of the Financial Close Security pursuant to the terms thereof and Section 1.3(a)(i), Section 1.3(a)(ii) (but only to the extent that Section 1.3(b)(ii) of this Schedule 1 does not apply) or Section 1.3(a)(iii) of this Schedule 1:
 - (A) is in the nature of liquidated damages and not a penalty; and
 - (B) any amount forfeited is a fair and reasonable estimate of fair compensation to the Enterprises for the work required to procure the Project and any Losses that may accrue to the Enterprises as a result of the circumstances giving rise to such forfeiture, which amounts were impossible to ascertain as of the initial date of the delivery of the Financial Close Security; and
 - (ii) following any drawing of the Financial Close Security pursuant to the terms thereof and Section 1.3(a)(ii) of this Schedule 1, to the extent this Agreement has not been terminated and the Enterprises do not then have a right to terminate this Agreement pursuant to Section 4.1(a)(ii) or Section 5.1(a) of this Schedule 1, the Enterprises shall return to Developer the cash amount of such drawing

promptly following Developer's cure of any prior failure to comply with Section 1.2(b) of this Schedule 1.

2. **Conditions Precedent to Achieving Financial Close**

2.1 **Occurrence of Financial Close**

- (a) "Financial Close" will occur upon:
 - (i) satisfaction (or waiver by the Enterprises) of each of the Developer Conditions Precedent; and
 - (ii) satisfaction (or waiver by Developer) of each of the Enterprise Conditions Precedent.
- (b) Without limiting or otherwise modifying any Party's obligations under this Agreement with respect to Financial Close, no later than three Working Days after the Agreement Date, Developer shall submit to the Enterprises:
 - (i) for Information, a closing checklist and timeline, identifying all documents, submissions and other actions (whether by or on the part of either Party or any third party) then reasonably anticipated by Developer to be necessary to achieve Financial Close by the Financial Close Deadline; and
 - (ii) for their consent (such consent not to be unreasonably withheld), a protocol for calculating the Financial Close Base CPP (and, accordingly, the Base MPP) and for calculating the Base Case Equity IRR pursuant to Sections 4 and 5 of Annex A to this Schedule 1 and for determining any other necessary adjustments or amendments to the Financial Model contemplated in Section 2.2(h)(i) of this Schedule 1 and pursuant to Annex A to this Schedule 1 and Section 28.3 of the Project Agreement.
- (c) For purposes of Sections 2.2 and 2.3 of this Schedule 1:
 - (i) any matter that must be "certified" by a Party shall be certified in writing by an authorized representative of such Party, such certification being in form and substance consented to by the other Party (such consent not to be unreasonably withheld); and
 - (ii) the Parties shall, to the extent practical and without limiting or otherwise modifying either Party's obligations under this Agreement, endeavor to deliver and promptly respond to and comment on documents (including draft documents) necessary to satisfy the conditions precedent to Financial Close in conformity with the closing checklist and timeline referred to in Section 2.1(b)(i) of this Schedule 1 (taking into account the Enterprises' comments on the same).

2.2 **Developer Conditions Precedent**

Developer shall be responsible for satisfying the following conditions precedent to Financial Close:

- (a) on and from the Agreement Date through and including the Financial Close Date, Developer shall have performed and complied with its material obligations under this Agreement, and no Developer Default (or event that, with the passage of time or the giving of any notice, would become a Developer Default) shall have occurred and be continuing on the Financial Close Date;
- (b) as of the Financial Close Date, each representation and warranty made by Developer pursuant to Section 5.1.1 of the Project Agreement shall be true and correct as of such date, as certified by Developer;

- (c) Developer shall have provided the Enterprises with:
 - (i) a copy, certified by Developer as true, complete and accurate, of each executed Financing Document that is not also an Enterprise Closing Agreement, each of which shall be in form and substance consented to by the Enterprises (such consent not to be unreasonably withheld); and
 - (ii) a counterpart of each Enterprise Closing Agreement executed by all parties thereto other than the Enterprises (including other than BE acting as PABs Issuer), each of which shall be in form and substance consented to by the Enterprises (such consent not to be unreasonably withheld);
- (d) Developer shall have provided the Enterprises with such documents and certificates as the Enterprises may reasonably request evidencing:
 - (i) Developer's organization, existence and qualification to do business, including any articles of incorporation, bylaws, partnership agreement, joint venture agreement and/or other appropriate organizational documents and a statement of foreign entity authority, if applicable;
 - (ii) that all necessary company or partnership action has been taken by Developer to authorize the execution, delivery and performance of each Financing Document and each Enterprise Closing Agreement to which it is a party;
 - (iii) the authority, power and capacity of the individuals executing the agreements referred to in Section 2.2(d)(ii) of this Schedule 1 on behalf of Developer;
 - (iv) satisfaction, or waiver, of all conditions precedent to closing and funding the Project Debt under the Financing Documents;
 - (v) Committed Investments that satisfy the requirements of Section 26.1 of the Project Agreement;
 - (vi) by reference to the Financial Model and other closing documentation (such as a flow of funds memorandum and/or irrevocable payment instructions), Developer's irrevocable commitment, subject only to the occurrence of Financial Close, to pay the Enterprises (and/or, at the Enterprises' direction, their designee(s)) in such manner and to such accounts as the Enterprises shall, in their discretion, instruct Developer:
 - (A) \$25,000,000 pursuant to Section 3.7 of Part B of the ITP; and
 - (B) all the Enterprises', CDOT's and/or the PABs Issuer's reimbursable fees, costs and expenses associated with the issuance and subsequent administration of any PABs issued in connection with Financial Close pursuant to Section 3.2.2.e of Part B of the ITP, in the final amount notified to Developer by the Enterprises prior to the Financial Close Date; and
 - (C) all the Enterprises' and/or CDOT's reimbursable fees, costs and expenses associated with the origination, credit processing and administration of any TIFIA Financing undertaken in connection with Financial Close pursuant to Section 3.3.4.d of Part B of the ITP, in the final amount notified to Developer by the Enterprises prior to the Financial Close Date;
- (e) Developer shall have delivered to the Enterprises legal opinions to the effect set out in and otherwise compliant with Part C of Schedule 22 (*Forms of Legal Opinions*), which opinions shall otherwise be in form and (subject to reasonable and customary assumptions and qualifications) substance consented to by the Enterprises (such consent not to be unreasonably withheld);

- (f) Developer shall have delivered to the Enterprises the Contractor Bonds as required pursuant to Sections 9.3.1.a.i and, if applicable, 9.3.1.c of the Project Agreement;
- (g) with respect to all Insurance Policies that are required pursuant to Section 25 of the Project Agreement and Schedule 13 (*Required Insurance*) to be in effect on and from the Financial Close Date:
 - (i) such policies have been obtained from Eligible Insurers on terms that comply with Section 25 of the Project Agreement and Schedule 13 (*Required Insurance*) and are in full force and effect; and
 - (ii) the Enterprises shall have received binding verifications of coverage from the relevant insurers (or Developer's insurance brokers) of such Insurance Policies, in compliance with Section 25.3.1 of the Project Agreement as Accepted by the Enterprises; and
- (h) on or immediately prior to the anticipated Financial Close Date, Developer shall have delivered to the Enterprises, and the Enterprises shall have consented to (such consent not to be unreasonably withheld):
 - (i) an unrestricted electronic version of the Financial Model, which version incorporates any amendments previously agreed by the Parties (including to reflect the Financial Close Base CPP), together with an updated "Assumptions Book" (in the form previously submitted by the Preferred Proposer pursuant to Section 6.10.2 of the Financial Proposal Submission Requirements, as defined in the ITP) and with any other documentation necessary or reasonably requested by the Enterprises to operate the Financial Model; and
 - (ii) an update to the audit report previously submitted by the Preferred Proposer pursuant to Section 6.10.3 of the Financial Proposal Submission Requirements, as defined in the ITP in respect of the Financial Model delivered pursuant to Section 2.2(h)(i) of this Schedule 1, which audit report shall otherwise comply with Section 28.4.1 of the Project Agreement.

2.3 Enterprises Conditions Precedent

Without limiting:

- (a) BE's obligations as PABs Issuer with respect to the matters set out in paragraph b. of the definition of PABs Event in Part A of Annex A (*Definitions and Abbreviations*) of the Project Agreement; or
- (b) Developer's rights under this Schedule 1 following the occurrence of any Key Financial Event,

the Enterprises shall be responsible for satisfying the following conditions precedent to Financial Close:

- (c) as of the Financial Close Date, each representation and warranty made by each Enterprise pursuant to Section 5.1.2 of the Project Agreement shall be true and correct as of such date, as certified by the Enterprises;
- (d) subject to Developer's delivery to the Enterprises of executed counterparts of each Enterprise Closing Agreement pursuant to Section 2.2(c)(ii) of this Schedule 1, the Enterprises (including BE as PABs Issuer) shall have provided Developer with counterparts of each such Enterprise Closing Agreement executed by one or both Enterprises, as applicable (including, as applicable, execution by the State Controller);
- (e) the Enterprises (including BE as PABs Issuer) shall have provided Developer with:
 - (i) a copy, certified by the Enterprises as true, complete and accurate, of the fully effective (subject only to achievement of Financial Close) Supplemental

Indenture in substantially the form provided to the Preferred Proposer prior to the Final Project Information Date;

- (ii) a copy, certified by the Enterprises as true, complete and accurate, of the fully effective (subject only to achievement of Financial Close) IAA in substantially the form provided to the Preferred Proposer prior to the Final Project Information Date; and
 - (iii) each other customary document, certificate, opinion or undertaking (or, as applicable, a copy of the same certified by the Enterprises as true, complete and accurate) that Developer may reasonably request from either Enterprise (including BE as PABs Issuer) or CDOT as necessary to comply with (A) disclosure requirements under Law and/or (B) customary underwriter requirements, in each case in connection with the issuance of the PABs or any other capital markets issuance; and
- (f) the Enterprises shall have provided Developer and the Lenders with legal opinions of the State Attorney General's Office in substantially the forms of Part A and Part B of Schedule 22 (*Forms of Legal Opinions*) to this Agreement.

3. Achievement of Financial Close

3.1 Interest Rate Fluctuation and Benchmarking

Subject to Section 4 of this Schedule 1, pursuant to Annex A to this Schedule 1 the Enterprises shall assume certain Benchmark Interest Rate and/or credit spread fluctuation risks in connection with Financial Close.

3.2 Financial Close Certificate

Upon the occurrence of Financial Close in accordance with Section 2.1(a) of this Schedule 1, the Parties shall sign a certificate in such form as the Parties shall reasonably agree specifying the Financial Close Date.

3.3 Actions Upon Occurrence of Financial Close

Promptly following Financial Close (and, for certainty with respect to Section 3.3(c), on the Financial Close Date):

- (a) the Parties shall place the Financial Model and audit report submitted and consented to pursuant to Section 2.2(h) of this Schedule 1 into escrow with the Escrow Agent pursuant to the terms of the Financial Model Escrow Agreement;
- (b) the Enterprises shall return the Financial Close Security to Developer; and
- (c) BE shall execute and deliver the Central 70 Note to Developer.

4. Key Financial Events

4.1 Parties' rights with respect to Key Financial Events

If a Key Financial Event occurs prior to Financial Close:

- (a) the Enterprises may, at any time after such Key Financial Event occurs, in their discretion and by notice to Developer:
 - (i) take any action pursuant to Section 4.2 of this Schedule 1; or
 - (ii) with or without first taking (or after taking) any action pursuant to Section 4.2 of this Schedule 1, terminate this Agreement subject to prior notice, in which case Section 4.4 of this Schedule 1 shall apply; and
- (b) Developer may terminate this Agreement by notice if, and only if, Developer has a right to terminate pursuant to Section 5.2(a) of this Schedule 1.

4.2 Mitigation of a Key Financial Event prior to Financial Close

If a Key Financial Event has occurred, the Enterprises may, in their discretion, take any one or more of the following actions as applicable with respect to such Key Financial Event:

- (a) agree to an increase to the Base CPP, including to an amount that would result in an upward adjustment to the Base MPP of more than 10%;
- (b) with the agreement of Developer and, as necessary, the Lenders, agree to lower the amount and/or timing of the Committed Investments otherwise required in order to comply with Section 26.1 of the Project Agreement;
- (c) require Developer to introduce alternative sources of debt for Project Debt relative to those set out in the Base Financial Model, in which case, the Enterprises may require Developer to conduct a timely, transparent financing competition to identify and arrange for the lowest-priced alternative debt financing commercially available on terms reasonable satisfactory to Developer and Approved by the Enterprises, provided that Developer shall be entitled to recover from the Enterprises the reasonably incurred and documented costs and expenses associated with conducting such a funding competition;
- (d) in connection with any Key Financial Event of a type referred to in paragraphs d., e. or f. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) of the Project Agreement, the Enterprises may in their discretion and upon prior notice extend the Financial Close Deadline (one or more times, provided that the aggregate such extension shall not exceed 180 Calendar Days) and Developer shall correspondingly extend the expiration date of the Financial Close Security (subject to Sections 4.2(d)(ii), 5.1(c) and 5.2(b) of this Schedule 1, at Developer's cost and expense) to occur no earlier than the 10th Working Day following the extended Financial Close Deadline, provided that as a condition to such extensions of the Financial Close Deadline and of the expiration date of the Financial Close Security, the Enterprises shall agree to:

- (i) an increase (if any) to the Base CPP and/or the Milestone Payments (the election being at the Enterprises' discretion) to reflect indexation of the Construction Price, such that the Construction Price will be adjusted by applying the following formula:

$$\text{Price}_{\text{new}} = \text{Price}_{\text{old}} \times (1 + (((\text{CCI}_{\text{new}} - \text{CCI}_{\text{old}}) / \text{CCI}_{\text{old}}) * (D/M)))$$

Where:

- (A) $\text{Price}_{\text{new}}$ is the adjusted Construction Price;
- (B) $\text{Price}_{\text{old}}$ is the unadjusted Construction Price (being the amount set out in the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) of the Project Agreement);
- (C) CCI_{new} is the value for the ENR Construction Cost Index most recently published by Engineering News-Record prior to the Financial Close Date;
- (D) CCI_{old} is the value for the ENR Construction Cost Index most recently published by Engineering News-Record prior to the Financial Close Deadline in effect immediately prior to such extension;
- (E) D is the number of Calendar Days in the period from (but excluding) the Financial Close Deadline in effect immediately prior to such extension to (and including) the Financial Close Date; and
- (F) M is the total number of Calendar Days from (but excluding) the date of issuance of CCI_{old} to (and including) the date of issuance of CCI_{new} ,

provided that, if CCI_{new} is less than or equal to CCI_{old} , then (x) no calculation shall be carried out, (y) $Price_{new}$ shall be deemed to be equal to $Price_{old}$ and (z) no adjustments shall be made to the Base CPP and/or the Milestone Payments pursuant to this Section 4.2(d)(i);

- (ii) an increase to the Base CPP and/or the Milestone Payments (the election being at the Enterprises' discretion) to compensate Developer for the lesser of:
 - (A) its reasonable and documented costs and expenses (including, for certainty, the cost and expense of extending the expiration date of the Financial Close Security) incurred in connection with its efforts to achieve Financial Close from (but excluding) the Financial Close Deadline in effect immediately prior to such extension; and
 - (B) \$1,500,000; and
 - (iii) an adjustment to the protocol previously consented to by the Enterprises pursuant to Section 2.1(b)(ii) of this Schedule 1 (which prior protocol shall, for certainty, remain in effect in the event that Financial Close occurs on or prior to the Financial Close Deadline in effect immediately prior to such extension) such that:
 - (A) for purposes of Section 3(a) and 3(b) of Annex A to this Schedule 1, the Enterprises shall bear the risk and have the benefit of 100% (and not, for certainty, 85%) of the impact (either positive or negative) of changes in credit spreads for any Bond Financing (excluding any private placement that is not also an offering under Rule 144A and Regulation S of the Securities Act of 1933) as otherwise provided for in Sections 1 and 4 of Annex A to this Schedule 1 (including as such Section 4 shall be deemed to be revised pursuant to Section 5 of Annex A to this Schedule 1); and
 - (B) the Enterprises shall bear the risk and have the benefit of:
 - (I) 100% of changes in credit spreads for any Bond Financing comprised of a private placement that is not also an offering under Rule 144A and Regulation S of the Securities Act of 1933; and
 - (II) [*Reserved.*],
- provided that:
- (III) as a condition to the Enterprises bearing such risk, Developer shall use Reasonable Efforts to extend its existing Lender commitments with respect to any such Bond Financing on its original terms; and
 - (IV) if, after the use of such Reasonable Efforts, Developer is unable to extend such commitments, or is only able to obtain extended commitments on terms that differ materially (and adversely to Developer, and therefore to the Enterprises, such determination to be made by the Enterprises in their discretion), then the Enterprises may, in accordance with and subject to Section 4.2(c) of this Schedule 1, require Developer to introduce alternative sources of debt for Project Debt; and/or
- (e) take any other action as may be proposed by any Party and mutually agreed among all the Parties.

4.3 Successful mitigation of a Key Financial Event

If, following the occurrence of a Key Financial Event, either:

- (a) subject to Section 5.2(c) of this Schedule 1, the Enterprises take any one or more actions pursuant to Section 4.2 of this Schedule 1; or
- (b) following the Enterprises' election to terminate this Agreement pursuant to Section 4.1(a)(ii) of this Schedule 1, Developer delivers a notice pursuant to Section 4.4 of this Schedule 1 and, only with respect to any such notice delivered pursuant to Section 4.4(b) of this Schedule 1, Developer concluded (prior to the end of the period of suspension of Enterprises' notice of termination pursuant to Section 4.4(b) of this Schedule 1) a financing competition that identified and arranged a debt financing solution that is consented to by the Enterprises (such consent not to be unreasonably withheld),
then, to the extent applicable:
- (c) if requested by Developer (and to the extent the Enterprises have not previously extended the Financial Close Deadline pursuant to Section 4.2(d) of this Schedule 1) the Enterprises shall extend the Financial Close Deadline to the extent reasonably necessary, provided that Developer correspondingly extends the expiration date of the Financial Close Security to occur no earlier than the 10th Working Day following the extended Financial Close Deadline; and
- (d) this Agreement shall be amended (in a manner to be agreed among the Parties) to reflect any relevant action taken by the Enterprises as referred to in Section 4.3(a) of this Schedule 1 or, as the case may be, the results of any such financing competition that identified and arranged a debt financing solution that is consented to by the Enterprises (such consent not to be unreasonably withheld).

4.4 Enterprise Election to terminate due to a Key Financial Event

If the Enterprises make an election to terminate this Agreement pursuant to Section 4.1(a)(ii) of this Schedule 1, then, except to the extent expressly provided otherwise in Section 5.3 of this Schedule 1, this Agreement shall terminate in its entirety upon 15 Working Days' prior notice to Developer, provided that, with respect to any such election to terminate following the occurrence of a Key Financial Event of the type defined in paragraphs a., b. or c. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) of the Project Agreement, the Enterprises shall suspend their notice of termination if, within 10 Working Days after delivery of such notice to Developer, Developer notifies the Enterprises that:

- (a) Developer irrevocably and unconditionally agrees that any increase in the Base CPP that would otherwise apply as a result of an adjustment pursuant to Annex A to this Schedule 1 or Section 4.2(a) of this Schedule 1 would be capped such that the resulting upward adjustment to the Base MPP would not exceed 10% where it would otherwise exceed such percentage and, as a result, would result in the occurrence of the Key Financial Event specified in paragraph b. of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) of the Project Agreement; or
- (b) Developer shall, at its own initiative, conduct a timely, transparent financing competition equivalent to that described in Section 4.2(c) of this Schedule 1 in order to address a Key Financial Event occurring in relation to a PABs Event or TIFIA Event, provided that, if Developer notifies the Enterprises pursuant to this Section 4.4(b), any resulting suspension of Enterprises' notice of termination pursuant to this Section 4.4 shall end on the earliest of:
 - (i) the unsuccessful conclusion of such financing competition without identifying and arranging a debt financing on terms reasonable satisfactory to Developer and that is otherwise consented to by the Enterprises (such consent not to be unreasonably withheld);

- (ii) the successful conclusion of such financing competition with the identification and arrangement of a debt financing solution that is on terms reasonable satisfactory to Developer and that is otherwise consented to by the Enterprises (such consent not to be unreasonably withheld) (at which time such notice of termination will be deemed void);
- (iii) 60 Calendar Days after the date on which Developer notified the Enterprises pursuant to this Section 4.4(b); and
- (iv) the Financial Close Deadline.

5. Termination prior to Financial Close

5.1 Termination by the Enterprises

- (a) If any Developer Condition Precedent is not satisfied (or waived) by the Enterprises as of the Financial Close Deadline, the Enterprises may in their discretion, after the Financial Close Deadline, terminate this Agreement by notice with immediate effect.
- (b) If the Enterprises terminate this Agreement pursuant to Section 5.1(a) of this Schedule 1, then upon such termination becoming effective, and unless Developer has been excused from its obligation to achieve Financial Close by the Financial Close Deadline pursuant to Section 5.2(c) of this Schedule 1, the Enterprises may in their discretion draw on, and retain the proceeds of, the Financial Close Security pursuant to Section 1.3 of this Schedule 1 (and, for certainty, the Enterprises shall have no obligation to pay the Financial Close Termination Amount to Developer).
- (c) In the event that the Enterprises terminate this Agreement pursuant to Section 4.1(a)(ii) of this Schedule 1, the Enterprises shall pay the Financial Close Termination Amount to Developer no later than 60 Calendar Days following such termination.

5.2 Termination by Developer

- (a) If either:
 - (i) as of the Financial Close Deadline:
 - (A) each Developer Condition Precedent has been satisfied or waived (or, to the extent unsatisfied, remains unsatisfied as a direct result of (I) the Enterprises' failure to comply with their obligations to provide assistance to Developer pursuant to Section 27.4.1 of the Project Agreement, which failure Developer has been unable to mitigate through Reasonable Efforts or (II) the continuation of a Key Financial Event as of the Financial Close Deadline that falls within paragraphs d., e. or f. of the definition of Key Financial Event in Part A of Annex A (Definitions and Abbreviations) of the Project Agreement); and
 - (B) any Enterprise Condition Precedent has not been satisfied and has not been waived; or
 - (ii) a Key Financial Event occurs prior to Financial Close and:
 - (A) the Enterprises have notified Developer that they will not take any action, or will cease to take any action, pursuant to Section 4.2 of this Schedule 1;
 - (B) the Enterprises have taken action pursuant to Sections 4.2(a), 4.2(b), 4.2(c), 4.2(d)(iii)(B)(IV) and/or 4.2(e) of this Schedule 1 but, after taking into account any effect of such action (and unless Developer has agreed otherwise pursuant to Section 4.2(e) of this Schedule 1) any of the Key Ratios and/or the Equity IRR would be less than that Key Ratio or Equity IRR, as the case may be, would have been had the relevant Key Financial Event not occurred; or

- (C) the Enterprises have not, within 15 Calendar Days of receiving a written request from Developer (or, if earlier, by the Financial Close Deadline if it occurs following such a written request) notified Developer of their intent to take any action pursuant to Section 4.2 of this Schedule 1,
then Developer shall have the right to terminate this Agreement by notice to the Enterprises with immediate effect, following which the Enterprises shall return the Financial Close Security to Developer in the City of Denver within two Working Days.
- (b) In the event that Developer terminates this Agreement pursuant to Section 5.2(a) of this Schedule 1, the Enterprises shall pay the Financial Close Termination Amount to Developer no later than 60 Calendar Days following such termination.
- (c) Unless the Enterprises otherwise terminate this Agreement pursuant to either Section 4.1(a)(ii) or Section 5.1(a) of this Schedule 1, Developer's obligation to achieve Financial Close by the Financial Close Deadline shall be excused if, and only if it has a right to terminate this Agreement pursuant to Section 5.2(a) of this Schedule 1.

5.3 Consequences of Termination

If this Agreement is terminated pursuant to this Schedule 1, neither Party shall have any obligation or liability to the other Party, except:

- (a) any Enterprise entitlement to draw on the Financial Close Security pursuant to this Schedule 1;
- (b) any Enterprise obligation to pay the Financial Close Termination Amount to Developer pursuant to Section 5.1(c) or Section 5.2(b) of this Schedule 1;
- (c) with respect to any antecedent breach of this Agreement; and
- (d) as provided for in Section 41 of the Project Agreement.

Annex A
Interest Rate and Credit Spread Fluctuation Risk Sharing

1. Changes in Financing Terms

The Enterprises reserve the right to Approve any changes in Benchmark Interest Rates or in the debt structure (e.g., fixed or variable rate, bank financing or bond financing, call provisions) that are proposed to be made at or prior to Financial Close to the extent that any such change constitutes a deviation from the assumptions in the Base Financial Model.

2. Market Interest Rate Protection

Subject to the Parties' rights pursuant to Section 4.1 of Schedule 1 following the occurrence of a Key Financial Event, pursuant to Section 4 of this Annex A the Enterprises shall bear the risk and have the benefit of 100% of the impact (either positive or negative) on the Base CPP of changes in any applicable Benchmark Interest Rates over the applicable Protection Period with respect to any Bond Financing and/or TIFIA Financing.

3. Credit Spread Fluctuation Risk Protection

(a) Subject to (I) Section 3(b) of this Annex A, (II) the Parties' rights pursuant to Section 4.1 of Schedule 1 following the occurrence of a Key Financial Event, and (III) adjustment pursuant to Section 4.2(d)(iii) of Schedule 1, pursuant to Section 4 of this Annex A the Enterprises shall bear the risk and have the benefit of 85% of the impact (either positive or negative) on the Base CPP of the differences between:

- (i) the Baseline Credit Spreads; and
- (ii) the credit spreads for any Bond Financing (excluding any private placement that is not also an offering under Rule 144A and Regulation S of the Securities Act of 1933) as of the last day of the applicable Protection Period, excluding any increases in credit spreads in respect of bonds that are part of any Bond Financing resulting from the final credit rating of such bonds being lower than the indicative investment grade rating(s) of such bonds provided in the Preferred Proposer's Proposal.

(b) To the extent that Section 5 of this Annex A applies, the amount of the risk and benefit borne by the Enterprises of the impact (either positive or negative) on the Base CPP of changes in the credit spreads referred to in Section 3(a)(ii) of this Annex A shall be determined by application of the principles set out in Section 5(b) of this Annex A.

(c) For certainty, Developer will bear the risk and have the benefit of 100% of the impact (either positive or negative) of the movements in margins associated with any commercial bank financing, including bank lender margins and swap credit margins.

4. Base MPP Update Protocol

The Parties shall use the Base Financial Model to calculate the changes contemplated by Sections 2 and 3 of this Annex A, positive or negative, in the Base CPP. The Parties shall make such calculation and produce the Financial Model to be delivered pursuant to Section 2.2(h)(i) of Schedule 1 by taking the following steps, and otherwise pursuant to the protocol consented to by the Enterprises pursuant to Section 2.1(b)(ii) of Schedule 1 (as such may subsequently be adjusted pursuant to Section 4.2(d)(iii) of Schedule 1).

(a) *First*, the Base Financial Model shall be run to solve for a "preliminary adjusted" Base CPP, inputting only:

- (i) the actual Financial Close Date and amendments to the Baseline Substantial Completion Target Date and Milestone Completion Target Dates in each case to reflect, on a day for day basis, any delay in achieving Financial Close relative to November 30, 2017 (being the Financial Close Date assumed in the ITP); and

- (ii) in the event that the Enterprises extend the Financial Close Deadline pursuant to Section 4.2(d) of Schedule 1, for increases in costs permitted pursuant to Sections 4.2(d)(i) and 4.2(d)(ii), including any associated adjustments to the Milestone Payments made pursuant thereto,

in each case holding the Preliminary Equity IRR constant. As part of this process the Base Financial Model shall be solved for the lowest possible change in the Base CPP that does not result in a breach of any of the Key Ratios.

- (b) *Second*, the interim Financial Model resulting from the step described in Section 4(a) of this Annex A shall be run to solve for a “first adjusted” Base CPP, inputting only the TIFIA Betterments and holding the Preliminary Equity IRR constant. As part of this process the Base Financial Model shall be solved for the lowest possible change in the Base CPP that does not result in a breach of any of the Key Ratios.
- (c) *Third*, a “second adjusted” Base CPP shall be calculated as follows:
 - (i) the “preliminary adjusted” Base CPP; *minus*
 - (ii) 85% of the difference between the “preliminary adjusted” Base CPP and the “first adjusted” Base CPP.
- (d) *Fourth*, the interim Financial Model resulting from the step described in Section 4(b) of this Annex A shall be run to solve for the Equity IRR (which shall be the “TIFIA Adjusted Preliminary Equity IRR” for purposes of this Section 4 of this Annex A) that results from inputting the “second adjusted” Base CPP.
- (e) *Fifth*, the interim Financial Model resulting from the step described in Section 4(d) of this Annex A, shall be run to solve for a “first interim” Base CPP, inputting only the changes, if any, in Benchmark Interest Rates as described in Section 2 of this Annex A, and changes, if any, in the coupon rates applicable to a Bond Financing (such changes to be determined in accordance with the following paragraph of this Section 4(e)), and holding the “TIFIA Adjusted Preliminary Equity IRR” calculated pursuant to Section 4(d) of this Annex A constant. In addition, as part of this process the Base Financial Model shall be solved for the lowest possible change in the “second adjusted” Base CPP that does not result in a breach of any of the Key Ratios.

The Enterprises shall capture a portion of changes, if any, in coupon rates applicable to a Bond Financing through the model run under this Section 4(e) and the remainder of any such changes in coupon rates through the model run under Section 4(f) of this Annex A. The allocation between the model runs under this Section 4(e) and Section 4(f) of this Annex A for the changes in coupon rates (if any) will be determined in proportion to the overall change in Benchmark Interest Rates and credit spreads (relative to the Baseline Credit Spreads). By way of example only, if Benchmark Interest Rates increase 50bps, credit spreads increase 25bps, and the coupon rate increases 30bps, 20bps of the change in the coupon rate will be run under this Section 4(e) and the other 10bps change in the coupon rate will be run under Section 4(f) of this Annex A. As another example, if Benchmark Interest Rates decrease 20bps, credit spreads increase 30bps, and the coupon rate increases 5bps, -10bps of the change in the coupon rate will be run under Section 4(e) and 15bps change in the coupon rate will be run under Section 4(f) of this Annex A.

- (f) *Sixth*, the interim Financial Model resulting from the step described in Section 4(e) of this Annex A shall be run to solve for a “second interim” Base CPP, inputting only the changes, if any, in credit spreads for any Bond Financing as described in Section 3(a) of this Annex A and in the coupon rates applicable to a Bond Financing, and holding the “TIFIA Adjusted Preliminary Equity IRR” calculated pursuant to Section 4(d) of this Annex A constant. In addition, as part of this process the Base Financial Model shall be solved for the lowest possible change in the “first interim” Base CPP that does not result in a breach of any of the Key Ratios.

- (g) *Seventh*, an amended Base CPP (the “Financial Close Base CPP”) shall be calculated as follows:

$$\text{Financial Close Base CPP} = \text{Base CPP}^{\text{First}} + (85\% \times (\text{Base CPP}^{\text{Second}} - \text{Base CPP}^{\text{First}}))$$

where:

Base CPP^{First} = the first interim Base CPP resulting from the step described in Section 4(e) of this Annex A

Base CPP^{Second} = the second interim Base CPP resulting from the step described in Section 4(f) of this Annex A

- (h) *Eighth*, the interim Financial Model resulting from the step described in Section 4(f) of this Annex A shall be run to solve for the Base Case Equity IRR, inputting:
- (i) the Financial Close Base CPP; and
 - (ii) to the extent applicable, all other changes in the terms of the financing between those assumed and indicated in the Base Financial Model and those set out in or otherwise applicable under the terms of the Financing Documents as of the Financial Close Date.

5. Preferred Proposer Basis Scale Adjustment

- (a) The Parties acknowledge and agree that the “Proposer Basis Scale” submitted by the Preferred Proposer pursuant to Section 6.6 of the Financial Proposal Submission Requirements as defined in the ITP included, in some but not all cases, credit spreads that were less than those reflected in the basis yield curve and set of baseline credit spreads previously issued to it by the Enterprises pursuant to Section 4.2.3.c.ii. of Part C of the ITP (any such lesser credit spreads submitted by the Preferred Proposer, “Preferred Proposer Credit Spreads”).
- (b) Therefore, the protocol to be submitted by Developer pursuant to Section 2.1(b)(ii) of this Schedule 1 shall include the protocol for calculating the Financial Close Base CPP (and, accordingly, the Base MPP) and for calculating the Base Case Equity IRR with respect to each actual Baseline Credit Spread for which there is a Preferred Proposer Credit Spread and for the purposes thereof Section 4 of this Annex A shall be deemed to be revised to reflect the following, in each case as applied separately to each tranche / maturity of the Project Debt and with respect to each actual Baseline Credit Spread for which there is a Preferred Proposer Credit Spread:
- (i) if any actual credit spread exceeds the relevant Baseline Credit Spread, Developer shall only be entitled to credit spread projection for the actual credit spread above the Baseline Credit Spread (with the difference between the Preferred Proposer Credit Spread and the Baseline Credit Spread being Developer’s risk);
 - (ii) if any actual credit spread exceeds the relevant Preferred Proposer Credit Spread but is less than or equal to the relevant Baseline Credit Spread, Developer shall not be entitled to any credit spread protection; and
 - (iii) if any actual credit spread is equal to or less the relevant Preferred Proposer Credit Spread, Developer and the Enterprises shall share credit spread fluctuation risk 15%/85% relative to the Preferred Proposer Credit Spread.

- (c) The following worked examples are provided as examples only of the application of Section 5(b) of this Annex A:

	Preferred Proposer Credit Spreads (bps)	Common Credit Spreads (bps)	Actual Credit Spreads (bps)	Risk Sharing
Scenario 1	100	150	200	Developer bears risk on 100% of movements in spreads from 100bps to 150bps. 85/15 risk sharing calculated on movement in spreads from 150bps to 200bps. Calculations to account for Developer bearing 100% of the risk of movements in spreads from 100bps to 150bps.
Scenario 2	100	150	125	Developer bears risk on 100% of movements in spreads from 100bps to 125bps.
Scenario 3	100	150	75	85/15 risk sharing calculated on movement in spreads from 100bps to 75bps.

Schedule 2
Representations and Warranties

Part A: Representations and Warranties of Developer

- (a) **Organization; Power and Authority.** Developer:
- (i) is a limited liability company, duly formed, validly existing and in good standing in accordance with the laws of the State of Delaware;
 - (ii) is authorized to transact business in, and is registered with the Secretary of State in, the State; and
 - (iii) has the limited liability company power and authority to:
 - (A) transact the business that it transacts and proposes to transact pursuant to the Project Agreement; and
 - (B) execute, deliver and perform the Project Agreement, each Principal Subcontract and each other Subcontract and each Financing Document and Enterprise Closing Agreement to which Developer is a party (collectively, the “Developer Agreements”).
- (b) **Authorization and Due Execution.**
- (i) Each Person executing any Developer Agreement on behalf of Developer has been (or, at the time of execution, will have been) duly authorized to execute and deliver such document on behalf of Developer.
 - (ii) The execution, delivery and performance of each Developer Agreement by Developer has otherwise been duly authorized by all necessary limited liability company action of Developer.
 - (iii) Each Developer Agreement has been (or, at the time of execution and delivery, will have been) duly and validly executed and delivered by Developer.
- (c) **Enforceability.** Each Developer Agreement constitutes (or, at the time of execution and delivery, will constitute) a legal, valid and binding obligation of Developer, enforceable against Developer and, if applicable, each Equity Member holding an interest in Developer, in accordance with its terms, subject only to applicable bankruptcy, insolvency and similar laws affecting the enforceability of the rights of creditors generally and general principles of equity.
- (d) **No Conflicts.** The execution, delivery and performance by Developer of any Developer Agreement does not and will not contravene any:
- (i) Law applicable to Developer that is in effect on the date of execution and delivery of each Developer Agreement;
 - (ii) organizational, corporate or other governing documents of Developer; or
 - (iii) agreement, instrument, Governmental Approval, judgment or decree to which Developer is a party or is bound.
- (e) **Consents and Approvals.**
- (i) Prior to the Agreement Date, Developer familiarized itself with the requirements of any and all Laws, including Laws applicable to the use of Federal funds, and the conditions of any Governmental Approvals or Permits necessary to perform its obligations under the Project Agreement at the time and in the manner required.
 - (ii) As of the date on which this representation and warranty is given or repeated, Developer has acquired any and all Governmental Approvals and Permits:
 - (A) that Developer is required to obtain pursuant to the Project Agreement; and

- (B) that are necessary to perform those of its obligations under the Project Agreement that fall due for performance on or immediately following such date such that Developer is not and will not be in breach of Section 8.4.2.a. of the Project Agreement,

and, as of such date, all such Governmental Approvals and Permits are in full force and effect.
- (iii) Developer has no reason to believe that any Governmental Approval or Permit that Developer is required to obtain pursuant to the Project Agreement will not be granted in due course and thereafter remain in effect so as to enable the Work to proceed in accordance with the Project Agreement.
- (f) **Developer Default.** No Developer Default has occurred and is continuing, and no fact or event exists that with the passage of time or giving of notice would constitute a Developer Default.
- (g) **Applicable Law.** Developer is not in breach of any Law that would have a material adverse effect on the Work or the performance of any of its obligations under the Developer Agreements.
- (h) **Due Diligence; Reasonable Investigation.**
 - (i) The statements set out in Sections 3.1.a., 3.1.b and 3.2.1 of the Project Agreement are true and accurate.
 - (ii) On the basis of:
 - (A) the due diligence conducted by the Preferred Proposer and the Developer-Related Entities as referred to in Sections 3.1.b and 3.2.1 of the Project Agreement; and
 - (B) subsequent such diligence of the Project, the Project Information and the Site as has been conducted by Developer,

and taking into account the terms of the Project Agreement and Developer's rights thereunder, Developer:
 - (C) is familiar with and accepts the physical requirements of the Work;
 - (D) has evaluated all the constraints affecting design and construction of the Project and has reasonable grounds for believing and believes that the Project can be designed and built within such constraints; and
 - (E) has obtained for itself all necessary information regarding the risks, contingencies and other circumstances which may influence or affect its ability to perform its obligations under the Project Agreement and any other factors which would affect its decision to enter the Project Agreement or the terms on which it would do so.
- (i) **Financial Model.**
 - (i) The Financial Model:
 - (A) was prepared by or on behalf of Developer in good faith;
 - (B) was audited by an independent recognized model auditor immediately before the Agreement Date in compliance with the engagement terms previously approved by the Procuring Authorities in accordance with Section 4.4.3 of Part C of the ITP;
 - (C) fully discloses all financial assumptions and projections that Developer has used or is using in making its decision to enter into this Agreement and in making disclosures to rating agencies, potential equity investors and Lenders;
 - (D) includes only formulas that are:

- (I) mathematically correct and suitable for making the projections referred to in paragraph (i)(i)(E) of this Part A; and
 - (II) the same financial formulas that Developer utilized and is utilizing in the Financial Model in making its decision to enter into the Project Agreement and in making disclosures to rating agencies, potential equity investors and Lenders; and
 - (E) represents the projections that Developer believes in good faith are the most realistic and reasonable for the Project as of the date on which this representation and warranty is given or repeated, provided that such projections:
 - (I) are based upon a number of estimates and assumptions;
 - (II) are subject to significant business, economic and competitive uncertainties and contingencies; and
 - (III) accordingly, are not a representation or warranty that any of the assumptions are correct, that such projections will be achieved or that the forward-looking statements expressed in such projections will correspond to actual results.
 - (ii) Developer has reviewed all Law relating to Taxes, and has taken into account all requirements imposed by relevant Law in preparing the Financial Model.
- (j) **Legal Proceedings.** There is no:
 - (i) criminal, civil, enforcement or other action, suit, proceeding, investigation or litigation pending or served on or against Developer or any Equity Member that:
 - (A) challenges Developer's authority to execute, deliver or perform any Developer Agreement;
 - (B) challenges the validity or enforceability of any Developer Agreement;
 - (C) challenges the authority of any Developer representative executing any Developer Agreement; or
 - (D) could reasonably be expected to have a material and adverse effect on the ability of Developer to perform its obligations under any Developer Agreement; and
 - (ii) un-served or threatened action, suit, proceeding, investigation or litigation against Developer or any Equity Member with respect to any of the matters referred to in paragraphs (j)(i)(A) to (D) of this Part A of which Developer is aware and has not previously disclosed in writing to the Enterprises.
- (k) **Prohibited Acts.** Developer has not, and, to the best of Developer's knowledge and belief (Developer having made reasonable enquiries with a view to obtaining such knowledge and belief) no Developer-Related Entity has, committed any Prohibited Act.
- (l) **Organizational Conflicts of Interest.** As of the Financial Proposal Deadline, the Preferred Proposer disclosed to the Enterprises in writing all Organizational Conflicts of Interest of which Preferred Proposer was aware and, since such date, Developer has not obtained knowledge (Developer having made reasonable inquiries with a view to obtaining such knowledge) of any additional Organizational Conflict of Interest, and there have been no Organizational Changes or Key Personnel Changes (as such terms are defined in the ITP) to or by Developer or its Principal Subcontractors identified in its Proposal which require approval by the Enterprises pursuant to the terms of the ITP and have not been so approved.
- (m) **Debarment.** None of Developer, any of its principals or any of its Principal Subcontractors are presently disqualified, suspended or debarred from bidding, proposing or contracting with any state-level, interstate or Federal Governmental Authority. For purposes of this representation and warranty, the term "principal" means an officer, director, Equity Member or other direct or indirect owner, partner, Key Personnel, employee or other person with primary management or

supervisory responsibilities, or a person who has a critical influence on or substantive control over the operations of Developer.

- (n) **Taxes and Fees.** Neither Developer nor any of its Equity Members is presently in arrears in payment of Taxes, Permit fees or other statutory, regulatory or judicially required payments to the Enterprises, CDOT or the State or, with respect to Taxes or judicially required payments only, to any other state or the Federal Government, except with respect to any State, other state or Federal Taxes, to the extent such are being contested in good faith and by appropriate proceedings for which adequate reserves have been established in accordance with GAAP.
- (o) **Principal Subcontractors.** As of the effective date of the relevant Principal Subcontract:
 - (i) each of the Construction Contractor and the O&M Contractor (each such Principal Subcontractor, a "Relevant Entity"):
 - (A) is duly organized, validly existing and, where legally applicable, in good standing under the laws of the state of its organization; and
 - (B) is authorized to transact business in, and is registered with the Secretary of State in, the State;
 - (ii) each Relevant Entity has the power and authority to do all acts and things and execute and deliver all other documents as are required to be done, observed or performed by it in connection with its engagement by Developer;
 - (iii) each Relevant Entity has:
 - (A) obtained or will obtain and will maintain all necessary or required registrations, permits, licenses and approvals required under applicable Law; and
 - (B) the expertise, qualifications, experience, competence, skills and know-how to perform, in accordance with this Agreement and the Principal Subcontract to which it is a party, the Work that it has agreed to perform pursuant to such Principal Subcontract;
 - (iv) none of the Relevant Entities is in breach of any Law that would have a material adverse effect on the Work;
 - (v) each Principal Subcontract, and any amendments or supplements thereto, is in compliance with, and, as applicable, incorporates the terms set out in, Part A of Schedule 16 to the Project Agreement; and
 - (vi) no default under any Principal Subcontract has occurred and is continuing, and no fact or event exists that with the passage of time or giving of notice would constitute such a default.

Part B: Representations and Warranties of the Colorado Bridge Enterprise

- (a) **Power and Authority.** BE is a government-owned business within CDOT and an enterprise within the meaning of Article X, Section 20(2)(d) of the Colorado Constitution, and BE has the legal power, right and authority to execute, deliver and, subject to the terms and conditions of each such document as such apply to BE, perform the Project Agreement, the Enterprise Closing Agreements to which BE is a party, the IAA, the Supplemental Indenture and the Central 70 Note (collectively, the “BE Agreements”).
- (b) **Authorization and Due Execution.**
- (i) Each person executing any BE Agreement on behalf of BE has been (or, at the time of execution, will have been) duly authorized to execute and deliver such BE Agreement on behalf of BE.
 - (ii) The execution, delivery and performance of each BE Agreement has otherwise been duly authorized by BE.
 - (iii) Each BE Agreement has been (or will be) duly and validly executed and delivered by BE.
- (c) **Enforceability.** Each BE Agreement constitutes (or, at the time of execution and delivery, will constitute) a legal, valid and binding obligation of BE enforceable against it in accordance with its terms as such terms separately apply to BE, except to the extent limited by applicable bankruptcy, insolvency, reorganization, moratorium or other similar laws affecting the enforceability of the rights of creditors generally, by general principles of equity, by the exercise by the State and its governmental bodies of the police power inherent in the sovereignty of the State and by the exercise by the United States of the powers delegated to it by the Constitution of the United States.
- (d) **No Conflicts.** The execution and delivery by BE of the BE Agreements has not resulted in, and the performance thereof by BE will not result in:
- (i) a breach of, default under or a violation of any agreement, instrument, judgment or decree to which BE is a party or is bound; or
 - (ii) a violation of any Law applicable to BE that is in effect on the date of execution and delivery of each BE Agreement.
- (e) **Consents and Approvals.** Except as otherwise disclosed in writing by the Enterprises to Developer in connection with the occurrence of Key Financial Event of a type referred to in paragraphs d., e. or f. of the definition thereof in Part A of Annex A (Definitions and Interpretation) of the Project Agreement, as of the date on which this representation and warranty is given or repeated, no consent of any party and no Governmental Approval which has not already been obtained is required, as of such date, to have been obtained in connection with the execution, delivery and performance of any BE Agreement by BE.
- (f) **Enterprise Default.** No Enterprise Default has occurred and is continuing, and no fact or event exists that with the passage of time or giving of notice would constitute an Enterprise Default.
- (g) **Applicable Laws.** BE is not in breach of any Law that would have a material adverse effect on the performance of any of its obligations under any BE Agreement.
- (h) **Legal Proceedings.** Except as otherwise disclosed in writing by the Enterprises to Developer in connection with the occurrence of any Key Financial Event of a type referred to in paragraphs d., e. or f. of the definition thereof in Part A of Annex A (Definitions and Interpretation) of the Project Agreement, no action, suit, proceeding, investigation or litigation is pending or overtly threatened in writing:
- (i) that challenges:
 - (A) BE’s authority to execute, deliver or perform;
 - (B) the legality, validity or enforceability of, as against BE; or

- (C) the authority of any representative of BE executing, in each case, any of the BE Agreements; or
 - (ii) that could reasonably be expected to have a material and adverse effect on the ability of BE to perform its obligations under the Project Agreement.
- (i) **Eligible Project Costs.**
 - (i) The total federal assistance received and/or allocated and/or to be received and/or allocated by or to the Enterprises for the construction costs of the Project (specifically excluding costs for O&M Work) does not exceed 80% of “eligible project costs”, as those costs are defined by any federal loan or grant agreement to which BE is a party or of which BE has actual knowledge.
 - (ii) The Enterprises have submitted to Build America Bureau information regarding all “eligible project costs” incurred to date by the Enterprises.

Part C: Representations and Warranties of the High Performance Transportation Enterprise

- (a) **Power and Authority.** HPTE is a government-owned business within CDOT and an enterprise within the meaning of Article X, Section 20(2)(d) of the Colorado Constitution, and HPTE has the legal power, right and authority to execute, deliver and, subject to the terms and conditions of each such document as such apply to HPTE, perform the Project Agreement, the Enterprise Closing Agreements to which HPTE is a party and the IAA (collectively the “HPTE Agreements”).
- (b) **Authorization and Due Execution.**
- (i) Each person executing any HPTE Agreement on behalf of HPTE has been (or, at the time of execution, will have been) duly authorized to execute and deliver such HPTE Agreement on behalf of HPTE.
 - (ii) The execution, delivery and performance of each HPTE Agreement has otherwise been duly authorized by HPTE.
 - (iii) Each HPTE Agreement has been (or will be) duly and validly executed and delivered by HPTE.
- (c) **Enforceability.** Each HPTE Agreement constitutes (or, at the time of execution and delivery, will constitute) a legal, valid and binding obligation of HPTE enforceable against it in accordance with its terms as such terms separately apply to HPTE, except to the extent limited by applicable bankruptcy, insolvency, reorganization, moratorium or other similar laws affecting the enforceability of the rights of creditors generally, by general principles of equity, by the exercise by the State and its governmental bodies of the police power inherent in the sovereignty of the State and by the exercise by the United States of the powers delegated to it by the Constitution of the United States.
- (d) **No Conflicts.** The execution and delivery by the HPTE of the HPTE Agreements has not resulted in, and the performance thereof by HPTE will not result in:
- (i) a breach of, default under or a violation of any agreement, instrument, judgment or decree to which HPTE is a party or is bound; or
 - (ii) a violation of any Law applicable to HPTE that is in effect on the date of execution and delivery of each HPTE Agreement.
- (e) **Consents and Approvals.** Except as otherwise disclosed in writing by the Enterprises to Developer in connection with the occurrence of any Key Financial Event of a type referred to in paragraphs d., e. or f. of the definition thereof in Part A of Annex A (Definitions and Interpretation) of the Project Agreement, as of the date on which this representation and warranty is given or repeated, no consent of any party and no Governmental Approval which has not already been obtained is required, as of such date, to have been obtained in connection with the execution, delivery and performance of any HPTE Agreement by HPTE.
- (f) **Enterprise Default.** No Enterprise Default has occurred and is continuing, and no fact or event exists that with the passage of time or giving of notice would constitute an Enterprise Default.
- (g) **Applicable Laws.** HPTE is not in breach of any Law that would have a material adverse effect on the performance of any of its obligations under any HPTE Agreement.
- (h) **Legal Proceedings.** Except as otherwise disclosed in writing by the Enterprises to Developer in connection with the occurrence of any Key Financial Event of a type referred to in paragraphs d., e. or f. of the definition thereof in Part A of Annex A (Definitions and Interpretation) of the Project Agreement, no action, suit, proceeding, investigation or litigation is pending or overtly threatened in writing:
- (i) that challenges:
 - (A) HPTE’s authority to execute, deliver or perform;
 - (B) the legality, validity or enforceability of, as against HPTE; or

- (C) the authority of any representative of HPTE executing, in each case, of any of the HPTE Agreements; or
 - (ii) that could reasonably be expected to have a material and adverse effect on the ability of HPTE to perform its obligations under the Project Agreement.
- (i) **Eligible Project Costs.**
 - (i) The total federal assistance received and/or allocated and/or to be received and/or allocated by or to the Enterprises for the construction costs of the Project (specifically excluding costs for O&M Work) does not exceed 80% of “eligible project costs”, as those costs are defined by any federal loan or grant agreement to which HPTE is a party or of which HPTE has actual knowledge.
 - (ii) The Enterprises have submitted to the Build America Bureau information regarding all “eligible project costs” incurred to date by the Enterprises.

Schedule 3
Commencement and Completion Mechanics

Part 1: Commencement of NTP1 Work

1. In this Agreement, “NTP1 Conditions” means the following conditions, each of which shall be construed as a separate and independent condition:
 - (a) Developer shall have submitted each Deliverable which is identified as being required to be submitted prior to the issuance of NTP1 in either (x) the “Schedule” column in any of the Deliverables tables in Schedule 8 (Project Administration), Schedule 10 (Design and Construction Requirements), Schedule 11 (Operations and Maintenance Requirements), Schedule 14 (Strategic Communications), Schedule 15 (Federal and State Requirements) (other than the first two Deliverables listed in the Deliverables Table in Schedule 14 and the first Deliverable listed in the Deliverables Table in Schedule 15), Schedule 17 (Environmental Requirements) and Schedule 18 (Right-of-Way) (collectively, the “Deliverables Tables”) or (y) any other part of this Agreement (excluding such Schedules), and:
 - (i) if Acceptance, Approval or other consent, approval or like assent of any such Deliverable is required as indicated in the Deliverables Tables or otherwise by the express terms of this Agreement, Developer shall have received such Acceptance, Approval or other consent, approval or like assent as applicable, of each such Deliverable; and
 - (ii) if any such Deliverable is required to be submitted for Information as indicated in the Deliverables Tables or otherwise by the express terms of this Agreement, the initial review period as determined pursuant to Section 6(a) of Schedule 9 (Submittals) shall have expired with respect to each such Deliverable;
 - (b) Developer shall have mobilized its quality management staff as anticipated by the Approved Stage 1 Quality Management Plan;
 - (c) no Developer Default shall have occurred and be continuing; and
 - (d) Developer shall have satisfied any other requirements and conditions that are required by the terms of this Agreement to have been satisfied prior to the issuance of NTP1 or the commencement of any NTP1 Work.
2. Pursuant to Section 9.1.a of the Project Agreement, Developer shall not be entitled to commence any NTP1 Work (other than those preparatory activities referenced in paragraphs b. and c. of the definition of NTP1 Work in Part A of Annex A (Definitions and Abbreviations) of the Project Agreement) until the Enterprises have issued NTP1 in accordance with Section 4(a) of this Part 1.
3. Developer shall notify the Enterprises promptly after it considers that all NTP1 Conditions have been satisfied.
4. The Enterprises shall promptly after receipt of a notice from Developer pursuant to Section 3 of this Part 1, and in any event within five Working Days after such receipt, either:
 - (a) if they consider that all NTP1 Conditions have been satisfied, issue a notice (“NTP1”) to Developer authorizing commencement of the NTP1 Work; or
 - (b) if they do not consider that all NTP1 Conditions have been satisfied, notify Developer to such effect, specifying which NTP1 Conditions have not been satisfied and why they consider that such NTP1 Conditions have not been satisfied.
5. If the Enterprises issue a notice to Developer pursuant to Section 4(b) of this Part 1, then the procedures set out in Sections 3 and 4 of this Part 1 shall be repeated until the Enterprises issue NTP1.

Part 2: Commencement of Construction Work and O&M During Construction Work

1. In this Agreement, “NTP2 Conditions” means the following conditions, each of which shall be construed as a separate and independent condition:
 - (a) NTP1 shall have been issued;
 - (b) the FHWA shall have approved the initial financial plan submitted by Developer pursuant to Section 8.3.3.a.i.B.I. of the Project Agreement;
 - (c) all Governmental Approvals and Permits applicable to the commencement of Construction Work and O&M Work During Construction shall have been obtained, any conditions thereto that are required to be satisfied in advance of such commencement shall have been satisfied, and Developer shall have otherwise complied with its obligations in relation to such Governmental Approvals and Permits pursuant to this Agreement, including under Section 8.4.2 of the Project Agreement and under Section 5 of Schedule 8 (Project Administration);
 - (d) Developer shall have delivered to the Enterprises:
 - (i) copies of all Governmental Approvals and Permits referred to in Section 1(c) of this Part 2; and
 - (ii) evidence that any conditions thereto that are required to be satisfied in advance of commencement of the Construction Work and O&M During Construction have been satisfied;
 - (e) Developer shall have demonstrated the functionality and use of its Maintenance Management Information System to the satisfaction of the Enterprises (acting in their discretion) and such Maintenance Management Information System shall be fully operational and substantially populated, as determined by reference to Section 7 of Schedule 11 (Operations and Maintenance Requirements);
 - (f) Developer shall have submitted to the Enterprises, and received Acceptance of, a written protocol pursuant to Section 19.1.3.d of the Project Agreement;
 - (g) Developer shall have submitted each Deliverable which is identified as being required to be submitted either (1) prior to the issuance of NTP2 or (2) a specified number of days after the issuance of NTP1, either (x) in the “Schedule” column in any of the Deliverables Tables (other than the third Deliverable listed in the Deliverables Table in Schedule 14 (Strategic Communications)) or (y) any other part of this Agreement (excluding the Schedules referred to in Section 1(a) of Part 1 of this Schedule 3), and:
 - (i) if Acceptance, Approval or other consent, approval or like assent of any such Deliverable is required as indicated in the Deliverables Tables or otherwise by the express terms of this Agreement, Developer shall have received such Acceptance, Approval or other consent, approval or like assent as applicable, of each such Deliverable; and
 - (ii) if any such Deliverable is required to be submitted for Information as indicated in the Deliverables Tables or otherwise by the express terms of this Agreement, the initial review period as determined pursuant to Section 6(a) of Schedule 9 (Submittals) shall have expired with respect to each such Deliverable;
 - (h) Developer shall have delivered to the Enterprises the Contractor Bonds as required pursuant to Section 9.3.1.a.i of the Project Agreement;
 - (i) no Developer Default shall have occurred and be continuing; and
 - (j) Developer shall have satisfied any other requirements and conditions that are required by the terms of this Agreement to have been satisfied prior to the issuance of NTP2 and the commencement of the Construction Work and O&M Work During Construction (other than Snow and Ice Control Services).

2. Pursuant to Section 9.1.b of the Project Agreement, Developer shall not be entitled to:
 - (a) commence any Construction Work or O&M Work During Construction until the Enterprises have issued NTP2 in accordance with Sections 4(a) and 5 of this Part 2; or
 - (b) commence any specific aspect of the Construction Work or O&M Work During Construction pursuant to this Agreement until any applicable condition to such commencement specified in this Agreement (including in Schedule 8 (Project Administration), Schedule 10 (Design and Construction Requirements) and Schedule 11 (Operations and Maintenance Requirements)) has been satisfied.
3. Developer shall notify the Enterprises promptly after it considers that all NTP2 Conditions have been satisfied.
4. The Enterprises shall promptly after receipt of a notice from Developer pursuant to Section 3 of this Part 2 and, in any event, within five Working Days after such receipt either:
 - (a) if they consider that all NTP2 Conditions have been satisfied, issue a notice to Developer to such effect; or
 - (b) if they do not consider that all NTP2 Conditions have been satisfied, notify Developer to such effect, specifying which NTP2 Conditions have not been satisfied and why they consider that such NTP2 Conditions have not been satisfied.
5. If:
 - (a) the Financial Close Date has occurred prior to, or is the same date as, the date of issuance by the Enterprises of a notice pursuant to Section 4(a) of this Part 2, then such notice shall constitute "NTP2"; or
 - (b) the Enterprises issue a notice pursuant to Section 4(a) of this Part 2 prior to the Financial Close Date, they shall issue a further notice on the Financial Close Date which shall constitute "NTP2".
6. If the Enterprises issue a notice to Developer pursuant to Section 4(b) of this Part 2, then the procedures set out in Sections 3 and 4 of this Part 2 shall be repeated until the Enterprises issue NTP2 in accordance with Sections 4(a) and 5 of this Part 2.

Part 3: Commencement of Snow and Ice Control Services

1. In this Agreement, "NTP3 Conditions" means the following conditions:
 - (a) NTP1 and NTP2 shall have been issued; and
 - (b) Financial Close shall have occurred.
2. Subject to the obligations of Developer to perform Snow and Ice Control Services pursuant to Section 2.2.2.b of Schedule 11 (*Operations and Maintenance Requirements*) (which obligations shall arise whether or not either (1) NTP3 has been issued or (2) the Snow and Ice Control Commencement Date has occurred), pursuant to Section 9.1.a.iii of the Project Agreement, Developer shall not be entitled to:
 - (a) commence Snow and Ice Control Services pursuant to this Agreement until:
 - (i) the Enterprises have issued NTP3 in accordance with this Part 3; and
 - (ii) the Snow and Ice Control Commencement Date has occurred; and
 - (b) commence any specific aspect of Snow and Ice Control Services pursuant to this Agreement until any applicable condition to such commencement specified in this Agreement (including in Schedule 8 (*Project Administration*), Schedule 10 (*Design and Construction Requirements*) and Schedule 11 (*Operations and Maintenance Requirements*)) has been satisfied.
3. After satisfaction of the NTP3 Conditions, the Enterprises shall at any time thereafter issue a notice ("NTP3") to Developer authorizing and requiring commencement of Snow and Ice Control Services pursuant to Section 2.2.1 of Schedule 11 (*Operations and Maintenance Requirements*) on the date specified in such notice (the "Snow and Ice Control Commencement Date"), which date shall be no earlier than the later of: (a) July 1, 2018; and (b) 30 Calendar Days after the date of such notice.

Part 4: Milestone Completion

1. In this Agreement, "Milestone Completion Conditions" means, in respect of any Payment Milestone, the following conditions, each of which shall be construed as a separate and independent condition:
 - (a) the Enterprises shall have Approved a Milestone Completion Punch List in respect of the relevant Payment Milestone;
 - (b) Developer shall:
 - (i) have completed any Milestone Completion Punch List Items that are required in such Milestone Completion Punch List to be completed as Milestone Completion Conditions in respect of the relevant Payment Milestone; and
 - (ii) otherwise be in compliance with Section 4 of Part 7 of this Schedule 3 with respect to such Milestone Completion Punch List;
 - (c) subject only to any incomplete Milestone Completion Punch List Items in respect of the relevant Payment Milestone which are permitted to be completed after the relevant Milestone Completion Date, Developer shall have completed the Construction Work related to the relevant Payment Milestone in accordance with this Agreement including:
 - (i) the repair, replacement or correction and full remediation of all Defects and the remediation of all Nonconforming Work pursuant to Section 6.5 of Schedule 8 (*Project Administration*); and
 - (ii) any such Construction Work related to Local Agency Roadways, including such that:
 - (iii) in the case of all Payment Milestones, the infrastructure constituting the relevant Payment Milestone is in a condition that can be operated for safe vehicular travel in all lanes and at all points of entry and exit; and
 - (iv) in the case of Payment Milestone 3 and Payment Milestone 4, the traffic shall have been properly transferred on to the infrastructure constituting such Payment Milestone pursuant to Schedule 10 (*Design and Construction Requirements*);
 - (d) Developer shall have provided the Enterprises with a written certificate, in form and substance reasonably acceptable to the Enterprises, that limited Closures on the infrastructure constituting such Payment Milestone are required or expected for the remainder of the Construction Period;
 - (e) Developer shall have conducted, and provided the Enterprises with an opportunity to witness, all tests and inspections necessary to provide measurement records for each Element of the relevant Payment Milestone in accordance with the Performance and Measurement Table set out in Appendix A-1 to Schedule 11 (*Operations and Maintenance Requirements*) and Developer's Approved Quality Management Plan;
 - (f) any systems and equipment in relation to the relevant Payment Milestone which Developer is required to install pursuant to this Agreement:
 - (i) shall have been installed;
 - (ii) shall comply, in all respects, with applicable Law; and
 - (iii) excluding ETC or ITS Elements, shall:
 - (A) be fully operational and functional; and
 - (B) have passed any tests and inspections required under this Agreement,

- in each case subject only to completion of any incomplete Milestone Completion Punch List Items in respect of the relevant Payment Milestone which are permitted to be completed after the relevant Milestone Completion Date;
- (g) Developer shall have submitted certificates in respect of the relevant Payment Milestone in the form and content as required by Section 6.4.3.b.i of Schedule 8 (*Project Administration*);
 - (h) Developer shall have provided the Enterprises with lien waivers as required pursuant to Section 4(c) of Schedule 5 (*Milestone Payments*);
 - (i) no Developer Default shall have occurred and be continuing (except with respect to any Developer Default number (2), (3), (4) or (5) in Section 32.1.1 of the Project Agreement that shall be cured upon achievement of Milestone Completion of the relevant Payment Milestone (in the case of Developer Default number (5), simultaneously with achievement of Substantial Completion) and in respect of which the Enterprises have not issued a Termination Notice pursuant to Section 33.1.3.a of the Project Agreement); and
 - (j) Developer shall have satisfied any other requirements and conditions that are required by the terms of this Agreement to have been satisfied prior to completion of such Payment Milestone.
2. Developer shall provide the Enterprises with at least 40 Working Days' advance notice of the date of the expected Milestone Completion of any Payment Milestone, which notice shall expressly and conspicuously state that it is being delivered pursuant to this Section 2 of Part 4 of this Schedule 3.
 3. During the 40 Working Day period following receipt by the Enterprises of a notice pursuant to Section 2 of this Part 4, Developer and the Enterprises shall meet, confer and exchange information on a regular and cooperative basis, and the Enterprises shall conduct:
 - (a) an inspection of the Construction Work comprising the relevant Payment Milestone and its components (which may be conducted jointly with FHWA and/or CDOT pursuant to Section 21.1.1.a of the Project Agreement); and
 - (b) such other investigation and review of reports, data and documentation, as in each case may be necessary (as determined by the Enterprises, acting reasonably) to evaluate whether all of the applicable Milestone Completion Conditions in respect of the relevant Payment Milestone have been satisfied.
 4. After Developer has given a notice pursuant to Section 2 of this Part 4 in respect of a Payment Milestone, Developer shall provide the Enterprises a further notice when Developer considers that all applicable Milestone Completion Conditions have been satisfied, which notice shall include a written certification, in form and substance reasonably acceptable to the Enterprises, that all applicable Milestone Completion Conditions in respect of the relevant Payment Milestone have been satisfied.
 5. Within five Working Days after receipt of a notice and certification pursuant to Section 4 of this Part 4, the Enterprises shall either:
 - (a) if they consider that all applicable Milestone Completion Conditions have been satisfied, issue a certificate to such effect (a "Milestone Completion Certificate"), and the date of such Milestone Completion Certificate shall be the "Milestone Completion Date"; or
 - (b) if they do not consider that all applicable Milestone Completion Conditions have been satisfied, notify Developer to such effect, specifying which Milestone Completion Conditions have not been satisfied and why they consider that such Milestone Completion Conditions have not been satisfied.
 6. If the Enterprises issue a notice to Developer pursuant to Section 5(b) of this Part 4, then the procedures set out in Sections 2 to 5 of this Part 4 shall be repeated until the Enterprises issue a Milestone Completion Certificate in respect of the relevant Payment Milestone.

Part 5: Substantial Completion

1. In this Agreement, "Substantial Completion Conditions" means the following, each of which shall be construed as a separate and independent condition:
 - (a) the Milestone Completion Date shall have occurred in respect of each of the Payment Milestones and all Milestone Completion Conditions in respect of all Payment Milestones shall remain satisfied;
 - (b) the Enterprises shall have Approved Developer's completion of all work with respect to all Milestone Completion Punch List Items on the basis that the relevant Construction Work completed as a result of the completion of such Punch List Items is in full compliance with the applicable requirements of this Agreement;
 - (c) Developer shall have completed the Construction Work for the Project in accordance with this Agreement, including:
 - (i) the repair, replacement or correction and full remediation of all Defects; and
 - (ii) the remediation of all Nonconforming Work pursuant to Section 6.5 of Schedule 8 (*Project Administration*),

including such that the Project is in a condition that can be open to traffic in the final configuration (subject only to completion of (A) any incomplete Substantial Completion Punch List Items which are permitted to be completed after the Substantial Completion Date and (B) any Construction Work the completion of which constitutes a Final Acceptance Condition);
 - (d) Developer shall have provided the Enterprises with a written certificate, in form and substance reasonably acceptable to the Enterprises, that no Closures are required or expected during the Operating Period other than (i) Excused Closures and (ii) Permitted Operating Period Closures;
 - (e) Developer shall have complied with Sections 3.5.6, 3.5.7, 3.5.8 and 3.5.9 of Schedule 10 (*Design and Construction Requirements*), and each time period referenced therein shall have expired;
 - (f) Developer shall have conducted, and provided the Enterprises an opportunity to witness, all tests and inspections necessary to provide measurement records for each Element of the entire Project in accordance with the Performance and Measurement Tables and Developer's Approved Quality Management Plan;
 - (g) Developer shall have delivered to the Enterprises the Contractor Bonds as required pursuant to Section 9.3.1.a.ii of the Project Agreement;
 - (h) the Enterprises shall have Approved any updates:
 - (i) that Developer has submitted to the Enterprises pursuant to Section 4.2.6 of Schedule 11 (*Operations and Maintenance Requirements*); and
 - (ii) to the Performance and Measurement Table set out in Appendix A-2 to Schedule 11 (*Operations and Maintenance Requirements*);
 - (i) any systems and equipment which Developer is required to install pursuant to this Agreement:
 - (i) shall have been installed;
 - (ii) shall comply, in all respects, with applicable Law;
 - (iii) shall be fully operational and functional; and
 - (iv) shall have passed any tests and inspections required under this Agreement,

in each case subject only to completion of:

- (v) any incomplete Substantial Completion Punch List Items which are permitted to be completed after the Substantial Completion Date; and
- (vi) any Construction Work the completion of which constitutes a Final Acceptance Condition;
- (j) Developer shall have delivered to the Enterprises all reports, data and documentation relating to such tests and inspections as are referred to in Section 1(f) of Part 4 and in Section 1(i) of this Part 5;
- (k) the Enterprises shall have Approved a Substantial Completion Punch List;
- (l) Developer shall:
 - (i) have completed any Substantial Completion Punch List Items that are required in such Substantial Completion Punch List to be completed as Substantial Completion Conditions; and
 - (ii) otherwise be in compliance with Section 4 of Part 7 of this Schedule 3 with respect to such Substantial Completion Punch List;
- (m) if any Governmental Authority, Railroad or Utility Owner with jurisdiction over any portion of the Project requires any form of certification of design, engineering or construction with respect to such portion, including any certifications or approvals required under any Permit or Governmental Approval, Developer shall have caused such certificates or approvals to be executed and delivered and shall have concurrently provided copies of such certificates or approvals to the Enterprises;
- (n) Developer shall have submitted each Deliverable which is identified as being required to be submitted prior to issuance of Substantial Completion either (x) in the "Schedule" column in any of the Deliverables Tables or (y) any other part of this Agreement (excluding the Schedules referred to in Section 1(a) of Part 1 of this Schedule 3) and:
 - (i) if Acceptance, Approval or other consent, approval or like assent of any such Deliverable is required as indicated in the Deliverables Tables or otherwise by the express terms of this Agreement, Developer shall have received such Acceptance, Approval or other consent, approval or like assent as applicable, of each such Deliverable; and
 - (ii) if any such Deliverable is required to be submitted for Information as indicated in the Deliverables Tables, the initial review period as determined pursuant to Section 6(a) of Schedule 9 (*Submittals*) shall have expired with respect to each such Deliverable;
- (o) Developer shall have submitted certificates in respect of Substantial Completion in the form and content as required by Section 6.4.3.b.i of Schedule 8 (*Project Administration*);
- (p) with respect to all Insurance Policies that are required by Section 25 and Schedule 13 (*Required Insurances*) to be in effect on and from the Substantial Completion Date:
 - (i) such policies shall have been obtained from Eligible Insurers on terms that comply with Section 25 and Schedule 13 (*Required Insurances*) and shall be in full force and effect; and
 - (ii) the Enterprises shall have received binding verifications of coverage from the relevant insurers (or Developer's insurance brokers) of such Insurance Policies, in compliance with Section 25.3.1 of the Project Agreement as Accepted by the Enterprises;
- (q) Developer shall have provided the Enterprises with lien waivers as required pursuant to Section 4(c) of Schedule 5 (*Milestone Payments*);

- (r) no Developer Default shall have occurred and be continuing (except with respect to any Developer Default number (2), (3), (4) or (5) in Section 32.1.1 of the Project Agreement that shall be cured upon achievement of Substantial Completion) and in respect of which the Enterprises have not issued a Termination Notice pursuant to Section 33.1.3.a of the Project Agreement); and
 - (s) Developer shall have satisfied any other requirements and conditions that are required by the terms of this Agreement to have been satisfied prior to Substantial Completion.
- 2. Developer shall provide the Enterprises with 40 Working Days' advance notice of the date of expected Substantial Completion, which notice shall expressly and conspicuously state that it is being delivered pursuant to this Section 2 of Part 5 of this Schedule 3.
- 3. During the 40 Working Day period following receipt by the Enterprises of a notice pursuant to Section 2 of this Part 5, Developer and the Enterprises shall meet, confer and exchange information on a regular and cooperative basis, and the Enterprises shall conduct:
 - (a) an inspection of the entire Project and its components (including all Milestone Completion Punch List Items) (which may be conducted jointly with FHWA and/or CDOT pursuant to Section 21.1.1.a of the Project Agreement); and
 - (b) such other investigation and review of reports, data and documentation, as in each case may be necessary (as determined by the Enterprises, acting reasonably) to evaluate whether all of the Substantial Completion Conditions have been satisfied.
- 4. After Developer has given a notice pursuant to Section 2 of this Part 5, Developer shall provide the Enterprises a further notice when Developer considers that all Substantial Completion Conditions have been satisfied, which notice shall include a written certification, in form and substance reasonably acceptable to the Enterprises, that all Substantial Completion Conditions have been satisfied.
- 5. Within five Working Days after receipt of a notice and certification pursuant to Section 4 of this Part 5, the Enterprises shall either:
 - (a) if they consider that all applicable Substantial Completion Conditions have been satisfied, issue a certificate to such effect (a "Substantial Completion Certificate"), and the date of such Substantial Completion Certificate shall be the "Substantial Completion Date"; or
 - (b) if they do not consider that all Substantial Completion Conditions have been satisfied, notify Developer to such effect, specifying which Substantial Completion Conditions have not been satisfied and why they consider that such Substantial Completion Conditions have not been satisfied.
- 6. If the Enterprises issue a notice to Developer pursuant to Section 5(b) of this Part 5, then the procedures set out in Sections 2 to 5 of this Part 5 shall be repeated until the Enterprises issue a Substantial Completion Certificate.

Part 6: Final Acceptance

1. In this Agreement, “Final Acceptance Conditions” means the following, each of which shall be construed as a separate and independent condition:
 - (a) the Substantial Completion Date shall have occurred and all Substantial Completion Conditions shall remain satisfied;
 - (b) the Enterprises shall have Approved Developer’s completion of all work with respect to all Substantial Completion Punch List Items on the basis that the relevant Construction Work completed as a result of the completion of such Punch List Items is in full compliance with the applicable requirements of this Agreement;
 - (c) all previously identified Defects shall have been repaired, replaced or otherwise corrected and fully remedied as required by this Agreement and all Nonconforming Work shall have been remedied pursuant to Section 6.5 of Schedule 8 (Project Administration);
 - (d) Developer shall have provided the Enterprises with a written certificate, in form and substance reasonably acceptable to the Enterprises, that no Closures are required or expected during the Operating Period other than (i) Excused Closures and (ii) Permitted Operating Period Closures;
 - (e) the Enterprises shall have received and Accepted a complete set of As-Built survey sheets for the Project in the form and content as required by Schedule 10 (Design and Construction Requirements);
 - (f) the Enterprises shall have received and Accepted a complete set of the As-Built drawings in the form and content required by Schedule 8 (Project Administration) and Schedule 10 (Design and Construction Requirements);
 - (g) the Final Acceptance Condition specified in Section 14.9 of Schedule 10 (Design and Construction Requirements) shall have been, and shall remain, satisfied;
 - (h) Developer shall have submitted certificates in respect of Final Acceptance in the form and content as required by Section 6.4.3.b.i of Schedule 8 (Project Administration);
 - (i) Developer shall have submitted each Deliverable which is identified as being required to be submitted prior to issuance of Final Acceptance in either (x) the “Schedule” column in any of the Deliverables Tables or (y) any other part of this Agreement (excluding the Schedules referred to in Section 1(a) of Part 1 of this Schedule 3) and:
 - (i) if Acceptance, Approval or other consent, approval or like assent of any such Deliverable is required as indicated in the Deliverables Tables or otherwise by the express terms of this Agreement, Developer shall have received such Acceptance, Approval or other consent, approval or like assent as applicable, of each such Deliverable; and
 - (ii) if any such Deliverable is required to be submitted for Information as indicated in the Deliverables Tables, the initial review period as determined pursuant to Section 6(a) of Schedule 9 (Submittals) shall have expired with respect to each such Deliverable;
 - (j) no Developer Default shall have occurred and be continuing (except with respect to any Developer Default number (2), (3) or (4) in Section 32.1.1 of the Project Agreement that shall be cured upon achievement of Final Acceptance) and in respect of which the Enterprises have not issued a Termination Notice pursuant to Section 33.1.3.a of the Project Agreement); and
 - (k) Developer shall have satisfied any other requirements and conditions that are required by the terms of this Agreement to have been satisfied prior to Final Acceptance.

2. Developer shall provide the Enterprises with 40 Working Days' advance notice of the date of expected Final Acceptance, which notice shall expressly and conspicuously state that it is being delivered pursuant to this Section 2 of Part 6 of this Schedule 3.
3. During the 40 Working Day period following receipt by the Enterprises of a notice pursuant to Section 2 of this Part 6, Developer and the Enterprises shall meet, confer and exchange information on a regular and cooperative basis, and the Enterprises shall conduct:
 - (a) an inspection of the entire Project and its components (including all Substantial Completion Punch List Items) (which may be conducted jointly with FHWA and/or CDOT pursuant to Section 21.1.1.a of the Project Agreement); and
 - (b) such other investigation and review of reports, data and documentation, as in each case may be necessary (as determined by the Enterprises, acting reasonably) to evaluate whether all of the Final Acceptance Conditions have been satisfied.
4. After Developer has given a notice pursuant to Section 2 of this Part 6, Developer shall provide the Enterprises a further notice when Developer considers that all Final Acceptance Conditions have been satisfied, which notice shall include a written certification, in form and substance reasonably acceptable to the Enterprises, that all Final Acceptance Conditions have been satisfied.
5. Within five Working Days after receipt of a notice and certification pursuant to Section 4 of this Part 6, the Enterprises shall either:
 - (a) if they consider that all applicable Final Acceptance Conditions have been satisfied, issue a certificate to such effect (a "Final Acceptance Certificate"), and the date of such Final Acceptance Certificate shall be the "Final Acceptance Date"; or
 - (b) if they do not consider that all Final Acceptance Conditions have been satisfied, notify Developer to such effect, specifying which Final Acceptance Conditions have not been satisfied and why they consider that such Final Acceptance Conditions have not been satisfied.
6. If the Enterprises issue a notice to Developer pursuant to Section 5(b) of this Part 6, then the procedures set out in Sections 2 to 5 of this Part 6 shall be repeated until the Enterprises issue a Final Acceptance Certificate.

Part 7: Punch List Mechanism

1. Developer shall comply with the procedures and schedules for preparing Punch Lists and for completing Punch List Items pursuant to the Developer's Approved Project Management Plan and the provisions of this Part 7.
2. Following any inspection conducted:
 - (a) pursuant to Section 3(a) of Part 4 of this Schedule 3, Developer shall promptly prepare and deliver to the Enterprises a list (a "Milestone Completion Punch List") of Punch List Items applicable to the relevant Payment Milestone ("Milestone Completion Punch List Items"), including a proposed date of completion for each item (which shall in no event be later than the then anticipated Substantial Completion Date);
 - (b) pursuant to Section 3(a) of Part 5 of this Schedule 3, Developer shall promptly prepare and deliver to the Enterprises a list (a "Substantial Completion Punch List") of Punch List Items applicable to the entire Project ("Substantial Completion Punch List Items"), including a date of proposed completion for each item (which shall in no event be later than the Final Acceptance Deadline).
3. The Enterprises shall notify Developer within 10 Working Days of receipt of any Punch List pursuant to Section 3 of this Part 7 whether they Approve the contents of such Punch List or dispute or reject the inclusion (or omission) of any Punch List Item on such Punch List.
4. Developer shall promptly commence (or, as applicable, continue) work on all Approved Punch List Items and diligently prosecute such work to completion by the date of completion specified in the Punch List and in any event no later than (i) Substantial Completion with respect to all Milestone Completion Punch Line Items and (ii) the Final Acceptance Deadline with respect to all Substantial Completion Punch List Items.
5. Developer shall, on an ongoing basis:
 - (a) (i) verify that each item on any Punch List has been corrected or completed, (ii) provide all final documentation, and (iii) perform a final review and inspection to verify that Punch List Items have been resolved, in the case of each (i)-(iii) to the satisfaction of the Enterprises (acting in their discretion); and
 - (b) provide the Enterprises with regular written updates regarding the same.

Schedule 4 Payments

Part 1: Construction Period

1. Milestone Payments

The Enterprises shall pay the Milestone Payments to Developer in accordance with Schedule 5 (Milestone Payments) in respect of Construction Work carried out during the Construction Period.

2. Monthly Deductions Reports

2.1 Developer shall submit to the Enterprises, no later than the tenth Working Day in each month that commences after the Financial Close Date (or, if earlier, the date of issuance of NTP1) and prior to the Substantial Completion Date, a report that complies with the requirements of Section 2.2 of this Part 1.

2.2 Each Monthly Deductions Report required to be submitted to the Enterprises pursuant to Section 2.1 of this Part 1 shall be in a form agreed by the Parties (acting reasonably) and shall contain the following information in relation to (unless expressly provided otherwise in this Section 2.2) the month that immediately precedes the month in which such Monthly Deductions Report is required to be submitted:

(a) details of:

- (i) each Noncompliance Event (including the nature of such event, its Noncompliance Start Time and, if such time has occurred at the date of such report, its Noncompliance Rectification Time) that accrued Noncompliance Points in the CP Deduction Month in accordance with Table 6A.1 and Part 4 of Schedule 6 (Performance Mechanism); and
- (ii) the number of Noncompliance Points that accrued in respect of each such Noncompliance Event in the CP Deduction Month (including details of how such number was calculated),

provided that, for certainty, in relation to any Noncompliance Event that occurred in (A) a month prior to the CP Deduction Month but which continued to subsist during the CP Deduction Month or (B) the CP Deduction Month but which continued to subsist after the end of the CP Deduction Month, the number of Noncompliance Points reported pursuant to this Section 2.2(a) shall be solely the number that accrued in the CP Deduction Month in accordance with Section 3 of Part 4 of Schedule 6 (Performance Mechanism);

(b) the aggregate number of Noncompliance Points that accrued in the CP Deduction Month in respect of all Noncompliance Events in accordance with Table 6A.1 and Part 4 of Schedule 6 (Performance Mechanism);

(c) the calculation of the Monthly Noncompliance Deduction for the CP Deduction Month;

(d) the cumulative total of Monthly Noncompliance Deductions for all months up to and including the CP Deduction Month;

(e) details of:

- (i) each Non-Permitted Construction Closure (including the cause thereof, its start time and, if such time has occurred at the date of such report, its end time) that resulted in the accrual of one or more Construction Closure Deductions in the CP Deduction Month in accordance with Section 3 of Part 1 of Schedule 6 (Performance Mechanism); and
- (ii) the amount of such Construction Closure Deductions that accrued in respect of each such Non-Permitted Construction Closure in the CP Deduction Month (including details of how such amount was calculated),

provided that, for certainty, in relation to any Non-Permitted Construction Closure that commenced in (A) a month prior to the CP Deduction Month but which continued to subsist during the CP Deduction Month or (B) the CP Deduction Month but which continued to subsist after the end of the CP Deduction Month, the amount of Construction Closure Deductions reported pursuant to this Section 2.2(e) shall be solely the amount that accrued in the CP Deduction Month in accordance with Section 3.2(b) of Part 1 of Schedule 6 (*Performance Mechanism*);

- (f) the calculation of the Monthly Construction Closure Deduction for the CP Deduction Month;
- (g) the cumulative total of Monthly Construction Closure Deductions for all months up to and including the CP Deduction Month;
- (h) the aggregate of the amounts referred to in Sections 2.2(c) and (f) of this Part 1;
- (i) the aggregate of the amounts referred to in Sections 2.2(d) and (g) of this Part 1;
- (j) sufficient information to evidence whether:
 - (i) either of the Noncompliance Default Events specified in paragraph a.i or a.ii of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement; and/or
 - (ii) either of the Increased Oversight Thresholds specified in paragraph a.i or a.ii of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement,

has occurred, which information shall include the cumulative number of Noncompliance Points accrued during each of the 12 month period and the 36 month period ending at the end of the CP Deduction Month; and

- (k) sufficient information to evidence whether either of the Closure Default Events specified in paragraph a.i or a.ii of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement has occurred, which information shall include the cumulative amount of Construction Closure Deductions accrued during the four month period and the 12 month period ending at the end of the CP Deduction Month.

Following submission of any Monthly Deductions Report pursuant to this Part 1 or Section 4(b)(ii) of Schedule 5 (*Payment Milestones*), Developer shall provide such other information as may reasonably be requested by the Enterprises in respect of the calculation of any amounts referenced in such report.

- 2.3 The Enterprises shall notify Developer in writing (with reasons and any supporting documentation available to the Enterprises) within ten Working Days of receipt of any such Monthly Deductions Report if there is any part of such report which the Enterprises dispute, provided that a failure by the Enterprises to notify Developer of a Dispute within such period shall not constitute a waiver of their rights to do so at a later date.
- 2.4 If the Parties agree or it is determined pursuant to the Dispute Resolution Procedures that any Monthly Deductions Report was incorrect or inaccurate, then Developer shall be required (if requested by the Enterprises) to submit a corrected report and shall, in any event, reflect such correction, as appropriate, in the next Monthly Deductions Report to be submitted to the Enterprises pursuant to Section 2.1 of this Part 1 after the Parties reach agreement or the Dispute is resolved, provided that, in the event that any such inaccuracy is identified or Dispute resolved after payment of the Substantial Completion Payment, Developer shall be required to reflect the necessary adjustment, as appropriate, in the next Payment Request submitted to the Enterprises after identification of such inaccuracy or resolution of such Dispute.

Part 2: Operating Period

1. Performance Payments

The Enterprises shall pay Performance Payments to Developer during the Operating Period, as calculated in accordance with Part 2 of Schedule 6 (*Performance Mechanism*).

2. Payment Requests

2.1 No later than the tenth Working Day in each Payment Month (other than the First Payment Month if the Substantial Completion Date occurs after the tenth Working Day of such month), Developer shall submit a payment request for the Performance Payment payable in respect of the Payment Month in which such payment request is submitted, together with a Monthly Deductions Report in accordance with Section 3 of this Part 2.

2.2 If the Substantial Completion Date occurs after the tenth Working Day of the First Payment Month, Developer shall submit a separate Payment Request for the Performance Payment payable in respect of the First Payment Month at the same time as, pursuant to Section 2.1 of this Part 2, it submits a Payment Request for the Performance Payment payable in respect of the second Payment Month.

2.3 Each Payment Request shall set out:

- (a) the amount of the Performance Payment payable in respect of the relevant Payment Month;
- (b) the calculation of the amount of the Operations Goal Deduction in respect of the relevant Payment Month as calculated in accordance with Section 1(d) of Part 2 of Schedule 6 (*Performance Mechanism*);
- (c) the Agreed or Determined amount of any Monthly Noncompliance Deductions and/or Operating Period Closure Deductions that accrued in any month prior to the relevant Payment Month which have not been reflected in any prior Payment Request (including as a result of the accrual or amount thereof having been in dispute);
- (d) any amount required to be reflected in such Payment Request pursuant to the proviso to Section 2.4 of Part 1 of this Schedule 4;
- (e) if such Payment Request is in respect of the First Payment Month and the Substantial Completion Deduction Amount exceeded the Substantial Completion Milestone Payment, an amount equal to such excess, provided that each Payment Request submitted after such Payment Request shall include any portion of such amount that has not been taken into account in a prior Payment Request;
- (f) any other amounts due under this Agreement from Developer to the Enterprises or from the Enterprises to Developer and not previously included in a Payment Request or Milestone Payment Request (including, if applicable, any amount payable by the Enterprises to the Developer pursuant to Section 1.3.1.c of Schedule 15 (*Federal and State Requirements*));
- (g) any adjustments to reflect over-payments and/or under-payments (each such adjustment stated separately) of any amount due prior to the relevant Payment Month (for which adjustment has not already been made);
- (h) any interest payable by the Enterprises or Developer in respect of any amount that previously became payable to, respectively, Developer or the Enterprises and not previously included in a Payment Request or Milestone Payment Request; and
- (i) the net amount owing to Developer by the Enterprises or by Developer to the Enterprises in respect of the relevant Payment Month.

- 2.4 Each Payment Request shall be accompanied by:
- (a) work papers clearly setting out the derivation of all amounts set out in the Payment Request to the extent not detailed in the Monthly Deductions Report submitted at the same time as such Payment Request; and
 - (b) lien waivers duly executed by:
 - (i) Developer;
 - (ii) all Subcontractors that performed Work during the relevant Payment Month; and
 - (iii) if the Enterprises in their discretion elected to pay the amount of the Payment Request submitted in respect of any previous Payment Month notwithstanding the failure by Developer to have delivered a lien waiver that complies with the requirements of this Section 2.4(b) from any Subcontractor, any such Subcontractor,
- all of which waivers shall be in the form required by the applicable provisions of Section 6 of Part 3 of this Schedule 4.
- 2.5 The Enterprises shall notify Developer in writing (with reasons and any supporting documentation available to the Enterprises) within ten Working Days of receipt of any Monthly Deductions Report or Payment Request if there is any part of such report or Payment Request which the Enterprises dispute, provided that a failure by the Enterprises to notify Developer of a Dispute within such period shall not constitute a waiver of their rights to do so at a later date.
- 2.6 The Enterprises shall pay Developer within 45 Calendar Days of the receipt of a Payment Request which is accurate and complete in accordance with the terms of this Schedule 4.
- 2.7 If:
- (a) the Parties agree or it is determined pursuant to the Dispute Resolution Procedures that any Monthly Deductions Report and/or Payment Request was incorrect or inaccurate, then Developer shall be required to submit a corrected report and/or Payment Request, as the case may be; or
 - (b) the inaccuracy was identified or the Dispute resolved after the payment of the amount set out in the Payment Request affected by such inaccuracy, the necessary adjustment(s) shall be reflected, as appropriate, in the next Monthly Deductions Report and/or Payment Request to be submitted to the Enterprises after the Parties reach agreement or the Dispute is resolved.
- 2.8 In no event shall the Enterprises be obligated to pay interest on any late payments arising due to any such inaccuracies.
- 2.9 The Enterprises may delay payment of the final Performance Payment to be made under this Agreement prior to the Expiry Date for an additional 30 Calendar Days in order to verify the Monthly Deductions Report and Payment Request applicable to such final payment and to allow time for the receipt and verification by the Procuring Authorities of the report submitted pursuant to Section 3.1 of this Part 2 in respect of the Final Payment Month. The Enterprises shall also be entitled to deduct from the Performance Payment otherwise payable in respect of the Final Payment Month the amount of the Monthly Noncompliance Deduction and Operating Period Closure Deductions that accrue in the Final Payment Month.
- 3. Monthly Deductions Reports**
- 3.1 Each Payment Request shall be accompanied by a report that complies with the requirements of Section 3.2 of this Part 2. In addition, at a date in the Final Payment Month to be agreed between the Parties, Developer shall submit a report that complies with such requirements, which report shall provide the required information in respect of the Final Payment Month (such that, for the purposes of such report, references to the OP Deduction Month in Section 3.2 of this Part 2 shall be deemed to be references to the Final Payment Month).

- 3.2 Each Monthly Deductions Report required to be submitted to the Enterprises pursuant to Section 3.1 of this Part 2 shall be in a form agreed by the Parties (acting reasonably) and shall contain the following information in relation to (unless expressly provided otherwise in this Section 3.2) the month that immediately precedes the month in which such Monthly Deductions Report is required to be submitted (in the case of each such Monthly Deductions Report, such preceding month, the “OP Deduction Month”):
- (a) details of:
 - (i) each Noncompliance Event (including the nature of such event, its Noncompliance Start Time and, if such time has occurred at the date of such report, its Noncompliance Rectification Time) that accrued Noncompliance Points in the OP Deduction Month in accordance with Table 6A.2 and Part 4 of Schedule 6 (*Performance Mechanism*); and
 - (ii) the number of such Noncompliance Points that accrued in respect of each such Noncompliance Event (including details of how such number was calculated),
provided that, for certainty, in relation to any such Noncompliance Event that occurred in (A) a month prior to the OP Deduction Month but which continued to subsist during the OP Deduction Month or (B) the OP Deduction Month but which continued to subsist after the end of the OP Deduction Month, the number of Noncompliance Points reported pursuant to this Section 3.2(a) shall be solely the number that accrued in the OP Deduction Month in accordance with Section 3 of Part 4 of Schedule 6 (*Performance Mechanism*);
 - (b) the aggregate number of Noncompliance Points that accrued in the OP Deduction Month in respect of all Noncompliance Events in accordance with Table 6A.2 and Part 4 of Schedule 6 (*Performance Mechanism*);
 - (c) the calculation of the Monthly Noncompliance Deduction for the OP Deduction Month;
 - (d) the cumulative total of Monthly Noncompliance Deductions for all months up to and including the OP Deduction Month;
 - (e) details of:
 - (i) each Non-Permitted Operating Period Closure (including the cause thereof, its start time and, if such time has occurred at the date of such report, its end time) that resulted in the accrual of one or more Operating Period Closure Deductions in the OP Deduction Month in accordance with Section 3 of Part 3 of Schedule 6 (*Performance Mechanism*) and Part 5 of Schedule 6 (*Performance Mechanism*); and
 - (ii) the amount of such Operating Period Closure Deductions that accrued in respect of each such Operating Period Closure Event in the OP Deduction Month (including details of how such amount was calculated),
provided that, for certainty, in relation to any Non-Permitted Operating Period Closure that commenced (A) in a month prior to the OP Deduction Month but which continued to subsist during the OP Deduction Month or (B) in the OP Deduction Month but which continued to subsist after the end of the OP Deduction Month, the amount of Operating Period Closure Deductions reported pursuant to this Section 3.2(e) shall be solely the amount that accrued in the OP Deduction Month in accordance with Section 1.2 of Part 5 of Schedule 6 (*Performance Mechanism*);
 - (f) the calculation of the Monthly Operating Period Closure Deduction for the OP Deduction Month;
 - (g) the cumulative total of Monthly Operating Period Closure Deductions for all months up to and including the OP Deduction Month;

- (h) the calculation of the Monthly Performance Deduction for the OP Deduction Month, being the aggregate of the amounts referred to in Sections 3.2(c) and (f) of this Part 2;
- (i) the cumulative total of Monthly Performance Deductions for all months up to and including the OP Deduction Month, being the aggregate of the amounts referred to in Sections 3.2(d) and (g) of this Part 2;
- (j) sufficient information to evidence whether:
 - (i) either of the Noncompliance Default Events specified in paragraph b.i or b.ii of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement; and/or
 - (ii) either of the Increased Oversight Thresholds specified in paragraph b.i or b.ii of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement,has occurred, which information shall include the cumulative number of Noncompliance Points accrued during each of the 12 month period and the 36 month period ending at the end of the OP Deduction Month; and
- (k) sufficient information to evidence whether any of the Closure Default Events specified in paragraph b.i, b.ii or b.iii of the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement has occurred, which information shall include the cumulative amount of Operating Period Closure Deductions accrued during the one month period, the four month period and the 12 month period ending at the end of the OP Deduction Month.

Following submission of any Monthly Deductions Report pursuant to this Part 2, Developer shall provide such other information as may reasonably be requested by the Enterprises in respect of the calculation of any amounts referenced in such report.

Part 3: General

1. **Payments by the Department**

Developer agrees that, to the extent that CDOT makes payment to Developer of any amount payable under this Agreement, such payment shall, to the extent of the amount paid by CDOT, be deemed to have discharged the obligation of the Enterprises to make the relevant payment under this Agreement.

2. **Due Date**

Unless expressly provided otherwise, the due date for all payments under this Agreement shall be the date which is 45 Calendar Days (in the case of payments to be made by the Enterprises) and 30 Calendar Days (in the case of payments to be made by Developer) after receipt of written request therefor by the Party from which payment is claimed (together with such supporting documentation as is required under this Agreement or reasonably requested by such Party).

3. **Default Interest**

In the event that any of the Parties fails to pay any amount under this Agreement on the due date therefor, or any of the Parties makes an over-payment of any amount, the Parties have agreed that interest:

- (a) calculated at the Default Interest Rate and on the basis of a 360 day year for the actual days elapsed, shall be added to any late payment from and excluding the due date to and including the date of payment; or
- (b) in the amount earned in respect of any over-payment by the recipient of such over-payment, shall be credited to the Party that made the over-payment from and excluding the date of over-payment to and including the date on which the Party that made the over-payment receives credit therefor.

4. **Disputed Amounts**

- 4.1 Notwithstanding any other provision of this Agreement, the Enterprises shall have the right to dispute any amount specified in a Milestone Payment Request, Payment Request or Monthly Deductions Report, in which event the Enterprises shall pay the amount of the Milestone Payment Request or Payment Request in question that is not in dispute and will be entitled to withhold the balance pending resolution of the Dispute.
- 4.2 Developer shall have the right to dispute any determination by the Enterprises that a Milestone Payment Request, Payment Request or Monthly Deductions Report is incomplete and/or incorrect in a material respect.
- 4.3 Any amount determined to be due pursuant to the Dispute Resolution Procedures shall be paid within 45 Calendar Days (in the case of payments to be made by the Enterprises) and 30 Calendar Days (in the case of payments to be made by Developer) following resolution of the Dispute, together with interest thereon in accordance with Section 3 of this Part 3, provided that in no event shall the Enterprises be obligated to pay interest on any late payments arising due to any inaccuracy in a Milestone Payment Request, Payment Request or Monthly Deductions Report.

5. **Set-off**

Notwithstanding any other provision of this Agreement:

- (a) the Enterprises may set-off against any amount owing to Developer under this Agreement any amount which is Agreed or Determined to be due from Developer under this Agreement, including:
 - (i) any funds that must be withheld pursuant to the requirements of C.R.S. § 38-26-107(2) and the amount of all loss, damage, cost or expense (including reasonable attorneys' fees (including the fees of the State's Attorney General's Office)), arising out of any claim, lien or action by Developer or any

Subcontractor against the Enterprises, CDOT or the Project with respect to the claims, rights and liens waived and released pursuant to any lien waiver executed pursuant to the Sections of this Schedule 4 and Schedule 5 (*Milestone Payments*) referred to in Section 6 of this Part 3:

- (ii) any amount that the Enterprises are entitled to deduct from the Performance Payments pursuant to Section 4.2(c) of Schedule 12 (*Handback Requirements*); and
 - (iii) any amounts permitted to be withheld in accordance with Section 53.7 of the Project Agreement.
- (b) Developer may set-off against any amount owing to the Enterprises under this Agreement any amount which is Agreed or Determined to be due from the Enterprises under this Agreement.

6. Lien Waivers

- (a) Any lien waiver required to be executed by Developer pursuant to Section 2.4(b)(i) of Part 2 of this Schedule 4 or Section 4(c)(i) of Schedule 5 (*Milestone Payments*) shall be:
- (i) with respect to any payment prior to the final payment referred to in Section 6(a)(ii) of this Part 3, substantially in the form set out in Appendix A to this Schedule 4; and
 - (ii) with respect to the final Performance Payment to be paid under this Agreement, substantially in the form set out in Appendix B to this Schedule 4.
- (b) Any lien waiver required to be executed by a Subcontractor pursuant to Section 2.4(b)(ii) or 2.4(b)(iii) of Part 2 of this Schedule 4 or Section 4(c)(ii) or 4(c)(iii) of Schedule 5 (*Milestone Payments*) shall be:
- (i) if, at the time of execution of such lien waiver, the Subcontractor has not yet become entitled to receive the final payment under its Subcontract, substantially in the form set out in Appendix C to this Schedule 4; and
 - (ii) if, at the time of execution of such lien waiver, the Subcontractor is entitled to receive the final payment under its Subcontract, substantially in the form set out in Appendix D to this Schedule 4.

Appendix A
Form of Developer Partial Lien Waiver
DEVELOPER PARTIAL WAIVER OF LIENS

This partial lien waiver is issued pursuant to the requirements of the Project Agreement for the Central 70 Project dated as of November 21, 2017 (the "Project Agreement"), by and among: Colorado High Performance Transportation Enterprise ("HPTE"), a government-owned business within, and a division of, the Colorado Department of Transportation ("CDOT"); Colorado Bridge Enterprise, a government-owned business within CDOT (together with HPTE and CDOT, the "Owners") and Kiewit Meridiam Partners LLC, a limited liability company formed under the laws of the State of Delaware (the "Developer") for the design, construction, financing, operation and maintenance of a portion of the I-70 East corridor in Greater Denver (the "Project").

PAYMENT AMOUNT: *[\$amount] [Developer to specify amount of the relevant Milestone Payment Request or Payment Request]*

DATE: *[month][day], [year] ("Waiver Date")*

PAYMENT DESCRIPTION AND NUMBER: *[details to be included by Developer]*

1. The undersigned is a contractor who has furnished labor, laborers, material, rental machinery, tools and/or equipment, among other services and things, in connection with the Project in its capacity as Developer pursuant to the Project Agreement (the "Work Performed").
2. The undersigned has been paid in full for all amounts that have become due and owing under the Project Agreement to date for Work Performed through the Waiver Date ("Relevant Amounts"),

subject to collection of payment of the "Payment Amount" as referred to above and any other payment the due date for which has not yet occurred.

3. The undersigned waives and releases all claims and rights of any kind against the Owners or the Project which the undersigned can or may have, in respect of the Relevant Amounts, to file any liens against the Owners or the Project for Work Performed through the Waiver Date (including, without limitation, any mechanic's or materialmen's liens, and any liens pursuant to C.R.S. §§ 38-26-101 through and including § 38-26-110).
4. The undersigned represents and warrants that all persons or entities, if any, who have, directly or indirectly, furnished labor, laborers, material, rental machinery, tools and/or equipment to the undersigned in connection with the Work Performed have been paid in full for all amounts they are owed, subject to any payment that is dependent on collection by Developer of the payments referred to in paragraph 2 above.

**Schedule 5
 Milestone Payments**

1. The table in this Section 1 sets out the amount (each a “Milestone Payment”) payable by the Enterprises in respect of the achievement of each Payment Milestone and Substantial Completion, subject to the provisions of this Schedule 5. For certainty, the descriptions of the Payment Milestones in the table below are for reference only; the full definitions of each Payment Milestone are set out in Part A of Annex A (Definitions and Abbreviations) to the Project Agreement and the conditions to achievement of each Payment Milestone and Substantial Completion are set out in, respectively, Parts 4 and 5 of Schedule 3 (Commencement and Completion Mechanics).

Milestone Payment Table

Event	Milestone Payment
Completion of Milestone 1 (Sand Creek Bridge to Chambers Road)	\$50,000,000
Completion of Milestone 2 (Dahlia Street to Sand Creek Bridge)	\$95,000,000
Completion of Milestone 3 (WB I-70 Brighton Boulevard to Dahlia Street)	\$52,000,000
Completion of Milestone 4 (EB I-70 Brighton Boulevard to Dahlia Street)	\$52,000,000
Substantial Completion	\$70,000,000
TOTAL	\$319,000,000

2. Each Milestone Payment shall be payable no later than the date which is 45 Calendar Days after receipt by the Enterprises of a payment request (a “Milestone Payment Request”) from Developer for such Milestone Payment that complies with the requirements of Section 4 of this Schedule 5 (such date, the “Milestone Payment Request Due Date” in respect of such Milestone Payment Request), provided that:
- (a) Developer shall only be entitled to deliver a Milestone Payment Request for a Milestone Payment if, on the Milestone Payment Request Due Date in respect of such Milestone Payment Request (the “Relevant Milestone Payment Request Due Date”), the aggregate amount of:
- (i) such Milestone Payment Request;
 - (ii) any Milestone Payment Request(s) delivered simultaneously with such Milestone Payment Request; and
 - (iii) all previous Milestone Payment Requests delivered pursuant to this Section 2,
- will be less than or equal to the amount specified in the “Cumulative Available Funds” column in the table in this Section 2(a) in respect of the period during which the Relevant Milestone Payment Request Due Date occurs;

Cumulative Available Funds Table

Period	Cumulative Available Funds
July 1, 2017 – June 30, 2018	\$50,000,000
July 1, 2018 – June 30, 2019	\$145,000,000
July 1, 2019 – June 30, 2020	\$197,000,000
July 1, 2020 and after	\$319,000,000

- (b) without prejudice to the requirements of Section 4 of this Schedule 5 (including the requirement that any Milestone Payment Request must be accompanied by the relevant Milestone Completion Certificate or the Substantial Completion Certificate, as the case may be), in order to comply with Section 2(a) of this Schedule 5, Developer shall be entitled to deliver multiple Milestone Payment Requests for payment of less than the full amount of any single Milestone Payment; and
 - (c) each Milestone Payment Request shall be in respect of a single Milestone Payment (or a portion thereof).
3. Subject to set-off in accordance with Section 5 of Part 3 of Schedule 4 (*Payments*):
- (a) each Milestone Payment (other than the Substantial Completion Milestone Payment), or portion thereof, shall be paid without deduction; and
 - (b) the Substantial Completion Milestone Payment shall have deducted from it the Substantial Completion Deduction Amount (the net amount following such deduction, the “Substantial Completion Payment”).
4. A Milestone Payment Request delivered:
- (a) for a Milestone Payment in respect of the completion of a Payment Milestone shall be accompanied by a copy of the Milestone Completion Certificate in respect of the relevant Payment Milestone;
 - (b) for the Substantial Completion Payment shall be accompanied by:
 - (i) a copy of the Substantial Completion Certificate; and
 - (ii) a report in the form of a Monthly Deductions Report required to be submitted to the Enterprises pursuant to Section 2.1 of Part 1 of Schedule 4 (*Payments*), which shall contain:
 - (A) the information specified in Section 2.2 of Part 1 of Schedule 4 (*Payments*) in relation to the period commencing on the day after the end of the CP Deduction Month that was the subject of the most recent Monthly Deductions Report submitted by Developer pursuant to Section 2.1 of Part 1 of Schedule 4 (*Payments*) up to and including the Substantial Completion Date (where, for the purposes of the report submitted pursuant to this Section 4(b)(ii), (A) references to the CP Deduction Month in Section 2.2 of Part 2 of Schedule 4 (*Payments*) shall be deemed to be references to the period referred to in this Section 4(b)(ii) and (B) Sections 2.3 and 2.4 of Part 1 of Schedule 4 (*Payments*) shall apply equally to the report submitted pursuant to this Section 4(b)(ii)); and
 - (B) details of the calculation of the Construction Goal Deduction in accordance with Section 1(c) of Part 1 of Schedule 6 (*Performance Mechanism*); and
 - (c) for any Milestone Payment shall be accompanied by lien waivers duly executed by:

- (i) Developer;
- (ii) all Subcontractors that performed Work since the date of the previous Milestone Payment Request or, in the case of the first Milestone Payment Request, since the Agreement Date (for certainty, including any Subcontractor that performed any Work since the applicable date and not only Subcontractors that performed Work in relation to the Payment Milestone that is the subject-matter of the relevant Milestone Payment Request); and
- (iii) if the Enterprises in their discretion elected to pay the amount of any previous Milestone Payment Request notwithstanding the failure by Developer to have delivered a lien waiver that complies with the requirements of this Section 4(c) from any Subcontractor, any such Subcontractor,

all of which waivers shall be in the form required by the applicable provisions of Section 6 of Part 3 of Schedule 4 (*Payments*).

5. No later than ten Calendar Days before the Substantial Completion Date, the Enterprises shall publish notice of the anticipated Substantial Completion Date consistent with the requirements of C.R.S. § 38-26-107 such that any applicable Subcontractor who has not yet been paid may file with the Enterprises a verified statement of the amount due and unpaid on account of such Subcontractor's claim.

Schedule 6
Performance Mechanism
Part 1: Construction Period

1. Substantial Completion Deduction Amount

The Substantial Completion Deduction Amount (“SCDA”) shall be calculated in accordance with the following formula:

$$SCDA = MND_{sc} + MCCD_{sc} + CGD$$

Where:

- (a) MND_{sc} = an amount equal to the aggregate of all Monthly Noncompliance Deductions calculated in accordance with Section 2 of this Part 1 that accrued during:
- (i) each month (m) that commences during the period from and excluding the Financial Close Date (or, if earlier, the date of issuance of NTP1) to and including the Substantial Completion Date; and
 - (ii) the month (m) in which the Financial Close Date occurs (or, if earlier, in which the date of issuance of NTP1 occurs),
- (each month (m) falling within (i) or (ii), a “CP Deduction Month”);
- (b) $MCCD_{sc}$ = an amount equal to the aggregate of all Monthly Construction Closure Deductions calculated in accordance with Section 3 of this Part 1 that accrued during each CP Deduction Month; and
- (c) CGD = an amount equal to the sum of:
- (i) any “Construction Work Small Business Goal Deduction” calculated in accordance with Section 1.3.1.a. of Schedule 15 (*Federal and State Requirements*); plus
 - (ii) any “Construction Period OJT Goal Deduction” calculated in accordance with Section 1.3.1.b. of Schedule 15 (*Federal and State Requirements*).

2. Monthly Noncompliance Deduction prior to Substantial Completion

The Monthly Noncompliance Deduction (“MND”) for any CP Deduction Month (m) shall be calculated in accordance with the following formula:

$$MND_m = NCPV \times NCP_m$$

Where:

- (a) $NCPV$ = \$5,000, being the unit value of each Noncompliance Point; and
- (b) NCP_m = the number of Noncompliance Points that accrued during CP Deduction Month (m) in accordance with Table 6A.1 and Part 4 of this Schedule 6.

3. Monthly Construction Closure Deduction

3.1 The Monthly Construction Closure Deduction (“MCCD”) for any CP Deduction Month (m) shall be calculated in accordance with the following formula:

$$MCCD_m = \sum_{p=1}^n CCD_p$$

Where:

- (a) p = a Closure Deduction Period that commenced during CP Deduction Month (m);
- (b) n = the total number of Closure Deduction Periods that commenced during CP Deduction Month (m); and
- (c) CCD_p = the Construction Closure Deduction in respect of each Closure Deduction Period (p).

3.2 For purposes of calculating the Monthly Construction Closure Deduction for any CP Deduction Month (m) pursuant to Section 3.1 of this Part 1:

- (a) each Non-Permitted Construction Closure shall be deemed to:
 - (i) start when the relevant Closure actually starts (or is deemed to start in accordance with the proviso to the definition of Non-Permitted Construction Closure in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement); and
 - (ii) end when the relevant Closure actually ends (or is deemed to end in accordance with such proviso);
- (b) a Construction Closure Deduction shall accrue in the CP Deduction Month in which each individual full or partial Closure Deduction Period commences;
- (c) a Closure that affects more than one travel lane shall, to the extent that such Closure otherwise constitutes a Non-Permitted Construction Closure within the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement, be treated as a separate Non-Permitted Construction Closure of each affected travel lane;
- (d) the proviso to Section 2.11.14.c of Schedule 10 (*Design and Construction Requirements*) shall apply in determining the number of separate Non-Permitted Construction Closures deemed to occur pursuant to such Section;
- (e) depending upon the duration of any Non-Permitted Construction Closure, such Non-Permitted Construction Closure may result in one or more Construction Closure Deductions, which shall accrue in respect of each full or partial Closure Deduction Period that commences during the subsistence of such Non-Permitted Construction Closure; and
- (f) each Non-Permitted Construction Closure shall result in the accrual of Construction Closure Deductions in addition to any Construction Closure Deductions that accrue in respect of any other Non-Permitted Construction Closure (including where both such Closures are simultaneously caused by the same circumstances).

Part 2: Performance Payments

1. Monthly Performance Payments

The Performance Payment (“PP”) payable in respect of any Payment Month (m) shall be calculated in accordance with the following formula:

$$PP_m = \text{MaxPP}_m - \text{MPD}_{m-1} - \text{OGD}_m$$

Where:

- (a) $PP_m = 0$, if $\text{MPD}_{m-1} \geq \text{MaxPP}_m$;
- (b) $\text{MaxPP}_m =$ the Maximum Performance Payment in respect of Payment Month (m), which shall be calculated in accordance with the following formula:

$$\text{MaxPP}_m = \left(\frac{d_m}{d_y} \right) \times \text{MaxPP}_y$$

Where:

- (i) $d_m =$ the number of Calendar Days in Payment Month (m) from and including the first day of Payment Month (m) (or, in the case of the First Payment Month, from and excluding the Substantial Completion Date) to and including the final day of Payment Month (m) (or to and excluding the Termination Date, if earlier);
- (ii) $d_y =$ the number of Calendar Days in Contract Year (y); and
- (iii) $\text{MaxPP}_y =$ the amount of the Maximum Performance Payment calculated in accordance with Section 2 of this Part 2 in respect of Contract Year (y);
- (c) $\text{MPD}_{m-1} =$ the Monthly Performance Deduction for month (m-1) (for clarity, month (m-1) in respect of Payment Month (m) is defined as the OP Deduction Month in respect of Payment Month (m)) calculated in accordance with Section 1 of Part 3 of this Schedule 6, provided that:
 - (i) for certainty, $\text{MPD}_{m-1} = 0$ where Payment Month (m) is the First Payment Month; and
 - (ii) where Payment Month (m) is the Final Payment Month, MPD_{m-1} shall equal the aggregate of the Monthly Performance Deduction for each of (A) the month immediately preceding the Final Payment Month and (B) the Final Payment Month (provided that, for purposes of calculating the Monthly Performance Deduction for the Final Payment Month, references in Part 3 of this Schedule 6 to OP Deduction Month (m) shall be deemed to be references to the Final Payment Month); and
- (d) $\text{OGD}_m =$ the “Operations Goal Deduction” in respect of Payment Month (m) which shall be calculated as follows:

$$\text{OGD}_m = \text{ROMESBGD}_m + \text{RWDBEGD}_m + \text{RWOJTG}_m$$

Where:

- (i) $\text{ROMESBGD}_m =$
 - (A) in respect of each Payment Month (m) in which the first Payment Request is submitted after the amount of the five year Routine O&M Work ESB Goal deduction has been Agreed or Determined in respect of the previous five Contract Year period in accordance with Section 1.3.2.a of Schedule 15 (*Federal and State Requirements*), such amount; and

- (B) subject to the proviso to this Section 1(d), in respect of each other Payment Month (m), nil;
- (ii) $RWDBEGD_m =$
 - (A) in respect of each Payment Month (m) in which the first Payment Request is submitted after the amount of the five year Renewal Work DBE Goal deduction has been Agreed or Determined in respect of the previous five Contract Year period in accordance with Section 1.3.2.b of Schedule 15 (Federal and State Requirements), such amount; and
 - (B) subject to the proviso to this Section 1(d), in respect of each other Payment Month (m), nil; and
- (iii) $RWOJTGD_m =$
 - (A) in respect of each Payment Month (m) in which the first Payment Request is submitted after the amount of the annual Renewal Work OJT Goal deduction has been Agreed or Determined in respect of the previous Contract Year in accordance with Section 1.3.2.c of Schedule 15 (Federal and State Requirements), such amount; and
 - (B) subject to the proviso to this Section 1(d), in respect of each other Payment Month (m), nil.

provided that, if OGD_m in any Payment Month (m) exceeds the amount of the Performance Payment otherwise payable in respect of such Payment Month (for certainty, determined as $MaxPP_m - MPD_{m-1}$, taking into account Section 1(a) of this Part 2), such excess shall be included by Developer in the next Payment Request submitted by it until the full amount of the deductions Agreed or Determined in accordance with Sections 1.3.2.a, b and c of Schedule 15 (Federal and State Requirements) have been deducted from Performance Payments.

2. **Maximum Performance Payment in each Payment Year**

The Maximum Performance Payment (“MaxPP”) in respect of any Contract Year (y) shall be calculated in accordance with the following formula:

$$\text{MaxPP}_y = (\text{Base}_{\text{CPP}} \times (1.02)^n) + (\text{Base}_{\text{OMRP}} \times \left(\frac{\text{CPI}_y}{\text{CPI}_{2017}}\right))$$

Where:

- (a) Base_{CPP} = the Base Capital Performance Payment in July 1, 2017 Dollars set out in the table in Section 2(f) of this Part 2;
- (b) $\text{Base}_{\text{OMRP}}$ = the Base OMR Payment in July 1, 2017 Dollars set out in the table in Section 2(f) of this Part 2;
- (c) CPI_y = CPI as of July 1 of Contract Year (y);
- (d) CPI_{2017} = CPI as of July 1, 2017;
- (e) n = the number of Contract Years from and including the Contract Year commencing on July 1, 2017 to and excluding Contract Year (y); and
- (f)

Base Capital Performance Payment (in nominal dollars as of July 1, 2017)	\$28,460,169, as such amount may be amended pursuant to the Project Agreement Amendment in accordance with paragraph <u>a.</u> of the definition thereof in <u>Part A</u> of <u>Annex A (Definitions and Abbreviations)</u> of the Project Agreement.
Base OMR Payment (in nominal dollars as of July 1, 2017)	\$7,115,042

Part 3: Performance Payment Deductions

1. Payment Deductions after Substantial Completion

The Monthly Performance Deduction (“MPD”) for any OP Deduction Month (m) shall be calculated in accordance with the following formula:

$$MPD_m = MND_m + MOPCD_m$$

Where:

- (a) MND_m = the Monthly Noncompliance Deduction for OP Deduction Month (m) calculated in accordance with Section 2 of this Part 3; and
- (b) $MOPCD_m$ = the Monthly Operating Period Closure Deduction for OP Deduction Month (m) calculated in accordance with Section 3 of this Part 3,

provided that the Monthly Performance Deduction for OP Deduction Month (m) shall not exceed the Maximum Performance Payment in respect of Payment Month (m) calculated in accordance with Section 1(b) of Part 2 of this Schedule 6.

2. Monthly Noncompliance Deduction after Substantial Completion

The Monthly Noncompliance Deduction (“MND”) for any OP Deduction Month (m) shall be calculated in accordance with the following formula:

$$MND_m = NCPV \times NCP_m$$

Where:

- (a) $NCPV$ = \$5,000 (indexed), being the unit value for each Noncompliance Point; and
- (b) NCP_m = the number of Noncompliance Points that accrued during OP Deduction Month (m) in accordance with Table 6A.2 (or, in accordance with Section 5 of Part 4 of this Schedule 6, Table 6A.1) and Part 4 of this Schedule 6.

3. Monthly Operating Period Closure Deduction

3.1 The Monthly Operating Period Closure Deduction (“MOPCD”) for any OP Deduction Month (m) shall be calculated in accordance with the following formula:

$$MOPCD_m = \sum_{p=1}^n OPCD_p$$

Where:

- (a) p = a full or partial Closure Deduction Period that commenced during OP Deduction Month (m);
- (b) n = the total number of full or partial Closure Deduction Periods that commenced during OP Deduction Month (m); and
- (c) $OPCD_p$ = the Operating Period Closure Deduction in respect of each full or partial Closure Deduction Period (p).

3.2 The Operating Period Closure Deductions Table is set out below.

Type of Closure	Number of Lanes subject to the Closure	Operating Period Closure Deduction (each such amount to be indexed) in respect of each full or partial Closure Deduction Period that commences other than on a Weekend or a Holiday
Closure of a General Purpose Lane in one direction in any O&M Segment	One Lane Closed	\$10,000
	Two Lanes Closed	\$20,000
	Three Lanes Closed	\$30,000
Closure of a Tolloed Express Lane in one direction in any O&M Segment	One Lane Closed	\$25,000
Closure of an I-70 Mainline ramp in any O&M Segment	One Lane Closed	\$7,500
	Two Lanes Closed	\$15,000
Closure of a travel lane on a CDOT Roadway or a Local Agency Roadway or a cross street in one direction, or Closure of a CDOT Roadway or Local Agency Roadway ramp, in any O&M Segment	One Lane Closed	\$5,000
	Two Lanes Closed	\$10,000
	Three Lanes Closed	\$15,000

3.3 At their sole discretion, the Enterprises shall be entitled, no more frequently than once every Contract Year during the Operating Period, to amend (by giving at least 30 Calendar Days' advance notice to Developer of the effective date of such amendment) the Operating Period Closure Deductions Table by either:

- (a) amending the amount of any Operating Period Closure Deduction set out in the Operating Period Closure Deductions Table; and/or
- (b) introducing different amounts of Operating Period Closure Deduction in respect of an individual type of Closure specified in the O&M Deductions Table for different O&M Segments,

provided that, following any such amendment:

- (i) no Operating Period Closure Deduction shall exceed the highest Operating Period Closure Deduction set out in the Operating Period Closure Deductions Table prior to such amendment; and
- (ii) the aggregate amount of all Operating Period Closure Deductions set out in the final column of the Operating Period Closure Deductions Table shall not exceed the aggregate thereof prior to such amendment.

3.4 Without prejudice to the right of the Enterprises in their sole discretion to make any amendments to the Operating Period Closure Deductions Table in accordance with Section 3.3 of this Part 3, they shall consult with Developer prior to giving a notice to Developer pursuant to such Section.

Part 4: Noncompliance Points

Each Noncompliance Event shall accrue Noncompliance Points as follows.

1. Subject to Section 4 of this Part 4, for any Noncompliance Event that has a Cure Period, such Noncompliance Event shall accrue the number of Noncompliance Points set out against such Noncompliance Event in Table 6A.1 or Table 6A.2, as applicable, for each full or partial Noncompliance Cure Period that commences at any time from and including:
 - (a) if such Noncompliance Event does not have a Grace Period, the Noncompliance Start Time; and
 - (b) if such Noncompliance Event has a Grace Period, the expiry of the Grace Period, in each case, until the Noncompliance Rectification Time.
2. For any Noncompliance Event that has no Cure Period, such Noncompliance Event shall accrue the number of Noncompliance Points set out against such Noncompliance Event in Table 6A.1 or Table 6A.2, as applicable, but shall not accrue any further Noncompliance Points during the period that the failure giving rise to the original Noncompliance Event continues to subsist. Notwithstanding the foregoing, any subsequent recurrence of the same Noncompliance Event shall be treated as a separate Noncompliance Event and shall accrue Noncompliance Points in accordance with this Part 4.
3. Noncompliance Points in respect of a Noncompliance Event:
 - (a) that has a Cure Period shall accrue in the month in which each individual Noncompliance Cure Period commences; and
 - (b) that has no Cure Period shall accrue in the month in which the Noncompliance Start Time occurs.
4. Subject to Section 1.2(b)(i) of Part 6 of this Schedule 6, if a Noncompliance Event has a Grace Period and the Noncompliance Rectification Time for such Noncompliance Event occurs prior to the expiry of such Grace Period, such Noncompliance Event shall not accrue any Noncompliance Points.
5. If the Noncompliance Start Time of any Noncompliance Event which has a Cure Period occurs prior to or on the Substantial Completion Date and such Noncompliance Event continues to subsist after the Substantial Completion Date, then:
 - (a) if such Noncompliance Event is set out only in Table 6A.1, such Noncompliance Event shall accrue the number of Noncompliance Points set out against such Noncompliance Event in Table 6A.1 for each full or partial Noncompliance Cure Period (to be determined by reference to the Cure Period of such Noncompliance Event set out in Table 6A.1) that commences prior to, on or after the Substantial Completion Date; and
 - (b) if such Noncompliance Event is set out in both Table 6A.1 and Table 6A.2, such Noncompliance Event shall accrue the number of Noncompliance Points set out against such Noncompliance Event:
 - (i) in Table 6A.1 for each full or partial Noncompliance Cure Period (to be determined by reference to the Cure Period of such Noncompliance Event set out in Table 6A.1) that commences prior to or on the Substantial Completion Date (for certainty, including where such Noncompliance Cure Period ends after the Substantial Completion Date); and
 - (ii) in Table 6A.2 for each full or partial Noncompliance Cure Period (to be determined by reference to the Cure Period of such Noncompliance Event set out in Table 6A.2) that commences after the Substantial Completion Date.
6. Nothing in this Agreement shall prevent the accrual of Noncompliance Points in respect of both the occurrence of a Noncompliance Event and the Noncompliance Event caused by the failure to notify the Enterprises of the same Noncompliance Event in accordance with this Agreement.

Part 5: Operating Period Closures

1. Occurrence of Operating Period Closures

- 1.1 Each Non-Permitted Operating Period Closure shall be deemed to:
- (a) start when the relevant Closure actually starts (or is deemed to start in accordance with the proviso to the definition of Non-Permitted Operating Period Closure in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement); and
 - (b) end when the relevant Closure actually ends (or is deemed to end in accordance with such proviso).
- 1.2 An Operating Period Closure Deduction shall accrue in the month in which each individual full or partial Closure Deduction Period commences.
- 1.3 A continuous Closure that affects more than one O&M Segment shall, to the extent that such Closure otherwise constitutes a Non-Permitted Operating Period Closure within the definition thereof in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement, be treated as a separate Non-Permitted Operating Period Closure in each affected O&M Segment.
- 1.4 The proviso to Section 2.11.14.c of Schedule 10 (*Design and Construction Requirements*) shall apply in determining the number of separate Non-Permitted Operating Period Closures deemed to occur pursuant to Section 2.11.14.d of Schedule 10 (*Design and Construction Requirements*).
- 1.5 Depending upon the duration of any Non-Permitted Operating Period Closure, such Non-Permitted Operating Period Closure may result in one or more Operating Period Closure Deductions, which shall accrue in respect of each full or partial Closure Deduction Period that commences during the subsistence of such Non-Permitted Operating Period Closure.
- 1.6 Subject to Section 2.5 of this Part 5, each Non-Permitted Operating Period Closure (the “First Closure”) shall result in the accrual of Operating Period Closure Deductions in addition to any Operating Period Closure Deductions that accrue in respect of any other Non-Permitted Operating Period Closure (the “Other Closure”) (including where the Other Closure is simultaneously caused by the same circumstances as caused the First Closure), but, for certainty, without double-counting where the amount of the Operating Period Closure Deductions in respect of the Other Closure is determined by reference to the Operating Period Closure Deduction specified in any of the “Two Lanes Closed” or “Three Lanes Closed” rows in the Operating Period Closure Deductions Table and one of the two or three lanes is a lane that is the subject of the First Closure.

2. Operating Period Closure Deduction Modifications

- 2.1 Where a Non-Permitted Operating Period Closure is caused by the Closure of one or more contra-flow lanes, the Operating Period Closure Deduction in respect of each full or partial Closure Deduction Period that commences during the subsistence of such Non-Permitted Operating Period Closure shall be the Operating Period Closure Deduction that would otherwise have accrued multiplied by 110%.
- 2.2 Where a Non-Permitted Operating Period Closure is caused by the Closure of part of a ramp such that the ramp remains available for use by traffic but is partially restricted, the Operating Period Closure Deduction in respect of each full or partial Closure Deduction Period that commences during the subsistence of such Non-Permitted Operating Period Closure shall be the Operating Period Closure Deduction that would otherwise have accrued multiplied by 50%.
- 2.3 Where a Non-Permitted Operating Period Closure is caused by the Closure of a shoulder only, and continued flow of traffic on the adjacent travel lane may be safely permitted, the Operating Period Closure Deduction in respect of each full or partial Closure Deduction Period that commences during the subsistence of such Non-Permitted Operating Period Closure shall be the Operating Period Closure Deduction that would have accrued had the adjacent travel lane been subject to such Closure multiplied by 50%.

- 2.4 Where a Non-Permitted Operating Period Closure is caused by the Closure of a travel lane but the adjacent shoulder is temporarily utilized as a replacement travel lane, the Operating Period Closure Deduction in respect of each full or partial Closure Deduction Period that commences during the subsistence of such Non-Permitted Operating Period Closure shall be the Operating Period Closure Deduction that would otherwise have accrued multiplied by 50%.
- 2.5 Where a Non-Permitted Operating Period Closure is caused by the Closure of a single General Purpose Lane or Tolloed Express Lane in one direction of travel and the adjacent shoulder is consequently closed or inaccessible to traffic, the Closure of the shoulder shall be deemed not to constitute a Non-Permitted Operating Period Closure.
- 2.6 Where a Non-Permitted Operating Period Closure is caused by the Closure of any sidewalk, the Operating Period Closure Deduction in respect of each full or partial Closure Deduction Period that commences during the subsistence of such Non-Permitted Operating Period Closure shall be the Operating Period Closure Deduction that would have accrued had one lane of the adjacent travel lane been subject to such Closure multiplied by 10%, provided that, for certainty:
- (a) the Closure of each sidewalk on either side of the relevant travel lane shall constitute a separate Non-Permitted Operating Period Closure; and
 - (b) each Operating Period Closure Deduction that accrues in respect of the Non-Permitted Operating Period Closure of a sidewalk shall be in addition to any Operating Period Closure Deductions that accrue in respect of a Non-Permitted Operating Period Closure caused by the Closure of the adjacent travel lane.
- 2.7 Where a Non-Permitted Operating Period Closure is caused by the Closure of any driveway, the Operating Period Closure Deduction in respect of each full or partial Closure Deduction Period that commences during the subsistence of such Non-Permitted Operating Period Closure shall be the Operating Period Closure Deduction that would have accrued had one lane of the travel lane to which the driveway connects been subject to such Closure multiplied by 50%, provided that, for certainty, each Operating Period Closure Deduction that accrues in respect of the Non-Permitted Operating Period Closure of a driveway shall be in addition to any Operating Period Closure Deductions that accrue in respect of a Non-Permitted Operating Period Closure caused by the Closure of the travel lane to which such driveway connects.

Part 6: Reporting Requirements

1. Notification

1.1 Notification Initiated by Developer

- (a) Developer shall notify the Enterprises in writing of the occurrence of any Noncompliance Event or the commencement of any Non-Permitted Closure or Excused Closure as soon as reasonably practicable, and in any event within twenty-four (24) hours, after Developer first becomes aware that the Noncompliance Event has occurred or the Non-Permitted Closure or Excused Closure has commenced. Such notice shall:
- (i) in the case of a Noncompliance Event:
 - (A) provide reasonable detail of the circumstances of such Noncompliance Event and its Noncompliance Start Time;
 - (B) identify the number of Noncompliance Points and the Grace Period (if any) and the Cure Period (if any) for such Noncompliance Event, all as specified in Table 6A.1 or Table 6A.2, as applicable; and
 - (C) if such Noncompliance Event has been cured by the time notice is given pursuant to this Section 1.1(a), identify its Noncompliance Rectification Time (if such Noncompliance Event has a Cure Period) or the date and time that such Noncompliance Event was fully cured (if such Noncompliance Event does not have a Cure Period); or
 - (ii) in the case of a Non-Permitted Closure or Excused Closure:
 - (A) provide reasonable details of the circumstances of such Non-Permitted Closure or Excused Closure, its commencement time and (if it has ended by the time notice is given pursuant to this Section 1.1(a)), its end time;
 - (B) in the case of an Excused Closure:
 - (I) explain the basis (using the categories specified in paragraphs a. to f. of the definition of Excused Closure in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement) on which Developer considers that the relevant Closure is an Excused Closure; and
 - (II) confirm that the relevant Closure did not arise as a result of any of the circumstances specified in paragraph g of the definition of Excused Closure in Part A of Annex A (*Definitions and Abbreviations*) to the Project Agreement; and
 - (C) explain the steps being taken by Developer to:
 - (I) mitigate the impact thereof;
 - (II) reopen the affected part(s) of the Project as quickly as possible to traffic; and
 - (III) if such Closure arose as the direct result of an Emergency, respond to the Emergency in accordance with the requirements of this Agreement.

Within ten Calendar Days after receiving a notice pursuant to this Section 1.1(a), the Enterprises shall deliver to Developer a written notice either confirming their agreement to, or disputing (with reasons), the information contained in Developer's notice. Due to extenuating circumstances, the Enterprises may, at their discretion, provide an extension to any Grace Period applicable to a Noncompliance Event so notified and will document such extension in the notice delivered by them pursuant to this Section 1.1(a).

- (b) Developer shall notify the Enterprises in writing as soon as reasonably practicable, and in any event within 24 hours, after the occurrence of the Noncompliance Rectification Time in respect of any Noncompliance Event which has a Cure Period, the date and time that any Noncompliance Event which does not have a Cure Period has been fully cured or the end time of any Non-Permitted Closure or Excused Closure, including in such notice:
 - (i) in the case of a Noncompliance Event:
 - (A) the Noncompliance Rectification Time of such Noncompliance Event or, as the case may be, the date and time that such Noncompliance Event was fully cured;
 - (B) a detailed description of the manner in which such Noncompliance Event was cured; and
 - (C) a calculation of the total Noncompliance Points that accrued in respect of such Noncompliance Event; or
 - (ii) in the case of a Non-Permitted Closure or Excused Closure:
 - (A) the end time of such Non-Permitted Closure or Excused Closure; and
 - (B) in the case of a Non-Permitted Closure, a calculation of the total Construction Closure Deductions or Operating Period Closure Deductions, as the case may be, that accrued in respect of such Non-Permitted Closure.
- (c) Within ten Calendar Days after receiving a notice pursuant to Section 1.1(b) of this Part 6, the Enterprises shall deliver to the Developer a written notice either confirming their agreement to, or disputing (with reasons), the information contained in Developer's notice.
- (d) Developer shall be entitled to satisfy its notification obligations under this Section 1.1 by ensuring that the Noncompliance and Closure Database issues email or other alerts to the Enterprises, provided that such alerts:
 - (i) are received by the Enterprises within the time periods required by Section 1.1(a) or (b) of this Part 6, as applicable; and
 - (ii) either:
 - (A) contain the information required by Section 1.1(a) or (b) of this Part 6, as applicable; or
 - (B) provide a direct link to such information.

1.2 Notification Initiated by the Enterprises

- (a) If the Enterprises believe that any Noncompliance Event has occurred or Non-Permitted Closure has commenced in respect of which the Enterprises have not received notification from Developer in accordance with Section 1.1(a) of this Part 6, the Enterprises may deliver to Developer a notice containing such of the information that is required to be included in the notice that Developer should have delivered pursuant to Section 1.1(a) of this Part 6 in respect of such Noncompliance Event or Non-Permitted Closure that is available to the Enterprises.
- (b) In the event that the Enterprises deliver a notice pursuant to Section 1.2(a) of this Part 6:
 - (i) if a Noncompliance Event that has a Grace Period is the subject of such notice, such Noncompliance Event shall be deemed not to have a Grace Period even if a Grace Period is specified for such Noncompliance Event in Table 6A.1 or Table 6A.2, as applicable; and

- (ii) the failure by Developer to issue a notice in respect of the relevant Noncompliance Event or Non-Permitted Closure shall itself constitute a Noncompliance Event in accordance with item 1.14 in Table 6A.1 or item 2.16 in Table 6A.2, as applicable.

2. Noncompliance and Closure Database

2.1 Without prejudice to Developer's obligations under Section 1 of this Part 6, Developer shall establish and maintain an electronic database that records on a real-time basis, and retains, information in relation to each and every Noncompliance Event, Non-Permitted Closure and Excused Closure that occurs or commences, as the case may be. The following data shall be recorded in such database:

- (a) in respect of each Noncompliance Event (whether notified by Developer to the Enterprises pursuant to Section 1.1(a) of this Part 6 or by the Enterprises to Developer pursuant to Section 1.2(a) of this Part 6):
 - (i) a description of such Noncompliance Event in reasonable detail, including the circumstances giving rise to such Noncompliance Event, its Noncompliance Start Time, any applicable Cure Period or Grace Period and the number of Noncompliance Points set out for such Noncompliance Event in Table 6A.1 or Table 6A.2, as applicable;
 - (ii) the location of such Noncompliance Event within the Project (if applicable);
 - (iii) for any Noncompliance Event that is not yet cured:
 - (A) the calculation of the Noncompliance Points that have accrued in respect of such Noncompliance Event up to that time; and
 - (B) the steps being taken to cure it; and
 - (iv) for any Noncompliance Event that Developer considers to be cured:
 - (A) the Noncompliance Rectification Time of such Noncompliance Event (if such Noncompliance Event has a Cure Period) or the date and time that such Noncompliance Event was fully cured (if such Noncompliance Event does not have a Cure Period) and, in either case, the calculation of the total Noncompliance Points that accrued in respect of such Noncompliance Event; and
 - (B) the nature of the cure in reasonable detail and the measures that have been, and will be, taken to prevent the reoccurrence of such Noncompliance Event; and
- (b) in respect of each Non-Permitted Closure (whether notified by Developer to the Enterprises pursuant to Section 1.1(a) of this Part 6 or by the Enterprises to Developer pursuant to Section 1.2(a) of this Part 6) and each Excused Closure:
 - (i) a description of such Non-Permitted Closure or Excused Closure in reasonable detail, including the location thereof within the Project, the circumstances giving rise to such Non-Permitted Closure or Excused Closure and its commencement time;
 - (ii) for any Non-Permitted Closure or Excused Closure that is continuing:
 - (A) in the case of a Non-Permitted Closure, the calculation of the Construction Closure Deductions or Operating Period Closure Deductions, as the case may be, that have accrued in respect of such Non-Permitted Closure up to that time; and
 - (B) a description of the steps being taken by Developer to:

- (I) mitigate the impact thereof;
 - (II) reopen the affected part(s) of the Project as quickly as possible to traffic; and
 - (III) if such Closure arose as the direct result of an Emergency, respond to the Emergency in accordance with the requirements of this Agreement; and
 - (iii) for any Non-Permitted Closure or Excused Closure that has ended:
 - (A) the end time of such Non-Permitted Closure or Excused Closure;
 - (B) in the case of a Non-Permitted Closure, the calculation of the total Construction Closure Deductions or Operating Period Closure Deductions, as the case may be, that accrued in respect of such Non-Permitted Closure; and
 - (C) all of the steps taken by Developer as referred to in Section 2.1(b)(ii)(B) of this Part 6 during the subsistence of such Non-Permitted Closure or Excused Closure and the measures that have been, and will be, taken to prevent the reoccurrence of similar Non-Permitted Closures or Excused Closures.
- 2.2 The database shall also record on a real-time basis:
 - (a) the cumulative number of Noncompliance Points that have accrued and cumulative number of relevant Noncompliance Events that have occurred in such a manner as to allow the Parties to establish at any time whether any Noncompliance Default Event or any Increased Oversight Threshold has occurred; and
 - (b) the cumulative amount of Construction Closure Deductions and Operating Period Closure Deductions that have accrued in such a manner as to allow the Parties to establish at any time whether any Closure Default Event has occurred.
- 2.3 Developer shall provide to the Enterprises unrestricted electronic access to the Noncompliance and Closure Database at all times and the database shall be designed to enable the Enterprises to:
 - (a) inspect all entries by Developer;
 - (b) flag a request for further information from Developer related to any entry;
 - (c) flag any entry where the Enterprises dispute the entry;
 - (d) enter information in respect of each Noncompliance Event and Non-Permitted Closure notified to Developer by the Enterprises pursuant to Section 1.2(a) of this Part 6 to the same level of detail as Developer is required to enter in respect of Noncompliance Events and Non-Permitted Closures notified by it to the Enterprises pursuant to Section 1.1(a) of this Part 6;
 - (e) record for each Noncompliance Event or Non-Permitted Closure the issuance of a notice by the Enterprises pursuant to Section 1.2(a) of this Part 6;
 - (f) automatically generate a report recording the number and details of:
 - (i) Noncompliance Events that have been cured and remain uncured; and
 - (ii) Non-Permitted Closures and Excused Closures that have ended and are continuing,in either case, including:

- (iii) separate counts of:
 - (A) Noncompliance Events, Non-Permitted Closures and Excused Closures notified by Developer pursuant to Section 1.1(a) of this Part 6; and
 - (B) Noncompliance Events and Non-Permitted Closures notified by the Enterprises pursuant to Section 1.2(a) of this Part 6; and
- (iv) the number of Noncompliance Points, Construction Closure Deductions and Operating Period Closure Deductions:
 - (A) accrued by Developer; and
 - (B) subject to dispute by either Party,in any such case, within any user-defined time period; and
- (g) flag the Enterprises' concurrence or otherwise that the Noncompliance Rectification Time has occurred in respect of Noncompliance Event or a Non-Permitted Closure has ended.

APPENDIX A
Noncompliance Points Tables

Any single failure that constitutes a Noncompliance Event pursuant to more than one item in Table 6A-1 or Table 6A-2 shall be deemed only to constitute a Noncompliance Event pursuant to the item that is more specific to such failure. In the event of any ambiguity as to which Noncompliance Event is more specific to a failure, Section 2.4.3 of the Project Agreement shall apply.

For certainty, if an act, omission, event or other circumstance gives rise to more than one failure each of which constitutes a Noncompliance Event, all provisions of this Agreement that apply as a result of the occurrence of each such Noncompliance Event shall apply without limitation or prejudice to the provisions of this Agreement that apply as a result of the occurrence of any other such Noncompliance Event.

Table 6A.1 - Construction Period Noncompliance Events

Ref	Activity Type	Heading	Noncompliance Event – Failure to:	Cure Period (Calendar Days, except where specified otherwise)	Grace Period (Calendar Days)	Number of Points
1.1	Developer's Management Process	Updates to the Project Management Plan (PMP)	Carry out and submit to the Department updates to the Project Management Plan at times and in the manner prescribed in the Project Management Plan and in accordance with <u>Section 2.2.1 of Schedule 8 (Project Administration)</u> .	7	N/A	1
1.2	Developer's Management Process	Compliance with PMP	Establish, maintain, and comply with any provision of the Project Management Plan as described in <u>Section 2 of Schedule 8 (Project Administration)</u> .	7	7	2
1.3	Developer's Management Process	Compliance with QMP	Establish, maintain, update and comply with any provision of the Quality Management Plan as described in <u>Section 6 of Schedule 8 (Project Administration)</u> .	7	7	2

Table 6A.1 - Construction Period Noncompliance Events

Ref	Activity Type	Heading	Noncompliance Event – Failure to:	Cure Period (Calendar Days, except where specified otherwise)	Grace Period (Calendar Days)	Number of Points
1.4	Developer's Management Process	Compliance with Safety Plan	Establish, adhere to or enforce a safety policy, procedure, process, or guideline as required by the Safety Management Plan as described in <u>Section 7 of Schedule 8 (Project Administration)</u> .	2	N/A	2
1.5	Developer's Management Process	Environmental Compliance Work Plan (ECWP)	Establish, maintain, and comply with a complete ECWP and any provision as described in <u>Section 2 of Schedule 17 (Environmental Requirements)</u> .	7	7	2
1.6	Developer's Management Process	Comply with Document Control System	Comply with the requirements of the Document Control System (DCS) in accordance with <u>Section 13 of Schedule 8 (Project Administration)</u> .	2	N/A	1
1.7	Reserved

2.29	Project Delivery	CDPS-SCP and MS4 requirements	Comply with CDPS-SCP and MS4 requirements, and the Environmental Requirements referenced in <u>Appendix A to Schedule 17</u> , Revision of Section 208.09 (including, but not limited to: failure to comply with BMP, incomplete SWMP, or failure to correctly implement the SWMP).	1	2	4
2.30	Project Delivery	Courtesy Patrol Services	Comply with any provision of <u>Section 10</u> of, and <u>Appendix B</u> to, <u>Schedule 11 (Operations and Maintenance Requirements)</u> , excluding the General Requirements in relation to the Courtesy Patrol Services in <u>Appendix A-2 to Schedule 11, (Operations and Maintenance Requirements)</u> .	7	N/A	1
2.31	Project Delivery	Punch List	Prepare, maintain or timely deliver in accordance with <u>Part 7 of Schedule 3 (Commencement and Completion Mechanics)</u> a Punch List (or a modification thereto) containing all items of Work to be completed, corrected, adjusted or modified.	7	N/A	4

Table 6A.2 – Operating Period Noncompliance Events

Ref	Activity Type	Heading	Noncompliance Event – Failure to:	Cure Period (days)	Grace Period (days)	Number of Points
2.32	Project Delivery	Final Acceptance	Achieve Final Acceptance prior to the Final Acceptance Deadline.	5	N/A	15
2.33	Notification by Developer	CDPS-SCP and MS4 requirements	Notify to the Department and the applicable Governmental Authority Developer's failure to comply with CDPS-SCP and MS4 requirements (including, but not limited to: failure to comply with BMP, incomplete SWMP, or failure to correctly implement the SWMP).	N/A	1	2
2.34	Notification by Developer	Recognized Hazardous Materials	Comply with the Developer's reporting or notification obligations under <u>Schedule 17</u> (<i>Environmental Requirements</i>) in respect of Recognized Hazardous Materials.	N/A	1	3
2.35	Notification by Developer	Notification of Environmental Breach	Notify the Department of any breach by Developer of any Environmental Laws, Governmental Approvals, or any of its Environmental Requirements.	N/A	1	1
2.36	Inspections, Defects and Standards	Timely and accurate Inspections	Perform timely and accurate inspections in accordance with <u>Schedule 10</u> (<i>Design and Construction Requirements</i>) in respect of Renewal Work or <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>) in respect of O&M Work that is the subject of the inspections identified in such <u>Schedule 11</u> (<i>Operations and Maintenance Requirements</i>).	7	N/A	1

Table 6A.2 – Operating Period Noncompliance Events

Ref	Activity Type	Heading	Noncompliance Event – Failure to:	Cure Period (days)	Grace Period (days)	Number of Points
2.37	O&M Defects	Timely Remedy of Category 1 Defect	Remedy a Category 1 Defect (Immediate Action) within the Defect Remedy Period.	Defect Remedy Period	N/A	4
2.38	Reserved					
2.39	O&M Defects	Timely Remedy of Category 2 Defect	Remedy a Category 2 Defect (Permanent Repair) (for certainty, other than in an Excluded Element) within the Defect Remedy Period.	1	N/A	1
2.40	O&M Defects	Prevent occurrence of Defect	Prevent a Category 2 Defect (for certainty, other than in an Excluded Element) from deteriorating into a Category 1 Defect.	N/A	N/A	1
2.41	Project Delivery	Maintenance of Traffic Requirements	Perform O&M Work After Construction in compliance with any of Developer’s obligations or commitments (other than those in respect of lane Closures or Closures which are subject to Operating Period Closure Deductions in accordance with this <u>Schedule 6</u>) in respect of maintenance of traffic as set out in <u>Section 2 of Schedule 10 (Design and Construction Requirements)</u> , Developer’s Maintenance Management Plan and Developer’s Transportation Management Plan (TMP), including Temporary Traffic Control Plan (TCP) Strategies, Transportation Operations (TOP) Strategies and Public Information (PI) Strategies.	1	N/A	4

Table 6A.2 – Operating Period Noncompliance Events

Ref	Activity Type	Heading	Noncompliance Event – Failure to:	Cure Period (days)	Grace Period (days)	Number of Points
2.42	Project Delivery	Timely Performance of Renewal Work	Perform Renewal Work at the time or in the manner set forth in Developer’s Annual Renewal Work Plan and in accordance with the Annual Renewal Work Schedule.	14	7	1
2.43	Reserved					
2.44	Reserved					
2.45	Notification by Developer	ITS Outage	Provide notification within the time period specified in <u>Section 3 of Schedule 10 (Design and Construction Requirements)</u> for any planned ITS outage	N/A	N/A	1
2.46	Project Delivery	ITS Outage	Restore ITS functionality or power for any planned ITS outage by the time specified in <u>Section 3 of Schedule 10 (Design and Construction Requirements)</u> .	5	N/A	1
2.47	Project Delivery	ITS Outage	Maintain ITS network communications or device functionality resulting in an unplanned ITS outage identified in <u>Section 3 of Schedule 10 (Design and Construction Requirements)</u> .	1	N/A	1
2.48	Project Delivery	Maintain Utility Service	Maintain a Utility fully operational except as specifically permitted by the Utility Owner and by any affected property in accordance with <u>Section 4.2.9 of Schedule 10 (Design and Construction Requirements)</u> .	2	N/A	4

Table 6A.2 – Operating Period Noncompliance Events

Ref	Activity Type	Heading	Noncompliance Event – Failure to:	Cure Period (days)	Grace Period (days)	Number of Points
2.49	Project Delivery	Environmental Requirements	Comply with the requirements of Environmental Laws or any of the Environmental Requirements as they relate to, exceedance of permitted thresholds, as required by applicable Law and all relevant Governmental Approvals.	2	2	2
2.50	Nonconforming Work	Deliverables	Submit an updated NCR in accordance with <u>Section 6.5.2 of Schedule 8 (Project Administration)</u> within five Working Days after submission of an initial NCR in accordance with <u>Section 6.5.1 of Schedule 8 (Project Administration)</u> .	5	N/A	2
2.51	Nonconforming Work	Deliverables	Submit a NCR in accordance with <u>Section 6.5.7 of Schedule 8 (Project Administration)</u> within five Working Days of issuance of a NCN by the Department in accordance with <u>Section 6.5.6 of Schedule 8 (Project Administration)</u> .	5	N/A	2
2.52	Project Delivery	Deliverable Compliance	Comply with any requirement applicable to, or obligation of Developer associated with, a Deliverable set out in <u>Section 14 of Schedule 11 (Operations and Maintenance Requirements)</u> .	7	7	2
2.53	Developer's Management Process	Compliance with MMP	Maintain, update and comply with any provision of the Maintenance Management Plan as described in <u>Section 5 of Schedule 11 (Operations and Maintenance Requirements)</u> .	7	7	2

Table 6A.2 – Operating Period Noncompliance Events

Ref	Activity Type	Heading	Noncompliance Event – Failure to:	Cure Period (days)	Grace Period (days)	Number of Points
2.54	Developer's Management Process	Compliance with OMP	Maintain, update and comply with any provision of the Operations Management Plan as described in <u>Section 9 of Schedule 11</u> (<i>Operations and Maintenance Requirements</i>).	7	7	2
2.55	Developer's Management Process	Compliance with Renewal Works Requirements	Establish, maintain, update and comply with any requirement related to Renewal Work as set out in <u>Section 6 of Schedule 11</u> (<i>Operations and Maintenance Requirements</i>).	7	7	2
2.56	Project Delivery	Deliverable Compliance	Comply with any requirement applicable to, or obligation of Developer associated with, a Deliverable set out in <u>Table 2 of Schedule 8</u> (<i>Project Administration</i>) and effective during the Operating Period.	7	7	2
2.57	Project Delivery	ETC System outage	Prevent interference with, or damage to, the ETC System by any Developer-Related Entity resulting in an unplanned ETC System outage which is only able to be rectified with the involvement of the ETC System Integrator, but which does not result in a Closure of a Tolloed Express Lane.	7	N/A	10
2.58	Developer's Management Process	Compliance with QMP	Maintain, update and comply with any provision of the Quality Management Plan during the Operating Period as described in <u>Section 6 of Schedule 8</u> (<i>Project Administration</i>).	7	7	2

Table 6A.2 – Operating Period Noncompliance Events

Ref	Activity Type	Heading	Noncompliance Event – Failure to:	Cure Period (days)	Grace Period (days)	Number of Points
2.59	Deliverables	Record keeping for Utilities	Make records relating to Utilities available as required by <u>Section 4 of Schedule 10 (Design and Construction Requirements)</u> .	7	N/A	2
2.60	Deliverables	Materials testing records	Submit to the Department records of materials testing and information to the Department’s Quality Records Database in accordance with the requirements of <u>Section 6.4.3 of Schedule 8 (Project Administration)</u> within the specified time periods and conforming to the requirements of <u>Section 6 of Schedule 8 (Project Administration)</u> and Developer’s IQC Program.	2	2	3
2.61	Deliverables	Certification	Submit required valid certificates in relation to the O&M Work After Construction in accordance with <u>Section 6.4.3 of Schedule 8 (Project Administration)</u> .	2	N/A	1
2.62	Reserved					
2.63	Project Delivery	Subcontracting Requirements	Meet the requirements of <u>Section 17.5 of the Project Agreement</u>	7	3	1
2.64	Project Delivery	ETC System outage	Prevent interference with, or damage to, the ETC System by any Developer-Related Entity resulting in an unplanned ETC System outage which is able to be rectified without the involvement of the ETC System Integrator, but which does not result in a Closure of a Tolerated	1	N/A	4

2.77	Notification by Developer	Air Quality	Comply with the Developer's reporting or notification obligations under <u>Schedule 17 (Environmental Requirements)</u> in respect of Air Quality.	N/A	1	3

Schedule 7
Compensation on Termination

1. Compensation on Termination For Convenience and Termination for Enterprise Default

The Termination Amount payable by the Enterprises to Developer in connection with:

- (a) any Termination for Convenience;
- (b) any termination of the Project Agreement for Enterprise Default; or
- (c) any Termination by Court Ruling that arises by reason of an Enterprise Default,

shall equal the amount calculated at the Termination Date (without double-counting) as follows:

- (i) the Equity Market Value; *minus*
- (ii) the costs and expenses to determine the Equity Market Value in accordance with the process described in the definition thereof, to the extent such costs and expenses were incurred or paid by the Enterprises;

plus (if the amount calculated pursuant to (iii) is positive) or *minus* (if the amount calculated pursuant to (iii) is negative):

- (iii) an amount equal to:
 - (A) Lenders' Liabilities; *plus*
 - (B) Subcontractor Breakage Costs; *plus*
 - (C) Developer Employee Redundancy Payments; *minus*
 - (D) Account Balances; *minus*
 - (E) Termination Insurance Proceeds; *minus*
 - (F) any Termination Deduction Amount.

2. Compensation on Termination by Court Ruling, Termination for Extended Events and Termination for Uninsurable Risk

The Termination Amount payable by the Enterprises to Developer in connection with:

- (a) any Termination by Court Ruling (other than any such termination that arises by reason of a Developer Default or an Enterprise Default);
- (b) any Termination for Extended Events; or
- (c) any termination of the Project Agreement pursuant to Section 33.1.7 thereof;

shall equal the amount calculated at the Termination Date (without double-counting) as follows:

- (i) the greater of:
 - (A) all amounts paid or disbursed to Developer prior to the Termination Date by:
 - (I) Equity Members in the form of direct equity investments; and
 - (II) Equity Members or any of their Affiliates in the form of Equity Member Debt,

minus, an amount equal to all Distributions made by Developer to the Equity Members on or before the Termination Date; and

- (B) \$0;

plus (if the amount calculated pursuant to (ii) is positive) or *minus* (if the amount calculated pursuant to (ii) is negative):

- (ii) an amount equal to:
 - (A) Lenders' Liabilities; *plus*
 - (B) Subcontractor Breakage Costs; *plus*
 - (C) Developer Employee Redundancy Payments; *minus*
 - (D) Account Balances; *minus*
 - (E) Termination Insurance Proceeds; *minus*
 - (F) any Termination Deduction Amount.

3. Compensation on Termination for Developer Default

3.1 The Termination Amount payable by the Enterprises to Developer in connection with:

- (a) any termination of the Project Agreement for Developer Default; or
 - (b) any Termination by Court Ruling that arises by reason of a Developer Default,
- on or prior to the Substantial Completion Date, shall equal the amount calculated at the Termination Date (without double-counting) as the lesser of:

- (i) the Construction Work Value; and
- (ii) an amount (whether positive or negative) equal to:
 - (A) Lenders' Liabilities; *minus*
 - (B) Account Balances; *minus*
 - (C) Termination Insurance Proceeds; *minus*
 - (D) any Termination Deduction Amount.

3.2 The Termination Amount payable by the Enterprises to Developer in connection with:

- (a) any termination of the Project Agreement for Developer Default; or
 - (b) any Termination by Court Ruling that arises by reason of a Developer Default,
- after the Substantial Completion Date, shall equal the amount calculated at the Termination Date (without double-counting) as the lesser of:

- (i) an amount (whether positive or negative) equal to:
 - (A) Lenders' Liabilities; *minus*
 - (B) Maintenance Rectification Costs; *minus*
 - (C) Account Balances; *minus*
 - (D) Termination Insurance Proceeds; *minus*
 - (E) any Termination Deduction Amount; and
- (ii) an amount (whether positive or negative) equal to:
 - (A) 80% of Lenders' Liabilities; *minus*
 - (B) Account Balances; *minus*
 - (C) Termination Insurance Proceeds; *minus*
 - (D) any Termination Deduction Amount.

4. Miscellaneous Compensation Provisions

4.1 Set Off and Deductions on Termination

The Enterprises shall only be entitled to deduct any Termination Deduction Amount when calculating any Termination Amount pursuant to Section 1 or 2 of this Schedule 7 to the extent that, after making such deduction, the Termination Amount payable to Developer would not be less than an amount equal to the Lenders' Liabilities.

4.2 Timing of Payment of Termination Amount

Any Termination Amount shall be due and payable by the Enterprises 180 Calendar Days after the Termination Date.

4.3 Treatment of Negative Termination Amount Calculations

To the extent that any Termination Amount calculated pursuant to this Schedule 7 is calculated to be less than zero, then such Termination Amount shall be deemed to equal zero.

4.4 Calculation of Termination Amount and Lenders' Liabilities

(a) Promptly following:

- (i) delivery by either Party of a Termination Notice or any Termination by Court Ruling, as applicable; and
- (ii) any Enterprise request for an update to a certificate previously provided by the Collateral Agent pursuant to this Section 4.4(a), such update to be made in anticipation of paying the Termination Amount on a specific date,

Developer shall request that the Collateral Agent provide it and the Enterprises with a certificate (or, as applicable, an update certificate) as to the amounts described in Sections 4.4(b)(i) and 4.4(b)(ii) of this Schedule 7.

(b) The Enterprises shall be entitled to rely on a certificate of the Collateral Agent as conclusive as to the amount of:

- (i) the Lenders' Liabilities outstanding at the relevant time (or, as applicable, projected to be outstanding at a future time absent changed circumstances); and
- (ii) the amount of any Account Balances with respect to accounts held with the Collateral Agent or any other Lender at the relevant time (or, as applicable, projected to be held at a future time absent changed circumstances).

4.5 Transfer of Key Assets

Developer shall comply with its obligations under Section 34 of the Project Agreement as a condition precedent to the Enterprises' payment of any Termination Amount.

4.6 Gross Up of Termination Amount

(a) If any Termination Amount payable by the Enterprises to Developer pursuant to Section 1 or Section 2 of this Schedule 7 is subject to Applicable Tax, then subject to Section 4.6(b) of this Schedule 7 the Enterprises shall pay to Developer such additional amount of Applicable Tax as the Enterprises reasonably determine will put Developer (or, to the extent that Developer is treated as a pass through entity for Applicable Tax purposes, its Equity Members) in the same after tax position as it would have been in had the payment not been subject to Applicable Tax, taking account of any relief, allowances, deductions, setting off or credits in respect of any Applicable Tax (whether available by choice or not) which may be available to Developer to reduce the Applicable Tax to which the payment is subject.

(b) As a condition to Enterprises' payment to Developer of the amount of Applicable Tax otherwise payable pursuant to this Section 4.6, Developer shall certify to the Enterprises the amount of Applicable Tax Developer believes should be paid pursuant to this Section,

which certification shall include a detailed calculation of such amount together with relevant supporting documentation and information reasonably acceptable to the Enterprises.

Schedule 8 Project Administration

1. GENERAL REQUIREMENTS

The Developer shall be solely responsible for the management and administration of the Work, coordinating all activities necessary to perform the Work, and reporting and documenting all Work and ensuring the quality of the Work in conformance with the Project Agreement. The Developer shall satisfy all functional needs and characteristics of Project administration and this Schedule 8.

2. PROJECT MANAGEMENT PLAN

2.1. General Requirements

2.1.1. The Developer shall submit a Project Management Plan (PMP) that encompasses the Term of the Project Agreement, for Acceptance by the Department, prior to the issuance of NTP1, which is consistent with and expands upon the draft Project Management Plan submitted with the Proposal. The PMP shall provide clear detail of the Developer's overall approach to its team organization, structure, and management processes, and shall describe the scope, goals, and objectives of Project approach and intended results and be fully compliant with all provisions of the Project Agreement. The PMP shall identify by signature page and date, the title of the qualified professionals who are responsible for planning, reviewing, approving, reporting, monitoring, controlling, implementing, revising, and issuing the PMP, including revisions. At a minimum, the PMP shall include the following (where applicable relating to both Developer and its Subcontractors but also, where applicable, clearly identifying the division of roles and responsibilities between the Developer and its Subcontractors):

- a. An organizational chart and description, indicating the Developer's overall team structure including all Key Personnel, management staff and their reporting relationships for all Work, and including designation of an individual who is (and whose replacement, if any, shall be) a licensed professional engineer in the State who shall at all times when Construction Work or Renewal Work is being conducted serve as the engineer in responsible charge for the observation of the Construction Work or, as applicable, the Renewal Work;
- b. A design organizational chart and description, indicating the roles, responsibilities and structure of the Developer's design staff, down to and including discipline leads and the staff positions proposed in each discipline;
- c. A construction organizational chart and description, indicating the roles, responsibilities and structure of the Developer's construction staff, down to and including field superintendents and the staff positions proposed under each field superintendent for the Work for all shifts;
- d. A quality management organizational chart and description, indicating the roles, responsibilities and structure of the respective quality management, Process Control and IQC staff, down to and including field inspection, and testing for the Work for all shifts;
- e. An Operations and Maintenance (O&M) organizational chart, and description, indicating the roles, responsibilities and structure of the O&M staff, both during the Construction Period and the Operating Period, down to and including the roadway, drainage, bridge, tolling systems and Intelligent Transportation Systems (ITS) discipline leads for any O&M related Work;
- f. A design management process, including a description of how design personnel will interface with the Department, construction, quality management and O&M organizations, in accordance with the Schedule 8, Quality Management Plan requirements;
- g. A construction management process, including the independence of Process Control (PC) personnel and activities from IQC personnel and activities, interface with the IQC and roles and responsibilities for approvals, Developer's coordination plan, the Developer's management approach, the construction management structure, identification of advanced

- Work, detailed delineation of work zones with identification of design and construction packages, and summary of major Project phases;
- h. Description of key processes and their reference location within the Developer's Operations Management Plan and Maintenance Management Plan, in accordance with the Schedule 11 requirements, including a description of how design personnel will interface with Developer's construction, Process Control, IQC and O&M organizations in accordance with the Schedule 8, Quality Management Plan requirements, process for inspections and notifications of issues of non-compliance to Department, and processes and timeframe for providing applicable cures for nonconformance;
 - i. Detailed description of the interface between the design and construction resources and the allocation of design and construction staff to implement the Project;
 - j. Process for addressing constructability, durability, maintainability and environmental compliance in the Work;
 - k. Description of key processes and their reference location within the Developer's Durability Plan, in accordance with the requirements in Schedule 8 and to meet the requirements of Schedule 12 Handback Requirements. This will include a description of how design personnel will interface with Developer's construction, Process Control, IQC and O&M organizations in accordance with the Quality Management Plan requirements in Schedule 8 to ensure durability in the design process;
 - l. Description of key processes and their reference location within the Developer's Quality Management Systems Manual, in accordance with the Schedule 8 requirements, for control of the Release for Construction (RFC) drawings through the Construction Period including making changes to the design during construction and ensuring engineering review of the new design and compliance with the Project Agreement. Processes shall demonstrate how the Department and the Developer's design team are involved in the review and acceptance of deviations from the RFC drawings;
 - m. Process for construction closeout including the Developer's approach to satisfaction of Milestone Completion Conditions, Substantial Completion Conditions, Final Acceptance Conditions, and management of Punch Lists;
 - n. Description of key processes, and their reference location within the Developer's Safety Management Plan, in accordance with Schedule 8 requirements, for both employees of Developer and its Subcontractors and the public, including the designation of a full time safety manager, training procedures, description of the subcontractor Health and Safety Plan, accident investigation procedures and exposure assessment;
 - o. Description of key processes, and their reference location within the Developer's Transportation Management Plan, in accordance with Section 2 of Schedule 10 Maintenance of Traffic requirements, including interface with the Department and the City of Denver (CCD);
 - p. Description of key processes, and their reference location within the Developer's Strategic Communications Plan, in accordance with the Schedule 14 requirements, including interface with the Department, CCD, Governmental Authorities, regulatory agencies, Utility Owners, Railroads, other stakeholders and the public during the Work, at a minimum the following activities: plans and Permits review; progress, workshops, partnering and Utility coordination meetings; construction engineering and inspection; and public involvement and community input;
 - q. Description of key processes, and their reference location within the Developer's Environmental Compliance Work Plan, in accordance with the Schedule 17 requirements, including interface with the Department and any Governmental Authority;
 - r. Description of key processes, and their reference location within the Developer's Property Management Plan, in accordance with the Schedule 18 requirements, including processes

for the security, hazardous materials assessment, demolition, debris removal, site clearing, storm water management improvements, and clean-up of building structures and property improvements acquired as part of the ROW for the Project;

- s. Description of key processes for managing the Project's Disadvantaged Business Enterprise (DBE), Emerging Small Business (ESB), and Workforce Development program, and their reference location within their respective Plans, in accordance with the Schedule 15 requirements;
- t. Description of the Developer's key processes and approach to the Schedule Work Plan, in accordance with the Schedule 8 requirements, including Schedule maintenance and required Deliverables management, and Supervening Event and Change management procedures; and
- u. Developer's approach to non-compliance reporting, evaluation, and resolution with each of its Subcontractors and methodology on how this information will be reported to the Department, including in accordance with the Schedule 6, Part 6 requirements.

2.2. Project Management Plan Updates

2.2.1. The Developer shall monitor and improve the effectiveness of its PMP and resubmit the PMP for Acceptance by the Department annually, upon the anniversary of its initial Acceptance by the Department, or more frequently should any of the following conditions exist:

- a. A plan or procedure no longer adequately addresses the matters it was originally intended to address;
- b. A plan or procedure does not conform with the Project Agreement;
- c. An audit by the Developer or the Department identifies a deficiency in the PMP requiring an update;
- d. Organizational structure changes require revision to the PMP;
- e. The Developer is undertaking, or about to undertake, activities that are not covered within the current PMP; or
- f. The Department requires the PMP to be updated at its request.

2.2.2. The Developer shall clearly identify in a cover sheet what changes were made in a PMP update to expedite the Department's review. Also, a redline copy and a final clean copy shall be submitted to the Department.

3. PROJECT SCHEDULING

3.1. General Requirements

The Department's opinions concerning the various scheduling documents and reports are not controlling over the Developer's independent judgment concerning the means, methods, and sequences of Work that the Developer employs. All Work and activities of the Developer shall be scheduled and monitored by use of a Critical Path Method (CPM) Project Schedule using scheduling software compatible with Primavera P6 v7. Compatible shall mean that the Developer provided electronic file version of the Project Schedule may be loaded or imported by the Department with no modifications, preparation, or adjustments. All scheduling software settings within the scheduling/leveling dialog box shall remain 'default' unless otherwise Approved by the Department. In addition, any changes to the scheduling software settings that alter the scheduling calculations shall be clearly identified and provided as part of the Schedule submittals. The Developer shall provide a Project Schedule for the Work in accordance with this Section 3.

The Developer shall designate a Developer's Scheduler until Final Acceptance. The Developer's Scheduler shall have at least 10 years of previous scheduling experience on similarly sized projects in both scope and complexity (with references to be provided to the Department, upon request). The Developer's Scheduler shall be a certified Planning and Schedule Professional (AACE International PSP Certification). Upon removal or voluntary termination of the Developer's

Scheduler from the Project, the Developer shall provide a qualified replacement within 30 Calendar Days.

3.2. Schedule Work Plan

- 3.2.1. The Developer shall provide a Schedule Work Plan that addresses all aspects of scheduling the Work and assigns responsibilities to positions within the Developer's organization. The Schedule Work Plan should be based on the description of the overall approach of scheduling the Construction Work provided with the Proposal Schedule. The Schedule Work Plan shall be submitted for Acceptance by the Department, prior to the issuance of NTP1, and shall provide a description of the overall approach of scheduling the Work, including the following:
- a. The Developer's approach to development, review, and coordination with the Department for Approval of the Project Schedules;
 - b. The Developer's organization and specific positions (including field personnel) that will be responsible for developing and progressing the Project Schedules and for PC and IQC of the Project Schedules, the personnel performance responsibilities and Developer coordination internally and with the Department for Project Schedules updates;
 - c. Developer's approach to updating and maintaining the Project Schedules to reflect the scheduled Work and how the Project Schedule will be utilized to progress the Work; and
 - d. Developer's approach to tracking the information necessary to update each Monthly Progress Schedule to reflect the exact manner in which the Developer executed the Construction Work.
- 3.2.2. The Developer may propose or the Department may require updates to the Schedule Work Plan. Changes to the Schedule Work Plan shall be submitted by Developer for Acceptance by the Department.

3.3. Project Schedules

- 3.3.1. The Work specified in this Section 3.3 includes preparing, progressing, revising, and submitting the Project Schedules.
- 3.3.2. The Project Schedules shall be developed consistent with the Accepted Work Breakdown Structure (WBS) and shall represent a practical plan to:
- a. complete the Work before the Baseline Substantial Completion Date and the Final Acceptance Deadline, as applicable;
 - b. achieve Milestone Completion of each Payment Milestone before the applicable Milestone Completion Target Date; and
 - c. convey the intent in the manner of the prosecution and progress of the Work.
- 3.3.3. The Project Schedules shall include the planned execution of the Work in accordance with the Project Agreement. The Project Schedules shall include seasonal and weather limitations, involvement and coordination with Utility Owners, Railroads, environmental limitations, Right of Way restrictions, traffic limitations, Governmental Authorities, engineers, architects, Subcontractors, and Suppliers, and all other limitations shall be considered in the development of the Baseline Schedule, Revised Baseline Schedule, and updating of subsequent Monthly Progress Schedules. Days scheduled as non-work days shall be indicated. The Project Schedules shall include delivery dates for critical materials, submittal and review periods (which shall be in accordance with the time periods specified in Schedule 9 (Submittals) and also take account of any such periods in Exhibit K to the Denver IGA, the URAs, the RRAs and any other Third Party Agreement).
- 3.3.4. The Project Schedule shall mean any of the following schedules identified in this Section 3.3 (Project Schedules). If any ambiguity exists, which Project Schedule is meant shall be as determined by the Department.

a. Baseline Schedule

- i. The Developer shall submit, for Acceptance by the Department, a Baseline Schedule. The Baseline Schedule shall be a CPM Schedule with activity detail to WBS Level VI. The Baseline Schedule shall conform to the Accepted WBS and include all Developer-defined WBS Level IV, V, and VI activities. The Baseline Schedule shall be cost and resource loaded to Level VI.
- ii. The Baseline Schedule shall be developed based upon the Proposal Schedule, shall include the dates for the Key Milestones and shall be incorporated into the Project Agreement (such dates for which shall not be changed except by Department Approval). The Baseline Schedule shall detail the Developer's Activities for the Project from NTP1 through Final Acceptance. Activities representing Work during this period shall be sufficiently detailed to plan, monitor, and evaluate the progress of the Work. The Baseline Schedule shall represent conditions of the Project at NTP1.
- iii. Once Accepted, the Baseline Schedule shall be the base Project Schedule against which all progress of the Work and the Monthly Progress Schedule shall be assessed. The Baseline Schedule shall not be modified.

b. Revised Baseline Schedule

Any revisions or changes to the Baseline Schedule proposed by the Developer, or required by the Department, shall be incorporated by the Developer into a Revised Baseline Schedule. Each Revised Baseline Schedule is subject to Department Acceptance prior to implementation. Each Revised Baseline Schedule shall have a unique name that includes a sequential revision number from the original Baseline Schedule. The Revised Baseline Schedule shall detail the then-current progress of Work, including the status of all activities, sequencing, and logic changes, and shall represent the Developer's best knowledge and planning at that time. Once Accepted, each Revised Baseline Schedule shall be the basis for all subsequent Monthly Progress Schedules.

c. Float

- i. Section 9.2.3 of the Project Agreement shall apply in respect of any Float included in any Project Schedule.
- ii. The Developer shall not suppress or consume Float by extending activity duration or including dummy activities. Preferential sequencing shall not be permitted.
- iii. The Department shall have the right to examine the identification of, or failure to identify, Float and Controlling Work Items on any Project Schedule in determining whether to Accept such Project Schedule.

3.3.5. Monthly Progress Schedules

- a. The Developer shall submit Monthly Progress Schedules with Progress Reports submitted pursuant to Section 4 of this Schedule 8, unless otherwise Approved by the Department. At a minimum, the Monthly Progress Schedule(s) shall include the following current Construction Work data:
 - i. Detailed Schedule of activities that clearly identify the Critical Path;
 - ii. Progress for the current period for all activities; and
 - iii. Actual start and finish dates of activities, physical percent complete, and Calendar Days remaining for activities in progress.
- b. The data date for use in calculating the Monthly Progress Schedule shall be the first day of the following month. The Monthly Progress Schedule shall accurately reflect updated progress as of the effective date of the Baseline Schedule or Revised Baseline Schedule, forecast finish for in-progress activities, and reforecast early and late dates for remaining

activities, and shall indicate the overall physical percent complete of the Project. If any actual dates are changed or corrected in any following month, the information must be included in the required monthly narrative to be submitted along with the Monthly Progress Schedule.

- c. The Monthly Progress Schedule(s) shall be submitted, for Acceptance, monthly no later than the 10th Working Day of the relevant month, and include additional, separate, filtered lists of activities and Construction Work elements included in the Monthly Progress Schedule to illustrate the following:
 - i. Coordination and accomplishment of Construction Work associated with Utilities and Railroads;
 - ii. Status of all Key Milestones as compared to the Baseline Schedule or Revised Baseline Schedule planned dates;
 - iii. Physical status of all Work as of date of the update;
 - iv. Actual progress relative to planned progress, organized by WBS;
 - v. Design document submittals for the upcoming period;
 - vi. All activities with 14 Calendar Days or less Float;
 - vii. 60 Calendar Day look ahead on all required Department Approvals and other applicable third party approvals;
 - viii. 90 Calendar Day look ahead sorted by WBS and activity early start dates;
 - ix. Critical items for Critical Path sorted by activity late start date; and
 - x. Time-scaled critical path network plot indicating the status of all activities as of the date of the update.
- d. The Developer may modify a Monthly Progress Schedule with Department Acceptance. The Developer shall provide a list of any proposed changes from the previous Monthly Progress Schedule with a supporting narrative justifying the changes to the Department for Acceptance. The Developer shall describe any changes to the Key Milestones, or any activities that require action or include commitments by the Department, including changes to the dates such activities fall upon in the narrative. If the Department provides comments to any Monthly Progress Schedule, the Developer shall address such comments to the Department's satisfaction prior to submittal of the subsequent Monthly Progress Schedule. The Monthly Progress Schedule shall include all information current as of the data date.

3.3.6. Record Schedule

The final Monthly Progress Schedule submitted shall include all Work completed through Final Acceptance and be identified by the Developer as the Record Schedule. The Record Schedule shall reflect the exact manner in which the Developer executed the Construction Work (including start and finish dates, activities, actual durations, sequences, and logic), and shall be signed and certified by the Developer's Project Manager and the Developer's lead scheduler as being a true reflection of how the Work was executed through Final Acceptance.

3.3.7. Schedule Requirements

- a. All Float shall be shown on the Project Schedule on each Schedule path, with the Float in respect of the Critical Path and in respect of each Milestone Completion to be separately and clearly identified.
- b. The Project Schedule shall divide the Work into activities with appropriate logic ties to show the Developer's overall approach to planning, scheduling, and executing the Work. The duration and the logical relationships of the activities and summaries at Work phase level shall be based on the actual durations and relationships anticipated. The Developer shall not use calendar dates to "logically" begin or complete any activity unless those specified

calendar dates are identified in the Project Agreement. The Developer shall allow for at least three workshop sessions with the Department during development of the Baseline Schedule and at least one workshop session for each Revised Baseline Schedule. For all Monthly Progress Schedules, the Developer shall meet with the Department at least once per month and as otherwise requested by the Department.

- c. The Project Schedule shall accommodate the Right-of-Way Schedule in accordance with Schedule 18 Right-of-Way.
- d. The Project Schedule shall accommodate Utility coordination in accordance with Schedule 10, Section 4 Utilities.
- e. The Project Schedule shall accommodate Railroad coordination in accordance with Schedule 10, Section 10 Railroads.
- f. Schedule Development

All Project Schedules and Monthly Progress Schedules shall:

- i. Include the following data:
 - A. Activity ID;
 - B. Activity description;
 - C. Start date (actual start date for started activities);
 - D. Finish date (actual finish date for completed activities);
 - E. Original duration;
 - F. Remaining duration (for those activities started but not completed);
 - G. Variance from Baseline Schedule or Revised Baseline Schedule start dates;
 - H. Variance from Baseline Schedule or Revised Baseline Schedule finish dates;
 - I. Total Float (which shall be separately and clearly identified in respect of the Critical Path and in respect of each Milestone Completion); and
 - J. Critical Path activities highlighted in red;
- ii. Provide sufficient number of activities in the Schedule to assure adequate planning and control of Construction Work, and to permit monitoring and evaluation of progress, and analysis of time impacts;
- iii. Use CPM to determine Controlling Work Items of Construction Work. The Developer shall utilize retained logic for calculating all Project Schedules. Out-of-sequence Construction Work shall be itemized and described in monthly Schedule narrative reports and discussed at monthly review meetings. Out-of-sequence Construction Work shall be corrected in order to have the required record schedule;
- iv. Show the order in which the Developer plans to perform the Construction Work, with logical ties sufficient to demonstrate the Developer's overall approach to planning, scheduling, and executing the Construction Work;
- v. Use activities, with the exception of the first and last activities, that have a minimum of one predecessor and a minimum of one successor activity;
- vi. Not use unnecessary logic ties;
- vii. Use durations and logical relationships based on the actual durations and relationships anticipated;

- viii. Depict the sequence and interdependence of all activities required for the complete performance of the Work, beginning at NTP1 and concluding at Final Acceptance;
 - ix. Use all, and only, activities which are consistent with the Developer's WBS;
 - x. Identify all design packages intended to be included as Release for Construction (RFC) Documents, which, at a minimum, shall have logical ties to the submittals and Construction Work anticipated for the respective design package;
 - xi. Show the phasing of the Construction Work, including RFC Documents, submittal dates, subcontractor Construction Work, procurement, fabrication, preparation of mock-ups, delivery, installation, PC, IQC, testing of materials and equipment, and any long-lead-time (over 60 Calendar Days) orders for materials or equipment;
 - xii. Include the Key Milestones, which shall each be assigned "finish on or before" constraint dates;
 - xiii. Depict the required coordination with, and work to be performed by other contractors, including any contractors performing Construction Work within or adjacent to the Site, and work from adjacent projects which may affect the Construction Work, Railroad Work, Utility Owners, third parties, Subcontractors, and Suppliers;
 - xiv. Depict and account for the acquiring of Permits and Governmental Approvals;
 - xv. Show all activities, of either the Department or third parties that affect progress of the Work. Include activities identifying Department Approval or Acceptance periods and other actions;
 - xvi. Contain no activity duration shorter than one Calendar Day, or longer than 30 Calendar Days, except for long lead time material procurements, as long as each phase of the procurement is identified as a specific activity;
 - xvii. Show Maintenance of Traffic (MOT) Activities;
 - xviii. Contain no unspecified milestones, Float suppression techniques, or use of activity durations, logic ties, and/or sequences deemed unreasonable by the Department;
 - xix. Use activities or calendars instead of duration lags, and contain no negative float;
 - xx. Utilize a unique number and name for each individual activity;
 - xxi. Not reuse any activity number;
 - xxii. Include, in electronic and hardcopy format, a graphic representation in the form of a Gantt chart with an activity table of all activities;
 - xxiii. Comply with all requirements in Schedule 10, Section 2 (Maintenance of Traffic) for all Closures documented by indicating the planned or actual start and completion of a Closure using a level-of-effort activity; and
 - xxiv. Appropriately account for weather.
- g. Schedule Management
- i. Activities and their durations that represent Department actions or commitments shall be subject to the Approval of the Department. Once Approved, no changes to such activities, nor their start and finish dates, shall be made without Department Approval;
 - ii. Activity descriptions shall not be changed without Department Approval. Any proposed change to a description shall be clearly identified and discussed at monthly meetings. New activities shall be used to show changes in scope; and

- iii. All Project Schedules and time impact analyses shall include a certification by the lead scheduler and Project Manager that the information presented is true and accurate based on information currently known and meets the requirements of the Project Agreement.
- h. Schedule Narrative Report
 - i. The Baseline Schedule shall include a Schedule Narrative Report describing, at a minimum, the Developer's plan and schedule for achieving the Project Agreement requirements and objectives for all Work. The narrative shall describe the methods of operation, resources to be employed, time frames for Project administration, design, and construction, and time frames for accomplishment of specified milestones and Key Milestones. A Resource Plan shall be included, which shall document in detail the types and quantities of resources needed to prosecute all aspects of the Work;
 - ii. The Revised Baseline Schedule shall include a Schedule Narrative Report describing the Developer's plan and schedule for achieving the remaining Project Agreement requirements and objectives for the Work. The narrative shall include a list of the changes that were made to the Revised Baseline Schedule and why the changes were made. The narrative shall also describe the methods of operation, resources to be employed, time frames for the design and construction, and time frames for accomplishment of specified milestones and Key Milestones. A Resource Plan shall be included, which shall document in detail the types and quantities of resources needed to prosecute all aspects of the Work; and
 - iii. The Monthly Progress Schedule shall include a Schedule Narrative Report describing the status of the Work, in detail. The narrative shall include a list of the changes made to the schedule, why those changes were necessary, progress made that period, plans for the forthcoming period, all potential delays and problems, their estimated effect on the Project Schedule and overall completion, and whether the Project is on, ahead of, or behind schedule. The Monthly Progress Schedule narrative shall not be considered to be notification of delays, request for Changes, or other issues.

3.3.8. Work Breakdown Structure

- a. The Developer shall submit to the Department a detailed WBS along with its Baseline Schedule. The Baseline Schedule shall include a detailed, organized hierarchical division of the WBS for completing each element of the Work. The Accepted WBS shall be the basis for organizing all Work under the Project Agreement, and shall be used as a basis for the Project Schedules, and other control systems;
- b. The WBS shall conform to the levels in Table 1. Table 1 represents Levels I through VI, which are the minimum levels of the WBS that all schedule information shall roll up. However, further detail shall be provided by the Developer for Levels IV, V, and VI to ensure a clear understanding of the Project Agreement. The Developer shall submit its Baseline Schedule broken down to the WBS Level VI activities. Additionally, a roll-up of activities unique to design, construction, and maintenance shall be shown at Level IV;
- c. The Accepted WBS shall be the basis for organizing all Construction Work under the Project Agreement, and shall be used to structure the design, and other control systems. The Developer shall submit its Baseline Schedule specifying WBS activities and proposed Construction Work segments. The Baseline Schedule shall be submitted for Approval by the Department prior to the issuance of NTP1; and
- d. A method statement shall be prepared for each of the Level III WBS elements listed in the Project Schedules for all Critical Path items in the Project Schedules, and for any feature not listed in the Project Schedules that the Developer considers a salient feature for timely

completion. The methods statement shall be completed in accordance with the CDOT Standard Specifications.

3.3.9. Draw Down Schedules

The Developer shall submit to the Department, for Information prior to NTP1, two draw down schedules showing the estimated monthly expenditures for the duration of the construction of the Project based off the Accepted Baseline Schedule. The first draw down estimate shall be based on the early finish dates in the Developer’s Baseline Schedule. The second draw down estimate will be based on the late finish dates in the Developer’s Baseline Schedule. Updated draw down estimates shall be provided within 10 Calendar Days after the Department Accepts a Revised Baseline Schedule submittal.

Table 1 WBS Levels

Level I:	I-70 EAST PROJECT AGREEMENT PROGRAM
<u>Program Level – Department use only:</u> The summary of all program components	
Level II:	ACTIVITIES OF THE DEVELOPER
<ul style="list-style-type: none"> • Activities of the Developer. This is the Developer’s highest level 	
Level III:	CONSTRUCTION WORK COMPONENTS
Developer Construction Work Components: <ul style="list-style-type: none"> • Breakdown of major components of the Construction Work: <ul style="list-style-type: none"> ○ Mobilization ○ Construction Work Management ○ Quality Management Plan ○ Changes/construction modification orders ○ Disadvantaged Business Enterprise/Emerging Small Business Plan ○ Workforce Development Plan ○ Strategic Communications ○ Environmental Management ○ Drainage ○ Utilities ○ Structures ○ Railroads ○ Right-of-Way ○ Aesthetics ○ Fire & life safety ○ Deck cover park plans ○ Maintenance of traffic ○ Roadway ○ ITS ○ ETC (including the timeframes provided in <u>Section 3, Schedule 10</u> related to the ETC System Integrator’s scope of work) ○ Warranty 	

Level IV:	CONSTRUCTION WORK SUBCOMPONENTS
Developer Contract Subcomponents: <ul style="list-style-type: none"> • Breakdown of all major subcomponents of the Construction Work (i.e. level III WBS), at a minimum, the Developer shall include Level IV elements. • The Developer to define certain activities at this level (e.g., work areas) 	
Level V:	CONSTRUCTION WORK SUBCOMPONENTS AND WORK ACTIVITIES
Breakdown defined by the Developer: <ul style="list-style-type: none"> • As-Built plans • Minor subcomponents (e.g., bridge substructures & superstructures, etc.) • The Developer to define certain activities at this level (work areas, phases, etc.) • Maintenance during construction (duration based) 	
Level VI:	WORK SUB-ACTIVITIES
Breakdown defined by the Developer: <ul style="list-style-type: none"> • The Developer to define all activities at this level 	

4. PROGRESS REPORTING

4.1. Progress Submittals

The Developer shall submit Progress Reports to the Department each month. Each Progress Report shall be submitted for Acceptance within 10 Working Days following prior month’s end. Progress Report submittals shall be done electronically.

4.1.1. Progress Report Content

The Progress Report shall include:

- a. A Cover Sheet indicating the following information:
 - i. Project number and title;
 - ii. Progress Report number (numbered consecutively starting with “1”);
 - iii. Period covered by the Progress Report (specific calendar dates);
 - iv. Total percent complete to date for the Construction Work as a whole and for each Level III WBS activity; and
 - v. Identification of Nonconforming Work generated during the period covered by the Progress Report;
- b. Additionally, each monthly Progress Report shall include the following:
 - i. Narrative description of Level V activity and progress for the Construction Work as a whole, including maintenance, design, and construction;
 - ii. Identification of actual start and completion dates;
 - iii. Update of progress with respect to Utilities and Railroads;
 - iv. Update of progress with respect to Right-of-Way;
 - v. Identification of whether any completion and deadlines are achieved or revised during the period;
 - vi. Summary of PC and IQC program efforts, including results of design reviews, Nonconforming Work generated, resolved and remaining outstanding;

- vii. Identification of problems and issues that arose during the period and remaining problems and issues to be resolved;
 - viii. Summary of resolution of problems and issues raised in previous Monthly Progress Reports or resolved during the period;
 - ix. Summary of Construction Work accidents (frequency and severity) and the management of those accidents through the SMP;
 - x. Identification of critical Schedule issues and proposed resolution;
 - xi. Discussion of Schedule variations from Key Milestones that have slipped or improved;
 - xii. Monthly update and discussion of previous month's Strategic Communications activities, in accordance with the requirements of Schedule 14, including: stakeholder meetings, public meetings, community events, complaint tracking log, and outreach tools employed;
 - xiii. Monthly Environmental Compliance Work Plan (ECWP) activities report in accordance with Schedule 17;
 - xiv. Monthly report and tracking in relation to small business participation, workforce development and Davis-Bacon, in accordance with the requirements of Schedule 15; and
 - xv. Progress photographs.
- c. The Progress Report format shall be Approved by the Department, and jointly established through consultation with the Developer, within 10 Working Days after NTP1. The Progress Report shall be on Developer 8.5 x 11 inch letterhead;
- d. The status date of the Monthly Progress Schedule is the last Calendar Day of each month. The data date for use in calculating the Monthly Progress Schedule shall be the first Calendar Day of the following month;
- e. The Developer shall make all corrections to the Monthly Progress Schedule requested by the Department and resubmit the Monthly Progress Schedule. If the Developer does not agree with the Department's comments, the Developer shall provide written notice of disagreement within five Working Days from the receipt of the comments. The items in disagreement shall be resolved in a meeting held for that purpose;
- f. Certification by the Developer's Project Quality Manager. The Developer shall submit a certification signed by its Project Quality Manager certifying that:
- i. All Construction Work, including that of designers, sub-contractors, suppliers and fabricators has been checked and/or inspected by the Developer's PC and IQC program staff, and that all Construction Work, except as specifically noted in the certification, conforms to the requirements of the Project Agreement;
 - ii. The Quality Management Plan (QMP) and all of the measures and procedures provided therein, are functioning properly and are being followed; and
 - iii. All safety critical work, in conformance with the Safety Management Plan (SMP) as further described in the Project Special Provisions set out in Appendix A to this Schedule 8, has been reviewed and sealed by the professional engineer of responsible charge before construction begins. Safety critical work is defined by the CDOT Revision of Section 107 – Performance of Safety Critical Work, included in Appendix A to this Schedule 8.
- g. Maintenance Progress Report. The Developer shall submit to the Department the current Maintenance Progress Report simultaneously with the monthly Progress Report. The report shall include a summary, with a date, location, and narrative of all maintenance work

that the Developer completed per Schedule 11 (*Operations and Maintenance Requirements*).

4.1.2. Progress Status Meetings

A Progress Status Meeting shall be conducted each time a Monthly Progress Report is made. The meeting shall be used to verify, address and finalize the following:

- a. Actual start dates;
- b. Actual and planned completion deadlines for Key Milestones;
- c. Activity percent complete;
- d. Incorporation of Approved Change Orders;
- e. Status of outstanding Nonconforming Work;
- f. Work performance;
- g. Monthly Progress Schedule, including changes from previous month's Progress Schedule; and
- h. Critical Path.

5. GOVERNMENTAL APPROVALS TRACKING

5.1. Governmental Approvals tracking list

5.1.1. No later than 30 Working Days after the Agreement Date, and thereafter on each anniversary of such date, Developer shall submit to the Department a list (the "Governmental Approvals List") of all Governmental Approvals and Permits that are required in respect of Work that:

- a. Have been or will be applied for within the next 12-month period;
- b. Have previously been obtained and are in effect; and
- c. Have expired or been terminated during the prior 12-month period.

5.1.2. The Governmental Approvals List shall identify the:

- a. Date on which any Governmental Approval or Permit application was made;
- b. Date on which any Governmental Approval or Permit is expected to be or was obtained;
- c. Date on which any Governmental Approval or Permit expired or was terminated; and
- d. Anticipated date for any expiration or renewal for any Governmental Approval or Permit.

5.1.3. Without prejudice to Developer's obligations under Sections 8.4 and 19 of the Project Agreement, as soon as reasonably practicable following a request to do so, Developer shall supply free of charge to the Department a copy of any document or documents referred to in such list.

6. QUALITY MANAGEMENT

6.1. General

6.1.1. The Developer shall be responsible for implementation and maintenance of an effective quality program to manage, control, document and assure all obligations of the Developer comply with the requirements of the Project Agreement. The Developer shall develop and submit a comprehensive Quality Management Plan (QMP) that is consistent with and expands upon the draft Stage 1 QMP and draft Stage 2 QMP submitted in the Proposal. The QMP shall document the Developer's commitment to quality, and all quality requirements of the Project Agreement. Processes and procedures established in the QMP shall be certified under (with respect to the Construction Period) and otherwise comply with (with respect to the Operating Period) International Organization for Standardization (ISO) 9001:2015, or equivalent ISO standard in effect on the date the QMP is submitted. The QMP shall encompass all Work performed by the Developer and Subcontractors of all tiers. The Developer shall obtain the Department's Approval

- of the QMP in two stages: Stage 1, Approval of all non-construction related procedures and plans; and Stage 2, Approval of all construction-related procedures and plans.
- 6.1.2. The QMP shall delineate how the Developer will ensure that all disciplines, aspects, and elements of the Work shall comply with the requirements of the Project Agreement.
 - 6.1.3. The QMP shall cover temporary and permanent components of the Work.
 - 6.1.4. The QMP shall include procedures and methods that define how the Developer will collaborate with the Department through the Department's quality assurance oversight program as described in Section 6.6 of this Schedule 8.
 - 6.1.5. The QMP shall describe the Developer's quality policy, approach to Process Control (PC) and Independent Quality Control (IQC) relative to design, construction, and Work management, quality improvement, quality personnel, and training in the QMP. The QMP shall list procedures for meeting all requirements of the Project Agreement. The Developer shall submit the Stage 1 QMP for non-construction related Work to the Department for Approval prior to issuance of NTP1. The QMP for all remaining Work (Stage 2) on the Project must have the Department's Approval prior to the issuance of NTP2. Any subsequent addenda to the QMP, required during execution of the Work, shall require the Department's Approval prior to implementation.
 - 6.1.6. The QMP may include a process to allow the commencement by the Developer of Restricted Activities (as defined in Schedule 9, (*Submittals*)) on an at risk basis. If included, such process shall require the Developer to document at a minimum the following:
 - a. Identification of the need to perform the Work constituted by the relevant Restricted Activities on an at risk basis;
 - b. Description of such Work, including discussions with the Department;
 - c. Description of Developer assessment of risk associated with proceeding with such Work on an at risk basis;
 - d. Developer approval mechanism, above the Principal Subcontractor level, and including the IQCM;
 - e. Clear delineation of at risk construction plans, how and when they will be released; and
 - f. Verification process of acceptability of such Work once plans have formally been Released for Construction.
 - 6.1.7. The Developer shall update and submit to the Department for Approval its QMP when its own quality management organization detects systemic or fundamental breaches of the Project Agreement or deficiencies in the manner the Work is inspected or tested, including breaches or deficiencies that have caused or that may cause Nonconforming Work to be performed, or when the Department advises the Developer of such a problem. The Developer shall also revise the QMP should any of the following conditions exist:
 - a. QMP or procedure within the QMP no longer adequately addresses the matters it was originally intended to address;
 - b. QMP or procedure within the QMP does not conform with the Project Agreement;
 - c. An audit by the Developer or the Department identifies a deficiency in the QMP requiring an update;
 - d. Organizational structure changes require revision to the QMP;
 - e. The Developer is undertaking, or about to undertake, activities that are not covered within the current QMP; or
 - f. The Department requires the QMP to be updated at its request.

6.2. Administrative Requirements

6.2.1. Quality Systems Procedures shall adhere to the following requirements:

- a. Be consistent with the requirements of this Section 6.2.1 of this Schedule 8 and Developer's stated quality policy.
- b. Include all Work methods and the enforcement and implementation of these work methods through best practice. However, it is inevitable that situations will arise that require a departure from the norm. These conditions shall be anticipated in the procedures and shall allow for control of these activities.
- c. Define the liaison and interface between the quality organization and the design and construction arms of the Developer.
- d. The quality procedures shall, as a primary objective, be written with the intent of gaining employee understanding of the system.
- e. Describe the rationale for the procedures selected and, if the procedures do not address every provision of this Section 6.2.1 of Schedule 8, to explain why the standard is not applicable in their particular situation.
- f. The following list of procedures (items i through xxi) shall serve as the starting point for defining Developer's quality management system:
 - i. Procedure for the preparation, control, and distribution of the Quality Management Plan;
 - ii. Scope;
 - iii. Key Personnel;
 - iv. Organizational/technical interfaces;
 - v. Design input requirements;
 - vi. Design output requirements (deliverables);
 - vii. Design Reviews;
 - viii. Department participation;
 - ix. Levels of responsibility and authority;
 - x. Procedure to control, verify, and validate the design;
 - xi. Procedure for document issue, approval, and revision;
 - xii. Procedure for the identification of, and where required by Project Agreement the traceability of, deliverable items, such as Release for Construction Documents and As-Builts;
 - xiii. Procedure for the verification and control of computer programs used in design;
 - xiv. Procedures for inspecting, testing, and calibrating equipment;
 - xv. Procedures for handling Nonconforming Work;
 - xvi. Procedures for environmental compliance;
 - xvii. Procedures for corrective/preventive actions;
 - xviii. Procedures for handling storing, packaging, tracking and submitting Deliverables;
 - xix. Training processes;
 - xx. Procedures for internal quality audits; and
 - xxi. Procedure for management review.

- g. The implementation of the quality system shall be demonstrated by internal quality audit reports, the trending of nonconformance, records of root-cause analysis, records of corrective and preventive actions, and records of Department audits and observations.
- h. Documented procedures may make reference to specifications that define how an activity is performed. Procedures shall describe the process steps of what needs to be done and work instructions shall prescribe how it is to be done.

6.2.2. Quality Policy

- a. The Developer shall develop a written policy for quality, including objectives for, and its commitment to, quality. The Developer's executive management shall ensure that this policy is implemented at all levels of the Developer's organization.
- b. The Developer shall publish and post a statement of its commitment to quality and the organization's quality objectives in several locations throughout the Project office and the Site. The statement shall explain the Developer's commitment to quality and the responsibility the Developer has for assuring that it meets the quality requirements included in this Schedule 8.
- c. The quality policy statement shall be made known to and understood by all Developer employees, sub-consultants, Subcontractors, and Suppliers. The Developer shall conduct and document a formal training program for all Developer employees, sub-consultants, Subcontractors, and Suppliers on the quality policy prior to their participation in activities monitored by the Developer under the QMP.
- d. The QMP shall include the Developer's executive management's quality policy. The QMP shall delineate the procedure used by the Developer's executive management to implement the Developer's quality policy.

6.2.3. Quality Planning

- a. The Developer shall provide evidence of quality planning that ensures specific requirements of the Project Agreement have been identified and incorporated into the documented quality system. Department's requirements represent the minimum requirements.
- b. The Developer shall perform IQC inspections during all phases of the Work from NTP1 until Final Acceptance to assure that the Work meets, and is being performed in accordance with, the Project Agreement.
- c. The Developer shall include in the QMP its planning methods to meet the requirements of the Project Agreement. The Developer shall include, at a minimum, the activities below in its quality planning efforts to meet the Project Agreement requirements for the Work:
 - i. Define and develop quality objectives for the Work;
 - ii. Identify the necessary processes, resources, and IQC personnel that are needed to assure that Developer obligations meet the requirements of the Project Agreement, including, but not limited to, design, construction, Environmental Compliance, Strategic Communications requirements, maintenance of traffic requirements, safety, Disadvantaged Business Enterprise (DBE), Emerging Small Business (ESB), Workforce Development, training, project management processes, and the QMP;
 - iii. Ensure the compatibility of design, construction, installation, public information, inspection, and testing procedures;
 - iv. Develop and maintain up to date procedures for PC, IQC, and quality improvement;
 - v. Identify and define all measurable Project Agreement requirements;

- vi. Identify quality hold points for Developer IQC testing and inspection and to allow the Department the opportunity to perform its owner verification responsibilities;
- vii. Identify, define, and implement standards of workmanship for all applicable work features (e.g., concrete finishing);
- viii. Identify, define, prepare, and maintain quality records and quality plans for all elements of design, including, but not limited to, wet and dry utilities, architectural, civil, structural, geotechnical, survey, hydraulic, environmental, traffic, safety, Right-of-Way (ROW), Railroad Work, ITS Work, and temporary Work;
- ix. Develop a procedure for preparation, control, Approval, and distribution of the QMP;
- x. Develop a procedure for IQC auditing to ensure the Developer, Subcontractors, and Suppliers of material understand and are effectively implementing the QMP;
- xi. Develop a procedure for corrective and preventative actions regarding quality compliance and implement the quality improvement plan to address corrective Work;
- xii. Develop a procedure and ensure the Developer's executive management reviews the QMP at planned intervals to ensure its continued suitability, adequacy and effectiveness. Such reviews should include PC/IQC results, owner verification results, status of corrective/preventive actions, follow-up items from previous management reviews, changes to the QMP, and recommendations for improvement; and
- xiii. A systemic process for ensuring quality regardless of production or scheduling needs.

6.2.4. Process Control

- a. The Developer shall be responsible for establishing, documenting, and implementing, a PC program. The PC program shall be described in the QMP and shall include all procedures necessary for the Developer to control the quality of its production processes to meet the requirements of the Project Agreement. The Developer shall develop a testing and inspection schedule to control production processes. The Developer shall conduct examinations of the quality of workmanship to confirm that all Work is being performed in accordance with all Project Agreement requirements. Appropriate follow-up inspections, sampling, and testing of materials shall be performed as each item of Work progresses to assure consistency in workmanship, compliance with Project Agreement requirements, (including design and construction documents), and satisfactory performance of the Work in service.
- b. Construction PC materials testing activities shall utilize statistical analyses of material test results, including mean, variance, range, and running averages; measurements; clearances; and interactions between PC and IQC. The results of these activities shall be used by the Developer to set up control charts to monitor and track variations in materials over time. The control charts and the analytical results on which they are based shall be provided to the Department within 24 hours when requested.
- c. Tests or inspections performed by production or PC personnel as part of the PC process shall not be used to satisfy the IQC requirements.

6.2.5. Control of Inspection, Measuring, and Test Equipment

- a. Developer shall establish and maintain documented procedures to control, calibrate, and maintain inspection, measuring, and test equipment – including test software – used by Developer to demonstrate the conformance of product to the specified requirements. Inspection, measuring, and test equipment shall be used in a manner that ensures that the

measurement uncertainty is known and is consistent with the required measurement capability.

- b. Developer shall ensure Quality Control is being performed by a group completely independent of the Developer's Project Manager and Construction Contractor. The Independent Quality Control firm or function group (IQCF) shall be an independent group employed by the Developer responsible for administering and managing the construction IQC Inspection, sampling, and Testing. The IQCF and any Subcontractors or sub-consultants thereto must not have any responsibilities for Construction Work scheduling or production activities.
- c. The Developer shall establish, document and implement an IQC program. The Developer shall include in the QMP the methods and procedures by which the Work will be certified by the Developer as complying with the requirements of the Project Agreement.
- d. The IQC program shall be separate from the Developer's PC program.
- e. At a minimum, the IQCF testing shall include the observations, measurements, and documentation specified in the CDOT *Field Materials Manual* and its Frequency Guide Schedule for minimum materials sampling, testing, and inspection for all quality acceptance tests required. Items identified as pre-tested or pre-inspected by the Department shall remain the responsibility of Developer. The IQCF shall document the results and show if the test passed or failed based on the "pass/fail criteria" established in the Project Agreement. The IQCF shall include failing tests results in the test documentation.
- f. IQC personnel shall not participate in any PC activities and shall be independent of the PC personnel.
- g. The Developer shall identify in the QMP all necessary resources and personnel to perform all IQC activities required to ensure all Work meets the requirements of the Project Agreement. The QMP shall identify the construction quality hold points for IQC testing and inspection and shall describe how the Developer will notify the Department so that it may have the opportunity to perform its owner verification responsibilities.

6.2.6. Quality Improvement

- a. The Developer shall establish, document, and implement a program for quality improvement. The Developer shall include in the QMP the methods for identifying, analyzing, evaluating, and implementing solutions to continuously improve quality. The QMP shall establish and maintain specific procedures to ensure a successful Quality Improvement Program.
- b. The Developer shall schedule and perform internal quality audits on the basis of the status and importance of the activity to be audited. The Developer shall conduct weekly quality meetings with affected Developer staff including construction specialty leads, and the Department to discuss open Nonconformance Notices (NCN)s/Nonconformance Reports (NCR)s and quality issues. All unresolved quality issues, including but not limited to NCRs and owner verification NCNs, shall be discussed at these meetings, until resolved. The Developer shall submit an updated Nonconforming Work log to the Department weekly and shall use the log to look for Nonconforming Work trends to determine if Corrective Actions are needed.
- c. The Developer shall ensure timely implementation of the necessary Corrective Actions to improve any nonconformance found during audits. The Developer's follow-up activities shall ensure the implementation and effectiveness of the Corrective Action taken. Corrective Actions shall identify the root causes of deficiencies and shall be developed, implemented, and tracked to prevent the recurrence of future nonconformance. Corrective Actions shall be monitored through review of documents, surveillance, or follow-up audits. The Developer shall keep records of Corrective Actions together with the respective audit records and submit those records to the Department upon request.

- d. The Developer shall consider the Department's verification audits and the overall project goals to determine where Developer quality improvement audits shall be performed and potential Corrective Actions to be implemented.

6.2.7. Quality Personnel

- a. The Developer's executive management shall have overall responsibility for success of the QMP. The Developer's executive management shall have the responsibility to ensure that personnel performing PC and IQC activities have the appropriate education, training, skills, and experience to meet the requirements of the Project Agreement. The Developer shall designate a Project Quality Manager (PQM) who shall not report to Developer's Project Manager, but shall be directly responsible to and report to the Developer's executive management. The PQM shall provide all final checks, approvals, and certifications for quality. The PQM shall be responsible for assuring, certifying, and providing documented evidence that the Work meets the requirements of the Project Agreement. The PQM shall have the authority and responsibility for the success of the Developer's quality program, and shall ensure that authority and responsibilities are defined and communicated within the organization.
- b. The PQM shall be the primary point of contact to the Department for all issues relating to Developer's Quality Management Plan, including preparation, review, implementation, and updates. The PQM, irrespective of other responsibilities, shall have defined authority and responsibility for the following:
 - i. Ensuring that a quality system is established, implemented, and maintained;
 - ii. Reporting quarterly on the performance of the quality system to Developer's executive management and the Department for review and as a basis for improvement of the quality system; and
 - iii. Direct supervision of the IDQM and IQCM and their respective staffs.
- c. The Developer shall assign an Independent Design Quality Manager (IDQM) that reports directly to the PQM and shall be responsible for all design quality control activities for the Work. The Developer shall identify a Design Process Control Manager (DPCM) for all design activities. The DPCM may be employed by the Lead Engineer and shall be responsible for all design PC activities. The IDQM shall not be involved with Construction Work scheduling or production activities, and shall report directly to the PQM. The IDQM shall ensure that the methods and procedures contained in the Approved QMP, related to design, are implemented and followed by the Developer, subcontractors, fabricators, suppliers, and vendors in the performance of the Work.
- d. The Developer shall assign an on-site Construction PC Manager (CPCM) who shall be responsible for management of the PC aspect of the QMP. The CPCM shall not be involved with Construction Work scheduling or production activities, and shall report directly to the Developer's management team. The CPCM shall ensure that the methods and procedures contained in the Approved QMP, related to construction, are implemented and followed by the Developer, subcontractors, fabricators, suppliers, and vendors both on-site and off-site in the performance of the Work.
- e. The Developer shall assign an on-Site Independent Quality Control Manager (IQCM) who shall be a member of the IQCF and independent of Construction Work scheduling or production and shall be responsible for management of the IQC aspect of the QMP. The IQCM shall report to the PQM and to the Department. The IQCM shall not report to any person or party directly responsible for design or construction production.
- f. The IQCM and CPCM shall both have or obtain the American Society for Quality (ASQ) certification as Quality Inspector, Quality Engineer, or Manager of Quality as an NTP2 Condition.

- g. The Developer's PQM, IQCM, IDQM, CPCM, and DPCM shall review and approve the QMP prior to submittal to the Department. The Developer shall assure, certify and provide documented evidence that the Work meets the requirements of the Project Agreement. At a minimum, the PQM shall report the status of the Work's quality monthly to the Department.
- h. All construction IQC testing personnel and PC testing personnel performing concrete and hot bituminous pavement process control tests shall meet the standards established in Section CP-10 of the CDOT *Field Materials Manual*.
- i. All construction IQC inspection personnel performing fabrication inspection of structural steel elements shall be qualified in accordance with Section 4.0 of the *CDOT Staff Bridge Fabrication Inspection Manual, Fabrication Inspection of Structural Steel Items for CDOT Roads and Bridge*.
- j. All construction IQC testing and inspection personnel performing inspections and tests for pre-stressed and precast concrete products shall be qualified in accordance with Section 3.0 of the *CDOT Staff Bridge Fabrication Inspection Manual, Fabrication Inspection of Pre-stressed and Precast Concrete Products*.
- k. The Developer shall ensure that personnel performing Work shall have the education, training, skills, and experience to meet the requirements of the Project Agreement. The Developer shall maintain appropriate personnel records that may be examined by the Department upon request.

6.2.8. Training

- a. The Developer shall establish and maintain documented procedures for identifying training needs and requirements and shall provide training of all personnel performing activities affecting quality. Personnel performing specific assigned tasks affecting quality shall be trained in the specific plans, processes, and procedures as assigned in the QMP (e.g., Materials Testing and Inspection Plan (MTIP), Developer auditing procedures, etc.).
- b. The Developer shall provide training to all personnel that may interface with the Department's oversight efforts (audit process) to ensure they understand their roles and responsibilities for cooperating and responding to audits.

6.3. Quality Management Plan Requirements

6.3.1. The QMP shall state the Developer's commitment to quality and provide a clear definition of the scope of activities and detail the methods to ensure the Work meets the requirements of the Project Agreement. The QMP shall list all deliverables to the Department, as required by the Project Agreement and this Section.

6.3.2. Responsibility and Authority

- a. The Developer shall include in the QMP an organizational chart that illustrates a commitment to an effective quality program to ensure all Work meets the requirements of the Project Agreement. The QMP shall describe the hierarchy of the Developer's organization. The QMP shall graphically depict the principal quality participants, showing lines of responsibility, authority, communication, and interfaces with the Department; other involved agencies; and any other team members having a significant quality role, including subconsultants, Subcontractors, and Suppliers. The PQM, IDQM, DPCM, CPCM (and PC staff) and IQCM (and IQC staff) shall be shown on the organization chart to report to the Developer's executive management and be independent of the Developer's Project Manager. The Developer shall update the organization charts and distribute those charts to the Department when any changes to the organization are made.
- b. The QMP shall describe the roles and responsibilities of the PQM, IDQM, DPCM, CPCM, IQCM, PC and IQC staff, and other key personnel; and shall describe their authority to implement quality improvements for the Work.

- c. The Developer's IQC managers and IQC staff shall have no responsibilities in the management and production of the Construction Work and IQC personnel shall have the authority to stop Work that does not comply with requirements of the Project Agreement.
- d. The responsibilities of all personnel who manage, perform, and ensure the quality of the Work include:
 - i. Initiate action to prevent the occurrence of Nonconforming Work;
 - ii. Identify, evaluate, and document quality problems;
 - iii. Recommend or initiate quality improvement solutions through established organizational channels;
 - iv. Ensure the implementation of quality improvement solutions; and
 - v. When Nonconforming Work is identified, stop all Work that is affected by the Nonconforming Work until the deficiency is corrected.
- e. The PQM, IDQM, DPCM, CPCM, and IQCM shall have the following responsibilities defined in the QMP:
 - i. Facilitate compliance of Work with the requirements of the Project Agreement and the Approved QMP;
 - ii. Approve Developer quality processes and procedures;
 - iii. Provide adequate resources and trained personnel for PC and IQC activities;
 - iv. Ensure the adequacy and enforcement of quality procedures, processes, inspections, and tests for all Work;
 - v. Establish and implement procedures to control and ensure the Work performed by subconsultants, Subcontractors and Suppliers meet the requirements of the Project Agreement;
 - vi. Ensure the QMP is being implemented and report in writing regularly to the Developer's executive management regarding the status of the implementation of the QMP;
 - vii. Ensure that quality records are properly prepared, completed, maintained, and delivered to the Department, as required by the Project Agreement, to provide evidence of PC and IQC activities performed and quality results achieved;
 - viii. Ensure that IQC staff is independent of the Developer's Project Manager and regularly reports to the Developer's executive management; and
 - ix. Continually promote awareness of the requirements of the Project Agreement throughout the Developer's entire project organization.

6.4. Independent Quality Control

6.4.1. General

- a. The Developer shall establish, document, and implement an IQC program. The Developer shall include in the QMP the methods and procedures by which the Work shall be certified by the Developer as complying with the requirements of the Project Agreement.
- b. The QMP shall establish procedures for procuring services. The procedures shall include a review and approval process by the Developer for adequacy of specified technical requirements and the adherence to quality requirements.
- c. The QMP shall describe the measures to be taken to ensure that Subcontractors, Suppliers and subconsultants meet, implement, document, and maintain the QMP requirements.

- d. The selection of Subcontractors, Suppliers and subconsultants and the type and extent of control exercised by the Developer shall be dependent upon the type of product or service and, where appropriate, on records of Subcontractors', Suppliers' and subconsultants' previously demonstrated capability and performance.

6.4.2. Design Quality Control

- a. The QMP shall include procedures that address all elements of design, including, but not limited to, wet and dry utilities, architectural, civil, structural, geotechnical, survey, hydraulic, landscaping, aesthetics, environmental, traffic, safety, ROW, and temporary Work. The Developer shall identify in the QMP all applicable computer programs to develop and check designs.
- b. The QMP shall describe how the design team plans and schedules the design efforts, including task force meetings, design reviews, constructability reviews, design meetings, independent design checks, and discuss how these activities are accounted for in the overall Project Schedule.
- c. The Developer shall identify in the QMP design input requirements. The Developer shall perform ongoing audits of the design input requirements. The Developer shall maintain an accessible, centrally controlled design manual, database, or list that contains all relevant design inputs to be used by design personnel for the Work. The Developer shall provide a process in the QMP to ensure that the design inputs are communicated to, and accessible by, the relevant designers responsible for incorporating design inputs into the design. The Developer shall include in the QMP how changes to design inputs are identified, reviewed, and approved by authorized personnel prior to their implementation. The QMP shall also include:
 - i. Procedures to control and independently ensure that the design meets the requirements of the Project Agreement, including provisions for subconsultant's designs and configuration management activities;
 - ii. Procedures to identify and track design document deliverables;
 - iii. Procedures for Developer approval, tracking and recording revisions to Release for Construction (RFC) Documents. The Developer shall have a formal procedure for comment resolution included in the QMP;
 - iv. Procedures for Developer approval of RFC Documents; and
 - v. Procedures for approval of supplier-provided design drawings (e.g. shop drawings), including opportunity for the Department to perform audits.
- d. The Developer's design quality program shall include processes based on Developer's obligations under this Section 6.4.2.d.
 - i. The Developer shall prepare, and submit to the Department for Acceptance, preliminary (30% level) plan packages which (1) show how the Developer's design meets the Schedule 10 (Design and Construction Requirements) obligations and Ultimate configuration accommodation requirements and (2) include:
 - A. Cover sheet;
 - B. Typical sections;
 - C. Plan and profile for the I-70 Mainline, CDOT Roadways, and Local Agency Roadways;
 - D. Structure Concept Plans including:
 - (I) Plans, elevations, and appropriate typical sections for each bridge type;

- (II) Plan views of the structure identifying each bridge location and type. Include documentation of design vehicle turning movement analysis;
 - (III) Plan views of the structure identifying each wall location and type;
 - (IV) Description of conceptual solutions for complex structural problems identified by the Developer;
 - (V) Description of creative or innovative ways the design, construction, and/or choice of structural types will benefit and/or enhance the Project Schedule, quality, aspects of the structure; and minimize traffic impacts; and
 - (VI) Structure numbers for major structures.
- E. Drainage structure general layouts;
 - F. Master drainage plan (including Groundwater Elevation Plans);
 - G. Master Drainage Report;
 - H. Master Water Quality Report;
 - I. Preliminary wall layouts; and
 - J. Roadway cross sections at 50 foot intervals.
- ii. Task Force Meetings

The Developer shall conduct weekly task force meetings to coordinate the design development within the Developer's organizations and with the Department and other affected agencies. As a minimum, the Developer shall prepare an agenda and conduct each meeting to discuss the status of the design, coordinate the design development between design disciplines, discuss constructability issues, and identify any questions associated with design requirements. The Developer shall take meeting minutes for all task force meetings and provide minutes to the Department for Acceptance within four Working Days after each meeting. The Developer shall provide final minutes to the Department via the Department's document management system on a monthly basis.
 - iii. Design Progress Review Meetings

The Developer shall hold one design progress review meeting during the design development process (e.g., 90% package) and invite the Department to attend. The design progress review meetings shall be scheduled, conducted, and documented by the Developer. The Developer shall take meeting minutes and submit those minutes to the Department for Acceptance within four Working Days after each meeting.
 - iv. Final (100% Level) Plan Package

The Developer shall prepare the final (100% level) plan packages showing how the Developer's design meets the Schedule 10 (*Design and Construction Requirements*) obligations and submit to the Department for Acceptance. After the review period, the Developer shall conduct a comment resolution meeting with the Department. The Developer shall take meeting minutes and submit those minutes to the Department for Acceptance within four Working Days after each meeting.
 - v. RFC Documents and revisions to RFC Documents

RFC Documents shall be submitted for Acceptance by the Department. The RFC Documents shall include an MTIP. This plan shall give testing quantities and frequencies, and IQC inspection quality hold points to confirm minimum QMP requirements have been met. The Developer's Project Quality Manager shall approve the RFC Documents prior to RFC. The Developer shall submit one electronic copy of the RFC Documents to the Department. The Developer's IQC process for the RFC Documents shall be thoroughly documented in the Developer's QMP.

- vi. Prior to release of RFC Documents for structure construction, the following items shall be required:
 - A. The independent design check shall have been completed per the CDOT *Bridge Design Manual* and the original final structural design calculations shall be revised and corrected based on comments from the independent design check for the structural element to be constructed.
 - B. The Rating Package as defined in the CDOT *Rating Manual* shall be completed prior to release of the superstructure construction drawings.

vii. As-Built Documents

As-Built documents shall be submitted to the Department for Acceptance. The Department may audit As-Built documents to ensure completeness and compliance with the requirements of the Project Agreement. The Department shall not Accept As-Built documents until the Developer has addressed, resolved, and incorporated, to the satisfaction of the Department, any prior Developer or Department comments. The Developer shall ensure and provide documentation to the Department that all review comments have been addressed. The As-Built documents shall be bundled into packages that match the RFC design Deliverable packages. The As-Built documents submittal shall include:

- A. All plans reflecting RFC Documents or revisions to RFC Documents;
 - B. Resolution of nonconformance;
 - C. Design calculations;
 - D. Design reports;
 - E. Specifications;
 - F. Electronic CADD files, as specified elsewhere in the Project Agreement; and
 - G. Index summarizing all revisions to initial RFC Documents.
- viii. The Developer shall include in the QMP a process for a licensed engineer in responsible charge for the design to prepare, review, and approve all changes, including field design changes, RFC Documents, and As-Built documents. The Developer shall maintain a master list of approved design changes. The QMP shall include a process to communicate design changes to those completing the Work on a timely basis consistent with the progress of construction activities.

ix. Environmental review

The Developer shall include in the QMP a process for Environmental review prior to submission of final (100% level) plan packages showing how the Developer's design meets the Environmental Requirements, including the Developer's obligations under Schedule 17 (*Environmental Requirements*).

x. ROW processes and documents

All ROW processes, exhibits, plans, appraisals and appraisal reviews, value findings, and acquisition and relocation files shall undergo a Developer prepared IQC review process to ensure compliance with the Uniform Act, Colorado State Statutes, Department procedures and the Developer's obligations under Schedule 18 (Right-of-Way). In the event of an instance of nonconformance or an audit of the Developer's IQC process identifies a nonconformance with Schedule 18 requirements, the Department may elect and engage, at the expense of the Developer, a firm to conduct its own quality review. In such event, the Developer shall implement corrective and preventative actions to eliminate recurrence.

6.4.3. Construction Quality Control

a. The Developer shall perform and document all required construction PC and IQC activities necessary to control the Work. The QMP shall extend to both permanent and temporary Work (erosion control, traffic control, drainage, etc.). Records of inspection and testing activities (other than materials inspection and testing) shall be submitted to the Department through Aconex. Records of materials inspection and testing shall be submitted to the Department through the Department's Quality Records Database (QRD), a secure web-based application. The Department will provide user accounts and training for use by the Developer of the QRD. Materials test reports will also require entry of meta-data fields for analysis and comparison to the Department's verification test results.

b. As a minimum, the Developer's construction IQC Program shall include the elements defined below:

i. Certification:

The Developer shall include in the QMP a process to submit certificates to the Department at the following times that the Work performed meets the requirements of the Project Agreement (such certificates to be in the form set out in Appendix B to this Schedule 8, amended as appropriate in the case of certificates required to be submitted pursuant to Section 6.4.3.b.i.D):

- A. prior to each Milestone Completion;
- B. prior to Substantial Completion;
- C. prior to Final Acceptance; and
- D. at any other time requested by the Department (including in relation to any Renewal Work).

ii. Inspection:

The Developer shall include in the QMP, and submit to the Department for Approval, an MTIP that shall include detailed inspection procedures to be used in cases where inspections are to serve as the basis for verifying compliance with the requirements of the Project Agreement. The Developer shall submit to the Department (A) all records of inspection and testing (other than materials inspection and testing) through Aconex and (B) all records of materials inspection and testing through the Department's QRD. The Developer shall conduct each inspection in accordance with the Approved QMP. The Developer shall document whether the inspections passed or failed based on the "pass/fail criteria" established in the procedure and the requirements of the Project Agreement; (e.g., concrete depth checks on deck pours, rebar clearance/size, locations, elevations, stationing etc.). The Developer shall include failing inspection results, when applicable, in the inspection documentation.

iii. Testing:

At a minimum or unless otherwise specified in this Project Agreement, the Developer shall follow the CDOT *Field Materials Manual* and its Frequency Guide Schedule for minimum Materials sampling, testing, and inspection requirements identified under the column titled "Work Verification Sampling & Testing Frequency" for all IQC tests required. The Developer shall document the results of all testing (showing if the test passed or failed based on the "pass/fail criteria" established in the Project Agreement) and submit such results to the Department through Aconex (other than the results of materials testing, which shall be submitted through the Department's QRD). The Developer shall include failing tests results in the test documentation. Independent Laboratories shall submit signed and certified test reports to the Developer not more than 10 Working Days after completion of the tests for all tests which require an independent Laboratory. The Department may witness any test conducted for Independent Assurance purposes. The Developer shall develop and maintain a current test log for all tests required by the Project Agreement. As a minimum, the Developer shall document results of tests in report format and include the following:

- A. Project Agreement Project identification number
- B. Identification of items tested
- C. Quantity
- D. Date and time test conducted
- E. Location of items tested
- F. Test procedure used
- G. Name of technician
- H. Acceptance criteria
- I. Results - Acceptance or rejection
- J. Authorized signature

iv. Certificate of Compliance, Certified Test Report and Buy America documentation:

- A. The Developer shall include in the QMP a method of handling and documenting work/products accepted in the Work by Certificate of Compliance (COC) or Certified Test Report (CTR).
- B. The Developer shall include in the QMP a method for documenting and tracking, on a basis consistent with Developer's Progress Reporting, compliance with Buy America Requirements of 23 CFR 635.410, and at a minimum shall address the following obligations of the Developer:
 - (I) The Developer shall maintain on file certifications that every process, including the application of a coating, performed on steel or iron products either has or has not been carried out in the United States of America. This certification applies to every iron or steel product that requires pre-inspection, pretesting, certified test results, or a certificate of compliance. The Developer shall obtain such a certification from each supplier, distributor, fabricator, and manufacturer that has handled each steel or iron product. These certifications shall create a chain of custody trail that includes every supplier, distributor, fabricator, and manufacturer that handles the steel or iron product. The lack of these certifications shall be justification for rejection of the steel or iron product.

- (II) The Developer shall maintain a document summarizing the date and quantity of all steel and iron material delivered to the Project. The document shall show the pay item, quantity of material delivered to the Project, along with the quantity of material installed by the cutoff date for the monthly Progress Report. The summary shall also reconcile the pay item quantities to the submitted Buy America certifications. The Developer shall also maintain documentation of the project delivered cost of all foreign steel or iron permanently incorporated into the Project. Such summary and the cost information shall be submitted to the IDQM within five Working Days of the cutoff date for each monthly Progress Report during (I) the Construction Period and (II) during the Operating Period for any month in which any Renewal Work is being performed that includes steel or iron products. A monthly summary shall be required even if no steel or iron products are incorporated into the Project during the month. The summary document does not relieve the Developer of providing the necessary Buy America certifications of steel and or iron prior to permanent incorporation into the Project.
- C. The Developer shall obtain COCs and CTRs prior to incorporation in the Work and maintain a complete log of all COCs and CTRs. The Developer shall make the log and all COCs/CTRs available for owner verification at any time during normal business hours and shall submit the COC/CTR log for Acceptance prior to Substantial Completion.
- D. The Developer shall include in its COC/CTR log signed certification that all materials represented by each COC/CTR were installed in the Work. Certification shall be in accordance with requirements of the Project Agreement.
- v. Quality Reviews:

The Developer's PQM or designated representative shall document formal reviews to verify that the Approved QMP is being effectively implemented.
- vi. Environmental compliance in Construction:

The Developer shall include in the QMP a Section detailing the IQC activities that will be performed to ensure compliance during construction of all environmental requirements. IQC staff oversight of all Schedule 17 (*Environmental Requirements*) elements that apply to construction is required. These elements include but are not limited to: construction air quality, construction noise, noxious weed management, landscape planting and establishment, water quality, protection of wetlands and other sensitive areas, hazardous materials and environmental hardscape elements such as noise walls.

6.4.4. Materials Testing and Inspection Plan

- a. The Developer shall prepare and implement a MTIP as part of the QMP that includes the appropriate criteria, tests, and inspection requirements identified in CDOT's *Standard Specifications, Field Materials Manual, CDOT Staff Bridge Fabrication Inspection Manual*; Developer-prepared inspection checklists; and requirements as set forth herein.
- b. The MTIP shall describe all of the proposed inspections and tests procedures, including products provided by suppliers during the manufacturing, receiving, and installation process, to ensure the requirements of the Project Agreement are met. The MTIP shall identify all inspections and tests required and include, at a minimum, reference to the requirements of the Project Agreement, frequency of the inspections and tests, and the Developer-prepared IQC processes. Where no inspections or test standard exists in any of

CDOT's manuals, the Developer shall develop criteria, in writing, based upon the best-available industry standard information and technology.

- c. The MTIP shall include procedures for delivery, handling, and storage of furnished products ensuring that they are properly handled and stored to prevent damage, deterioration, or theft. It shall also document procedures for stored items and materials consistent with the expected duration and type of storage, and procedures for monitoring special processes utilized in fabrication, assembly, and testing of specified products. Special processes are those requiring qualified/certified production, inspection, and test personnel to perform highly skilled work, such as welding, brazing, soldering, non-destructive testing, machining, coating, or plating.
- d. The MTIP shall describe all IQC inspection and test activities to be carried out including quality hold points, and establish authority within the Developer's organization for releasing Work beyond the quality hold point. While the Developer shall notify the Department when Work has progressed to a quality hold point, it shall be the responsibility of the Developer's Quality Managers to verify that all requirements have been met prior to allowing the Work to progress.
- e. The MTIP shall include a summary of activity-specific material quantities to document that the minimum sampling, testing, and inspection requirements have been met. This summary shall be performed and provided to the Department for Acceptance monthly. The Developer may follow the CDOT Form 250 as a minimum basis for their materials documentation record.
- f. The MTIP shall include processes to control, calibrate, and maintain test equipment to ensure it meets industry standards and other applicable requirements. Test equipment used by the Developer shall be of a quality and capacity that ensures that measurements made are to levels of accuracy and precision that are required by the test procedure. The MTIP shall:
 - i. Identify the test required and the accuracy required, and select the appropriate test equipment;
 - ii. Define procedures to calibrate all test equipment prior to initial use and at prescribed maintenance intervals against certified equipment and measurement standards of the National Institute of Standards and Technology or other similar recognized technical standards customarily accepted in the industry. Where no standard exists, the basis for calibration shall be developed in writing based upon the best-available information and technology;
 - iii. Identify test equipment with a suitable indicator to show the calibration status of the test equipment;
 - iv. Maintain current calibration records for test equipment;
 - v. Define procedures to ensure that environmental conditions are suitable for calibrating test equipment;
 - vi. Define procedures to ensure that the handling and storage of test equipment is such that the accuracy and fitness for use is maintained;
 - vii. Define procedures to safeguard test equipment, including test hardware and test software, from adjustments that would invalidate calibration settings; and
 - viii. Identify procedures with respect to the paving for the Project that includes the following:
 - A. A thorough definition of pavement smoothness and quality, which shall be the same for all travel lanes and shoulders, and the identification of steps for maintaining these criteria, including defined hold points and potential corrective measures;

- B. Detailed information on identification of potential issues affecting quality such as smoothness, dumping and batching;
- C. Procedures for monitoring, minimizing and correcting for lane to lane roughness variation;
- D. Procedures for the control of segregation in HMA paving, and process to address unacceptable segregation that includes, at a minimum, a stop work provision and root cause analysis prior to restart;
- E. Procedures for dowel bar placement and Magnetic Imaging Tools (MIT) testing and auditing, including the Developer's obligation to provide additional test sections for MIT testing and auditing at the Department's discretion; and
- F. A Portland cement concrete pavement (PCCP) plan for addressing noted issues with performance and procedures to correct such issues.

6.4.5. Quality Hold Points

- a. Developer shall establish Quality Hold Points (QHPs) at stages of the construction progress to ensure Work is performed in accordance with Developer's Quality Management Plan and within the terms and conditions of the Project Agreement. Prior to reaching the first instance of any QHP, the Developer's PQM, IQCM and IDQM shall meet to review documentation and procedures for PC/IQC, including but not limited to material certifications, daily inspection records, material testing results, survey results, permits, and material placement records. The Developer shall invite the Department to each of these meetings. Developer's PQM shall coordinate group members to ensure that QHP checks are accomplished in a timely manner so that Developer is not delayed. When an identified QHP is reached, the PQM shall notify both IQC and the Department. IQC shall be solely responsible for verifying and documenting whether Work has been completed for the QHP. Notification that a QHP has been reached while Work is still being performed or not allowing adequate time to complete the QHP review and opportunity for adjustments (e.g., concrete trucks are queuing while reinforcement is still being placed and QHP is being reviewed for a specified unit) shall result in the issuance of a Nonconformance Report.

At a minimum, Developer shall establish QHPs at the following stages of construction:

- i. Environmental:
 - A. After the establishment of Water Quality BMPs, and prior to initial ground disturbance;
 - B. Upon completion of surveys for nesting birds and protected species, prior to ground disturbance, in accordance with Project Special Provision 240, Schedule 17 (Environmental Requirements);
 - C. Upon completion of protection of environmental resources, in accordance with Schedule 17 (Environmental Requirements), where fencing or other appropriate protection mechanism is required, prior to ground disturbance; and
 - D. At the end of each month to review Developer's weekly and post-storm inspections.
- ii. Embankments:
 - A. After the completion of drainage and Utility Relocations and prior to backfill;
 - B. After clearing, grubbing, and excavation to check subgrade;
 - C. Per specifications for lift requirements at 5 foot intervals of embankment construction;

- D. After the completion of mechanically stabilized earth (MSE) wall panel placement; and
 - E. At the completion of embankment placement.
- iii. Structures:
- A. At the completion of placement for bridge deck reinforcement and prior to the placement of concrete;
 - B. At the completion of placement for abutment wall reinforcement and prior to the placement of concrete;
 - C. After the completion of pile-driving at each structure support, including pile-driving results and records;
 - D. At the completion of placement for footing reinforcement steel and prior to the placement of concrete;
 - E. At the completion of excavation for drilled shaft foundations and prior to concrete placement;
 - F. After setting rails for screed machine and prior to placing concrete overlays;
 - G. After the completion of the first component to receive specified aesthetic wall treatment/form liner and prior to proceeding with the construction of subsequent components; and
 - H. After the completion of every 500 feet of noise wall posts and panels.
- iv. Utilities:
- A. After the installation of direct-burial duct banks and prior to backfill operations;
 - B. For concrete-encased duct banks, after the installation of conduits and prior to the placement of concrete; and
 - C. For all Utility lines intended to transport pressurized materials and lines intended to carry liquids, after the installation and prior to the completion of pressure testing.
- v. Paving and sidewalks:
- A. Before the placement of each course above subgrade on permanent roadway components;
 - B. Before the placement of each lift of asphalt or Portland cement concrete; and
 - C. Prior to the placement of concrete for sidewalks.
- vi. ITS and Tolling:
- A. After the completion of the requirements identified in each of Schedule 10, Sections 3.5.7, 3.5.8 and 3.5.9 and prior to the ETC System Integrator's work;
 - B. After completion of staking for ITS and tolling locations and prior to installation, per Schedule 10, Section 3.8.8.a.i;
 - C. After installation of manhole, pull box, or conduit and prior to backfilling;
 - D. After installation of sign structures, pole and mounting brackets; and prior to installation of ITS devices; and

- E. After fiber installation and prior to fiber splicing or cutover, per Schedule 10, Section 3.8.8.b.iii and 3.8.26.a.

6.4.6. Reporting and Record-Keeping of Quality Documentation

- a. The Developer shall maintain construction workmanship and materials quality records of all inspections and tests performed per the QMP. These records shall include factual evidence that the required inspections or tests have been performed, including type and number of inspections or tests involved; results of inspections or tests; nature of Nonconforming Work and causes for rejection, etc.; proposed remedial action; and Corrective Actions taken. These records shall cover both conforming and Nonconforming Work, and shall include a statement that all supplies and materials incorporated in the Work are in full compliance with the Project Agreement.
- b. The Developer's Quality Managers shall ensure that quality records are properly prepared, completed, maintained, and delivered to the Department, as required by the Project Agreement, to provide evidence of the quality activities performed and quality results achieved.
- c. The Developer shall submit all IQC test measurements and test results, including failing results, and inspection records. The Developer shall submit test data and approved test results to the Department for Information using Aconex (or, in the case of data and results related to materials testing, through the Department's QRD) within 24 hours following the inspection or test completion. The responsible technician and the technician's supervisor shall sign the daily test reports.
- d. The Developer's Quality Managers shall also maintain a daily log of all inspections performed for both Developer and sub-contractor operations. The daily inspection reports shall identify inspections conducted, dates of inspections, results of inspections, locations and nature of defects found, causes for rejection, and remedial or corrective actions taken or proposed. The responsible technician and the technician's supervisor shall sign the daily inspection reports. These daily inspection reports shall document the day's events, activities, and discussions in a format consistent with the requirements contained within CDOT's *Field Materials Manual* and *Construction Manual*.
- e. To enhance coordination of the Department's Independent Assurance activities during construction, the Developer shall provide the Department with a weekly look ahead of specific scheduled construction activities designating location and planned quantities of materials to be placed, and protocols for identifying completed Work. The Developer shall provide the Department with the actual construction activities conducted during the previous week, designating location and quantities of materials that were placed.

6.5. Nonconforming Work

- 6.5.1. The QMP shall include procedures to develop and maintain a system to identify, control, remedy and report Nonconforming Work, including Nonconforming Work identified through the issuance of a NCN by the Department. The Developer shall remedy Nonconforming Work in accordance with the Approved QMP. The responsibility for review and authority for the disposition of Nonconforming Work shall be defined in the QMP. The Developer shall document the identification of Nonconforming Work by completing and submitting a NCR to the Department as soon as reasonably practicable, and in any event within 24 hours, after the Developer first becomes aware of the Nonconforming Work. Each NCR shall include:
- a. Identification of Nonconforming Work, including tagging work products;
 - b. Evaluation of the Nonconforming Work, including the cause thereof;
 - c. Recommendation for "reject" or "remedy" disposition (including, in the case of a "remedy" disposition, details of the recommended Nonconforming Work Remedy);
 - d. Schedule for completion of any applicable Nonconforming Work Remedy, including, if the Developer considers that Appendix A-1 or Appendix A-2 to Schedule 11 Operations and

Maintenance Requirements applies to any Nonconforming Work that is O&M Work, the remedy period for completion of such Nonconforming Work Remedy that applies pursuant to such Appendix;

- e. Signature lines for the Department's Approval of (i) the disposition and (ii) in the case of a "remedy" disposition, the recommended Nonconforming Work Remedy, including the Schedule for completion thereof. The Developer shall not commence with any Nonconforming Work Remedy or progress beyond Nonconforming Work until the Department has provided its Approval;
 - f. If applicable:
 - i. a Corrective Action Plan detailing the proposed Corrective Action in relation to such Nonconforming Work and to prevent recurrence;
 - ii. responsibility for accomplishing Corrective Action through a Corrective Action Plan;
 - iii. Schedule for completion of Corrective Action;
 - g. Signature line for the Department's Approval of any applicable Corrective Action Plan;
 - h. Signature lines for the design or construction IQC Manager verifying that any applicable Nonconforming Work Remedy has been completed;
 - i. Signature lines for the design or construction IQC Manager verifying that any applicable Corrective Action has been completed in accordance with the Corrective Action Plan;
- provided that:
- A. the initial NCR submitted to the Department pursuant to this Section 6.5.1 in respect of any Nonconforming Work shall only be required to include the information required by Section 6.5.1.a and, if known at the time of submission of the NCR, Section 6.5.1.b; and
 - B. the information required by Sections 6.5.1.b (if not included in such initial NCR) and c through j shall only be required to be included in the updated NCR submitted to the Department pursuant to Section 6.5.2 of this Schedule 8.
- 6.5.2. Within five Working Days after the issuance by the Developer of any initial NCR pursuant to Section 6.5.1 of this Schedule 8, the Developer shall submit an updated NCR to the Department for Approval that recommends, as appropriate, a "reject" or "remedy" disposition for the Nonconforming Work and, in the case of a recommended "remedy" disposition, should identify the Nonconforming Work Remedy it proposes, together with the other information required to be included in such updated NCR in accordance with proviso B to Section 6.5.1 of this Schedule 8.
- 6.5.3. Prior to the submittal of any updated NCR to the Department, the Developer's Project Manager shall approve (a) the recommended disposition specified in such NCR and (b) in the case of a "remedy" disposition, the recommended Nonconforming Work Remedy.
- 6.5.4. The Developer's Project Quality Manager shall document the completion of any Nonconforming Work Remedy and, if applicable, any Corrective Action, once accomplished, and promptly notify the Department so that the Department can perform its verification.
- 6.5.5. The QMP shall include procedures for controlling the use of Nonconforming Work including the tagging of Nonconforming Work products. Nonconforming Work product tags shall only be removed by the originator of the NCR or the originator's supervisor, and only when the Developer demonstrates to the Department that the Nonconforming Work product meets the requirements of the Project Agreement.
- 6.5.6. For verification and acceptance purposes, the Department will perform assessment of the Work. These efforts do not relieve the Developer of responsibility for checking all Work. The Department will forward all assessment reports and NCNs to the Developer. NCNs may be:

- a. Level 1, identifying Nonconforming Work that represents an immediate or imminent health or safety hazard, nuisance or other similar immediate or imminent risk to Users or workers or an immediate or imminent risk of structural failure, damage to a third party's property or equipment or damage to the Environment; or
 - b. Level 2, identifying any other category of Nonconforming Work.
- 6.5.7. Within 24 hours of the issuance of a Level 1 NCN and within five Working Days of issuance of a Level 2 NCN by the Department, the Developer shall respond to the Department by submitting an NCR (which shall include all information specified in Sections 6.5.1.a through i of this Schedule 8 in respect of the Nonconforming Work identified in the NCN) for Approval. The Department shall provide user accounts and training for this purpose. The Developer shall describe in the QMP its approach and methodology for resolving and responding to any NCNs issued by the Department.
- 6.5.8. Corrective and Preventative Action
- a. The QMP shall describe corrective and preventative action ("Corrective Action") procedures that the Developer shall use to identify and improve processes and remedy issues that produce, or may produce, systemic Nonconforming Work. The Developer's Corrective Action procedures shall include:
 - i. Methods to investigate the cause of systemic Nonconforming Work and to determine what Corrective Action is needed to prevent recurrence;
 - ii. Methods to analyze all processes, Work operations, quality records, service reports, and Department assessments/testing to detect and eliminate the possibility of systemic Nonconforming Work from occurring;
 - iii. Methods to prioritize Corrective Action efforts based upon the level of risk to the quality of the Work;
 - iv. Controls to ensure that effective Corrective Action is taken when the need is identified; and
 - v. Methods to implement and record changes in procedures resulting from any Corrective Action.
 - b. If systemic Nonconforming Work is identified by the Developer or identified by the Department by the issuance of a corrective action request (CAR) notice to the Developer, the Developer shall submit a Corrective Action Plan to the Department.
- 6.5.9. Punch List Work
- The Developer shall develop Punch Lists and Punch List logs recording information required to demonstrate the Developer's compliance with Section 5 of Part 7 of Schedule 3 Commencement and Completion Mechanics. All Punch Lists and Punch List logs shall be completed by PC and IQC personnel. The Department and other affected agencies shall be invited by the Developer to attend walks of the Work to include items on Punch Lists. The Developer shall provide all Punch Lists and Punch List logs for Approval to the Department.
- 6.5.10. The provisions of this Section 6.5 are without prejudice to the provisions of Schedule 6 Performance Mechanism.

6.6. Quality Assurance Oversight

6.6.1. Department Quality Oversight

- a. The Department retains the responsibility for acceptance of the Work as required in Title 23, Code of Federal Regulations, Part 637.
- b. The Department will periodically audit the Developer's Quality Management activities, including conducting independent verification sampling and testing to assess the Developer's compliance with the requirements of the Project Agreement. The Department

reviews of sampled Work for Project Agreement compliance are defined as verification reviews. The four types of the Department verification reviews are:

- i. Design verification reviews: The Department will perform design verification reviews on the products of design (drawings, specifications, and other design deliverables) on an ongoing basis during the Work. The Developer shall submit documents for design verification reviews to the Department for Acceptance a minimum of five Working Days in advance of review meeting.
 - ii. Construction verification Inspections: The Department will perform construction verification inspections on construction activities.
 - iii. Construction verification Testing: The Department will perform sampling and Testing of materials to validate the Developer IQC testing program. Verification Test results will be stored in the QRD.
 - iv. Process Audits: The Department will perform process audits on the implementation of all Developer Work activities, excluding design and construction. Such activities may include the requirements of the Project Agreement, such as public information, maintenance of traffic, environmental compliance, safety, project management processes, and meeting the requirements of the Approved QMP.
- c. Verification reviews will entail the collection and documentation of objective evidence to determine whether the requirements of the Project Agreement have been met. The results of the Department verification reviews will be recorded by the Department and will be documented within the Department's QRD. Any NCNs identified by the Department require a response within the QRD.
- d. Department will provide the Developer access to the Department's QRD application to review and respond to observations made during Department Quality Oversight activities. Developer is required to utilize the Department's QRD application to record all material test quality records, and to respond to Department generated observations. Developer is given the option of either directly entering all PC/IQC observations and material test results into the Department's QRD application or providing Department with data collected during PC/IQC efforts in an electronic format compatible for batch upload into Department's QRD application. Department generated observations will be identified either as conforming or nonconforming to related requirements of the Project Agreement. Department observations will be presented to Developer through Department Quality Oversight Verification Reports. A construction Nonconformance Report will be closed by Department upon the verification of a resolution of the issue Approved by the Department.

6.6.2. Department Owner Verification Testing

The Department will perform periodic verification tests to ensure that the Developer's materials meet the requirements of the Project Agreement. The Department will enter verification test results in the QRD. The Department will perform a statistical analysis to ensure that the Developer's IQC test results correlate statistically with the Department verification test results and meet the requirements of the Project Agreement. If the Department determines that the compared test results do not correlate, the Department will follow procedures outlined in the CDOT *Field Materials Manual* for Non-Validation and Status of Material Quality.

6.6.3. Independent Assurance

- a. The Department will perform Independent Assurance tests to ensure that:
 - i. Developer IQC personnel are trained and certified and demonstrate that they understand the test procedures they are performing;
 - ii. Department verification personnel are trained and certified and demonstrate that they understand the test procedures they are performing;

- iii. The test equipment used by the Developer IQC personnel, and Department verification personnel, is calibrated; and
- iv. Split sample test results correlate.
- b. Independent Assurance test results will also be used as referee tests to assess statistically significant differences, determined by the Department in its sole discretion, between Developer IQC tests and the Department verification test results.
- c. IAT will be on a system basis and not a project basis.

6.6.4. Governmental Authority Inspections

Governmental Authorities shall have the right to inspect the Work, provided that the Governmental Authority has jurisdiction over the Work and as required by Law.

6.7. Deliverable Requirements

6.7.1. Quality Management Plan

The Developer shall submit the Stage 1 QMP to the Department for Approval as an NTP1 Condition. The Stage 2 QMP for all remaining Work must have the Department's Approval as an NTP2 Condition. NTP2 will not be issued until the Stage 2 QMP has been Approved by the Department.

6.7.2. Design Deliverables

- a. The Developer shall submit to the Department all RFC Documents, revisions to RFC Documents, and As-Built documents.
- b. The Developer shall identify on its Project Schedules when RFC Documents and As-Built documents will be submitted to the Department. The schedule shall also reflect changes to the Work as a result of revisions to RFC Documents having been made.
- c. The Developer shall provide one set of electronic files of the design deliverables to the Department. As-Built documents shall show all changes. All changes shall be noted using CADD. Hand-drawn changes are not permitted.
- d. The design deliverables shall be delivered to the Department indexed and clearly marked to indicate the date of issue and stage of development (e.g., RFC Documents). All design deliverables shall include a title block, consistent with the standard Work drawing format established as part of the QMP, with the following information:
 - i. Date of issuance and including all prior revision dates;
 - ii. Contract title and number;
 - iii. The names of the Developer, sub-consultants, subcontractors, suppliers, and manufacturers, as applicable; and
 - iv. Subject identification by Developer drawing or Project Agreement reference.
- e. All design deliverables shall be sealed by the Developer's engineer consistent with Law. All design deliverables shall include a sufficient blank space, in the lower right corner, just above the title block on the drawings, and in the lower right corner of the title page of specifications and calculations, in which the Developer's engineer may indicate the action taken, indicating his or her review and approval.
- f. If a design deliverable requires review approval from a Local Agency or permitting authority, the Developer shall obtain such approval pursuant to Section 5 of Schedule 9.
- g. Specifications or CDOT Standard Special Provisions applicable to a design deliverable shall be submitted with the design deliverable.
- h. When calculations accompany drawings in a submittal, the body of the calculations shall contain cross-references to the individual drawing to which the pages of the calculations

pertain. Calculations required shall demonstrate conformance with the requirements of the Project Agreement.

- i. The CADD drawings and associated documents shall be organized in a logical manner, have a uniform and consistent appearance, and clearly depict the intent of the design and construction. In addition:
 - i. The software requirements for all submitted design deliverables shall be InRoads/MicroStation, in accordance with the current CDOT standards in effect. Project files shall be organized and submitted in accordance with CDOT's ProjectWise format.
 - ii. The Developer shall prepare As-Builts for the Work that shall include, but not be limited to, the following:
 - A. Title sheet;
 - B. Index;
 - C. Standard Plan List;
 - D. Roadway design data;
 - E. General notes;
 - F. Pavement details;
 - G. Roadway details;
 - H. Drainage details;
 - I. Geotechnical plans;
 - J. Environmental mitigation, as necessary;
 - K. Permanent signing plans and sign structure cross-sections;
 - L. Signalization plans;
 - M. Aesthetic elements;
 - N. Roadway typical sections;
 - O. Roadway geometric layout plans;
 - P. Roadway geometric layout tables;
 - Q. Roadway plan;
 - R. Roadway profile;
 - S. Detour construction and phasing plans;
 - T. Detour construction and phasing profiles;
 - U. Intersection plans;
 - V. Pavement plans;
 - W. Drainage plan;
 - X. Drainage profiles;
 - Y. Pavement marking plans;
 - Z. Utility plans;
 - AA. Right-of-Way plans, for Developer acquisitions;
 - BB. Right-of-Way monumentation plans;

- CC. ITS, ATM, and Tolling plans;
 - DD. ITS Communication Network plans;
 - EE. Landscape/seeding plans;
 - FF. Grading plans;
 - GG. Lighting plans;
 - HH. Bridge plans;
 - II. Wall and shoring plans;
 - JJ. Roadway cross sections;
 - KK. ROW plans for Developer acquisitions;
 - LL. Estimated material quantities;
 - MM. Other details, as needed; and
 - NN. Specifications
- iii. The Developer shall provide one set each of electronic files of Utility As-Built documents to the Department and to the respective Utility Owner for Utility Work constructed by the Developer, within 90 Calendar Days after the Utility Owner has accepted the Utility Work. These electronic deliverables shall conform to those requirements set forth in the Project Agreement for CADD requirements, except as modified by the specific requirements of the individual Utility Owners. The Utility As-Built documents shall show locations of existing Utilities, structures, trees, streets, and existing highway ROW limits. Additionally, the Developer shall obtain from each Utility Owner performing its own Utility Relocations Utility As-Built documents for such Utility Relocations showing the foregoing information, and shall deliver one set of electronic files of such documents on DVD to the Department. The Developer shall show this information on the As-Built documents. All As-Built documents electronic files shall be submitted in MicroStation and *.pdf format, or other formats as accepted by the Utility Owner;
 - iv. CADD files shall be in accordance with the appropriate Department standards. All CADD files shall be documented in a tabular format describing the path, file name, and description.
 - v. The structure of the reference drawings, Contract Drawings, and CADD files are recommended as a guideline for file setup.

6.7.3. Document and Data Approval

The Developer shall ensure that all deliverables include a signed and dated certification by the originator of the deliverables and that the deliverable is complete and meets the requirements of the Project Agreement.

6.7.4. Document and Data Changes

The Developer shall ensure that any changes to deliverables provided to the Department as revised are in a format that can enable changes to be readily apparent and trackable (e.g., documents use the redline/strikeout method).

6.7.5. Product Data

The Developer shall submit to the Department for Acceptance one electronic copy of all manufacturers' warranties, guarantees, instruction sheets, parts lists, and other product data within 20 Working Days after installation of the items to which they relate, and in any event prior to Substantial Completion. The Developer shall ensure that the product data cited in this Section

is organized and indexed in a manner that allows easy retrieval of information. The Developer shall maintain proper records of product data.

7. SAFETY MANAGEMENT

7.1. General

7.1.1. The Developer shall be responsible for the establishment, control, direction, and implementation of a comprehensive safety plan that protects the safety of its personnel and the general public affected by the Project.

7.1.2. The SMP shall fully describe the Developer's policies, plans, training programs, Site controls, and incident response plans to ensure the health and safety of personnel involved in the Project and the general public affected by the Project during the Term of the Project Agreement. The SMP shall be signed by the Safety Manager, approved (signed) by a member of the Developer's executive management, and shall include Work performed by any Subcontractor.

7.2. Personnel Requirements

7.2.1. The Developer shall provide a Safety Manager with the authority to implement and manage the Developer's SMP. The Safety Manager shall have a high degree of program visibility and shall have authority to perform independent safety evaluations, and to ensure that safety issues are acted on in a timely manner. The minimum experience requirements for the Developer's Safety Manager are a safety professional meeting the following minimum qualifications:

- a. Certification as a Safety Professional (CSP) or Certification as an Industrial Hygienist (CIH).
- b. A minimum of five years of progressively responsible construction safety experience specifically related to highway capital development projects.
- c. A minimum of five years of experience in the development of comprehensive safety programs, policies and procedures including the development and implementation of employee safety training programs.
- d. A minimum of five years of experience in occupational safety accident investigation, accident report writing, and OSHA accident reporting.

7.2.2. Resume and qualifications summary for the Developer's Safety Manager shall be provided with the SMP.

7.3. Submittal

7.3.1. The Developer's SMP shall be submitted for Acceptance as an NTP1 Condition and, at a minimum shall include the following:

- a. The Developer's commitment and policies on safety and health;
- b. Organizational chart identifying all safety management personnel, roles, authorities, and line reporting relationships. Resumes of key safety management personnel shall be provided;
- c. Developer's approach to educating, training, and communicating to all workers procedures within the SMP. Safety orientation shall be conducted prior to employees entering the Construction Work area;
- d. Procedures for the identification of employees successful completion of safety orientation, and segregation of employees that have not completed safety orientation;
- e. Provisions for and the frequency of safety inspections of the Construction Work areas, materials, and equipment to ensure compliance to the SMP, including methods of record keeping and correction of deficiencies;
- f. An internal traffic control plan that describes the Developer's method or protocol to coordinate worker, work vehicle, and equipment movements in an activity area of a work zone;

- g. Provisions for delineation of responsibilities for reporting and investigating accidents, incidents, exposures, and maintaining logs;
- h. Policy for Developer's emergency response, addressing emergency response capabilities and contingency action plans;
- i. Policy on the use of Personal Protective Equipment (PPE) for all Construction Work;
- j. Developer's detailed Construction Safety Critical Plan which shall include an Erection plan, a Bridge Removal Plan, and a Removal of Portion of Bridge Plan, as applicable, as well as other requirements specified in the Revision of 107 set out in the Project Special Provisions set out in Appendix A to this Schedule 8;
- k. Procedures for immediate notification to the Department of all incidents arising out of or in connection with the performance of the Work, whether on or adjacent to the Project; and
- l. The SMP is a living document and shall be updated when a process, method, chemical or other Construction Work criteria changes that affects the safety of a person or property. The updated portion of the SMP shall be submitted for Acceptance.

7.3.2. Project staff must be trained on the elements of the Developer's Accepted SMP submittal.

8. DURABILITY PLAN

- 8.1.** Sixty (60) Calendar Days after NTP1 the Developer shall submit for the Department's Acceptance a Durability Plan addressing durability for all Residual Elements with a specified minimum Residual Life of forty (40) years or greater. When developing a design deliverable package that involves a Residual Element with a specified minimum Residual Life of 40 years or greater, the Durability Plan for the relevant Elements in the design package shall be updated and submitted with the final plan sets. The Durability Plan shall indicate the durability design basis and the measures in place to ensure the durability requirements are reflected in the final plan sets. Following completion of the final plan sets and prior to Substantial Completion the Durability Plan shall be submitted to the Department for Acceptance to confirm it addresses durability in relation to the completed final plan sets and that the Plan covers the relevant Residual Elements. The Durability Plan shall be updated as necessary based on this review and submitted for Acceptance.
- 8.2.** Following Substantial Completion the Durability Plan shall be reviewed annually by the Developer to ensure that it is consistent with the Maintenance Management Plan and takes account of improvements in industry practice in testing and forecasting Residual Life. Any changes to testing methodologies shall demonstrate a correlation with the superseded methodology so that previous measurements remain relevant to the accurate prediction of the degradation of the relevant Residual Element. The Developer shall make any updates required and submit to the Department for Acceptance.
- 8.3.** The Durability Plan shall indicate the maintenance and monitoring strategy, outline the process for establishing the Residual Life in order to fulfill the requirements of Schedule 12 (Handback Requirements) for each relevant Residual Element, and shall describe a methodology for the replacement of life expired relevant Residual Elements.
- 8.4.** The Durability Plan shall include the following, at a minimum:
 - a. Identification of each relevant Residual Element with the corresponding environmental exposure conditions for each Element (e.g., buried, submerged, exposed to atmosphere, exposed to corrosive chemicals). Some Elements may be exposed to more than 1 environmental condition (e.g., foundations in water table, foundations in areas with petroleum contamination), which might require different corrosion considerations for each exposure;
 - b. Identification of relevant degradation and protective mechanisms for each structural Element, quantifying the degradation processes and resistances to these processes with respect to time. The time-related changes in performance for each relevant Residual

Element at intervals not exceeding 10 years up to the end of the required Residual Life. The design life shall be predicted using deterministic models, published industry guidance and test data, allowing for the environmental conditions, and any proposed protective measures. The models and all assumptions shall be clearly indicated in the plan;

- c. Description of measures taken during construction to ensure the assumed quality of construction is achieved (e.g., uniform compaction of embankment, adequate concrete cover, proper curing, etc.);
- d. Summary of the above information, for each Element, in a tabular format and an estimate of life-cycle costs for the Structure;
- e. List of manufacturers of all proposed durability enhancement measures, including coatings, inhibitors, sealers, and membranes;
- f. Schedule for corrosion inspection of structural Elements indicating the parameters to be measured in order to confirm the underlying performance relative to that predicted in the design, gathered at intervals of not more than 10 years from Substantial Completion; and
- g. Proposed maintenance Schedule for items/materials that could be affected by corrosion.

8.5. Cathodic protection shall not be used to mitigate expected corrosion effects.

8.6. For each Structure, the Developer shall prepare an addendum to the Durability Plan indicating the impact of the as-built condition (including Nonconforming Work and testing data) on the predicted design service life and maintenance and inspection regime.

9. MEETINGS

9.1. Meeting Minutes

Unless notified otherwise by the Department, the Developer shall be responsible for developing meeting minutes for all Project related meetings between the Developer and the Department or the Enterprises, between the Developer and counterparties to Third Party Agreements, and between the Developer and other Governmental Agencies and stakeholders. All meeting minutes shall be submitted to the Department within four Working Days following the meeting either for Acceptance where expressly provided in the Project Agreement or otherwise for Information.

9.2. Task Force Meetings

9.2.1. At a minimum, the Developer shall conduct and take meeting minutes of task force meetings for the following disciplines to facilitate "over the shoulder" review of the design:

- a. Drainage;
- b. Roadway;
- c. Structures;
- d. Traffic/ITS/tolling;
- e. Maintenance of Traffic (refer to Schedule 10, Section 2 Maintenance of Traffic for further requirements related to such meetings);
- f. Fire and Life Safety;
- g. Cover;
- h. Utilities;
- i. Right-of-Way;
- j. Environmental (refer to Schedule 17 (Environmental Requirements) for further requirements related to such meetings); and
- k. Strategic Communications.

9.2.2. Meeting minutes for each task force shall be provided to the Department within four Working Days following the meeting for Acceptance.

9.3. Design Progress Review Meetings

The Developer shall hold Design Progress Review Meetings as described in Section 6.4.2 of this Schedule 8. Meeting minutes will be documented and submitted to the Department for Acceptance within four Working Days after each meeting.

9.4. Safety Meetings

The Developer shall conduct regularly scheduled project safety meetings, tool box talks, etc., as specified in its SMP.

9.5. Quality Meetings

The Developer shall conduct weekly quality meetings with representatives from Quality Control, Quality Assurance, and the Department, in accordance with this Schedule 8.

10. PHOTOGRAPHS AND VIDEO

10.1. Pre-Construction Photographs and Video

The Developer shall take a sufficient number of pre-construction photographs and a 1080p HD resolution, or greater, video of the Site, including roadways, structures, drainage, and all areas necessary and/or anticipated to be impacted by the Construction Work in HD format so as to resolve any disputes which may arise regarding the conditions prior to and subsequent to construction. Such preconstruction photo and video survey shall be completed prior to the NTP1 and data provided to the Department for Information. If a dispute arises where no or insufficient photographic or video evidence of its existing condition is available, the disputed area shall be restored to the extent directed by the Department at no additional cost to the Department.

10.2. Progress Photographs

10.2.1. At a minimum, the Developer shall take eight megapixel resolution or greater, aerial photographs of the Construction Work and Site every three months. Aerial photographs shall include all areas under construction, whether temporary or permanent, and all other areas impacted, each time they are taken. One series of oblique photographs shall be taken from one direction along the corridor. The Department's confirmation shall be sought regarding views to be taken and the approximate time at which they will be taken;

10.2.2. The Developer shall provide the Department one complete set of high quality aerial photographs on DVD. The file format shall be .jpg, .gif, or .tiff; and

10.2.3. The Developer shall provide interior and exterior photographs of each buried structure, just prior to burial. Provide a minimum of four internal views (as applicable) and four external views of each structure. Place the following information on the front of digital photographs:

- a. Date photograph was taken;
- b. Title of Project;
- c. Description of view shown in photograph;
- d. Identification of photographer; and
- e. Sequential number of photograph.

10.3. Time Lapse Photography

The Developer shall provide a continuous time-lapse photo of the viaduct area of the Project from the point of NTP1 to Final Acceptance. Time-lapse camera shall be positioned at a location determined by the Department. Photos shall be uploaded to the Project website in real-time. Resolution shall be 12 megapixels or greater. Camera shall be capable of continuous streaming of data to the web.

11. FACILITIES PROVIDED BY DEVELOPER

- 11.1.1. The Developer shall provide all office space, equipment, and vehicles as required for the Project. The Developer shall provide space and facilities to allow the Department's staff to co-locate with the Developer's staff. "Co-locate" shall mean located within the same building or office complex.
- 11.1.2. The Developer shall make available its proposed facilities for inspection and Acceptance by the Department prior to the Department occupying any Developer provided facilities. Developer shall obtain Acceptance by the Department no later than 30 Calendar Days after NTP1. Both parties shall participate in a facility condition inspection prior to and at the completion of occupancy. The Department shall return possession of Developer provided facilities to the Developer in the same condition as when the Department initially occupied the facilities, except for reasonable wear and tear.
- 11.1.3. The Developer shall secure sites, obtain all site Permits, install, set up, and provide Utility services, and maintain the facilities as part of the Construction Work.
- 11.1.4. In the event that office spaces or appurtenant facilities are stolen, destroyed, or damaged during the Construction Work, the Developer shall at its expense repair or replace those items provided to their original condition within five Working Days, or as Accepted by the Department, except for any loss or damage caused as a direct result of willful misconduct of Department personnel, which the actual, reasonable, and documented costs of the repair, replacement, and/or restoration will be reimbursed by the Department.
- 11.1.5. The Developer shall provide office space (the Department offices) and equipment for 50 Department personnel, including at least 10 private offices, specified herein. The Department offices shall meet the BOMA Class B definition for the North Denver Area, similar to the space provided for the US36 project.
- a. The proposed facilities shall be located within a one and a half mile radius of I-70 between I-25 and Quebec Street. The Developer shall be required to furnish the Department's staff with offices that are in good and serviceable condition (condition comparable to the Developer's office space);
 - b. The Developer shall maintain the Department offices until at least Final Acceptance unless otherwise agreed to by the Department. The Department may, at its option, vary the number of its staff throughout the duration of the Project. However, the Developer shall maintain the initial number and size of the Department offices, conference rooms, reception area, break room and filing area (the Department Office Facilities) until Final Acceptance following the Construction Period;
 - c. The Developer shall be responsible for disposal or removal of all the Department office facilities and any site restoration Construction Work required;
 - d. The Developer shall provide:
 - i. Telephones and telephone service with at least one outside line for each Department office, reception area, conference rooms, break room, and filing room;
 - ii. High-speed Internet connection (100 megabyte/sec or greater, synchronous transfer rate business class Ethernet system) and networking for all offices and conference rooms;
 - iii. A server room (seven feet x 10 feet minimum) for the Department's sole use with supplemental air conditioner if internal air conditioner cannot keep the room (with Department installed server equipment) at or below 75 degrees at all times. This room shall be no further than 300 feet from the farthest cube/office. Electrical in the server room shall consist of two 20-AMP 120V circuits with 2 National Electrical Manufacturers Association (NEMA) 5-15 and 1 NEMA 5-20 outlet on each circuit;
 - iv. Overhead lighting meeting Occupational Safety & Health Administration (OSHA) and code requirements for office space;

- v. Two color laser printer/copiers capable of 45 ppm input and output at 600 x 600 dpi and at least two paper drawers accepting 8-1/2 x 11 inch up to 11 x 17 inch paper and paper weights from 16 to 24 lb. bond, including paper, toner, service and repairs. The unit shall be capable of scanning documents to 11 x 17 inch size and transmitting the scanned file to multiple email addresses; and
- vi. Office space not less than the size indicated below:
 - A. Private offices shall be 150 square feet of enclosed office space (with individual locking door) per office;
 - B. Partitioned office shall be 100 square feet enclosed office space per office (cubicles/partitions are acceptable);
 - C. One enclosed conference room with doors capable of accommodating a 30 person meeting, with at least 50 percent of seating capacity at the conference table. This can be a shared conference room between the Developer and the Department, provided that the Department shall be afforded exclusive access during 50 percent of the working hours between 7:00 am and 5:00 pm;
 - D. One enclosed conference room with doors for the Department's exclusive use capable of accommodating a 20 person meeting, with a 15 person seating capacity at the conference table. The conference room shall be in an adjacent space to the Department Offices;
 - E. Break room shall be 150 square feet with sink, counter, microwave, and 20 cubic- foot refrigerator, and drinking water and dispenser;
 - F. Filing space shall be enclosed, with lockable door and 15 steel, five-drawer, locking, lateral file cabinets (approximate size shall be 18 inches by 42 inches). The file room shall also have two 30 x 72-inch utility tables with two chairs each. This space shall be of sufficient size to accommodate the requested equipment and accommodate four staff members (to typical industry standards). This space shall not be shared with any other room;
 - G. One reception area with common access to the Department Offices; and
 - H. Storage room: 150 square feet, enclosed with lockable door.
- e. Furnishings, as follows:
 - i. Conference Room
 - A. Conference table and chairs;
 - B. Wastebasket; and
 - C. Hanging, erasable white board that is four feet by six feet minimum.
 - ii. Offices
 - A. Desk that is minimum size 76 x 36 inches with locking drawers and keys;
 - B. Computer workstation desk capable of holding a desktop printer, monitor, keyboard, and any accessories;
 - C. Worktable (private offices only);
 - D. Ergonomically correct, OSHA-approved chairs;
 - E. Extra office chair;
 - F. Wastebasket;

- G. Hanging, erasable white board, minimum three feet by four feet (private offices only); and
 - H. Bookshelf.
- f. Indoor restrooms suitable for number of offices and personnel, including separate facilities for men and women;
 - g. Hard-surfaced (paved) parking, one space per employee, plus 10 visitor spaces (50 total);
 - h. Daily janitorial service;
 - i. Maintenance of the exterior area of office, including access to parking and snow removal;
 - j. Facilities that meet American with Disabilities Act (ADA) access requirements and meet all local code requirements for office space;
 - k. Heating, ventilation and air conditioning/cooling systems capable of maintaining an office temperature range of between 68 degrees and 76 degrees (Fahrenheit);
 - l. 24 hours a day, seven days a week secure access; and
 - m. A secure single point visitor check in location and staffing to direct visitors to the appropriate team member.

11.1.6. Design-Build Field Laboratory (Owner Verification Testing)

The Developer shall provide two Field Laboratories, Class 2, as per CDOT *M & S Standard Plans*, at a location to be agreed upon by the Department and the Developer. The field Laboratories shall have a minimum of three parking spaces per trailer, all contained within a security fence. The field Laboratories shall be provided to the Department at least 15 Working Days prior to commencement of any field activities involving earthwork of any type, analysis of mix designs, or planned placement of Portland cement concrete pavement (PCCP) or hot bituminous pavement (HBP) and shall have a forced air oven and high-speed Internet connection.

11.1.7. Project Vehicles

- a. The Developer shall, within 30 Calendar Days after NTP1, provide 2- 2017-2018 (110 cu. ft. EPA passenger volume or greater) five-passenger, four-wheel drive, Crossover sport utility vehicles, 6- 2017-2018 (150 cu. ft. EPA passenger volume or greater) seven-passenger, four-wheel drive, Crossover sport utility vehicles, and 4- 2017-2018 four-wheel drive Crew Cab (full-size class) pickups, including delivery charges, full service, all applicable taxes, and full coverage insurance, license plate fees, all maintenance, and all other cost inherent to provisions of said vehicles, excluding fuel expense. The vehicles shall be used exclusively by the Department's staff until Final Acceptance;
- b. The Project Vehicles shall:
 - i. Be new, white in color, and complete with all standard equipment;
 - ii. Comply with the Motor Vehicle Safety Standards, as established by the U.S. Department of Transportation;
 - iii. Have Developer maintained ownership and title of the vehicles during the period they are in the possession of the Department; and
 - iv. In case of fire, theft, accident, or breakdown, be repaired or replaced within 48 hours of such occurrence.
- c. General equipment for the vehicles shall include:
 - i. Four Door;
 - ii. Engine – standard available for each identified model type;

- iii. Tires and wheels – standard size for each identified model type, with all season steel-belted radial tires;
 - iv. Power anti-lock brakes and power steering;
 - v. Automatic transmissions;
 - vi. Vinyl floor mats;
 - vii. Rear window wiper and defroster – electric type (Crossover sport utility type only);
 - viii. Directional signals with 4-way flasher;
 - ix. Inside rear view mirror – day/night type;
 - x. Exterior mirrors – left and right mounted, power adjustable;
 - xi. Air conditioner/heater;
 - xii. Radio – AM/FM push-button (minimum);
 - xiii. Windshield wipers – variable speed with intermittent control; and
 - xiv. Hood release – inside vehicle.
- d. General vehicle light bar shall be as follows:
- i. Five-passenger Crossover sport utility vehicles shall be equipped with two amber LEDs on the front grille or one within each headlamp lens, two amber LEDs on the lower portion of the rear liftgate or one within each tail lamp lens, two amber LEDs mounted to the rear portion of the interior headliner and facing to the rear so as to be visible through the rear window, and a full-length light bar (type: Whelen Justice or equivalent) affixed to the roof. The light bar shall be mounted as close to center of the vehicle as practicable but may be mounted rearwards if it is deemed to be more visible. The light bar shall be amber with white work lights to the front, rear, and sides. The light bar shall be wired so that it is operable while the engine is on and off.
 - ii. Seven-passenger Crossover sport utility vehicles shall be equipped with two amber LEDs on the front grille or one within each headlamp lens, two amber LEDs on the lower portion of the rear liftgate or one within each tail lamp lens, an amber dual LED mounted to the front portion of the interior headliner and visible to the front, an amber dual LED mounted in each rear side window and visible to the sides, and a traffic indicator (type: Whelen Dominator Plus 6 or equivalent) mounted inside the rear window, as high as practicable, so as to be visible to the rear.
 - iii. Pickup trucks shall be equipped with two amber LEDs on the front grille or one within each headlamp lens, two LEDs within the tail lamp lenses, and a full-length light bar (type: Whelen Justice or equivalent) mounted to the top of the cab, centered approximately between the front and rear axles. Pickup trucks equipped with headache racks shall have the light bar affixed to the top of the headache rack rather than to the cab roof. The light bar shall be wired so that it is operable while the engine is on and off.
 - iv. Light bars and LEDs shall be programmed to flash amber and white alternately to increase visibility.
- e. Vehicle Graphics shall be as follows:
- i. All Developer provided Project vehicles shall be equipped with one row of high-visibility reflective chevrons, approximately 4” tall and spanning the width of the vehicle, to be mounted to the rear bumper. If the vehicle is equipped with a split rear bumper, the chevrons may be affixed to the lowest portion of the rear tailgate or liftgate practicable. Adjustments for manufacturer’s logos and body lines are

permitted within reason. Chevrons should be placed with consideration for maximum visibility.

12. PROJECT DIRECTORY

The Developer shall furnish and maintain to the Department a Project Directory listing the names, addresses and telephone numbers (office, home, cellular, etc.) of the Key Personnel and critical support staff of the Developer and each Subcontractor. The Project Directory shall be submitted to the Department, prior to issuance of the NTP1, for Information. The Developer shall update the Project Directory quarterly for the duration of the Construction Work and with any Key Personnel changes.

13. DOCUMENT MANAGEMENT

13.1. General Requirements

- 13.1.1. The Developer shall establish and maintain its own Document Control System (DCS) to store and record all correspondence, drawings, progress reports, technical reports, specifications, deliverables, calculations, and administrative documents generated under the Project Agreement. The Developer shall also establish correspondence routing, filing, control, and retrieval methods that are compatible with the Department's DCS. Document Control, storage, and retrieval methods shall include the use of both hard copies and electronic records. The Developer's DCS shall handle all documents.
- 13.1.2. The Department will use Aconex as its DCS, a web-based information management system. Aconex will be the only recognized method for transmittal of formal project correspondence, documents and information (other than for service of legal process). Where it is necessary to transmit original signed documents, these shall be acceptable forms of correspondence only when they have been issued via Aconex first. The provisions of this Section 13.1.2 are subject to the provisions of Section 1.2.7 of Schedule 15.
- 13.1.3. The Developer shall use the Department's Aconex system when communicating with the Department. This includes use for all Document Control related documents, transmitting deliverables, and email correspondence purposes for the duration of the Project. The Aconex system will be used by all participants engaged on this Project, including Subcontractors of any tier, Suppliers and their subsequent legal successors in title. It is the Developer's responsibility to ensure consistency with this procedure subject to the provisions of Section 1.2.7 of Schedule 15.
- 13.1.4. Access to the Department's Aconex system and web-based certified and payroll and contractor compliance system will be provided to the Developer and all Subcontractors free of charge for the duration of the Project.
- 13.1.5. The Department, at its sole discretion, may elect to use an alternative DCS during the course of the Term. In such case, the Developer shall use this alternative DCS for all correspondence with the Department as described herein.
- 13.1.6. All correspondence of the Developer to and from the Department and its representatives with respect to the Project shall be categorized and serialized by a method Accepted by the Department. The Developer shall maintain separate incoming and outgoing correspondence logs. Developer correspondence serialization shall be submitted for Acceptance by the Department prior to NTP1.
- 13.1.7. The following is the minimum criteria that the Developer's DCS shall provide:
 - a. Access shall be provided to the Department on a real-time basis that can only be attained through the Internet. The Developer shall maintain industry standards for Internet connectivity as determined by the Department.
 - b. The Developer's incoming and outgoing correspondence logs shall be available to the Department within 24 hours.
 - c. Documents within the Developer's DCS must be transferable to the Department's DCS. The transfer of documents shall be performed through the Internet.

- d. The Department and CCD shall have read only access to the latest set of drawings that are produced during the Construction Period.
- e. Process Control (PC) and Independent Quality Control (IQC) data, such as test results, daily inspection records, non-conformance reports, etc., shall be stored by the Developer within their DCS. Real-time access by the Department to PC/IQC data shall be required. PC/IQC data shall be transferred to the Department’s DCS on a monthly basis.

14. DELIVERABLES

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the timeframes specified below:

Table 2 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Project Management Plan (PMP)	Acceptance	Prior to the issuance of NTP1, updated annually
WBS	Acceptance	Prior to the issuance of NTP1
Baseline Schedule	Acceptance	Prior to the issuance of NTP1
Revised Baseline Schedule	Acceptance	Upon the Department’s or Developer’s request
Draw Down Schedule	Information	Prior to the issuance of NTP1
Progress Report format	Approval	Within 10 Working Days after the issuance of NTP1
Progress Report	Acceptance	10 Working Days following prior month’s end
Schedule Work Plan	Acceptance	Prior to the issuance of NTP1
Monthly Progress Schedule	Acceptance	Concurrent with each Progress Report
Maintenance Progress Report	Information	Concurrent with each Progress Report
Record Schedule	Acceptance	Concurrent with final Progress Report
Developer Provided Facilities	Acceptance	30 Calendar Days after NTP1
Pre-construction photo and video survey	Information	Prior to the issuance of NTP1
Project Directory	Information	Prior to the issuance of NTP1
Developer DCS correspondence categorization and serialization method	Acceptance	Prior to the issuance of NTP1
Safety Management Plan (SMP)	Acceptance	Prior to the issuance of NTP1
Stage 1 Quality Management Plan (QMP)	Approval	Prior to the issuance of NTP1
Stage 2 Quality Management Plan (QMP)	Approval	Prior to the issuance of NTP2

Deliverable	Information, Acceptance, or Approval	Schedule
Updates to Stage 1 or Stage 2 QMP	Approval	As needed to document changes to quality program
Evidence of ASQ certification of IQCM and CPCM as per <u>Section 6.2.7.f</u> of this <u>Schedule 8</u>	Information	Prior to the issuance of NTP2
Durability Plan	Acceptance	60 Calendar Days after the issuance of NTP1; following completion of final plan sets and prior to Substantial Completion; annually thereafter
Meeting Minutes to be submitted for Acceptance per the Project Agreement	Acceptance	Four Working Days after meeting
Preliminary (30% level) plan package	Acceptance	As defined in Project Schedules
Meeting minutes, other than those required to be Accepted	Information	Four Working Days after meeting
Task force meeting minutes	Acceptance	Four Working Days after meeting
Design progress review meeting minutes	Acceptance	Four Working Days after meeting
Quality Manager reports the status of the Work's quality	Information	Monthly
Materials Testing and Inspection Plan (MTIP)	Approval	Concurrent with QMP
Materials Testing and Inspection Plan (MTIP)	Acceptance	Concurrent with RFC Documents
Summary of activity-specific Material quantities	Acceptance	Monthly
Final (100% level) plan sets	Acceptance	As required by <u>Schedule 10</u>
Release for Construction Documents	Acceptance	As required by <u>Schedule 10</u>
Revisions to Release for Construction Documents	Acceptance	As required by <u>Schedule 10</u>
As-Built Documents	Acceptance	As required by <u>Schedule 10</u>

Deliverable	Information, Acceptance, or Approval	Schedule
One electronic copy of all manufacturers' warranties, guarantees, instruction sheets, parts lists, and other product data	Acceptance	Within 20 Working Days after installation of the items to which they relate, and in any event prior to Substantial Completion
COC/CTR log	Acceptance	Prior to Substantial Completion
IQC test measurements and test results	Information	Within 24 hours following inspection or test completion
Weekly look ahead of specific scheduled construction activities	Information	Weekly
Description of actual construction activities conducted during the previous Week	Information	Weekly
Nonconformance Report	Approval	As required by <u>Section 6.5</u> of this <u>Schedule 8</u>
Nonconforming Work log	Acceptance	Weekly
Corrective Action Plan	Approval	As required by <u>Section 6.5</u> of this <u>Schedule 8</u>
Punch Lists and Punch List logs	Approval	As required by <u>Part 7</u> of <u>Schedule 3</u>

15. APPENDICES

- Appendix A Project Special Provisions
- Appendix B Certificates for Construction Work Completion

Appendix A
Project Special Provisions

The following specifications modify and take precedence over the Standard Specifications. The provisions of Appendix A to Schedule 10A (*Applicable Standards and Specifications*) apply to these Project Special Provisions.

PROJECT SPECIAL PROVISIONS

	<u>Page</u>
Index	8-50
Revision of Section 107 – Performance of Safety Critical Work	8-51 to 8-53

**REVISION OF SECTION 107
PERFORMANCE OF SAFETY CRITICAL WORK**

Section 107 of the Standard Specifications is hereby revised as follows:

Add subsection 107.061 immediately following subsection 107.06 as follows:

107.061 Performance of Safety Critical Work. The following work elements are considered safety critical work for this project:

- (a) Overhead girder erection
- (b) Overhead structure construction or repair
- (c) Removal of bridge
- (d) Removal of portion of bridge
- (e) Temporary works: falsework, shoring that exceeds 5 feet in height, cofferdams, and temporary bridges
- (f) Work requiring the use of cranes or other heavy lifting equipment to set a girder, to make overhead repairs, or includes special provisions for Removal of Bridge or Removal of Portion of Bridge. Also when construction materials are being lifted that may fall onto active traffic lanes.
- (g) Blasting
- (h) Excavation and embankment adjacent to the roadway, especially if it requires shoring
- (i) Tunneling
- (j) Work operations such as pile driving and jack hammering which may create vibration and cause debris to fall into traffic.
- (k) Rockfall mitigation

The Contractor shall submit, for record purposes only, an initial detailed construction plan that addresses safe construction of each of the safety critical elements. When the specifications already require an erection plan, a bridge removal plan, or a removal of portion of bridge plan, it shall be included as a part of this plan. The detailed construction plan shall be submitted two weeks prior to the safety critical element conference described below. The construction plan shall be stamped "Approved for Construction" and signed by the Contractor. The construction plan will not be approved by the Engineer.

The Construction Plan shall include the following:

- (a) Safety Critical element for which the plan is being prepared and submitted.
- (b) Contractor or subcontractor responsible for the plan preparation and the work.
- (c) Schedule, procedures, equipment, and sequence of operations, that comply with the working hour limitations

-2-

**REVISION OF SECTION 107
PERFORMANCE OF SAFETY CRITICAL WORK**

- (d) Temporary works required: falsework, bracing, shoring, etc.
- (e) Additional actions that will be taken to ensure that the work will be performed safely.
- (f) Names and qualifications of workers who will be in responsible charge of the work:
 - 1. Years of experience performing similar work
 - 2. Training taken in performing similar work
 - 3. Certifications earned in performing similar work
- (g) Names and qualifications of workers operating cranes or other lifting equipment
 - 1. Years of experience performing similar work
 - 2. Training taken in performing similar work
 - 3. Certifications earned in performing similar work
- (h) The construction plan shall address how the Contractor will handle contingencies such as:
 - 1. Unplanned events (storms, traffic accidents, etc.)
 - 2. Structural elements that don't fit or line up
 - 3. Work that cannot be completed in time for the roadway to be reopened to traffic
 - 4. Replacement of workers who don't perform the work safely
 - 5. Equipment failure
 - 6. Other potential difficulties inherent in the type of work being performed
- (i) Name and qualifications of Contractor's person designated to determine and notify the Engineer in writing when it is safe to open a route to traffic after it has been closed for safety critical work.
- (j) Erection plan or bridge removal plan when submitted as required elsewhere by the specifications. Plan requirements that overlap with above requirements may be submitted only once.

A safety critical element conference shall be held two weeks prior to beginning construction on each safety critical element. The Engineer, the Contractor, the safety critical element subcontractors, and the Contractor's Engineer shall attend the conference. Required pre-erection conferences or bridge removal conferences may be included as a part of this conference.

-3-

**REVISION OF SECTION 107
PERFORMANCE OF SAFETY CRITICAL WORK**

After the safety critical element conference, and prior to beginning work on the safety critical element, the Contractor shall submit a final construction plan to the Engineer for record purposes only. The Contractor's Engineer shall sign and seal temporary works, such as falsework, shoring etc., related to construction plans for the safety critical elements, (3) Removal of Bridge, (4) Removal of Portion of Bridge and (5) Temporary Works. The final construction plan shall be stamped "Approved for Construction" and signed by the Contractor.

The Contractor shall perform safety critical work only when the Engineer is on the project site. The Contractor's Engineer shall be on site to inspect and provide written approval of safety critical work for which he provided signed and sealed construction details. Unless otherwise directed or approved, the Contractor's Engineer need not be on site during the actual performance of safety critical work, but shall be present to conduct inspection for written approval of the safety critical work.

When ordered by the Engineer, the Contractor shall immediately stop safety critical work that is being performed in an unsafe manner or will result in an unsafe situation for the traveling public. Prior to stopping work, the Contractor shall make the situation safe for work stoppage. The Contractor shall submit an acceptable plan to correct the unsafe process before the Engineer will authorize resumption of the work.

When ordered by the Engineer, the Contractor shall remove workers from the project that are performing the safety critical work in a manner that creates an unsafe situation for the public in accordance with subsection 108.05.

Should an unplanned event occur or the safety critical operation deviate from the submitted plan, the Contractor shall immediately cease operations on the safety critical element, except for performing any work necessary to ensure worksite safety, and provide proper protection of the work and the traveling public. If the Contractor intends to modify the submitted plan, he shall submit a revised plan to the Engineer prior to resuming operations.

All costs associated with the preparation and implementation of each safety critical element construction plan will not be measured and paid for separately, but shall be included in the work.

Nothing in the section shall be construed to relieve the Contractor from ultimate liability for unsafe or negligent acts or to be a waiver of the Colorado Governmental Immunity Act on behalf of the Department.

Schedule 9 Submittals

1. Definitions

The following terms have the respective meanings set out below for all purposes of this Schedule 9:

“Deliverable for Acceptance” means any Deliverable that, pursuant to this Agreement, must be submitted either:

- (a) for Acceptance; or
- (b) for consent, approval or like assent, to the extent that the Department is or the Enterprises are, as applicable, pursuant to the express provisions of this Agreement, required to act reasonably in deciding whether to give such consent, approval or like assent.

“Deliverable for Approval” means any Deliverable that, pursuant to this Agreement, must be submitted either:

- (a) for Approval; or
- (b) for consent, approval or like assent, to the extent that such is, pursuant to the express provisions of this Agreement or pursuant to Section 2.2.4.b of the Project Agreement, in, as applicable, the Department’s or the Enterprises’ discretion.

“Deliverable for Information” means any Deliverable that, pursuant to this Agreement, must be submitted by Developer for Information.

“Deliverable for Third Party Review” means any Reviewable Deliverable that requires review or approval by a Governmental Authority, Utility Owner, Railroad or other third Person in addition to the review or approval by the Department or the Enterprises.

“DRTL” has the meaning given to it in Section 7(a) of this Schedule 9.

“Restricted Activity” has the meaning given to it in Section 3(a) of this Schedule 9.

“Reviewable Deliverable” means any Deliverable that is a Deliverable for Approval, a Deliverable for Acceptance or a Deliverable for Information.

“RFC Deliverable” means any RFC Document that is a Deliverable.

2. General

(a) This Schedule 9 shall govern all Reviewable Deliverables to be submitted either to the Department or the Enterprises pursuant to this Agreement.

(b) For purposes of Sections 3, 4, 6 and 9 of this Schedule 9 only, any reference to:

(i) “Acceptance”, “Accept”, “Acceptable” or “Accepted” shall be deemed to include any other form of consent, approval or like assent to the extent that the Department is or the Enterprises are, as applicable, pursuant to the express provisions of this Agreement:

- (A) required to act reasonably in deciding whether to give; or
- (B) otherwise precluded from unreasonably withholding, such consent, approval or like assent; and

- (ii) “Approval”, “Approve” or “Approved” shall be deemed to include any other form of consent, approval or like assent to the extent that such is, pursuant to the express provisions of this Agreement or pursuant to Section 2.2.4.b of the Project Agreement, in, as applicable, the Department’s or the Enterprises’ discretion.
- (c) Developer shall develop and implement procedures for handling, storing, packing, tracking and submitting Reviewable Deliverables as part of its Quality Management Plan pursuant to Section 6.2.1.f.xviii of Schedule 8 (Project Administration). Such procedures shall comply, and be consistent, with this Schedule 9.

3. Restrictions on Work Prior to Review

- (a) Except to the extent expressly permitted by Section 3(b) of this Schedule 9, Developer shall not commence or perform, and shall ensure that none of its Subcontractors nor any of their respective Subcontractors shall commence or perform, any part of the Work (each such part, a “Restricted Activity”) to the extent that such Restricted Activity is the subject of, governed by or otherwise conditioned on the submission, review, Approval or Acceptance of any Reviewable Deliverable unless and until:
 - (i) in respect of a Deliverable for Approval:
 - (A) either the Department or the Enterprises, as applicable, has unconditionally Approved such Reviewable Deliverable; or
 - (B) (I) either the Department or the Enterprises, as applicable, has conditionally Approved such Reviewable Deliverable pursuant to Section 6(b)(i)(B) of this Schedule 9, (II) Developer has, as applicable, complied with or responded to, or agreed in writing to comply with or respond to, all relevant conditions and comments related to such Reviewable Deliverable and (III) no resubmission of such Reviewable Deliverable is required either (x) as a result of the application of Section 9(b)(ii) of this Schedule 9 or (y) pursuant to Section 9(d) of this Schedule 9;
 - (ii) in respect of a Deliverable for Acceptance:
 - (A) either the Department or the Enterprises, as applicable, has unconditionally Accepted such Reviewable Deliverable;
 - (B) (I) either the Department or the Enterprises, as applicable, has conditionally Accepted such Reviewable Deliverable pursuant to Section 6(b)(ii)(B) of this Schedule 9, (II) Developer has, as applicable, complied with or responded to, or agreed in writing to comply with or respond to, all relevant conditions and comments related to such Reviewable Deliverable and (III) no resubmission of such Reviewable Deliverable is required either (x) as a result of the application of Section 9(b)(ii) of this Schedule 9 or (y) pursuant to Section 9(d) of this Schedule 9; or
 - (C) if either the Department has or the Enterprises have, as applicable: (I) failed to respond in any way to such Reviewable Deliverable within any applicable period determined in accordance with Sections 6(a)(i) and 6(a)(ii) of this Schedule 9; and (II) subsequently failed to respond to any notice regarding such failure as determined in accordance with Section 6(a)(iv) of this Schedule 9,
in which event the Department or the Enterprises, as applicable, shall be deemed to have unconditionally Accepted such Reviewable Deliverable;
and

- (iii) in respect of a Deliverable for Information, either the Department or the Enterprises, as applicable, has had at least 15 Working Days to review and comment on such Reviewable Deliverable after it was first submitted.
- (b) Notwithstanding Section 3(a) of this Schedule 9, Developer may itself, and may permit its Subcontractors to, commence or perform any Restricted Activity prior to Developer, or any such Subcontractor, otherwise being permitted to do so pursuant to Section 3(a) of this Schedule 9:
 - (i) if the Restricted Activity is the subject of, governed by or otherwise conditioned on the submission, review or Acceptance of any Deliverable for Acceptance or any Deliverable for Information; and
 - (ii) only to the extent permitted by any Approved Quality Management Plan, provided that:
 - (A) for certainty, this Section 3(b) of this Schedule 9 shall in no circumstance apply to any Restricted Activity that is the subject of, governed by or otherwise conditioned on the submission, review or Approval of any Deliverable for Approval;
 - (B) any Restricted Activity undertaken by Developer, or any Subcontractor, pursuant to this Section 3(b) shall be conducted at Developer's sole cost and risk without prejudice to the Department's and the Enterprises' continuing rights of review, comment and Acceptance of any relevant Reviewable Deliverables under this Schedule 9; and
 - (C) Developer shall at all times remain responsible for complying with the outcome of the Department's and the Enterprises' review, comment and Acceptance process under this Schedule 9, at Developer's sole cost and risk, including any and all reconstruction, alterations, modifications or other remedial work to Work already completed as may be necessary to comply with such outcome.

4. **Submission of Deliverables**

- (a) Each Reviewable Deliverable submission shall:
 - (i) include a signed and dated certification by Developer in form and substance reasonably Acceptable to the Department or the Enterprises, as applicable, that such Reviewable Deliverable is complete, is suitable for the purpose for which it is submitted and meets the requirements of this Agreement; and
 - (ii) be accompanied by such supplemental reference information and materials as are reasonably requested by the Department or the Enterprises in advance.
- (b) Developer may resubmit any previously submitted Deliverable for Approval or Deliverable for Acceptance, as applicable, that was not previously Approved or Accepted, or otherwise consented to, approved or assented to, without conditions, provided that Developer clearly identifies and documents in its resubmission how all prior conditions and comments have been addressed.

5. **Third Party Review**

- (a) Developer shall submit to either the Department or the Enterprises, as applicable, each Deliverable for Third Party Review concurrently with its submission to the relevant Governmental Authority, Utility Owner, Railroad or other third Person, except:
 - (i) with respect to any Deliverable for Third Party Review that:
 - (A) is to be submitted to the FHWA or which involves a Department Provided Approval, which Deliverable for Third Party Review Developer is

- obligated to first submit to the Enterprises pursuant to Section 8.4.3.a of the Project Agreement;
- (B) is a design Deliverable to be submitted to the BNSF pursuant to the BNSF RRA, which must be Approved or Accepted by the Department, as applicable, prior to submission to the BNSF; or
 - (C) the Department or the Enterprises, as applicable, has or have notified Developer must be reviewed and/or approved:
 - (I) by the Department or the Enterprises, as applicable, prior to submission to any relevant Governmental Authority, Utility Owner, Railroad or other third Person; or
 - (II) by the relevant Governmental Authority, Utility Owner, Railroad or other third Person prior to submission to the Department or the Enterprises, as applicable; or
- (ii) as otherwise expressly provided for in this Agreement.
- (b) Except as otherwise expressly provided for in this Agreement, neither the Department nor the Enterprises, as applicable, shall be obligated to provide Developer with a written response on any Deliverable for Third Party Review that is subject to concurrent review under Section 5(a) of this Schedule 9 until the relevant Governmental Authority, Utility Owner, Railroad or other third Person has formally provided a response or granted approval (conditional or otherwise) to it, at which time, as applicable, the Department or the Enterprises will provide a written response within five Working Days or, if later, by the date otherwise required pursuant to Section 6(a) of this Schedule 9.

6. Review Process

- (a) Subject to Sections 5(b) and 8 of this Schedule 9, the Department or the Enterprises, as applicable, will provide Developer with a written response to each Reviewable Deliverable pursuant to Section 6(b) of this Schedule 9 within:
- (i) subject to Section 6(a)(ii) of this Schedule 9:
 - (A) 15 Working Days following an initial submission of such Reviewable Deliverable; and
 - (B) 10 Working Days of any resubmission of such Reviewable Deliverable, provided that either the Department or the Enterprises, as applicable, may in its or their discretion (and by written notice to Developer) extend such period to 15 Working Days if it or they determine in its or their discretion that such longer review period is necessary; or
 - (ii) such other period as is otherwise expressly provided for such Reviewable Deliverable in this Agreement,
- provided that any failure by the Department or the Enterprises, as applicable, to provide any written response within the applicable period determined in accordance with Sections 6(a)(i) and 6(a)(ii) of this Schedule 9:
- (iii) to any Deliverable for Approval, shall be deemed a disapproval;
 - (iv) to any Deliverable for Acceptance, shall be deemed an Acceptance if Developer notifies the Department or the Enterprises, as applicable, of such failure and the Department or the Enterprises, as applicable, subsequently fail to respond in any way within five Working Days of receipt of such a notice; and
 - (v) to any Deliverable for Information, shall be deemed to have satisfied the condition specified in Section 3(a)(iii) of this Schedule 9.

- (b) The Department or the Enterprises, as applicable, shall provide one of the following responses, in writing, to each Reviewable Deliverable:
 - (i) for Deliverables for Approval:
 - (A) unconditional Approval;
 - (B) conditional Approval, with guidance as to any conditions and/or comments that Developer must agree, in writing, to comply with and/or respond to as and when required by the terms of such conditional Approval in order for such conditional Approval to be effective (which compliance and/or responses may, in the Department's or the Enterprises' discretion, be permitted to occur after such conditional Approval becomes effective); or
 - (C) disapproval, with or without guidance as to the basis for the disapproval and/or whether either the Department or the Enterprises, as applicable, expects to subsequently Approve such Reviewable Deliverable following any resubmission subject to modifications and/or conditions (including any that are required to address comments made in the Department's or the Enterprises' response, as applicable);
 - (ii) for Deliverables for Acceptance:
 - (A) unconditional Acceptance;
 - (B) conditional Acceptance, with guidance as to any conditions and/or comments that Developer must agree, in writing, to comply with and/or respond to as and when required by the terms of such conditional Acceptance in order for such conditional Acceptance to be effective (which compliance and/or responses may, in the Department's or the Enterprises' discretion, be permitted to occur after such conditional Acceptance becomes effective); or
 - (C) rejection, with guidance as to the basis for the rejection and/or whether either the Department or the Enterprises, as applicable, expects to subsequently Accept such Reviewable Deliverable following any resubmission subject to modifications and/or conditions (including any that are required to address comments made in the Department's or the Enterprises' response, as applicable); or
 - (iii) for Deliverables for Information, comments or written confirmation of "no comments".
- (c) Notwithstanding any Approval, Acceptance, comment or other response of or on a Reviewable Deliverable, Developer acknowledges and agrees that its ability to rely on the same is subject to Section 2.2.5 of the Project Agreement.

7. Tracking of Deliverables

- (a) Prior to the issuance of NTP1, Developer shall submit to the Department for Acceptance, as part of its Project Management Plan delivered pursuant to Schedule 8 (*Project Administration*), the Deliverable Requirements Tracking List ("DRTL").
- (b) The DRTL shall:
 - (i) identify each Reviewable Deliverable that, as of the date of submission of the DRTL, Developer knows or anticipates will need to be submitted to the Department or the Enterprises, as applicable;
 - (ii) specify the type of Reviewable Deliverable;
 - (iii) include Developer's proposed timeframe and sequence for submission, review and resolution of each Reviewable Deliverable; and

- (iv) show how, given the proposed timing and sequencing of such Reviewable Deliverables, the Department or the Enterprises, as applicable, shall be able to reasonably review and respond to all such Reviewable Deliverables pursuant to Section 6 of this Schedule 9 while avoiding the concurrent review of five or more Reviewable Deliverables that require review by the same specialty experts (as reasonably determined by the Department or the Enterprises, as applicable) unless the Department has previously Approved such concurrent review.
- (c) Following the Department's Acceptance of the DRTL, Developer shall use the DRTL to track the status of all Reviewable Deliverables, including all submissions and resubmissions and responses from the Department and the Enterprises, as applicable.
- (d) Developer shall deliver to the Department for Acceptance monthly updates to the DRTL to track the status of all Reviewable Deliverables, including updates to the DRTL as may be necessary to reflect the inclusion of any Reviewable Deliverable that was not previously included in the DRTL.

8. Sequencing

- (a) Developer shall use Reasonable Efforts to schedule, prioritize and coordinate all Reviewable Deliverables to allow an efficient and orderly Reviewable Deliverables review process pursuant to this Schedule 9 and the DRTL.
- (b) To the extent that Developer exceeds any of the limits on Reviewable Deliverables set out in this Agreement or the DRTL, the Department or the Enterprises, as applicable, shall (acting reasonably and taking into account the number and nature of any other Reviewable Deliverables that it and/or they may concurrently be in the process of reviewing) determine a time period for the review of the Reviewable Deliverables that exceed such limit.
- (c) For certainty, neither the Department nor the Enterprises shall be obligated to concurrently review five or more Reviewable Deliverables that require review by the same specialty experts (as reasonably determined by the Department or the Enterprises, as applicable) unless the Department or the Enterprises, as applicable, has or have previously Approved such concurrent review.

9. Developer Responses

Except with respect to:

- (a) a Deliverable for Information; and
- (b) any other Reviewable Deliverable that the Department or the Enterprises, as applicable, has or have:
 - (i) unconditionally Approved or unconditionally Accepted; or
 - (ii) notified Developer are not subject to Section 9(c) and/or Section 9(d) of this Schedule 9,

Developer shall:

- (c) respond to all comments and responses from the Department or the Enterprises on or to any Reviewable Deliverable, including by making modifications to such Reviewable Deliverable as necessary to fully reflect and resolve all such comments and responses; and
- (d) if and to the extent modifications to such Reviewable Deliverable are necessary pursuant to Section 9(c) of this Schedule 9, resubmit:
 - (i) any RFC Deliverable; and
 - (ii) any other Deliverable to the extent reasonably required by the Department or the Enterprises, as applicable,

as many times as is necessary until either the Department or the Enterprises, as applicable, has or have either:

- (iii) unconditionally Approved or unconditionally Accepted the relevant Reviewable Deliverable; or
- (iv) notified Developer that such RFC Deliverable or other Deliverable is no longer subject to resubmission pursuant to this Section 9(d) of this Schedule 9.

1. GENERAL

1.1 Purpose

- 1.1.1 The purpose of this Section is to summarize the Developer's obligations with respect to design and construction of the Project by identifying major elements of the Construction Work, including references to the processes and procedures that the Developer is required to comply with.
- 1.1.2 Reference is made to the Sections of this Schedule and other Schedules which include details of the specific requirements relevant to the Construction Work.

1.2 Application of Schedule 10 Design and Construction Requirements

- 1.2.1 Without limiting any other provision of this Project Agreement, this Schedule (including all of the terms, conditions, requirements, criteria, specifications and standards set out or referenced herein) comprises the minimum obligations of the Developer in respect of the matters set out in this Schedule, including in respect of the provision, performance and carrying out of the Construction Work.
- 1.2.2 The Developer shall ensure that the Construction Work complies with and is undertaken in accordance with the terms, conditions, requirements, criteria, specifications and standards set out or referenced in this Schedule.
- 1.2.3 In complying with the terms, conditions, requirements, criteria, specifications and standards set out or referenced in this Schedule, the Developer shall give due regard to the terms, conditions, requirements, criteria, specifications and standards set out or referenced in each of the other Sections of this Schedule and to the other provisions of the Project Agreement.
- 1.2.4 Nothing in any one Section of this Schedule shall relieve the Developer from its obligations to comply with the terms and conditions, requirements, criteria, specifications and standards set out or referenced in each of the other Sections of this Schedule.
- 1.2.5 The Developer shall design and construct all Elements of the Project in compliance with the requirements of all relevant Sections of the Project Agreement including all performance requirements and the Handback Requirements.

1.3 General Requirements

The Developer's obligations in respect of the Construction Work are summarized below and shall be carried out in accordance with the Project Agreement, the Sections of this Schedule and other Schedules:

- a. Removal and replacement of the existing I-70 Mainline on viaduct from Brighton Boulevard to Colorado Boulevard, with the I-70 Mainline lowered below existing grade;
- b. Construction of Cover over the I-70 Mainline (including Planning Area 1 and Planning Area 2) between Columbine Street and Clayton Street;
- c. Reconstruction of the I-70 Mainline from Brighton Boulevard to Quebec Street;
- d. Widening of the I-70 Mainline to include a Tolled Express Lane in each direction from Quebec Street to Chambers Road;
- e. Restriping of the existing I-70 Mainline from east of I-25 to Brighton Boulevard;
- f. Construction of cross streets at Brighton Boulevard, York Street, Josephine Street, Columbine Street, Clayton Street, Fillmore Street, Steele Street/Vasquez Boulevard, Cook Street, Monroe Street, Colorado Boulevard, Dahlia Street, Holly Street, Monaco Street, Quebec Street, and Peoria Street (reconstruction of the cross streets at Central Park Boulevard, Havana Street and Chambers Road is not included);
- g. Combining existing ramps at Dahlia Street and Monaco Street into a single interchange at Holly Street;

- h. Reconstruction of the UPRR Crossing, UPRR Pepsi Lead Crossing, UPRR York Street Crossing, BNSF Crossing, and DRIR Crossing;
- i. Reconstruction of the I-270 eastbound bridge over I-70 Mainline;
- j. Provision of ITS and ETC system infrastructure, including an Active Traffic Management system; and
- k. Maintenance of traffic including maintenance of existing roadways, including detours, during the Construction Period.

1.4 Notices to Proceed (Schedule 3)

Parts 1 and 2 of Schedule 3 Commencement and Completion Mechanics shall apply in respect of the commencement of the Construction Work.

1.5 Project Administration (Schedule 8)

The Developer shall comply with its obligations under Schedule 8 Project Administration and undertake all actions as necessary when discharging its obligations relating to project management and Quality Assurance Activities for the Construction Work.

1.6 Submittals (Schedule 9)

The Developer shall comply with the procedures set out in Schedule 9 Submittals when making submittals to the Department, the Enterprises or any other Person in connection with the Construction Work.

1.7 Approvals, Consents and Permits

Except to the extent expressly provided otherwise in the Project Agreement, the Developer shall be responsible for obtaining all Governmental Approvals and Permits in connection with the Construction Work.

1.8 Detailed Requirements

Detailed requirements for individual Construction Work elements are described in the remaining Sections of this Schedule listed below:

- a. Section 2: Maintenance of Traffic;
- b. Section 3: ITS and Tolling Equipment;
- c. Section 4: Utilities;
- d. Section 5: Survey;
- e. Section 6: Roadway Pavements;
- f. Section 7: Earthwork;
- g. Section 8: Drainage;
- h. Section 9: Roadway;
- i. Section 10: Railroads;
- j. Section 11: Signing, Pavement Markings, Signalization and Lighting;
- k. Section 12: Cover MEP System;
- l. Section 13: Structures; and
- m. Section 14: Landscaping and Aesthetics.

1.9 Applicable Standards and Specifications (Schedule 10A)

- 1.9.1 Except to the extent expressly provided otherwise in the Project Agreement, the Developer shall design and construct the Project in accordance with the Construction Standards. The list of standards in Schedule 10A Applicable Standards and Specifications shall not be considered comprehensive.
- 1.9.2 The I-70 Mainline and CDOT Roadways and associated Construction Work shall be designed and constructed in accordance with the CDOT *Standards and Specifications* (as modified by Appendix A to Schedule 10A Applicable Standards and Specifications).
- 1.9.3 Local Agency Roadways and associated Construction Work shall be designed and constructed in accordance with the standards and specifications of the Local Agency (e.g., City of Denver).

1.10 Contract Drawings (Schedule 10B)

Schedule 10B Contract Drawings contains the Contract Drawings in accordance with which the Developer shall develop the design and construct the Project.

1.11 Reference Documents (Schedule 29)

Section 3 of the Project Agreement sets out the status of the Reference Documents in relation to the performance of the Work, including the Construction Work.

1.12 Strategic Communications (Schedule 14)

The Developer shall comply with its obligations under Schedule 14 Strategic Communications when discharging its obligations relating to Construction Work.

1.13 Federal and State Requirements (Schedule 15)

The Developer shall comply with its obligations under Schedule 15 Federal and State Requirements when discharging its obligations relating to Construction Work.

1.14 Environmental Requirements (Schedule 17)

Except to the extent expressly provided otherwise in the Project Agreement, the Construction Work required to be carried out by the Developer:

- a. Shall include all Elements and commitments described in the I-70 East EIS to the extent that such Elements and commitments relate to the scope of the Project;
- b. Shall be compatible with the I-70 East EIS to ensure implementation of the Ultimate configuration to the extent that it relates to the scope of the Project; and
- c. Shall include all mitigation measures required to be carried out to ensure compliance with the I-70 East EIS, as required by Schedule 17 Environmental Requirements.

1.15 Right-of-Way (Schedule 18)

Right-of-Way defines a major constraint to the Developer's design in terms of boundary restrictions and limits of the Construction Work. Except to the extent expressly provided otherwise in the Project Agreement, the obligations and responsibilities of the Department and the Developer are set out in Schedule 18 Right-of-Way and the Parties shall comply with these accordingly.

1.16 Havana Street Design-Build Project

A separate improvement project, the Havana Street Design-Build Project, involves construction of the I-70 Mainline to the Ultimate configuration. The improvements are planned to be completed prior to issuance of NTP 2. The Developer's Construction Work within the physical limits of the Havana Street Design-Build Project shall include any striping, signing or other modifications required to accommodate the Construction Work.

1.17 City of Denver Identified Future Improvements and Non-Preclusion Areas

- 1.17.1 The Developer's design and construction shall not preclude CCD identified improvements specified in Sections 1.17.1.a to c below.
- a. Construction of a future second cover over the I-70 Mainline from 50 feet west of the Steele Street/Vasquez Boulevard Bridge to 50 feet east of the Cook Street Bridge;
 - b. Conversion of York Street to two-way operations; and
 - c. Conversion of Josephine Street vehicular bridge over the I-70 Mainline to a pedestrian crossing.
- 1.17.2 The Developer shall not construct permanent improvements within the non-preclusion areas identified in the Reference Documents and specified in Sections 1.17.2.a to f below. Only staging and/or temporary construction is allowed within these areas.
- a. Construction of a pedestrian overpass over the UPRR Crossing along 47th Avenue as depicted on the graphic in the Reference Documents;
 - b. Construction of a Xcel gas regulator station within Parcel AP-169 as depicted in the Reference Documents;
 - c. Construction of planned improvements shown on the National Western Stock Show Non-Preclusion Area 1 Exhibit in the Reference Documents;
 - d. Construction of planned improvements shown on the National Western Stock Show Non-Preclusion Area 2 Exhibit in the Reference Documents;
 - e. Construction of planned improvements shown on the Steele-Vasquez Southern Quadrants Non-Preclusion Exhibit in the Reference Documents; and
 - f. Construction of planned improvements shown on the Steele St to Colorado Blvd (North) Non-Preclusion Exhibit in the Reference Documents.
- 1.17.3 The Developer's design and construction shall accommodate the CCD identified improvements specified in Sections 1.17.3.a to b below without requiring future reconstruction of the Work.
- a. Widening of Quebec Street by one additional lane northbound and southbound with sidewalks for pedestrian/bicycle facilities in accordance with the Roadway Typical Sections provided in Schedule 10B Contract Drawings; and
 - b. Widening of Peoria Street by one additional lane northbound and southbound, with sidewalks for pedestrian/bicycle facilities in accordance with the Roadway Typical Sections provided in Schedule 10B Contract Drawings.

1.18 Compatibility with the I-70 Ultimate Configuration (Sand Creek to Tower Road)

The Developer's design and construction between Sand Creek and Chamber Road shall account for the future I-70 Ultimate configuration. The Construction Work in such location shall not preclude the future implementation of the I-70 Ultimate configuration, provided that storm water ponds shall be designed and constructed to meet the construction requirements set out in this Schedule 10.

2. MAINTENANCE OF TRAFFIC

2.1. General

The Developer shall be responsible for designing, providing and maintaining safe and effective traffic control on all roadways that are affected by the Construction Work for the movement of people, goods, and services through and around the Project while minimizing impacts to local residents, businesses and commuters.

2.2. Transportation Management Plan

2.2.1. The Developer shall prepare a Transportation Management Plan (TMP) including Temporary Traffic Control Plan (TCP) Strategies, a Transportation Operations (TOP) Strategies, and Public Information (PI) Strategies for all proposed Work associated with the Project during the Construction Period, which is consistent with and expands upon the draft TMP submitted with the Proposal. Responsibilities include monitoring and updating the TMP throughout the Construction Period. The TMP shall document how traffic shall be managed during the construction of the Project. The TMP shall follow the requirements shown in CDOT's *Work Zone Safety and Mobility Rule Procedures Document*.

2.2.2. Submission by the Developer, and Approval by the Department, of the TMP shall be prior to the issuance of NTP2. Subsequent modifications to the TMP shall be submitted to the Department for Approval.

2.2.3. Transportation Management Plan Content

The Developer shall prepare a TMP that defines the strategic plan for traffic management on the Project. The TMP shall address major aspects of the Construction Work for individual construction areas, phases, and stages. The Developer shall involve all affected agencies in the development of the TMP and associated plans. The TMP shall be used as a planning and policy guide to develop and execute the Maintenance of Traffic (MOT) program for the Project. The TMP's contents shall include or address at a minimum (1) the following matters as described in Sections 2.2.3.a to h of this Schedule 10 and (2) the matters as described in Sections 2.2.4 to 2.2.6 of this Schedule 10:

- a. An overview and description of the Project, subdivided as applicable, into the following components:
 - i. Area: A specific grouping of Construction Work for the Project, defined by the Developer, which creates segments of the Project for the purpose of planning and executing the Construction Work;
 - ii. Phase: A specific sequence of the Construction Work in an area during which a major traffic movement is undertaken (e.g., a detour) and left in place until the Construction Work is complete and traffic is redirected to another location. This shall require development of a specific TCP. In some cases, multiple TCPs may be necessary; and
 - iii. Stage: A subdivision of Construction Work within a phase that combines similar components of Construction Work to maintain efficiency.
- b. Provide information on existing and future conditions including traffic, safety, lighting, and business/community access.
- c. A list of known or potential roadway, ramp, and lane Closures, including the following information:
 - i. Description of traffic shift;
 - ii. Description of detour:
 - A. Identification of detour limits to be used in each construction phase; and

- B. The Developer's identification and coordination with other construction projects, within the vicinity of the proposed detour route. The impact of these construction projects shall be incorporated into the detour route planning and scheduling.
 - iii. Number of shifts expected; and
 - iv. Duration of shifts and detours.
 - d. A description of proposed detour routes;
 - e. Typical section requirements;
 - i. Lane widths;
 - ii. Shoulder widths;
 - iii. Number of lanes;
 - iv. Barrier/wall locations; and
 - v. Proposed work zone locations.
 - f. Emergency requirements:
 - i. Pull-out locations;
 - ii. Emergency access; and
 - iii. Courtesy patrol.
 - g. Temporary Closure scenarios:
 - i. Location; and
 - ii. Time and duration.
 - h. Access:
 - i. Pedestrian/bike;
 - ii. Business;
 - iii. Local/adjacent property owner access;
 - iv. Project; and
 - v. Bus/transit.

2.2.4. Temporary Traffic Control Plan Strategies

- a. The Developer shall provide a detailed approach to the development of TCPs, including Temporary Drainage as described in Schedule 10, Section 8 Drainage, and Methods of Handling Traffic (MHT) on the Project.
- b. The Developer shall provide a detailed approach to the implementation and monitoring of TCPs and Methods of Handling Traffic (MHT) on the Project. At a minimum, the Developer shall include the following:
 - i. Process for Developer MOT inspections (daytime and nighttime).
 - ii. Process for opening new MOT phases or stages to traffic (safe-to-open procedure).
 - iii. Process for opening new MOT phases or stages to traffic on Local Agency Roadways (see Reference Documents for more information on CCD requirements).
 - iv. Process for winter maintenance of MOT devices and temporary striping.

- v. Process for monitoring the safety and effectiveness of TCPs and MHTs.
- vi. Process for refining unsafe or ineffective TCPs and MHTs.
- c. Business and Private Access

The Developer shall maintain public and private access to the local street system. See additional requirements under the Maintenance of Access Plan included in [Section 2.9](#) to this [Schedule 10](#). TCPs and MHTs shall incorporate stakeholder information from the PI, available surveys, and other pertinent studies relating to business and private access to the local street system and the highway facilities. At a minimum, the Developer shall communicate and document the following information relevant to business and private access:

 - i. Access points impacted by a particular construction phase or stage;
 - ii. All notifications of affected businesses and land owners;
 - iii. Schedule of Closures and estimated durations;
 - iv. Project-specific access or delivery requirements for local businesses (deliveries, wide load vehicles, etc.); and
 - v. Proposed mitigation efforts.
- d. Colorado Transportation Management Center Coordination
 - i. The Developer shall provide an approach to the use of Intelligent Transportation System (ITS)/Variable Message Sign (VMS) boards and traffic signals/ramp meter stations, including coordination with the Denver Traffic Management Center, and Colorado Transportation Management Center (CTMC);
 - ii. Routine requests for use of the CTMC VMS boards shall be submitted to the Department by 10:30 a.m. on Thursday of the week prior to when the VMS boards will be needed (Monday through Sunday of the following week). Requests for routine use of the VMS will be reviewed by noon Friday of the same week of the submittal. The Developer shall coordinate directly with the CTMC at 303-512-5830 following review by the Department;
 - iii. For after-hours (non-construction work times) operations only, the Developer shall coordinate directly with the CTMC. The CTMC is available to the Developer to modify VMS messages 24 hours a day, seven days a week; and
 - iv. The Developer shall coordinate with the Colorado Department of Transportation (CDOT), City of Denver (CCD), and the CTMC in relation to Emergencies, in accordance with the Accepted Incident Management Plan (IMP).

2.2.5. Transportation Operations Strategies

The Developer shall:

- a. Provide a detailed approach to Travel Demand Management (TDM) strategies.
- b. Inventory existing bus and rail routes/stops and provide an approach to coordination with Regional Transportation District (RTD) to resolve disruptions in services due to the Construction Work.
- c. Provide an approach to traffic access management, including restrictions, bicycles, pedestrians, and potential impacts to handicapped mobility.
- d. Provide an approach to coordinate with Denver International Airport during peak travel times.
- e. Provide an approach to pedestrian and bicycle movements associated with all school routes within the Site, including to/from Swansea Elementary, Bruce Randolph Junior

High and Garden Place Elementary Schools. The approach shall include handicap accessibility, bus and shuttle parking and access, parent drop-off and pick-up circulation and location, lighting, before and after school activities. The Developer's strategy shall include signing, pavement marking, and pedestrian signalization in compliance with MUTCD and CCD standards. The Developer's strategies shall be coordinated with the respective school and Denver Public Schools Department of Transportation. The Developer shall coordinate with the CCD Safe Route to School coordinator for current student distribution maps and overall pedestrian walk path ratings can be found at www.walkscope.org.

- f. The approach and strategies to be implemented for pedestrian and bicycle movements associated with the UPRR York Street Crossing shall specifically address safety and delays caused by UPRR train movements. The Developer's strategies shall consider flagging and shuttles during periods of start and end to the school day to safely move pedestrians and bicycles. The Developer shall also provide a covered and secured pedestrian access under the UPRR shoofly during the Construction Period.
- g. Develop a detailed IMP to manage traffic incidents and emergency operations on the Project. The IMP shall comply with the CDOT *Guidelines for Developing Traffic Incident Management Plans for Work Zones*. The IMP shall be submitted to the Department for Acceptance within 30 Calendar Days after the issuance of NTP1. At a minimum, the IMP shall include the following:
 - i. Coordination with the PIP;
 - ii. Incident detection and identification;
 - iii. Incident response;
 - iv. Incident site management;
 - v. Incident clearance;
 - vi. Dissemination of traveler information regarding incidents;
 - vii. Courtesy patrol;
 - viii. Emergency Services notification, including local area police departments, the Colorado State Patrol (CSP), local area fire departments, ambulance services, and any other Emergency response providers;
 - ix. Notification of local school districts about possible impacts to school bus routes, student drop-offs, and/or pedestrian facilities;
 - x. Geographic and other special constraints;
 - xi. Available resources; and
 - xii. Operational procedures.
 - xiii. Detour routes to be used in the event of a catastrophic incident along I-70 Mainline or ramps that would require a Closure that is not permitted by any of Sections 2.11.6, 2.11.9, or 2.11.10. The Developer shall coordinate with any impacted Local Agencies if detour routes use Local Agency Roadways. Developer shall ensure that the detour routes work for each traffic phase and stage throughout construction.
- h. Coordinate and work cooperatively with the corridor-focused Transportation Management Organization (TMO) and the Department. Additionally, the Developer shall provide:
 - i. Four VMS boards used exclusively for TDM outreach; and

- ii. A grant program to be implemented, in cooperation with the Department, during the first three years of the Operating Period. The grant program shall be funded by the Developer and have a total amount of no less than \$100,000. The program shall support community-based projects that reduce Vehicle Miles Travelled and encourage multi-modal options within the Project area. Such projects may include support for bus stops, sidewalks, bike lanes, and crossing guards at key pedestrian crossing locations. The Developer shall administer an annual competitive grant application program, open to all nonprofit groups, registered neighborhood organizations, and schools located within the Project area, to award the grant funds. Individual grants may be awarded in reasonable amounts to be determined by the Developer.
- i. Cooperate with the Department with regards to any dynamic ride sharing programs established in the metro area.

2.2.6. Public Information Strategies

- a. Provide a detailed approach to coordinate the TMP Activities with performance of the Developer's obligations under Schedule 14 Strategic Communications;
- b. A checklist identifying specific items shall be provided to the Department by the Developer's Project Communications Manager;
- c. The Developer's Project Communications Manager and the Department's Communications Manager shall meet once per week to discuss public information and management Activities on the Project. The checklist shall provide the inclusion of supporting information relevant to coping messages and public awareness and shall be included in the Construction Period Communications Plan (CPCP), as described in Schedule 14 Strategic Communications;
- d. The Developer shall establish a MOT Task Force to ensure proper coordination with affected agencies. The MOT Task Force shall include, at a minimum, the Developer's Project Communications Manager, Traffic Control Supervisor, Superintendent, the Department, RTD, Denver Police Department-Traffic Unit, and Local Agencies (e.g., CCD, Commerce City, Adams County, and City of Aurora). The Developer shall submit the proposed list of the MOT Task Force members to the Department for Acceptance within 30 Calendar Days after issuance of NTP1. Within 14 Calendar Days after Acceptance of the proposed list of MOT Task Force members, the Developer shall convene a TMP kick-off meeting. The meeting will be used to develop agreement upon the level of detail required for the TMP; and
- e. The MOT Task Force shall meet weekly, and shall be an integrated component of the CPCP, as described in Schedule 14 Strategic Communications. The Developer is responsible for the preparation and distribution of agendas, meeting materials, and meeting minutes and shall submit the minutes to the Department for Acceptance in accordance with Section 9 of Schedule 8 Project Administration.

2.3. Maintenance of Traffic Variance Process

- 2.3.1. The Developer shall adhere to the requirements for lane Closures, detours and any other restrictions as set forth within this Section 2, except the Developer may request an MOT Variance from the Department or, as the case may be, the relevant Local Agency to reduce neighborhood/business impacts, improve safety, or improve quality.
- 2.3.2. In relation to MOT Variances required from the Department, if the Developer can show some benefit in the areas referred to in Section 2.3.1, and present it successfully to the Department, then the Developer may be granted an MOT Variance. The following information shall be included in each MOT Variance request submitted to the Department:
 - a. Summary of the MOT Variance request;

- b. Justification for the MOT Variance request, including a list of the criteria that cannot be met and the reasons for not being able to meet the criteria;
- c. Hour-by-hour schedule of planned work activities during the variance;
- d. Public notification methods and schedule;
- e. List of affected Emergency Services and the schedule for notification;
- f. List of affected Local Agencies or private owners and the method(s) and schedule for notification;
- g. Description of additional public information surveys to be performed, if required;
- h. List of any potential safety hazards to which the public may be exposed;
- i. Proposed revisions to the Accepted TCP or current MHT; and
- j. Proposed duration of lane Closure, detour, or phasing change for which a MOT Variance is requested.

The Developer shall submit any MOT Variance request to the Department for Approval 30 Calendar Days prior to implementation.

- 2.3.3. In relation to MOT Variances required from a Local Agency, the Developer shall comply with all Local Agency requirements, including submittal contents and time periods, relating thereto. In addition, the Developer shall meet all Local Agency requirements for detours utilizing non-State owned facilities. Promptly after receipt of the relevant approval, the Developer shall submit a copy of any approved MOT Variance granted by a Local Agency to the Department for Information.

2.4. Developer Response Time

The Developer shall have at least one employee on call at all times, via cellular phone, that can be a point of contact for immediate response to an incident (i.e. within 30 minutes or less after notification). Upon arrival at the incident, Developer shall assess the situation and immediately notify the appropriate personnel to implement the IMP. Upon notification of the incident, the Developer shall cooperate with the Emergency Services and immediately undertake actions necessary to restore traffic operations, as described in the IMP, in a timely and expedient manner.

2.5. Special Events

- 2.5.1. Within 15 Working Days after the issuance of NTP 2 and prior to the commencement of each Contract Year thereafter, and additionally when requested by the Department, the Developer shall coordinate with the Department's Communications Manager and the Local Agencies to develop a list and schedule of Special Events for a period as may be agreed to by the Developer and the Department. The special event calendar shall be a standing agenda item at the weekly MOT Task Force meetings and specific event mitigation measures will be agreed to by the MOT Task Force members.
- 2.5.2. The Developer shall coordinate with the CCD and other Local Agencies to develop mitigation that the Construction Work creates regarding delays before, during and after Special Events. This shall include and will not be limited to events such as dignitary escorts, sporting facilities, the National Western Stock Show, local events, etc.
- 2.5.3. To accommodate traffic to and from Special Events, the Developer shall implement necessary changes in Construction Work Activities as a result of specific event mitigation measures agreed to by the MOT Task Force. No additional lane Closures that could affect traffic movements associated with the Special Event shall be permitted on the day of any Special Event, unless Approved by the Department 14 Calendar Days prior to implementation. The Developer shall use reasonable efforts to mitigate the effects of ongoing lane Closures on traffic movements associated with Special Events. Construction Work outside the travel lanes, ramps and shoulders shall be permitted during Special Events unless specifically prohibited otherwise in this Section 2.

2.6. National Western Stock Show

To accommodate traffic to and from the National Western Stock Show, the Developer shall implement necessary changes in Construction Work Activities as a result of specific event mitigation measures agreed to by the MOT Task Force. Further, no Construction Work (whether inside or outside of travel lanes, ramps, and shoulder) is permitted at the Brighton Boulevard Interchange, associated ramps, Brighton Boulevard, and 47th Avenue west of Williams Street from the Saturday prior to the start, until the Sunday following the end, of the National Western Stock Show. Additionally, no full ramp Closures of the Brighton Boulevard WB exit ramp are permitted during these periods.

2.7. RTD Transit System

- 2.7.1. The Developer shall coordinate with RTD to minimize any impacts to the RTD transit system as a result of the Construction Work, including bus routes, station access, bus stop locations, and other RTD services. During the Construction Period the Developer shall coordinate with RTD prior to disruptions to RTD service areas and schedules. Coordination with RTD shall be done far enough in advance to allow 30 Calendar Days' notification to transit users of any closures, delays, or modifications in bus or rail routes; and of modifications or relocation of transit stops or signage along the affected routes. The Developer shall utilize the appropriate Strategic Communications Plan(s) (Schedule 14 Strategic Communications) to communicate changes of RTD service to RTD patrons and the public.
- 2.7.2. The Developer shall maintain access to all RTD stations within the Project during construction. Any modifications to RTD station access or bus stop locations shall be submitted to the RTD for approval and copied to the Department, for Information.
- 2.7.3. The Developer shall include CCD in all coordination with RTD.

2.8. Coordination with Adjacent Projects

The Developer shall coordinate with the Department, RTD, Local Agencies, and adjacent projects to coordinate construction traffic and detour impacts and minimize simultaneous lane Closures or impacts to adjacent or alternate routes.

2.9. Maintenance of Access Plan

The Developer shall maintain business accesses at all times unless otherwise Approved by the Department. For businesses with multiple driveways, when driveway Closure is necessary to progress Construction Work, no driveway may be closed for more than 30 consecutive Calendar Days or more than 45 Calendar Days in aggregate. The grades for temporary driveways shall not be greater than the existing driveway grade. The Developer shall work with the property owner to coordinate access restrictions during that particular construction phase.

2.10. Maintenance of Traffic Analysis and Operations

- 2.10.1. The Developer shall evaluate intersection traffic operations in advance of all major MOT phases. Major phases will be identified at the discretion of the Department, and will generally be indicated by major changes in Construction Work locations and lane Closures. The purpose of the evaluation is to ensure that any traffic operations impacts related to the MOT Plans are acceptable to the Department and the Local Agencies. The Developer shall use existing traffic data supplied by the Department, supplemented by additional traffic counts by the Developer as required. The Developer shall report any increases in intersection delay or queue length. The Developer shall use the traffic modeling software provided in the Reference Documents to project the expected queue lengths and delays. The Developer shall provide intersection analysis that includes traffic signal timing optimization and signal coordination along signalized corridors. Timing plans and implementing timing plans shall be coordinated with CCD.
- 2.10.2. The Department will not use specific delay or queue length thresholds for evaluation, but traffic operations will be evaluated while considering the Developer's overall MOT Plans and approach. The Developer shall be responsible for monitoring actual queues and delays during MOT operations, evaluated on a rolling 2 week average. If the queues and delays exceed the predicted

value, then it shall be the Developer's responsibility to modify the TCPs within 24 hours to mitigate impacts to traffic operations. All proposed changes to the TCPs shall be submitted to the Department for Acceptance.

2.10.3. The Developer shall submit the MOT operations and analysis to the Department for Acceptance. The traffic analysis shall be summarized in report format, and include all supporting documentation.

2.10.4. The Department may identify that additional analysis is necessary if the traffic impacts are unacceptable to the Department. If so, the Developer shall be required to prepare an analysis of the Construction Work Activities that includes the following:

- a. Project Location and Description:
 - i. Location and Construction Work required;
 - ii. Existing condition;
 - iii. Purpose for the threshold exception request, along with how long and what hours the lane Closures will be in effect; and
 - iv. Recommendations to minimize impacts.
- b. MOT Alternatives
 - i. All potential options for MOT with descriptions and discussions of each, including the following:
 - ii. Advantages/disadvantages;
 - iii. Estimated timeframe;
 - iv. Potential economic impact to communities and businesses; and
 - v. Ability to gain public buy-in and awareness of the impacts and means to mitigate those impacts.
- c. Traffic Analysis
 - i. Queue/delay analysis;
 - ii. Percent diversion that is reasonable to expect given the location and construction Activity; and
 - iii. Resulting traffic operations after diverting.
- d. Detour Calculations
 - i. If a detour is proposed, provide detour route description, detour map(s), and user cost created to travel the extra distance;
 - ii. Provide capacity, volume, and queue length calculations for the critical node along the detour route; and
 - iii. Suggest improvements to the detour route to improve traffic flow on the route with the detour traffic.
- e. Summary and Recommendations
 - i. List alternatives in order of preference and explain why the alternative is or is not preferred; and
 - ii. Summarize alternatives in table format, including important comparison items such as maximum queue lengths; the number and width of open lanes; the length, dates, and duration of construction period for the relevant part of the Construction Work.

2.11. Design Requirements

2.11.1. Temporary Traffic Control Plan (TCP)

- a. The Developer shall prepare a TCP to control traffic on the Project. The TCP shall conform to the requirements specified herein and the CDOT *Standard Specifications*. The TCP shall generally include all lane and shoulder configurations, including widths, traffic control signing, pavement markings, traffic control devices, temporary signalization, construction access, construction parking, emergency access, work areas, lighting, and pedestrian/bicycle movements necessary for each construction phase. Temporary traffic signals shall be installed as described in Schedule 10, Section 11 Signing, Pavement Marking, Signalization, and Lighting;
- b. The TCP shall be submitted to the Department for Acceptance; and
- c. Any major revision to the TCP, as determined by the Department, shall require submission of a new TCP for Acceptance.

2.11.2. Method of Handling Traffic (MHT)

To implement the TCP, the Developer shall prepare MHTs that conform to the requirements specified herein and the CDOT *Standard Specifications*. The MHTs shall be submitted to the Department for Acceptance.

2.11.3. Detour Design

- a. Detour designs shall move traffic to equivalent classification roadways or roadways with greater capacity, or as otherwise Approved by the Department.
- b. Detour design shall be as described in Table 2-1.

Table 2-1 Design and Posted Speeds for Construction Work Zones

Location	Design Speed (mph)	Posted Speed (mph)
I-70 Mainline, I-225 and I-270	55	55
Ramps and collector-distributor roads	As posted under existing conditions	As posted under existing conditions
CDOT Roadways (other than I-225 and I-270) and Local Agency Roadways	As posted under existing conditions	As posted under existing conditions

2.11.4. The Developer's Professional Engineer in responsible charge of the MOT design shall prepare or oversee, review, seal with a Colorado PE stamp and approve: field design changes that require a revision to a previously stamped and approved plan sheet; Release for Construction Documents; and TCP plans.

2.11.5. Full Local Agency Roadway Closure Restrictions

Local Agency Roadways will be affected by the reconstruction of I-70 Mainline between Brighton Boulevard and Quebec Street requiring restrictions regarding concurrent Construction Work Activities as follows:

- a. North and South Connectivity and Roadway Restrictions
 - i. Maintaining access to the Elyria and Swansea Neighborhoods and reducing out of direction travel is critical. The businesses, schools and social gathering spots in these communities depend on the crossings to traverse the neighborhood, and provide as little disruption to their livelihood as possible. Construction phasing shall be taken into account in the determination and implementation of

construction phasing and detours. All directions of travel during construction phasing shall be considered in the roadway network to maintain current circulation and prevent the isolation of communities, especially north and south of the I-70 Mainline.

- ii. Full roadway closures of Brighton Boulevard, Steele Street, Vasquez Boulevard, Colorado Boulevard, Quebec Street, and Peoria Street are not allowed except as permitted by Section 2.11.5.a.iii and iv. At a minimum, the Developer is required to maintain the same number of thru lanes and left turn lanes as are provided in the existing conditions unless alternative measures are used to mitigate the loss of existing conditions. Reducing the number of thru lanes and auxiliary turn lanes will need to be Approved by the Department through the MOT Variance process described in Section 2.3 (whether an MOT Variance is required from the Department or a Local Agency).
- iii. Full night Closures of Brighton Boulevard, Steele Street, Vasquez Boulevard, Colorado Boulevard, Quebec Street, and Peoria Street are permitted during the Construction Period only between 10:00 PM and 5:00 AM (other than on a Holiday), provided that:
 - A. a maximum of six such Closures in relation to each such roadway is permitted during the whole of the Construction Period; and
 - B. the implementation of any such Closure is subject to prior Acceptance by the Department.

The Developer shall prepare the TMP, TCPs, Project Schedule, and perform Construction Work in accordance with the permitted construction Closures defined in this Section 2.11.6.
- iv. Roadway Closures for north-south facilities shall be in accordance with Table 2-2. The Construction Work restrictions, as shown in the table, show where concurrent Closures are not permitted.

Table 2-2 Concurrent Full Roadway Closure Restrictions for North-South Facilities

	Roadway Closures Not Permitted								
	UPRR Crossing	York Street	Josephine Street	Columbine Street	Clayton Street	Fillmore Street	Dahlia Street	Holly Street	Monaco Street
York Street		-	X	X					
Josephine Street		X	-	X					
Columbine Street		X	X	-	X				
Clayton Street				X	-	X			
Fillmore Street					X	-			
Dahlia Street							-	X	
Holly Street							X	-	X
Monaco Street								X	-

X means concurrent full roadway Closures are not permitted

- b. For certainty, for purposes of the definition of Construction Closure Deduction, paragraph b. of such definition in Part A of Annex A (Definitions and Abbreviations) to the Project Agreement shall apply to any full roadway Closure not permitted by Table 2-2.
- c. East and West Connectivity and Roadway Restrictions
 - i. Full Closure of 46th Avenue between Brighton Boulevard and York Street is allowed upon initiation of UPRR Bridge Construction Work that necessitates full Closure.
 - ii. 46th Avenue, between York Street and Colorado Boulevard, shall maintain a minimum of one lane in each direction.
 - iii. Provide a temporary connection of 46th Avenue between Clayton Street and Columbine Street for the removal of the existing viaduct and construction of two-way 46th Avenue. After the 46th Avenue South connection between Clayton Street and Columbine Street is open for bi-directional travel, the temporary connection can be removed.
 - iv. 46th Avenue, between Steele/Vasquez and Monroe Street, shall maintain a minimum of one lane in each direction, for access to businesses south and north of I-70 between BNSF Market Lead Crossing and Colorado Boulevard. A temporary detour of 46th Avenue using Jackson Street, 48th Avenue, Vasquez Boulevard, and Colorado Boulevard is allowed with business access agreements in place, as needed, for the Construction Work.
 - v. Stapleton Drive, between Colorado Boulevard and Oneida Street, shall maintain a minimum of one lane in each direction, for access to businesses.
 - vi. In single lane situations, a minimum clear travel lane width shall be 16 feet.

2.11.6. Permitted I-70 Mainline and Ramp Full Closures

Subject to Acceptance by the Department, full Closures can be implemented by the Developer for the I-70 Mainline and ramps as outlined below during the Construction Period only. The Developer shall prepare the TMP, TCPs, Project Schedule, and perform Construction Work in accordance with the permitted construction Closures defined in this Section 2.11.6.

- a. Permitted I-70 Mainline Full Closures
 - i. Night full Closures on the I-70 Mainline (Brighton Blvd. to I-270) – between 10:00 PM to 5:00 AM (other than at a Weekend or on a Holiday), up to ten occurrences are permitted during the whole of the Construction Period.
 - ii. Weekend full Closures on the I-70 Mainline (Brighton Blvd. to I-270) - 10:00 PM Friday to 5:00 AM Monday (other than on a Holiday), up to four occurrences are permitted during the whole of the Construction Period.
- b. Ramp Full Closures
 - i. Permitted ramp full Closures on the I-70 Mainline can be implemented by the Developer in accordance with Table 2-3, subject to the sequencing restrictions listed in Section 2.11.6.b.v.
 - ii. Ramp full Closures at the Brighton Blvd. interchange are not permitted during the National Western Stock Show.
 - iii. The ramps that are located between Brighton Blvd. and I-270 are allowed to be closed during permitted full Closures of I-70 Mainline.
 - iv. Full ramp Closures are not permitted without Department Approval and Developer implementing a detour design for the Closure.

Table 2-3 Permitted Full Ramp Closures on the I-70 Mainline from Brighton Blvd. to Chambers Blvd.

Location	Ramp	Allowed Closure
Brighton Blvd. Interchange	EB exit ramp	No full Closures allowed
	WB entrance ramp	No full Closures allowed
	WB exit ramp	Full Closure allowed for up to the lesser of the period of construction and six months upon initiation of construction that affects ramp
	EB entrance ramp	No full Closures allowed
York Street	EB exit ramp	Full Closure allowed upon initiation of Viaduct removal that affects ramp
	WB entrance ramp	Full Closure allowed upon initiation of construction that affects ramp for UPRR phasing
Steele/Vasquez Blvd. Interchange	EB exit ramp	Full Closure allowed for up to the lesser of the period of construction and six months upon initiation of viaduct removal that affects ramp
	WB entrance ramp	Full Closure allowed for up to the lesser of the period of construction and six months upon initiation of viaduct removal that affects ramp
	WB exit ramp	Full Closure allowed upon opening of the Colorado Boulevard westbound exit ramp and 46 th Avenue north between Vasquez and Colorado Blvd's. (Ultimate construction or temporary detour)
	EB entrance ramp	Full Closure allowed upon initiation of Viaduct removal that affects ramp
Colorado Blvd. Interchange	EB exit ramp	No full Closures allowed
	WB entrance (loop ramp from northbound Colorado Blvd.)	Full Closure allowed upon initiation of construction that affects ramp
	WB exit ramp	Full Closure allowed for up to the lesser of the period of construction and six months upon initiation of construction that affects ramp
	EB entrance ramp	No full Closures allowed
	EB entrance (loop ramp from southbound Colorado Blvd.)	Full Closure allowed upon initiation of construction that affects ramp

Location	Ramp	Allowed Closure
I-70 Slip Ramps to Stapleton Drive	EB exit @ Dahlia	Full Closure allowed upon initiation of construction that affects ramp
	WB entrance @ Dahlia	Full Closure allowed upon initiation of construction that affects ramp
	WB exit @ Monaco	Full Closure allowed upon initiation of construction that affects ramp
	EB entrance @ Quebec	Full Closure allowed upon initiation of construction that affects ramp
Quebec Street Interchange	EB exit ramp	Full Closure allowed for up to the lesser of the period of construction and six months upon initiation of construction that affects ramp
	WB entrance ramp	Full Closure allowed for up to the lesser of the period of construction and six months upon initiation of construction that affects ramp
	WB exit ramp	No full Closures allowed
	EB entrance ramp	No full Closures allowed
Central Park Blvd. Interchange	All existing ramps	No full Closures allowed
Havana Street Interchange	All existing ramps	No full Closures allowed
Peoria Street Interchange	All existing ramps	No full Closures allowed
Chamber Blvd. Interchange	All existing ramps	No full Closures allowed

v. Ramp Full Closure Sequencing

Prior to the Developer implementing a permitted ramp full Closure on the I-70 Mainline the following sequencing requirements associated with implementing the permitted ramp full Closures shall be met.

A. Steele/Vasquez interchange

Full Closures of Like Ramps (meaning any entrance ramps that provide the same directional access onto I-70 Mainline or any exit ramps that provide egress in the same direction from I-70 Mainline) at the Brighton Blvd. interchange and Colorado Blvd. interchange shall not occur concurrently.

B. Colorado Blvd. interchange

(I) Full Closures of Like Ramps (as defined in A. above) at the Steele/Vasquez Blvd. interchange shall not occur concurrently.

(II) The new Holly Street interchange shall be constructed and operational prior to Closure of ramps at the Colorado Blvd. interchange.

(III) Department Approval of detour route and design.

C. I-70 Slip Ramps to Stapleton Drive

The new I-70/Holly Street interchange shall be constructed and operational prior to Closure of I-70 slip ramps to Stapleton Drive interchange.

D. Quebec Street interchange

The new Holly Street interchange shall be constructed and operational prior to Closure of ramps at the Quebec Street interchange.

c. Request for full construction Closures

The Developer shall submit a lane Closure request for every permitted full Closure of the I-70 Mainline or ramps on the I-70 Mainline for Acceptance. Each lane Closure request shall include the following:

- i. Detailed description of the permitted full Closure, need and type of Closure;
- ii. Construction activities that will occur, and date, timing and duration of requested Closure;
- iii. Detours for full permitted Closures; and
- iv. Description of the coordination and relationship between the requested permitted Closure and:
 - A. Any other Closures that will be in effect during the same period of time;
 - B. Any past Closures relating to the requested Closure, along with results and outcomes of past Closures;
 - C. Future Closures of the same facility; and
 - D. Adjacent projects.

2.11.7. Swansea Elementary School

Maintaining safe and effective operations for the Swansea Elementary School shall be accounted for in the development of the construction phasing including the following:

- a. Columbine Street and Clayton Street are essential roadways for access to the school and shall not be closed while school is in session, between first day of school in August to last day of school near the end of May (as defined by the schools calendar for each school year during the Construction Period). During closures of 46th Avenue, 47th Avenue will need to remain open between Clayton Streets and York Streets;
- b. The Developer shall coordinate with Denver Public Schools for all Closures and operational impacts in the area of the School;
- c. The Developer's TMP shall include an approach to pedestrian and bicycle movements and school traffic circulation. This approach and solution shall be coordinated with CCD and the Denver Public Schools Department of Transportation and Approved by the Department;
- d. Coordination with existing Safe Routes to School Plans; and
- e. Inclusion of Transportation Operations Strategies provisions of Section 2.2.5.

2.11.8. Offsite and Onsite Outfall Systems

For the construction of the Offsite Outfall System and the Onsite Outfall System, the Developer shall coordinate the construction phasing and traffic control plans with CCD, local business owners, Railroads and other Persons, as required. The Developer is responsible for obtaining required Local Agency approvals and Permits prior to submittal of TCPs to the Department for these Elements of the Construction Work.

2.11.9. Permitted Freeway Lane Closure Hours

a. I-70 permitted lane Closure hours

Without prejudice to the provisions of Section 2.11.6, Tables 2-4 and 2-5 below set out the times when the Developer shall be permitted to implement lane Closures on I-70 Mainline during the Construction Period, provided that, for certainty, no such lane Closures are permitted on a Holiday.

Table 2-4 Single Lane Closures on the I-70 Mainline from Pecos Street to Tower Road

Pecos Street to Tower Road (MM 273 to MP 285.727)				
Beginning of Section (MP)	End of Section (MP)	Direction	Weekday	Weekend
270.496 (Sheridan Blvd)	274.000 (I-25)	EB	7 PM to Midnight Midnight to 5:30 AM	7 PM to Midnight Midnight to 9 AM
274.000 (I-25)	270.496 (Sheridan Blvd)	WB	7 PM to Midnight Midnight to 5:30 AM	7 PM to Midnight Midnight to 9 AM
274.000 (I-25)	276.572 (SH 2)	EB	8 PM to Midnight Midnight to 5 AM	8 PM to Midnight Midnight to 8 AM

2.11.10. Permitted interchange ramp lane Closure hours

a. I-70 Mainline interchange entrance and exit ramp lane Closure hours

Without prejudice to the provisions of Section 2.11.6, Table 2-9 sets out the times when the Developer shall be permitted to implement lane Closures on ramps on the I-70 Mainline during the Construction Period, provided that, for certainty, no such lane Closures are permitted on a Holiday and

- i. Temporary ramp Closures will only be permitted if:
 - A. An alternate route or temporary detour is provided;
 - B. Such Closure is for a duration of 48 hours or less; and
 - C. It is Approved by the Department; and
- ii. Two consecutive eastbound and westbound exit ramps are not permitted to be subject to a Closure at the same time.

Table 2-9 Permitted Ramp Closures on the I-70 Mainline from Pecos Street to Airport Boulevard

Pecos Street to Airport Boulevard (MP 273 to MP 284.627)

2.11.11. State Highway and arterial roadway permitted lane Closure hours

Tables 2-10 to 2-13 below set out the times when the Developer shall be permitted to implement lane Closures during the Construction Period on CDOT Roadways other than I-270 and I-225, provided that, for certainty, no such lane Closures are permitted on a Holiday. During non-permitted Closure hours, all lanes and turn lanes as they exist prior to construction must be maintained.

Table 2-10 Brighton Boulevard/York Street Single Lane Closure Times

Brighton Boulevard/York Street from 6 th Ave to York St (MP 8.954 to MP 0.961)				
Arterial Single-Lane Closure Schedules				
Beginning of Section (MP)	End of Section (MP)	Direction	Weekday	Weekend

2.11.12. Permitted Local Agency Roadways lane Closure hours

In performing the Construction Work on Local Agency Roadways, lane Closures shall only be permitted during the following hours:

- a. Arterials, collectors – 8:30 AM to 3:30 PM; and
- b. Local residential streets – 7:00 AM to 5:00 PM.

2.11.13. Queue Lengths during Construction

The Developer shall monitor queue lengths on all roads within the Project whenever a lane Closure is in effect. The Developer shall adjust the traffic control devices, including advance signing, to provide advance warning to motorists of stopped traffic.

2.11.14. Closure Violations

- a. Any lane Closure that results in a breach of, or is not permitted by, any of Sections 2.11.5, 2.11.6, 2.11.7.a, 2.11.9, 2.11.10, 2.11.11 or 2.11.12 shall result in the accrual of Construction Closure Deductions in accordance with, and subject to the terms of, Schedule 6 Performance Mechanism.

- b. Any Closure that results in a breach of, or is not permitted by any of Sections 2.5.3, 2.6, 2.7, or 2.9 shall result in the accrual of Construction Closure Deductions in accordance with, and subject to the terms of, Schedule 6 Performance Mechanism.
- c. Any Closure set during the Construction Period (other than a full Closure permitted by Section 2.11.5.a.iii or Sections 2.11.6.a or b) without active Construction Work being performed within the Closure on any half-mile of roadway within the Closure for a duration of more than 30 minutes shall be deemed to be a Non-Permitted Construction Closure and shall result in the accrual of Construction Closure Deductions in accordance with, and subject to the terms of, Schedule 6 Performance Mechanism, provided that, for certainty, a separate Non-Permitted Construction Closure shall be deemed to commence pursuant to this Section 2.11.14.c in respect of each such one-half mile of roadway, including if there is a continuous length of one mile or more of roadway in a single lane or shoulder that has no active Construction Work being performed on it. In its individual MHT submittals the Developer may submit, for Acceptance by the Department Closures that would otherwise be so deemed to be Non-Permitted Construction Closures in order to develop a safe Closure or to allow for the Developer's reasonable productivity during the allowable Closure period.
- d. Any Closure set during the Operating Period without active Routine Maintenance or Renewal Work being performed within the Closure on any half-mile of roadway within the Closure for a duration of more than 30 minutes shall be deemed to be a Non-Permitted Operating Period Closure and shall result in the accrual of Construction Closure Deductions in accordance with, and subject to the terms of, Schedule 6 Performance Mechanism. The proviso to Section 2.11.14.c shall apply equally to Closures deemed to be Non-Permitted Operating Period Closures pursuant to this Section 2.11.14.d. In its individual MHT submittals the Developer may submit, for Acceptance by the Department, Closures that would otherwise be so deemed to be Non-Permitted Operating Period Closure in order to develop a safe Closure or to allow for the Developer's reasonable productivity during the allowable Closure period.
- e. For any violation of the permitted lane Closure times for traffic control, without prejudice to the operation of Schedule 6 Performance Mechanism, a written notice to stop Construction Work may be imposed on the Developer at the start of the next Working Day. Construction Work shall not resume until the Developer assures the Department, in writing, that there will not be a reoccurrence of the violation.

2.11.15. Construction Phasing Minimum Lane Requirements

- a. I-70 Mainline lane restrictions
 - i. Minimum lane widths for travel lanes on the I-70 Mainline shall be 11 feet. Minimum outside and inside shoulder widths on the I-70 Mainline shall be two feet. Emergency pull outs shall be accommodated as required by this Section 2;
 - ii. If the I-70 Mainline is reduced to a single lane in one direction, the Developer shall provide a minimum clear width of 16 feet to accommodate oversize vehicles or provide alternate route planning for oversize vehicles; and
 - iii. The same number of existing lanes shall be maintained, unless otherwise permitted by this Section 2.
- b. I-70 Mainline interchange entrance and exit ramp lane restrictions
 - i. Minimum lane widths for ramps shall be 11 feet;
 - ii. Minimum shoulder width shall be two feet; and
 - iii. A minimum of one lane shall remain open on all ramps, unless otherwise permitted under Section 2.11.6.
- c. I-70 Mainline interchange roadways, 46th Avenue and Stapleton Drive lane restrictions

- i. Minimum lane widths for I-70 Mainline interchange roadways, 46th Avenue and Stapleton Drive shall be 11 feet;
 - ii. Minimum shoulder width shall be two feet; and
 - iii. Curb and gutter sections do not require a two foot shoulder.
- d. Other roadways lane restrictions
 - i. Minimum lane widths for local roads shall be 11 feet;
 - ii. Minimum shoulder width shall be two feet; and
 - iii. Curb and gutter sections do not require a two foot shoulder.

2.11.16. Weekly Lane Closure Notification

The Developer shall submit, for Information but without prejudice to any obligation of the Developer to obtain Approval or Acceptance from the Department of any specific Closure pursuant to any other terms of the Project Agreement, including this Section 2, lane Closures and Construction Work hours to the Department by Thursday 10:30 a.m. of the week in advance of implementation (for work Sunday through Saturday), unless required by construction emergencies or other reasonably unforeseen events. The Lane Closure Report, as provided in Appendix A to this Section 2, shall be used for the weekly submittal. The Lane Closure Report shall be updated and resubmitted to CDOT daily if any changes are made to the original submittal.

2.11.17. Noise Control Ordinance

The Developer shall obtain required Permits and comply with all Local Agency requirements for noise control ordinances in relation to Construction Work. The noise ordinance mitigation and Construction Work hours should be reflected on the MHT and TCP.

2.11.18. Detour Routes

Only State highways shall be used for I-70 Mainline detour routes. Local Agency Roadways proposed to be used as detours shall be approved by the Local Agency. For any Closure of a roadway that is designated as a bike route, as defined by the Local Agency, the Developer shall provide a detour route with equivalent bicycle access and adequate signage. All detour routes shall be the shortest length possible using equivalent or greater capacity roadways or as otherwise Approved by the Department. Pedestrians should be detoured to nearest available route where Closures are required, with the desired pedestrian detour not exceeding 1,000 feet in out of direction travel, unless otherwise Approved by the Department.

2.11.19. Trail and Pedestrian Impacts

- a. The Developer shall comply with all requirements of Schedule 17 Environmental Requirements;
- b. Existing trail systems, temporary trails, sidewalks, and pedestrian routes shall be maintained at all times. The Developer shall meet all requirements of the Americans with Disabilities (ADA) Act for all Construction Work that impacts existing trails and pedestrian facilities or that will be used for temporary detour routes;
- c. Temporary trail detours shall meet requirements for trail detours as outlined in the *CCD Construction Detour Standards for Bikeways and Multi-Use Trails*; and
- d. The following restrictions shall apply to existing trail systems in the vicinity of the Project:
 - i. No trail closures shall be allowed; and
 - ii. Temporary trail detours will be allowed under the following conditions:
 - A. PIP requirements shall be identified and appropriate public notifications provided; and

- B. The Developer shall comply with the *CCD Construction Detour Standards for Bikeways and Multi-Use Trails*.

2.11.20. Emergency Pullouts

- a. For facilities under construction, the Developer shall provide Emergency pullouts on the I-70 Mainline for disabled vehicles, staging of incident management, and law enforcement vehicles, when shoulder widths are less than eight feet at any point along a 0.5 mile stretch. Emergency pullouts shall be provided at the outside shoulder, between each interchange or at 0.5 mile spacing, whichever is less. For determining 0.5 mile spacing, the emergency pullouts shall be measured from the center of the first pullout to the center of the next pullout. Interchange distance shall be measured from ramp gore to ramp gore in the same direction of travel. The minimum pullout length shall be 150 feet, not including transitions. Pullouts shall be placed on the outside shoulder only; and
- b. Transitions shall be made at 15:1 or greater. The minimum pullout width shall be 14 feet measured beyond the travel lane. The pullouts shall be signed for emergency parking only, shall have a paved surface, shall include advance signing in compliance with the FHWA *Manual on Uniform Traffic Control Devices (MUTCD)*, and shall not be subject to ponding or other weather-related conditions that could render them unsafe or ineffective. Snow removal in Emergency pullouts is the responsibility of the Developer.

2.11.21. Courtesy Patrols

The Developer shall coordinate with the courtesy patrols as part of the implementation of the IMP. Schedule 11 Operations and Maintenance Requirements details the courtesy patrol requirements.

2.11.22. Uniformed Traffic Control

- a. The Developer shall employ off-duty police officers to provide traffic control and traffic enforcement throughout the Project as required. Uniformed Traffic Control includes; scheduling, coordinating and furnishing a uniformed police agency officer from the Local Agency and/or the Colorado State Patrol (CSP) to perform uniformed traffic control for any traffic control Activity including but not limited to:
- i. Lane Closures to I-70 Mainline (including ramps);
 - ii. Night construction on I-70 Mainline (including ramps);
 - iii. Lane Closures on Local Agency or CDOT Roadways;
 - iv. Night construction on Local Agency or CDOT Roadways;
 - v. Periods of active Traffic Control Management on all Roadways; and
 - vi. As necessary to ensure safety and efficient operations as identified in the Contractor's TMP.
- b. The uniformed police agency officer shall have completed *The Safe and Effective Use of Law Enforcement Personnel in Work Zones* training course. The Developer shall provide to the Department for Information copies of documentation certifying the officer's successful completion of this course.
- c. If not provided by the Local Agency and/or the CSP, the Developer shall furnish a vehicle for the officer to use in performing uniformed traffic control. The Developer shall be responsible for licensing, insuring, servicing, and fueling the vehicle. Each traffic control vehicle shall furnish Class 1 SAE certified light bar and control panel for exclusive use by uniformed police agency officers while performing Uniformed Traffic Control. The light bar shall have the following configuration:
- i. Minimum of 44 inches in length, and shall be either permanently or temporarily attached to the top of the vehicle;

- ii. Flash red on the driver side and blue on the passenger side;
 - iii. Equipped with an amber-colored directional device in the rear of the bar;
 - iv. Have alley and takedown lights;
 - v. Control panel shall be capable of controlling the front of the bar and the rear of the bar separately; and
 - vi. The traffic advisor shall be controlled separately.
- d. The light bars shall be mounted on traffic control vehicles, and shall be maintained in good operating condition at all times. The Developer shall obtain a permit from the police or sheriff department, as appropriate, for the use of the light bars. The Developer shall keep the light bars covered at all times when the traffic control vehicle is being used by someone other than the authorized uniform police agency officer.

2.11.23 CTMC Central 70 Support

During Construction, the Developer shall provide a staff person at the CTMC, to monitor I-70 traffic operations 6:30 am to 8:00 pm for weekdays, and 10:00 am to 7:00 pm for weekends. Developer shall monitor regardless of weather conditions. Any extensions of operating hours due to Emergencies, Severe Weather Event or planned Special Events as identified by Developer and Accepted by the Department, or as required by the Department, (up to 30 hours per Contract Year for all required vehicles, dispatch staff, and required personnel and equipment) shall be the responsibility and cost of the Developer.

The staff person shall be trained and knowledgeable with working with ITS cameras, digital message signs, ITS devices and CMTC operating procedures. Monitoring traffic operations will be for I-70 Mainline between I-25 to Tower Rd. Work shall include coordination between the Developer, the Department, CCD and Developer's Courtesy Patrol.

The Department will furnish the work station and computer.

2.12. Construction Requirements

2.12.1. The Developer shall provide installation, maintenance, and removal of all temporary traffic control devices.

2.12.2. Temporary Traffic Control Devices

a. Construction Signing

Construction signing within the Project and all detours shall comply with CDOT *Standard Specifications*, the MUTCD and all other applicable standards set forth herein. Wood signposts conforming to CDOT *Standard Specifications* will be allowed for installation of temporary signs. No posting on Utility poles or other permanent sign posts. The Developer shall submit sign layouts for all special signs of any size to the Department for Acceptance.

b. Temporary Traffic Signals and Temporary Ramp Meter Stations

Temporary traffic signals and ramp meter shall comply with Schedule 10, Section 11 Signing, Pavement Marking, Signalization, and Lighting. Upon discovery of a signal malfunction, the Developer shall immediately notify the entity responsible for the signal.

c. Pavement Marking and Signing

The Developer shall furnish, apply and remove pavement marking material in accordance with CDOT *Standard Specifications*. Pavement striping shall meet the conformity of lines (including no overspray), dimensions, patterns, locations and details established in the Developer's TCP and MHT. The Developer shall comply with the criteria for retro reflectivity in Table 2-14 for striping material.

- i. Hydro blasting, or other methods that do not result in scarring of permanent pavements shall be used for removal of temporary striping; and
- ii. Pavement marking striping shall be maintained and measured for performance.

2.12.3. Pavement Markings During Construction

- a. The Developer shall provide all pavement markings meeting the minimum retro-reflectivity as shown in Table 2-14. The Developer shall use a calibrated retro-reflectometer and perform the test on each line strip in conformance with ASTM E 1710 or AASHTO TP111 procedures. The following readings shall be collected for each day striping test is being conducted:
 - i. Within a mile test section, collect 10 readings for each longitudinal line stripe, at no less than 40 feet intervals; and
 - ii. Where striping is less than 500 feet in length, collect readings at 50 foot intervals.
- b. The calibration for the retroreflectometer shall be verified every day, prior to the readings being taken. The retroreflectivity readings shall be taken no sooner than 3 Calendar Days and no later than 14 Calendar Days after the marking is tack free.

Table 2-14 Pavement Marking Reflectivity

Color	Retro-reflectivity Reading (R) in a one-mile section (mcd/m ² /lux)
White	R ≥ 375 (Newly applied marking less than 3 weeks old) Newly applied marking minimum 375 mcd/m ² /lux. Less than this reading for newly applied marking; remove and replace, impose a Working Time Violation Incident and stop work.
Yellow	R ≥ 250 (Newly applied marking less than 3 weeks old) Newly applied marking minimum 250 mcd/m ² /lux. Less than this reading for newly applied marking; remove and replace, impose a Working Time Violation Incident and stop work

- c. Prior to taking retro-reflectivity readings, the Developer shall remove at the retro-reflectivity reading locations any excess beads placed during marking application.

2.12.4. Glare Screen, Barrier Reflector Strips and of Temporary Traffic Control Devices

- a. The Developer is required to have 18 inch glare screen on all temporary barrier located between I-70 Mainline opposing traffic located within four feet of the barrier;
- b. Barrier reflector strips shall be installed on all temporary barrier, both right and left sides, as per the CDOT Standard S-612-1. The spacing between each three foot panel shall be no more than seven feet; and
- c. Delineators shall be used throughout the Project, including lighted areas.

2.12.5. Maintenance of Temporary Traffic Control Devices

The Developer shall be responsible for the maintenance of all temporary traffic control devices within the Project, including the local street system. Temporary traffic control devices shall meet the acceptable standard as defined by the ATSSA *Quality Guidelines for Work Zone Traffic Control Devices*.

2.12.6. Detours and Detour Pavement

- a. Any detour pavement shall be designed according to the requirements as provided in Schedule 10, Section 6 Roadway Pavements;
- b. Detour pavement locations shall be generally described in the Developer's TMP and detailed in the Accepted TCP;
- c. The Developer shall obtain written approval from the affected Local Agency prior to use of any local streets for detours;
- d. The Developer shall begin removing all detour signs immediately after any Closure is removed and all detour signs shall be removed within 2 hours of the Closure being removed;
- e. Covering or masking of signs shall be allowed on signs permanently installed, if detour is to be reused. All temporary signs shall be removed in accordance with Section 2.12.6.d;
- f. Detours that use existing street pavements shall be subject to pavement repair or replacement where it is determined that the condition of the existing pavement has noticeably deteriorated over the duration of its use as a detour; and
- g. The Developer shall be responsible for damage on any existing streets used for detours and shall repair any damages to the existing condition, as directed by the Department.

2.12.7. Temporary Lighting

Any existing lighting that is not in operation when NTP 2 is issued shall be remedied by the Developer within 30 Calendar Days after the issuance of NTP 2. Developer shall ensure that existing lighting that has yet to be impacted by the Construction Work will be maintained and operated at its current level and will not be required to meet the minimum criteria in Table 2-15.

The Developer shall provide all temporary lighting for traffic shifts, detours, emergency pull out locations, merge/diverge locations and intersections within Construction Work, which lighting shall meet the minimum requirements as shown in Table 2-15.

The Developer shall provide temporary lighting for all existing (including locations where existing sidewalk is not present) and proposed pedestrian and bicycle movements (including detour routes) between Brighton Blvd and Garfield St. within Construction Work, which lighting shall meet the minimum requirements as shown in Table 2-15.

Light shields shall be required if located adjacent to residential structure.

Table 2-15 Temporary Lighting

	Design Method	Luminance Range (cd/m²)	Uniformity (avg:min)	Veiling Luminance Ratio (L_{vmax}/L_{avg})	Visibility Level	Illuminance Range (avg fc)
Freeway, Interchanges, Highway Underpasses	Luminance	0.4 – 0.6	3.5	0.3		
	STV	0.3 – 0.5	6.0 (max:min)		2.6 – 3.8	
	Illuminance		3.0	0.3		0.4 – 1.4
Municipal Streets	Luminance	0.3 – 0.8	3.0 – 6.0	0.4		
	STV	0.3 – 0.6	6.0 – 10.0 (max:min)		1.6 – 3.8	
	Illuminance		4.0 – 6.0	0.4		0.4-1.2
Pedestrian and Bike ways	Illuminance (Mixed vehicle and pedestrian)		4.0			2.0
	Illuminance (pedestrian only)		4.0			1.0
	Illuminance (Walkways/ Bikeways)		4.0			0.5

2.12.8. Traffic Accidents within Traffic Control Zones

The Developer shall provide CDOT with weekly updates of all recorded accidents located within the Project traffic control zone(s). The Developer shall coordinate with local jurisdictions as necessary to request and obtain (including any required payment) for the recorded accident reports. The accidents shall be discussed at the weekly MOT Task Force Meetings to identify potential problem locations.

2.13. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance, or Approval in accordance with the time frames specified below:

Table 2-16 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
List of MOT Task Force members	Acceptance	30 Calendar Days after issuance of NTP1
Transportation Management Plan (TMP)	Approval	Prior to the issuance of NTP2
Incident Management Plan (IMP)	Acceptance	30 Calendar Days after issuance of NTP1

Deliverable	Information, Acceptance, or Approval	Schedule
Department MOT Variance request	Approval	30 Calendar Days prior to implementation
Local Agency MOT Variance approval	Information	Promptly after MOT Variance approved
Modifications to RTD station access or bus stop locations	Information	Prior to RFC Documents
Lane Closures and Construction Work Hours	Information	Thursday 10:30 AM the week in advance of implementation
Requests for full Closures permitted by <u>Section 2.11.4</u> or <u>2.11.6</u>	Acceptance	As required
MOT operations and analysis	Acceptance	Submit with TCPs
Temporary Traffic Control Plan (TCP)	Acceptance	Prior to RFC Documents
Method of Handling Traffic (MHT)	Acceptance	14 Calendar Days prior to implementation
Uniformed traffic control certifications	Information	14 Calendar Days prior to implementation
Sign layouts for special signs	Acceptance	Submit with TCPs

3. ITS AND TOLLING EQUIPMENT

3.1. General

- 3.1.1. The Developer is responsible for:
- a. the design and construction of the Intelligent Transportation System (ITS) and Electronic Toll Collection (ETC) infrastructure Elements for the Project in accordance with this Section 3; and
 - b. maintenance of the ITS and ETC Elements of the Project in accordance with this Section 3, including the Elements identified as Developer responsibility in Appendix B Responsibility Matrix to this Section 3. This includes maintenance of the existing ITS devices and fiber optic cables in accordance with Schedule 11 Operations and Maintenance Requirements. Inventory of CDOT ITS devices and CCD cameras is included in the Reference Documents as information only.
- 3.1.2. The ITS Elements include various devices, such as Dynamic Message Signs (DMS), Side Mount Variable Message Signs (SMVMS), Variable Toll Message Signs (VTMS), Closed Circuit Television (CCTV) camera, Microwave Vehicle Radar Detection (MVRD), Travel Time Indicators (TTI), Road Weather Information Systems (RWIS), Environmental Friction Sensors (friction sensors), Lane-Use Signals (LUS), Doppler radar, Automatic Traffic Recorders (ATR), and Dedicated Short Range Communications (DSRC) Radios. In addition, the ITS system includes the various components for CCD and CDOT that make up the communication system, such as conduit, fiber optic cable, fiber optic cable network, fiber splicing, Ethernet switches, routers, racks, rack mounts, Uninterruptable Power Supply (UPS), power generators, grounding, cabinets and all incidental equipment and materials required to provide a fully functional system.
- 3.1.3. The Developer shall be responsible for coordinating with the ETC System Integrator for design and construction of the ETC system. The ETC System Integrator and the Developer shall be responsible for their respective ETC Elements for design, procurement and construction as outlined in this Section 3. The ETC System Integrator is responsible for procurement and installation of Automatic Vehicle Identification (AVI) Readers, Automatic License Plate Recognition (ALPR) Cameras, Loop Detectors, Lane Controllers, Transaction Status Indicator Beacons, ETC system Ethernet network equipment and plaza servers. The ETC system will rely on CDOT's 216 strand fiber optic communications network, referred to as the backbone, to link the ETC field devices to the ETC back-office.
- 3.1.4. All existing CDOT ITS devices, equipment, supports, and structures within the Project shall be replaced by the Developer, unless specifically noted otherwise in this Section 3. This shall include items such as all existing DMS, CCTV cameras, MVRDs, TTIs, RWIS, ATRs, cabinets, and Ethernet switches. Existing devices may be reset temporarily to maintain operability during construction, however all permanent installations require new ITS devices, equipment, supports, and structures. All existing devices replaced on the Project shall be salvaged and returned to CDOT.
- 3.1.5. The ITS and ETC fiber optic communications network extends beyond the Construction Work area and includes interconnections between nodes. This includes Node 1 located at I-25 and 38th Ave/Fox St. (3701 Park Ave), Southmoor Node (3857 S. Monaco Pkwy.), Node 2 near I-25/70th (525 E. 70th Ave.), a new node to be constructed with the Project at I-70/Airport Blvd., Region 1 KOA communications room at Colfax Ave./Tower Rd., E-470 Authority Data Center at E-470/6th Ave. in Aurora and the Colorado Transportation Management Center (CTMC) in Golden (425 Corporate Circle, Golden 80401).
- 3.1.6. The Developer shall install a new node building at I-70/Airport Blvd. which shall house the ETC equipment and the ITS system equipment along with the installation and termination of CDOT's 216 backbone cable connecting the node building equipment to the ETC and the ITS field equipment. The Developer's and the ETC System Integrator's responsibilities are further defined in this Section 3.

- 3.1.7. The Developer shall construct a network equipment room at the Cover which will house the Cover MEP systems and network equipment, as described in Schedule 10, Section 12 and this Section 3.

3.2. Applicable Standards

All Construction Work required to be performed by the Developer pursuant to this Section 3 shall comply with the Construction Standards, the requirements listed in this Section 3, Good Industry Practice and Phase I Signing and Striping Plan included in the Reference Documents.

3.3. Legacy Equipment

Due to the risk of obsolescence, equipment should not be purchased or ordered more than six months prior to the installation date for any piece of equipment without prior written Acceptance by the Department.

3.4. ITS and Tolling Manager, Task Force Meetings, and Schedule

3.4.1. ITS and Tolling Manager

- a. From NTP1 to Final Acceptance, the Developer shall employ a full time ITS and Tolling Manager (“ITM”) to be responsible for coordinating and ensuring compliance with all ITS and tolling design, construction, integration, scheduling and operational requirements;
- b. The ITM shall be able to demonstrate a minimum of 10 years of experience with ITS design and construction, and the individual’s resume shall be submitted to the Department for Acceptance prior to NTP1; and
- c. If for any reason Developer wishes to remove and/or replace the ITM, the change requires the Enterprises’ Acceptance. Developer shall promptly deliver a notice to the Enterprises for Acceptance, setting out the reason for such removal and/or replacement, together with:
 - i. The identity, expertise and experience of the proposed replacement meeting the requirements of Section 3.4.1.b; and
 - ii. Any such support information or evidence as the Enterprises may reasonably require in relation to such matters.
- d. The ITM shall have the authority to stop or redirect the Work at any time as needed, and shall be responsible for the following:
 - i. Ensure that all individuals working on design, construction and integration for ITS and tolling are qualified and have relevant experience;
 - ii. Be the primary liaison between the Developer and the Department on all ITS and tolling related issues;
 - iii. Be the lead responder to any non-compliance findings for ITS or tolling issued by the Department or the Independent Quality Control Manager (“IQCM”) for the Work;
 - iv. Provide support to the IQCM to ensure inspection checklists cover all ITS and tolling requirements;
 - v. Ensure full compliance with all ITS and tolling requirements in the Work;
 - vi. Ensure that all ITS and tolling related tasks are performed by qualified professionals pursuant to Section 16.3 of the Project Agreement, and provide the resources to perform the Work needed to meet the ITS and tolling requirements;
 - vii. Lead ITS and tolling cross-disciplinary reviews of all design submittals in order to confirm compliance with all ITS and tolling requirements and design commitments;

- viii. Perform reviews of proposed Developer Changes prior to submittal to the Department of any related Developer Change Notice pursuant to Schedule 24 (Change Procedure). The submittal of a proposed Developer Change Notice by the Developer to the Department shall include documentation that the ITM has performed due diligence and that the proposed Developer Change complies with the ITS and tolling requirements;
 - ix. Measure the number and severity of non-conformances with the ITS and tolling requirements and include a monthly summary of the findings at the task force meetings, including the steps that will be taken to improve processes going forward;
 - x. Coordinate the participation of the appropriate members of the Developer's team for, and lead, ITS/tolling task force meetings as referred to in Section 3.4.2 below; and
 - xi. Direct, oversee and coordinate with the staff person that is required at the CTMC per Schedule 10, Section 2, Maintenance of Traffic.
- e. The ITM's responsibilities shall not be delegated to production staff or any other Person without Department Approval.

3.4.2. ITS/Tolling Task Force Meetings

- a. Developer shall conduct ITS/tolling task force meetings pursuant to Section 9.2 of Schedule 8 (Project Administration) and this Section 3.4.2;
- b. ITS/tolling task force meetings shall be held on a weekly basis during the period beginning with NTP1 through the Final Acceptance Date to discuss ongoing design, construction, integration and operations topics related to the ITS and tolling elements of the Work. During the Operating Period, the Department may require such meetings on an as needed basis; and
- c. The ITM shall coordinate and lead the ITS/tolling task force meetings pursuant to Section 3.4.1.

3.4.3. Schedule

- a. The Developer shall detail all work items and requirements for the ETC system and ITS design, equipment procurement, installation, testing, and integration into its Baseline Schedule as described within this Section 3. This includes schedule requirements, Deliverables, and time periods as specified in this Section 3 for work to be performed by the ETC System Integrator and in the Central 70 Testing and Integration Plan in the Reference Documents.

3.5. The ETC System Integrator and Developer Responsibilities

- 3.5.1. The ETC System Integrator shall be responsible for procuring, installing and integrating the ETC system in accordance with the E-470 TSA and the E-470 Installation Agreement. The ETC System Integrator will procure and install the loop detector wires, transaction status indication beacons, ALPR cameras, AVI antennas over the Tolloed Express Lanes, and any ETC equipment required in the cabinets that is not included with the cabinet per Project Special Provisions, Appendix A to this Section 3. The ETC System Integrator shall test the ETC equipment to ensure that the toll tags are accurately read. The ETC System Integrator shall be responsible for any software necessary to collect tolls, compile transactions from the ALPR cameras, and the ETC system Ethernet network equipment.
- 3.5.2. Although the ETC System Integrator shall be responsible for the installation and configuration of the ETC equipment per this Section 3, the Developer shall be responsible for all of the ETC design per ETC requirements. The Developer shall be responsible for the procurement and construction of the ETC lane controller cabinets and associated foundations; all work and materials associated with the toll point UPSs; all conduit needed to connect to: the ETC lane

controllers, AVI antennas, loops, ALPR cameras; transaction status indication beacons, and other toll related equipment, all overhead structures and AVI mounting brackets; all ALPR camera poles and bases; and all conduits, cabling, patch panels and terminations needed to provide communications and power to the cabinets. The design of the ETC system, network, fiber connectivity, locations of the cabinets, devices, foundations, and conduits shall be Approved by the ETC System Integrator and the Department.

3.5.3. The Developer shall provide the power, lateral conduits, and lateral fiber to all ETC equipment and provide and terminate all fiber and fiber patch cables at field cabinet locations and node buildings.

3.5.4. The Developer shall be responsible to coordinate and provide all traffic control for the ETC System Integrator. The ETC System Integrator will be required to follow the permitted Closure hours outlined in Schedule 10, Section 2, Maintenance of Traffic for equipment installation, configuration, integration, and testing activities on the Project. The ETC System Integrator will be required to schedule all work activities with the Developer and provide at least 48 hours' advance notice of any Closures needed for their work. The Developer shall coordinate Closures with the ETC System Integrator.

3.5.5. The Developer shall be responsible for coordination and scheduling of the Construction Work with the ETC System Integrator. Developer shall coordinate the design of Project Elements between the ETC System Integrator and CDOT's ITS network. The ETC System Integrator and the Developer shall work together and coordinate Construction Work schedules. The Developer shall be responsible for coordinating with the ETC System Integrator, including so as to avoid any delays to the Project due to scheduling this work.

3.5.6. Equipment Procurement and Configuration

The Developer shall include in its Baseline Schedule 120 Working Days from the date the equipment is ordered by the ETC System Integrator until it is received. The Developer shall include in such schedule, and allow the ETC System Integrator, an additional 20 Working Days for configuration of the ETC equipment.

3.5.7. Installation and Integration

Prior to the ETC System equipment installation and integration, the Developer shall meet the following conditions:

- a. Cabinet back and side panel provided to the ETC System Integrator 25 Working Days, at a minimum, prior to start of installation of tolling devices;
- b. Permanent barrier or guardrail installed;
- c. Tolling cabinets and pull boxes installed;
- d. Tolling UPS and cabinet installed and properly sealed;
- e. Loop wire conduits installed from the cabinet to the stub up locations;
- f. Final pavement placed, debris removed, and lanes swept where loops are installed;
- g. Final pavement markings are identified in the field;
- h. ALPR camera bases and poles installed;
- i. Overhead structure, mounting brackets, and conduit installed;
- j. Pull tape installed in all conduit runs from the ETC cabinet to the device locations;
- k. Permanent power and communications connections fully operational;
- l. All fiber and power testing to toll locations (including UPS), have been confirmed for functionality of toll cabinets and lateral fiber. Testing to be performed per the Central 70 Testing and Integration Plan included in the Reference Documents;

- m. As-built documentation of fiber path and terminations at toll points and node buildings for ETC network;
- n. All fiber patch cables installed and patch panels labeled;
- o. Method of Handling Traffic (MHT) submitted and reviewed by the ETC System Integrator. Coordinated schedule for closure of Tolloed Express Lanes to allow for the ETC System Integrator to perform installation, mapping, and testing;
- p. Photos sent to the ETC System Integrator for review of readiness prior to work; and
- q. Walkthrough scheduled with the ETC System Integrator to verify the location readiness for installation and integration of the ETC devices.

The Developer shall provide the ETC System Integrator a minimum of 48 hours' advance notice that a toll point site is ready for installation. The Developer shall include in its Baseline Schedule, and provide the ETC System Integrator with, a minimum 14 Calendar Days of unrestricted access to each tolling location to allow installation and integration of the ETC devices. Installation and integration by the ETC System Integrator will need to be scheduled sequentially, and not concurrently. Once the integration has been completed at a toll point, the Department will need to perform a preliminary inspection.

3.5.8. Lane Testing

Prior to the ETC System Integrator lane testing, the Developer shall have completed all of the requirements in Section 3.5.7 of this Section 3 and the ETC System Integrator shall have completed its installation and integration activities. In addition, the Developer shall allow live traffic through test toll locations in final alignment, for a minimum distance of 500 feet on either side of the toll structure. All final pavement markings shall be in place. Developer shall have all CDOT CCTV cameras and DMS installed, field tested, communications to CTMC and E-470 verified and fully operational prior to lane testing.

The Developer shall include in its Baseline Schedule, and allow the ETC System Integrator, a minimum 14 Calendar Days per site for the conduct of lane testing and processing of the respective data. Developer shall allow for the following:

- a. A minimum of 12,000 vehicles within a 24-hour period; and
- b. A traffic type mix to travel through test locations during day and night.

Work to be scheduled at sequential locations and not concurrently. The ETC System Integrator testing work to be conducted at all toll points.

3.5.9. Final Acceptance Testing

Prior to the ETC System Integrator's final acceptance testing of the ETC equipment, the Developer shall have completed all of the requirements in Section 3.5.8 of this Section 3. In addition, traffic must be travelling through the final alignment for all toll points and final striping must be in place.

For final acceptance testing of the ETC system, the ETC System Integrator requires testing and evaluation under normal traffic patterns to verify that the ETC back-office system is functioning correctly. The Developer shall include in its Baseline Schedule a minimum 70 Working Days for the conduct of final acceptance testing from the date that the last tolling point lane testing is completed and traffic is operating in final configuration through the toll points. The Developer shall provide advance notice to the ETC System Integrator of any lane Closures or other impacts to traffic through the toll points during this final acceptance testing period.

3.6. Zayo and Developer Responsibilities

- 3.6.1. The Utility Relocation Agreement (URA) between CDOT and Zayo, provided in the Reference Documents, defines the responsibilities of the parties as outlined in this Section 3 and the Developer shall be responsible for performing all Utility Work in accordance with Utility Work Orders issued pursuant to the URA and Schedule 10, Section 4 Utilities.

- a. Zayo will be responsible for any Utility Relocations with regards to the shared resource facility in accordance with the User Agreement dated 6-27-03 and Agreement for Shared Resources Project dated 3-11-1999 from Quebec St to Airport Blvd; and
- b. Developer shall be responsible for the design and installation of the Zayo Utility Relocation from York St to Quebec St in accordance with the URA.

3.6.2. Zayo will be responsible for the following:

- a. Zayo will furnish six 6-inch conduits (two conduits will be equipped with seven 1 ¼-inch innerducts) and all manholes and pull boxes needed for the Zayo facility from York St. to Quebec St. Zayo will furnish a 288-strand fiber optic cable for Zayo's facility from York to Quebec St. and shall be responsible for all splicing of Zayo fiber. Thirty-six strands of Zayo's 288 strand fiber optic cable are allocated to CDOT and is referred to as the shared resource;
- b. Zayo will furnish a 216-strand fiber optic cable for CDOT's facility between Node 1 and the proposed node building at I-70/Airport Blvd.;
- c. Zayo will furnish a 96-strand fiber optic cable (84 strands single mode and 12 strands multi-mode) for City and County of Denver (CCD) facility between Washington St. and Quebec St.; and
- d. Zayo will perform all splicing to the existing or proposed shared resource.

3.6.3. The Developer shall be responsible for the following:

- a. The Developer shall be responsible for all work to maintain connectivity between existing devices and fiber and the proposed shared resource with the exception of the fiber splicing to the shared use facility. The Developer shall furnish and install all materials (including, conduit, fiber, pull boxes, splice closures and manholes) required to maintain connectivity to existing devices;
- b. All splicing to the existing or proposed shared resource will be performed by Zayo and the cost for the splicing shall be paid to Zayo by the Developer. The Developer shall be responsible for scheduling the work with Zayo;
- c. The Developer shall be responsible for the relocation of any existing CCD fiber backbone or laterals impacted within the Site per Schedule 10, Section 4 Utilities and Schedule 10, Section 11 Signing, Pavement Markings, Signalization, and Lighting;
- d. The Developer shall furnish and install all conduit, pull boxes, manholes for CDOT and CCD facilities per this Section 3;
- e. The Developer shall furnish and install a 96-strand fiber optic cable (84 strands single mode and 12 strands multi-mode) for CCD at all locations along I-70 where CCD's existing fiber backbone is impacted east of Quebec St. The Developer shall also furnish and install a 96-strand fiber optic cable (84 strands single mode and 12 strands multi-mode) for CCD between Quebec St and Colorado Blvd. This is in addition to the fiber that Zayo is providing as CCD has a second existing 96-strand fiber backbone in this segment;
- f. The Developer shall be responsible for furnishing and installing all pull tape, tracer wire, conduit plugs, concrete aprons, location markers and other associated items or materials required for installation of the manholes, pull boxes, and conduit furnished by Zayo; and
- g. The Developer shall be responsible for the design and installation of the relocated Zayo, CDOT, and CCD facilities; including all conduit, manholes, pull boxes, and fiber.

3.6.4. The Developer shall coordinate schedules with Zayo to avoid delays. Without prejudice to the Developer's rights arising as a result of the occurrence of a Supervening Event, the Department will not be responsible for delays. As the section between York St. and Airport Blvd. is a shared resource that runs longitudinally alongside I-70, the Developer shall be aware that a 45 Calendar

Day notice by Zayo to its customers is required for any service disruptions and shall be built into the Developer's Project Baseline Schedule. Reference Schedule 8 Project Management for scheduling requirements.

3.7. Colorado Transportation Management System Software and Video Management System

- 3.7.1. Colorado Transportation Management System (CTMS) software refers to the computer program used at the CTMC to control CDOT's statewide DMS's, Active Traffic Management (ATM) on US 36, I-25, and I-70 West, monitors the equipment connected to the software in real time for failures, calculates travel time using the TTIs, MVRDs and Doppler radars, utilizes the RWIS statewide for road conditions, and replicates information to the State's website, www.cotrip.org. This website is in a usable format for the public to view in real time.
- 3.7.2. No CTMS software development shall be needed by the Developer. Any new models of equipment that may require software upgrades to the CTMS will be at the responsibility of the Department.
- 3.7.3. The video management system software controls the statewide camera network and is a shared camera network with multiple participating agencies in the Denver Metro area. Any new cameras added to the I-70 Mainline shall be incorporated into the video software, NICE® Vision, and shall be the responsibility of the Developer. The Developer shall be responsible to provide qualified staff that are capable of camera installations, terminations and any trouble shooting required until the camera is fully operational. The Developer shall provide licensing required for the existing video software associated with new camera installations.

3.8. Design and Construction Requirements

- 3.8.1. The Developer shall design and construct the ITS and ETC infrastructure components as outlined in this Section 3. All devices and equipment shall be new unless the Department Approves that an item may be reused. This does not apply to devices or equipment to be reset for temporary use during the Construction Period. No part or attachment of any equipment shall be substituted or applied contrary to the manufacturer's recommendations and Good Industry Practice.
- 3.8.2. The Developer shall submit a preliminary (30% level) ITS roll plot with locations of all ITS and ETC infrastructure described within this Section 3. The ITS roll plot shall also include the Ramp Meters.
- 3.8.3. The Developer shall submit both final (100%) and RFC level ITS and ETC design plans and details. The ITS and ETC design plans and details shall include, at a minimum, the following:
 - a. ITS plan sheets detailing all temporary and permanent ITS, and ETC equipment and infrastructure. The ITS plan sheets shall include existing and proposed utilities, proposed roadway and pavement markings, and proposed sign structure locations;
 - b. Plans and details for the proposed Node Building at I-70 and Airport Blvd, proposed network equipment room at the Cover, Node 1, Node 2, KOA communications room, and the Southmoor node;
 - c. Site specific maintenance access shall be shown on the ITS plans for every ITS and ETC device, manhole with splicing, and cabinet. Maintenance vehicle parking and personnel access shall be detailed on the plans; and
 - d. ITS and ETC device and infrastructure details.
- 3.8.4. The Developer shall provide all supporting reports and design calculations, including electrical calculations, with the final (100%) and RFC submittals.
- 3.8.5. The Developer shall submit ITS and ETC device and material specification sheets for Acceptance to the Department prior to ordering the equipment. ITS infrastructure locations need to incorporate elements from this Section 3 and other applicable Sections of this Schedule 10 and the Phase 1 Signing and Striping Plan included in the Reference Documents. Fiber backbones, ITS and ETC devices and infrastructure shall be placed to accommodate the Ultimate configuration.

3.8.6. Conduit, Fiber and Node Buildings

a. Design Requirements

- i. The Developer shall design new and separate conduit systems (including all hardware, fasteners, and accessories) for communication and power control systems. Longitudinal conduits for the communications network shall be installed within the Right-of-Way (ROW) and as close to the ROW line as practical. The CDOT backbone shall cross I-70 at only one location between Washington St. and Airport Blvd., or as Approved by the Department. The CCD backbone running parallel to the I-70 Mainline shall cross the I-70 Mainline at only one location within the Site, or as Approved by the Department;
- ii. Conduits shall be installed by the Developer per the National Electrical Code (NEC) requirements including separate conduits and pull boxes for power, communications and appropriate conduit fill ratio. Power conduits shall be placed above Zayo conduits if they are located in a joint trench;
- iii. Permanent CDOT ramp meters, CCD traffic signals and traffic signal surveillance cameras shall be designed and connected to the respective agency fiber backbones by the Developer;
- iv. The Developer shall maintain existing ramp metering connections and communications to the central ramp metering control system;
- v. Location markers for fiber optic and power shall be installed by the Developer as per the Project Special Provisions, Appendix A of this Section 3;
- vi. Fiber strand color codes and conduit color codes shall follow CDOT's, Zayo's and CCD's requirements;
- vii. The Developer shall be responsible to install the number of conduits in a duct bank, as described below. The fiber and conduit installed are for Zayo's, CCD's and CDOT's exclusive use and may not be used for fiber laterals or power;
- viii. CDOT's duct bank consists of five 2-inch conduits along I-70 Mainline between Airport Blvd. and the pull box west of I-25; one of the 2-inch conduits is for CDOT's backbone and the other four 2-inch conduits are spare for CDOT's future use and not to be used on this Project. Any conduits needed for ITS or ETC fiber laterals or power shall be installed in addition to CDOT's five 2-inch conduits;
- ix. All references to conduits in this Section 3 shall be either polyvinyl chloride (PVC) schedule 80 or high-density polyethylene (HDPE) schedule 80 and ETL/UL listed. The conduits shall be factory lubricated, low friction, high-density conduit constructed of virgin schedule 80. HDPE conduits shall be capable of being coiled on reels in continuous lengths, transported, stored outdoors, and subsequently uncoiled for installation, without affecting its properties or performance. All conduits shall comply with the CDOT Standard Specifications;
- x. The following are additional requirements for the conduit, fiber and power installation:
 - A. Separate 2-inch lateral conduits for fiber laterals shall be required to the ETC and ITS equipment. These shall be in addition to the five 2-inch conduits for CDOT;
 - B. Separate 12 strand single mode fiber optic lateral cables shall be required to the ETC and ITS equipment;
 - C. 3-inch lateral conduit and fiber shall be required to CCD signals and equipment per Schedule 10, Section 11 Signing, Pavement Markings, Signalization and Lighting;

- D. Separate power conduit, 2-inch minimum, shall be required to the equipment for ETC, ITS, and CCD. These shall be in addition to the five 2-inch conduits for CDOT;
 - E. The Developer shall design electrical Utility service as described in Schedule 10, Section 4 Utilities;
 - F. CDOT and Zayo require manholes for backbone conduits. Pull boxes will not be allowed for CDOT or Zayo backbone conduits. See the Pull Boxes and Manholes section in this Section 3 for spacing requirements;
 - G. CCD requires pull boxes for their backbone conduits. Refer to the Pull Boxes and Manholes section in this Section 3 for spacing requirements;
 - H. The Developer shall replace all impacted existing CCD fiber lateral or backbone cables. No new end-to-end splice points for CCD backbone or lateral cables shall be introduced, unless Approved by the Department. Existing fiber slack in existing CCD pull boxes, manholes or cabinets cannot be utilized in order to re-use existing fiber;
 - I. Fiberglass sweeps are not allowed unless otherwise Approved by the Department;
 - J. The Developer shall splice all laterals to the backbone;
 - K. The Developer shall be responsible for the removal of all existing fiber backbone and lateral cables that are replaced;
 - L. The Developer shall audit and verify all existing splice closures and available fibers on the existing shared resource prior to any work to re-locate existing ITS devices;
 - M. End-to-end fiber backbone splices for CDOT's fiber backbone shall be spaced no closer than 20,000 feet apart and locations shall be Approved by the Department prior to notifying Zayo of the cable reel lengths to procure;
 - N. CCD backbone and Zayo 288 strand fiber cables shall be installed continuously, with no intermediate end-to-end splice points allowed, unless approved by CCD or Zayo respectively;
 - O. If the conduit duct bank is installed under proposed or existing live traffic, a concrete (Class BZ) encased trench to the bottom of the pavement structural section is required;
 - P. At all locations where Zayo's, CDOT's and CCD's conduits are installed in one trench, Zayo's conduits shall be placed on the bottom; and
 - Q. If conduit and fiber require crossing bridge structures, the Developer shall comply with the relevant requirements of Schedule 10, Section 13 Structures.
- xi. Except as specified otherwise, the following sets out the Construction Work that shall be the Developer's responsibility in relation to the conduit duct bank and fiber:
- A. I-70 between Quebec St. and Airport Blvd.;
 - (I) The Developer shall furnish and install five 2-inch conduits for CDOT, comprised of 4 spare conduits and one conduit for the CDOT backbone, along the I-70 Mainline, which shall terminate in the new node building at I-70/ Airport Blvd.;

- (II) If the CDOT five 2-inch conduits are installed on the south side of the I-70 Mainline, they shall be placed in the ROW, and within 5 feet of the existing or proposed Zayo conduits;
 - (III) The Developer shall install the 216 strand single mode fiber optic cable, provided by Zayo, in one 2-inch conduit for the CDOT backbone;
 - (IV) For lateral from the new node building at I-70/Airport Blvd. to the KOA communications room the Developer shall utilize new conduit and existing Zayo conduit as follows:
 - (aa) Provide and terminate a new 24 strand single mode fiber optic cable lateral from the node building at I-70/Airport Blvd. to the KOA communications room;
 - (bb) Install a 2-inch conduit from the new node building at I-70/Airport Blvd. to Zayo's shared resource manhole at I-70 and 32nd Pl.;
 - (cc) Provide a manhole for CDOT's splice location at I-70/Airport Blvd. next to Zayo's facility;
 - (dd) Utilize an existing empty 1 ¼-inch innerduct in the Zayo facility from I-70 and 32nd Place to Colfax Ave and Tower Road. See Schedule 29 Reference Documents; and
 - (ee) Install a 2-inch conduit from Zayo's network at Colfax Ave and Tower Road to the KOA communications room. The path shall be Approved by the Department.
 - (V) The Developer shall relocate existing CCD conduit and fiber backbone if impacted. Refer to CCD Fiber Interconnect in the Reference Documents; and
 - (VI) If the existing Zayo facility is impacted, refer to Schedule 10, Section 4 Utilities.
- B. I-70 between York St. and Quebec St.
- (I) As described below, the Developer shall install twelve conduits in a duct bank also referred to as the joint trench. Twelve conduits shall be stacked in a trench that shall be no more than 22-inches in width, except as Approved by the Department. The twelve conduits are as follows:
 - (aa) Six 6-inch conduits with two of the 6-inch conduits equipped with seven 1 ¼ -inch innerducts for Zayo. These conduits are inclusive of Zayo's 288-strand fiber optic cable which includes 36 strands of fiber allocated to CDOT and are a shared resource between Zayo and CDOT. An agreement between Zayo and CDOT allows for this 36 strands of fiber to extend through the entire length of the conduit;
 - (bb) One 2-inch conduit for CCD's 96 strand fiber optic cable (CCD's backbone); and
 - (cc) Five 2-inch conduits for CDOT, comprised of 4 spare conduits and one conduit for the CDOT backbone.
 - (II) The Developer shall install Zayo's 288 strand fiber which will be spliced by Zayo;

- (III) The Developer shall install CCD's 96 strand fiber (84 strand single mode and 12 strand multi-mode) backbone provided by Zayo. The Developer shall splice CCD's 96 strand fiber to existing 48 strand fiber in ITS pull boxes at Quebec St and Washington St.;
 - (IV) Between Colorado Blvd and Quebec St., the Developer shall furnish and install an additional 2-inch conduit for CCD and an additional 96-strand fiber cable (84 strand single mode and 12 strand multi-mode) backbone;
 - (V) The Developer shall install CDOT's 216 strand fiber optic cable provided by Zayo in one 2-inch conduit for the CDOT backbone;
 - (VI) The location of the joint trench shall be submitted to the Department for Approval. The location shall have safe, easy access for maintenance without the need for road closures or detours; and
 - (VII) At Holly St and Stapleton Dr S, northwest quadrant, the Developer shall maintain the existing conduit and fiber lateral to the CDOT North Holly building at 4670 Holly St.
- C. I-70 between Washington St. and York St.
- (I) The Developer shall install CDOT's five 2-inch conduits, comprised of 4 spare conduits and one conduit for the CDOT backbone, and CCD's one 2-inch conduit along the I-70 Mainline. The location shall be submitted to the Department for Approval; and
 - (II) The Developer shall install the 216 strand single mode fiber optic cable, provided by Zayo, in one 2-inch conduit for CDOT's backbone and a 96 strand fiber optic cable in one 2-inch conduit for CCD (84 strand single mode and 12 strand multi-mode) for CCD's backbone, provided by Zayo.
- D. I-70 between West of I-25 and Washington St.
- (I) Between Washington St and existing CDOT ITS manhole west of I-25 (Station 1001+-00 164 feet right), the Developer shall install CDOT's five 2-inch conduits, comprised of 4 spare conduits and one conduit for the CDOT backbone, along the I-70 Mainline. The location shall be submitted to the Department for Approval; and
 - (II) The Developer shall install the 216 strand single mode fiber optic cable, provided by Zayo, in one 2-inch conduit for CDOT's backbone.
- xii. The following sets out the Construction Work that is the Developer's responsibility in relation to the node buildings. The communications node building, regeneration node building, and traffic management system building are used interchangeably, but as per the Project Special Provisions, Appendix A to this Section 3 all refer to the same facility that houses communication equipment which aggregates transmissions from ITS and ETC field devices.
- A. Node building at I-70/Airport Blvd.;
- (I) The Developer shall be responsible for the design and construction of a new node building at I-70/Airport, see Appendix A to this Section 3, Revision of Section 614 – Traffic

Management System Building. The location and access of node building shall be submitted to the Department for Approval. The location shall have safe, easy access for maintenance without the need for traffic control;

- (II) The entire node building shall have modular UPS and shall include installing an external natural gas generator. This includes all wiring and connections to an automatic transfer switch at the node building;
 - (III) Minimum node building size shall be per Appendix A to this Section 3, Revision of Section 614 – Traffic Management System Building. The node building footprint shall allow for future UPS installation of equal size and capacity;
 - (IV) The node building shall include an asphalt driveway to building and asphalt parking area to accommodate two vehicles;
 - (V) Node building site shall be graded to ensure surface water flows away from building and parking area;
 - (VI) Developer shall provide chain link fencing for security that surrounds the node building and asphalt parking area. Fencing shall be double gated at driveway and width to allow for two vehicles to pass;
 - (VII) Developer shall provide equipment racks for ITS and ETC equipment. ETC equipment racks shall be separate from ITS equipment racks and shall be lockable for individual secured access;
 - (VIII) Developer shall provide power distribution units (PDUs) for each rack and cabinet that provide safe and efficient power distribution to house equipment;
 - (IX) Developer shall provide horizontal and vertical cable pathways with the node building for proper installation of copper and fiber cables;
 - (X) Developer shall provide three phase, 120/208 volt power service (from the Utility meter), to the node building with generator, automatic transfer switch, and UPS backup;
 - (XI) The Developer is required to provide a packetwave platform switch, an Ethernet-over-dense wavelength division multiplexing (DWDM) packet-optical platform unit, coarse wavelength division multiplexing (CWDM) mounting panels, modules and aggregation switches, and ETC and ITS equipment for CWDM Ethernet communications, as described in the Project Special Provisions, Appendix A to this Section 3; and
 - (XII) The Developer shall provide design and optical fiber network connections for the ETC and ITS devices.
- B. Node 1 at I-25 and 38th Ave./Fox St.;
- (I) From the existing CDOT ITS manhole west of I-25 (Station 1001+00 offset 164 feet right), the Developer shall install CDOT's 216 fiber backbone through CDOT ITS existing conduit to Node 1. The existing conduit is located within the I-25 HOV express lanes and the Developer shall coordinate with HPTE for lane closures and work. Allowable work periods defined by

HPTE are between 7:00 pm Friday and 5:00 am Sunday. Any closure of such lanes (including within the allowable work periods) will require Developer to reimburse HPTE for lost daily toll revenues. The amount of any such reimbursement will be in an amount equal to the revenues payable by HPTE in such circumstances to the concessionaire pursuant to the terms of HPTE's P3 concession agreement in relation to the US36 and I-25 Managed Lanes Project.

- (II) The Developer shall connect designated ETC fibers and the Cover network equipment room fibers from the 216 strand single mode fiber optic cable, CDOT's backbone, to Node 2 by splicing through at Node 1 and utilizing CDOT's existing backbone on I-25;
 - (III) The Developer may utilize the existing equipment rack for termination work;
 - (IV) The Developer shall provide a rack-mount splice/termination panel and splice/terminate CDOT's 216 strand single mode fiber optic cable. All strands of CDOT's new backbone fiber cable shall be terminated with LC type connectors; and
 - (V) The Developer shall conduct all CDOT fiber optic backbone cable cross connects or splicing as it pertains to the overall network design in Node 1. These cross connects shall include but are not limited to connections to CTMC, Southmoor Node, Node 2, the new node at I-70/Airport Blvd., the network equipment room at the Cover and the E-470 Authority at E470 /6th Ave. Additional cross connects to splicing may be required to complete the system.
- C. Node 2 at I-25 and 70th Ave.;
- The Developer shall connect the new ETC network field elements to the existing ETC equipment at Node 2 by using the existing available fiber from Node 1 to Node 2.
- D. KOA Communications Room at Colfax and Tower;
- The Developer shall provide a rack-mount fiber optic splice/termination panel for the fiber lateral between the Airport Node and the KOA communications room. The Developer shall be responsible for terminating or splicing all fibers, on both ends.
- E. Southmoor Node at I-25; and
- The Developer shall provide CWDM mounting panels, modules and aggregation switches, and ETC and ITS equipment for CWDM Ethernet communications, as described in the Project Special Provisions, Appendix A to this Section 3.
- F. Cover Network Equipment Room.
- The Developer shall provide CWDM mounting panels, modules and aggregation switches necessary for CWDM Ethernet communications, as described in the Project Special Provisions, Appendix A to this Section 3, to meet the requirements of Schedule 10, Section 12. The Developer shall provide a minimum of 2 rack units of rack space and connections for the CDOT provided firewall.

- b. Construction Requirements
 - i. Utilities shall not be permitted in the joint trench and shall not be permitted within 4 feet on either side of the joint trench. Wet Utilities are not allowed above or below the conduit duct bank except for crossings. The conduit duct bank shall be no more than 22-inches wide, and provide 4 feet of cover, plus the surface thickness of the pavement or sidewalk, measured from the top of the conduit. Conduit duct bank shall be no deeper than 6 feet. Cover and placement requirements for utilities, conduit, and duct bank shall be followed or as Approved by the Department;
 - ii. Any interference between other conduits, drainage pipes and outlets shall be mitigated. The fiber conduits perpendicular to any drainage outlets shall be cast in concrete (Class BZ) to prevent it from floating upward to the surface. A design by the Developer shall be submitted for Acceptance if at least a 48-inch depth from the top of the conduit trench to the surface cast in concrete (Class BZ) cannot be accommodated. For bores that contain more than one conduit, the conduit shall be bundled together and contained in a single bore;
 - iii. Aerial fiber optic cable is not allowed for temporary or permanent installation;
 - iv. The Developer shall install conduit plugs in all open conduit ends immediately following conduit installation. Pull tape shall be installed in all conduits and tracer wire shall be installed in every conduit that contains fiber and every run of conduit shall have at least one tracer wire in the bundle. The conduit shall not be considered complete until the conduit plugs, pull tape, tracer wire have been installed, and all requirements in Appendix A to this Section 3, Revision of Section 613 – CDOT Electrical Conduit have been met;
 - v. The Developer shall be responsible to protect all fiber cables that are the Developer's responsibility to install. If there is damage to any new fiber optic cables, either lateral or backbone, the Developer shall be responsible for replacing the cable between Approved end-to-end fiber backbone cable splice points;
 - vi. The Developer shall be responsible for clearing and grading of the node building site to accommodate the new node location and associated appurtenances. Obtaining any Permits required by the State and/or any other Governmental Authority shall be the responsibility of the Developer, including the preparation of any applications and payment of accompanying fees. The Developer shall also be responsible for coordinating with Utility Owners to provide essential services at the node location; and
 - vii. Developer shall become a member of the applicable notification association (as defined in CRS 9-1.5) for all Developer installed fiber per Schedule 18. The Developer shall be responsible for locating all Developer installed fiber facilities, whether or not they are spliced, until the end of the O&M Work with respect to ITS and ETC facilities per Schedule 11.

3.8.7. Electrical Power

- a. Design Requirements
 - i. The Developer shall provide single phase 120/240 volt alternating current (AC) power service to every ITS and ETC cabinet within the Site. Refer to Schedule 10, Section 11 for Ramp Metering power requirements. Each power service includes meter(s), metered service, power disconnect at the service, and additional external power disconnect on the cabinet. All power service work shall be designed within the ROW. The proposed node building at I-70/Airport Blvd. has separate power requirements defined in this Section 3 and the single phase AC does not apply;

- ii. Economizing the power services for multiple sites with similar equipment into one meter is allowed. However, ETC equipment, ITS, and ramp meters each require separate dedicated meters for billing purposes. Separate disconnect means are required for each individual device which serves as a maintenance breaker to avoid power shutdowns for an entire site;
 - iii. Any remaining existing services shall be metered, if not already, and include a power disconnect;
 - iv. The Developer shall obtain approval for all power service designs or modifications from the power service provider. The Developer shall coordinate and meet all requirements, as specified by the power service provider, for the complete and operational power service to all required locations;
 - v. The Developer shall be responsible for the coordination of Utility service as described in Schedule 10, Section 4 Utilities; and
 - vi. The Developer shall size the power service and electrical conductors to accommodate the Ultimate design for the two-lane toll points and an additional LUS.
- b. Construction Requirements
- i. The Developer shall make appropriate arrangements with the power service provider for installation or relocation of power service. The Developer shall also be responsible for all costs of installing or relocating Utility services, including involvement with the power service provider at locations for new services. The Developer shall ensure the transition and reassignment of electrical service to under CDOT's account and that there is no disruption in service; and
 - ii. Developer shall become a member of the applicable notification association (as defined in CRS 9-1.5) for all ITS and ETC electrical power services per Schedule 18. The Developer shall be responsible for locating these facilities until the end of the O&M Work with respect to ITS and ETC facilities per Schedule 11.
- 3.8.8. Location, Protection of ITS and ETC Systems and Worker Safety
- a. Design Requirements
- i. The Developer shall design all ITS and ETC infrastructure, in accordance with this Section 3, to ensure equipment and devices can be installed within the ROW, and Routine Maintenance operations can be performed without lane Closures, affect traffic operations, or require complex traffic control. Overhead LUS's and TTI antenna are an exception. All proposed locations shall require Approval by the Department prior to installation;
 - ii. All existing underground Utilities, within ROW, and all ITS and ETC infrastructure Elements shall be designed to avoid or minimize conflicts with these facilities. Existing and new Utilities shall be shown on the plans. The Developer shall be responsible for all repairs to facilities damaged during construction. The Developer shall be responsible for maintaining and keeping operational all existing ITS devices, infrastructure, power and communications during construction per the Project Special Provisions, Appendix A to this Section 3. This includes CCTV cameras, DMS, Doppler radar, MVRD, TTI, RWIS, ATR, ramp metering, communications and network equipment, and other devices owned by CDOT and the CCD;
 - iii. The Developer shall protect all new equipment, devices, interconnect wiring, communications devices, communications lines, power supplies, antennas, operator controls, power service, etc. through the installation of an on-line double-conversion power conditioner to eliminate damage by external and internal sources (including power surges), lightning, induced voltages, and static

discharge. A grounding system and protection of devices that are suitable for the specific installation and equipment shall be designed. See Project Special Provisions, Appendix A to this Section 3 for Grounding and Bonding Specification;

- iv. Structure cross sections are required for all ETC and ITS equipment structures and shall incorporate Elements from this Section 3 and Schedule 10, Section 11 Signing, Pavement Markings, Signalization, and Lighting. ITS pole and tower cross sections are also required for all CCTV, MVRD, TTI, DSRC, RWIS and friction sensors. Cross sections shall also be provided for ramp metering equipment and ground mounted cabinets. All ETC and ITS devices, equipment, external conduit, penetrations, and cabinets to be mounted on the sign structures and poles shall be shown on these cross sections. Cross sections for each sign structure with ETC and ITS equipment shall be submitted for Approval by the Department prior to structure design;
- v. Profile plans for any LUS, SMVMS, DMS, or VTMS structures showing the sight distances for each sign shall be submitted for Approval by the Department;
- vi. Location specific, device orientation details, are required for all ITS device locations showing the orientation in relation to the roadway of each device, cabinet and access handhole to be installed on the pole or structure; and
- vii. Design for all ITS and ETC infrastructure shall account for Routine Maintenance operations. All Routine Maintenance operations shall be accessible by public ROW. Access through any fenced ROW area shall include the installation of double gates that can be locked. The location of ITS and ETC infrastructure shall have safe, easy access for maintenance without the need for road closures or detours. Safe vehicle access shall include ingress and egress relative to deceleration and acceleration. Consideration needs to be given to any structures that impede these movements, along with the required distances for the individual movements. All proposed locations shall require Approval by the Department prior to installation. The following are maintenance requirements for ITS and ETC Elements:
 - A. Pull boxes and Manholes
 - (I) Pull boxes, manholes, and respective aprons shall be installed on level ground. A working surface shall extend a minimum of 5 feet beyond the pull box or manhole concrete apron and have a slope of 1:5 or flatter. The working surface shall be designed by the Developer and Accepted by the Department.
 - (II) Pull boxes and manholes must be directly accessible by maintenance trucks or have parking within 1,000 feet and direct maintenance pedestrian access (1:4 slope or flatter) to the pull box or manhole, unless otherwise Approved by the Department. Splice points must be accessible by maintenance truck within 10 feet.
 - B. Cabinets
 - (I) Cabinets shall be installed on level ground. A working surface shall extend a minimum of 20 feet parallel to the roadway and 10 feet perpendicular to the roadway beyond the concrete base. The working surface shall have a slope of 1:5 or flatter. The working surface shall be designed by the Developer and Accepted by the Department.
 - (II) Cabinets must be directly accessible by maintenance trucks or have parking within 1,000 feet and direct maintenance

pedestrian access (1:4 slope or flatter) to the pull box or manhole, unless otherwise Approved by the Department.

- (III) Cabinets shall be located such that maintenance will not require a lane closure.
- (IV) Cabinets shall not be placed in the median from Quebec St. to Tower Rd. and shall be located such that maintenance will not require a lane or shoulder closure, unless otherwise Approved by the Department.

C. ITS and ETC Devices

- (I) Poles and structures with ITS or ETC equipment shall be installed at a location on level ground. A working surface shall extend a minimum of 20 feet parallel to the roadway and 10 feet perpendicular to the roadway. The working surface shall have a slope of 1:5 or flatter, or as Approved by the Department. The working surface shall be designed by the Developer and Accepted by the Department.
- (II) Poles and structures must be directly accessible by maintenance trucks or have parking within 1,000 feet and direct maintenance pedestrian access (1:4 slope or flatter) to the pole or structure, unless otherwise Approved by the Department.
- (III) The CCTV camera sites shall be designed such that the camera can be lowered to the ground for maintenance purposes without interfering with any other pole mounted devices or cabinets, and is directly accessible by the person lowering the camera. The positioning of the CCTV's mating/locking device shall be installed such that it does not interfere with the camera view.
- (IV) TTI antennas shall be accessible by CDOT bucket trucks and unit replacement shall be feasible within 15 minutes.
- (V) MVRD units shall not be located in the median. The MVRD units shall be located such that maintenance will not require a lane closure.
- (VI) For DMS an 8 feet wide paved area shall be provided, outside of the shoulder for maintenance access, where ROW permits. The sign bridge shall have a locked, secured ladder and walkway so that maintenance personnel can maintain every portion of the sign bridge without the use of a bucket truck.
- (VII) From Quebec St. to Tower Rd., ITS and ETC devices, cabinets and other Elements shall not be located in the I-70 Mainline median, except for the center support of freeway DMS, VTMS, and TTI related to the Tolloed Express Lanes, AVI, ALPR, transaction status indicator beacons and the support structures.

b. Construction Requirements

- i. The Developer shall be responsible for locating all underground facilities to avoid or minimize conflicts with these facilities. If any facilities are damaged during construction, the Developer shall be responsible for all repairs;
- ii. The Developer shall construct a grounding system for each ITS and ETC device;
- iii. ITS devices are integral to CDOT's overall traffic operations. Communications and disruptions of ITS devices during construction shall be kept to a minimum time period. Developer shall provide a Maintenance of ITS Plan to be Accepted

by the Department at least 30 Calendar Days prior to start of disruption of communications or device outages in the area. The Maintenance of ITS Plan shall outline all devices, highlighting the devices impacted due to reset, removal, replacement and also show any new devices. The plan shall include a method statement and details on how fiber communications and operability will be maintained for each device during construction, including the anticipated workforces to provide the maintenance. ITS plan sheets shall be provided for all temporary work and shall be considered a design deliverable per Schedule 8. The plan shall also include scheduled start and end dates of impact, duration and justification. Dates shall reflect actual end and start dates where each device is fully operational and communicating with the CTMC. CDOT's and CCD's respective fiber optic backbones cannot be out of service unless Approved by the Department and CCD;

- iv. If ITS devices require reconnecting to existing backbone due to Construction Work, Zayo is required to provide this service. Zayo will require advance notification of work as specified in this Section 3 and fee assessed by Zayo shall be at the expense of the Developer; and
- v. Developer may need to reset existing CCD ITS devices, including fiber optic cable communications to maintain CCD's operations.

3.8.9. Communications System

a. Design Requirements

- i. The communications system is used to transmit data to and from all existing and proposed ITS devices. In addition, the ETC system used for transmitting all ETC tolling data to and from the back-office for processing, issuing of tolls, and updating of information in the lanes;
- ii. Refer to Schedule 10, Section 12 Cover MEP System for other requirements that need to be integrated into the system regarding command control and monitoring of the systems inside the Cover. The Developer shall design and construct any infrastructure and systems required to provide cell coverage to Users in the Cover;
- iii. The Developer shall design the lateral fiber optic communication system from CDOT's communications backbone to the field devices and end equipment which includes the node buildings listed in this Section 3. CDOT uses CWDM and DWDM technology for all optical Ethernet communications, with the exception of the ETC toll point equipment. The ETC toll point equipment lateral splices to the backbone shall utilize standard optics. Standard optics shall be defined as those operating within the O-band transmission window (notably 1310 nm). The CWDM and DWDM technology includes the use of CWDM filters spliced to the device lateral fiber optic cable in the backbone manhole. CWDM optical multiplexers/demultiplexers in the node buildings and CWDM optics in both the field Ethernet switches and the node building aggregation and packet-optical platform. DWDM technology is used as part of CDOT's high-speed optical Ethernet backbone, a DWDM packet-optical platform is required in the new I-70/Airport Blvd. node building;
- iv. CDOT's fiber backbone will be economized to the degree that four buffer tubes are used for CDOT, one buffer tube for ETC equipment, and the remaining buffer tubes will be preserved and uncut for future use by CDOT. All strands of CDOT's new backbone fiber cable shall be terminated with LC type connectors or spliced through in the new I-70/Airport Blvd. node building and the Node 1 building. Construction Work should be expected in Node 1, Node 2, Southmoor Node, the new node at I-70/Airport Blvd., the KOA communications room and the CTMC. If additional buffer tubes are required, the Developer shall provide an explanation

and will need Acceptance from the Department. The network drawings shall economize the fiber splices using CWDM technology. The DWDM and CWDM Project communications requirements shall include the design of equipment to connect between the Southmoor Node and the new node at I-70/Airport Blvd. The Developer shall design a system capable of transporting data and video signals between field devices and support the following functional requirements, at a minimum:

- A. Provide CDOT fiber optic communications connectivity between the field devices, end equipment, the new node at I-70/Airport Blvd. and Southmoor Node;
 - B. Splice up to twelve fibers from the I-70 backbone cable to twelve of CDOT's strands of the Level 3 fiber cable at the existing I-70 and I-225 manhole to connect to the Southmoor Node building to provide a redundant ring for the I-70 Mainline device communications. The twelve fibers on I-70 and on I-225 shall need to be optical time-domain reflectometer tested for dB loss. The range of acceptable loss can be found in the Project Special Provisions, Appendix A to this Section 3;
 - C. Provide CWDM internet protocol (IP) Ethernet communications to all field Ethernet switches. All devices shall be IP compatible and connected to the field Ethernet switches. A single CWDM Ethernet switch shall be installed at a location with either a single device or multiple devices. If the Ethernet port density is insufficient, a second Ethernet switch shall be installed at that location. No optical fiber extenders of any type shall be allowed. Each individual device Ethernet cabling shall plug into a CWDM Ethernet switch at its installed location;
 - D. Support full-color, real-time video images at a data rate of no less than four MB/s or at the Department standard at the time of construction of the CCTV camera system for all cameras to node building;
 - E. All fiber allocations, splicing diagrams, and network drawings shall be prepared by the Developer and submitted to the Department for Approval in electronic format; and
 - F. Splicing of CDOT fiber optic cable shall be performed in manholes only.
- v. The Developer shall furnish all components required to achieve a fully-functioning communications system. The communications system shall be designed based on the following material requirements: Respective (Zayo, CDOT, CCD) fiber optic backbones and laterals shall include sweeps (conduit breakouts) to separate pull boxes, manholes, or vaults, as required, for each owner, and respective ownership clearly marked on each Element;
 - vi. CCD's fiber backbone shall utilize standard optics;
 - vii. Provide separate 12 strand fiber optic cable (minimum 6 single mode, 6 multi-mode) laterals and conduit from the CCD backbone to all traffic signals. Replacements to match existing fiber optic cable. Reference CCD standards for fiber optic specifications and standards for equipment, installation and communication connections;
 - viii. For CDOT, 100 feet of each fiber optic cable shall be coiled inside each manhole, and 50 feet of each fiber optic cable shall be coiled inside each pull box. An additional 100 feet of 12 strand fiber shall be coiled at all splice locations for CWDM splicing. The coiling lengths required shall be for the final configuration, after splicing has occurred;

- ix. For CCD, one hundred feet of each fiber optic cable shall be coiled at each splice location and 50 feet of each fiber optic cable shall be coiled at non-splicing locations. The coiling lengths required shall be for the final configuration, after splicing has occurred;
- x. At splice locations, the fiber optic cable coil length shall be evenly distributed on each side of the splice closure;
- xi. CDOT lateral splices to the fiber optic backbone shall be spaced no closer than ½ mile apart. To alleviate an excessive number of fiber laterals spliced in a single manhole, all device laterals shall be evenly distributed between splice manholes and there shall be a maximum of 3 CWDM switches spliced in a manhole, unless otherwise Approved by the Department. Each switch shall have its own separate fiber lateral to the fiber backbone splice manhole and a maximum of 2 switches per wavelength (not per lateral). Other non-CWDM laterals may be permissible in the same manhole;
- xii. Provide fiber quick disconnects at all unprotected ITS devices and equipment locations where new fiber optic lateral cables are installed and spliced to CDOT's and CCD's backbone cables. The fiber quick disconnects shall allow the fiber laterals to be disconnected to prevent damage to the fiber backbone in case any of the devices or equipment along the corridor are damaged. The fiber quick disconnect shall be installed in areas where they will not be submerged in water and per the manufacturer's recommendations. Bend insensitive (ITU-T G.657 A) tactical fiber optic cable with a polyurethane jacket shall be used for all patch cables and shall be fully compatible with all fiber optic laterals;
- xiii. Provide hardened, extended temperature roadside carrier grade field Ethernet switches configured per the Project Special Provisions, Appendix A to this Section 3. The switches shall also include sufficiently sized optics and attenuators for transmitting and receiving data from the node building aggregation Ethernet switches. Per the Project Special Provisions, Appendix A to this Section 3. Ciena 3930 or 3931 switches are required at CDOT ITS device locations throughout the Project corridor;
- xiv. All existing and proposed ITS and ETC field devices to be connected to the fiber optic backbone shall communicate via Ethernet switches, unless otherwise stated;
- xv. CWDM wavelengths for both the Ethernet switch optics and optical CWDM filter shall be 1430 NM, 1450NM, 1470NM, 1490NM, 1510NM, 1530NM, 1550NM, 1570NM, 1590NM and 1610NM;
- xvi. DWDM technology shall be used for backbone connectivity between packet-optical platform switches. DWDM ranges for the DWDM packet-optical platform unit can be found in Project Special Provisions, Appendix A to this Section 3;
- xvii. 1430 NM, 1450 NM, 1470 NM, 1490 NM, 1510 NM, 1530 NM, 1550 NM 1570 NM, 1590 NM, and 1610 NM SFPs shall be used as the CWDM transport mode and 1310 NM SFPs shall be used as the resilient path transport. Ethernet switches will be used to transport CDOT field device data to minimize fiber usage and maximize fault tolerance;
- xviii. All roadside carrier grade field Ethernet switches shall be fully compatible with the DWDM packet-optical platform unit and aggregation switches;
- xix. Passive CWDM thin film filter multiplexer (MUX) shall be used at each roadside field Ethernet switch splice location to split out the appropriate wavelengths. The MUX filters and MUX filter splices shall be contained in a separate splice enclosure from the splice enclosure containing the lateral fiber cable to backbone fiber cable splices;

- xx. Management system software tool shall be provided to manage carrier grade field Ethernet and Transport product portfolios;
 - xxi. Passive 1U rack mount 32-channel optical splitter shelf shall be used in the regeneration building to demux (split) CWDM optical signals out to the paired SFP in the core aggregation switch;
 - xxii. Provide one CWDM Optical Time Domain Reflectometer (OTDR) modular testing unit to test the CWDM optical networks prior to any CWDM filter splicing. The CWDM OTDR will become the property of CTMC after the Final Acceptance Date;
 - xxiii. Optical attenuators shall be installed on all receive signals entering the field fiber optic termination patch panels to ensure the optical power is within the acceptable range for the selected optic. The receive signal shall be tested both prior to and after the attenuator is installed;
 - xxiv. Optical attenuators shall be installed on all received signals entering node buildings multiplexer/demultiplexer receive ports to ensure the optical power is within the acceptable range of the selected optic. The receive signal shall be tested both prior to and after the attenuator is installed; and
 - xxv. The Developer shall submit network and splicing plans for Approval by the Department. The network and splicing plans shall include network drawings, fiber allocations, and splicing diagrams.
- b. Construction Requirements
- i. The Developer shall furnish and install the fiber optic communications system and connect all ITS, ETC and CCD field Elements to the system;
 - ii. Prior to performing any Construction Work that may impact existing ITS communications systems, the Developer shall coordinate with the owner of the affected system;
 - iii. Fiber optic conduit shall be located along 46th Ave. under the sidewalk. It shall not be located in the travel way unless Approved by the Department;
 - iv. The Developer shall provide fiber test results for Acceptance by the Department. The results shall include OTDR fiber cable trace results, power meter results, spectrum analyzer results including both pre-attenuator and post attenuator installations; and
 - v. CWDM technology shall be used for CDOT's ITS optical Ethernet communications which shall include CWDM SFP optic modules in both the field switches and the node building aggregation switches, CWDM thin filters at all CWDM splice locations and the multiplexer/demultiplexer installed in the node buildings. The Developer shall design up to 20 CWDM Ethernet switches on a pair of fiber strands to ensure fiber utilization, with two switches allowed per wavelength. The Developer shall request Approval from the Department if there are cases where more than two switches per wavelength or 20 per pair of fiber strands are needed.

3.8.10. Vertical Clearance Requirements

Design Requirements

See Schedule 10, Section 11 Signing, Pavement Markings, Signalization, and Lighting for vertical clearance requirements, provided that all AVIs shall have an 18.5 feet clearance from the roadway surface. If any signage/signals or tolling equipment are planned on structures the vertical clearance is measured to the bottom of the lowest device and any future equipment from the highest point on the roadway surface under the device. Therefore, sign panels and structures

must accommodate the additional clearance required for the proposed and future ITS and ETC devices.

3.8.11. Dynamic Message Signs

a. Design Requirements

- i. The DMS's are large dynamic displays that are used for a wide range of purposes, including providing driver information regarding weather advisories, travel times, amber alerts, toll information, construction, and incident notifications. The Developer shall design a complete DMS system. Final sign locations may need to be adjusted due to roadway geometry, conflicts with other signs or Cover requirements. Final locations of all DMS shall be Approved by the Department.
 - A. Westbound full color DMS shall be installed at the following approximate locations:
 - (I) 0.4 miles east of Airport Blvd.
 - (II) 0.5 miles west of Peoria St.
 - (III) Between Havana St. and in advance of the I-270 off ramp
 - (IV) 0.8 miles east of Colorado Blvd.
 - B. Eastbound full color DMS shall be installed (or, in the case of (ii), replaced) at the following approximate locations:
 - (I) Between I-25 and Brighton Blvd.
 - (II) In advance of Washington St. (at the same location as the current DMS). This DMS shall be over the entering ramp lanes
 - (III) Between the Cover and Vasquez Blvd.
 - (IV) 0.9 miles east of Colorado Blvd.
 - (V) Between the Central Park Blvd. eastbound on-ramp and Havana St.
 - C. A new Amber DMS with dimensions of 18 feet (width) by 8.5 feet (height) by 4 feet (depth) with an allowable variation of plus or minus 7-inches shall be installed at the I-70 eastbound to I-25 off-ramp to replace the existing DMS; and
 - D. See Schedule 10, Section 12 Cover MEP System for additional requirements regarding the DMS required for the Cover.
- ii. New DMSs shall be mounted on a sign bridge and co-located with the static guide signs wherever possible. They shall be centered over the General Purpose Lanes but be visible to all Users. The DMS walkway shall be mesh with a maximum diameter of ½-inch to prevent dropped tools and debris from falling onto the travelled way. In addition, the walkway shall be Occupational Safety and Health Administration (OSHA) compliant with side rails and toe kicks. The Developer shall submit a structural design for each DMS structure in accordance with the requirements of Schedule 10, Section 13 Structures. The sign bridge walkway shall not prevent the static sign messages from being clearly read and shall be OSHA compliant; and
- iii. The Developer shall furnish, install, integrate, and test all new DMS signs and any and all associated equipment necessary to achieve a fully-functioning system. The new DMS signs shall be designed based on the following material requirements, at a minimum:

- A. The sign shall utilize light emitting diode (LED) displays;
 - B. The sign shall be equipped with the ability to display three lines of text with a character height of 18-inches and 18 characters minimum per line;
 - C. The sign shall utilize a full-color, full-matrix display and utilize a 24 bit red, green, blue color with a 32-35 mm pixel spacing (approximate size 26 feet width, 8.5 feet height by 4 feet depth with a tolerable variation of plus or minus 7-inches);
 - D. The sign shall have a walk-in cabinet;
 - E. The sign viewing angle shall be 30 degrees;
 - F. The sign shall have a minimum design life of 20 years;
 - G. The DMS controller and sign must be National Transportation Communications for ITS Protocol (NTCIP) compliant, provide an Ethernet interface, and must be compatible with the CTMS; and
 - H. The sign shall have environmental controls inside the cabinet and be capable of remote surveillance of all controls, legend and maintenance.
- b. Construction Requirements
- i. The Developer shall be fully responsible for the furnishing and installation of all DMS signs. Existing DMS on the I-70 Mainline may not be reused and shall be salvaged and returned to CDOT. The DMS shall be installed in accordance with manufacturer's recommendations. A qualified factory representative shall be available to ensure proper installation and testing; and
 - ii. Each DMS system shall be connected to the communication system using fiber optic laterals extended into the DMS controller cabinet. The Developer shall notify the Department upon installation of each DMS and complete, and submit to the Department for Acceptance, a CDOT Device Installation Checklist per Project Special Provisions, Appendix A to this Section 3. The Developer shall be responsible for local field operations testing. The Department shall be responsible for modifying the CTMS software to incorporate the new devices.

3.8.12. Closed Circuit Television Camera

The CCTV cameras are used for monitoring travel conditions in the corridor, such as weather conditions, accidents, traffic congestion, and other events. The video images are also shared with the public via the internet (www.cotrip.org) and television news agencies.

- a. Design Requirements
- i. Provide full CCTV camera coverage of the entire I-70 corridor including all interchanges, between Pecos St. and Airport Blvd. CCD and RWIS cameras shall not be utilized to achieve this full coverage. The CCTVs shall be at a maximum of one mile separation, provide overlapping coverage up to 1,000 feet in full zoom, and provide ¼ mile coverage in either direction along roadways at interchanges. Due to the closely spaced bridges and Cover, additional cameras may be required for overlapping coverage;
 - ii. The CCTV camera coverage shall be provided via Ethernet-based cameras meeting the material requirements;
 - iii. The CCTV cameras shall be mounted on minimum of a 50 feet steel poles as described below and shall have a lowering device that allows CCTV cameras to be lowered to the ground;
 - iv. See Schedule 10, Section 12 Cover MEP System for additional requirements regarding CCTV camera coverage under the Cover;

- v. All CDOT CCTV cameras installed shall meet the following minimum requirements:
 - A. Digital and Ethernet-based;
 - B. All-in-one color surveillance dome camera unit (Ingress Protection [IP] 66 and NEMA 4X rating);
 - C. Pan, 220 degree tilt, zoom operation;
 - D. 32X optical zoom and 12X digital zoom minimum;
 - E. Minimum illumination no less than 0.3 lux;
 - F. H.264 video stream or current standard used by CDOT at the time of installation;
 - G. Compatible with the current CCTV camera standard used by CDOT at the time of installation;
 - H. Full 360 degree overview with one-click pan, tilt, zoom; and
 - I. See Project Special Provisions, Appendix A to this Section 3.
 - vi. The CCTV camera shall also include a weatherproof dome housing, 50 feet, or higher, steel pole, proper foundation, lowering device, mount adapter, camera transformer, attachment hardware and all other hardware, cables, and test equipment necessary for a complete installation; and
 - vii. The Developer shall provide a CDOT CCTV coverage plan for CDOT cameras on the I-70 Project. The CDOT CCTV Coverage plan shall include the following items:
 - A. Plan view of CCTV coverage limits including radius of coverage for each camera;
 - B. Profile view of each direction of the roadway showing the CCTV coverage and calling out any potential occlusions, such as bridges and overhead sign structures;
 - C. A three-dimensional rendering, in MicroStation, for CCTV camera coverage between Colorado Blvd. and Washington St.; and
 - D. Photos of the CCTV view in each direction from a bucket truck survey, for all locations except between Colorado Blvd. and Washington St.
- b. Construction Requirements
- A. Existing CCTV cameras in the corridor may not be reused and shall be salvaged and returned to CDOT; and
 - B. The Developer shall notify the Department upon installation of each CCTV camera and complete, and submit to the Department for Acceptance, a CDOT Device Installation Checklist. The Developer shall be responsible for the integration of each new CCTV camera back to the CTMC. The Department shall be responsible for modifying the video control software to incorporate the new devices.

3.8.13. Microwave Vehicle Radar Detection

The MVRD, also referred to as side-fire radar, are used to collect point data of volume, occupancy, speed, and classification in each lane of travel. The data is used primarily for measuring and analysis of traffic conditions, both real-time and for studies.

a. Design Requirements

- A. The Developer shall prepare a design to locate side-fire MVRD units at one half mile spacing both eastbound and westbound between Pecos St. and Tower Rd. In addition, the MVRD's shall be designed at 0.5 mile spacing from the exit gore ramp at I-225 northbound to westbound ramp and the exit gore ramp from I-25 northbound and southbound to eastbound I-70 both leading into the Tolled Express Lanes ingress points;
- B. MVRD locations shall be coordinated such that they are at the desired location relative to the LUS, SMVMS, and DMS gantries to support the ATM system software algorithm (dynamic queue warning and lane control system); and
- C. The Developer shall furnish all new MVRD units and any and all associated equipment necessary to achieve a fully-functioning system. The MVRD units shall detect all individual lanes of travel, including the General Purpose Lanes and Tolled Express Lanes in both directions. Data collection shall include volume, occupancy, speed, and classification.

b. Construction Requirements

The Developer shall furnish all MVRD and carry out all installation, field-testing, and burn-in of the system per the manufacturer's recommendations, the Construction Standards and Project Special Provisions, Appendix A to this Section 3. Each device shall be connected to the communication system using fiber optic laterals. Existing MVRD units may not be reused and shall be salvaged and returned to CDOT. The Developer shall notify the Department upon installation of each MVRD device and complete, and submit to the Department for Acceptance, a CDOT Device Installation Checklist.

3.8.14. Travel Time Indicators

TTI sites are comprised of antennas and readers that detect toll tag transponders in vehicles. While MVRD units give volume, occupancy, and speed data at a given point, the TTI are used to track vehicle travel times across segments spanning from one TTI location to the next.

a. Design Requirements

- i. The Developer shall prepare a design to locate TTI sites in both directions between Pecos St. and Tower Rd. that shall read the General Purpose Lanes and the Tolled Express Lanes separately, without any cross-reading;
- ii. For the General Purpose Lanes, the TTI sites shall be spaced with an approximate spacing of no more than one mile and shall be located before and after each interchange. Additional TTI sites shall be installed between the exit ramp and entrance ramp, at each interchange, to allow drivers exiting the facility for a short period of time to be excluded from the travel time calculations. The TTI sites shall be designed to read all General Purpose Lanes at each location, which may require multiple TTI antennas and/or readers. The TTI antennas shall be placed over the edge line of the lane or lanes in order to read all General Purpose Lanes;
- iii. For the Tolled Express Lanes, TTI sites shall be located between each ingress/egress point in each direction of travel to obtain directional travel times;
- iv. The TTI readers shall be Sirit 6204 multi-protocol readers and antennae, or CDOT's current model, and shall be able to read both Title 21 and ISO 18000-6C transponder tags. Any existing TTI sites along the new CDOT fiber optic backbone shall be replaced with new Sirit 6204 multi-protocol readers and antenna; and

v. TTI sites shall be located at least 1,000 feet from toll points.

b. Construction Requirements

The Developer shall furnish all new TTI readers, antennas and all associated equipment necessary to achieve a fully-functioning system. The Developer shall carry out all installation, field-testing, and burn-in of the system per the manufacturer's recommendations and the Construction Standards. Each device shall be connected to the communication system using fiber optic laterals. Existing TTI and associated equipment shall be salvaged and returned to CDOT. The Developer shall notify the Department upon installation of each TTI device and complete, and submit to the Department for Acceptance, a CDOT Device Installation Checklist.

3.8.15. Division of Transportation Development Automatic Traffic Recorders

The Division of Transportation (DTD) ATR stations continuously collect vehicle volume and functional classification data using in-pavement loops and piezoelectric sensors. The DTD ATR locations are to be placed between Holly St. and Dahlia St. and between Havana St. and Central Park Blvd.

a. Design Requirements

- i. The Developer shall design the DTD ATR counting station. Each new DTD ATR must collect data for all lanes of travel, including the General Purpose Lanes, auxiliary Lanes, and Tolloed Express Lanes in both directions. Communications to the DTD ATR station shall be provided via a 12 strand single mode fiber optic lateral from the ITS fiber backbone to a DTD ATR cabinet. In addition, a telephone line connection shall be provided for each counter. The ATR shall have a dual communications port, one for real time and one for historical reporting;
- ii. The Developer shall furnish all equipment necessary to achieve a fully-functioning DTD ATR system. Each DTD ATR station consists of cabinet loop detectors and piezoelectric axle sensors (piezos), and traffic counters. The traffic counters are capable of classifying up to 8 lanes, so two traffic counters shall be required at each site so that vehicles in all lanes will be classified; and
- iii. The Developer shall design a temporary ATR station while the existing permanent ATR station near Colorado Blvd. is out of service. The temporary ATR shall consist of an MVRD, cellular modem, pole mounted cabinet, and traffic counter.

b. Construction Requirements

The Developer shall furnish all DTD ATR-related equipment and carry out all installation, field-testing, and burn-in of all DTD ATR counting station being replaced. All Construction Work will be inspected by CDOT's Traffic Data Collection Unit (TDC) during installation for Approval. The Developer shall test and operate the piezos and loops under actual traffic conditions.

3.8.16. Doppler Radar

a. Design Requirements

The Doppler radar are a self-contained unit; including wireless communications. All existing units that need to be relocated shall be installed per the manufacturer's recommendations. All Doppler radar units shall be co-located with other sign structures and therefore shall not require separate structures to be installed by the Developer.

b. Construction Requirements

The Developer shall coordinate with the Department when any of the existing speed Doppler radar units currently installed along the corridor need to be relocated to new or temporary structures during construction.

3.8.17. Road Weather Information System and Environmental Friction Sensor

a. RWIS and friction sensors are used for traveler information systems and highway maintenance operations by providing on-Site weather information. RWIS and friction sensors shall include work and materials in Project Special Provisions, Appendix A to this Section 3, Revision of Section 614 - Weather Monitoring System (WMS) and Revision of Section 614 - Environmental Friction System.

b. Design Requirements

i. RWIS systems shall be installed as follows:

A. New RWIS shall be installed at the following locations:

- (I) On I-70 eastbound at the east entrance to the Lowered Section, about 500-1,000 feet prior to the entrance;
- (II) On I-70 westbound at the west entrance to the Lowered Section, about 500-1,000 feet prior to the entrance;
- (III) On the Colorado Blvd. overpass in both directions of travel to monitor the road; and
- (IV) On I-70 eastbound or westbound between the Havana Street and Peoria Street Interchanges.

B. Existing RWIS shall be salvaged and delivered to CDOT.

C. The existing RWIS system near Chambers Rd. and I-70 at approximately mile marker 283 shall require the roadway pucks to be replaced with non-invasive sensors and poles for mounting.

ii. The RWIS's shall include the following material requirements:

A. Weather monitoring system, including a remote processing unit, precipitation type sensor, air temperature/relative humidity sensor, ultrasonic wind sensor, non-invasive road surface sensor, non-invasive friction sensor, non-intrusive pavement condition sensor, and a CCTV camera; and

B. Concrete pad, fold-over tower, and chain link fence.

iii. Friction sensors shall be installed as follows:

A. Friction sensors shall be designed and installed on the I-70 Mainline and at all overpasses within the Site, including multiple overpasses within the interchanges at I-225, I-270 and I-25. Spacing shall be at a maximum of every 2 miles on I-70, in addition to overpasses on the roadway and ramps. Locations shall be Approved by the Department. The Developer

shall alternate the side of the road that the friction sensors are installed;
and

- B. A friction sensor shall only include the remote processing unit, air temperature/relative humidity sensor, ultrasonic wind sensor, non-intrusive pavement condition sensor, non-intrusive pavement temperature sensor, cabinet, mounting of sensor, and communications to CTMC. See Section 3 Appendix A, Revision of Section 614 -Weather Monitoring System, for the environmental friction sensor items.

c. Construction Requirements

The Developer shall be responsible for replacing any portions of the RWIS system impacted by the Construction Work and new installations. An existing RWIS is located at (a) I-70 and mile marker 276 (near SH 2), which shall be salvaged to the Department and replaced; and (b) I-70 and mile marker 283 (near Chambers Rd.), which will require existing pucks to be replaced with non-invasive sensors and poles for mounting.

3.8.18. Lane Use Signs and Side Mounted Variable Message Signs

LUS and SMVMS are a part of the ATM System that is currently being used by CDOT ITS. The following shall be designed and installed by the Developer:

a. Design Requirements

- i. The Developer shall design the LUS to provide lane status information over each General Purpose Lane, Tolloed Express Lane and auxiliary lane to Users along the I-70 corridor to notify drivers of Closures, restrictions, maintenance or merge conditions. The lane status information shall be displayed at one-half mile intervals between Pecos St. and Chambers Rd. in both directions of travel. The lane status information shall provide continuous visibility of the sequential LUS which can be mounted and combined with other sign structures. The LUS shall be a full-color, full-matrix DMS with a 64 by 64 pixel matrix at 20 mm pixel pitch and utilize a 24 bit red, green, blue color. The viewable area within should be maximized by reducing the bezel width (approximate sign size 60-inches by 60-inches). Plans showing LUS, SMVMS, DMS, and cameras shall include sight line angles and measurements and spacing of devices;
- ii. At all LUS locations where full, overhead DMS are not provided, two SMVMS shall be installed. The SMVMS shall be mounted on both sides of the roadway within the drivers' sightlines and shall be full-color, full-matrix, with a minimum 80 by 80 pixel matrix at 20 mm pixel pitch and utilize 24 bit red, green blue color (approximate size 84-inches by 84-inches). The viewable area within should be maximized by reducing the bezel width. Refer to the Project Special Provisions, Appendix A to this Section 3 for the specific requirements for each component;
- iii. All devices, software, and hardware shall be NTCIP compliant and compatible with the CTMS. The Developer shall verify that the device is properly communicating with CTMS, CDOT can control the device using CTMS, and the device is powered and functioning properly. The Developer shall work closely with CDOT's CTMS integrator, which will be hired by the Department, for software integration. CDOT shall integrate the LUS and SMVMS into CTMS;
- iv. LUS must be designed so that they can easily be removed by two people in an overhead lift and this shall include removal and replacement of one LUS in less than 15 minutes from an overhead General Purpose Lane or Tolloed Express Lane; and
- v. The Developer shall visibly mark each sign structure with a unique identifier to assist operators in identifying structure location and direction from CTMC within the ATM software.

- b. Construction Requirements
 - i. Structure cross sections are required and shall incorporate elements from this Section 3 and Schedule 10, Section 11 Signing, Pavement Markings, Signalization, and Lighting;
 - ii. Refer to Schedule 10, Section 12 Cover MEP System for LUSs and SMVMSs that are to be installed at the Portal and inside the Cover;
 - iii. The CTMS integrator shall be responsible for developing any graphics for the LUS and SMVMS and will provide to the Developer or sign manufacturer. The Developer or sign manufacturer shall request the graphics from the CTMS integrator 30 Calendar Days in advance and shall pre-load all graphics onto the signs; and
 - iv. Refer to Project Special Provisions, Appendix A to this Section 3.

3.8.19. Variable Toll Message Signs

The VTMS is a combination of a static sign with one electronic DMS insert utilized to display the specific tolls for each segment of the corridor. All I-70 Mainline VTMS shall be located upstream of the Tolloed Express Lane ingress/egress point. This will allow Users sufficient time to read the toll rate and then make their decision whether to enter, or continue to use, the Tolloed Express Lanes.

- a. Design Requirements
 - i. The Developer shall design a complete VTMS system so that the following requirements are met:
 - A. VTMS shall be provided prior to each Tolloed Express Lane ingress/egress point on the I-70 Mainline, and the VTMS shall be mounted overhead and positioned between the Tolloed Express Lane and most-left General Purpose Lane, and visible to all roadway Users, including Users that have just entered the facility via entrance ramps;
 - B. All VTMS shall be mounted overhead. This includes one DMS insert capable of displaying the toll rates in each overhead sign as required for tolling purposes; and
 - C. VTMS sign panels, structures, and structure foundations shall be designed to accommodate two destinations and two electronic DMS inserts.
 - ii. The Developer shall furnish all new VTMS signs and any and all associated equipment necessary to achieve a fully-functioning system. The VTMS signs shall be designed based on the following material requirements, at a minimum:
 - A. The sign shall utilize LED displays;
 - B. The overhead signs shall be equipped with the ability to display a minimum of seven characters, including the toll rate, the "\$" sign, the numerical value of toll rate, and decimal or the word "CLOSED"; all with a character height of at least 18-inches;
 - C. The pixel matrix shall be a minimum of 7 by 35;
 - D. The VTMS shall have a minimum design life of 20 years;
 - E. The sign viewing angle shall be 30 degrees; and
 - F. The VTMS cabinet shall be installed on a concrete foundation to the right of the travelled way and shoulder so that maintenance can be performed without the need for lane closures. UPS shall be provided for each VTMS

to ensure that each sign is operational for 8 hours in the event of a power failure. The Developer shall purchase and install the UPS in the controller cabinet.

- b. Construction Requirements
 - i. The Developer shall be fully responsible for the furnishing and the installation of all VTMS signs and all damages that occur in the installation and delivery process. The VTMS shall be installed in accordance with manufacturer's recommendations; and
 - ii. CDOT will be responsible for the integration of each new VTMS into CTMS. The ETC System Integrator shall be responsible for incorporating the ETC Elements into the ETC system.

3.8.20. ITS Device Cabinets

- a. Design Requirements
 - i. The Developer's design shall utilize ground or barrier mounted Type 332 or 332D cabinets for all VMS, VTMS, LUS, and SMVMS locations which shall be sized to accommodate all equipment. Type 2 cabinets shall only be allowed at sites where there are only CCTV cameras, MVRDs, TTIs, and DSRC radios. Type 2 cabinets may only be pole mounted on CCTV camera lowering device poles or sign structures. Type 1 cabinets shall only be allowed at isolated RWIS sites where there are no other devices connected to the cabinet; and
 - ii. The Developer shall create cabinet rack layouts for all cabinets.
- b. Construction Requirements
 - i. All cabinets shall be installed per the manufacturer requirements or the requirements found in the Project Special Provisions, Appendix A to this Section 3; and
 - ii. The Developer shall furnish electrical and fiber quick disconnects at all cabinet locations not protected by guardrail or barrier.

3.8.21. Toll Point

The toll points collect information from vehicles so that Users are appropriately charged for use of the Tolled Express Lanes. A toll point is defined as a single toll collection point for one direction of travel.

Design Requirements

- i. Each toll point includes AVI readers/antennas, ALPR cameras, an ETC lane controller, and a UPS, as well as all associated pull boxes, conduit, cabinets, structures, barrier, communications equipment, fiber connections and power for one direction of travel. The Developer shall be responsible for the design and installation of the ETC cabinet and associated foundation; the conduit to connect the ETC lane controller to the AVI antenna, in-pavement loops, and ALPR cameras; and providing communications and power to the cabinet;
- ii. The Developer shall submit a toll point detail, including details of the overall layout for each toll point and the Elements of a toll point described above, for Approval by the Department prior to Construction Work of that Element. These details will be coordinated with and reviewed by both the Department and the ETC System Integrator;
- iii. UPS shall be provided for each toll point to ensure that each ETC lane controller is operational for 8 hours in the event of a power failure. This works includes providing power service and conduit to the UPS cabinet. The Developer shall

purchase and install the UPS in a separate controller cabinet, as described in Project Special Provisions, Appendix A to this Section 3;

- iv. All pavement joints within the vicinity of a toll point shall be coordinated with the ETC Integrator;
- v. The Developer is responsible for providing outlets and circuit(s) in the new I-70/Airport Blvd. node building to accommodate the ETC System Integrator's servers and network equipment. These new circuits shall be protected by the UPS and generator; and
- vi. The toll point locations will need to be coordinated with infrastructure, signing, striping and ITS Elements. The total number of tolling points is five (three in eastbound direction and two in the westbound direction). The approximate locations in the eastbound direction are York St., Monaco St., and Havana St. The approximate locations in the westbound direction are Havana St. and Holly St.

3.8.22. Automatic Vehicle Identification Reader

An AVI reader and antennas shall be installed at each toll point and used to read the toll tag information stored inside each transponder.

a. Design Requirements

- i. The AVI reader shall be installed by the ETC System Integrator in the lane controller cabinet, and the antennas that will read the tag information shall be mounted directly above the Tolloed Express Lane. The Developer shall be responsible for providing structures at each toll point (either dedicated or shared with another installation) to allow the ETC System Integrator to mount the AVI antennas in the correct positions;
- ii. The AVI reader that shall be utilized is anticipated to be a Sirit Model 6204, which shall be installed by the ETC System Integrator. Each toll point shall require a structure installed by the Developer upon which two antennas per lane, per direction, shall be mounted 18.5 feet above the Tolloed Express Lane. The AVI antenna shall be mounted on a 2-inch diameter pole spanning the Tolloed Express Lane that allows for 6-inches of clearance between the pole and the bottom of the structure for angling and installation of the supporting hardware. In addition, the AVI antenna shall have 4 feet of lateral clearance. The Developer shall coordinate with the ETC System Integrator to ensure that the proper installation equipment is provided at each AVI antenna installation location;
- iii. In addition to the structure, the Developer shall also provide two 2-inch conduits between the lane controller cabinet and the base of the structure supporting the AVI antenna. All cabling shall be installed internal to the structure. Communications to the AVI antenna shall be provided by coaxial cable installed by the ETC System Integrator. The Developer shall ensure that the lane controller cabinet and the structures used to support the AVI antenna equipment be as close together as possible to ensure that the maximum coaxial cable length does not exceed 175 feet; and
- iv. The Developer shall be responsible for providing a bracket upon which the ETC System Integrator can mount the AVI antenna. The exact type of bracket will depend on the type of structure that the AVI antenna shall be mounted on. The Developer shall coordinate with the ETC System Integrator to determine the type and number of brackets that shall be necessary.

b. Construction Requirements

The ETC System Integrator shall be fully responsible for the furnishing and the installation of all AVI antennas.

3.8.23. Automatic License Plate Recognition Cameras and Loop Detector Wire

The ALPR cameras shall be used to obtain an image of the vehicle's license plate if a transponder is not detected. In-pavement loops shall be used to signal to the ALPR camera that a vehicle is present. Once the image is taken, the Optical Character Recognition (OCR) system inside the camera unit (or the lane controller) will process the image to identify the vehicle's license plate. This information will then be sent to the lane controller.

a. Design Requirements

- i. The ALPR cameras and loop detector wire shall be mounted and installed by the ETC System Integrator. The ALPR cameras shall be mounted over each Tolloed Express Lane. One ALPR camera shall be for front facing license plate photos and one ALPR camera for rear facing license plate photos. The ALPRs shall be mounted over each Tolloed Express Lane on an overhead structure. The Developer shall be responsible for providing these structures at the toll point locations determined by the ETC System Integrator and the Department for each Tolloed Express Lane;
- ii. The overhead structure and mounting attachments for the ALPR cameras shall be designed and constructed by the Developer to meet the BS EN 60068-2-64 environmental test standards for vibration requirements;
- iii. In addition to the structure, the Developer shall also provide two 2-inch conduits between each ALPR camera structure and the lane controller. Communications cabling from the lane controller cabinet to the ALPR cameras shall be provided and installed by the ETC System Integrator. The Developer shall ensure that the lane controller cabinet and the structures used to support the ALPR equipment be as close together as possible to ensure that the maximum coaxial cable length does not exceed 175 feet; and
- iv. The ALPR cameras shall require an in-pavement loop detection system to signal to the cameras that a vehicle is present. Loops shall be saw cut into each Tolloed Express Lane. The ETC System Integrator shall perform the loop installation and saw cutting, but the Developer shall provide the necessary pull boxes and conduit. The locations of the pull boxes and conduit shall be coordinated with the ETC System Integrator. In addition, the pavement surface temperature must be 50 degrees and rising in order for the ETC System Integrator to properly install the in-pavement loop sealant. As a result, the Developer shall coordinate with the ETC System Integrator to ensure the correct seasonal climate for the in-pavement loop installation.

b. Construction Requirements

The ETC System Integrator shall be fully responsible for the furnishing and the installation of all ALPR cameras and loop detector wire.

3.8.24. Electronic Tolling Lane Controller

The lane controller cabinet shall be located at each tolling point and shall be connected to the electronic tolling equipment via a conduit system. The lane controller will be used for all data processing and transmittal of transponder tag and license plate information via the fiber optic communications network to the ETC back-office for processing.

a. Design Requirements

- i. The ETC System Integrator shall be responsible for the installation and configuration of the lane controller; the Developer shall be responsible for the design of the cabinet and associated foundation, the conduit to connect the lane controller to the AVI antenna, ALPR cameras, and transaction status indicator beacon, and the conduit to provide communications and power to the cabinet. One lane controller cabinet shall be provided for each tolling point location per

direction. If there is an eastbound and westbound toll point at the same location, two lane controller cabinets shall be required. The locations of the cabinets, foundations, and conduits shall be coordinated with, and approved by, the ETC System Integrator. However, the conduit system shall be designed such that the maximum cable length between the lane controller and the ETC devices (AVI antennas, ALPR cameras, and transaction status indicator beacon) shall be designed such that the cable lengths do not exceed 175 feet; and

- ii. The Developer shall have the following responsibilities at each toll point where a lane controller is required:
 - A. Provide a 3R NEMA rated Type M Stretch cabinet with a minimum size of 31-inches (width) 68-inches (height) by 19-inches (depth). Cabinets shall have a backplane with dimensions of 25-inches (width) by 54-inches (height) mounted on both fixed bolts. In addition, the Developer shall provide the required foundation on a level surface easily accessible for programming and maintenance purposes;
 - B. Provide a 12-strand single mode fiber optic communications lateral between the cabinet and CDOT's fiber optic backbone. The fiber optic lateral shall terminate at a patch panel that shall be installed inside the communications cabinet by the Developer;
 - C. Provide power to the cabinet to power the lane controller and all associated equipment and provide a UPS for backup power for up to 8 hours; and
 - D. Developer shall deliver tolling cabinet backplane, side planes, DIN rail and circuit breakers to the ETC System Integrator.

b. Construction Requirements

The ETC System Integrator shall be fully responsible for the furnishing and the installation of all electric tolling lane controllers.

3.8.25. Transaction Status Indicator Beacons

The enforcement will be on the inside shoulder for enforcement personnel to perform tolling enforcement at each toll point.

a. Design Requirements

- i. A transaction status indicator beacon will be installed to signal to the enforcement personnel if toll transaction is recorded as a toll exempt high occupancy vehicle (HOV). This transaction status indicator beacon will be furnished and installed by the ETC System Integrator and meet the following material requirements:
 - A. Provide a blue LED transaction status indicator beacon that shall be activated when a User is identified as an HOV by the tag status file;
 - B. Developer to provide 2-inch conduit between the transaction status indicator beacon and the lane controller cabinet and connect the two devices;
 - C. Shall be outdoor-rated and weatherproof; and
 - D. Shall be visible to enforcement personnel in the adjacent enforcement zone.

b. Construction Requirements

The ETC System Integrator will be responsible for the furnishing and the installation of all transaction status indicator beacons.

3.8.26. Pull Boxes and Manholes

a. Design Requirements

- i. The Developer's design shall utilize fiberglass reinforced, polymer concrete pull boxes and pre-cast concrete manholes with the interior dimensions of 4 feet (width) by 4 feet (length) by 4 feet (depth), with a cast iron frame ring and cover. Pull boxes shall be 24-inches by 36-inches minimum for fiber laterals or ITS and ETC power locations and manholes shall be used for all CDOT fiber backbone locations. Pull box and manhole spacing shall be as follows:
 - A. The manholes and pull boxes shall be clustered in a group wherever possible;
 - B. Pull boxes are not allowed in traffic areas, paved shoulders, paved roadways, and sidewalks, no exceptions. No fiber optic splicing shall be performed in CDOT pull boxes;
 - C. Manholes are not allowed in paved shoulders or paved roadways, unless specifically Approved by the Department;
 - D. The CDOT and Zayo manholes shall be spaced no greater than 1,200 feet apart and CCD pull boxes shall be spaced no greater than 500 feet apart as Accepted by the Department;
 - E. Pull boxes for ITS and ETC power shall be spaced no greater than 300 feet apart as Accepted by the Department;
 - F. Pull boxes or manholes shall be placed within 20 feet of the ITS and ETC equipment as Accepted by the Department, in safe, easy to access locations; and
 - G. Refer to the communications system requirements in this [Section 3](#) for fiber coiling and splicing requirements in pull boxes and manholes.
- ii. All pull boxes shall be constructed of fiberglass reinforced, polymer concrete and have a detachable cover with a skid-resistant surface and have the label of the owner cast into the surface. Painting of words shall not be allowed. All pull boxes shall be verified by a third-party nationally recognized Independent Testing Laboratory as meeting all test provisions of ANSI/SCTE 77 2007 Specification for Underground Enclosure Integrity, Tier 22 rating.

b. Construction Requirements

The Developer shall furnish and install all pull boxes and manholes based on the Construction Standards and any applicable Local Agency standards and specifications. Each location shall be easily accessible for maintenance purposes. Pull boxes shall not be placed in a known flood-prone area or drainage ditch. A fiber optic cable label shall be attached to each fiber optic cable located within a pull box or manhole.

3.8.27. Cabling and Conductors

a. Design Requirements

- i. The Developer shall design all conductors and cables on the Project for voltage drop and load to account for additional 30 percent load capacity for future electrical needs. All cabling and conductors shall meet the CDOT standards and the National Electric Code (NEC). All electrical items shall be inspected by the state electrical inspector; and

- ii. All ITS device control cables and connectors shall be designed in accordance with the manufacturer's recommendation and the CCTV camera manufacturer's signal attenuation requirements.

b. Construction Requirements

All cables shall be installed per the manufacturer requirements for each device or the requirements found in the Project Special Provisions, Appendix A to this Section 3. The maximum conduit fill ratio for both new and existing conduits shall be in accordance with the NEC.

3.8.28. Dedicated Short Range Communications Radios

The Developer shall install Dedicated Short Range Communications (DSRC) radios, Road Side Unit (RSU) between Pecos St. and Tower Rd. The DSRC radios, RSU shall be deployed to allow vehicle-to-infrastructure communications and support multiple applications.

a. Design Requirements

- i. The Developer shall prepare a design to place DSRC radio, RSUs in such a manner that a vehicle equipped with connected vehicle technology traveling in any lane, including the General Purpose Lanes and Tolloed Express Lanes, in both directions, shall be able to have constant communications with at least one DSRC radio, RSU throughout the Project limits. DSRC radio, RSUs shall be installed at a maximum of every two-thousand feet, or closer spacing if necessary, to meet communication requirements. More closely spaced placements shall be necessary to provide constant communications to the CTMC and to motorists to allow for traveler information. Communications are required at critical locations that may be affected by weather conditions, accidents, traffic congestion, and events;
- ii. Locations expected to have a high density of connected vehicle field equipment may include roadway stretches with historically high congestion, on and off ramps, major interchanges, and other spot locations;
- iii. DSRC radio, RSU shall be mounted on ITS infrastructure such as breakaway steel poles, camera poles or overhead sign structures. If colocation on an ITS pole or sign structure is not feasible, a new ITS breakaway steel pole shall be used;
- iv. The Developer shall furnish new DSRC radio, RSUs and all associated equipment necessary to achieve a fully-functioning system. Prior to ordering the DSRC radio, RSUs, Developer shall provide product specifications for Acceptance by the Department;
- v. The Developer shall submit a DSRC coverage plan, to the Department for Approval that shows proposed DSRC radio, RSU locations and that continuous radio coverage has been achieved throughout the corridor. The coverage plan shall show structures and terrain, including existing and proposed, within the coverage area. The coverage plan shall validate the communication range of each 5.9GHz band DSRC radio, RSU for both Transmitting and Receiving frequency band (5.850 – 5.925GHz), and data frames in the intended coverage area including both driving directions of the highway;
- vi. Radio coverage shall be in accordance with manufacturer's recommendations and installation practices and accounted for on the coverage plan; and
- vii. The radio interference shall be assessed at each DSRC radio, RSU location. The design shall be configured so that the performance is not degraded by the frequency interference by other radio signals. The Developer shall use a spectrum analyzer to identify other radio services in the frequency band of 5.850 – 5.925 GHz, and measure the impacts on the DSRC channel quality by other

licensed and/or unlicensed device transmissions as well as any detection and /or interference.

b. Construction Requirements

- i. The Developer shall comply with the Federal Communications Commission (FCC) service rules, regulations, and technical requirements; including obtaining licensing and registration for every DSRC radio, RSU site;
- ii. The Developer shall furnish all DSRC radio, RSU and carry out all installation, field-testing, and burn-in of the system per the manufacturer's recommendations and the Project Special Provisions, Appendix A to this Section 3. Refer to Testing and Integration Plan included in the Reference Documents for testing requirements;
- iii. Each device shall be connected and communicated over the same network as ITS installation and have sufficient bandwidth for future connected vehicle applications (which may be different systems);
- iv. Each device shall be connected to CDOT's communication system using fiber optic laterals, CDOT's fiber optic backbone and communications to a CDOT's node building. The Developer shall work with the Department's ITS staff to ensure acceptable communications to CTMC; and
- v. The Developer shall provide power and all necessary equipment. Power service shall be through nearby electrical service drop.

3.9. Salvaging of Materials

The Developer shall salvage all existing ITS equipment that is affected by the Construction Work. Salvaged equipment shall be delivered to the Region 1 office located at 18500 East Colfax, Aurora Colorado 80011. The delivery schedule and a method statement for transport shall be Accepted by the Department. Delivery shall be coordinated with the Department 48 hours in advance of transport.

3.10. Integration and Testing

3.10.1. Integration and testing shall be conducted for all ITS devices and components that meet any of the following criteria:

- a. A new device and/or cabinet supporting the device has been installed;
- b. A device and/or cabinet supporting the device has been relocated;
- c. The communications path between the devices and the local cabinet has been disturbed and/or relocated; and
- d. A new communication path to a device has been established.

3.10.2. The Developer shall be responsible for the installation, communications design, terminations and testing and integration coordination of all ITS devices. This includes, but not limited to, all DMS, CCTV cameras, MVRD, TTI, ATR, RWIS, LUS, VTMS, SMVMS, ramp metering systems, DSRC radio, and all associated cabinets. All modifications to the CTMS will be performed by CDOT.

3.10.3. The Developer shall submit acceptance test procedures for all DMS, VTMS, LUS and SMVMS in accordance with the manufacturer's guidance for Acceptance by the Department. The test procedure shall be performed in the presence of the Department and the manufacturer's representative. The test shall also include the use of the latest version of the NTCIP Exerciser, or equivalent, to demonstrate that no proprietary protocols have been used and that the local and central software are NTCIP compliant. The Developer shall notify the Department at least 30 Calendar Days prior to the test date. These requirements for digital displays are in addition to the other testing and integration requirements that apply to all ITS Elements in the Central 70 Testing and Integration Plan included in the Reference Documents.

- 3.10.4. For all devices connected to the fiber optic communication network, Developer shall provide testing and integration per the Testing and Integration Plan.
- 3.10.5. The Developer shall submit a testing plan for the network design for Approval by the Department. The testing plan shall include a detailed method statement describing the splicing, testing plan, device cutover plan, and schedule.
- 3.10.6. The Developer shall perform the Department's testing procedures provided in the Central 70 Testing and Integration Plan included in the Reference Documents. This test plan does not encompass all testing procedures for all ITS elements and infrastructure. For all other devices not listed in the Testing and Integration Plan, the Developer shall develop a test plan according to the manufacturer's recommendations for conducting system and subsystem testing and submit it to the Department for Acceptance. Developer shall completely develop testing and integration so that every device and equipment is tested for functionality and integration. No testing shall be performed until the Department has Accepted the test plan. The Department ITS may adjust the proposed testing schedule by up to 30 Calendar Days, at no cost to the Department, to accommodate availability of personnel. The Department staff member or an authorized Department representative will witness and sign off on all tests.
- 3.10.7. The overall test plan that includes the Testing and Integration Plan and additional test plan according to manufacturers' recommendations, shall include the following:
- a. The fiber optic cable testing shall be performed based on the requirements found in the Central 70 Testing and Integration Plan included in the Reference Documents;
 - b. A local field operations test shall be performed for all ITS devices to demonstrate that all hardware, cables, and connections furnished and installed by the Developer operate correctly and that all functions are in accordance with the requirements described herein. Verify the power supply voltages and the functionality of the cabinet fans and heaters. Provide the Department a 30 Calendar Day pretest notification and test completion notification. In addition, the Developer shall prepare a CDOT Device Installation Checklist for each installed device and submit to the Department for Acceptance;
 - c. Developer shall set up an ITS test laboratory for all proposed ITS devices and network equipment. See Project Special Provisions, Appendix A to this Section 3 for test laboratory requirements;
 - d. A subsystem communication throughput test over the communication path between each field device and the communications hub. The testing shall occur after all communication installation for a particular site has been completed, the communication paths between the device and the communications hub have been functional for at least 48 hours, and all fiber optic tests have been successfully passed. The Developer shall notify the Department at least 30 Calendar Days prior to beginning testing;
 - e. After successful completion of all subsystem test procedures and after all I-70 Mainline lanes, as well as ramps are open, test each site for proper communication operation for 30 Calendar Days. During the testing period, all equipment at the site that was provided, installed, or relocated by the Developer shall operate without failures of any type. If any component malfunctions or fails to provide the capabilities specified herein during the 30 Calendar Day test period, within 72 hours of notification by the Department, troubleshoot to find the exact cause of the failure. The cost of correcting equipment malfunctions shall be the responsibility of the Developer. After the component malfunction has been corrected to the satisfaction of the Department, restart the 30 Calendar Day test period; and
 - f. For all components which integrate with the ETC system, a system connectivity test shall be conducted in coordination with the ETC System Integrator.
- 3.10.8. Documentation indicating successful passing of each test shall be submitted to the Department for Acceptance. This shall include the completed deliverable checklist and forms from the Central 70 Testing and Integration Plan included in the Reference Documents.

3.11. Training and Documentation

The Developer shall provide the Department with instruction in the operation and maintenance of the hardware and software associated with the ITS equipment and infrastructure. The Developer shall also provide documentation for all ITS equipment.

3.12. Warranty

3.12.1. The Developer shall procure from the manufacturer standard warranties for all ETC and ITS equipment required to be provided by the Developer. In addition to such standard warranties, the Developer shall also ensure that the following warranty requirements are met:

- a. For all DMS, LUS, SMVMS and VTMS, the warranty shall include 20 years from the Final Acceptance Date for telephone and technical support with access to a trained service representative who can respond within 24 hours to questions regarding all sign related equipment problems and maintenance issues at no additional charge to the Department;
- b. The warranty in respect of UPS equipment for all DMS, VTMS, ETC equipment and other ITS devices shall include a repair option for UPS equipment extending at least 5 years from the Final Acceptance Date. Repair cost shall include all labor and materials necessary to complete the repair. The Developer shall be responsible for ensuring the vendor processes repairs for the 5-year period following Final Acceptance as part of the warranty;
- c. For all ETC, and ITS cabinets, the cabinet manufacturer shall affix a permanent label on the inside of the door that identifies the cabinet type, date of manufacture, warranty expiration date and manufacturer's name. The warranty expiration date shall be expressed in the (mm/dd/yyyy) format. The warranty shall cover all cabinet materials and workmanship;
- d. The Developer shall provide a 5-year warranty on all equipment included in Section 3 Appendix A Revision of Section 614 – Traffic Management Building Equipment. The warranty shall provide coverage on all equipment for 5 years from the Final Acceptance Date and include protection against lightning and electrical surges. Coverage for repair or replacement of equipment shall be provided;
- e. The traffic management system building UPS manufacturer warranty shall cover onsite labor for 90 Calendar Days and start-up by the manufacturer; and
- f. The CWDM OTDR shall include a full 4-year warranty by the manufacturer's direct service and support. The 4-year warranty period shall commence from the Final Acceptance Date. Service and support from a third party other than the manufacturer shall not be acceptable. This service and support shall be available both during and after the CWDM-OTDR warranty period. The manufacturer shall offer toll free phone technical service. In the event that repairs are required, the manufacturer shall have a maximum 3 day turnaround time in shipping the CWDM-OTDR fully repaired.

3.12.2. Sections 2.2.6 and 3.2.8 of Schedule 11, Operations and Maintenance Requirements set out the Developer's O&M Work responsibilities in respect of ITS and ETC facilities.

3.13. Deliverables

At a minimum, the Developer shall submit the following to the Department for Information, Acceptance or Acceptance in accordance with the specified timeframes:

Table 3-1 Deliverables

Deliverable	Information, Acceptance, or Approval	Schedule
Maintenance of ITS Plan	Acceptance	30 Calendar Days prior to start of disruption of communications or device outages in the area.
ITS Roll Plot	Acceptance	Preliminary (30%) plan level
ITS and ETC Design Plans and Details	Acceptance	At final (100%) design review, and RFC
ITS and ETC Device and Material Specification Sheets	Acceptance	30 Calendar Days prior to placing order of device or equipment
Test Plan according to the manufacturer's recommendations	Acceptance	After issuance of NTP 2 and 30 Calendar Days prior to testing and integration of ITS and ETC devices
Network and Splicing Plans	Approval	At final (100%) design review, and RFC
CDOT Device Installation Checklist	Acceptance	30 Calendar Days prior to device integration
Fiber Test Results	Acceptance	10 Calendar Days after completion of test
Documentation Indicating Successful Passing of Each Test	Acceptance	30 Calendar Days after completion of test
Cross sections for ITS, and ETC structures	Approval	At preliminary (30%) structural design of the sign structures, final (100%) design review, and RFC
ITS pole and tower cross sections for all CCTV, MVRD, TTI, DSRC poles, RWIS, Environmental Friction System	Approval	At preliminary (30%), final (100%) design review, and RFC
Ramp metering equipment and ground mounted cabinet cross sections	Approval	At preliminary (30%), final (100%) design review, and RFC
Profile Plans for LUS, SMVMS, DMS, and VTMS structures	Approval	At preliminary (30%), final (100%) design review, and RFC.
CCTV and DSRC Coverage Plans	Approval	At preliminary (30%) and final (100%) design review, and RFC.
Device Orientation Details	Approval	At final (100%) design review, and RFC.
Supporting reports and design calculations	Information	At final (100%) design review, and RFC.
Testing Plan for the Network Design	Approval	At final (100%) design review, and RFC.
Terms of warranties required by Section 3.12	Acceptance	30 Calendar Days prior to placing order of device or equipment

3.14. Appendices

- Appendix A Project Special Provisions
- Appendix B Responsibility Matrix

Appendix A
Project Special Provisions for ITS and Tolling Equipment Elements

The following special provisions supplement or modify the *Standard Specifications* and take precedence over the *Standard Specifications* and plans. The provisions of Appendix A to Schedule 10A Applicable Standards and Specifications apply to these Project Special Provisions.

PROJECT SPECIAL PROVISIONS

**REVISION OF SECTION 604
CDOT ITS MANHOLE FOR TRAFFIC MANAGEMENT SYSTEM**

Section 604 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

CDOT ITS Manhole Traffic Management System (Manhole TMS) shall include the installation of manholes for the Traffic Management System at locations Approved by the Department.

MATERIALS

Manhole TMS shall be pre-cast concrete, circular or square, with a base and cast iron frame ring and cover. Each Manhole TMS, frame, and cover shall conform to American Association of State Highway and Transportation Officials (AASHTO) HS20-44. Manhole TMSs shall be capable of accepting concrete grade rings to add height to raise the ring and cover to a future finished grade.

Pre-cast units shall be provided with factory-installed knockouts that will permit the installation of a minimum of 6 of 2-inch conduits. The factory-installed knockouts shall be at a depth of 3 feet below the top of the Manhole TMS. The Manhole TMS shall have a detachable cover that has a skid-resistant surface and have the words "CDOT COMM" cast on top of cover. The cover shall be attached to the Manhole TMS body with screw-in bolts.

Each Manhole TMS shall include all hangers and hooks that needed all proposed fiber and communication cabling. Fiber management hangers and hooks for fiber coils and splice canisters shall be of sufficient quantity to hang each backbone and lateral cable installed in the Manhole TMS separately.

CONSTRUCTION REQUIREMENTS

The Contractor shall neatly excavate the site of Manhole TMS installation. A minimum of 12 inches of $\frac{3}{4}$ inch granite-gravel shall be placed below the Manhole TMS.

In pavement and sidewalks, the top of the Manhole TMS shall be flush with the existing or final proposed grade. Outside of pavement and sidewalks, the top of the Manhole TMS shall be 2 inches above existing or final proposed grade.

Backfill around the Manhole TMS excavation shall conform to Section 206, Structure Backfill (Class 2).

Fiber optic cable coils shall be tied to each cable rack with plastic cable ties. The Contractor shall coil the fiber cable per the manufacture's recommendations. If hangers are not factory installed in the Manhole TMS, the bolts shall be installed in the Manhole TMS walls by means of either an epoxy compound or expansion type fitting. Conduit entering the Manhole TMS base shall have sweeps attached so conduit entrance is elevated a minimum of 6 inches above the bottom of the Manhole TMS.

Manhole TMS will include marking conduit ownership in each, the Manhole TMS, excavation and backfill, hooks to hang coils, all cable innerduct, conduit inside Manhole TMS, all hardware, as well as all equipment and labor necessary to install the Manhole TMS. Capping and sealing the conduits shall be included. Backfill for Manhole TMS shall conform to Section 206, Structure Backfill (Class 2).

REVISION OF SECTION 612 CDOT ITS LOCATION MARKERS

Section 612 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

Contractor shall furnish and install Location Markers for identifying fiber optic conduit and other utility conduit at locations shown on the plans.

MATERIALS

Location Marker (Fiber Optic) (Dome) shall be made of non-conductive high-density polymer, and shall be integrally white in color with an orange cap. All colors shall be stabilized against ultraviolet light such that they will not fade under continuous exposure to direct sunlight. The Location Marker shall retain size and shape and rigid in temperatures ranging from -40° F to 175° F.

The Location Marker (Fiber Optic) (Dome) shall include a label with CDOT contact information and the designation of "FIBER OPTIC CABLE". The label shall have black lettering on an orange background. The label shall include the highway milepost of the pull box or manhole. The mile post shall be to the nearest hundredth mile. This label shall be placed below the "FIBER OPTIC CABLE" warning label. The Contractor shall submit the label design to the Department for Acceptance.

Location Marker (Utility) (Flat Slat) shall be made of fiberglass reinforced composite, and shall be color orange for telephone or red for electric.. The Location Marker shall retain size and shape and rigid in temperatures ranging from -40° F to 175° F.

The Location Marker (Utility) (Flat Slat) shall include a label with CDOT contact information and the designation of "ELECTRICAL CABLE" or "TELEPHONE CABLE". The label shall have black lettering on a red background for electrical and black lettering on an orange background for telephone. The Contractor shall submit the label design to the Department for Approval.

Concrete footing for dome marker shall be 18 inches x 18 inches x 12 inches per Project detail. Concrete footing shall be Concrete Class B and shall be in accordance with Section 601.

CONSTRUCTION REQUIREMENTS

Location Marker (Fiber Optic) (Dome) shall be installed at all pull box and Manhole TMS locations that contain fiber optic cable. Intermediate Location Markers shall be installed evenly at a maximum of 1000 foot spacing along each conduit run.

Location Marker (Utility) (Flat Slat) shall be installed at utility pull box and manhole locations and utility point of service to identify both electric and telephone communication lines. Contractor shall designate the utility line with a Location Marker installed at mid-point between the utility point of service and the device.

**REVISION OF SECTION 613
CDOT AND CCD ELECTRICAL CONDUCTOR IDENTIFICATION**

Section 613 of the Standard Specifications is hereby revised for this Project as follows:

Section 613.08 shall include the following:

All electrical conductors shall be tagged as follows:

Electrical conductor cable tags shall be located below the termination in the base of the street light, in the pull box, in the pedestal and at the point of termination to existing facilities of the local utility company supplying the electrical service. The tags shall be attached with a cable tie. The information written on the tag shall include the direction and approximate length of cable feeds running from where to, etc.

Each incoming conductor shall be individually color coded with 1 tape mark, while outgoing conductors shall have 2 tape marks.

Example:

FEEDS TO PULL BOX
50' NORTH & 75' WEST
THEN TO HIGHWAY SIGN

FEEDS FROM XFMR
250' SOUTH & 75' EAST
200' WEST

Uniform tags are available in a Tag Kit. The Tag Kit consists of: 100 tags, 3 part yellow with 1 hole, 100 black nylon ties and 1 black permanent marker.

Size	2-1/2" X 5"
Standard Package	Kit
Weight, Kit, Approx.	1.5 Pounds
Color	Yellow

REVISION OF SECTION 613 CDOT ELECTRICAL CONDUIT

Section 613 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work includes furnishing and installing new High-Density Polyethylene (HDPE) and Polyvinyl Chloride (PVC) Electrical Conduit and fittings for use with fiber optic cable, electrical conductors, and communications cabling.

MATERIALS

All materials furnished, assembled, fabricated, or installed under this item shall be new, Underwriters Laboratories (UL) listed, corrosion resistant and National Electric Code (NEC) compliant. Materials shall be submitted to the Department for Approval.

Electrical Conduit shall be Schedule 80. Electrical Conduit and fittings shall be UL listed.

HDPE conduit and fittings shall be certified by the manufacturer as meeting American National Standards Institute (ANSI) ANSI/UL 651A. PVC conduit and fittings shall be certified by the manufacturer as meeting ANSI/UL 651. The manufacturers shall be International Organization for Standards (ISO) 9001 compliant.

All HDPE conduit shall be factory lubricated, low-friction, high-density conduit constructed of virgin high-density polyethylene resin. HDPE conduit shall be capable of being coiled on reels in continuous lengths, transported, stored outdoors, and subsequently used for installation, without affecting its properties or performance.

Each conduit shall be equipped with a pull tape. The pull tape shall have a minimum tensile strength of 1800 pounds and be of a design and manufacture that prevents cutting or burning into the conduit during cable installation. The pull tape shall include a continuous 22 gauge tracer wire. Splices in the pull tape and tracer wire are allowed inside manholes and pull boxes but shall not be permitted inside conduit.

A minimum 12 gauge tracer wire shall be included in conduits containing fiber optic cable.

Where multiple conduits are installed in a joint trench, the Contractor shall use Department-Approved commercially available conduit spacers that provide separation between the conduits, as well as anchor the conduit into the bottom of the trench. The conduit spacers shall be factory-certified to accommodate all handling pressures and stresses associated with conduit installation.

Where conduit encasement is required, the concrete used shall conform to CDOT standards.

All of CDOT's five 2 inch conduits in the joint trench shall be orange in color and CCD's conduit(s) in the joint trench shall be green with an orange stripe. The following conduit colors shall be used for additional conduits installed so that the contents can be easily identified. If more than 3 conduits are installed then the other colors shall be grey and blue:

1. Conduit for CDOT fiber optic —Orange
2. Conduit for power—Red
3. Conduit for future use—Grey or Blue

-2-

REVISION OF SECTION 613 CDOT ELECTRICAL CONDUIT

CONSTRUCTION REQUIREMENTS

All conduit and fittings installation shall conform to the NEC.

Electrical conduit installed using a trenchless technology such as directional boring shall be HDPE.

Electrical conduit that is installed by direct burial methods such as plowing, open trenching, or other excavation methods shall be PVC or HDPE.

Prior to construction, the Contractor shall prepare a trenching and boring plan. The plan shall show the limits of the planned work areas and the areas of anticipated disturbance. All disturbances outside the planned work areas created by Contractor's operations shall be restored to their original condition at the Contractor's expense.

During construction operations, the Contractor shall maintain boring logs that include the depth at specific distances along the bore. Boring logs shall be submitted on a weekly basis.

Excavations and conduit installation shall be performed in a continuous operation. All trenches shall be backfilled by the end of each shift. Material from trenching operations shall be placed in a location that will not cause damage or obstruction to vehicular or pedestrian traffic or interfere with surface drainage.

Where multiple conduits are installed in a joint trench, the Contractor shall install conduits in a manner that allows the backfill material to completely surround all exterior surfaces of the conduit. The Contractor shall separate conduits using conduit spacers. The conduit spacers shall be installed per the manufacturer's recommendations. The Contractor shall demonstrate to the Engineer that the spacers are properly anchored and maintaining proper depth.

The Contractor shall be responsible for damage due to over-excavating a trench and heaving damage to the existing asphalt and concrete mat, caused by equipment directly and by dislodging rocks or boulders. All damage from over-excavation and heaving shall be repaired at the Contractor's expense. The Contractor shall bear the cost of backfilling all over-excavated areas with backfill material Approved by the Engineer.

Conduit installed longitudinally under roadway surfaces shall be encased in concrete. The Contractor shall use a process to install the conduits that ensures the conduits do not float up in the concrete and shall use interlocking spacers manufactured for use in encased conduit installation. All debris that falls in the trench during the placement and positioning of the conduits and concrete shall immediately be removed. The plastic conduits shall be placed in the trench in such a way that they will be straight and located at the depths shown in the plans.

- (1) If conduit is installed prior to the placement of the concrete below the conduits, the conduits shall be bundled and supported by manufactured conduit spacers to allow the concrete to flow under and between the conduits to the proper dimensions without displacing the unsupported sections of conduit. Conduits shall be bundled, supported and anchored at a maximum distance of 5 feet if concrete is placed around the conduit.
- (2) If the concrete below the conduits is placed prior to the installation and positioning of the conduits, the concrete shall be placed in such a way so that the conduits are not curved or damaged. The conduits

-3-

REVISION OF SECTION 613 CDOT ELECTRICAL CONDUIT

shall then be positioned, bundled by manufactured conduit spacers and anchored as required at their proper position as the remainder of the concrete is placed to the required depth.

The Contractor shall restore all surface materials to the original condition or better. This includes but is not limited to pavement, sidewalks, sprinkler systems, landscaping, shrubs, sod, and native vegetation that is disturbed by the conduit installation operation.

The Contractor shall use UL listed splice couplings that comply with the NEC. All associated work to splice the conduit shall be included in the cost of the item. The coupling technology used to connect conduit ends shall require no special tools and form a watertight, airtight seal. The breaking force between segments shall exceed 250 pounds. Conduit splices shall be kept to a minimum and all such locations shall be Approved and inspected by the Engineer and the authority having jurisdiction. Additional pull boxes shall not be substituted for conduit splices.

Conduit plugs that are watertight, removable, mechanical and equipped with a tie rope for connection to a pull rope and pull tape shall be supplied and installed in all open conduit ends as soon as the conduit is installed. Conduit shall be plugged at all termination points including, but not limited to pull boxes, manholes, controller cabinets and node buildings. Conduits containing cable shall be plugged with durable and reusable split type plugs, fabricated without metallic parts. The plugs shall allow easy removal and reinstallation around in-place cables. Split type plugs shall provide a watertight and airtight seal of at least 22 pounds per square inch. They shall be installable by hand without using tools and without damaging the cable. All plugs shall be correctly sized to fit the conduit being plugged.

All conduits shall use sweeps to elevate the buried conduits to the final grade within a pull box or manhole. The sweeps shall be terminated within the pull boxes and manholes to allow for easy installation and removal of conduit plugs. The sweeps shall be set above the ground surface of the inside of the pull box at a height that does not interfere with coiling of the fiber optic cable. The color of the sweeps shall match the color of the conduit it is attached to. All sweeps shall have a label attached identifying owner, use, and direction conduit is running. The label shall be attached with a durable material, such as zip ties, and shall be readable for 20 years.

Unused conduit shall be plugged with mechanical duct plugs that provide a watertight barrier. Duct plugs shall be removable. Plugs shall be of the proper size for the conduit diameter being plugged.

Mechanical sealing devices shall be used to provide a watertight barrier between the conduit and communications cable. Seals shall be of the proper size for the conduit diameter and cable diameter being sealed. Mechanical seals shall be removable.

All conduits terminating in a pole or sign structure shall extend to a point 6 inches below the handhole in the pole or structure.

All conduit runs containing fiber optic cable shall have a limited number of bends. The sum of the individual bends on a single conduit run between any two pull points shall not exceed 270 degrees. No individual bend shall exceed 90 degrees. All conduit bends shall have a minimum acceptable radius of 48 inches for 90 degree bends and for conduit containing fiber optic cable and 24 inches for all other bends. HDPE conduit minimum bending radius shall conform to Table 354.24 in the NEC.

~~-4-~~

**REVISION OF SECTION 613
CDOT ELECTRICAL CONDUIT**

New conduits may be installed into existing pull boxes, manholes and cabinet bases, and the Contractor shall carefully excavate around the existing facility and install the new conduit as shown on the plans. The Contractor shall not damage the existing facility or its contents. If the existing conduit, pull box, lid and concrete collars are damaged during conduit installation, the Contractor shall restore the damaged item or section to current CDOT requirements at no additional cost to the Project.

Conduit shall always enter a pull box, manhole, cabinet base and all other structure types from the direction of the run only.

All conduits ends shall be free from sharp edges and burrs.

Conduit shall also include all groundwork, lubricants, anchors, bands, skids, sweeps, pull rope, pull tape, copper tracer wire, adaptors, fittings, splice couplings, conduit plugs, foam sealant, installation equipment, mounting brackets and hardware, structure anchors, adhesives, labor and all other items necessary to complete the work.

REVISION OF SECTION 613 CDOT PULL BOXES

Section 613 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

Contractor shall furnish and install fiberglass reinforced polymer concrete pull boxes and concrete aprons.

MATERIALS

Pull boxes shall be verified by a 3rd Party Nationally Recognized Independent Testing Laboratory as meeting all test provisions of American National Standards Institute/Society of Cable Telecommunications Engineers (ANSI/SCTE) 77, 2013 Specification for Underground Enclosure Integrity, Tier 22 rating. Pull boxes shall be Underwriters Laboratories (UL) listed. Certification documents shall be submitted with material submittals.

Each pull box shall have an Electrical Marker System (EMS) locator disk manufactured into the lid for communication line locating. The locator disk shall be compatible with a CDOT cable locator and utilize the APWA Uniform Color Code standard for visual reference, if disk is observable on the exterior of the lid. The locator disk shall utilize the proper locate frequency for the pull box type.

Pull boxes 24 inches by 36 inches and larger shall have removable split lids with a removable metal center support beam. Lid segment weight shall not exceed 100 pounds.

One piece lids shall have a minimum of two lift slots per lid, while split lids shall have a minimum of one lift slot per lid. Lift slots shall be rated for 3,000 pounds.

Pull box removable lids shall be provided with a skid-resistant surface and have the words "CDOT COMM", or "CDOT POWER", as well as "EMS MARKER EMBEDDED IN COVER" and the tier level rating cast into the surface. Painting of words shall not be accepted. The cover shall be attached to the pull box body by means of 3/8 inch x 7 inch lag thread hex head stainless steel bolts.

Test point locations shall be integrated into the pull box lids to provide for attachment of test leads of various connector types for underground conduit tracing. The minimum number of test point locations shall equal the number of conduit banks entering the pull box, up to a maximum of five test points. Pull boxes with split lids shall have the test points on one split lid section only. Pull box lids shall be furnished with 3/8 inch x 1/16 inch deep recesses at locations adjoining each test point for the application of direction arrow symbols indicating the direction of underground conduit exiting the pull box. Recesses shall be thoroughly cleaned with alcohol prior to applying arrow symbols.

Wire mesh shall be installed in a manner to completely surround the box. The wire mesh shall meet the material standard ANSI/American Society of Testing and Materials (ANSI/ASTM) A555-79 and made of T-304 stainless steel, 0.025 inch wire diameter minimum and shall have a spacing of 10 mesh per inch.

Pull boxes installed in dirt or landscaped areas shall have a Class B concrete apron or a pre-cast polymer concrete apron. Class B concrete shall be in accordance with Section 601.

The pre-cast polymer concrete apron shall be non-metallic, non-conductive, and UV resistant, and shall include 2 lifting slots for placement in the field. The pre-cast polymer concrete apron shall be a minimum 4 inches deep and shall extend 11 inches (minimum) from each side of the pull box. The gap

-2-

REVISION OF SECTION 613 CDOT PULL BOXES

between the pre-cast polymer concrete apron and outer wall of the pull box shall be a maximum of ½ inch.

Pull Box (Surface Mounted) shall be aluminum type with a hinged front door and have at least a National Electrical Manufacturers Association (NEMA) 3R rating. The hinged door shall be provided with both a weather tight seal and an aluminum hasp. The use of surface mounted pull boxes shall be Approved by the Department.

CONSTRUCTION REQUIREMENTS

A minimum of 12 inches of ¾ inch granite-gravel shall be installed as a base for the pull box. The granite-gravel shall be free of dirt and debris and spread evenly to facilitate a level base for the pull box. The Contractor shall ensure that sufficient compacting is made prior to the installation of granite-gravel to alleviate future settling.

Wire mesh shall be installed in to completely surround the box. The wire mesh shall be installed prior to the installation of the pull box above the bed of ¾ inch granite-gravel. The wire mesh shall be gently cut to allow only the entrance of the conduit through at the bottom of the box. All openings cut in the wire mesh that are larger than the diameter of the conduit shall be covered with additional wire mesh in a manner to completely surround the pull box with wire mesh.

Tracer wire shall be attached to the trace test points on the underside of the pull box lid. Each tracer wire shall be attached to an individual trace point; no 2 wires shall be attached to the same point. The Contractor shall coil an additional 6 feet of tracer wire inside the pull box to ensure that the tracer wire will not disconnect from test points when the lids are removed.

At pull boxes installed in dirt and landscaped areas, the Contractor shall install a concrete apron or a pre-cast polymer concrete apron around the edges of the pull box. Three sides of the concrete apron shall measure 12 inches wide by 6 inches deep and one side shall measure 18 inches wide by 6 inches deep. The apron side measuring 18 inches wide by 6 inches deep shall be located on the edge of the pull box furthest from the roadway, and shall contain a 4 inch diameter round knockout for fiber optic location marker installation. Pull boxes shall not be installed above the grade of the apron. The concrete apron shall have a one percent slope away from the top of pull box to allow for drainage.

Surface mounted pull boxes shall be mounted on or embedded into hard surfaces such as bridge decks, concrete barriers, retaining walls, or buildings. Surface mounted pull boxes shall be attached using 3/8 inch epoxy anchors or other methods Approved by the Department. Surface mounted pull boxes shall not be used for ground installations. Pull rope and tracer wire shall be installed in surface mounted pull boxes.

Pull boxes will include base, lid, integrated location disk, integrated test points, arrow symbols, excavation, backfill, concrete apron, wire mesh and ¾ inch granite-gravel. Pull boxes shall also include the removal and patching of pavement, sidewalks, curb and gutters and their replacement in kind to match existing grade.

**REVISION OF SECTION 613
ELECTRICAL CONDUIT (LIQUIDTIGHT FLEXIBLE METAL)**

Section 613 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work includes furnishing and installing new liquidtight flexible metal conduit (LFMC) and fittings for use with fiber optic cable, electrical conductors and communications cabling. All underground-to-aboveground and aboveground conduit installations shall utilize LFMC.

MATERIALS

All materials furnished, assembled, fabricated, and installed under this item shall be new, Underwriters Laboratories (UL) listed, corrosion resistant, and National Electric Code (NEC) compliant.

LFMC shall meet UL safety standard UL 360 –Liquid-Tight Flexible Metal Conduit.

The LFMC shall be rated for use in wet locations.

For below ground to above ground transitions, the Contractor shall use LFMC to Polyvinylchloride (PVC) couplings or LFMC to High Density Polyethylene (HDPE) couplings.

CONSTRUCTION REQUIREMENTS

Prior to installation, the Contractor shall submit technical data sheets for all conduit types, couplings, fittings, elbows, L-bends, mounting hardware, conduit plugs, and sealing plugs to the Engineer for written approval.

LFMC shall be installed in all below ground to above ground conduit transitions. Below ground, the Contractor shall couple the LFMC conduit to the below ground conduit using approved coupling technology that is listed for use with LFMC.

Above ground LFMC shall be installed between pole-mounted communications cabinets and device poles. LFMC shall be installed for connections between the sign structure and housings for Dynamic Message Sign (DMS), Lane Use Sign (LUS), and Sidemount Variable Message Sign (SMVMS), as well as for connections to ETC and ITS equipment. For above ground LFMC entries into cabinets, poles, sign structures, and sign housings, the Contractor shall use fittings listed for use with LFMC. At entries into cabinets, poles, sign structures, and sign housings, the Contractor shall ensure that the entry hole is free from sharp edges and burrs.

The Contractor shall use factory drilled entries for connection of LFMC to cabinets, poles, and DMS housings. If the LFMC is to be used on an existing structure or cabinet on which no factory drilled entry exists, the Contractor shall receive Approval from the Department prior to field drilling cabinets, poles, and DMS housings.

At field drilled steel poles, the Contractor shall repair all damaged galvanizing by hot dip or metallizing process as described in American Society for Testing and Materials (ASTM) ASTM A780 or shall paint with one full brush coat of a zinc-rich paint meeting Military Specification Department of Defense (DOD) DOD-P-21035A. Spray can applications of zinc will not be allowed. LFMC installation shall conform to the requirements of NEC Article 350 LFMC and shall be secured and supported per NEC Article 350.30.

**REVISION OF SECTION 613
SERVICE METER CABINET**

Section 613 of the Standard Specifications is hereby revised for this Project as follows:

Subsection 613.01 shall include the following:

This work consists of the installation of a Service Meter Cabinet including the preformed polymer concrete footing, meter cabinet, mounting hardware, Cabinet mounting base, power cables, UV-resistant cables and connection to the power source and all required wires and wiring to facilitate a fully functioning Service Meter Cabinet at locations as shown on the plans.

Add subsection 613.09 (a) as follows:

(a) *Service Meter Cabinet*

The Service Meter Cabinet shall be National Electrical Manufacturer Association (NEMA) 3R and shall be UL 508 listed as industrial control panel service equipment. It shall have the ability to be padlocked at the location shown on the Service Meter Cabinet detail.

Utility metering compartment shall be protected with a hinged, pad lockable hood.

Service conductor terminations shall be accessible by a removable cover.

The Service Meter main shall be 100 amp minimum, with voltage range of 120V – 480V.

The Service Meter Cabinet shall be compatible with both ringless and ring-type meter sockets, and with 4-7 terminals.

Exterior of the Service Meter Cabinet shall be a gray powder-coated aluminum, with a thickness of 0.125 inches which is rain and dust impermeable and electrically welded and reinforced where required.

The Service Meter Cabinet shall have a swing dead front door compartment with distribution and control equipment that is secured with both a latch and a pad lockable draw latch outer door.

All nuts, bolts, screws and hinges shall be stainless steel and not visible from outside the Service Meter Cabinet.

Service Meter Cabinet and polymer concrete foundation shall have a divider to separate the service and load conduits/ conductors.

The Service Meter Cabinet shall provide accommodation for four, single branch circuit breakers at a minimum, not including the main breaker. Circuit breakers shall be cable-in, cable-out with line on top, and load on bottom. Handle position shall be up = ON, down = OFF.

The polymer concrete foundation shall have 1/2 inch-13 unified course (UNC) through bolt inserts for mounting the Service Meter Cabinet.

The polymer foundation shall pass the most recent addition of the ANSI/SCTE 77 6.0, 6.1, 6.2, 6.3, 6.4 & 6.5 environmental test, including a 5 percent solution of magnesium chloride.

-2-

REVISION OF SECTION 613 SERVICE METER CABINET

The divider plate between the service conduit and load conduit shall be full depth of foundation and be made of preformed polymer concrete.

All materials furnished, assembled, fabricated or installed shall be new, corrosion resistant and in strict accordance with the details shown on the Service Meter Cabinet detail and in these Technical Specifications.

Functional Characteristics:

The Service Meter Cabinet shall provide a viewing window in which the meter shall be readable while providing a vandalism resistant enclosure. Viewing window shall be comprised of bullet resistant polycarbonate resin thermoplastic.

Physical Characteristics:

Refer to the Service Meter Cabinet detail for specific dimensions and tolerances.

CONSTRUCTION REQUIREMENTS

Add Subsection 613.03(a), Service Meter Cabinet:

The Contractor shall go through the Colorado State Electrically Board to acquire the electrical installation permit prior to the installation of the meter Cabinet equipment for all CDOT owned and maintained traffic signal and lightning.

Installation shall conform to the latest edition of the National Electrical Code (NEC) and the Authority Having Jurisdiction.

The Service Meter Cabinet foundation shall be polymer concrete with fiberglass reinforcement. The pad shall be continuous cloth reinforcement on the inside and outside perimeters.

The Service Meter Cabinet shall be factory wired and inspected by CDOT ITS prior to installation.

Construction methods shall conform to the requirements of Section 614.10 (c), Section 614.10 (d) and Section 614.10 (j).

The Contractor shall certify the records of the testing including grounding, voltage drop (within 3 percent) and other required tests as meeting specification requirements and submit the records to the Engineer.

Subsection 613.11 shall include the following:

Service Meter Cabinet will include the foundation, all internal wiring, hardware, polymer foundation, excavation, meter, back fill, disposal of excess excavation, crushed rock, UNC inserts and everything shown on Service Meter Cabinet Detail example provided in the Reference Documents.

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work consists of furnishing and installing overhead, walk-in accessible Dynamic Message Signs (DMS), sign controller, and associated uninterruptible power supply (UPS) system, DMS equipment cabinet and cabinet foundations. The sign shall be fully compatible with the mounting hardware and support structure designed by the Contractor. The DMS shall be equipped with the ability to display 3 lines of text at a height of 18-inch tall characters and 18 characters per line, and shall have a display made up of a full color matrix configuration. The DMS shall be equipped to display 24 bit color messages and graphics using red green and blue Light Emitting Diodes (LEDs). The sign shall have 32-35 mm pixel spacing. The color LEDs shall have a viewing angle of 30 degrees.

The sign shall be 26 feet wide by 8.5 feet tall by 4 feet deep with an allowable variation of (plus or minus 7 inches). The size of the DMS for cover portals shall be as specified in Schedule 10, Section 12.

The sign shall include a main service power shut off mounted to the sign structure. The sign shall be capable of operating without any decrease in performance over a temperature range of -34° F to +140° F with a relative humidity of 0 to 99 percent, non-condensing. The UPS system shall be capable of running essential sign control electronics, communication equipment, and half of the pixels in the LED sign face allowing messaged display, and sign communication/control for a minimum of 8 hours depending on the number of batteries used.

MATERIALS

- a. *Certifications.* Prior to start of the installation of the DMS the Contractor shall provide the following certifications to the Engineer for review and Approval:
 1. Certification showing that the manufacturer of the DMS is fully compliant with ISO 9001 prior to the start of construction for this Project. The ISO 9001 Certification shall apply to the facility, and to the design, fabrication, installation, and maintenance of the DMS. The facility where this company actually designs and manufactures the DMS shall be ISO 9001:2000 (or later) certified a minimum of one year prior to the start of construction.
 2. Working drawings showing the sign housing and tilting brackets (if tilting brackets are used to achieve the required 3 degree sign face tilt) shall be sealed by an Engineer registered in the State of Colorado and shall be submitted in accordance with subsection 105.02. The sign housing shall be capable of withstanding a wind loading of 120 mph without permanent deformation or other damages. The sign housing shall also be designed and PE sealed to withstand current AASHTO specified group loading combinations.
 3. Certification showing that welding of the DMS housing is in accordance with the American Welding Society (AWS) Standards, ANSI/AWS D1.2-97. The DMS manufacturer's welders and welding procedures shall be certified by an ANSI/AWS Certified Welding Inspector to the ANSI/AWS D1.2-97 Structural Welding Code for Aluminum.
 4. Certification that all aluminum face materials have a coating that meets or exceeds the requirements of the American Architectural Manufacturers Association (AAMA) Specifications Publication No. 2605.

-2-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

5. Certification that the LEDs were tested and binned in accordance with the International Commission on Illumination (CIE) Standard Condition A.
 6. Documentation and information on software as described in this document.
 7. Documentation verifying the DMS is listed by an accredited 3rd party testing organization for conformance to UL48 and UL 1433.
 8. All workmanship shall comply with IPC-A-610C, Class 2 titled "Acceptability of Electronic Assemblies".
 9. Documentation providing proof printed circuit board (PCB) silicon conformal coating conformance to MIL-I-46058C Type SR and IPC-CC-830.
 10. Documentation that the sign's structural integrity is in conformance with the current AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaries and Traffic Signals.
 11. Documentation that the DMS conforms to the transient protection and vibration of the National Electrical Manufacturer Association (NEMA) Standard TS4, Section2.
- b. *Sign Housing.* All component parts shall be easily and readily accessible by a single person for inspection and maintenance. There shall be room for a technician to work. Access shall be made by entering both sides of the housing. The housing shall be weather tight, and compliant to the NEMA 3R Standard. The bottom panel of the housing shall have a minimum of four drain holes, with snap-in, drain filter plug inserts.

Any visible manufacturer's logo/trade name/reference on the DMS shall be placed on the bottom side of the access door or back panels of the DMS.

The sign housing shall be capable of withstanding a wind loading of 120 mph without permanent deformation or other damages. The sign housing shall also be designed, stamped and signed by a Professional Engineer to withstand current AASHTO specified group loading combinations including: sign weight, repair personnel and equipment, ice and wind loads. It shall also meet strength requirements for truck-induced gusts as specified in NCHRP Report 412. The sign housing shall be engineered to withstand snow loading of 40 pounds per square foot, as well as the ability to be mounted in a manner that prevents the buildup of snow and creates a natural means by which snow can run off without impeding flow of traffic. The performance of the sign, including the visibility and legibility of the display, shall not be impaired due to continuous vibration caused by wind, traffic or other factors. The housing shall be designed to accommodate mounting on the rear vertical plane and shall be structurally sufficient to be mounted to the sign support structure.

The LED DMS shall be built with a forward tilt angle of 3 degrees toward the viewing motorists. The sign housing and structural components for the tilting system if required by design shall be structurally sufficient to perform under all applicable loading conditions including gravity, wind, traffic, weather, roadway deicers, maintenance, and other environmental factors. Working drawings

-3-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

showing the sign housing shall be submitted in accordance with subsection 105.02. Working drawings shall be sealed and signed by an Engineer registered in the State of Colorado.

All parts shall be made of corrosion resistant materials, such as plastic, stainless steel or aluminum. Painted steel is not acceptable. No self-tapping screws shall be used. The exterior front face surfaces shall be finish coated by a system that meets or exceeds the AAMA Specification No. 2605. The finish shall be matte black. The main body of the sign housing shall be constructed of aluminum. All exterior seams shall be continuously welded by an inert gas process, except for the coated fascia material.

Each panel shall have a single polycarbonate sheet attached securely to the inside of the aluminum panel. The polycarbonate sheet shall cover all of the pixel openings. The polycarbonate shall be sealed to prevent water and other elements from entering the DMS. The polycarbonate shall contain UV inhibitors that protect the LED display matrix from the effects of ultraviolet light exposure and prevent premature aging of the polycarbonate itself. The use of a plastic lens system will not meet the requirements and will be cause for rejection. No louvers shall be allowed.

Polycarbonate sheets shall have the following characteristics:

- Tensile Strength, Ultimate: 10,000 PSI
- Tensile Strength, Yield: 9,300 PSI
- Tensile Strain at Break: 125%
- Tensile Modulus: 330,000 PSI
- Flexural Modulus: 330,000 PSI
- Impact Strength, Izod (1/8", notched): 17 ft-lbs/inch of notch
- Rockwell Hardness: M75, R118
- Heat Deflection Temperature Under Load: 264 PSI at 270F and 66 PSI at 288F
- Coefficient of Thermal Expansion: 3.9×10^{-5} in/in/F
- Specific Heat: 0.30 BTU/lb/F
- Initial Light Transmittance: 85% minimum
- Change in Light Transmittance, 3 years exposure in a Southern latitude: 3%
- Change in Yellowness Index, 3 years exposure in a Southern latitude: less than 5%

LED display modules shall mount to the inside of the DMS front face panels and be accessible from the inside of the sign housing only. No tools shall be needed for removal and replacement of LED display modules.

The external front face panels shall have the following minimum dimensions: The perimeter panels shall be a minimum of 12 inches wide. The external front face panels shall be thermally insulated from the rest of the sign housing. The glazing, aluminum mask and the external front face panels shall be easily replaceable from within the sign housing.

-4-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

The ventilation system shall be forced air. The system shall be designed to adequately cool the pixels from all sides along with the front and rear of the display module and all other internal components. The ventilation system shall have the following properties:

- (1) Positive pressure (exhaust fans are not acceptable).
- (2) The fans shall have ball or roller bearings, shall be permanently lubricated and shall require no periodic maintenance. The fans are to be positioned in such a manner so as to provide a balanced air flow to the ventilation system in the event of failure of any fan.

Access door shall be mounted to an integral doorframe, which mounts to the DMS housing using non-corrosive hardware. A continuous vertical stainless steel hinge shall support the door, and the door shall open outward towards the monotube structure. In the closed position, each door shall latch to its frame with a three-point draw-roller mechanism. The latching mechanism shall include an internal handle and release lever. Door release levers shall be located so that a person with no key and no tools cannot become trapped inside the housing.

Access doors shall be framed and swing open and lock in-place open at a 90 degree angle and 110 degree angle from the DMS housing end wall. The bottom edge of each door shall be at least 3.5-inches from the bottom edge of the DMS housing. This will provide clearance for the doors to swing open over external access platform.

The door will be fitted with an interior and exterior lockable heavy duty handle. Each Exterior door shall be furnished with a handle that is pad lock ready. Each door shall close around its flanged frame and compress against a closed-cell foam gasket, which adheres to the door. All doors shall contain a stop that retains the door in a 90 and 110-degree open position. When a door is open, the door and its stop shall withstand damage by a 60 mph wind gust.

The DMS must be equipped with an OSHA compliant safety rail assembly, which when closed across an open access door, prevents service personnel from falling out of the DMS. DMS shall have a rail assembly to be provided for each door in the display. The rail assembly shall require no tools to open and close.

The door shall incorporate an open/closed sensor that is detectable by the sign controller and notifies the central system control software whenever the door is accessed.

Minimum headroom of 72-inches shall be provided in the DMS housing. This free space shall be maintained across the entire width of the DMS housing, with the exception of structural frame members. Structural members shall be designed not to obstruct the free movement of maintenance personnel throughout the DMS interior.

A level aluminum walkway shall be installed in the bottom of the DMS housing. The walkway shall be a minimum of 24-inches wide and it shall run the entire length of the housing, from access door to access door. The walkway's top surface shall be non-slip and shall be free of obstructions that could trip service personnel. The walkway shall support a load of 300 pounds per linear foot.

-5-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

The internal structural members shall be extruded aluminum and shall accommodate both the display module mountings while allowing air distribution. The display modules shall be removed and replaced without the use of tools and without disturbing adjacent modules. The sign shall have heaters that are sufficient to elevate the temperature within the sign to 30° F above the temperature outside the sign. These heaters shall be controlled by a manually operated automatic shut-off timer in the sign and remotely from central computers.

The system power and communication lines shall each be protected by two stages of surge protection devices. The first stage shall be an arc discharge, gas discharge tube or a thyristor surge protection based unit with local and remote reporting capability. The second stage shall be metal oxide varistor (MOV) based. This second stage shall include a crowbar circuit, that when remotely enabled, shall trip the power circuit breaker when the second stage surge suppressor is activated. In both cases, tripping of each stage (or both if tripped simultaneously) of the surge protection and shall report the power surge condition to the sign controller for report to central. The crowbar shall be an option that is either enabled or disabled and is selected and downloaded from the central system control software to the sign controller. When this option is enabled, tripping of the second stage of surge protection shall prevent power from reaching any components of the sign until the surge protection has been replaced. When this option is disabled, the sign will continue to function normally after the second stage of surge protection is tripped.

- c. *Sign controller.* The sign controller and associated communication equipment shall be installed inside the DMS equipment cabinet. Each DMS shall be controlled and monitored by its own sign controller. The sign controller shall be a stand-alone microprocessor-based system, which does not require continuous communication with DMS control software in order to perform most DMS control functions.

The sign controller shall meet the following operational requirements:

1. Communicate using embedded National Transportation Communications for ITS Protocol (NTCIP).
2. Contain memory for storing changeable and permanent messages, schedules, and other necessary files for controller operation.
3. Include a front panel user interface with graphical Vacuum Fluorescent Display (VFD) or LCD and keypad for direct operation and diagnostics as described herein.
4. Contain a minimum of three NTCIP-compliant RS232 communication ports.
5. Contain a minimum of one NTCIP-compliant Ethernet port with RJ45 connector.
6. Contain a minimum of one NTCIP-compliant RS422 communication port with RJ45 connector.
7. Have the ability to play volatile messages.
8. Contain DMS-specific control firmware (embedded software) that shall monitor all external and internal sensors and communication inputs and control the display modules as directed by external control software and the front panel interface.
9. Ability for remote firmware upgrades that error check to eliminate firmware corruption.

-6-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

NTCIP shall be natively supported in the DMS controller. External protocol converter or translator devices shall not be allowed.

The sign controller shall be programmed to receive and transmit NTCIP compliant sign control commands from the central system control software and laptop computer.

The controller shall have power-up and auto-restart capabilities with programmable default actions when recovering from a power off condition. A hardware watch dog circuit shall provide automatic reset of the controller and communications device. Central control shall have ability to perform a remote command for the controller and communications device reset. The controller shall be able to accept standard UPS shutdown commands via Ethernet or serial interface.

The Controller shall perform all communication, control and feedback functions and shall not require an intermediate control device and be the only sign controller. Communication and control lines between the sign controller and the system interface circuits shall be opto-coupled

- d. *Cabinet.* The sign controller shall be installed in the DMS Equipment Cabinet. The cabinet shall be a Model 332D cabinet with dual-sided access, polycarbonate base and cast-in-place concrete pad.

The equipment cabinet shall be natural aluminum with anchor bolts in accordance with the FHWA-IP-78-16 specification. The cabinet shall include the following minimum requirements:

1. Two internal (front/back) fluorescent lamps.
2. Full-height standard Electronics Industry Alliance (EIA) 19-inch rack with a minimum of one pullout drawer.
3. Power panel board circuit breakers meeting the following minimum requirements.
4. Service entrance-rated.
5. Minimum of 12 circuit breaker mounting positions.
6. Short circuit rating of 22,000 amps for main and 10,000 amps branch circuits.
7. Underwriters' Laboratories (UL) Listed.
8. Two 15-amp NEMA 15-R 120VAC duplex outlet with one ground-fault circuit interrupter.
9. One earth ground lug that is electrically bonded to the cabinet.
10. One thermostatically controlled 100 cubic feet per minute (cfm) exhaust fan mounted near the top of the cabinet.
11. Filtered air intake ports with removable and replaceable fan and filter located on the bottom third of each access door.
12. Remote communication device.

A 19-inch rack mountable power conditioner shall be installed in the DMS equipment cabinet to provide – simultaneously- fully regenerated, conditioned power with true sine wave and continuous AC outputs to controllers, and communication devices.

-7-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

The following shall be mounted inside the cabinet:

1. NTCIP compliant DMS controller.
 2. Fold-down laptop shelf and document holder for maintaining sign.
 3. Ruggedized Ethernet switch or router with fiber uplink port and optics appropriate to the distance to the communications hub. The switch or router shall be capable of operating within the temperature range given for the DMS or have sufficient ventilation to stay within its manufacturer's specified temperature range. Adequate ports for system devices shall be provided plus at least two spare 100 Mbs ports.
 4. Display system interface circuits.
 5. Local/remote control switch.
 6. RS-232 cable (a minimum of 4 feet long to connect the controller interface to a laptop computer) (7) A.C. surge protection and communication surge protection.
- e. *Electronics.* All electronic components, except printed circuit boards, shall be commercially available, easily accessible, replaceable and individually removable using conventional electronics repair methods.

All printed circuit boards shall be sealed with a silicone conformal coating.

Components shall be arranged so they are easily accessible for testing and replacement. All circuit designs shall utilize high quality electronic components and shall provide a meantime before failure of at least 3 years.

The DMS shall contain an automatically controlled defog system that warms the DMS front face when the internal DMS relative humidity is near condensation levels. This system shall keep the front face polycarbonate panel free of fog and condensation. The heat generated by the defog system shall not damage any part of the DMS.

The sign and the controller shall be capable of operating with 120/240 VAC, 50 amp per leg, 60 Hz, single phase power. The sign shall have a power panel board with 50-amp two-pole breaker (common trip) main, 120/240

VAC, single phase, four wire load center with 20 circuit capability. Each circuit in the sign shall be powered from a circuit breaker. Inside the sign housing, all 120 VAC service lines shall be independently protected by a thermo magnetic circuit breaker at the sign housing entry point. All 120 VAC wiring shall be located in conduit, pull boxes, raceways, or control cabinets as required by the National Electrical Code (NEC). No 120 VAC wiring shall be exposed within or outside of the sign housing. The sign housing shall not be considered as a raceway or control cabinet. There shall be a minimum of three GFI Duplex outlets installed inside the sign housing.

-8-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

The DMS housing shall contain a minimum of one (1) compact fluorescent light (CFL) fixture for every eight (8) feet of DMS housing width. The lamps shall be evenly spaced across the housing ceiling and provide uniform light distribution for maintenance purposes. The light provided by the lamps shall meet the requirements of *ANSI/IESNA RP-7-01, Lighting Industrial Facilities*. Each lamp shall be rated for at least 10,000 hours of operation, have a minimum 30-watt rating, be self-ballasted, and be rated for cold weather operation down to -20° F. Lamp housing shall be heavy duty and enclosed to protect the lamps from damage. The lamps shall and have a color temperature of at least 4100°K.

The brightness and color of each pixel shall be uniform over the entire face of the sign within the 30-degree cone of vision from minimum of 200 feet up to and including 1100 feet in all lighting conditions.

Sign brightness shall meet NEMA TS4-2005, Section 5, (12,400 cd/m² minimum white brightness). The LED drive current shall be less than 30mA for Red and less than 15mA for Blue and Green.

The brightness of each LED shall be measured in accordance with CIE Standard Condition A, as described in CIE 127-2007, Technical Report: Measurement of LEDs.

Each LED module shall contain a printed circuit board to which LED pixels are soldered. The LED pixel matrix shall conform to the following specifications:

1. Each LED module shall contain approximately 256 LED pixels configured in a two dimensional array.
2. The pixel array shall be approximately 16 pixels high by 16 pixels wide.
3. The distance from the center of one pixel to the center of all adjacent pixels, both horizontally and vertically, shall be 32-34 mm.
4. Each pixel will contain a Red, Green, and Blue LED, each being independently driven.
5. The failure of an LED string or pixel shall not cause the failure of any other LED string or pixel in the DMS.
6. The base of the discrete LEDs shall be soldered such that the 30 degree field of view is consistent with field of view for the entire set of LEDs on the sign.
7. All LED pixel boards shall be identical and interchangeable throughout the DMS.

-9-

REVISION OF SECTION 614 DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)

Discrete LEDs

DMS pixels shall be constructed with discrete LEDs manufactured by a reputable manufacturer such as Avago Technologies (formerly Agilent Technologies), Nichia Corporation, OSRAM or EOI. Discrete LEDs shall conform to the following specifications:

1. All LEDs shall have a nominal viewing cone of 30 degree angle of 15 degrees measured from the center of the longitudinal viewing cone.
2. Color LEDs shall utilize AlInGaP semiconductor technology and shall emit light that has a peak wavelength of 590 ± 5 nm. Color LEDs shall utilize Red AlInGaP 626 nm, Green InGaN 525 nm and Blue InGaN 470 nm.
3. The LED packages shall be fabricated from UV light resistant epoxy.
4. The LED manufacturer shall perform intensity sorting of the bins. LEDs shall be obtained from no more than two consecutive luminous intensity “bins” as defined by the LED manufacturer.
5. The LED manufacturer shall perform color sorting of the bins. LEDs shall be obtained from no more than two consecutive color “bins” as defined by the LED manufacturer.
6. The various LED color and intensity bins shall be distributed evenly throughout the sign and shall be consistent from pixel to pixel. Random distribution of the LED bins shall not be accepted.
7. The LED manufacturer shall assure color uniformity and consistency on the LED display face within the 30 degree cone of vision and shall not have inconsistent color shifts.
8. LED package style shall be surface-mount or through-hole with or without standoffs.
9. All LEDs used in all DMS provided for this contract shall be from the same manufacturer and of the same part number, except for the variations in the part number due to the intensity and color.
10. The LEDs shall be rated by the LED manufacturer to have a minimum lifetime of 100,000 hours of continuous operation while maintaining a minimum of 70% of the original brightness.

Pixel Drive Circuitry

Each LED display module shall contain electronic driver circuitry that shall individually control all pixels on that module. The driver circuitry shall conform to the following specifications:

1. Each LED module shall be microprocessor-controlled and shall communicate with the sign controller on a wire or fiber optic communication network. The microprocessor shall process commands from the sign controller to display data, perform diagnostic tests, and report pixel and diagnostic status.
2. The LED driver shall compensate for color based on temperature and LED color changing characteristics.

-10-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

3. Constant current LED driver ICs shall be used to prevent LED forward current from exceeding the LED manufacturer's recommended forward current whenever a forward voltage is applied. To maximize LED service life, LED drive currents will not be allowed that exceed the manufacturer's recommendations for the 100,000-hour lifetime requirement.
4. The LED driver shall utilize PWM (Pulse Width Modulation) of the drive current to vary the output intensity of each LED. The drive current pulse shall be modulated at a frequency high enough eliminate visible flickering from zero to full-brightness.
5. The LED driver circuitry shall receive updated display data at a minimum rate of ten (10) frames per second from the sign controller. Each LED driver circuit shall be powered by external regulated DC power supplies.
6. The voltage of each power input shall be measured to the nearest tenth of a volt and reported to the sign controller upon request. Each driver circuit shall also contain a status LED for the power source that indicates if the power source is present or not.
7. The LED driver circuitry shall be able to detect that individual LED strings or pixels are stuck off and shall report the pixel status to the sign controller upon request.
8. The LED driver circuit shall contain a seven segment numeric LED display that indicates the functional status of the LED pixel display module. At a minimum, it shall indicate error states of the LED pixels and communication network. The indicator shall be positioned such that a maintenance technician can easily view the status code for diagnostic purposes. The LED display module shall report the status, including pixel errors, voltage levels, etc. to the sign controller upon request.

Pixel power drawn from the DC supplies shall not exceed 1.5 watts per pixel, including the driving circuitry.

A minimum of 3 photocells shall be installed on the sign. These devices shall permit automatic light intensity measurement of light conditions at each sign location. These photocells shall be mounted in a manner to measure front, rear and ambient light conditions.

Provisions shall be made to prevent perceivable brightening of the sign due to stray headlights shining upon the photo sensors at night.

The sign shall be configured such that a UPS will be able to run all necessary control electronics, communication equipment, and the half of the pixels in the sign display in the event of a power failure.

Power supplies for the sign display shall be configured such that the failure of any one supply does not degrade functionality of the display and the display remains 100% functional.

All cables shall be securely clamped/tied in the sign housing. No adhesive attachments will be allowed.

The signs shall be capable of displaying ASCII characters 32 through 126 (including all upper and lower case letters and digits from 0 to 9) at any location in a message line.

-11-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

The Contractor shall be responsible for locating the nearest electrical power and telephone sources and connecting those sources to the appropriate terminations with the DMS. The Contractor shall cooperate with the local electrical and telephone utilities to establish a service accounts at the direction of the Engineer.

- f. *Control and Communication.* The sign controller shall be capable of being controlled from the central system control software via RS-232 serial and Ethernet communications.

The communications between the sign controller and the central system control software shall comply with the NEMA National Transportation Communications for ITS Protocol (NTCIP). The sign controller shall support all NTCIP conformance levels, conformance groups, objects, and minimum storage sizes and ranges as specified under the NTCIP Section listed in this Project Special Provision.

In addition to the standard Management Information Base (MIB) objects, the sign shall include any additional manufacturer-specific MIB objects required to support all of the sign and central software functionality defined in the specification's and in the NTCIP Section found in this specification.

Protect low voltage communication lines (twisted pair or coaxial) with multi-stage one- pair or two-pair surge suppressors designed for high-exposure applications, providing common mode and differential mode protection, with a maximum clamping voltage of 10 volts greater than peak DC or maximum AC RMS signal voltage and peak surge current rating of 10kA.

The sign controller shall be capable of being remotely reset from the central system control software.

The sign shall provide a minimum of four input and four output contact closures able to receive digital and or analog signals that allow at least 15 message activations upon contact closure events. These message activations shall permit standard NTCIP operations to occur and also permit contact closure messages to occur without message activation collisions and or message activation errors. Contact closures shall be remotely accessible using standard NTCIP MIB objects. Contact closures shall be capable of issuing NTCIP traps.

The sign controller shall allow user-configuration of maximum and minimum temperature in which to turn fans on and off.

The sign shall have polling capability and at a minimum shall be capable of reporting the status of the following:

1. Pixel operational status that includes the state of every pixel
2. Sign and ambient temperature
3. DC power supply status
4. The current state (on or off) of each pixel, including any pixel errors, in the actual, currently displayed message without disturbing the message in any way. This shall be real time and shall not be based on a previous pixel test.

-12-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

5. Cooling fan status
6. Access door alarm
7. Communication failure log
8. UPS status
9. AC surge protector status

The controller software shall be capable of displaying the following types of messages:

1. Static messages capable of displaying any character or set of characters
2. Full Graphic capabilities.
3. Flashing messages with the following ranges of adjustable timing:
 - (a) Message time on from 0.5 to 5.0 seconds in 0.1 second increments.
 - (b) Message time off from 0.5 to 5.0 seconds in 0.1 second increments.
4. Alternating messages capable with the following ranges of adjustable timing:
 - (a) Primary message time on from 0.5 to 5.0 seconds in 0.1 second increments.
 - (b) Primary message time off from 0 to 5.0 seconds in 0.1 second increments.
 - (c) Alternate message time on from 0.5 to 5.0 seconds in 0.1 second increments.
 - (d) Alternate message time off from 0 to 5.0 seconds in 0.1 second increments.
5. Capability to do Text rectangles, Background colors, Foreground Colors, Support 24 Bit Color Scheme as specified by NTCIP 1203 v2

It shall be possible to flash any character or set of characters in an alternating message at the adjustable frequencies listed above for flashing messages. The flashing period shall be a sub-multiple of the associated alternating on time. It shall also be possible to flash any character or set of characters in a static message. The sign controller shall monitor the photo cell circuits in the sign and convert the measured light intensity into the desired pixel brightness.

- g. UPS System.* The UPS system shall provide “On-Line” dual conversion control.

The UPS shall be rated per the following:

Input Voltage	85 VAC to 135 VAC
Input Frequency	48 to 62 Hz
Output Voltage	120 VAC +/- 3%

-13-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

Output Frequency	60 Hz
Power	VA required to run color DMS sign control electronics, communication equipment, and half of the pixels in the LED sign face with all LED illuminated at day time brightness levels, allowing for sign functionality during a power outage for a minimum of 8 hours

The unit will be designed for a hot swap of components and shall not compromise existing DMS wiring. The unit shall provide for RS232 communication and contact closures for alarm functions. The unit shall be temperature rated to operate from 0 degree C to +40 degree C.

The UPS system shall be capable of producing simultaneously-fully regenerated, conditioned power with true sine wave and continuous AC outputs with stand by capability.

The unit shall have a re-settable power event counter to record the number of power utility failures, a battery run- time counter and temperature compensated battery charging.

The UPS System shall be capable of providing continuous, fully conditioned (both voltage and frequency), regulated, sinusoidal (AC) power to selected devices such as controllers, modems, 5 volt power supplies, and sign face drivers.

Wiring shall comply with national electrical code (NEC) standards and approved wiring methods. Properly rated SO/SJO cords shall be allowed to allow easy replacement of the UPS System.

The UPS shall be 19-inch rack mountable and shall be accompanied with 19-inch rack mountable aluminum battery shelves for installation in the DMS Equipment Cabinet (Type 2).

The UPS shall consist of two major components, the electronics module and the battery system.

1. The electronics module shall consist of the following:
 - A. True Sine wave, high frequency inverter
 - B. Minimum 3-stage, temperature compensated, battery charger
 - C. For connection from the electronics module to the battery system, a dedicated harness shall be provided with quick-release, keyed, circular connectors, and braided nylon sleeving over all conductors.
 - D. Local and remote control of UPS functions
 - E. Local and remote communications capabilities
2. The battery system shall consist of the following:
 - A. Shall run sign electronics, communication equipment, and half of the pixels in the sign face with all LEDs illuminated at daytime brightness levels, for a minimum of 8 hours.

-14-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

- B. The batteries shall be comprised of extreme temperature, deep cycle Absorbed Glass Mat/Valve Regulated Lead Acid (AGM/VRLA) batteries that have been field proven and tested by the U.S. military.
- C. Batteries shall be certified to operate at extreme temperatures from -40°C to +74°C.
- D. The batteries shall be provided with appropriate interconnect wiring and a corrosion-resistant mounting trays and/or brackets appropriate for the location into which they will be installed.
- E. The interconnect cable shall be protected with abrasion-resistant nylon sheathing.
- F. Battery construction shall include heavy-duty, inter-cell connections for low-impedance between cells and heavy-duty plates to withstand shock and vibration.

The UPS System shall come standard with software, RS232 interface via a DB-9F connector (optional SNMP Adapter for TCP/IP protocols) allowing full, interactive, remote computer monitoring and control of the UPS functions. The software shall allow the user to set up all operational parameters either locally or remotely and test the functionality of the unit.

The UPS alarm function monitoring shall come standard with a DB-9F connector with open collectors (40 V @ 20 mA) indicating:

1. Loss of utility power
2. Inverter failure
3. Low battery

The UPS front panel controls shall come standard with Power ON, Cold (DC) Start, Alarm Silence, Battery Test, Bypass Breaker and DC/Battery Breaker.

Reliability shall be calculated with mean time between failure (MTBF) of 100,000 hours based on component ratings.

The DMS equipment cabinet shall be used to house the UPS system along with the equipment for the overhead DMS and lane use signs.

MANUFACTURER QUALIFICATIONS

The manufacturer shall supply experience documentation showing that the manufacturer has been in business, under the current corporate name, designing and manufacturing Interstate DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)s for a minimum of 5 years; and that the manufacturer has in operation a minimum of 50 walk-in DMSs 1 of which being COLOR DMSs and NTCIP compliant.

-15-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

CONSTRUCTION REQUIREMENTS

Contractor shall be fully responsible for the delivery of the DMSs and sign controllers to the installation site and any damages that occur in the installation delivery process.

The DMS shall be installed in accordance with manufacturer's recommendations. A qualified factory representative shall be available on site to ensure proper installation and testing.

See project specific Testing & Integration Plan for additional requirements for DMSs.

A minimum of five copies of the operations manual detailing the electrical schematics, operation and maintenance of the DMS system, including spare software copies, shall be provided. Additional copies may be requested by the Engineer. One copy of the manual shall remain inside the sign housing or control cabinet. One copy shall be mailed to the Colorado Transportation Management Center at 425 C Corporate Circle, Golden, Colorado 80401.

The manufacturer shall provide 8 hours of class room training for CDOT at the CTMC in Golden, CO. The manufacturer shall supply 8 hours of on-site training in the sign for the CTMC staff.

The CTMS integrator shall be responsible for developing any graphics for the DMS and will provide to the Contractor or sign manufacturer. The Contractor or sign manufacturer shall request the graphics from the CTMS integrator 30 Calendar Days in advance and shall pre-load all graphics onto the signs.

Uninterruptible Power Supply System

The UPS and batteries shall be installed in the DMS equipment cabinet which shall also house control equipment for lane use signs and side-mounted variable message signs. Contractor shall provide detailed design and installation plans for Engineer Approval prior to installation. Power feeding the sign shall first terminate in the ground mounted cabinet. Non-UPS power shall pass through the cabinet to power non-UPS loads. Power required for sign backup shall feed through the UPS system. A bypass switch, rated for the designed system, shall be installed to bypass the UPS in the event of UPS failure or for system maintenance. A disconnect switch shall also be installed to disconnect UPS and line power from the sign. The Contractor shall install the DMS UPS output into the DMS power distribution panel per sign manufacture recommendations. Serial and Ethernet cables shall be installed from the UPS system ground cabinet to the sign communication device location. All wiring shall conform to the latest version of the NEC.

Work includes furnishing, delivery to the site, and installation of DMS Equipment Cabinet and associated cabinet foundation, installing the power panel board and all associated electrical connections within the DMS housing. Work includes furnishing, installing and making all electrical connections for the main service power disconnect located on the sign structure near the access control cabinet. All costs associated with having a manufacturer's representative shall be included in the work. Work includes training and the purchasing of manuals.

-16-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

NTCIP Section

This portion of the specification defines the detailed NTCIP requirements for the LED DMS covered by the Project specifications. This specification references several standards through their NTCIP designated names. The following list provides the full reference to the current version of each of these standards. In many cases, the standard is more widely known by its original NEMA assigned number, in these cases, the NEMA number is also identified. The content of the NEMA standard is identical to that of the NTCIP standard.

Each NTCIP component covered by these Project specifications shall follow the most recent version of the standard that is at the stage of recommended or higher, including any and all Approved or Recommended Amendments to these standards as of the same date. It is the ultimate responsibility of the Contractor to monitor NTCIP updates.

General Requirements:

Subnet Level

NTCIP components may support additional Subnet Profiles at the vendor's option. At any one time, only one Subnet Profiles shall be active on a given serial port of the NTCIP Component. If the NTCIP Component has a serial port that supports multiple Subnet Profiles, the NTCIP Component shall be configurable to allow the field technician to activate the desired Subnet Profile and shall provide a visual indication of the currently selected Subnet Profile.

Transport Level

Each NTCIP Component shall comply with NTCIP 2202, (NEMA TS 3.Internet). NTCIP Components may support additional Transport Profiles at the manufacturer's option. Response datagrams shall use the same Transport Profile used in the request. Each NTCIP Component shall support the receipt of datagrams conforming to any of the identified Transport Profiles at any time.

Application Level

Each LED DMS shall comply with NTCIP 2301, (NEMA TS 3.AP-STMF), as a Managed Agent and shall meet the requirements for Conformance Level 1 (NOTE – See Amendment to standard). Simple network management protocol (SNMP) shall be required and simple transportation management protocol (STMP) shall not be required. An NTCIP Component may support additional Application Profiles at the manufacturer's option. Responses shall use the same Application Profile used by the request. Each NTCIP Component shall support the receipt of Application data packets at any time allowed by the subject standards.

Information Level

Each NTCIP Component shall provide Full, Standardized Object Range Support of all objects required by these procurement specifications, unless otherwise indicated below. The maximum Response Time for any object or group of objects shall be 200 milliseconds.

-17-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

The vendor's software shall implement all mandatory objects of the mandatory conformance group defined in NTCIP 1201, (NEMA TS 3.4) Global Object Definitions:

- Configuration Conformance Group – Section 3.1
- Security Conformance Group (new in Amendment 1)

The vendor's software shall implement the mandatory objects of the optional conformance groups defined in NTCIP 1201, (NEMA TS 3.4), Global Object Definitions:

- Time Management Conformance Group – Section 3.3
- TimeBase Event Schedule Conformance Group – Section 3.4
- Report Conformance Group – Section 3.5

The vendor's software shall implement all mandatory objects of all mandatory conformance groups defined in NTCIP 1203, (NEMA TS 3.6) Object Definitions for DYNAMIC MESSAGE SIGN (LED) (OVERHEAD):

- Sign Configuration Conformance Group – Section 4.1
- Message Table Conformance Group – Section 4.6
- Sign Control Conformance Group – Section 4.7

The vendor's software shall implement all mandatory objects of the optional conformance groups defined in NTCIP 1203, (NEMA TS 3.6), Object Definitions for DYNAMIC MESSAGE SIGN (LED) (OVERHEAD):

- GUI Appearance – Section 4.2
- Font Definition – Section 4.3
- DMS Sign Configuration – Section 4.4
- MULTI Configuration – Section 4.5
- Default Message – Section 4.8
- MULTI Error – Section 4.10
- Illumination/Brightness – Section 4.11
- Scheduling – Section 4.12
- Auxiliary I/O – Section 4.13
- Sign Status – Section 4.14
- Status Error – Section 4.15
- Pixel Error Status – Section 4.16
- Fan Error Status – Section 4.18
- Temperature Status – Section 4.17

-18-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

The vendor's software shall implement the following optional objects defined in NTCIP 1203, (NEMA TS 3.6):

- dmsMessageBeacon – Section 2.6.1.1.1.8.6
- dmsSWReset – Section 2.7.1.1.1.1
- dmsMessageTimeRemaining – Section 2.7.1.1.1.4
- dmsShortPowerRecoveryMessage – Section 2.7.1.1.1.8
- dmsLongPowerRecoveryMessage – Section 2.7.1.1.1.9
- dmsShortPowerLossTime – Section 2.7.1.1.1.10
- dmsResetMessage – Section 2.7.1.1.1.11
- dmsCommunicationsLossMessage – Section 2.7.1.1.1.12
- dmsTimeCommLoss – Section 2.7.1.1.1.13
- dmsPowerLossMessage – Section 2.7.1.1.1.14
- dmsEndDurationMessage – Section 2.7.1.1.1.15
- dmsMultiOtherErrorDescription – Section 2.7.1.1.1.20
- dmsStatDoorOpen – Section 2.11.1.1.1.6
- fanFailures – Section 2.11.2.1.1.8
- fanTestActivation – Section 2.11.2.1.1.9
- tempMinCtrlCabinet – Section 2.11.4.1.1.1
- tempMaxCtrlCabinet – Section 2.11.4.1.1.2
- tempMinAmbient – Section 2.11.4.1.1.3
- tempMaxAmbient – Section 2.11.4.1.1.4
- tempMinSignHousing – Section 2.11.4.1.1.5
- tempMaxSignHousing – Section 2.11.4.1.1.6

The vendor's software shall implement the following tags (opening and closing where defined) of MULTI as defined in NTCIP 1203, (NEMA TS 3.6), Object Definitions for DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD):

MULTI Tag

- 1 Field
- 2 Flash
- 3 Font
- 4 Hexadecimal Character
- 5 Justification Line
- 6 Justification Page
- 7 Moving Text
- 8 New Line
- 9 New Page
- 10 Page Time
- 11 Spacing – Character

**REVISION OF SECTION 614
 DYNAMIC MESSAGE SIGN (COLOR LED) (OVERHEAD)**

The Field Tag shall support the following field ID's:

Field Tag ID	Description
1	1 Time, 12-hour format (no AM/PM indicator)
2	2 Time, 24-hour format
3	3 Temperature in degrees Celsius
4	4 Temperature in degrees Fahrenheit
5	7 Day of week
6	8 Day of month
7	9 Month of year
8	10 Year, 2-digits
9	11 Year, 4-digits

Sizes and Ranges

All objects required by these procurement specifications shall support all values within its standardized range. The standardized range is defined by a size, range, or enumerated listing indicated in the object's SYNTAX field and/or through descriptive text in the object's DESCRIPTION field of the relevant standard. The following provides the current listing of known variances for this Project:

Object	Reference	Minimum Project Requirements
NTCIP 1201 (TS 3.4)		
moduleTableEntry	2.2.3	Shall contain at least one row with module Type equal to 3 (software). The module Make shall specify the name of the manufacturer, the module Model shall specify the manufacturer's name of the component and the model Version shall indicate the model version number of the component.
communityNamesMax	2.8.2	Shall be at least 4.
maxTimeBaseScheduleEntries	2.4.3.1	7
maxDayPlans	2.4.4.1	7
maxDayPlanEvents	2.4.4.2	7
maxEventLogConfigs	2.5.1	50

Documentation

Manufacturer shall supply software shall be supplied with full, electronic documentation containing American Standard Code for Information Interchange (ASCII) versions of the following Management Information Base (MIB) files in Abstract Syntax Notation 1 (ASN.1) format:

- The relevant version of each official standard MIB Module referenced by the device functionality.
- If the device does not support the full range of any given object within a Standard MIB Module, a vendor specific version of the official Standard MIB Module with the supported range indicated in ASN.1 format in the SYNTAX and/or DESCRIPTION fields of the associated OBJECT TYPE macro. The filename of this file shall be identical to the standard MIB Module, except that it will have the extension “.man”.
- A MIB Module in ASN.1 format containing any and all manufacturer-specific objects supported by the device with accurate and meaningful DESCRIPTION fields and supported ranges indicated in the SYNTAX field of the OBJECT-TYPE macros.
- A MIB containing any other objects supported by the device.

The vendor shall allow the use of any and all of this documentation by any party authorized by CDOT for systems integration purposes at any time initially or in the future, regardless of what parties are involved in the systems integration effort.

REVISION OF SECTION 614 DYNAMIC MESSAGE SIGN (AMBER)

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of furnishing and installing a Light Emitting Diode Dynamic Message Sign (DMS) (Amber) and associated equipment cabinets. The sign shall be fully compatible with the mounting hardware and support structure shown on the plans.

MATERIALS

The DMS (Amber) shall be equipped with the ability to display three lines of 18-inch tall characters and shall have a display made up of a full matrix configuration. The sign shall have a 66-70 millimeter pixel pitch. All LEDs shall have a viewing angle of 30 degrees.

The sign shall be 18 feet wide by 8.5 feet tall by 4 feet deep with an allowable variation of plus or minus 7 inches. The sign shall include a power shut off mounted to the sign structure near the controller interface cabinet. The sign shall be capable of operating without any decrease in performance over a temperature range of -34° F to +140° F with a relative humidity of 0 to 99 percent, non-condensing. The sign shall have a minimum design life of 20 years.

(a) *Certifications*

Prior to start of the installation of the DMS (Amber) the Contractor shall provide the following certifications to the Engineer for review and Approval:

- (1) Certification showing that the manufacturer of the DMS (Amber) is fully compliant with ISO 9001 prior to the start of construction for this project. The ISO 9001 Certification shall apply to the facility, and to the design, fabrication, installation, and maintenance of the DMS (Amber). The facility where this company actually designs and manufactures the DMS (Amber) shall be ISO 9001:2000 certified a minimum of one year prior to the start of construction.
- (2) Working drawings showing the sign housing and tilting brackets (if tilting brackets are used to achieve the required 3 degree sign face tilt) shall be sealed by an Engineer registered in the State of Colorado and shall be submitted in accordance with subsection 105.02.
- (3) Certification showing that welding of the DMS (Amber) housing is in accordance with the American Welding Society (AWS) Standards, ANSI/AWS D1.2-97. The DMS (Amber) manufacturer's welders and welding procedures shall be certified by an ANSI/AWS Certified Welding Inspector to the ANSI/AWS D1.2-97 Structural Welding Code for Aluminum.
- (4) Certification that all aluminum face materials have a coating that meets or exceeds the requirements of the American Architectural Manufacturers Association (AAMA) Specifications Publication No. 2605.
- (5) Certification that the LEDs were tested and binned in accordance with the CIE Standard Condition A.
- (6) Documentation and information on software as described in National Transportation Communications for Intelligent Transportation System Protocol (NTCIP) Section within this specification.
- (7) Documentation verifying the DMS is listed by an accredited 3rd party testing organization for conformance to UL 48 and UL 1433.
- (8) All workmanship shall comply with IPC-A-610C, Class 2 titled "Acceptability of Electronic Assemblies."

-2-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

- (9) Documentation providing proof printed circuit board (PCB) silicon conformal coating conformance to MIL-I-46058C Type SR and IPC-CC-830
- (10) Documentation that the sign's structural integrity is in Conformance to AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaries and Traffic Signals (Current Edition).
- (11) Documentation that the DMS conforms to the Transient Protection and Vibration of the NEMA Standard TS4, Section2.

(b) *Sign Housing*

All component parts shall be easily and readily accessible by a single person for inspection and maintenance. There shall be room for a technician to work. Access shall be made by entering the side of the housing. The housing shall be weather tight, and compliant to the NEMA 3R Standard. The bottom panel of the housing shall have a minimum of four drain holes, with snap-in, drain filter plug inserts. Any visible manufacturer's logo/trade name/reference on the DMS shall be placed on the bottom side of the access door or back panels of the DMS.

The sign housing shall be capable of withstanding wind loads of 120 mph without permanent deformation or other damage, withstand current AASHTO specified group loading combinations that include: sign weight, repair personnel and equipment, ice and wind. Design shall meet strength requirements for truck-induced gusts as specified in NCHRP Report 412. The sign housing design and working drawings shall be sealed and signed by an Engineer registered in the State of Colorado and submitted in accordance with CDOT Standard Specification 105.02.

The sign housing shall be engineered to withstand snow loading of 40 pounds per square foot, as well as the ability to be mounted in a manner that prevents the buildup of snow and creates a natural means by which snow can run off without impeding flow of traffic. The performance of the sign, including the visibility and legibility of the display, shall not be impaired due to continuous vibration as a result of wind, traffic or other factors. The housing shall be designed to accommodate mounting on the rear vertical plane and shall be structurally sufficient to be mounted to the sign support structure.

The DMS (Amber) shall be built with a forward tilt angle of three degrees toward the viewing motorists. The sign housing and structural components for the tilting system and vertical mounting bracket if required by design shall be structurally sufficient to perform under all applicable loading conditions including gravity, wind, traffic, weather, roadway deicers, maintenance, and other environmental factors. .

All parts shall be made of corrosion resistant materials, such as plastic, stainless steel or aluminum. Painted steel is not acceptable. No self-tapping screws shall be used. The exterior front face surfaces shall be finish coated by a system that meets or exceeds the AAMA Specification No. 2605. The finish shall be matte black. The main body of the sign housing shall be constructed of aluminum with a natural mill finish. All exterior seams shall be continuously welded by an inert gas process, except for the coated fascia material.

Each panel shall have a single polycarbonate sheet attached securely to the inside of the aluminum panel. The polycarbonate sheet shall cover all of the pixel openings. The polycarbonate shall be sealed to prevent water and other elements from entering the DMS. The polycarbonate shall contain UV inhibitors that protect the LED display matrix from the effects of ultraviolet light exposure and prevent premature aging of the polycarbonate itself. The use of a plastic lens system will not meet the requirements and will be cause for rejection. No louvers shall be allowed.

-3-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

Polycarbonate sheets shall have the following characteristics:

- (1) Tensile Strength, Ultimate: 10,000 pounds per square inch
- (2) Tensile Strength, Yield: 9,300 pounds per square inch
- (3) Tensile Strain at Break: 125 percent
- (4) Tensile Modulus: 330,000 pounds per square inch
- (5) Flexural Modulus: 330,000 pounds per square inch
- (6) Impact Strength, Izod (1/8", notched): 17 ft-lbs per inch of notch
- (7) Rockwell Hardness: M75, R118
- (8) Heat Deflection Temperature Under Load: 264 pounds per square inch at 270°F and 66 pounds per square inch at 288°F
- (9) Coefficient of Thermal Expansion: 3.9 by 10⁻⁵ in per in per °F
- (10) Specific Heat: 0.30 British Thermal Units per lb per °F
- (11) Initial Light Transmittance: 85 percent minimum
- (12) Change in Light Transmittance, three years exposure in a Southern latitude: 3 percent
- (13) Change in Yellowness Index, three years exposure in a Southern latitude: less than 5 percent

LED display modules shall mount to the inside of the DMS front face panels and be accessible from the inside of the sign housing only. No tools shall be needed for removal and replacement of DMS display modules.

The external front face panels shall have the following minimum dimensions: The perimeter panels shall be a minimum of 12 inches wide. The external front face panels shall be thermally insulated from the rest of the sign housing. The glazing, aluminum mask and the external front face panels shall be easily replaceable from within the sign housing.

The ventilation system shall be forced air. The system shall be designed to adequately cool the pixels from all sides along with the front and rear of the display module and all other internal components. The ventilation system shall have the following properties:

- (1) Positive pressure (exhaust fans are not acceptable).
- (2) The fans shall have ball or roller bearings, shall be permanently lubricated and shall require no periodic maintenance. The fans are to be positioned in such a manner so as to provide a balanced air flow to the ventilation system in the event of failure of any fan.

Access door shall be mounted to an integral doorframe that mounts to the DMS housing using non-corrosive hardware. A continuous vertical stainless steel hinge shall support the door, and the door shall open outward towards the monotube structure. In the closed position, each door shall latch to its frame with a three-point draw-roller mechanism. The latching mechanism shall include an internal handle and release lever. Door release levers shall be located so that a person with no key and no tools cannot become trapped inside the housing.

Access doors shall be framed and swing open and lock in-place open at a 90 degree angle and 110 degree angle from the DMS housing end wall. The bottom edge of each door shall be at least 3.5 inches from the bottom edge of the DMS housing. This will provide clearance for the doors to swing open over external access platform.

-4-

REVISION OF SECTION 614 DYNAMIC MESSAGE SIGN (AMBER)

The door will be fitted with an interior and exterior lockable heavy duty handle. Each exterior door shall be furnished with a handle that is pad lock ready and Corbin #2 key lock. Each door shall close around its flanged frame and compress against a closed-cell foam gasket, which adheres to the door. All doors shall contain a stop that retains the door in a 90 and 110-degree open position. When a door is open, the door and its stop shall withstand damaged by a 60 mph wind gust.

The DMS shall be equipped with an OSHA compliant safety rail assembly that when closed across an open access door will prevent service personnel from falling out of the DMS. The DMS shall have a rail assembly provided for each door in the display. The rail assembly shall require no tools to open and close.

The door shall incorporate an opened/closed sensor that is detectable by the sign controller and notifies the central system control software whenever the door is accessed.

Minimum headroom of 72 inches shall be provided in the DMS housing. This free space shall be maintained across the entire width of the DMS housing, with the exception of structural frame members. Structural members shall be designed not to obstruct the free movement of maintenance personnel throughout the DMS interior.

A level aluminum walkway shall be installed in the bottom of the DMS housing. The walkway shall be a minimum of 24 inches wide and it shall run the entire length of the housing, from access door to access door. The top surface of the walkway shall be non-slip and shall be free of obstructions that could trip service personnel. The walkway shall support a load of 300 pounds per linear foot.

The internal structural members shall be extruded aluminum and shall accommodate both the display module mountings while allowing air distribution. The display modules shall be removed and replaced without the use of tools and without disturbing adjacent modules. The sign shall have in cabinet heaters that are sufficient to elevate the temperature within the sign to 30° F above the temperature outside the sign. These heaters shall be controlled by a manually operated automatic shut-off timer in the sign and remotely from central computers.

The system power and communication lines shall each be protected by two stages of surge protection devices. The first stage shall be an arc discharge, gas discharge tube or a thyristor surge protection based unit with local and remote reporting capability. The second stage shall be metal oxide varistor (MOV) based. This second stage shall include a crowbar circuit, that when remotely enabled, shall trip the power circuit breaker when the second stage surge suppressor is activated. In both cases, tripping of each stage (or both if tripped simultaneously) of the surge protection and shall report the power surge condition to the sign controller for report to central. The crowbar shall be an option that is either enabled or disabled and is selected and downloaded from the central system control software to the sign controller. When this option is enabled, tripping of the second stage of surge protection shall prevent power from reaching any components of the sign until the surge protection has been replaced. When this option is disabled, the sign will continue to function normally after the second stage of surge protection is tripped.

(c) Sign controller

The sign controller and associated communication equipment shall be installed inside the DMS sign housing or roadside communications cabinet as shown on the plans. Each DMS shall be controlled and monitored by its own sign controller. The sign controller shall be a stand-alone microprocessor-based

-5-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

system, which does not require continuous communication with DMS control software in order to perform most DMS control functions.

The sign controller shall meet the following operational requirements:

- (1) Communicate using embedded NTCIP protocol
- (2) Contain memory for storing changeable and permanent messages, schedules, and other necessary files for controller operation
- (3) Include a front panel user interface with graphical vacuum fluorescent display (VFD) or liquid crystal display (LCD) and keypad for direct operation and diagnostics as described herein
- (4) Contain a minimum of three NTCIP-compliant RS232 communication ports
- (5) Contain a minimum of one NTCIP-compliant Ethernet port with RJ45 connector
- (6) Contain a minimum of one NTCIP-compliant RS422 communication port with RJ45 connector
- (7) Have the ability to play volatile messages
- (8) Contain DMS-specific control firmware (embedded software) that shall monitor all external and internal sensors and communication inputs and control the display modules as directed by external control software and the front panel interface
- (9) Ability for remote firmware upgrades that error check to eliminate firmware corruption

NTCIP shall be natively supported in the DMS controller. External protocol converter or translator devices shall not be allowed.

The sign controller shall be programmed to receive and transmit NTCIP compliant sign control commands from the central system control software and laptop computer.

The controller shall have power-up and auto-restart capabilities with programmable default actions when recovering from a power off condition. A hardware watch dog circuit shall provide automatic reset of the controller and communications device. Central control shall have ability to perform a remote command for the controller and communications device reset. The controller shall be able to accept standard uninterruptable power supply (UPS) shutdown commands via Ethernet or serial interface.

The Controller shall perform all communication, control and feedback functions and shall not require an intermediate control device and be the only sign controller. Communication and control lines between the sign controller and the system interface circuits shall be opto-coupled.

The following shall be mounted inside the main sign housing:

- (1) NTCIP compliant DMS controller (or as shown on the plans)
- (2) Fold-down laptop shelf and document holder for maintaining sign.
- (3) Hardened communication device
- (4) Display system interface circuits
- (5) Local/remote control switch
- (6) Sign to ground voice communication RJ-11 jack
- (7) Universal serial bus (USB) plug-in connection or a serial connection with a USB converter cable for the controller interface.
- (8) RS-232 cable (a minimum of 4 feet long to connect the controller interface to a laptop computer)
- (9) AC surge protection and communication surge protection

-6-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

There shall be an outside controller interface box that shall be made of aluminum or stainless steel, be weather tight, corrosion resistant, and meet NEMA 3R standards. The separate controller interface box shall be mounted as indicated on the plans. This typically will be on the sign support structure pole furthest from traffic.

The controller interface cabinet shall contain the following assemblies:

- (1) Fold-down laptop shelf and document holder
- (2) Power-on indicator
- (3) Waterproof local/remote switch
- (4) Local control LED indicator
- (5) RS-232 cable a minimum of 4 feet long to connect the controller interface to a laptop computer.
- (6) 120- volts alternating current (VAC) ground-fault interrupter (GFI) outlet
- (7) For dialup installations, an RJ-11 jack for connecting the dialup phone line shall be installed with in-line surge protection.

The manufacturer shall provide the latest version of the server and maintenance version of the DMS control software.

(d) *Electronics*

All electronic components, except printed circuit boards, shall be commercially available, easily accessible, replaceable and individually removable using conventional electronics repair methods.

All printed circuit boards shall be sealed with a silicone conformal coating.

Components shall be arranged so they are easily accessible for testing and replacement. All circuit designs shall utilize high quality electronic components and shall provide a meantime before failure of at least 3 years.

The DMS shall contain an automatically controlled defog system that warms the DMS front face when the internal DMS relative humidity is near condensation levels. This system shall keep the front face polycarbonate panel free of fog and condensation. The heat generated by the defog system shall not damage any part of the DMS.

The sign and the controller shall be capable of operating with 120/240 Volts Alternating Current (VAC), 38 to 50 amps per leg, 60 hertz (Hz), single phase power. The sign shall have a 50-amp two-pole breaker (common trip) main, 120/240 VAC, single phase, four wire load center with 20 circuit capability. Each circuit in the sign shall be powered from a circuit breaker. Inside the sign housing, all 120 VAC service lines shall be independently protected by a thermo magnetic circuit breaker at the sign housing entry point. All 120 VAC wiring shall be located in conduit, pull boxes, raceways, or control cabinets as required by the National Electrical Code (NEC). No 120 VAC wiring shall be exposed within or outside of the sign housing. The sign housing shall not be considered as a raceway or control cabinet. There shall be a minimum of three GFI Duplex outlets installed inside the sign housing.

Lighting shall be provided to illuminate the interior of the sign. The lights shall be enclosed in die cast aluminum safety fixtures with twist-on bulb guards secured by a minimum of 4 set- screws. The lights shall be controlled by an adjustable timer.

-7-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

The DMS housing shall contain a minimum of one long life LED light fixture for every 8 feet of DMS housing width. The lamps shall be evenly spaced across the housing ceiling and provide uniform light distribution for maintenance purposes. The light provided by the lamps shall meet the requirements of *ANSI/IESNA RP-7-01, Lighting Industrial Facilities*. Each lamp shall be rated for at least 10,000 hours of operation, have a minimum 30-watt rating, be self-ballasted, and be rated for cold weather operation down to -20° F. Lamp housing shall be heavy duty and enclosed to protect the lamps from damage. The lamps shall and have a color temperature of at least 4100°K.

The pixels shall be amber in color and utilize precision optical performance AlInGaP II LEDs constructed of aluminum indium gallium phosphide. The brightness and color of each pixel shall be uniform over the entire face of the sign.

The brightness and color of each pixel shall be uniform over the entire face of the sign within the 30-degree cone of vision from minimum of 200 feet up to and including 1100 feet in all lighting conditions. The brightness of each LED shall be measured in accordance with CIE Standard Condition A, as described in CIE 127-2007, Technical Report: measurement of LEDs.

The pixel strings shall be powered from a regulated direct current (DC) power source and the LED current shall be maintained at 25 plus or minus three milliamperes per string to maximize life of the pixel. The failure of an LED in one string within a pixel shall not affect the operation of any other string or pixel. The LEDs shall be capable of operating in a temperature range of -40 degrees to +100 degrees C. The LEDs shall be moisture resistant epoxy with UV-A and UV-B inhibitors.

Pixel power drawn from the DC supplies shall not exceed 1.5 watts per pixel, including the driving circuitry. A minimum of three photocells shall be installed on the sign. These devices shall permit automatic light intensity measurement of light conditions at each sign location. These photocells shall be mounted in a manner to measure front, rear and ambient light conditions.

Provisions shall be made to prevent perceivable brightening of the sign due to stray headlights shining upon the photo sensors at night.

The power supplies shall be paralleled in a diode or a configuration such that one supply may completely fail and the sign will still be supplied with enough power to run 40 percent of all pixels.

All cables shall be securely clamped or tied in the sign housing. No adhesive attachments will be allowed.

The signs shall be capable of displaying ASCII characters 32 through 126 (including all upper and lower case letters and digits from 0 to 9) at any location in a message line.

(e) *Communication*

The sign controller shall be capable of being controlled from the central system control software and the controller interface cabinet via RS-232 serial and Ethernet communications.

The sign controller shall include separate interfaces for communication with the central system control software and the controller interface cabinet.

-8-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

The communications between the sign controller and the central system control software and controller interface cabinet shall comply with the NEMA National Transportation Communications for ITS Protocol (NTCIP). The sign controller shall support all NTCIP conformance levels, conformance groups, objects, and minimum storage sizes and ranges as specified in the NTCIP Section within this specification.

In addition to the standard Management Information Base (MIB) objects, the sign shall include any additional manufacturer-specific MIB objects required to support all of the sign and central software functionality defined in this specification and in the NTCIP Section within this specification..

Dial-up or hardwire multi-drop communication lines shall be protected by two stages of transient voltage suppression devices including MOVs and spark gap arrestor.

Protect low voltage communication lines (twisted pair or coaxial) with multi-stage one- pair or two-pair surge suppressors designed for high-exposure applications, providing common mode and differential mode protection, with a maximum clamping voltage of 10 volts greater than peak DC or maximum AC root mean square (RMS) signal voltage and peak surge current rating of 10 kiloamperes.

The sign controller shall be capable of being remotely reset from the central system control software.

The sign shall provide a minimum of 4 input and 4 output contact closures able to receive digital and or analog signals that will allow up to 15 message activations upon contact closure events. These message activations shall permit standard NTCIP operations to occur and also permit contact closure messages to occur without message activation collisions and or message activation errors. Contact closures shall be remotely accessible using standard NTCIP MIB objects. Contact closures shall be capable of issuing NTCIP traps.

The sign controller shall allow user-configuration of maximum and minimum temperature in which to turn fans on and off.

The sign shall have polling capability and at a minimum shall be capable of reporting the status of the following:

- (1) Pixel operational status that includes every string of every pixel
- (2) Sign and ambient temperature
- (3) DC power supply status
- (4) The current state (on or off) of each pixel, including any pixel errors, in the actual, currently displayed message without disturbing the message in any way. This shall be real time and shall not be based on a previous pixel test.
- (5) Cooling fan status
- (6) Access door alarm
- (7) Communication failure log
- (8) UPS status
- (9) AC surge protector status

-9-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

The controller software shall be capable of displaying the following types of messages:

- (1) Static messages capable of displaying any character or set of characters
- (2) Full graphic capabilities.
- (3) Flashing messages with the following ranges of adjustable timing:
 - A) Message time on from 0.5 to 5.0 seconds in 0.1 second increments.
 - B) Message time off from 0.5 to 5.0 seconds in 0.1 second increments.
- (4) Alternating messages capable with the following ranges of adjustable timing:
 - A) Primary message time on from 0.5 to 5.0 seconds in 0.1 second increments.
 - B) Primary message time off from 0 to 5.0 seconds in 0.1 second increments.
 - C) Alternate message time on from 0.5 to 5.0 seconds in 0.1 second increments.
 - D) Alternate message time off from 0 to 5.0 seconds in 0.1 second increments.

It shall be possible to flash any character or set of characters in an alternating message at the adjustable frequencies listed above for flashing messages. The flashing period shall be a sub-multiple of the associated alternating on time. It shall also be possible to flash any character or set of characters in a static message.

The sign controller shall monitor the photo cell circuits in the sign and convert the measured light intensity into the desired pixel brightness.

(f) *Uninterruptable Power Supply (UPS)*

The UPS system shall provide "On-Line" dual conversion control.

The UPS shall be rated per the following:

- (1) Input Voltage: 85 VAC to 135 VAC
- (2) Input Frequency: 48 to 62 Hz
- (3) Output Voltage: 120 VAC plus or minus 3 percent
- (4) Output Frequency: 60 Hz
- (5) Power: VA required to run; DMS sign control electronics, communication equipment, and half of the pixels in the face with all LED illuminated at day time brightness levels allowing the sign functionality during a power outage for a minimum of 8 hours.

The unit shall be designed for a hot swap of components and shall not compromise existing DMS wiring. The unit shall provide for RS232 communication and contact closures for alarm functions. The unit shall be temperature rated to operate from 0 degree C to +40 degree C.

The UPS system shall be capable of producing simultaneously-fully regenerated, conditioned power with true sine wave and continuous AC outputs with stand by capability.

The unit shall have a re-settable power event counter to record the number of power utility failures, a battery run-time counter and temperature compensated battery charging.

The UPS System shall be capable of providing continuous, fully conditioned (both voltage and frequency), regulated, sinusoidal AC power to selected devices such as controllers, modems, 5 volt power supplies, and sign face drivers.

-10-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

Wiring shall comply with national electrical code (NEC) standards and approved wiring methods. Properly rated SO/SJO cords shall be allowed to allow easy replacement of the UPS System.

The UPS shall be 19-inch rack mountable and shall be accompanied with 19-inch rack mountable aluminum battery shelves for installation in the DMS.

The UPS shall consist of two major components, the electronics module and the battery system.

- (1) The electronics module shall consist of the following:
 - A) True Sine wave, high frequency inverter.
 - B) Minimum 3-stage, temperature compensated, battery charger
 - C) For connection from the electronics module to the battery system, a dedicated harness shall be provided with quick-release, keyed, circular connectors, and braided nylon sleeving over all conductors.
 - D) Local and remote control of UPS functions
 - E) Local and remote communications capabilities

- (2) The Battery System shall consist of the following:
 - A) Shall run sign electronics, communication equipment, and half of the pixels in the face with all LED illuminated at day time brightness levels, for a minimum of 8 hours
 - B) The batteries shall be comprised of extreme temperature, deep cycle Absorbed Glass Mat/Valve Regulated Lead Acid (AGM/VRLA) batteries that have been field proven and tested by the U.S. military.
 - C) Batteries shall be certified to operate at extreme temperatures from -40°C to +74°C.
 - D) The batteries shall be provided with appropriate interconnect wiring and a corrosion-resistant mounting trays and/or brackets appropriate for the location into which they will be installed.
 - E) The interconnect cable shall be protected with abrasion-resistant nylon sheathing.
 - F) Battery construction shall include heavy-duty, inter-cell connections for low-impedance between cells and heavy-duty plates to withstand shock and vibration.

The UPS System shall come standard with software, RS232 interface via a DB-9F connector (optional SNMP Adapter for TCP/IP protocols) allowing full, interactive, remote computer monitoring and control of the UPS functions. The software shall allow the user to set up all operational parameters either locally or remotely and test the functionality of the unit.

The UPS Alarm Function Monitoring shall come standard with a DB-9F connector with open collectors (40 V @ 20 mA) indicating:

- (1) Loss of utility power
- (2) Inverter failure
- (3) Low battery

The UPS Front Panel Controls shall come standard with Power ON, Cold (DC) Start, Alarm Silence, Battery Test, Bypass Breaker and DC/Battery Breaker.

Reliability shall be calculated with mean time between failures (MTBF) of 100,000 hours based on component ratings.

-11-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

(g) Manufacturer Qualifications

The manufacturer shall supply experience documentation showing that the manufacturer has been in business, under the current corporate name, designing and manufacturing Interstate LED Dynamic Message Signs for a minimum of five years; and that the manufacturer has in operation a minimum of 100 walk-in LED DMSs. These 100 DMS shall be from five separate projects and operational for a minimum of five years.

CONSTRUCTION REQUIREMENTS

Contractor shall be fully responsible for the delivery of the sign to the installation site and any damages that occur in the installation delivery process.

The DMS (Amber) shall be installed in accordance with manufacturer's recommendations. The Contractor's installation technician shall have a minimum certification from the DMS manufacturer. A qualified factory representative shall be available on site to ensure proper installation and testing.

The Contractor shall be responsible for locating the nearest electrical power and telephone sources and connecting those sources to the appropriate terminations with the DMS (Amber). The Contractor shall cooperate with the local electrical and telephone utilities to establish service accounts.

The Contractor shall perform a DMS acceptance test procedure for approval and acceptance by the Department in the presence of the Engineer, a representative of the CDOT Colorado Transportation Management Center, and the manufacturer's representative. The test shall include all items addressed in these specifications and any other requirements from the project plans or Engineer. The test shall also include the use of the latest version of the NTCIP Exerciser, or equivalent, to demonstrate that no proprietary protocols have been used and that the local and central software are NTCIP compliant.

The CDOT Form 1411 and written notification of the acceptance test date shall be submitted to the ITS group in Golden, CO 2 weeks prior to the acceptance test. Power and communications are required in order to schedule the acceptance.

A minimum of 5 copies of the operations manual detailing the electrical schematics, operation and maintenance of the DMS system, including spare software copies, shall be provided. Additional copies may be requested by the CDOT. One copy of the manual shall remain inside the sign housing or control cabinet. One copy shall be mailed to the Colorado Transportation Management Center at 425 C Corporate Circle, Golden, Colorado 80401.

The CTMS integrator shall be responsible for developing any graphics for the DMS and will provide to the Contractor or sign manufacturer. The Contractor or sign manufacturer shall request the graphics from the CTMS integrator 30 Calendar Days in advance and shall pre-load all graphics onto the signs.

-12-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

NTCIP SECTION

(a) *NTCIP Requirements*

This portion of the specification defines the detailed NTCIP requirements for the Dynamic Message Signs covered by the project specifications.

This specification references several standards through their NTCIP designated names. The following list provides the full reference to the current version of each of these standards. In many cases, the standard is more widely known by its original NEMA assigned number, in these cases, the NEMA number is also identified. The content of the NEMA standard is identical to that of the NTCIP standard.

Each NTCIP Component covered by these project specifications shall implement the most recent version of the standard that is at the stage of Recommended or higher as of January, 01, 2011, including any and all Approved or Recommended

Amendments to these standards as of the same date. It is the ultimate responsibility of the vendor to monitor NTCIP activities to discover any more recent documents.

(b) *General Requirements:*

1. **Subnet Level.** NTCIP Components may support additional Subnet Profiles at the vendor's option. At any one time, only one Subnet Profiles shall be active on a given serial port of the NTCIP Component. If the NTCIP Component has a serial port that supports multiple Subnet Profiles, the NTCIP Component shall be configurable to allow the field technician to activate the desired Subnet Profile and shall provide a visual indication of the currently selected Subnet Profile.
2. **Transport Level.** Each NTCIP Component shall comply with NTCIP 2202, (NEMA TS 3. Internet). NTCIP Components may support additional Transport Profiles at the manufacturer's option. Response datagrams shall use the same Transport Profile used in the request. Each NTCIP Component shall support the receipt of datagrams conforming to any of the identified Transport Profiles at any time.
3. **Application Level.** Each DMS (Amber) shall comply with NTCIP 2301, (NEMA TS 3.AP-STMF), as a Managed Agent and shall meet the requirements for Conformance Level 1 (NOTE – See Amendment to standard). Simple network management protocol (SNMP) shall be required and simple transportation management protocol (STMP) shall not be required. An NTCIP Component may support additional Application Profiles at the manufacturer's option. Responses shall use the same Application Profile used by the request. Each NTCIP Component shall support the receipt of Application data packets at any time allowed by the subject standards.

-13-

**REVISION OF SECTION 614
DYNAMIC MESSAGE SIGN (AMBER)**

4. **Information Level.** Each NTCIP Component shall provide Full, Standardized Object Range Support of all objects required by these procurement specifications, unless otherwise indicated below. The maximum Response Time for any object or group of objects shall be 200 milliseconds.

The vendor's software shall implement all mandatory objects of the mandatory conformance group defined in NTCIP 1201, (NEMA TS 3.4) Global Object Definitions:

- (1) Configuration Conformance Group – Section 3.1
- (2) Security Conformance Group (new in Amendment 1)

The vendor's software shall implement the mandatory objects of the optional conformance groups defined in NTCIP 1201, (NEMA TS 3.4), Global Object Definitions:

- (1) Time Management Conformance Group – Section 3.3
- (2) TimeBase Event Schedule Conformance Group – Section 3.4
- (3) Report Conformance Group – Section 3.5

The vendor's software shall implement all mandatory objects of all mandatory conformance groups defined in NTCIP 1203, (NEMA TS 3.6) Object Definitions for Dynamic Message Signs (DMS):

- (1) Sign Configuration Conformance Group – Section 4.1
- (2) Message Table Conformance Group – Section 4.6
- (3) Sign Control Conformance Group – Section 4.7

The vendor's software shall implement all mandatory objects of the optional conformance groups defined in NTCIP 1203, (NEMA TS 3.6), Object Definitions for Dynamic Message Signs (DMS):

- (1) GUI Appearance – Section 4.2
- (2) Font Definition – Section 4.3
- (3) DMS Sign Configuration – Section 4.4
- (4) MULTI Configuration – Section 4.5
- (5) Default Message – Section 4.8
- (6) MULTI Error – Section 4.10
- (7) Illumination/Brightness – Section 4.11
- (8) Scheduling – Section 4.12
- (9) Auxiliary I/O – Section 4.13
- (10) Sign Status – Section 4.14
- (11) Status Error – Section 4.15
- (12) Pixel Error Status – Section 4.16
- (13) Fan Error Status – Section 4.18
- (14) Temperature Status – Section 4.17

The vendor's software shall implement the following optional objects defined in NTCIP 1203, (NEMA TS 3.6):

- (1) dmsMessageBeacon – Section 2.6.1.1.1.8.6

-14-

**REVISION OF SECTION 614
 DYNAMIC MESSAGE SIGN (AMBER)**

- (2) dmsSWReset – Section 2.7.1.1.1.1
- (3) dmsMessageTimeRemaining – Section 2.7.1.1.1.4
- (4) dmsShortPowerRecoveryMessage – Section 2.7.1.1.1.8
- (5) dmsLongPowerRecoveryMessage – Section 2.7.1.1.1.9
- (6) dmsShortPowerLossTime – Section 2.7.1.1.1.10
- (7) dmsResetMessage – Section 2.7.1.1.1.11
- (8) dmsCommunicationsLossMessage – Section 2.7.1.1.1.12
- (9) dmsTimeCommLoss – Section 2.7.1.1.1.13
- (10) dmsPowerLossMessage – Section 2.7.1.1.1.14
- (11) dmsEndDurationMessage – Section 2.7.1.1.1.15
- (12) dmsMultiOtherErrorDescription – Section 2.7.1.1.1.20
- (13) dmsStatDoorOpen – Section 2.11.1.1.1.6
- (14) fanFailures – Section 2.11.2.1.1.8
- (15) fanTestActivation – Section 2.11.2.1.1.9
- (16) tempMinCtrlCabinet – Section 2.11.4.1.1.1
- (17) tempMaxCtrlCabinet – Section 2.11.4.1.1.2
- (18) tempMinAmbient – Section 2.11.4.1.1.3
- (19) tempMaxAmbient – Section 2.11.4.1.1.4
- (20) tempMinSignHousing – Section 2.11.4.1.1.5
- (21) tempMaxSignHousing – Section 2.11.4.1.1.6

The vendor’s software shall implement the following tags (opening and closing where defined) of MULTI as defined in NTCIP 1203, (NEMA TS 3.6), Object Definitions for Dynamic Message Signs (DMS):

MULTI Tag	Description
1	Field
2	Flash
3	Font
4	Hexadecimal Character
5	Justification Line
6	Justification Page
7	Moving Text
8	New Line
9	New Page
10	Page Time
11	Spacing – Character

-15-

**REVISION OF SECTION 614
 DYNAMIC MESSAGE SIGN (AMBER)**

The Field Tag shall support the following field ID's:

Field Tag	Tag ID	Description
1	1	Time, 12-hour format (no AM/PM indicator)
2	2	Time, 24-hour format
3	3	Temperature in degrees Celsius
4	4	Temperature in degrees Fahrenheit
5	7	Day of week
6	8	Day of month
7	9	Month of year
8	10	Year, 2-digits
9	11	Year, 4-digits

5. **Sizes and Ranges.** All objects required by these procurement specifications shall support all values within its standardized range. The standardized range is defined by a size, range, or enumerated listing indicated in the object's SYNTAX field and/or through descriptive text in the object's DESCRIPTION field of the relevant standard. The following provides the current listing of known variances for this project:

Object	Reference	Minimum Project Requirements
NTCIP 1201 (TS 3.4)		
moduleTableEntry	2.2.3	Shall contain at least one row with moduleType equal to 3 (software). The moduleMake shall specify the name of the manufacturer; the moduleModel shall specify the manufacturer's name of the component and the modelVersion shall indicate the model version number of the component.
communityNamesMax	2.8.2	Shall be at least 4.
maxTimeBaseScheduleEntries	2.4.3.1	7
maxDayPlans	2.4.4.1	7
maxDayPlanEvents	2.4.4.2	7
maxEventLogConfigs	2.5.1	50
eventConfigMode	2.5.2.3	2,3,and 4
maxEventLogSize	2.5.3	200
maxEventClasses	2.5.5	7
maxGroupAddress	2.7.1	1
NTCIP 1203 v0305j (TS 3.6)		
dmsNumPermanentMsg	5.6.1	100
dmsMaxChangeableMsg	5.6.3	100
dmsFreeChangeableMemory	5.6.4	500 MB
dmsMaxVolatileMsg	5.6.6	100
dmsFreeVolatileMemory	5.6.7	500 MB
dmsMessageMultiString	5.6.8.3	See attached table

6. **Documentation.** The Software shall be supplied with full documentation and a CD-Rom containing ASCII versions of the following Management Information Base (MIB) files in Abstract Syntax Notation 1 (ASN.1) format:

- (1) Relevant version of each official standard MIB Module referenced by the device functionality.
- (2) If the device does not support the full range of any given object within a Standard MIB Module, a vendor specific version of the official Standard MIB Module with the supported range indicated in ASN.1 format in the SYNTAX and/or DESCRIPTION fields of the associated OBJECT TYPE macro. The filename of this file shall be identical to the standard MIB Module, except that it will have the extension “.man”.
- (3) A MIB Module in ASN.1 format containing any and all manufacturer-specific objects supported by the device with accurate and meaningful DESCRIPTION fields and supported ranges indicated in the SYNTAX field of the OBJECT-TYPE macros.
- (4) A MIB containing any other objects supported by the device.

The vendor shall allow the use of any and all of this documentation by any party authorized by CDOT for systems integration purposes at any time initially or in the future, regardless of what parties are involved in the systems integration effort.

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work consists of furnishing, installing and testing full-color, full matrix Light Emitting Diode (LED) Lane Use Signs (LUS), sidemount variable message signs (SMVMS), associated equipment controller and cabinets, cabinet foundation and mounting hardware.

The LUS shall have a 64 x 64 pixel matrix with a 20 mm pixel pitch and shall utilize 24 bit RGB color. The LUS shall be 60 inches wide by 60 inches tall with an allowable variation of plus or minus 3 inches. The depth of the LUS shall not exceed 15 inches and the weight shall not exceed 420 pounds.

The SMVMS shall have a 80 x 80 pixel matrix at 20 mm pixel pitch and shall utilize 24 bit RGB color. The depth of the SMVMS shall not exceed 15 inches and the weight shall not exceed 500 pounds.

The sign controller(s) for the LUS and SMVMS shall be capable of controlling and monitoring multiple signs. The signs and sign controllers shall be capable of operating without any decrease in performance over a temperature range of -34° F to +140° F and a relative humidity range of 0 to 99 percent, non-condensing.

MATERIALS

- (a) *Certifications:* Prior to start of the installation of the LUS and SMVMS the Contractor shall provide the following certifications to the Engineer for Approval:
1. Certification showing that the manufacturer is fully compliant with ISO 9001 prior to the start of construction of this Project. The ISO 9001 Certification shall apply to the facility, and to the design, fabrication, installation, and maintenance of the signs. The facility where this company actually designs and manufactures the signs shall be ISO 9001:2000 or later certified a minimum of one year prior to the start of construction.
 2. Working drawings showing the sign housing and mounting brackets shall be sealed by a Professional Engineer (PE) registered in the State of Colorado and shall be submitted in accordance with subsection 105.02. The sign housing shall also be designed and PE sealed to comply with applicable requirements of current American Association of State Highway and Transportation Officials (AASHTO) Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals.
 3. Certification showing that welding of the sign housing is in accordance with the American Welding Society (AWS) Standards, ANSI/AWS D1.2-97. The manufacturer's welders and welding procedures shall be certified by an ANSI/AWS Certified Welding Inspector to the ANSI/AWS D1.2-97 Structural Welding Code for Aluminum.
 4. Certification that all aluminum face materials have a coating that meets or exceeds the requirements of the American Architectural Manufacturers Association (AAMA) Specifications Publication No. 2605. (16) Certification that the LEDs were tested and binned in accordance with the CIE Standard Condition A. Documentation and information on software as described in NTCIP Requirements of this Project Special Provision.

-2-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

5. Documentation verifying the LUS and SMVMS is listed by an accredited 3rd party testing organization for conformance to UL48 and UL 1433.
 6. Documentation providing proof printed circuit board (PCB) conformal coating conformance to IPC-CC-830. (19) Documentation that the sign's structural integrity is in conformance to current AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaries and Traffic Signals.
 7. Documentation that the LUS and SMVMS conforms to the Transient Protection and Vibration of the NEMA Standard TS4, Section2.
- (b) *Sign Housing:* All component parts shall be easily and readily accessible by a single person for inspection and maintenance. The housing shall be weather tight, and compliant to the National Electrical Manufacturers Association (NEMA) 3R Standard. All parts shall be made of corrosion resistant materials, such as plastic, stainless steel or aluminum. Painted steel is not acceptable. No self-tapping screws shall be used. The exterior front face surfaces shall be finish coated by a system that meets or exceeds the AAMA Specification No. 2605. The finish shall be matte black.

The main body of the sign housing shall be constructed of aluminum with a natural mill finish. All exterior seams shall be continuously welded by an inert gas process, except for the coated fascia material.

The glazing shall be constructed of clear polycarbonate sheets with surfaces that resist hazing from UV light. The glazing shall be protected by an aluminum mask with apertures punched directly in front of each pixel. The coating shall meet or exceed the AAMA Specification No. 2605.

For surge protection, the system power shall be protected by two stages of transient voltage suppression devices. Tripping of each stage (or both if tripped simultaneously) of the surge protection shall cause the sign controller to report the error condition to central on the next poll (for multi-drop operation). There shall be an option that is either enabled or disabled and is selected and downloaded from the central system control software to the sign controller. When this option is enabled, tripping of the second stage of surge protection shall prevent power from reaching any components of the sign until the surge protection has been replaced. When this option is disabled, the sign will continue to function normally after the second stage of surge protection is tripped.

- (c) *Sign Mounting Bracket Assembly:* The mounting brackets for LUS and SMVMS shall be designed in accordance to standard sign mounting bracket for monotube structures.
- (d) *Electronics:* All electronic components, except printed circuit boards, shall be commercially available, easily accessible, replaceable and individually removable using conventional electronics repair methods.

All PCBs shall be completely conformal coated in accordance to IPC CC-830 standard. The exception for this coating shall be the pixels on the front of the PCB of the LED motherboards and any components in sockets.

-3-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

All integrated circuits shall be individually replaceable. Components shall be arranged so they are easily accessible for testing and replacement. All circuit designs shall utilize high quality electronic components and shall provide a mean time before failure of at least 3 years. Provisions shall be made to prevent face fogging and condensation.

The sign shall be capable of operating with 120/240 VAC, 60 Hz, single phase power.

Pixels shall be constructed with discrete LEDs manufactured by a reputable manufacturer such as Avago Technologies (formerly Agilent Technologies), Nichia Corporation, OSRAM or EOI. Discrete LEDs shall conform to the following specifications:

- (1) All LEDs shall have a nominal viewing cone of 30 degree angle of 15 degrees measured from the center of the longitudinal viewing cone.
- (2) Color LEDs shall utilize AlInGaP semiconductor technology and shall emit light that has a peak wavelength of 590 ± 5 nm. Color LEDs shall utilize Red AlInGaP 626 nm, Green InGaN 525 nm and Blue InGaN 470 nm.
- (3) The LED packages shall be fabricated from UV light resistant epoxy.
- (4) The LED manufacturer shall perform intensity sorting of the bins. LEDs shall be obtained from no more than two consecutive luminous intensity "bins" as defined by the LED manufacturer.
- (5) The LED manufacturer shall perform color sorting of the bins. LEDs shall be obtained from no more than two consecutive color "bins" as defined by the LED manufacturer.
- (6) The various LED color and intensity bins shall be distributed evenly throughout the sign and shall be consistent from pixel to pixel. Random distribution of the LED bins shall not be accepted.
- (7) The LED manufacturer shall assure color uniformity and consistency on the LED display face within the 30 degree cone of vision and shall not have inconsistent color and intensity shifts.
- (8) LED package style shall be surface-mount or through-hole with or without standoffs.
- (9) All LEDs used in all LUS and SMVMS provided for this contract shall be from the same manufacturer and of the same part number, except for the variations in the part number due to the intensity and color.
- (10) The LEDs shall be rated by the LED manufacturer to have a minimum lifetime of 100,000 hours of continuous operation while maintaining a minimum of 70% of the original brightness.

Pixel power drawn from the DC supplies shall not exceed 1.5 watts per pixel, including the driving circuitry. The signs shall be equipped with a minimum of two photo sensors that measure

-4-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

outdoor ambient light level. These devices shall permit automatic light intensity measurement of light conditions at each sign location. These sensors shall be mounted in a manner to measure front, rear and ambient light conditions. Provisions shall be made to prevent perceivable brightening of the sign due to stray headlights shining upon the photo sensors at night.

The power supplies shall be paralleled in a diode OR configuration such that one supply may completely fail and the sign will still be supplied with enough power to run 40% of all pixels.

The signs shall be capable of displaying ASCII characters 32 through 126 (including all upper and lower case letters and digits from 0 to 9) at any location in a message line.

- (e) *Cabinet:* The cabinet shall be NEMA 3R ground mount traffic controller style cabinet with dual-sided access, polycarbonate base and cast-in-place concrete pad. The cabinet type shall be as follows:

The cabinet shall be a Model 332 cabinet or larger if required to house all required components. The Contractor shall be responsible for the design of the cabinet.

The equipment cabinet shall be natural aluminum with anchor bolts in accordance with the FHWA-IP-78-16 specification. The cabinet shall include the following minimum requirements:

- (1) Two internal (front/back) fluorescent lamps
- (2) Full-height standard Electronics Industry Alliance (EIA) 19-inch rack with a minimum of one pullout drawer
- (3) Power panel board circuit breakers meeting the following minimum requirements
- (4) Service entrance-rated
- (5) Minimum of 12 circuit breaker mounting positions
- (6) Short circuit rating of 22,000 amps for main and 10,000 amps branch circuits
- (7) Underwriters' Laboratories (UL) Listed
- (8) Two 15-amp NEMA 15-R 120VAC duplex outlet with one ground-fault circuit interrupter.
- (9) One earth ground lug that is electrically bonded to the cabinet.
- (10) One thermostatically controlled 100 cubic feet per minute (cfm) exhaust fan mounted near the top of the cabinet.
- (11) Filtered air intake ports with removable and replaceable fan and filter located on the bottom third of each access door.
- (12) Remote communication device.

A 19-inch rack mountable power conditioner shall be installed in the DMS equipment cabinet to provide – simultaneously- fully regenerated, conditioned power with true sine wave and continuous AC outputs to controllers, and communication devices.

-5-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

The system power and communication lines shall each be protected by two stages of surge protection devices. The first stage shall be an arc discharge, gas discharge tube or a thyristor surge protection based unit with local and remote reporting capability. The second stage shall be metal oxide varistor (MOV) based. This second stage shall include a crowbar circuit, that when remotely enabled, shall trip the power circuit breaker when the second stage surge suppressor is activated. In both cases, tripping of each stage (or both if tripped simultaneously) of the surge protection and shall report the power surge condition to the sign controller for report to central. The crowbar shall be an option that is either enabled or disabled and is selected and downloaded from the central system control software to the sign controller. When this option is enabled, tripping of the second stage of surge protection shall prevent power from reaching any components of the sign until the surge protection has been replaced. When this option is disabled, the sign will continue to function normally after the second stage of surge protection is tripped.

- (f) *Control and Communication:* The sign controller shall be supplied by the manufacturer of the LUS and SMVMS. The sign controller shall be a stand-alone microprocessor-based system, which does not require continuous communication with central control software in order to perform most sign control functions. A single sign controller shall be capable of controlling a minimum of five signs. LUS and SMVMS can be controlled by separate controllers.

The sign controller shall meet the following operational requirements:

- (1) Communicate using embedded National Transportations Communication for Intelligent Transportation System Protocol (NTCIP) protocol
- (2) Contain memory for storing changeable and permanent messages, schedules, and other necessary files for controller operation
- (3) Include a front panel user interface with graphical vacuum fluorescent display (VFD) or LCD and keypad for direct operation and diagnostics
- (4) Contain a minimum of one NTCIP-compliant Ethernet port with RJ45 connector
- (5) Have the ability to play volatile messages
- (6) Contain sign-specific control firmware (embedded software) that shall monitor all external and internal sensors and communication inputs and control the display modules as directed by external control software and the front panel interface

NTCIP shall be natively supported in the sign controller. External protocol converter or translator devices shall not be allowed. The sign controller shall be programmed to receive and transmit NTCIP compliant sign control commands from the central system control software and laptop computer. The controller shall have power-up and auto-restart capabilities with programmable default actions when recovering from a power off condition. A hardware watch dog circuit shall provide automatic reset of the controller and communications device. Central control shall have ability to perform a remote command for the controller and communications device reset.

The controller shall be able to accept standard uninterruptible power supply (UPS) shutdown commands via Ethernet or serial interface.

-6-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

The controller shall perform all communication, control and feedback functions and shall not require an intermediate control device and be the only sign controller. Communication and control lines between the sign controller and the system interface circuits shall be opto-coupled.

The sign controller shall be capable of being controlled from the central system control software via RS-232 serial and Ethernet communications.

The communications between the sign controller and the central system control software shall comply with the NTCIP. The sign controller shall support all NTCIP conformance levels, conformance groups, objects, and minimum storage sizes and ranges as specified in NTCIP Requirements in this specification.

In addition to the standard Management Information Base (MIB) objects, the sign shall include any additional manufacturer-specific MIB objects required to support all of the sign and central software functionality defined in this specification.

Protect low voltage communication lines (twisted pair or coaxial) with multi-stage one- pair or two-pair surge suppressors designed for high-exposure applications, providing common mode and differential mode protection, with a maximum clamping voltage of 10 volts greater than peak DC or maximum AC RMS signal voltage and peak surge current rating of 10kA.

The sign controller shall be capable of being remotely reset from the central system control software.

The sign controller shall provide software modules that will allow integration with CDOT Colorado Transportation Management System (CTMS).

The sign controller shall allow user-configuration of maximum and minimum temperature in which to turn fans on and off.

The sign controller shall have polling capability and at a minimum shall be capable of reporting the status of the following:

- (1) Pixel operational status that includes every string of every pixel
- (2) Sign and ambient temperature
- (3) DC power supply status
- (4) The current state (on or off) of each pixel, including any pixel errors, in the actual, currently displayed message without disturbing the message in any way. This shall be real time and shall not be based on a previous pixel test.
- (5) Communication failure log
- (6) AC surge protector status

-7-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

The controller software shall be capable of displaying the following types of messages:

1. Static or alternating messages capable of displaying any character or set of characters
2. Full graphic capabilities.

The sign controller shall be capable of monitoring ambient light sensor circuits in the sign and convert the measured light intensity into the desired pixel brightness.

MANUFACTURER QUALIFICATIONS

The manufacturer shall supply experience documentation showing that the manufacturer has been in business, under the current corporate name, designing and manufacturing LUS and SMVMS for a minimum of five years prior to the start of construction; and that the manufacturer has in operation a minimum of 100 LUS and SMVMS. These 100 signs shall be from a minimum of 5 separate projects and operational for a minimum period of 3 years prior to the start of construction.

TRAINING

The manufacturer shall provide 8 hours of class room training for CDOT at the CTMC in Golden, Colorado in addition to 8 hours of on-site training at the signs.

CONSTRUCTION REQUIREMENTS

Contractor shall be fully responsible for the delivery of the signs, sign controllers, cabinets and cabinet bases to the installation site and any damages that occur in the installation delivery process. Construction of concrete pad and installation of controller cabinet base shall be done in accordance to CDOT M & S standards.

Contractor shall provide a minimum of 10 feet of coiled slack power and control cables for each LUS or SMVMS in the pull boxes or inside the sign structure.

The signs and controllers shall be installed in accordance with manufacturer's recommendations. A qualified factory representative shall be available on site to ensure proper installation and testing.

See Testing & Integration Plan for additional requirements.

Installation of all earth grounding shall conform to the current National Electric Code.

A minimum of 5 copies of the operations manual detailing the electrical schematics, operation and maintenance of the LUS and SMVMS system, including spare software copies, shall be provided to the Department. Additional copies may be requested by the Department. One of the 5 copies of the manual shall remain inside the equipment cabinet. Four remaining copies shall be delivered to the Colorado Transportation Management Center at 425 C Corporate Circle, Golden, Colorado 80401.

-8-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

The CTMS integrator shall be responsible for developing any graphics for the LUS and SMVMS and will provide to the Contractor or sign manufacturer. The Contractor or sign manufacturer shall request the graphics from the CTMS integrator 30 Calendar Days in advance and shall pre-load all graphics onto the signs.

The LUS and SMVMS shall include installation, testing, acceptance, labor, materials, and equipment necessary to complete the work of installation and operations. Work includes delivery of all equipment and cabinets to the installation site; installation of sign controllers, auxiliary control panel, sign housing, and all associated electronics, communications equipment, equipment cabinet, and wiring; all tests as described herein; and standard warranty. Work includes ensuring there are communications between sign devices and CTMC.

-9-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

All costs associated with the delivery of the sign to the installation site will not be measured and paid for separately, but shall be included in the work.

NTCIP SECTION

NTCIP Requirements:

This portion of the specification defines the detailed NTCIP requirements for the LUS and SMVMS covered by the project specifications. This specification references several standards through their NTCIP designated names. The following list provides the full reference to the current version of each of these standards. In many cases, the standard is more widely known by its original NEMA assigned number, in these cases, the NEMA number is also identified. The content of the NEMA standard is identical to that of the NTCIP standard.

Each NTCIP Component covered by these Project Specifications shall implement the most recent version of the standard that is at the stage of Recommended or higher, including any and all Approved or Recommended Amendments to these standards as of the same date. It is the ultimate responsibility of the Contractor to monitor NTCIP activities to discover any more recent documents.

General Requirements:

Subnet Level

NTCIP Components may support additional Subnet Profiles at the vendor's option. At any one time, only one Subnet Profiles shall be active on a given serial port of the NTCIP Component. If the NTCIP Component has a serial port that supports multiple Subnet Profiles, the NTCIP Component shall be configurable to allow the field technician to activate the desired Subnet Profile and shall provide a visual indication of the currently selected Subnet Profile.

Transport Level

Each NTCIP Component shall comply with NTCIP 2202, (NEMA TS 3.Internet). NTCIP Components may support additional Transport Profiles at the manufacturer's option. Response datagrams shall use the same Transport Profile used in the request. Each NTCIP Component shall support the receipt of datagrams conforming to any of the identified Transport Profiles at any time.

Application Level

Each LED DMS shall comply with NTCIP 2301, (NEMA TS 3.AP-STMF), as a Managed Agent and shall meet the requirements for Conformance Level 1 (NOTE—See Amendment to standard). Simple network management protocol (SNMP) shall be required and simple transportation management protocol (STMP) shall not be required. An NTCIP Component may support additional Application Profiles at the manufacturer's option. Responses shall use the same Application Profile used by the request. Each NTCIP Component shall support the receipt of Application data packets at any time allowed by the subject standards.

-10-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

Information Level

Each NTCIP Component shall provide Full, Standardized Object Range Support of all objects required by these procurement specifications, unless otherwise indicated below. The maximum Response Time for any object or group of objects shall be 200 milliseconds.

The vendor's software shall implement all mandatory objects of the mandatory conformance group defined in NTCIP 1201, (NEMA TS 3.4) Global Object Definitions:

- Configuration Conformance Group—Section 3.1
- Security Conformance Group (new in Amendment 1)

The vendor's software shall implement the mandatory objects of the optional conformance groups defined in NTCIP 1201, (NEMA TS 3.4), Global Object Definitions:

- Time Management Conformance Group—Section 3.3
- TimeBase Event Schedule Conformance Group—Section 3.4
- Report Conformance Group—Section 3.5

The vendor's software shall implement all mandatory objects of all mandatory conformance groups defined in NTCIP 1203, (NEMA TS 3.6) Object Definitions for Variable Message Signs:

- Sign Configuration Conformance Group—Section 4.1
- Message Table Conformance Group—Section 4.6
- Sign Control Conformance Group—Section 4.7

The vendor's software shall implement all mandatory objects of the optional conformance groups defined in NTCIP 1203, (NEMA TS 3.6), Object Definitions for Variable Message Signs:

- GUI Appearance—Section 4.2
- Font Definition—Section 4.3
- VMS Sign Configuration—Section 4.4
- MULTI Configuration—Section 4.5
- Default Message—Section 4.8
- MULTI Error—Section 4.10
- Illumination/Brightness—Section 4.11
- Scheduling—Section 4.12
- Auxiliary I/O—Section 4.13
- Sign Status—Section 4.14
- Status Error—Section 4.15
- Pixel Error Status—Section 4.16
- Fan Error Status—Section 4.18
- Temperature Status—Section 4.17

-11-

**REVISION OF SECTION 614
LANE USE SIGN AND
SIDEMOUNT VARIABLE MESSAGE SIGN**

The vendor's software shall implement the following optional objects defined in NTCIP 1203, (NEMA TS 3.6):

- dmsMessageBeacon—Section 2.6.1.1.1.8.6
- dmsSWReset—Section 2.7.1.1.1.1
- dmsMessageTimeRemaining—Section 2.7.1.1.1.4
- dmsShortPowerRecoveryMessage—Section 2.7.1.1.1.8
- dmsLongPowerRecoveryMessage—Section 2.7.1.1.1.9
- dmsShortPowerLossTime—Section 2.7.1.1.1.10
- dmsResetMessage—Section 2.7.1.1.1.11
- dmsCommunicationsLossMessage—Section 2.7.1.1.1.12
- dmsTimeCommLoss—Section 2.7.1.1.1.13
- dmsPowerLossMessage—Section 2.7.1.1.1.14
- dmsEndDurationMessage—Section 2.7.1.1.1.15
- dmsMultiOtherErrorDescription—Section 2.7.1.1.1.20
- dmsStatDoorOpen—Section 2.11.1.1.1.6
- fanFailures—Section 2.11.2.1.1.8
- fanTestActivation—Section 2.11.2.1.1.9
- tempMinCtrlCabinet—Section 2.11.4.1.1.1
- tempMaxCtrlCabinet—Section 2.11.4.1.1.2
- tempMinAmbient—Section 2.11.4.1.1.3
- tempMaxAmbient—Section 2.11.4.1.1.4
- tempMinSignHousing—Section 2.11.4.1.1.5
- tempMaxSignHousing—Section 2.11.4.1.1.6

The vendor's software shall implement the following tags (opening and closing where defined) of MULTI as defined in NTCIP 1203, (NEMA TS 3.6), Object Definitions for Variable Message Signs:

MULTI Tag

1. Field
2. Flash
3. Font
4. Hexadecimal Character
5. Justification Line
6. Justification Page
7. Moving Text
8. New Line
9. New Page
10. Page Time
11. Spacing—Character

The Field Tag shall support the following field ID's:

-12-

**REVISION OF SECTION 614
 LANE USE SIGN AND
 SIDEMOUNT VARIABLE MESSAGE SIGN**

Field Tag ID Description

1	1	Time, 12-hour format (no AM/PM indicator)
2	2	Time, 24-hour format
3	3	Temperature in degrees Celsius
4	4	Temperature in degrees Fahrenheit
5	7	Day of week
6	8	Day of month
7	9	Month of year
8	10	Year, 2-digits
9	11	Year, 4-digits

Sizes and Ranges

All objects required by these procurement specifications shall support all values within its standardized range. The standardized range is defined by a size, range, or enumerated listing indicated in the object's SYNTAX field and/or through descriptive text in the object's DESCRIPTION field of the relevant standard. The following provides the current listing of known variances for this project:

NTCIP 1201 (TS 3.4)

Object	Reference	Minimum Project Requirements
moduleTableEntry	2.2.3	Shall contain at least one row with moduleType equal to 3 (software). The moduleMake shall specify the name of the manufacturer, the moduleModel shall specify the manufacturer's name of the component and the modelVersion shall indicate the model version number of the component.
communityNamesMax	2.8.2	Shall be at least 4
maxTimeBaseScheduleEntries	2.4.3.1	7

Documentation

Software shall be supplied with full, electronic documentation containing American Standard Code for Information Interchange (ASCII) versions of the following Management Information Base (MIB) files in Abstract Syntax Notation 1 (ASN.1) format:

- The relevant version of each official standard MIB Module referenced by the device functionality.
- If the device does not support the full range of any given object within a Standard MIB Module, a vendor specific version of the official Standard MIB Module with the
- supported range indicated in ASN.1 format in the SYNTAX and/or DESCRIPTION fields of the associated OBJECT TYPE macro. The filename of this file shall be identical to the standard MIB Module, except that it will have the extension “.man”.
- A MIB Module in ASN.1 format containing any and all manufacturer-specific objects supported by the device with accurate and meaningful DESCRIPTION fields and supported ranges indicated in the SYNTAX field of the OBJECT-TYPE macros.
- An MIB containing any other objects supported by the device.

The vendor shall allow the use of any and all of this documentation by any party authorized by CDOT for systems integration purposes at any time initially or in the future, regardless of what parties are involved in the systems integration effort.

REVISION OF SECTION 614 VARIABLE TOLL MESSAGE SIGN (VTMS)

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of furnishing and installing a Light Emitting Diode Variable Toll Message Sign (LED VTMS) and associated equipment cabinets. The sign shall be fully compatible with the mounting hardware and support structure shown on the plans. The LED VTMS shall be equipped with the ability to display 7 characters of text at a height of 18-inch tall characters. The pixel pitch shall be 66-70 mm. The sign shall include a power shut off mounted to the sign structure near the controller interface cabinet. The sign shall be capable of operating without any decrease in performance over a temperature range of -34° F to +140° F with a relative humidity of 0 to 99 percent, non-condensing. The sign shall have a minimum design life of 20 years.

MATERIALS

- (a) *Certifications.* Prior to start of the installation of the LED VTMS the Contractor shall provide the following certifications to CDOT for Approval:
1. Certification showing that the manufacturer of the LED VTMS is fully compliant with ISO 9001 prior to the start of construction for this Project. The ISO 9001 Certification shall apply to the facility, and to the design, fabrication, installation, and maintenance of the LED VTMS. The facility where this company actually designs and manufactures the LED VTMS shall be ISO 9001:2000 certified a minimum of one year prior to the start of construction.
 2. Working drawings showing the sign housing shall be sealed by an Engineer registered in the State of Colorado and shall be submitted in accordance with subsection 105.02.
 3. Certification showing that welding of the LED VTMS housing is in accordance with the American Welding Society (AWS) Standards, ANSI/AWS D1.2-97. The LED VTMS manufacturer's welders and welding procedures shall be certified by an ANSI/AWS Certified Welding Inspector to the ANSI/AWS D1.2-97 Structural Welding Code for Aluminum.
 4. Certification that all aluminum face materials have a coating that meets or exceeds the requirements of the American Architectural Manufacturers Association (AAMA) Specifications Publication No. 2605.
 5. Certification that the LEDs were tested and binned in accordance with the CIE Standard Condition A.
 6. Documentation and information on software as described in National Transportation Communications for ITS Protocol (NTCIP) Requirements of this Project Special Provision.
 7. Documentation verifying the VTMS is listed by an accredited 3rd party testing organization for conformance to UL48 and UL 1433.
 8. All workmanship shall comply with IPC-A-610C, Class 2 titled "Acceptability of Electronic Assemblies".
 9. Documentation providing proof PCB silicon conformal coating conformance to MIL-I-46058C Type SR and IPC-CC-830.

-2-

**REVISION OF SECTION 614
VARIABLE TOLL MESSAGE SIGN (VTMS)**

10. Documentation that the sign's structural integrity is in Conformance to American Association of State Highway and Transportation Officials (AASHTO) Standard Specifications for Structural Supports for Highway Signs, Luminaries and Traffic Signals (Third Draft).
 11. Documentation that the VTMS conforms to the Transient Protection and Vibration of the National Electrical Manufacturers Association (NEMA) Standard TS4, Section 2.
- (b) *Sign Housing.* All component parts shall be easily and readily accessible by a single person for inspection and maintenance. The housing shall be weather tight, and compliant to the NEMA 3R Standard.

All parts shall be made of corrosion resistant materials, such as plastic, stainless steel or aluminum. Painted steel is not acceptable. No self-tapping screws shall be used. The exterior front face surfaces shall be finish coated by a system that meets or exceeds the AAMA Specification No. 2605. The finish shall be matte black. The main body of the sign housing shall be constructed of aluminum with a natural mill finish. All exterior seams shall be continuously welded by an inert gas process, except for the coated fascia material.

The glazing shall be constructed of clear polycarbonate sheets with surfaces that resist hazing from UV light. The glazing shall be protected by a coated 0.090 inch aluminum mask with apertures punched directly in front of each pixel. The coating shall meet or exceed the AAMA Specification No. 2605.

For surge protection, the system power shall be protected by two stages of transient voltage suppression devices. Tripping of each stage (or both if tripped simultaneously) of the surge protection shall cause the sign controller to call central and report the error condition (for dialup operation) or report the error condition to central on the next poll (for multi-drop operation). There shall be an option that is either enabled or disabled and is selected and downloaded from the central system control software to the sign controller. When this option is enabled, tripping of the second stage of surge protection shall prevent power from reaching any components of the sign until the surge protection has been replaced. When this option is disabled, the sign will continue to function normally after the second stage of surge protection is tripped.

- (c) *Sign controller.* The sign controller shall be installed into the Communications Cabinet on the side of the road. The sign controller shall allow for control and monitoring of multiple VTMS inserts. The sign controller shall be a stand-alone microprocessor-based system, which does not require continuous communication with VTMS control software in order to perform most VTMS control functions.

The sign controller shall meet the following operational requirements:

1. Communicate using embedded NTCIP
2. Contain memory for storing changeable and permanent messages, schedules, and other necessary files for controller operation
3. Include a front panel user interface with graphical VFD or LCD and keypad for direct operation and diagnostics as described herein

-3-

**REVISION OF SECTION 614
VARIABLE TOLL MESSAGE SIGN (VTMS)**

4. Contain a minimum of two NTCIP-compliant RS232 communication ports
5. Contain a minimum of one NTCIP-compliant Ethernet port with RJ45 connector
6. Have the ability to play volatile messages
7. Contain VTMS-specific control firmware (embedded software) that shall monitor all external and internal sensors and communication inputs and control the display modules as directed by external control software and the front panel interface
8. Ability for remote firmware upgrades that error check to eliminate firmware corruption

NTCIP shall be natively supported in the VTMS controller. External protocol converter or translator devices shall not be allowed. The sign controller shall be programmed to receive and transmit NTCIP compliant sign control commands from the central system control software and laptop computer. The controller shall have power-up and auto-restart capabilities with programmable default actions when recovering from a power off condition. A hardware watch dog circuit shall provide automatic reset of the controller and communications device. Central control shall have ability to perform a remote command for the controller and communications device reset. The controller shall be able to accept standard UPS shutdown commands via Ethernet or serial interface

The Controller shall perform all communication, control and feedback functions and shall not require an intermediate control device and be the only sign controller. Communication and control lines between the sign controller and the system interface circuits shall be opto-coupled.

- (d) *Electronics.* All electronic components, except printed circuit boards, shall be commercially available, easily accessible, replaceable and individually removable using conventional electronics repair methods.

All Printed Circuit Boards (PCBs) shall be completely conformal coated with a silicone resin that meets the IPC CC-830 standard. The exception for this coating shall be the pixels on the front of the PCB of the LED motherboards and any components in sockets.

All integrated circuits shall be individually replaceable. Components shall be arranged so they are easily accessible for testing and replacement. All circuit designs shall utilize high quality electronic components and shall provide a meantime before failure of at least 3 years.

The sign and the controller shall be capable of operating with 120/240 VAC, 20 amp per leg, 60 Hz, single phase power. Each circuit in the sign shall be powered from a circuit breaker. Inside the roadside cabinet, all 120 VAC service lines shall be independently protected by a thermo-magnetic circuit breaker at the sign housing entry point. All 120 VAC wiring shall be located in conduit, pull boxes, raceways, or control cabinets as required by the National Electrical Code (NEC). No 120 VAC wiring shall be exposed within or outside of the sign housing.

The pixels shall be red/green/amber in color and utilize precision optical performance AlInGaP II LEDs (for red LEDs) or InGaN LEDs (for green LEDs) constructed of aluminum indium gallium

-4-

**REVISION OF SECTION 614
VARIABLE TOLL MESSAGE SIGN (VTMS)**

phosphide. The brightness and color of each pixel shall be uniform over the entire face of the sign within the 30-degree cone of vision from minimum of 200 feet up to and including 1,100 feet in all lighting conditions. Each pixel shall be 40 candelas at 20mA as measured by the sum of the brightness of the individual LEDs in each pixel. The brightness of each LED shall be measured in accordance with CIE Standard Condition A, as described in CIE 127-2007, Technical Report: Measurement of LEDs.

Each pixel shall contain two strings of LEDs. The pixel strings shall be powered from a regulated DC power source and the LED current shall be maintained at 25 plus or minus three milliamperes per string to maximize life of the pixel. The failure of an LED in one string within a pixel shall not affect the operation of any other string or pixel. The LEDs shall be capable of operating in a temperature range of -40 degrees to +100 degrees C. The LEDs shall be moisture resistant epoxy with UV-A and UV-B inhibitors.

Pixel power drawn from the DC supplies shall not exceed 1.5 watts per pixel, including the driving circuitry.

A minimum of one photocell shall be installed on the sign. This device shall permit monitoring of light conditions at each sign location and automatic selection of light intensity levels. The method or algorithm used to calculate the intensity level shall be determined by the manufacturer and tested under real-world lighting conditions.

The power supplies shall be paralleled in a diode OR configuration such that one supply may completely fail and the sign will still be supplied with enough power to run 40% of all pixels. The power supply shall be located inside the roadside cabinet and not in the sign. The Contractor shall work with the vendor to determine proper cabling requirements from the cabinet to the sign.

All cables shall be securely clamped/tied in the sign housing. No adhesive attachments will be allowed.

The signs shall be capable of displaying ASCII characters 32 through 126 (including all upper and lower case letters and digits from 0 to 9) at any location in a message line.

The Contractor shall be responsible for locating the nearest electrical power and CDOT communication sources and connecting those sources to the appropriate terminations with the LED VTMS. The Contractor shall cooperate with the local electrical and communication utilities to establish a service accounts at the direction of the Engineer.

- (e) *Communication.* The sign controller shall be capable of being controlled from the central system control software and the controller interface cabinet via RS-232 serial and Ethernet communications.

The sign controller shall include separate interfaces for communication with the central system control software and the controller interface cabinet.

The communications between the sign controller and the central system control software and controller interface cabinet shall comply with the NEMA NTCIP. The sign controller shall support

-5-

**REVISION OF SECTION 614
VARIABLE TOLL MESSAGE SIGN (VTMS)**

all NTCIP conformance levels, conformance groups, objects, and minimum storage sizes and ranges as specified in this specification.

In addition to the standard Management Information Base (MIB) objects, the sign shall include any additional manufacturer-specific MIB objects required to support all of the sign and central software functionality defined in this specification.

Dial-up or hardwire multi-drop communication lines shall be protected by two stages of transient voltage suppression devices including MOVs and spark gap arrestor.

The sign controller shall be capable of being remotely reset from the central system control software.

The sign controller shall allow user-configuration of maximum and minimum temperature in which to turn fans on and off.

The sign shall have polling capability and at a minimum shall be capable of reporting the status of the following:

1. Pixel operational status that includes every string of every pixel
2. Sign and ambient temperature
3. DC power supply status
4. The current state (on or off) of each pixel, including any pixel errors, in the actual, currently displayed message without disturbing the message in any way. This shall be real time and shall not be based on a previous pixel test.
5. Communication failure log
6. UPS status
7. AC surge protector status

The controller software shall be capable of displaying static messages, including any character or set of characters

It shall be possible to flash any character or set of characters in an alternating message at the adjustable frequencies listed above for flashing messages. The flashing period shall be a sub-multiple of the associated alternating on time. It shall also be possible to flash any character or set of characters in a static message.

The sign controller shall monitor the photo cell circuits in the sign and convert the measured light intensity into the desired pixel brightness.

-6-

**REVISION OF SECTION 614
VARIABLE TOLL MESSAGE SIGN (VTMS)**

MANUFACTURER QUALIFICATIONS

The manufacturer shall supply experience documentation showing that the manufacturer has been in business, under the current corporate name, designing and manufacturing freeway LED Variable Message

Signs of a similar type for a minimum of 5 years; and that the manufacturer has in operation a minimum of 100 LED VMS. These 100 VMS shall be from 5 separate projects and operational for a minimum of 5 years.

CONSTRUCTION REQUIREMENTS

Contractor shall be fully responsible for the delivery of the sign to the installation site and any damages that occur in the installation delivery process.

The LED VTMS shall be installed in accordance with manufacturer's recommendations. A qualified factory representative shall be available on site to ensure proper installation and testing.

The Contractor shall submit a "VTMS acceptance test procedure" for acceptance and shall perform the test in the presence of CDOT and the manufacturer's representative. The test shall also include the use of the latest version of the NTCIP Exerciser, or equivalent, to demonstrate that no proprietary protocols have been used and that the local and central software are NTCIP compliant. The Contractor shall notify CDOT at least two weeks prior to the test date.

A minimum of 5 copies of the operations manual detailing the electrical schematics, operation and maintenance of the VTMS system, including software copies, shall be provided to the Department. Additional copies may be requested by CDOT. One of the 5 copies of the manual shall remain inside the sign controller cabinet on the side of the road. The remaining four copies shall be delivered to the CTMC at 425C Corporate Circle, Golden, CO 80401.

The LED VTMS shall include all labor, materials, and equipment necessary to complete the work, including the sign controller, controller interface box, sign housing, electronics, communications equipment, delivery to the installation site and standard warranty.

NTCIP Requirements

This portion of the specification defines the detailed NTCIP requirements for the VTMS covered by the Project specifications.

This specification references several standards through their NTCIP designated names. The following list provides the full reference to the current version of each of these standards. In many cases, the standard is

-7-

REVISION OF SECTION 614 VARIABLE TOLL MESSAGE SIGN (VTMS)

more widely known by its original NEMA assigned number, in these cases, the NEMA number is also identified. The content of the NEMA standard is identical to that of the NTCIP standard.

Each NTCIP Component covered by these Project specifications shall implement the most recent version of the standard that is at the stage of Recommended or higher as of Sunday, April 03, 2001, including any and all Approved or Recommended Amendments to these standards as of the same date. It is the ultimate responsibility of the Contractor to monitor NTCIP activities to discover any more recent documents.

General Requirements: Transport Level

Each NTCIP Component shall comply with NTCIP 2202, (NEMA TS 3.Internet). NTCIP Components may support additional Transport Profiles at the manufacturer's option. Response datagrams shall use the same Transport Profile used in the request. Each NTCIP Component shall support the receipt of datagrams conforming to any of the identified Transport Profiles at any time.

Application Level

Each VTMS shall comply with NTCIP 2301, (NEMA TS 3.AP-STMF), as a Managed Agent and shall meet the requirements for Conformance Level 1 (NOTE – See Amendment to standard). SNMP shall be required and STMP shall not be required. An NTCIP Component may support additional Application Profiles at the manufacturer's option. Responses shall use the same Application Profile used by the request. Each NTCIP Component shall support the receipt of Application data packets at any time allowed by the subject standards.

Information Level

Each NTCIP Component shall provide Full, Standardized Object Range Support of all objects required by these procurement specifications, unless otherwise indicated below. The maximum Response Time for any object or group of objects shall be 200 milliseconds.

The vendor's software shall implement all mandatory objects of the mandatory conformance group defined in NTCIP 1201, (NEMA TS 3.4) Global Object Definitions:

- Configuration Conformance Group – Section 3.1
- Security Conformance Group (new in Amendment 1)

The vendor's software shall implement the mandatory objects of the optional conformance groups defined in NTCIP 1201, (NEMA TS 3.4), Global Object Definitions:

- Time Management Conformance Group – Section 3.3
- TimeBase Event Schedule Conformance Group – Section 3.4
- Report Conformance Group – Section 3.5

The vendor's software shall implement all mandatory objects of all mandatory conformance groups defined in NTCIP 1203, (NEMA TS 3.6) Object Definitions for Variable Message Signs:

-8-

**REVISION OF SECTION 614
VARIABLE TOLL MESSAGE SIGN (VTMS)**

- Sign Configuration Conformance Group – Section 4.1
- Message Table Conformance Group – Section 4.6
- Sign Control Conformance Group – Section 4.7

The vendor's software shall implement all mandatory objects of the optional conformance groups defined in NTCIP 1203, (NEMA TS 3.6), Object Definitions for Variable Message Signs:

- GUI Appearance – Section 4.2
- Font Definition – Section 4.3
- VMS Sign Configuration – Section 4.4
- MULTI Configuration – Section 4.5
- Default Message – Section 4.8
- MULTI Error – Section 4.10
- Illumination/Brightness – Section 4.11
- Scheduling – Section 4.12
- Auxiliary I/O – Section 4.13
- Sign Status – Section 4.14
- Status Error – Section 4.15
- Pixel Error Status – Section 4.16
- Fan Error Status – Section 4.18
- Temperature Status – Section 4.17

The vendor's software shall implement the following optional objects defined in NTCIP 1203, (NEMA TS 3.6):

- dmsMessageBeacon – Section 2.6.1.1.1.8.6
- dmsSWReset – Section 2.7.1.1.1.1
- dmsMessageTimeRemaining – Section 2.7.1.1.1.4
- dmsShortPowerRecoveryMessage – Section 2.7.1.1.1.8
- dmsLongPowerRecoveryMessage – Section 2.7.1.1.1.9
- dmsShortPowerLossTime – Section 2.7.1.1.1.10
- dmsResetMessage – Section 2.7.1.1.1.11
- dmsCommunicationsLossMessage – Section 2.7.1.1.1.12
- dmsTimeCommLoss – Section 2.7.1.1.1.13

-9-

**REVISION OF SECTION 614
VARIABLE TOLL MESSAGE SIGN (VTMS)**

**REVISION OF SECTION 614
UNINTERRUPTIBLE POWER SUPPLY FOR TOLL EQUIPMENT**

DESCRIPTION

This work consists of furnishing and installing a rack mounted Uninterruptible Power Supply (UPS), batteries, transfer switch, disconnect switch, and power connections in a Contractor supplied Model 332 cabinet, side mounted cooling fan and polycarbonate base. The UPS system shall be capable of running essential control electronics, communications equipment, AVI Antennas and readers, ALPR Cameras, transaction status beacons, and other miscellaneous equipment, for at least 8 hours. Contractor shall prepare design tolling layout details and show all devices and respective UPS needed to maintain operations.

The UPS system shall be designed for a hot swap of components and shall not compromise existing operation of dynamic message signs or variable message signs. The unit shall provide for RS232 communication and contact closures for alarm functions.

MATERIALS

The UPS system shall provide "On-Line" dual conversion control. The UPS shall be rated per the following:

Input Voltage	85 VAC to 135 VAC line to neutral
Input Frequency	48 to 62 Hz
Output Voltage	120 VAC +/- 3% 120/240 VAC, 1-Phase, 2 Wire plus Ground
Output Frequency	60 Hz
Power	VA required of running the toll equipment for a single and multi-direction toll point for up to 8 hours.

The unit shall be temperature rated to operate from 0 degree C to +40 degree C. The UPS system shall be capable of producing simultaneously-fully regenerated, conditioned power with true sine wave and continuous AC outputs with stand by capability.

The unit shall have a re-settable power event counter to record the number of power utility failures, a battery run-time counter and temperature compensated battery charging.

The UPS System shall be capable of providing continuous, fully conditioned (both voltage and frequency), regulated, sinusoidal (AC) power to selected devices such as controllers, modems, and 5 volt power supplies, and sign face drivers.

Wiring shall comply with national electrical code (NEC) standards and approved wiring methods. Properly rated SO/SJO cords shall be allowed to allow easy replacement of the UPS System.

The interconnect cable shall be protected with abrasion-resistant nylon sheathing.

The UPS shall consist of 2 major components, the electronics module and the battery system.

(a) The electronics module shall consist of the following:

1. True sine wave, high frequency inverter.
2. Minimum 3-stage, temperature compensated, battery charger

-2-

**REVISION OF SECTION 614
UNINTERRUPTIBLE POWER SUPPLY FOR TOLL EQUIPMENT**

3. For connection from the electronics module to the battery system, a dedicated harness shall be provided with quick-release, keyed, circular connectors, and braided nylon sleeving over all conductors.
 4. Local and remote control of UPS functions
 5. Local and remote communications capabilities
- (b) The Battery System shall consist of the following:
1. Shall meet the continuous 8 hour requirement to run electronics, communication equipment, and other toll equipment.
 2. The batteries shall be comprised of extreme temperature, deep cycle Absorbed Glass Mat/Valve Regulated Lead Acid (AGM/VRLA) batteries that have been field proven and tested by the U.S. military.
 3. Batteries shall be certified to operate at extreme temperatures from -40°C to +74°C.
 4. The batteries shall be provided with appropriate interconnect wiring and a corrosion-resistant mounting trays and/or brackets appropriate for the location into which they will be installed.
 5. Battery construction shall include heavy-duty, inter-cell connections for low-impedance between cells and heavy-duty plates to withstand shock and vibration.
- (c) The UPS enclosure shall have forced air Cooling/Ventilation:
1. The UPS shall be forced air cooled by internally mounted, continuous fans.
 2. Fan power shall be provided from the internal DC supply.
 3. Air intake shall be through the front bottom of the unit, and air exhaust shall be out the rear top of the unit.
 4. Intake and exhaust shall have bird/rodent mesh guard and filtration.
 5. The thermal design, along with all thermal and ambient sensors, shall be coordinated with the protective devices before excessive component or internal cabinet temperatures are exceeded

The UPS System shall come standard with software, RS232 interface via a DB-9F connector, and Ethernet interface via RJ-45 connector allowing full, interactive, remote computer monitoring and control of the UPS functions. The software shall allow the user to set up all operational parameters either locally or remotely and test the functionality of the unit. The unit shall be capable of sending simple network management protocol (SNMP) alarm traps upon alarm conditions and also be configurable via built in web page interface.

-3-

**REVISION OF SECTION 614
UNINTERRUPTIBLE POWER SUPPLY FOR TOLL EQUIPMENT**

The UPS System Alarm Function Monitoring shall come standard with a DB-9F connector with open collectors (40 V @ 20 mA) indicating:

- (a) Loss of utility power
- (b) Inverter failure
- (c) Low battery

The UPS system front panel controls shall come standard with Power ON, Cold (DC) Start, Alarm Silence, Battery Test, Bypass Breaker and DC/Battery Breaker.

Reliability shall be calculated with mean time between failure (MTBF) as 100,000 hours based on component ratings.

CONSTRUCTION REQUIREMENTS

Contractor shall provide detailed design and installation plans for Department approval prior to installation. Power feeding the toll equipment shall first terminate in the ground mounted cabinet. Non-UPS power shall pass through the cabinet to power non-UPS loads. Power required for toll equipment backup shall feed through the UPS system. A bypass switch, rated for the designed system, shall be installed to bypass the UPS in the event of UPS failure or for system maintenance. A disconnect switch shall also be installed to disconnect UPS and line power from the toll equipment. The Contractor shall install the UPS output per manufacture recommendations. Serial and Ethernet cables shall be installed from the UPS system ground cabinet to the toll equipment communication device location. All wiring shall conform to the latest version of the NEC.

**REVISION OF SECTION 614
UNINTERRUPTIBLE POWER SUPPLY FOR VARIABLE TOLL MESSAGE SIGN (VTMS)**

DESCRIPTION

This work consists of furnishing and installing a rack mounted Uninterruptible Power Supply (UPS) for VTMS, batteries, transfer switch, disconnect switch, and power connections in a Contractor supplied Model 332 cabinet, side mounted cooling fan and polycarbonate base. The UPS system shall be capable of running essential sign control electronics, communication equipment, full LED sign faces allowing messaged display, and sign control for at least 8 hours.

The UPS system shall be designed for a hot swap of components and shall not compromise operation of VTMS. The unit shall provide for RS232 communication and contact closures for alarm functions.

MATERIALS

The UPS system shall provide "On-Line" dual conversion control. The UPS shall be rated per the following:

Input Voltage	85 VAC to 135 VAC line to neutral
Input Frequency	48 to 62 Hz
Output Voltage	120 VAC +/- 3% 120/240 VAC, 1-Phase, 2 Wire plus Ground
Output Frequency	60 Hz
Power	VA required of running 2 VTMS signs at one location during a power outage for up to 8 hours. The unit shall be temperature rated to operate from 0 degree C to +40 degree C.

The UPS system shall be capable of producing simultaneously-fully regenerated, conditioned power with true sine wave and continuous AC outputs with stand by capability.

The unit shall have a re-settable power event counter to record the number of power utility failures, a battery run-time counter and temperature compensated battery charging.

The UPS System shall be capable of providing continuous, fully conditioned (both voltage and frequency), regulated, sinusoidal (AC) power to selected devices such as controllers, modems, and 5 volt power supplies, and sign face drivers.

Wiring shall comply with national electrical code (NEC) standards and approved wiring methods. Properly rated SO/SJO cords shall be allowed to allow easy replacement of the UPS System.

The interconnect cable shall be protected with abrasion-resistant nylon sheathing.

The UPS shall consist of two major components, the electronics module and the battery system.

(a) The electronics module shall consist of the following:

1. True Sine wave, high frequency inverter.
2. Minimum 3-stage, temperature compensated, battery charger

-2-

**REVISION OF SECTION 614
UNINTERRUPTIBLE POWER SUPPLY FOR VARIABLE TOLL MESSAGE SIGN (VTMS)**

3. For connection from the electronics module to the battery system, a dedicated harness shall be provided with quick-release, keyed, circular connectors, and braided nylon sleeving over all conductors.
 4. Local and remote control of UPS functions
 5. Local and remote communications capabilities
- (b) The battery system shall consist of the following:
1. Shall meet the continuous 8 hour requirement to run sign electronics, communication equipment, and half of the sign face with all LEDs illuminated at daytime brightness levels.
 2. The batteries shall be comprised of extreme temperature, deep cycle Absorbed Glass Mat/Valve Regulated Lead Acid (AGM/VRLA) batteries that have been field proven and tested by the U.S. military.
 3. Batteries shall be certified to operate at extreme temperatures from -40°C to +74°C.
 4. The batteries shall be provided with appropriate interconnect wiring and a corrosion-resistant mounting trays and/or brackets appropriate for the location into which they will be installed.
 5. Battery construction shall include heavy-duty, inter-cell connections for low-impedance between cells and heavy-duty plates to withstand shock and vibration.
- (c) The UPS enclosure shall have forced air cooling/ventilation:
1. The UPS shall be forced air cooled by, internally mounted, continuous fans.
 2. Fan power shall be provided from the internal DC supply.
 3. Air intake shall be through the front bottom of the unit, and air exhaust shall be out the rear top of the unit.
 4. Intake and exhaust shall have bird/rodent mesh guard and filtration.
 5. The thermal design, along with all thermal and ambient sensors, shall be coordinated with the protective devices before excessive component or internal cabinet temperatures are exceeded

The UPS System shall come standard with software, RS232 interface via a DB-9F connector, and Ethernet interface via RJ-45 connector allowing full, interactive, remote computer monitoring and control of the UPS functions. The software shall allow the user to set up all operational parameters either locally or remotely and test the functionality of the unit. The unit shall be capable of sending simple network management protocol (SNMP) alarm traps upon alarm conditions and also be configurable via built in web page interface.

-3-

**REVISION OF SECTION 614
UNINTERRUPTIBLE POWER SUPPLY FOR VARIABLE TOLL MESSAGE SIGN (VTMS)**

The UPS System alarm function monitoring shall come standard with a DB-9F connector with open collectors (40 V @ 20 mA) indicating:

- (a) Loss of utility power
- (b) Inverter failure
- (c) Low battery

The UPS System Front Panel Controls shall come standard with Power ON, Cold (DC) Start, Alarm Silence, Battery Test, Bypass Breaker and DC/Battery Breaker.

Reliability shall be calculated with mean time between failure (MTBF) as 100,000 hours based on component ratings.

CONSTRUCTION REQUIREMENTS

Contractor shall provide detailed design and installation plans for Department approval prior to installation. Power feeding the sign shall first terminate in the ground mounted cabinet. Non-UPS power shall pass through the cabinet to power non-UPS loads. Power required for sign backup shall feed through the UPS system. A bypass switch, rated for the designed system, shall be installed to bypass the UPS in the event of UPS failure or for system maintenance. A disconnect switch shall also be installed to disconnect UPS and line power from the sign. The Contractor shall install the UPS output into the VTMS power distribution panel per sign manufacture recommendations. Serial and Ethernet cables shall be installed from the UPS system ground cabinet to the sign communication device location. All wiring shall conform to the latest version of the NEC.

**REVISION OF SECTION 614
TRAVEL TIME INDICATOR**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work shall consist of furnishing and installing a Travel Time Indicator (TTI) in accordance with the Plans, these Special Provisions, and manufacturer's recommendations.

MATERIALS

A Travel Time Indicator system includes: a four channel multi-protocol RFID Reader 6204, or current version at the time of ordering, with power supply and composite cable, directional antennas, antenna signal cable and terminations, waterproofing mastic, serial surge suppressor, device configuration software, and all other related mounting hardware, cabling, and adaptors.

Travel Time Indicator shall include:

1. RFID Reader 6204 with power supply.

The TTI reader shall be part number 75-0302-3854-9 6204 - 4-pt ISO C B 10374 ASTMV6 PS111 T21, as manufactured by 3M Company – MVSS, 3M Center, Bldg 235-3A-09, St. Paul, MN 55144-1000, Phone: 1-877-777-3571, Fax: 1-800-591-9293. The Contractor must specify that v3.8 of the init.py script be preinstalled in the reader at the time of order.

2. Composite Cable

The composite cables shall include the following part numbers based on length required at each site:

- A. 20 feet (6 meters), RJ-45 terminated, 3M SKU: 75-0302-0132-3
- B. 7 feet (2 meters), RJ-45 terminated, 3M SKU: 75-0302-0131-5

3. Directional Antenna

The antenna shall be per the below table or approved equivalent and shall include a mount bracket. One antenna is required per vehicle detection direction and per port.

Application	Field of	3M SKU
Overhead Mount	22°	75-0302-0147-1
Side or Overhead	36°	78-0060-1048-8
Side or Overhead	42°	78-0060-1044-7

4. Antenna coaxial cable and terminations.

- A. The type of antenna signal cable used is determined by the distance from the reader to the antenna. Total signal loss on antenna cable runs shall remain below the manufacturer's recommendations for the intended application. At a transponder operating frequency of 916 megahertz (Mhz) the loss of the total cable assembly,

-2-

REVISION OF SECTION 614 TRAVEL TIME INDICATOR

including any jumpers or intermediate connectors, shall be less than 3 decibels (dB) for TTI installations. For antenna runs installed using a continuous cable, the following cable types shall be used up to the prescribed maximum length.

- (1) For runs 50 feet or less – Land Mobile Radio (LMR) - LMR-400.
- (2) For runs from 51-100 feet - LMR-600
- (3) For runs from 101-150 feet - LMR 900

B. Signal cable shall be terminated with weatherproof male N-type crimp on straight plugs that have the following properties. When available, terminations with soldered center conductor and crimped outer ferrule shall be used.

- (1) Ferrule – Copper with Albaloy (tin-zinc-copper alloy) plating
- (2) Contact pin – Brass with minimum 15 micrometer gold plating
- (3) Retaining ring – 304 stainless steel
- (4) Gasket – Silicone
- (5) Insulator – Teflon
- (6) Shell/Body – Brass with Albaloy plating
- (7) Impedance – 50 ohms
- (8) Insulation resistance - Greater than 5,000 megaohms
- (9) Peak operating voltage – 1,500 volts
- (10) Water-proofing mastic for antennas connections.

When LMR-900 cable is required, cable reduction jumpers not to exceed 4 feet in length, unless otherwise Approved by the Engineer, may be used in the cabinet at the reader-side connection. In these cases, it is the contractor's responsibility to ensure that the signal loss on the entire installed cable assembly does not exceed 3dB at 916 MHz for TTI installations or manufacturer's recommendations for alternate applications.

5. Serial surge suppressor shall be Wavetronix Click WX-CLK-200 or equivalent.
6. Device configuration software as provided by the manufacturer.
7. Mounting hardware, cabling, and adaptors including but not limited to: 0.75 inch Type 201 stainless steel strap with Type 201 stainless steel buckles, Liquidtight flexible conduit with compatible connectors.

CONSTRUCTION REQUIREMENTS

The Travel Time Indicator reader shall be mounted inside the communications cabinet allowing room for all communication cable connections. Self-tapping screws shall be used to mount the reader to the cabinet for ease of removal.

The power supply shall be mounted to Deutsches Institut für Normung (DIN) rail inside the communications cabinet. All wiring shall conform to the most current version of the National Electric Code (NEC).

-3-

**REVISION OF SECTION 614
 TRAVEL TIME INDICATOR**

The Contractor shall supply and install one-inch type 201 stainless steel strap used in conjunction with type 201 stainless steel buckles which shall be used to band the antenna mount to the structure at the mounting height directed by the Engineer. The Antenna shall be mounted horizontally polarized using the included stainless hardware. The antenna shall be oriented such that it intersects with the oncoming traffic at a 45 degree angle, and is aimed to the center of lanes detected.

The Contractor shall install flexible conduit from the communication cabinet enclosure to the structure for signal cable and power cable installation. Holes made in mounting structures shall be the minimum size necessary to secure the conduit connectors and shall not exceed 1.5 inches in diameter. All holes shall be free of burs and sharp edges prior to the installation of all cable, conduit, and conduit nipples. All cable entrances in structures, conduits, and enclosures shall be sealed and waterproofed. All wiring and electrical connections shall be performed in conformance with the latest version of the NEC.

The signal cable shall connect radio frequency (RF) input/output channels from the TTI reader to the TTI directional antennas – one cable per antenna. The Contractor shall route signal cable through existing structures or through new flexible or rigid polyvinylchloride (PVC) conduit mounted to existing structures as shown on the plans. Each signal cable shall be a continuous cable, with no splices, terminated with male N-type crimp on straight plugs on both ends. Installations that require cable lengths exceeding 100 feet shall utilize lower loss cable as to not exceed 3-4dB of loss per run. All signal cables shall be labeled on both ends with ultraviolet (UV) light resistant colored tape before installation. The same color label shall be used on both ends of one cable and label colors shall not repeat at the same installation site. Labels shall be installed such that they are distinguishable from the ground wire.

The Contractor shall ensure strain relief and drip loops in coaxial antenna cable. The Contractor shall provide full support to all coaxial cable not in conduit and wiring trays. All cable entrances in conduits, conduit entrances in structures and cabinets shall be sealed and waterproofed. Conduit and signal cable shall not enter the top of the communications cabinet that houses the TTI reader. Entering through the bottom of the cabinet is preferred, although side entrances will be permitted. Waterproofing mastic shall be applied at all antennas to signal cable connections following manufacturer’s recommendations.

The Contractor shall connect antenna signal cables to the TTI reader per the following table:

		TTI Reader Antenna Port			
		1	2	3	4
Traffic Detection Direction	General Purpose Lanes*	Northbound	Southbound	Eastbound	Westbound
	Managed Lanes*	Eastbound	Westbound	Northbound	Southbound
	Uni-Directional Multi-Pickup (All NB, SB, EB, or WB Detection)**	Lane/s closest to median or managed lane/s	Lane/s 2 nd closest to median	Lane/s 3 rd closest to median	Lane/s 4 th closest to median or closest to shoulder or ramp/s

*For multi-directional readers or sites where 2 or fewer antennas are used per traffic direction.

**For uni-directional readers that use 2 or more antennas for traffic in the same direction.

-4-

**REVISION OF SECTION 614
TRAVEL TIME INDICATOR**

RS-232 serial and Ethernet communications from the TTI reader shall terminate on their respective surge suppression device. The connection to serial surge suppressor shall allow access to the reader via laptop computer.

The Contractor shall configure the TTI in accordance with manufacturer's recommendations and the following specifications:

1. CalTrans Title 21 and ISOC protocols enabled for tag detection with only active antenna channels enabled
2. Power levels set to the minimum needed for reliable transponder detection.

The unit shall be configured for serial communication with the following:

1. 19,200 bits per second
2. 8 data bits
3. No parity
4. 1 stop bit
5. No flow control

TPS script v 3.8 shall be configured in the TTI reader per CDOT guidelines with the following:

1. interval: 60 seconds
2. Reader ID: as shown on the plans
3. Heartbeat: 10 seconds

The Contractor shall follow procedures in the Testing and Integration Plan to achieve Acceptance of the installation.

The TTI will be installed, and shall include warranty, documentation, RFID Reader 6204, power supply, antenna mounts, antennas, waterproofing mastic, conduit and connectors, installation hardware, all necessary wiring, test equipment, labor, and all other items necessary to complete the work. Each TTI shall include aiming the antenna, complete in place, in accordance with the Plans and these Special Provisions. TTI shall include reader connections, testing, warranty, documentation, all necessary cabling (excluding signal cable), all equipment and labor necessary for installation, and all other items necessary to complete the work.

REVISION OF SECTION 614 COMMUNICATIONS CABINET

Section 614 of the Standard specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work consists of furnishing and installing ground-mounted Communications Cabinets.

The Communications Cabinet (Type 332) shall be furnished for designated locations to house and protect field equipment, communications equipment, toll point Uninterruptible Power Supplies (UPS), batteries and power connections.

The Communications Cabinet (Type 332D) shall be furnished for designated locations to house and protect field equipment, communications equipment, UPS, batteries and power connections.

MATERIALS

Communication Cabinets. The nominal dimensions shall be as shown in Table 1 below. Some variance from these dimensions may be accepted at the Department's discretion.

Table 1 - Communications Cabinet Types

Cabinet Type	Nominal Dimensions
Communications Cabinet (Type 332)	67" (H) × 24" (W) × 30" (D)
Communications Cabinet (Type 332D)	67" (H) × 49" (W) × 30" (D)

The following apply to all ground mounted Communications Cabinets:

Each Cabinet shall be UL 508A Industrial Control Panels listed and conform to the National Electrical Manufacturers Association (NEMA) Type 3R rating. The Cabinets shall be H-32 aluminum conforming to the requirements of American Society for Testing and Materials (ASTM) B209 *Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate*.

All bolts, clamps, fasteners, hinges, latches, nuts and screws shall be stainless steel, unless an alternative corrosion proof material has been Accepted in writing by the Department.

A Cabinet grounding stud shall be provided in the vicinity of the ground bus mounted on the back panel and shown on the Plans.

All fabricated materials and added components must be free from burrs and sharp edges. Exterior seams of the Cabinet shall be continuously welded with edges ground smooth to a 0.03 inch radius. All welding shall be done with gas tungsten arc welds that comply with AWS B2.1-22-015 *Standard Welding Procedure Specification for Gas Tungsten Arc Welding of Aluminum* and C5.6 *Recommended Practices for Gas Metal Arc Welding*. All welds shall be neatly formed and free of blisters, blowholes, cracks and other irregularities.

The Cabinet door openings shall be designed to prevent dust and moisture intrusion in conformance to NEMA 3R requirements. All flange joints shall be welded or continuously formed. The doors shall have an adequately sized, oil- resistant gasket that provides a uniform seal with the door frame surface in conformance with NEMA 3R requirements and shall be permanently bonded to the door. The door shall utilize a continuous stainless steel hinge that allow for door removal from the hinge side. Hinges shall be

-2-

REVISION OF SECTION 614 COMMUNICATIONS CABINET

mounted such that the Cabinet door opens out to the left, unless otherwise specified on the Plans, Project Details or as specified by the Department.

Hinges shall be mounted with appropriately sized stainless steel hardware. The door shall be equipped with a hasp and staple for padlocking and Corbin #2 key lock, without impacting the NEMA 3R rating. A document holder constructed of high-impact thermoplastic shall be provided for each Cabinet and permanently mounted to the inside of the door. The Contractor shall insert a copy of the communications Cabinet Bill of Materials (BOM), individual Cabinet component specification sheets and an as built electrical/low-voltage wiring diagram for the Cabinet in the document holder.

A DIN rail shall be provided with each Cabinet.

Internal Cabinet Lighting. Provide a minimum of two light-emitting diode (LED) light strips per door opening to provide illumination for the entire Cabinet interior. Each door opening shall also be equipped with a door switch to activate the Cabinet lighting. LED light strips and door switches shall be mounted such that they do not interfere with use of rack space or other devices in the Cabinet and shall be easily removable for replacement.

Ventilation. Provide two (2), independently wired, 100 CFM exhaust fans near the top of the Cabinet that are controlled by independent adjustable thermostats. Provide filtered air intake ports with removable and replaceable filter on the bottom third of each access door.

Grounding Bus Bar. Equipment ground bus bars shall be provided for each Cabinet. Bus bars shall be UL listed and be fabricated from solid, 110 alloy copper. Each bus bar shall accommodate a minimum of seven (7) lug positions. The equipment grounding bus bar shall provide an additional 25 percent lug position capacity over the amount of terminations utilized for the Project. Multiple bus bars may be used within each Cabinet, if the interior dimensions of the Cabinet do not allow for the use of a larger bus bar. Each bus bar shall include insulators, stand-off brackets, snap on covers, and stainless steel mounting hardware.

Foundation. Each Communication Cabinet shall include a polymer concrete or poured concrete pad that extends at least 2.5 feet beyond the Cabinet base on each Cabinet door side and at least 6 inches beyond the Cabinet base on the other 2 sides. The Cabinet base shall be sealed around conduits.

Receptacles. Provide a minimum of one 15-amp NEMA 15-R 120VAC duplex GFCI receptacle labeled "Convenience Outlet" and one 15-amp NEMA 15-R 120VAC duplex receptacle labeled "ITS Equipment", each with a dedicated circuit.

-3-

REVISION OF SECTION 614 COMMUNICATIONS CABINET

Power Conditioner. The power conditioner shall be installed in the cabinet to provide both fully regenerated, conditioned power with true sine wave and continuous AC outputs to controllers and communication devices, simultaneously. The power conditioner shall be designed for outdoor use, support an operating temperature range of -40°F to +165°F, be operational in humidity levels of 0% to 95% (non-condensing) and operate at an altitude ranging from sea level to two miles above sea level. It shall utilize an input voltage of 120 VAC, 40 to 70 Hz and an output voltage of 120 VAC ($\pm 3\%$), user selectable 50 to 60 Hz ($\pm 0.25\%$).

The power conditioner shall support a maximum output of 1400W at 120 V. It shall have a total harmonic distortion not exceeding 3.0%. The power conditioner shall utilize input and output electrical connectors conforming to the IEC 60320-1 *Appliance Couplers for Household and Similar General Purposes* specification. Its dimensions shall not exceed 1.7 inches (H) \times 11 inches (W) \times 8.5 inches (D) and its weight shall not exceed 5 lbs. One power conditioner shall be provided with each cabinet, and shall be of higher capacity if necessary to accommodate the UPS design.

An integral component of the power conditioner shall be a factory-installed power strip. The power strip shall have six (6) front facing NEMA Type 5-20R outlets. The power strip shall be rated for 20 A at 120 VAC. It shall have an energy rating of 630 Joules, clamping voltage of 500 V and EMI/RFI noise filter of 150 KHz to 100 MHz at up to 43 dB. The power strip shall have a recessed power switch and a power cord of not less than 2.5 feet. The dimensions of the power strip shall be 10 inches (L) \times 1.63 inches (W).

Load Center. Each load center shall be readily accessible on the interior of the cabinet close to a door. The load center shall provide a main and a minimum of four (4) branch circuits. The neutral and ground bars shall be tied together in the load center. The ground bar shall be connected to the service disconnect using a bonding strap. The ground bar shall be connected to a grounding electrode using grounding conductors conforming to the requirements of Article 250.122 of the NEC. The grounding electrode shall conform to the requirements of Articles 250.52 through 250.70 of the NEC.

Specific to the Communications Cabinet (Type 332): Contractor shall provide a Cabinet rack at full-height standard Electronics Industry Alliance (EIA), 19-inch rack, with a minimum of one pullout drawer.

Specific to the Communications Cabinet (Type 332D): Contractor shall provide 2 Cabinet racks at full-height standard Electronics Industry Alliance (EIA), 19-inch racks, with a minimum of one pullout drawer.

CONSTRUCTION REQUIREMENTS

Conduit into all Cabinets for electrical wiring, specific field device low-voltage control cabling, waveguides and fiber optic cabling, shall be plugged with a manual plug (no foam sealant is allowed). After installation, the top of the cabinet should be approximately 5 feet above the prevailing ground line.

~~-4-~~

**REVISION OF SECTION 614
COMMUNICATIONS CABINET**

Conduit into the Cabinet for electrical wiring, specific field device low-voltage control cabling, and fiber optic cabling, shall be plugged with a manual plug (no foam sealant is allowed).

Cable management and strain relief shall be employed within the communications Cabinet. Cables shall be labeled and neatly organized using cable ties and/or velcro. Velcro shall be used on fiber optic jumper cables or bundles of cables containing fiber optic jumper cables.

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
 COMMUNICATIONS CABINET (TYPE I)**

Section 614 of the Standard specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work consists of furnishing and installing communications cabinets at designated Intelligent Transportation System (ITS) field device locations to house and protect electrical power components. Communication Cabinet (Type 1) shall be furnished and installed at field device sites to house and protect electrical power components, DIN rails, field equipment, serial servers, communications telemetry equipment and fiber optic termination panels. Each Communication Cabinet (Type 1) shall be pole-mounted.

MATERIALS

The nominal dimensions shall be as shown in Table 1 below. Some variance from these dimensions will be accepted, at the Department’s discretion.

Table 1 - Communications Cabinet Types

Cabinet Type	Dimensions	Maximum Weight (w/o back panel)
Communications Cabinet (Type 1)	36” (H) × 24” (W) × 18” (D)	N / A

Cabinets shall be UL 508A Industrial Control Panels listed and conform to National Electrical Manufacturers Association (NEMA) Type 3R rating. Communications cabinets shall be H-32 aluminum conforming to the requirements of ASTM B209 *Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate*.

All bolts, clamps, fasteners, hinges, latches, nuts and screws shall be stainless steel, unless an alternative corrosion proof material has been Approved by the Department and is in writing.

A Cabinet grounding stud shall be provided in the vicinity of the ground bus mounted on the back panel as shown on the Plans.

All fabricated materials and added components must be free from burrs and sharp edges. Exterior seams of the cabinet shall be continuously welded with edges ground smooth to a 0.03 inch radius. All welding shall be done with gas tungsten arc welds that comply with AWS B2.1-22-015 *Standard Welding Procedure Specification for Gas Tungsten Arc Welding of Aluminum* and C5.6 *Recommended Practices for Gas Metal Arc Welding*. All welds shall be neatly formed and free of blisters, blowholes, cracks and other irregularities. All bolts, clamps, fasteners, hinges, latches, nuts and screws shall be stainless steel, unless an alternative corrosion proof material has been Approved by the Department and is in writing.

The Cabinet door openings shall be designed to prevent dust and moisture intrusion in conformance to NEMA 3R requirements. All flange joints shall be welded or continuously formed. The doors shall have an adequately sized, oil- resistant gasket that provides a uniform seal with the door frame surface in conformance with NEMA 3R requirements and shall be permanently bonded to the door. The door shall utilize a continuous stainless steel hinge that allow for door removal from the hinge side. Hinges shall be mounted such that the Cabinet door opens out to the left, unless otherwise specified on the Plans, Project Details or as specified by the Department.

-2-

**REVISION OF SECTION 614
COMMUNICATIONS CABINET (TYPE I)**

Hinges shall be mounted with appropriately sized stainless steel hardware. The door shall be equipped with a hasp and staple for padlocking and Corbin #2 key lock be utilized in place of the hasp and staple if the NEMA 3R rating can be maintained. A document holder constructed of high-impact thermoplastic shall be provided for each communications Cabinet and permanently mounted to the lower portion of the inside door. The Contractor shall insert a copy of the Communications Cabinet Bill of Materials (BOM), individual Cabinet component specification sheets and an as built electrical/low-voltage wiring diagram of the Cabinet in the document holder.

Back Panels

Back panels shall be constructed of 0.10 inch Type 5052-H32 aluminum alloy, unless otherwise specified by the

Department. Two back panels and associated mounting hardware shall be included with each Cabinet and be rated for use in NEMA 3R Cabinets. The back panel shall be approximately 1-inch less than the inside dimensions. The back panel shall be 1-inch thick, with air space to allow for mounting screws to be used from either side without protrusion through the opposing face. The back panel shall be mounted within the communications Cabinet with a minimum of four screws on an adjustable sliding channel.

Outlet Box

The communications Cabinet shall contain a 4 inch square junction box attached to the back panel and near the door opposing the external service disconnect on side B. Each junction box shall be constructed of drawn or welded steel and have a minimum depth of 1.25 inches. Each junction box shall include knockouts and clamps for conduit and cables, as appropriate. Steel box covers shall be provided with each junction box as appropriate for the specific communications Cabinet application, e.g., duplex receptacles and/or duplex GFCI receptacles.

A duplex NEMA 5-15R receptacle shall be provided within the outlet box opposing the external service disconnect. NEMA 5-15R receptacles shall be rated for 125 VAC, 0.5 HP and 15 A. It shall be of commercial grade quality and be manufactured from high strength nylon. NEMA 5-15 receptacles shall have two poles, three wires and include a self-grounding strap to insure ground contact.

Duplex NEMA 5-15R GFCI receptacles shall be provided within the outlet box mounted to the backplane of side A. NEMA 5-15R GFCI receptacles shall be rated for 125 VAC, 0.5 HP and 15 A. It shall be of commercial grade quality and manufactured from high strength nylon.

Both duplex NEMA 5-15R and duplex NEMA 5-15R GFCI receptacles shall be UL listed.

-3-

REVISION OF SECTION 614 COMMUNICATIONS CABINET (TYPE I)

Power Conditioner

The power conditioner shall be a Clary SP400U Universal Power Conditioner. The power conditioner shall be designed for outdoor use, support an operating temperature range of -40°F to +165°F, be operational in humidity levels of 0% to 95% (non-condensing) and operate at an altitude ranging from sea level to two miles above sea level. It shall utilize an input voltage of 120 VAC, 40 to 70 Hz and an output voltage of 120 VAC ($\pm 3\%$), user selectable 50 to 60 Hz ($\pm 0.25\%$). The power conditioner shall support an output current of 4.8 A (400 W/570 VA). It shall have a total harmonic distortion not exceeding 3.0%. The power conditioner shall utilize input and output electrical connectors conforming to the IEC 60320-1 *Appliance Couplers for Household and Similar General Purposes* specification. Its dimensions shall not exceed 1.7 inches (h) \times 11 inches (w) \times 8.5 inches depth and its weight shall not exceed 5 lbs. One power conditioner shall be provided with each communications Cabinet.

An integral component of the power conditioner shall be a factory-installed power strip. The power strip shall have six front facing NEMA Type 5-15R outlets. The power strip shall be rated for 15 A at 120 VAC. It shall have an energy rating of 630 Joules, clamping voltage of 500 V and EMI/RFI noise filter of 150 KHz to 100 MHz at up to 43 dB. The power strip shall have a recessed power switch and a power cord of not less than 2.5 feet. The dimensions of the power strip shall be 10 inches (L) \times 1.63 inches (W).

DIN Rails

Each communications Cabinet shall utilize standard 1.38 inch DIN rails. The DIN rails shall be of steel construction with a coating for corrosion resistance. The DIN rails shall utilize 0.25 inch \times 0.71 inch slots for fastening to the back panel located in each communications Cabinet. The spacing of the DIN rail slots shall be 0.98 inch center-to-center. DIN rails and associated mounting hardware for attachment to the back panel shall be provided with each communications Cabinet in the lengths and quantities specified in the Project Details.

12 VDC Power Supply

The 12 VDC power supply shall support an input voltage range of 85-264 VAC and frequency range of 47-63 Hz. It shall have a typical efficiency of at least 76% and typical AC current of 1.6 A at 115 VAC. The 12 VDC power supply shall provide an output voltage of 12 VDC and have a current rating of 6.3 A. It shall support an output current range of 0 to 6.3 A and have a rated power of 75 W. The 12 VDC power supply shall have overload protection of 105-150% for its rated output power and overvoltage protection for voltages of 15-16.5 VDC. It shall be designed for an operating temperature of +14°F to +140°F and humidity levels of 20% to 90% (non-condensing). The 12 VDC power supply shall conform to the following standards: IEC 60068-2-6 *Environmental Testing (Vibration)* and UL 508 *Industrial Control Equipment*. It shall be DIN rail mountable, have dimensions not exceeding 5 inches (h) \times 2.25 inches (w) \times 4 inches (d) and a weight of not more than 1.5 lb. One 12 VDC power supply shall be provided with each communications Cabinet.

Service Disconnect. Each service disconnect shall be readily accessible and installed on the exterior of the Cabinet close to the door so that the center of the grip of the operating handle of the circuit breaker, when in its highest position, is not more than 6 feet 7 inches above the ground or as required per Article

-4-

REVISION OF SECTION 614 COMMUNICATIONS CABINET (TYPE I)

240.24 of the NEC. The neutral from the power source or service enclosure shall be connected to the ground bar in the service disconnect. The ground bar shall be connected to the service disconnect using a bonding strap.

The ground bar shall be connected to a grounding electrode using grounding conductors conforming to the requirements of Article 250.122 of the NEC. The grounding electrode shall conform to the requirements of Articles 250.52 through 250.70 of the NEC. The service disconnect shall feed a duplex NEMA 5-15R mounted on the inside of the Cabinet.

Pole Mounting Kit

Each Cabinet, designated for mounting on a pole, shall include a pole mounting kit suitable the pole diameters for which the Cabinet will be mounted. Each pole mounting kit shall include channel bars (for attachment to factory mounting holes on the back of the Cabinet), pole shims (to prevent Cabinet movement against pole), stainless steel straps and all other associated mounting and sealing hardware. The channel bars, pole shims and associated mounting hardware shall be manufactured from either galvanized steel or stainless steel. Mounting holes on the back of the Cabinet shall be installed at the factory (Cabinet manufacturer) to assure NEMA 3R integrity along with all factory-recommended mounting and sealing hardware. Field installation or modification of mounting holes shall be prohibited.

CONSTRUCTION REQUIREMENTS

Each Cabinet shall have tapped pads to provide for the mounting of a back panel as specified herein. Conduit accesses into the Cabinet for electrical wiring, specific field device low-voltage control cabling, waveguides and fiber optic cabling, shall be plugged with a manual plug (no foam sealant is allowed). After installation, the top of the Cabinet should be approximately 5 feet above the prevailing ground line.

**REVISION OF SECTION 614
 COMMUNICATIONS CABINET (TYPE 2)**

Section 614 of the Standard specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work consists of furnishing and installing Communications Cabinets at locations where an Uninterruptible Power Supplies (UPS) and batteries are not required to house and protect field equipment, communications equipment and power connections.

Communication Cabinet (Type 2) shall be a Caltrans 336S and shall be pole-mounted at all CCTV lowering device locations. Ground-mounted applications shall include a raised polymer concrete or poured concrete pad and base.

MATERIALS

The nominal dimensions shall be as shown in Table 1 below. Some variance from these dimensions will be accepted, at the Department’s discretion.

Table 1 - Communications Cabinet Types

Cabinet Type	Dimensions	Maximum Weight (w/o back panel)
Type 2	46 inches (H) × 24 inches (W) × 22 inches (D)	N / A

Each Cabinet shall be UL 508A *Industrial Control Panels* listed and conform to a NEMA Type 3R rating. Cabinet shall be H-32 aluminum conforming to the requirements of ASTM *B209 Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate*.

All bolts, clamps, fasteners, hinges, latches, nuts and screws shall be stainless steel, unless an alternative corrosion proof material has been Approved in writing by the Department.

A Cabinet grounding stud shall be provided in the vicinity of the ground bus mounted on the back panel as shown on the Plans.

All fabricated materials and added components must be free from burrs and sharp edges. Exterior seams of the Cabinet shall be continuously welded with edges ground smooth to a 0.03 inch radius. All welding shall be done with gas tungsten arc welds that comply with AWS B2.1-22-015 *Standard Welding Procedure Specification for Gas Tungsten Arc Welding of Aluminum and C5.6 Recommended Practices for Gas Metal Arc Welding*. All welds shall be neatly formed and free of blisters, blowholes, cracks and other irregularities.

The Cabinet door openings shall be designed to prevent dust and moisture intrusion in conformance to NEMA 3R requirements. All flange joints shall be welded or continuously formed. The doors shall have an adequately sized, oil- resistant gasket that provides a uniform seal with the door frame surface in conformance with NEMA 3R requirements and shall be permanently bonded to the door. The door shall utilize a continuous stainless steel hinge that allow for door removal from the hinge side. Hinges shall be mounted such that the Cabinet door opens out to the left, unless otherwise specified by the Department.

-2-

**REVISION OF SECTION 614
COMMUNICATIONS CABINET (TYPE 2)**

Hinges shall be mounted with appropriately sized stainless steel hardware. The door shall be equipped with a hasp and staple for padlocking and a Corbin #2 key lock without impacting the NEMA 3R rating. A document holder constructed of high-impact thermoplastic shall be provided for each Cabinet and permanently mounted to the inside of the door. The Contractor shall insert a copy of the Cabinet Bill of Materials (BOM), individual Cabinet component specification sheets and an as built electrical/low-voltage wiring diagram of the Cabinet in the document holder.

Internal Cabinet Lighting. Provide a minimum of two light-emitting diode (LED) light strips per door opening to provide illumination for the entire Cabinet interior. Each door opening shall also be equipped with a door switch to activate the Cabinet lighting. LED light strips and door switches shall be mounted such that they do not interfere with use of rack space or other devices in the Cabinet and shall be easily removable for replacement.

Ventilation. Provide 2, independently wired, 100 CFM exhaust fans near the top of the Cabinet that are controlled by independent adjustable thermostats. Provide filtered air intake ports with removable and replaceable filter on the bottom third of each access door.

Grounding Bus Bar. Equipment ground bus bars shall be provided for each Cabinet. Bus bars shall be UL listed and be fabricated from solid, 110 alloy copper. Each bus bar shall accommodate a minimum of 7 lug positions. The equipment grounding bus bar shall provide an additional 25 percent lug position capacity over the amount of terminations utilized for the Project. Multiple bus bars may be used within each Cabinet, if the interior dimensions of the Cabinet do not allow for the use of a larger bus bar. Each bus bar shall include insulators, stand-off brackets, snap on covers, and stainless steel mounting hardware.

Insulation. Provide R-4 insulation on interior, sides, top and all doors.

Cabinet Layout. Each Communications Cabinet shall be physically divided into 2 sides by a sliding back plane. The front side will house all associated ITS electronics, communication device hardware and a duplex GFCI convenience outlet. The back side will house the power and fiber resources, such as: 120V main power feeding the Cabinet, the Clary power conditioner, 6-outlet power strip, equipment power supplies, the fiber termination panel and slack fiber.

Back Plane (Front and Back Sides). The back plane shall be constructed of 0.10 inch Type 5052-H32 aluminum alloy, unless otherwise specified by the Department. A (two-sided) back plane and associated mounting hardware shall be included with each communications Cabinet and be rated for use in NEMA 3R Cabinets. The back plane shall be approximately 1-inch less on each side than the inside dimensions. The back plane shall have at least 1-inch of air space between the two sides to allow for mounting screws to be used from either side without protrusion through the opposing face. The back plane shall be mounted within the communications Cabinet with a minimum of four screws on an adjustable sliding channel.

-3-

**REVISION OF SECTION 614
COMMUNICATIONS CABINET (TYPE 2)**

Outlet Box.

(Front and Back Sides). The Cabinet shall contain a 4-inch square junction box attached to the back plane of the front side and near the door opposing the external service disconnect on the side wall of the back side. Each junction box shall be constructed of drawn or welded steel and have a minimum depth of 1.25 inches. Each junction box shall include knockouts and clamps for conduit and cables, as appropriate. Steel box covers shall be provided with each junction box as appropriate for duplex receptacle and/or a duplex GFCI receptacle.

A duplex NEMA 5-15R GFCI receptacle shall be provided within the outlet box mounted to the backplane of the front side, and be labeled "Convenience Outlet". NEMA 5-15R GFCI receptacles shall be rated for 125 VAC, 0.5 HP and 15 A. It shall be of commercial grade quality and manufactured from high strength nylon.

A duplex NEMA 5-15R receptacle shall be provided on the back side within the outlet box opposing the external service disconnect, and be labeled "ITS Equipment". The NEMA 5-15R receptacle shall be rated for 125 VAC, 0.5 HP and 15 A. It shall be of commercial grade quality and be manufactured from high strength nylon. The NEMA 5-15 receptacle shall have two poles, three wires and include a self-grounding strap to insure ground contact.

Both duplex NEMA 5-15R and duplex NEMA 5-15R GFCI receptacles shall be UL listed.

Power Conditioner (Back Side). The power conditioner shall be installed in the Cabinet to provide both fully regenerated, conditioned power with true sine wave and continuous AC outputs to controllers and communication devices, simultaneously.

The power conditioner shall be a Clary SP400U Universal Power Conditioner. The power conditioner shall be designed for outdoor use, support an operating temperature range of -40°F to +165°F, be operational in humidity levels of 0% to 95% (non-condensing) and operate at an altitude ranging from sea level to two miles above sea level. It shall utilize an input voltage of 120 VAC, 40 to 70 Hz and an output voltage of 120 VAC ($\pm 3\%$), user selectable 50 to 60 Hz ($\pm 0.25\%$). The power conditioner shall support a maximum output of 1400W at 120 V. It shall have a total harmonic distortion not exceeding 3.0%. The power conditioner shall utilize input and output electrical connectors conforming to the IEC 60320-1 *Appliance Couplers for Household and Similar General Purposes* specification. Its dimensions shall not exceed 1.7 inches (h) \times 11 inches (w) \times 8.5 inches depth and its weight shall not exceed 5 lbs. One power conditioner shall be provided with each Cabinet.

Six Outlet Power Strip (Front Side). An integral component of the power conditioner shall be a factory-installed power strip. The power strip shall have six front facing NEMA Type 5-20R outlets. The power strip shall be rated for 20 A at 120 VAC. It shall have an energy rating of 630 Joules, clamping voltage of 500 V and EMI/RFI noise filter of 150 KHz to 100 MHz at up to 43 dB. The power strip shall have a recessed power switch and a power cord of not less than 2.5 feet. The dimensions of the power strip shall be 10 inches (L) \times 1.63 inches (W).

-4-

REVISION OF SECTION 614 COMMUNICATIONS CABINET (TYPE 2)

DIN Rails (Front Side). Each Cabinet shall utilize standard 1.38 inch DIN rails. The DIN rails shall be of steel construction with a coating for corrosion resistance. The DIN rails shall utilize 0.25 inch × 0.71 inch slots for fastening to the back panel located in each Cabinet. The spacing of the DIN rail slots shall be 0.98 inch center-to-center. DIN rails and associated mounting hardware for attachment to the back panel shall be provided with each Cabinet.

Load Center. Each load center shall be readily accessible and installed on the exterior of the Cabinet close to the door on the back side positioned not more than 6 feet 7 inches above the ground or as required per Article 240.24 of the NEC. The load center shall provide a main and a minimum of four (4) branch circuits. The neutral and ground bars shall be tied together in the load center. The ground bar shall be connected to the service disconnect using a bonding strap.

The ground bar shall be connected to a grounding electrode using grounding conductors conforming to the requirements of Article 250.122 of the NEC. The grounding electrode shall conform to the requirements of Articles 250.52 through 250.70 of the NEC. The load center shall feed a duplex NEMA 5-15R mounted on the inside of the Cabinet.

Foundation. Each Communication Cabinet (Type 2) that is to be ground-mounted shall include a polymer concrete or poured concrete pad that extends at least 2.5 feet beyond the Cabinet base on each Cabinet door side and at least 6 inches beyond the Cabinet base on the other two sides. The Cabinet base shall be sealed around the conduits. There shall also be an 18 inch high aluminum riser. The bottom of this riser shall be solidly connected to the pad. The riser shall be approximately 2 feet above the pad and shall include connection mechanisms to which the Cabinet can be attached.

CONSTRUCTION REQUIREMENTS

Each Cabinet shall have tapped pads to provide for the mounting of a back panel as specified herein.

The Cabinet backplane shall be adjusted in depth to allow mounting of a 10 inch deep Ethernet switch on the front side rack rails.

Mounting of equipment and hardware onto the back panel shall be through the use of self-tapping screws or Velcro Extreme as required per the Plans. Self-tapping screws shall be of appropriate size for the equipment or hardware being installed onto the back panel. The length of the self-tapping screw shall not exceed a ½ inch and the bit recess in the screw head shall be hexagonal.

The power conditioner shall be mounted to the back plane on the back side of the Cabinet such that cooling vents remain unobstructed. The power strip shall be mounted on the back panel on the front side of the Cabinet.

-5-

**REVISION OF SECTION 614
COMMUNICATIONS CABINET (TYPE 2)**

DIN rail shall be mounted to the back panel on the front of the Cabinet to allow for current and future equipment.

Conduit accesses into the Cabinet for electrical wiring, specific field device low-voltage control cabling, and fiber optic cabling, shall be plugged with a manual plug (no foam sealant is allowed). After installation, the top of the Cabinet should be approximately 5 feet above the prevailing ground line.

Cable management and strain relief shall be employed within the Cabinet. Cables shall be labeled and neatly organized using cable ties and/or Velcro. Velcro shall be used on fiber optic jumper cables or bundles of cables containing fiber optic jumper cables. Unused spaces within the back panel and interior wall of the Cabinet may be used to facilitate cable management, but installation of cable management hardware that penetrate the exterior walls of the Cabinet shall not be permitted.

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
LANE CONTROLLER CABINET**

Section 614 of the Standard specifications is hereby revised for this Project as follows:

DESCRIPTION

Lane Controller Cabinet shall be furnished and installed at designated Toll Point locations to house and protect ETC components.

The Lane controller cabinet shall be a Type M Stretch Cabinet furnished for designated tolling field device sites to house and protect tolling equipment, communications equipment and power connections. The tolling equipment will be provided by others.

MATERIALS

The nominal dimensions shall be as shown in Table 1 below, but the final dimensions shall be coordinated with the Toll System Integrator prior to ordering.

Table 1 - Communications Cabinet Types

Cabinet Type	Nominal Dimensions
Lane Controller Cabinet	68" (H) × 31" (W) × 19" (D)

Each Cabinet shall be UL 508A *Industrial Control Panels* listed and conform to a NEMA Type 3R rating. The Cabinets shall be H-32 aluminum conforming to the requirements of ASTM B209 *Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate*.

All bolts, clamps, fasteners, hinges, latches, nuts and screws shall be stainless steel, unless an alternative corrosion proof material has been Approved by the Department and is in writing.

A Cabinet grounding stud shall be provided in the vicinity of the ground bus mounted on the back panel.

All fabricated materials and added components must be free from burrs and sharp edges. Exterior seams of the Cabinet shall be continuously welded with edges ground smooth to a 0.03 inch radius. All welding shall be done with gas tungsten arc welds that comply with AWS B2.1- 22-015 *Standard Welding Procedure Specification for Gas Tungsten Arc Welding of Aluminum* and C5.6 *Recommended Practices for Gas Metal Arc Welding*. All welds shall be neatly formed and free of blisters, blowholes, cracks and other irregularities. All bolts, clamps, fasteners, hinges, latches, nuts and screws shall be stainless steel, unless an alternative corrosion proof material has been Approved by the Department and is in writing.

The Cabinet door opening shall be designed to prevent dust and moisture intrusion in conformance to NEMA 3R requirements. All flange joints shall be welded or continuously formed. The door shall have an adequately sized, oil-resistant gasket that provides a uniform seal with the door frame surface in conformance with NEMA 3R requirements and shall be permanently bonded to the door. The door shall utilize a continuous stainless steel hinge that allow for door removal from the hinge side. Hinges shall be mounted such that the Cabinet door opens out to the left, unless otherwise specified by the Department. Hinges shall be mounted with appropriately sized stainless steel hardware. The door shall be equipped with a hasp and staple for padlocking and a Corbin #2 key lock without impacting the NEMA 3R rating. A document holder constructed of high-impact thermoplastic shall be provided for each lane controller Cabinet and permanently mounted to the inside of the door. The Contractor shall insert a copy of the

-2-

REVISION OF SECTION 614 LANE CONTROLLER CABINET

lane controller Cabinet Bill of Materials (BOM), individual Cabinet component specification sheets and an as-built electrical/low-voltage wiring diagram for the Cabinet in the document holder.

Each Cabinet shall have tapped pads to provide for the mounting of a back and side panels as specified herein.

Back and Side Panels. Back and side panels shall be constructed of 0.10 inch Type 5052-H32 aluminum alloy, unless otherwise specified by the Department. The back panel dimensions shall be approximately 25" W x 54" H, and shall be offset from the back of the Cabinet with enough air space to allow for mounting screws to be used without penetrating the external Cabinet shell. Proposed side panel dimensions shall be submitted to the Department for review based on the selected manufacturer's actual Cabinet dimensions. Panels shall mount on fixed bolts inside the Cabinet. All associated mounting hardware for the back and side panels shall be included with each communications Cabinet and be rated for use in NEMA 3R Cabinets.

A DIN rail shall be provided with each Cabinet.

Internal Cabinet Lighting. Provide a minimum of 2 light-emitting diode (LED) light strips per door opening to provide illumination for the entire Cabinet interior. Each door opening shall also be equipped with a door switch to activate the Cabinet lighting. LED light strips and door switches shall be mounted such that they do not interfere with use of rack space or other devices in the Cabinet and shall be easily removable for replacement.

Ventilation. Provide 2 independently wired, 100 CFM exhaust fans near the top of the Cabinet that are controlled by independent adjustable thermostats. Provide filtered air intake ports with removable and replaceable filter on the bottom third of each access door.

Grounding Bus Bar. Equipment ground bus bars shall be provided for each Cabinet. Bus bars shall be UL listed and be fabricated from solid, 110 alloy copper. Each bus bar shall accommodate a minimum of 7 lug positions. The equipment grounding bus bar shall provide an additional 25 percent lug position capacity over the amount of terminations utilized for the Project. Multiple bus bars may be used within each Cabinet, if the interior dimensions of the Cabinet do not allow for the use of a larger bus bar. Each bus bar shall include insulators, stand-off brackets, snap on covers, and stainless steel mounting hardware.

Insulation. Provide R-4 insulation on interior, sides, top and all doors.

Circuit Breakers. An appropriately sized terminal block for accepting the power feed wires from the toll point UPS and 3 circuit breakers (two 20 amp branch circuits and one 40 amp main) shall be provided with the Cabinet. The breakers shall be DIN rail mountable.

-3-

**REVISION OF SECTION 614
LANE CONTROLLER CABINET**

Cabinet Riser. A minimum 12 inch high riser is required for the tolling point Cabinets. The riser shall be constructed from the same material as the cabinet and shall include a connection mechanism to which the cabinet can be attached. The bottom of the riser shall be solidly connected to the pad.

Foundation. Each Cabinet shall include a polymer concrete or poured concrete pad that extends at least 2.5 feet beyond the cabinet base on each cabinet door side and at least 6 inches beyond the cabinet base on the other 2 sides. The conduit around the Cabinet base shall be sealed.

CONSTRUCTION REQUIREMENTS

Each Cabinet shall have tapped pads to provide for the mounting of a back panel as specified herein.

Conduit accesses into all Cabinets for electrical wiring, specific field device low-voltage control cabling, waveguides and fiber optic cabling, shall be plugged with a manual plug (no foam sealant is allowed).

Conduit accesses into the Cabinet for electrical wiring, specific field device low-voltage control cabling, and fiber optic cabling, shall be plugged with a manual plug (no foam sealant is allowed).

Cable management and strain relief shall be employed within the communications Cabinet. Cables shall be labeled and neatly organized using cable ties and/or velcro. Velcro shall be used on fiber optic jumper cables or bundles of cables containing fiber optic jumper cables.

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
MICROWAVE VEHICLE RADAR DETECTOR (NON 334)
This specification is to be used for all NON 334 cabinet sites.**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work shall consist of furnishing, installing, and configuring a microwave vehicle radar detector (MVRD) in accordance with these Special Provisions at the locations without ground mounted 334 cabinets. Contractor shall order the Wavetronix SmartSensor HD, configuration software, mounting hardware, and compatible Click! DIN rail mountable components.

MATERIALS

The Microwave Vehicle Radar Detector shall include: the radar detection unit with mounting hardware, manufacturer configuration software, power/communication cable, detection unit power supply, serial surge suppression, serial to Internet Protocol (IP) converter, and any additional hardware necessary for a complete and functional installation.

The radar detection unit shall be a Wavetronix SmartSensor HD, model number 101-0415 meeting the following requirements:

The radar detection unit shall include a non-intrusive device using frequency modulated continuous wave radar technology for the gathering of vehicle information including traffic volume, lane occupancy, individual and average speed, vehicle classification, and presence. It shall have auto configuration capabilities to simultaneously identify up to twelve highway lanes with the ability to detect over center median barriers and accurately detect partially occluded vehicles. Weather shall not impact the radar detection of the unit. Wind or temperature change shall not cause the device's original field installation configuration to alter over time. The radar detection unit shall include necessary hardware for pole mounting.

Manufacturer configuration software shall be the latest production version and allow for device discovery, configuration, and troubleshooting.

The power/communication cable shall be the manufacturer's recommended cable for functional operation of the radar detection unit.

A WX-CLK-301 module shall be furnished and installed, along with any cabling, to convert communications from Serial to Ethernet.

The detection unit power supply shall be Wavetronix WX-CLK-201 DIN mountable hardened AC to DC supply meeting manufacturer's recommendations for functional operation. Power supplies are not required when installed at ITS cabinets with existing 12VDC power supplies.

Serial surge suppressor shall be Wavetronix Click WX-CLK-200. The surge suppressor shall be DIN rail mountable with hot swappable protected busses. The surge suppressor shall provide protection for RS-232, RS-485, and DC power to the radar detection unit. Wiring for the surge suppressor shall be by means of pluggable screw terminals and include unprotected RS-232 and RS-485 communications connectors. The surge suppressor shall have a minimum operating temperature range of -29 to 165°F up to 95 percent relative humidity.

-2-

REVISION OF SECTION 614 MICROWAVE VEHICLE RADAR DETECTOR (NON 334)

The serial to IP converter shall be an externally powered, hardened, 35 millimeter DIN mountable unit, with one RJ-45 port for connection to an Ethernet network, one screw terminal port for connection to a serial device, and one DB-9M pass through port for local communication. It shall operate in a minimum temperature range of -30 to 165°F at 0 to 90 percent non-condensing humidity. The converter shall be powered externally and run off of 9 to 30 VDC drawing a maximum of 6 watts.

It shall support RS-232, 422, and 485 serial protocols at data rates from 300 to 230 kilobits per second, with hardware and software support for request to send (RTS), clear to send (CTS), data terminal ready (DTR), data set ready (DSR), and data carrier detect (DCD) signal control lines and modem emulation. Power, Ethernet, serial signals, and diagnostic status shall be visible via individual built in light emitting diodes (LEDs).

The converter shall be capable of a 10/100 megabit per second full duplex Ethernet connection. Serial ports shall be accessible via transmission control protocol/IP (TCP/IP), user datagram protocol/IP (UDP/IP), and include software drivers for mapping the ports to Windows, Linux, and Unix operating systems using a secure encrypted connection. It shall be configurable via command line interface through the serial port and integrated web interface via Ethernet connection. It shall be capable of serial bridging across an Ethernet network when two units are used together.

The converter shall support the following protocols: http/https, SNMP, TCP & UDP/IP, ASCII, DHCP, ARP, telnet, reverse telnet, PPP, SSH, SSL/TLS, and AES. The converter shall satisfy underwriters laboratories (UL) 1950, ANSI/ISA 12.12.01-2000 – Nonincendive Electrical Equipment for Use in Class I and II, Division 2 and Class III, Divisions 1 and 2 Hazardous (Classified) Locations, and Federal Communications Commission (FCC) part 15 (Class A).

The converter power supply shall be designed for a minimum operating temperature range of -13°F to +158°F at humidity levels of 20 to 95 percent (non-condensing), be DIN rail mountable and meet all manufacturer recommendations. The power supply will not be required at Type 1 and Type 2 communications cabinets where a 12 VDC power supply is provided with the cabinet and there is enough capacity on the supply to power all designated 12 VDC equipment at 80 percent loading.

Additional hardware, including but not limited to the following shall be supplied by the Contractor: mounting hardware, data interconnection cables, and power cables.

CONSTRUCTION REQUIREMENTS

The radar detection unit shall be mounted with 0.75 inch Type 201 stainless steel strap and buckles at a height and angle determined by roadway off-set and detection distance in accordance with manufacturer's recommendations.

The power/communication cable shall run from the radar detection unit through the mounting structure to the communications cabinet. A hole not to exceed 1.5 inches shall be made to allow passage of the power/communications cable into the structure. The hole shall not be made below the centerline of the sensor mount, or more than 2 feet above the centerline of the sensor mount. The Contractor shall ensure strain relief and drip loops in the power/communication cable before the cable enters the structure in accordance with manufacture's recommendations, and shall seal the hole with duct seal. Flexible conduit shall be used to run cables from the structure to the communications cabinet. A hole not to exceed 1.5

-3-

**REVISION OF SECTION 614
MICROWAVE VEHICLE RADAR DETECTOR (NON 334)**

inches shall be made below the communications cabinet to allow the power cable and communications cable to pass from the interior of the structure to the interior of the communications cabinet.

All holes shall be free of burs and sharp edges prior to the installation of all cable, conduit, and conduit nipples. All cable entrances in structures, conduits, and cabinets shall be sealed and waterproofed. All wiring and electrical connections shall be performed in conformance with the latest version of the NEC.

The serial surge suppressor shall be installed on DIN rail inside the communication cabinet. The power/communications cable shall be terminated on the protected side of the WX-SC-200 surge suppression unit per manufacturer's recommendations. The radar detection unit shall be wired to support RS-232 and RS-485 serial communications. Power shall be wired to the manufacturer's recommended power supply or the existing 12VDC power supply supplied in the communications cabinet. Wiring from the surge suppressor to the communication device shall be stranded Cat5 cable.

The serial to IP converter shall be installed on DIN rail inside the communication cabinet and powered from the manufacturer's approved power supply. When installed in a Type 1 or Type 2 communications cabinet, the 12 VDC power supply provided with the cabinet shall be used instead to power the converter as long as the final total load on the supply is less than 80 percent of total capacity.

The network connection from the converter to the field communication equipment shall be made with Cat5e cable using 8P8C terminations. The cable shall be long enough to connect from the field communication equipment directly to the serial device being converted to allow for future upgrade of the device to direct Ethernet communications.

The serial connection from the converter to the serial surge protector shall be made with stranded Cat5e cable. All bare wire connections shall be cleanly terminated with no stray or loose wires.

The network connection from the converter to the field communication equipment shall be made with Cat5e cable using 8P8C terminations.

The Contractor shall configure the converter with IP addresses as shown on the Plans or provided by the Engineer. Serial communication setting shall also be configured to match the serial device.

For a MVRD the settings are typically: 9600 bits per second, 8N1, no flow control; with TCP connections enabled to the serial port.

The Contractor shall utilize the latest version of manufacturer's software to verify optimal and correct sensor alignment to the roadway and configure the sensor. The Contractor shall configure the radar detection unit to detect all lanes per Plan sheets or the Department's direction and in accordance with the manufacture's recommendations. The Contractor shall configure the sensor for the following:

- (1) Sensor Settings
 - A) General tab
 1. Subnet/ID=000/Sensor ID per Plans
 2. Location= HWY Installed Direction Mile Post and Common Name

-4-

**REVISION OF SECTION 614
MICROWAVE VEHICLE RADAR DETECTOR (NON 334)**

3. Orientation = Direction the unit is pointing
 4. Date& Time = Synchronize to this computer
- B) Ports tab
1. Comm: RS-232
 2. Baud Rate=9600 bits per second
- C) Outputs tab
1. Legacy Protocols
 - (a) SS105 Protocol = Off
 - (b) RTMS protocol = Off
- (2) Lane Setup
- A) Sensor Alignment: Shall show green, unless detected lanes are not parallel.
 - B) Lane configuration = Setup using auto-configuration and manually adjust as necessary to detect lanes
- (3) Data Setup and Collection
- A) Interval Data: Interval=30 seconds
 - B) Data Push = OFF for output to RS-232 port

Once the device has been configured the Contractor shall verify connectivity through the serial to IP converter to the device, and connect the serial or Ethernet connection to the field communication device as appropriate. Once network connectivity has been verified, the Contractor shall confirm that the device is accessible and fully functional from the centralized software system at the CTMC.

See project specific Testing & Integration Plan for additional requirements for MVRDs.

REVISION OF SECTION 614 WIRELESS MODEM

Section 614 of the Standard Specifications is hereby revised for this Project as follows:

DESCRIPTION

This work consists of furnishing and installing a cellular wireless data modem at field devices for temporary communication. The modem is intended to establish remote communications to serial or Ethernet devices via a public carrier network. Communications to the modem may do by public internet, or private CDOT access; and will be determined by the Project or device. At this time CDOT uses Verizon wireless as their service provider.

For this Project the modem is intended to provide temporary communication to TTI, SFR, and/or VMS devices while work is performed to change the hardwired fiber network connection.

MATERIALS

The wireless modem shall include a cellular wireless data modem, associated power supply, cellular antenna, antenna cable, communication cable, and any necessary mounting hardware. All materials shall be furnished and installed by the Contractor.

The cellular wireless data modem shall be a standalone hardened unit designed to communicate to serial and Ethernet devices over 4G LTE and 3G wireless network. The modem shall consist of a unit capable of transmitting data by its embedded operating system and its own TCP/IP stack to enable transmission of data from non-IP devices. The Wireless Modem shall meet the following minimum requirements:

- (1) Communication to Ethernet devices via three 10/100 RJ-45 Ethernet jack.
- (2) Communications to RS-232 serial devices via DB-9F connector at speeds from 300 to 230,400 bps.
- (3) Support TCP/IP, UDP/IP, DHCP, HTTP, SNMP, SMTP, DNS, NAT, PPPoE, VLAN, port forwarding, SMS, MSCI, NMEA, TAIP, and GPS protocols.
- (4) Visual light indicators that show unit status for power, cellular signal, network connection, and data activity.
- (5) Cellular network support for 4G LTE at 700MHz and CDMA EV-DO rev A, 1x EV-DO rev 0, or 1xRTT at 800/1900 MHz with options for MIMO in LTE mode or receive diversity in CDMA mode.
- (6) Remotely upgradeable PRL, firmware, and configuration.
- (7) Minimum EV-DO rev A data rates of 3.1 Mbps downlink and 1.8 Mbps uplink.
- (8) Built in GPS receiver with port for external antenna.
- (9) 50 ohm SMA antenna interfaces.
- (10) Operate on 9-36 VDC at 0.5 amps or less.

-2-

**REVISION OF SECTION 614
WIRELESS MODEM**

- (11) Operate within a temperature range of -20 to 150°F at 0 to 95% humidity.
- (12) Management platform available from the manufacturer.

The power supply shall output a nominal 12 volts direct current at a minimum of 2 amps to power the wireless cellular data modem. The power supply shall be rated to operate within a temperature range of the modem.

The cellular antenna shall be outdoor rated, omnidirectional, and capable of transmitting and receiving on 3 frequency bands: 700MHz for LTE and 800/1900 MHz for CDMA operation. The antenna shall be base or wall mountable.

The antenna cable shall be an RG-58 coaxial cable type rated at 50 ohms. The cable shall be terminated with a male SMA on one end for connection with the wireless cellular data modem. The other end shall be terminated with the correct connector to interface with the tri band antenna.

The communication cable shall be constructed from twisted pair cable with minimum 22 gauge stranded conductors. For Ethernet communication the cable shall be terminated with 8P8C connectors with T568B pin/pair assignments. For serial communication the cable shall be terminated with a DB-9M for interfacing with the wireless cellular data modem. The other end shall be terminated such that it will mate with the designated end equipment.

CONSTRUCTION

The wireless cellular data modem shall be installed in the manor and locations as shown on the plans. A complete installation consists of the wireless cellular data modem, power supply, dual band antenna, antenna cable, communication cable, and wiring power to the unit. The Contractor shall install the power supply to the wireless cellular modem per manufacturer's recommendations. The Contractor shall connect the wireless cellular modem to the designated end equipment as specified in the plans. The placement of the unit shall allow provision for cable installation and maintenance per manufacturer's recommendations. All electrical wiring and connections shall meet NEC standards. The Contractor is responsible for supplying all necessary cabling, connectors, and hardware to make the installation functional.

The Contractor shall provide CDOT ITS with the device ID and login credentials so that CDOT staff can add the device to the network.

The Contractor shall be responsible for the cellular bill and payment during construction

REVISION OF SECTION 614 SERIAL TO IP CONVERTER

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of furnishing and installing a serial-to- IP converter at field devices. The serial to IP converter is intended to convert serial communication data to IP for access from an Ethernet communication network.

MATERIALS

The serial to IP converter shall include the converter, power supply, Cat5e cable, and any mounting hardware, cabling, and terminations required for a fully functional installation.

Converter. The type of serial to IP converter used will vary depending on the communication requirements of the end device and corresponding control software. Converter A is required for use with a Microwave Vehicle Radar Detector (MVRD), Diamond Counter for DTD ATR stations, or Traffic Signal (TS).

The converter shall be an externally powered, hardened, 35mm DIN mountable unit, with one (1) RJ-45 port for connection to an Ethernet network, one (1) screw terminal port for connection to a serial device, and one (1) DB-9M pass through port for local communication. It shall operate in a minimum temperature range of -30 to 165°F at 0-90% non-condensing humidity. The converter shall be powered externally and run off of 9-30 V DC drawing a maximum of 6W. It shall support RS-232, 422, or 485 serial protocols at data rates from 300 to 230kbps, with hardware and software support for RTS, CTS, DTR, DSR, and DCD signal control lines and modem emulation. Power, Ethernet, serial signals, and diagnostic status shall be visible via individual built in LEDs.

The converter shall be capable of a 10/100Mbps full duplex Ethernet connection. Serial ports shall be accessible via TCP/IP, UDP/IP, and include software drivers for mapping the ports to Windows, Linux, and Unix operating systems using a secure encrypted connection. It shall be configurable via command line interface through the serial port and integrated web interface via Ethernet connection. It shall be capable of serial bridging across an Ethernet network when two units are used together.

The converter shall support the following protocols: http/https, SNMP, TCP & UDP/IP, ASCII, DHCP, ARP, telnet, reverse telnet, PPP, SSH, SSL/TLS, and AES. The converter shall satisfy UL1950, UL 1604 (Class1, Division 4), and FCC part 15 (Class A), and IEC 1004-2.

Power Supply. The power supply shall output 12 VDC and support an input voltage range of 85-264 VAC and frequency range of 47-63 Hz. It shall have a typical efficiency of at least 76 percent and typical AC current of 1.6 A at 115 VAC. The 12 VDC power supply shall provide an output voltage of 12 VDC and have a minimum current rating of 6.3 A. It shall support an output current range of 0 to 6.3A (minimum) and have a rated power of 75 W (minimum). It shall have overload protection of 105-150% for its rated output power and overvoltage protection for voltages of 15-16.5 VDC. It shall be designed for a minimum operating temperature range of +14°F to +140°F at humidity levels of 20 to 90 percent (non-condensing). The 12 VDC power supply shall conform to the following standards: IEC 60068-2-6 Environmental Testing (Vibration) and UL 508 Industrial Control Equipment. It shall be DIN rail mountable, have dimensions not exceeding 5 inches (H) by 2.25 inches (W) by 4 inches (D) and a weight of not more than 1.5 pounds. A 12 AWG AC power cord with NEMA 5-15P shall be included with the power supply.

-2-

REVISION OF SECTION 614 SERIAL TO IP CONVERTER

The power supply will not be required at Type 1 or Type 2 ITS cabinets where a 12 VDC power supply is provided with the cabinet and there is enough capacity on the supply to power all designated 12VDC equipment at 80% loading.

Cat 5e cable. Cable shall be an 8 wire twisted pair cable constructed of 24 AWG stranded copper wires with minimum Category 5e rating. The outer jacket shall be UV resistant PVC insulation designed for outdoor use. Shielded cable shall be used when prescribed by the manufacturer, run through conduit or enclosed structures, and when needed for equipment or electrostatic grounding. Shielded cable shall be terminated with either conductive or non-conductive male 8P8C connectors. Where shielded cable is used as an equipment ground, conductive connectors shall be used on both ends of the cable. Where shielded cable is used as an electrostatic drain, the grounded side of the connection shall be terminated with a conductive connector and the ungrounded side shall be terminated with a non-conductive connector. Unshielded cable shall be used for interconnections within the same cabinet, or where grounding and electromagnetic interference is not present. Unshielded cable shall be terminated with non-conductive male 8P8C connectors on both ends. All Cat 5e cables used for Ethernet data shall conform to the Telecommunications Industry Association (TIA)-568 *Commercial Building Telecommunications Cabling Standard* and utilize the T568B pin/pair assignments.

CONSTRUCTION REQUIREMENTS

When installed in a Type1 or Type 2 ITS cabinet, the serial to IP converter shall be mounted on DIN rail. The 12 VDC power supply provided with the cabinet shall be used to power the converter as long as the final total load on the supply is less than 80% of total capacity. If an additional power supply is needed to power the converter, it shall be mounted on the DIN rail and plugged into a UPS protected outlet if available.

When installed in a ground cabinet for a TS, the converter and power supply shall be mounted on DIN rail fastened to the 19 inch cabinet rack rail. The power supply for the converter shall be plugged into a UPS protected, non-GFCI outlet designated for electronic loads.

Stranded 16 AWG copper wires with red and black insulation should be used to wire DC power from the power supply to the converter.

The network connection from the converter to the field communication equipment shall be made with Cat5e cable using 8P8C terminations. The cable shall be long enough to connect from the field communication equipment directly to the serial device being converted and allow for future upgrade of the device to direct Ethernet communications.

The serial connection from the converter to the serial device shall be made with Cat5e cable using the termination compatible with the serial device. The Contractor shall consult with the serial device manufacturer for correct terminations and wiring. All bare wire connections shall be cleanly terminated with no stray or loose wires.

-3-

**REVISION OF SECTION 614
SERIAL TO IP CONVERTER**

All communication cabling shall be routed cleanly and use cable tie supports every 2 feet. The cables shall be labeled on both ends indicating the device and port of the individual connection. Labels shall be self-laminating vinyl with black lettering on a white background.

The Contractor shall configure the converter with IP addresses as provided by the Engineer. Serial communication setting shall also be configured to match the serial device. In general this is as follows:

- For a MVRD: 9600bps, 8N1, no flow control; with TCP connections enabled to the serial port.
- For a Diamond Counter for DTD ATR Stations: 9600bps, 8N1, no flow control; with TCP connections enabled to the serial port.
- For a TS: 9600bps, 8N1, no flow control; with TCP connections enabled to the serial port.

After installation the Contractor shall verify local network communications directly to the converter and to the serial device. Once local communications has been verified, the Contractor shall confirm that the device is accessible and fully functional from the centralized software system on the CDOT network.

See project specific Testing & Integration Plan for additional requirements.

REVISION OF SECTION 614 FIBER OPTIC PRE-CONNECTORIZED CABLE

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work consists of the installation of fiber optic pre-connectorized patch cables in communication cabinets and communication node buildings from the termination patch panel to the optical communication device optics.

MATERIALS

The measured attenuation of the connector (inclusive of coupler and mated test connector) shall not exceed an average of 0.3 dB for all connectors provided. Any connector found in excess of 0.5 dB shall be rejected. Reflectance shall be less than -40 dB from 14° F to 140° F (-10°C to +60°C). The manufacturer shall have a program that periodically tests connectors to ensure that after 1000 re-matings, the attenuation will not change more than 0.2 dB.

The measured insertion loss shall be a maximum of 0.25 dB with a typical loss of 0.15dB. Return loss shall be a maximum of -65 dB (APC) and -55 dB (UPC) with a typical loss of -68 dB (APC) and -58 dB (UPC). The minimum cable bend radius shall be less the 15 mm.

The connector shall be able to withstand an axial pull of 25 lbs. with no physical damage to the connector and no permanent optical degradation more than 0.3 dB.

The pre-connectorized cables shall be provided with pre-connectorized connectors on both ends to match the termination patch panel bulkheads and small form-factor pluggable optic modules of the Ethernet switch. Connectors shall be terminated by the manufacturer.

The connectors shall be nickel-plated with a ceramic ferrule and shall be polished with a physical contact (PC) finish end to reduce reflection.

The cables shall contain the exact number of loose tube fibers and bulkhead connectors to connect from the termination patch panel to the optical modules. If the optical equipment transmits and receives data with a single optic, the pre-connectorized cable shall contain a single optical fiber (simplex). When the optical device transmits and receives data with two or four optics, or a network Ethernet switch small form factor pluggable optic module, a pre-connectorized cable shall be provided with two (2) optical fibers (duplex) per pair of transmit and receive optics.

CONSTRUCTION REQUIREMENTS

Pre-connectorized cables shall be installed from the termination panel bulkheads to the optical modules of the communication devices.

At the communications node building, the pre-connectorized cables shall be installed in the cable management hardware attached to equipment racks. The Contractor shall provide patch cables of sufficient length to span from the fiber termination patch panel bulkheads to the communications device or network device optical port. This length shall include a maximum of four (4) feet of slack cable. Appropriate cable management shall be used.

-2-

**REVISION OF SECTION 614
FIBER OPTIC PRE-CONNECTORIZED CABLE**

At communication cabinets, the Contractor shall provide pre-connectorized cables of sufficient length to span from the fiber termination patch panel bulkheads to the equipment device or network device optical port. This length shall include a maximum of two (2) feet of slack cable. Appropriate cable management shall be used.

Prior to installation, all pre-connectorized cable bulkhead connectors shall be cleaned with lint-free fiber wipes moistened with Isopropyl Alcohol 99% U.S.P. After cleaning with alcohol, the bulkhead shall be cleaned with an optical connector cleaner to ensure that all residue is removed.

Manufacturer testing reports for pre-connectorized cables shall be submitted as part of the as-built documentation. The installation location shall be noted on the test report for future reference.

At communication node buildings, pre-connectorized patch cables shall have identification labels applied on each end. Information indicating the patch panel number, device being connected and Ethernet switch port. CDOT personnel will aid in the labeling as it pertains to the proper nomenclature to be provided and/or Ethernet port connections.

At all field device locations, each cable shall have individual labels indicating the termination panel port and the data transmitting description (example: Tx or Rx).

The pre-connectorized cables shall be provided in the following lengths.

Field Device Cabinets 4 Feet, 0 Inch maximum

Node Buildings Cable shall be of sufficient length to accommodate connection of termination patch panel bulkhead to each individual optical device while allowing for 4 feet of slack.

REVISION OF SECTION 614 FIBER OPTIC SPLICE CLOSURE

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This item includes installing fiber optic splice closures and performing splicing of both fiber optic backbone and fiber optic lateral cables at locations shown on the plans.

When the project network is designed utilizing Coarse Wavelength Division Multiplexing (CWDM) network equipment, the Contractor shall provide two splice closures. Both closures shall be of the same size and shall be sized to accept both the backbone fiber optic cable and the associated fiber optic lateral cable(s).

The CWDM splicing design shall include one splice closure utilized for splicing of the backbone fiber optic cable to the lateral fiber optic cable(s) and filters. The second splice closure will be used for splicing the lateral fiber optic cable(s) to the coarse wavelength division multiplexing single wavelength filters and the lateral fiber optic cable(s) extending to the device communications cabinet or variable message sign.

The Contractor shall also be required to perform an audit of existing fiber optic splice closures to confirm current connectivity information prior to splicing field devices.

MATERIALS

The fiber optic splice closures shall be furnished and installed by the Contractor.

The splice closures shall be dome type and shall meet the following minimum requirements:

- (1) The closures shall seal, anchor and protect fiber optic cable splices.
- (2) The closures shall have a minimum of six total cable entries.
- (3) The closures shall be suitable for underground applications and shall be corrosion resistant, watertight and airtight.
- (4) The closure splice trays shall have a hinged design with an upright locking mechanism for all splice trays.
- (5) The closures shall have a sealing design that does not require glue, sealant, or new cable seals to re-enter the closure.
- (6) The closure shall be bonded inside and outside and have an external ground lug.
- (7) The Contractor shall include all necessary accessories to complete splicing.
- (8) The Contractor shall include all mounting hardware
- (9) The splice closure shall comply with Telcordia Generic Requirement (GR) GR-771

The closures shall be sized to provide a capacity equal to the total number of strands for all cables entering the closure.

-2-

REVISION OF SECTION 614 FIBER OPTIC SPLICE CLOSURE

The Contractor shall provide the required equipment to perform the audit of existing fiber optic splice closures. This equipment is expected to include, but not be limited to, common hand tools, a standard torque wrench, and a digital camera.

CONSTRUCTION REQUIREMENTS

The Contractor shall notify the Department of proposed daily splicing locations two business days prior to splicing and also the morning of proposed splicing. The Contractor shall contact the Department ITS Engineer at least four hours prior to sealing the closure to allow inspection.

If the Department ITS Engineer cannot be on site to inspect the open splice closure, a minimum of eight digital pictures shall be taken at varying angles of the interior of the splice closure showing all completed work as stated in this specification. The pictures shall include exposed fiber stands (both spliced and uncut) in all splice trays, fiber tray labeling and remaining buffer tubes showing appropriate coiling. One picture shall also include the complete re-assembly of all interior parts prior to final sealing. Once the closure and fiber coils are installed in the pull box or manhole, two pictures shall be taken showing the final installation of both the closure and the coiled fiber cable attached to the fiber management hardware. All pictures shall be organized per location and shall be submitted to the Department along with all final testing result documentation.

All splices shall be performed using the fusion splicing method. The fusion splicer shall be calibrated and certified at least once within the previous year from this Project. The Contractor shall present all certification documentation to the Department prior to start of fiber splicing.

The optical fibers shall be fusion spliced and shall meet the requirements in the Revision of Section 614 – Test Fiber Optic Cable special provision and the project specific Testing & Integration Plan.

The Contractor shall label each individual splice and buffer tube in all splice trays.

All unused buffer tubes and fiber strands shall remain uncut. After the fiber cable and proposed buffer tube is prepped for splicing, all fiber strands in the buffer tube shall be thoroughly cleaned. All uncut fiber strands shall be coiled in the tray. Remaining buffer tubes shall be neatly coiled, secured and stored in the storage area within the closure under the splice trays per the manufacturer's recommendations. Buffer tubes proposed for splicing shall be wrapped and secured to the splice tray with ties per the manufacturer's recommendations.

At CWDM splice locations, the completed splices and coarse wavelength division multiplexing single wavelength filters shall be secured in the splice tray foam splice chips per manufacturer's recommendations. Bare fiber strands shall not be taped to the splice tray.

All fiber optic cables shall be secured and sealed at the closure entrances. All unused cable entries shall be plugged.

If the closure requires re-entry, it shall be conducted per the manufacturer's recommendation for re-entry and resealing. The Contractor shall use caution to prevent damage to the existing fiber strands, splices, CWDM filters, and buffer tubes inside the splice closure. When sealing the closure for a second time, the Contractor shall follow all re-entry requirements of the manufacturer.

-3-

**REVISION OF SECTION 614
FIBER OPTIC SPLICE CLOSURE**

The Contractor shall ensure that the fiber optic splice closures and associated fiber cable coils fit adequately within the manhole or pull box splice locations, and shall securely mount the splice enclosure to the side of the manhole.

As part of ITS audit process for existing fiber optic splice closures, the Contractor shall physically access and open the splice closure and take digital photographs of each splice tray. This shall be supplemented with documenting the backbone and lateral cables entering the splice closure along with the buffer tube and fiber assignment associated with each splice to verify existing field device connectivity. The audit process shall be performed in conjunction with CDOT ITS personnel and/or a designated representative of CDOT ITS to enhance coordination and consultation with the Contractor. To facilitate this activity, the Contractor shall inform the Engineer a minimum of 5 working days prior to initiation of its auditing activities.

See Project specific Testing & Integration Plan for additional requirements.

REVISION OF SECTION 614 AUTOMATIC TRAFFIC RECORDING STATION

Section 614 of the Standard Specifications is hereby revised to include the following:

DESCRIPTION

This work consists of replacing any and all existing Division of Transportation Development (DTD) Automatic Traffic Recording (ATR) Station equipment that is impacted during construction and furnishing and installing a temporary ATR station to be used during construction. This also includes providing a cabinet to house all components for the ATR station.

The Contractor shall furnish and install any in-pavement loops, piezoelectric axle sensors (piezo), conduit and pull boxes for the existing permanent DTD ATR Stations that are impacted during the construction.

The Contractor shall also furnish and install temporary DTD ATR stations which will be used to provide traffic volume and classification information while the permanent ATR stations are out of service. The temporary ATR stations shall be installed and operational prior to any shift in traffic. The temporary ATR stations will be installed on temporary poles as close as practically possible to the existing ATR stations. Each temporary ATR station will consist of a Wavetronix SmartSensor HD126 side-fire radar unit, CDMA cellular modem, pole mounted cabinet, and associated equipment, to make a complete temporary CDOT DTD ATR Station. CDOT DTD will provide 1- 4 lane Phoenix Traffic Counter, 2 cables to interface the counter to the Click 100 and 1 cable to connect the counter to the modem for each temporary ATR station. All equipment for the temporary ATR shall be salvaged to CDOT DTD at the end of the project.

The Contractor shall coordinate all work with Mike DelCupp, Traffic Data Collection Manager, at 303-757-9816.

MATERIALS

1. *Permanent ATR Station.* The permanent ATR Station materials shall include a cabinet, cabinet foundation, counter, loop detector wire, and piezos. The cabinet, cabinet foundation, loop detector wires, and piezos shall meet the following specifications:
 - NEMA Type M cabinet with one outlet, fan, thermostat, 20 amp breaker, and a shelf.
 - Each communications cabinet shall include a polymer concrete or poured concrete pad that extends at least 2'-6" beyond the cabinet base on each cabinet door side and at least 6" beyond the cabinet base on the other two sides. The cabinet base shall be sealed around the conduits.
 - Loop detector wire shall consist of specified loop wire encased in ¼ inch OD, 3/16 inch ID vinyl or polyethylene tubing. (14-1/C Loop detector cable 19 STR. PVC/Nylon/PVC Tube 600v IMSA 51-5)
 - Loops shall be sealed with a two-part self-curing, self-bonding weatherproof epoxy approved for sealing loops. Loops shall be 6 feet by 6 feet.
 - The piezo shall be class II and 6 feet in length. The piezo shall have sufficient lead in cable, so the lead in cable can be pulled into the cabinet without splicing.

-2-

**REVISION OF SECTION 614
AUTOMATIC TRAFFIC RECORDING STATION**

- Grout or epoxy for the installation of the loops and piezos shall conform to manufacturer's recommendations.
- The Phoenix II Diamond traffic counter shall be furnished and installed, along with any cabling and hardware necessary. The counter shall be capable of counting and classifying a minimum of 6 lanes. The Contractor shall provide the number of counters needed such that all lanes are classified.

2. *Temporary ATR Station.* The temporary ATR Station materials shall include:

(a) *Wavetronix SmartSensor HD126 Side-fire Radar Unit:* The radar detection unit with mounting hardware, manufacturer configuration software, power/communication cable, detection unit power supply, serial surge suppression, and any additional hardware necessary for a complete and functional installation. The Contractor shall furnish and install the following required items, which shall all be DIN rail mountable, for the Wavetronix radar detection unit:

- Fuse block,
- Wavetronix Series 100 Click module,
- Mini power supply and circuit breaker,
- Wavetronix Series 205 Click module, and
- Wavetronix Click 200 for the serial surge suppressor.

The surge suppressor shall be DIN rail mountable with hot swappable protected busses. The surge suppressor shall provide protection for RS-232, RS-485, and DC power to the radar detection unit. Wiring for the surge suppressor shall be by means of pluggable screw terminals and include unprotected RS-232 and RS-485 communications connectors. The surge suppressor shall have a minimum operating temperature range of -29 to 165°F up to 95 percent relative humidity.

Manufacturer configuration software shall be the latest production version and allow for device discovery, configuration, and troubleshooting.

Power/communication cable shall be the manufacturer's recommended cable for functional operation of the radar detection unit.

- (b) *CDMA Wireless Modem:* A CDMA cellular modem shall be furnished, installed, configured, and tested, and the Contractor shall establish communications from the DTD central system to the field ATR. The Contractor shall be responsible for the cellular bill and payment during construction.
- (c) *Pole Mounted Cabinet:* The pole-mounted cabinet shall be NEMA 4R rated and shall be sized adequately to house all of the ATR Station components, such as the counter, CDMA modem, Wavetronix equipment, power supplies, cabling, and wiring. The cabinet shall be a minimum of 20 inches x 20 inches with a 120 volt outlet.
- (d) *Traffic Counter:* The Contractor shall provide a Phoenix Traffic Counter, cables to interface the counter to the Click 100 and any cable to connect the counter to the modem. The Contractor shall contact Mike DelCupp at 303-757-9816 for the equipment supplied by DTD.

-3-

**REVISION OF SECTION 614
AUTOMATIC TRAFFIC RECORDING STATION**

CONSTRUCTION REQUIREMENTS

- (a) *General.* A minimum of five days prior to installation, the Contractor shall submit a schedule of installation activities including alternative scheduling to the CDOT Project Manager and the Traffic Data Collection (TDC) Manager (Mike DelCupp, 303-757-9816, mike.delcupp@state.co.us). The installation instructions from the manufacturer shall also be submitted for approval. Installation shall not begin until approval has been received from CDOT.

For the permanent ATR, the Contractor shall install the loops and piezos as close to the existing detection equipment locations as possible. Exact locations, dimensions, and configurations may vary based on site conditions, and shall be as Approved by CDOT.

All work will be inspected by the Traffic Data Collection Unit (TDC) during installation.

The permanent and temporary ATR shall be installed in accordance with these specifications, the project details, and in accordance with manufacturer's recommendations.

- (b) *Installation of loops.* Loops shall be centered in the travel lane with two sides parallel to lane striping. The saw cut for the loops shall be made 3/8 inch wide and 3-1/2 inches deep. The saw slot shall be as straight as possible and shall not vary more than 1/2 inch when checked with a straightedge. No more than one set of loop lead wires shall be placed in one saw slot. Saw cuts shall be hydro-blasted with a mixture of water and air and then blown free of water and debris with compressed air, using a large capacity air compressor of at least 150 CFM. The cuts shall be dry prior to placement of loop wire.

The Contractor shall locate all buried utilities, which may interfere with the planned location of the ATR site. The Contractor shall contact the Utility Notification Center of Colorado (UNCC) at 811 or 1-800-922-1987 for location of member utilities at least three working days prior to any excavation, not including the day of actual notice.

The Contractor shall also locate non-member utilities, such as storm sewer and ditch. Any utility conflicts encountered with the proposed installation shall be brought to the attention of the Engineer

After the saw slot is cleaned of debris and dried, the wire shall be placed for the loop by pushing it into the slot with a blunt non-metallic object. A screwdriver or other sharp tool will not be permitted. Care shall be used to avoid abrading or damaging the insulation.

All loop corners shall be rounded using a 1-1/2 inch hole drilled to a minimum depth of 3-1/2 inches. Loop leads shall be drilled when leaving the roadway surface at a 45 degree angle 8 inches from pavement edge out through the side or bottom of roadway, the drilled hole shall be no larger than 3/4 of an inch. All holes shall be spaced a minimum of three inches from one another. No more than one set of loop lead wires shall be placed in one drill hole.

One continuous length of loop wire shall be used for each loop from pull box or cabinet around the loop with 4 turns and back to the pull box or cabinet with no splices. The wires shall be seated in the bottom of the saw slot. A 1/2-inch backer-rod shall be installed to insure wires do not float to the surface during grouting. Backer-rod shall be installed in 4 to 6 inch pieces with 1 to 2 foot gaps

-4-

**REVISION OF SECTION 614
AUTOMATIC TRAFFIC RECORDING STATION**

in-between, to insure the sealant will come in contact with the loop wire. One continuous piece of backer-rod will not be allowed.

After the loops are properly seated and tested, the slots shall be filled with a two-part self-curing, self-bonding epoxy or grout, as recommended by the manufacturer. Excess epoxy shall be removed to avoid unnecessary high spots, and level with the roadway surface.

Loop leads shall be pulled into cabinet without splices to match original installation when applicable.

All detector loops shall measure six feet by six feet.

Installation at an ATR count or classification site shall consist of one loop or one loop set (two loops) within a single lane. The loop sets shall be separated by 10 feet, plus or minus 1 inch, resulting in a distance of sixteen feet from the leading edge of the first loop in the direction of travel to the leading edge of the second loop.

Loop and loop leads shall be installed directly into the pavement, to pavement edge, pull box or cabinet. If loops are installed during asphalt paving, the loops shall be installed before the final lift is placed.

Loop lead wires from pavement edge to pull box shall be enclosed in $\frac{3}{4}$ inch PVC conduit or $\frac{3}{4}$ inch rubber hose to protect wire from abrasion. Loop lead-in pairs from pavement edge, to pull box, shall be symmetrically twisted 5 turns per 1 foot. Pull boxes or cabinet shall contain a minimum of 3 feet of loop lead wire for splicing. All loop and loop leads shall be clearly labeled in all pull boxes and cabinets. The Contractor shall be responsible for all trenching and digging from pavement edge to pull box.

All splices shall be made with approved waterproof pressure connector. All splices shall be capable of satisfactory operation under continuous submersion in water.

(c) *Piezo Installation.*

The piezo shall be permanently installed by grouting into the roadway flush to 1/16 of an inch above the roadway surface by grouting into a concrete roadway or the final lift of asphalt.

Piezo sensors shall be installed in compliance with the manufacturer's recommendations.

At an ATR axle classification site, one 6 foot piezo sensor per lane shall be installed at the exact midpoint between the two loops and to the right or left side of the line, centered in the wheel path.

The saw cut shall be as straight as possible and shall not vary more than $\frac{1}{2}$ inch when checked with a straightedge. The size of the saw cut shall be to the manufacturer's specifications and not vary more than $\frac{1}{8}$ of an inch in width. The slot for the piezo lead wire shall be 3 inches deep and $\frac{3}{8}$ of an inch wide. Only one piezo lead wire shall be placed in the saw slot.

-5-

**REVISION OF SECTION 614
AUTOMATIC TRAFFIC RECORDING STATION**

Piezo lead shall be drilled when leaving the roadway surface at a 45 degree angle 8 inches from the pavement edge out through the side or bottom of the roadway, the drilled hole shall be no larger than $\frac{3}{4}$ of an inch. All holes shall be spaced a minimum of 3 inches from one another. No more than one piezo lead wire shall be placed in one drill hole.

Saw cuts shall be hydro-blasted with a mixture of water and air and then blown free of water and debris with compressed air, using a large capacity air compressor of at least 150 cubic feet per minute. The cuts shall be dry and cleaned with acetone prior to placement of the piezo.

The piezo shall not be installed if roadway surface temperature is not above the manufacturer's recommended minimum temperature, or cannot be maintained above this temperature for a minimum of two hours after installation. The piezo shall not be installed if roadway surface temperature is above the manufacturer's highest recommended temperature for grout installation.

The piezo lead wire shall be placed in the saw slot with a blunt non-metallic object. A $\frac{1}{2}$ inch backer-rod shall be installed to insure the wire does not float to the surface during grouting. The backer-rod shall be installed in 4 to 6 inch pieces with 1 to 2 foot gaps in between, to insure the sealant will come in contact with the piezo lead wire. One continuous piece of backer-rod will not be allowed.

The sealant for the piezo lead wire shall be the same as that used for loops.

Piezo lead wire shall be pulled into the cabinet without splices, unless the length exceeds 300 feet.

Only one lead wire shall be placed in a saw slot.

Piezo lead wires from pavement edge to pull box shall be enclosed in $\frac{3}{4}$ inch PVC conduit or $\frac{3}{4}$ inch rubber hose, to protect wire from abrasion. Pull boxes or cabinet shall contain a minimum of three feet of piezo lead wire for splicing. Lead wire shall be clearly labeled as Approved by the Engineer and the TDC.

All splices in piezo wiring shall be soldered and enclosed in a resin filled splice kit.

- (d) *Pull Boxes.* All pull boxes on the shoulder of the roadway surface shall be raised to finished grade or level with the surrounding ground. If the shoulder has been raised to the point that the conduit is below the bottom of the pull box, then the conduit shall be raised. All wiring splices for existing wiring shall be a minimum of 12 inches in length above the conduit.

All existing pull boxes that are found to be damaged shall be replaced.

- (e) *Water Valves.* A minimum of two feet of slack shall be provided on the loop and piezo wires that are contained in water valves.

No splices shall be allowed in water valves.

- (f) *Pull Rope.* A $\frac{1}{8}$ inch nylon pull rope shall be installed in all new conduits and all existing conduits where a wire or cable is added or an existing wire or cable is replaced.

-6-

**REVISION OF SECTION 614
AUTOMATIC TRAFFIC RECORDING STATION**

- (g) *Conduit.* The contractor shall seal all conduits with a sealing compound where a wire or cable is added or an existing wire or cable is replaced. The sealing compound shall be UL tested and approved for use. Sealing compound shall be a permanently soft, fibrous, non-staining sealer that can be easily applied and removed by hand at all working temperatures. Sealing compound shall be designed to seal out weather, moisture, dust rodents, and atmospheric conditions both indoors and outdoors. No foam sealant will be allowed.
- (h) *Telephone Drop/ Fiber Connection.* The contractor shall provide a telephone drop/connection to the permanent ATR cabinet for connection to DTD and shall also provide a fiber connection.

See project specific Testing & Integration Plan for additional requirements for DTD ATR's.

**REVISION OF SECTION 614
FIBER OPTIC CABLE (SINGLE MODE)**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work consists of furnishing and installing backbone and lateral single mode fiber optic cables.

MATERIALS

All fiber optic cables shall be suitable for outdoor conduit installation.

All fiber optic cable shall have compatible characteristics with other proposed and existing fiber optic cables. All optical cables furnished on this Project shall meet the following fiber optic industry standards:

- (1) International Telecommunications Union – Telecommunications Standardization Sector - Recommendation G.652.D
- (2) Telecommunications Industry Association (TIA) - 598-D Optical Fiber Cable Color Coding
- (3) International Organization for Standardization (ISO) - 9001
- (4) Rural Utilities Service (RUS)- Specification for filled fiber optic cables

All cables shall be new and unused non-armored outdoor cable consisting of non-dispersion shifted, low water peak single-mode fiber strands free of surface imperfections and inclusions. Each single mode fiber strand shall consist of a doped silica core surrounded by a concentric silica cladding. The fiber shall be of matched clad design.

(a) *Fiber Strands.*

Fiber strands shall meet the following minimum characteristics:

- (1) Typical core diameter of $9.0\mu\text{m} \pm 1 \mu\text{m}$
- (2) Cladding Diameter of $125 \mu\text{m} \pm 1 \mu\text{m}$
- (3) Core concentricity error: $\leq 0.6 \mu\text{m}$
- (4) Cladding Noncircularity: $\leq 1.0 \%$
- (5) Coating Diameter (Colored): $245 \pm 5 \mu\text{m}$
- (6) Maximum Attenuation (Loose Tube): 0.35 dB/km at 1310 nm wavelength and 0.22 dB/km at 1550 nm wavelength
- (7) Mode-Field Diameter: $9.20 \pm 0.30 \mu\text{m}$ at 1310 nm wavelength and $10.40 \pm 0.50 \mu\text{m}$ at 1550 nm wavelength
- (8) Attenuation at the Water Peak: 0.32 to 0.34 dB/km at $1383 \pm 3 \text{ nm}$ wavelength
- (9) Cutoff Wavelength: $\leq 1260 \text{ nm}$
- (10) Zero Dispersion Wavelength: 1300 nm to 1324 nm
- (11) Zero Dispersion Slope: $\leq 0.092 \text{ ps} / (\text{nm}^2 * \text{km})$
- (12) Polarization Mode Dispersion: $\leq 0.06 \text{ ps} / \sqrt{\text{km}}$
- (13) Maximum Polarization Mode Dispersion at 0.01% distribution (PMDq): $0.20 \text{ ps} / \sqrt{\text{km}}$
- (14) Maximum Fiber Dispersion: $\leq 18 \text{ ps}/(\text{nm} * \text{km})$ at 1550 nm.
- (15) Fiber Curl: $\geq 4.0 \text{ m}$
- (16) Proof Tensile Test: 100 kpsi ($0.69 \text{ GN}/\text{m}^2$)

The fibers shall not adhere to the inside of the buffer tube.

-2-

**REVISION OF SECTION 614
FIBER OPTIC CABLE (SINGLE MODE)**

The coating shall be a dual layered, UV cured acrylate applied by the fiber manufacturer. The coating shall be capable of being mechanically stripped with a force of 0.3 to 2.0 lbf.

Each single mode fiber strand shall be color coded with distinct and recognizable colors in accordance with the TIA-598-D *Optical Fiber Cable Color Coding*.

(b) *Buffer Tubes.*

Each backbone buffer tube shall contain 12 fiber strands and each lateral fiber cable shall have two buffer tubes with six fiber strands in each.

Optical fibers shall be placed inside a loose buffer tube.

Each buffer tube shall be color coded with distinct and recognizable colors in accordance with TIA-598-D

If fillers are required, they shall be placed in the inner layer of the fiber optic cable. The color sequences of the buffer tubes shall begin from the inside layer of and progress outward.

Buffer tube black stripe shall be inlaid in the buffer tube material by means of co-extrusion when required.

In buffer tubes containing multiple fibers, the coloring shall be stable during temperature cycling and shall not be subjected to fading or smearing onto each other or into the buffer tube gel filling material if the fiber cable is supplied with gel filling for water blocking. Colorings shall not cause fibers to stick together.

Each buffer tube shall contain water blocking swellable yarns to prevent water from entering the individual buffer tubes. Swellable water blocking material shall be non-nutritive to fungus, electrically non-conductive and homogeneous. It shall be free from dirt and foreign matter and not require cleaning prior to splicing and placement into the splice closure tray. All fiber strands shall be thoroughly cleaned prior to fiber splicing. All water blocking material shall be uniformly distributed throughout the buffer tubes.

Buffer tubes shall be stranded around a central member of the cable using a reverse oscillation stranding process.

The buffer tubes shall be resistant to external forces and shall meet the buffer tube cold bend and shrinkback requirements of Code of Federal Regulations (CFR) 7 CFR 1755.900 – *RUS Specification for filled fiber optic cables*.

(c) *Fiber Cable.*

Fillers may be included in the cable core to lend symmetry to the cable cross-section where needed and shall not be placed to interrupt the consecutive positioning of the buffer tubes. Fillers shall nominally match the outer diameter of fiber filled buffer tubes.

-3-

**REVISION OF SECTION 614
FIBER OPTIC CABLE (SINGLE MODE)**

The central anti-buckling member of the cable shall consist of all dielectric, glass reinforced plastic (GRP) rod.

For single layer cables, a water swellable, (blocking) tape shall be applied longitudinally around the outside of the buffer tubes and fillers. The tape shall be held in place by a single polyester binder yarn. The water swellable tape shall be non-nutritive to fungus, electrically non-conductive, and homogenous. It shall also be free from dirt and foreign matter. Water blocking material shall be applied uniformly throughout the fiber cable to inhibit the ingress of water into the cable. Gel filled water-blocking compound shall not be allowed in the cable core interstices of the fiber optic cables.

When the fiber cable is provided with dual layer buffer tubes, both the inner and outer layer shall be provided with water swellable tape.

Binders shall be applied with sufficient tension to secure the buffer tubes to the central member without crushing the buffer tubes. The binders shall be non-hygroscopic, non-wicking (or rendered so by the flooding compound), and dielectric with low shrinkage.

The cable shall contain at least one ripcord under the sheath for easy sheath removal.

Outer cable jacket shall have a consistent thickness throughout the entire cable length and shall be sheathed with medium density polyethylene (MDPE). Jacketing material shall be applied directly over the tensile strength members and water blocking tape. The MDPE jacket material shall be as defined by ASTM D1248, Type II, Class , Category 4 and Grades J4, E7 and E8 and shall contain carbon black to provide ultraviolet light protection and shall not promote the growth of fungus.

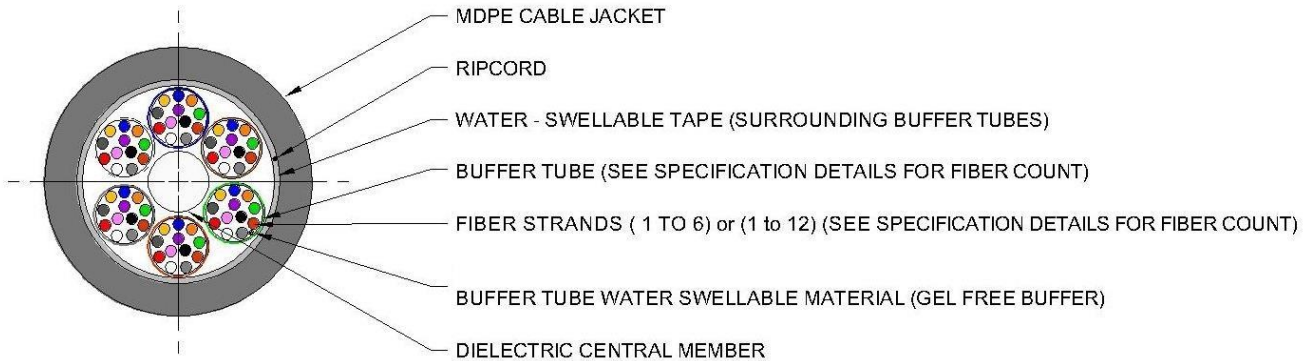

The cable jacket shall be free of holes, splits and blisters and be of a consistent thickness.

Cable jackets shall be marked with the manufacturer's name, sequential foot markings, fiber type and count, month and year of manufacture and a telecommunication handset symbol, as required by Section 350G of the National Electrical Safety Code (NESC). The actual length of the cable shall be within 0 to 1 percent of the length markings. The marking shall be in contrasting color to the cable jacket. The height of the marking shall be easily readable.

The Contractor shall submit to the Department a detailed fiber optic cable specification sheet from the manufacturer for Approval. The specification sheet shall be highlighted describing the water blocking material used for both the cable interstices and buffer tubes. Failure to fully describe the type of water blocking material shall result in the submittal being rejected and resubmitted with all highlighted information.

-4-

**REVISION OF SECTION 614
FIBER OPTIC CABLE (SINGLE MODE)**

Specification Detail 1

Typical Cross Section of Fiber Optic Cable to Be Provided Per This Specification

(d) *Environmental Parameters.*

The following minimum environmental parameters shall be met:

- (1) Shipping, storage and operating temperature range of the cable shall be; -40°F to +158°F (-40°C to +70°C)
- (2) Operating temperature range of the cable shall be; -40°F to +158°F (-40°C to +70°C)
- (3) Installation temperature range of the cable shall be; -22°F to +140°F (-30°C to +60°C)

(e) *Quality Assurance.*

The following minimum quality assurance requirements shall be met:

- (1) All optical fibers shall be 100 percent attenuation tested in accordance with Revision of Section 614 – Test Fiber Optic Cable. The attenuation of each fiber shall be provided with each cable reel.
- (2) The cable manufacturer shall be ISO 9001 or TL 9000 registered.

(f) *Packaging.*

The following minimum packaging parameters shall be met:

- (1) The complete cable shall be packaged for shipment on non-returnable wooden reels.
- (2) Top and bottom ends of the cable shall be available for testing.
- (3) Both ends of the cable shall be sealed to prevent the ingress of moisture.
- (4) Each reel shall have a weatherproof reel tag attached identifying the reel and cable.
- (5) Each cable shall be accompanied by a cable data sheet that contains significant information on the cable.
- (6) The cable reels shall not be stored nor shipped on their sides.

-5-

**REVISION OF SECTION 614
FIBER OPTIC CABLE (SINGLE MODE)**

CONSTRUCTION REQUIREMENTS

Fiber optic cable shall be used for either main backbone cable or lateral cables that connect to communications cabinets. The main backbone cable shall be terminated in a traffic management system building or network facility. Splicing shall be conducted at cable end splice locations and device splice locations shown on the Project plans or as Approved by the Department.

A minimum of one week prior to fiber optic work, the Contractor shall give the Department a detailed installation and splicing method statement and schedule. All installation, splicing, termination, and testing shall be listed on the schedule and method statement and revisions shall be re-submitted to the Department immediately. Installation of the fiber optic cable shall not be permitted until the method statement and schedule has been Approved by the Engineer.

The Contractor shall be responsible for coordinating with third parties when installing and splicing proposed fiber optic cable adjacent to existing third party owned fiber optic infrastructure and when splicing proposed fiber optic cable to existing third party owned fiber optic cable. The Contractor shall keep the Department apprised of all coordination activities it performs with third parties as it pertains to this Project.

The Contractor shall conform to the requirements included in the Revision of Section 614 – Test Fiber Optic Cable specification, as well as the project specific Testing & Integration Plan.

The Contractor shall provide the Engineer with two copies of the cable manufacturer's installation instructions for all fiber optic cable. All installations shall be in accordance with the manufacturer's recommendations except as otherwise directed by the Engineer. All additional costs including fiber optic cable associated to damages caused by the Contractor's neglect of recommended procedures, shall be the Contractor's responsibility.

Fiber optic cable including both backbone cables and lateral cables shall be installed in continuous runs. The Contractor shall include a detailed installation plan with the Method Statement showing cable installation lengths and cable end splice points. The fiber cable shall be installed in reel lengths that minimize the quantity of cable end splices. Under no conditions shall fiber optic cable be cut or spliced at intermediate points without express written direction from the Engineer.

The new fiber cable shall be installed in a manner which will not interfere with the integrity of existing cable and equipment and shall be installed in a manner which will not interfere with the maintenance of the traffic signal cable, wiring, or equipment.

Blowing cable is an acceptable alternative to pulling cable. If the Contractor chooses to use this method, submittals for cable installation shall be submitted along with complete information on fiber installation equipment.

The maximum pulling tension shall be 600 pounds (2700 N) during installation (short term) and 200 pounds (890 N) long term installed.

All cables shall have a minimum bending radius based on the diameter of the cable and shall meet the following:

-6-

**REVISION OF SECTION 614
FIBER OPTIC CABLE (SINGLE MODE)**

- (1) Under max pulling tension – 15 (Fifteen times the cable outside diameter)
- (2) Unloaded, not under tension – 10 (Ten times the cable outside diameter)

The fiber optic cable shall be installed in the conduit with a split-mesh cable grip to provide a firm hold on the exterior covering of the cable.

The manufacturer's recommended maximum allowable pull tension for cable pull lengths shall not be exceeded. The Contractor shall use a pulley system with a numerical readout indicating the cable tension. The pulley system shall be capable of alerting the installer when the cable pulling tension approaches the manufacturer's maximum allowable tension. The Contractor may supplement this procedure with a breakaway tension limiter set below the lowest recommended tensile limit of the cables being pulled. Intermediate pulleys shall be used at all pull boxes or manholes along the installation run to prevent cable damage.

If cable installation limits are met and the entire length cannot be installed completely from the shipping reel, installation shall be continued from the mid-point of the run. The Contractor shall first pull one-half of the cable from the reel at the mid-point through the conduit to one end of the run. The other half of the cable shall be removed from the reel and carefully placed on the ground in a figure eight pattern with a minimum loop diameter of 10 feet. While installing the remaining cable, care shall be taken to avoid dragging against the ground resulting in damage or excess bending of the cable. The Contractor shall not kink, twist or bend the cable during installation coiling and uncoiling.

The cable shall be continuously lubricated as it enters the conduit. The Contractor shall only use pulling lubricants recommended by the cable manufacturer. Liquid detergent shall not be used.

The Contractor shall furnish and install a pre-lubricated pull tape and tracer wire in the same conduit as the fiber is being installed. The pull tape and tracer wire shall conform with Revision of Section 613 – Electrical Conduit.

If the Contractor must install new cable in conduits that contain existing fiber optic cable or electrical wiring, the Contractor shall be responsible for all damage to the existing cables and wires. After this installation the Contractor shall perform a functional test of all the equipment connected by the existing fiber optic cables and electrical wiring to ensure proper working conditions. All costs associated with equipment testing and repairs shall be included in the cost of the fiber optic cable.

If an existing fiber optic cable is damaged during construction, it shall be removed from both points of termination and replaced, at no cost to the Project.

In no case shall the conduit fill ratio of new conduit exceed the requirements of the National Electrical Code.

Lateral cables shall be installed in continuous runs from the backbone splice location to the communications cabinet. Odd length cables and reel ends are acceptable for lateral cables provided they are pre-tested and free of defects and are of sufficient lengths to archive continuous runs.

Installation of lateral fiber optic cables shall include slack coil and a minimum of three strain relief locations within all communications cabinets and traffic signal cabinets.

-7-

**REVISION OF SECTION 614
FIBER OPTIC CABLE (SINGLE MODE)**

All fiber optic cables shall include identification labels attached to the cable in each pull box, manhole or communications cabinet. The information to be included on the label shall be Approved by the Engineer.

The Contractor shall coil 50 feet of each fiber cable in pull boxes and 100 feet in manholes.

At locations of Coarse Wavelength Division Multiplexing (CWDM) network equipment, the Contractor shall install and coil two separate 100-foot lateral fiber optic cables in the splice manholes. Refer to the fiber optic splicing details for more information.

Splicing of CWDM lateral fiber optic cables by the Contractor shall be as shown in the project plans.

Backbone and lateral buffer tubes and fiber strands shall be labeled on the splice tray prior to sealing of the closure. In the CWDM splice closure, the optical filter wavelengths shall also be labeled.

The Contractor shall ensure that all cable coils and splice canisters are attached separately to the cable management hardware inside manholes in a manner which will allow for all splice closures to be removed separately for future maintenance purposes. In Pull Boxes, all cable coils shall be attached separately to the cable management hardware in a manner which will allow for fiber optic cable to be removed separately.

The Contractor shall terminate the lateral cable at the communications cabinet in accordance with the Revision of Section 614 – Fiber Optic Termination Panel.

Prior to performing splicing and testing for CDOT ramp metering, the Contractor shall contact Joe Pirera, CDOT Traffic Signals & Ramp Metering Supervisor (303-815-9194), to allow for traffic signal technicians to disconnect all existing optical communications equipment.

The Contractor shall submit a final documentation package. The final documentation package shall include the cable manufacturer's installation procedures, technical support documentation and material documentation. These documents shall match the original submittals provided to the Engineer.

At any time, if the Contractor damages any of the fiber optic backbone cables, the entire end-to-end (reel-to-reel) section of fiber cable shall be removed, re-installed, and re-spliced from the cable end splice point at the Contractor's expense.

At any time, if the Contractor damages any of the fiber optic backbone laterals, the entire end-to-end (reel-to-reel) section of fiber cable shall be removed, re-installed, and re-spliced from the splice point to the device communication cabinet at the Contractor's expense.

See project specific Testing & Integration Plan for additional requirements.

REVISION OF SECTION 614 TEST FIBER OPTIC CABLE

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

Test Fiber Optic Cable shall include Optical Time Domain Reflectometer (OTDR) tests, Coarse Wave Division Multiplexor (CWDM) OTDR tests, spectrum analysis of CWDM fiber, and optical power meter tests of all installed fiber and modified existing fiber on the Project.

MATERIALS

The Contractor shall use equipment that is calibrated annually. A copy of the most recent certificate of calibration and all out-of-tolerance conditions shall be provided to the Department prior to the initiation of testing activities. The following equipment and information is required to perform fiber optic cable tests:

- (1) An OTDR (submit certification to the Department)
- (2) A Coarse Wave Division Multiplexor OTDR (submit certification to the Department)
- (3) An optical spectrum analyzer (submit certification to the Department)
- (4) Optical Power Meter Equipment capable of measuring optical power in dBm (submit certification to the Department)
- (5) A launch box (min length – 1000 feet)
- (6) A light source at the appropriate wavelength
- (7) Test jumpers shall be 3 feet to 12 feet long with connectors that are compatible with the light source and power meter and shall have the same fiber construction as the link segment being tested.

CONSTRUCTION REQUIREMENTS

Prior to splicing and testing on the Project the Contractor shall submit a detailed Method Statement to the Department describing the splicing and testing plan and schedule. Discussion of the Contractor's Cutover Plan and a proposed Device Cutover Schedule shall be included in the Method Statement. No fiber optic splicing shall begin until the method statement is submitted and Approved. If at any time it is determined that work began without an Approved method statement, or the work is not following the Approved method statement, an immediate "stop work" order will be issued and work will not resume until the method statement has been submitted and Approved. Once the splicing and testing begins, the method statement shall be updated if necessary to address any changes in the original planned and Approved procedures.

The Contractor shall conduct fiber optic testing at the following stages:

- (1) Pre-installation testing – bi-directional OTDR test of every fiber on every reel after delivery of the reel
- (2) Post installation and pre-splicing test – bi-directional OTDR test of every fiber of every cable after fiber is installed in the ground
- (3) Post-splicing tests, pre-CWDM filter splicing tests
 - i) Optical Power meter test from all fiber terminated in communications cabinets to a network facility for all fiber that is not used for CWDM on the Project.

-2-

**REVISION OF SECTION 614
TEST FIBER OPTIC CABLE**

- ii) Bi-directional OTDR test of all fiber between termination point in a network facility and cable end and between termination point in a network facility and communications cabinets for fiber that is not used for CWDM on the Project
- iii) Bi-directional CWDM OTDR test of all fiber between termination point in a network facility and cable end and between termination point in a network facility and communications cabinets for all fiber that is used for CWDM on the Project
- (4) Post-CWDM filter splicing tests
 - i) Spectrum analysis of all terminated fiber used for CWDM after filters have been spliced
 - ii) CWDM-OTDR
 - iii) Optical Power meter test and documented attenuator values
- (5) Re-testing of all stages above if initial test fails and after corrective action is taken

The guidelines for fiber optic cable testing include:

- (1) Launch box and test jumpers must be of the same fiber core size and connector type as the cable system: Single mode fiber 9.0 μ m (nominal) /125 μ m
- (2) The light source and OTDR must operate within the range of 1310 \pm 10 nm and 1550 \pm 20 nm single mode nominal wavelength for testing in accordance with Telecommunications Industry Association (TIA) TIA-526-7 Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant.
- (3) The power meter and the light source must be set to the same wavelength during testing.
- (4) The OTDR and power meter must be calibrated at each of the nominal test wavelengths and traceable to the National Institute for Standards and Technology (NIST) calibration standards.
- (5) The calibration of the OTDR and power meter shall conform to the requirements set forth in Telecommunications Industry Association/Electronic Industries Alliance (TIA/EIA) TIA/EIA-455-226 Calibration of Optical Time-Domain Reflectometers and TIA-455-231 Calibration of Fiber Optic Power Meters, respectively.

The Contractor shall document jacket length measurements for lateral and backbone cable at each end including splice enclosures and patch panels and at any intermediate splice points.

The Contractor shall document bare fiber slack not accounted for in jacket length.

All system connectors, adapters and jumpers shall be cleaned per manufacturer's instructions before measurements are taken.

At locations of new lateral fiber optic cable installation and at locations that require the re-installation of existing lateral fiber optic cable, the Contractor shall conduct testing from the termination panel mounted in the communications cabinet to the splicing manhole. The bi-directional test shall be conducted from the termination panel towards the splicing manhole and from the splicing manhole to the communications cabinet termination panel.

Final splicing will not begin until such time that the Contractor submits OTDR test results to the Department and the Department reviews the results.

Final OTDR testing from the communications cabinet to the corresponding node building shall be conducted after their splicing work has been completed. All issues with communications related to

-3-

**REVISION OF SECTION 614
TEST FIBER OPTIC CABLE**

Contractor installation and workmanship shall be remediated by the Contractor at no additional cost to the project.

A functional test shall be made in which it is shown that each and every part of the system functions as specified or intended herein.

(a) Optical Fiber Cable Testing with OTDR

The Contractor shall perform an OTDR test of all fibers in all tubes on the reel prior to installation of the fiber. The test results shall be supplied to the Department prior to installation of the cable.

Fiber testing shall be performed on all terminated fibers from patch panel to patch panel and unterminated fibers from end to end. Additionally, mid entry splices into mainline cables require testing of all strands in the mainline cable before and after installation. Testing shall consist of a bi-directional end-to-end OTDR trace.

Loss numbers for the installed link shall be calculated by taking the sum of the bi-directional measurements and dividing that sum by two.

The Contractor shall use an OTDR that is capable of storing traces electronically and shall save each final trace.

The Contractor shall use a test reel of minimum length identified in the Materials section of this Special Provision. The Contractor shall indicate the length of the test reel, in feet, for all test results.

If the fiber designation is not indicated on the trace itself, the Contractor shall provide a cross-reference table between the stored trace file name and the fiber designation.

The Contractor shall record the following information during the test procedure:

- (1) Name and contact information of person conducting the test
- (2) Type of test equipment used (manufacturer, model, serial number, calibration date and valid certification of calibration)
- (3) Date test is being performed
- (4) Optical source wavelength and spectral width
- (5) Fiber identification
- (6) Start and end point locations
- (7) Test direction
- (8) Launch conditions
- (9) Method of calculation for the attenuation or attenuation coefficient
- (10) Acceptable link attenuation
- (11) Cable manufacturer stated index of refraction for cable being tested
- (12) Jacket readings in and out of each splice vault and each pull box

(b) Optical Fiber Cable Testing with Optical Power Meter

The Contractor shall conduct an Optical Power Meter Test of each fiber installed.

-4-

REVISION OF SECTION 614 TEST FIBER OPTIC CABLE

Single mode segments shall be tested in one direction at both the 1310 nm and 1550 nm wavelength.

The following information shall be recorded during the test procedure:

- (1) Names of personnel conducting the test
- (2) Type of test equipment used (manufacturer, model, serial number, calibration date and a valid certification of calibration)
- (3) Date test is being performed
- (4) Optical source wavelength and spectral width
- (5) Fiber identification
- (6) Start and end point locations
- (7) Test direction
- (8) Reference power measurement (when not using a power meter with a Relative Power Measurement Mode)
- (9) Measured attenuation of the link segment
- (10) Acceptable link attenuation

(c) *Acceptable Attenuation Values*

The Contractor shall calculate acceptable attenuation values for each fiber tested. These values represent the maximum acceptable test values.

The general attenuation equation for all single mode link segments is as follows:

Acceptable Link Attenuation = Cable Attenuation + Connector Attenuation + Splice Attenuation.

8.3 μm (nominal) Single-mode Attenuation Coefficients:

- (1) Cable Attenuation=Cable Length (km) x (0.35 dB/km at1310 nm and 0.22 dB/km at1550 nm)
- (2) (No. of Mated Connections x 0.50 dB)
- (3) Splice Attenuation = Splices x 0.30 dB

(d) *Test Procedures*

The single mode Optical Power Meter fiber test shall be conducted in accordance with TIA-526-7.

The single mode OTDR test shall be conducted in accordance with TIA-526-7.

Testing for CWDM single wavelength filters (CWDM filter) shall be conducted in the following manner to ensure that the filter Pass, Reflect and Common pigtails are spliced to proper lateral fiber strands. Testing procedures and CWDM data flow information is included on the plans. Testing shall be conducted for all CWDM wavelengths are expressed in nanometer (nm) and applicable to each fiber strand used for data communications. CWDM wavelengths on this Project include 1430 nm, 1450 nm, 1470 nm, 1490 nm, 1510 nm, 1530 nm, 155-nm, 1570 nm, 1590 nm, and 1610 nm. Industry standard wavelengths (e.g. 1430 nm = 1431 nm) shall be observed.

-5-

**REVISION OF SECTION 614
TEST FIBER OPTIC CABLE**

After completion of fiber optic cable installation and prior to the CWDM filter splicing, all backbone cable to lateral cable splices shall be completed in the individual Ethernet switch sub-rings. Required steps shall include:

- (1) The backbone end of Lateral Cable 1 shall be spliced to the fiber optic backbone cable in Splice Closure 1. Once this splice is complete no future access to Splice Closure 1 shall be made unless a re-splice is required.
- (2) The opposite end of Lateral Cable 1 shall be spliced to itself in Splice Closure 2 in a manner to achieve continuity in the backbone strands from the beginning of the sub-ring (first node building) to the far end of the sub-ring (next node building).
- (3) An OTDR test shall be conducted on the sub-ring from building to building to ensure proper splicing of Lateral Cable 1 in Splice Closure 1.

Once the OTDR test is complete the results shall be submitted to the Department for approval. After approval the splicing of CWDM filters in Splice Closure 2 may begin.

The Contractor shall be required to break the Lateral Cable 1 splices in Splice Closure 2 used in the continuity test and conduct the CWDM filter splicing per the Project fiber splice plans. This will include splicing of Lateral Cable 1 and Lateral Cable 2 in Splice Closure 2 and the termination of Lateral Cable 2 in the communications cabinet.

After CWDM filter splicing, the Contractor may use one of the following methods to ensure the proper CWDM filter splicing.

- (1) By using a fiber identifier, testing of the incoming signal from either the upstream or downstream CWDM location, the Contractor shall show the Department that proper CWDM filter pigtail splicing has been achieved.
- (2) By using a spectrum analyzer to test the incoming wavelength to ensure proper splicing and wavelength of the CWDM signal.

Once all splicing of the individual sub-ring is complete the Contractor shall conduct the CWDM-OTDR and spectrum analyzer testing and submit the results to the Department. At the acceptance of these tests, the Contractor shall determine the proper optical attenuator to install in the Receive (Rx) ports at both the communications termination panel and the communications node building termination panel. After installation one final test of optical power shall be conducted to determine if the proper signal strength is being achieved by the Ethernet switch CWDM optic.

At that point the Colorado Department of Transportation, Colorado Transportation Management Center personnel along with Ciena network engineers will configure the sub-ring into the overall CDOT ITS network. If network communications cannot be achieved, a review of the CWDM testing materials will begin.

(e) Test Acceptance

The Contractor shall re-splice all fusion splices and re-terminate all terminations that have test results exceeding acceptable attenuation values. The Contractor shall retest all fiber links that have been re-spliced and that have been re-terminated.

-6-

**REVISION OF SECTION 614
TEST FIBER OPTIC CABLE**

The Contractor shall demonstrate that the tests result in acceptable attenuation values.

The Contractor, solely at the Contractor's expense, shall bring all links not meeting the requirements of this specification into compliance.

(f) Submittals

The Contractor shall submit test result documentation as both a hard copy and electronic copy.

After each reel test, the Contractor shall submit one hard copy of the OTDR trace for every fiber on the reel.

After installation, the Contractor shall submit two hard copies and one electronic copy of the following tests:

- (1) Continuity OTDR trace for every spliced fiber which the CWDM optical network will utilize.
- (2) OTDR trace for every fiber the high speed DWDM optical network will utilize.
- (3) CWDM-OTDR trace for every fiber which the CWDM optical network will utilize.
- (4) Spectrum analyzer test results for every fiber which the CWDM optical network will utilize.
- (5) OTDR traces and power meter results for all "dark" unused fiber strands in the backbone fiber optic cable from node buildings.

Hard copy traces shall be organized and bound in logical order in an 8 ½ inch x 11 inch hard cover binder.

The Contractor shall submit, after approval of the hard copy traces, electronic copies of all traces (PDF and native file format) and appropriate software, if needed, to allow reading the traces.

The Contractor shall submit one copy of the complete contract Plans, including additional drawings issued as part of all change orders, with all deviations clearly marked in color. Deviations to be noted shall include at a minimum, but not be limited to, the following:

- (1) Fiber Splice location
- (2) Fiber Splice configuration
- (3) Termination layout

After all splicing and fiber optic testing is completed the Contractor shall test the optical power of the incoming, (Receive) signal at each field Ethernet switch and existing node building location. To obtain the most accurate values of optical power, the testing equipment shall be attached to the SFP optic end of the pre-connectorized patch cable.

Once the optical power has been tested, the Contractor shall install the appropriate attenuator in the receive port to meet the receive values of the SFP optic module, including a design margin of 6 dB (to allow for degradation over the life of the system).

REVISION OF SECTION 614 CCD LOOSE TUBE FIBER OPTIC CABLE

Section 614 of the Standard Specifications is hereby revised for this Project as follows.

Notice:

Every effort has been made to ensure that the information contained in this specification is complete and accurate at the time of publication; however, information contained herein is subject to change.

Trademarks:

ANSI® is a registered trademark of the American National Standards Institute, Inc. KELLEMS® is a registered trademark of Harvey Hubbell, Inc.

Scope:

This specification covers the general design requirements and performance standards for fiber optic cables intended primarily for use in the outside plant environment. The purpose of this document is to provide the essential requirements for All-Dielectric Single Jacket, Single Jacket / Single Armor, and Double Jacket / Single Armor Loose Tube Fiber Optic cable to be used in the City of Denver networks.

The product requirements and features described in this specification are those considered useful for ensuring proper selection and manufacturing of fiber optic outside plant cables.

In this specification, all observed or calculated values are rounded off "to the nearest unit" in the last right hand place of figures used in expressing the limiting value. The round-off method of ASTM E 29 is used.

These cables should comply with industry standards such as Telcordia Technologies GR-20 (formerly Bellcore), Electronic Industries Association (EIA), Telecommunications Industry Association (TIA), International Telecommunications Union (ITU), International Electrotechnical Commission (IEC), and American Society for Testing and Materials (ASTM).

Optical Fiber Characteristics:

High quality optical fibers should be made with pure silica-based glass to have very low loss for infrared wavelengths and to be used to carry large amounts of information for very long distances in optical communication systems.

Details of the optical fibers are not covered in this specification, but the proposed cable should contain AllWave® or TrueWave® fibers for Single-Mode applications, or Multimode fibers that comply with the specific fiber requirements supplied by the City of Denver.

Cable Core Characteristic:

1. Color Code:

The individual colors for fibers and buffer tubes in loose tube cable cores should comply with EIA/TIA-598 as given in the following table.

-2-

**REVISION OF SECTION 614
 CCD LOOSE TUBE FIBER OPTIC CABLE**

Table 1 – Fiber and Tube Color Code

Fiber or Tube No.	Color
1	Blue (BL)
2	Orange (OR)
3	Green (GR)
4	Brown (BR)
5	Slate (SL)
6	White (WH)
7	Red (RD)
8	Black (BK)
9	Yellow (YL)
10	Violet (VI)
11	Rose (RS)
12	Aqua (AQ)

2. Central Strength Member

The central member functions as an anti-buckling element, and should be a glass/epoxy composite dielectric rod. A polyethylene overcoat may be applied to the central member to provide the proper spacing between buffer tubes during stranding.

3. Loose Tube Cable Buffer Tubes

Optical fibers are enclosed within buffer tubes that have a diameter several times larger than the diameter of the fibers. The optical fibers are loose within the buffer tubes allowing the fibers to move freely. The loose buffer tubes should have a 2.5 mm diameter, with a nominal wall thickness of 0.4 mm. For composite cable designs when both and multi-mode fibers are contained within the same cable, the single-mode fibers will be contained in the first buffer tubes. The multi-mode fibers will be contained in the sequenced buffer tubes following the multi-mode buffer tubes.

Table 2 – Buffer Tubes

Fiber Count	Buffer Tube OD (mm)	Fibers per Tube
1-288	2.5	12

The buffer tubes (and filler rods, if necessary) must be stranded in a reverse oscillation lay (ROL) technique around the central member to allow for easy mid-span access. The core of buffer tubes should be wrapped with two counter helically applied threads to bind together the cable core.

-3-

REVISION OF SECTION 614 CCD LOOSE TUBE FIBER OPTIC CABLE

4. Filler Rods

In order to create a round cable, filler rods of the same diameter as the buffer tubes may be used to fill empty positions. Filler rods are made out of HDPE and are natural in color.

5. Water Blocking System

Water blocking of the core outside and around the buffer tubes must be accomplished via “dry” elements. **In addition, water-blocking inside the buffer tubes must be accomplished via “dry” elements as well.**

These “dry” water blocking elements form a gel compound when in contact with water. The gel should effectively fill the interstices of the core and the inside of the tubes to prevent water penetration along the length of the cable. This dry water blocking significantly reduces cable core access time by eliminating the step of cleaning the buffer tubes and fibers upon entry. Additionally, this technology reduces the cable weight.

Dry water blocking elements should be in the form of binders, tapes, or yarns depending on where they are being applied.

Cable Sheath Characteristic:

The sheaths described in this section are:

- All-Dielectric Single Jacket: One polyethylene jacket, no metallic elements (SJ)
- Strength Elements: Sheath strength elements are applied over the cable core to provide the cable with the required tensile strength. These elements are made of fiberglass (Aramid yarns may be used as well).
- Inner Jacket (NOT APPLICABLE TO THIS PROJECT)
- Steel Armor (NOT APPLICABLE TO THIS PROJECT)
- Outer Jacket: An outer polyethylene jacket is applied over the cable to provide overall mechanical protection. This jacket is made of MDPE (or HDPE upon request) and is usually black. If required, the jacket could have two co-extruded colored tracer stripes located 180 degrees apart to aid in cable identification. The jacket will be continuous, free from pinholes, splits, blisters, or other imperfections.
- Ripcords: For ease of jacket removal, one clearly identifiable polyester ripcord is provided under the outer jacket for SJ designs. SJ/SA designs shall have two under armor ripcords placed 180 degrees apart. DJ/SA designs shall have one ripcord under both the inner jacket and steel armor.

-4-

**REVISION OF SECTION 614
 CCD LOOSE TUBE FIBER OPTIC CABLE**

Cable Cross-Sections: Single Jacket (SJ)

Figure 1 – Single Jacket

Table 3 – Target Cable Outer Diameters

Sheath Type	Number of Fibers							
	2 - 60 (5 Pos.)	2 - 72 (6 Pos.)	73 - 96 (8 Pos.)	97 - 120 (10 Pos.)	121- 44 (12 Pos.)	145-216 (18 Pos.)	217-240 (20 Pos.)	241-288 (24 Pos.)
	Cable OD in. (mm)	Cable OD in. (mm)	Cable OD in. (mm)	Cable OD in. (mm)	Cable OD in. (mm)	Cable OD in. (mm)	Cable OD in. (mm)	Cable OD in. (mm)
SJ	0.42 (10.6)	0.43 (11.0)	0.50 (12.8)	0.57 (14.4)	0.64 (16.2)	0.66 (16.7)	0.69 (17.4)	0.76 (19.2)

Mechanical, Environmental and Electrical Requirements:

These cables must meet the requirements of *Telcordia GR-20-CORE* with all testing performed based on *EIA/TIA-455* standards. The manufacturing company must provide proof of their quality control standards with *ISO 9001* and *TL9000* certifications. The cables should comply with the following temperature ranges:

Operation:	-40°C to 70°C (-40°F to 158°F)
Installation:	-30°C to 60°C (-22°F to 140°F)
Storage/Shipping:	-40°C to 75°C (-40°F to 167°F)

Single-Mode Fibers:

Per *Telcordia GR-20*, the magnitude of the attenuation change shall be less than or equal to 0.05 dB for 90% of the test fibers and less than or equal to 0.15 dB for the remaining 10% of test fibers. Cable aging allows for 0.10 dB/km average attenuation change with a magnitude of the maximum attenuation change for each individual fiber to be less than 0.25dB/km. These attenuation values include a 0.05 dB allowance for measurement repeatability. During mechanical and environmental testing evidence of cracking, splitting or other failure of the sheath components when examined under 5X magnification would result in failure of the proposed test requirements. In addition, no fiber shall lose optical continuity because of the test.

-5-

**REVISION OF SECTION 614
 CCD LOOSE TUBE FIBER OPTIC CABLE**

Table 4 – Testing for Single Mode Fibers

Cable Test	Test Method	Requirement
Tensile Loading and Bending	EIA/TIA-455-33	90% < 0.05 dB Max. Added Loss
	IEC 794-1-E1	100% < 0.15 dB Max. Added Loss
Cyclic Flexing	TIA/EIA-455-104	90% < 0.05 dB Max. Added Loss
	IEC 794-1-E6	100% < 0.15 dB Max. Added Loss
Cyclic Impact	EIA/TIA-455-25	90% < 0.05 dB Max. Added Loss
	IEC 794-1-E4	100% < 0.15 dB Max. Added Loss
Compressive Loading	TIA/EIA-455-41	90% < 0.05 dB Max. Added Loss
	IEC 794-1-E3	100% < 0.15 dB Max. Added Loss
Twist	TIA/EIA-455-85	90% < 0.05 dB Max. Added Loss
	IEC 794-1-E7	100% < 0.15 dB Max. Added Loss
Low and High Temperature Bend	EIA/TIA-455-37	90% < 0.05 dB Max. Added Loss
	IEC 794-1-E11	100% < 0.15 dB Max. Added Loss
External Freezing	EIA/TIA-455-98	< 0.05 dB Mean Added Loss
	IEC 794-1-F6	< 0.15 dB Max. Added Loss
Temperature Cycling	EIA/TIA-455-3	< 0.05 dB/km Mean Added Loss
	IEC 794-1-F1	< 0.15 dB/km Max Added Loss
Cable Aging	EIA/TIA-455-3	< 0.10 dB/km Mean Added Loss
	IEC 794-1-F1	< 0.25 dB/km Max Added Loss
Water Penetration	EIA/TIA-455-82 IEC 794-1-F5	No flow after 24 hours from one meter length of cable

Multimode Fibers

Per *Telcordia GR-20*, the allowable attenuation increase during the mechanical and environmental testing is 0.20 dB. Cable aging allows for the maximum attenuation change for each individual fiber to be less than 0.40dB/km.

During mechanical and environmental testing evidence of cracking, splitting or other failure of the sheath components when examined under 5X magnification would result in failure of the proposed test requirements. In addition, no fiber shall lose optical continuity because of the test.

-6-

**REVISION OF SECTION 614
 CCD LOOSE TUBE FIBER OPTIC CABLE**

Table 5 – Testing for Multi-Mode Fibers

Cable Test	Test Method	Requirement
Tensile Loading and Bending	EIA/TIA-455-33 IEC 794-1-E1	0.20 dB Max. Mean Added Loss
Cyclic Flexing	TIA/EIA-455-104 IEC 794-1-E6	0.20 dB Max. Mean Added Loss
Cyclic Impact	EIA/TIA-455-25 IEC 794-1-E4	0.40 dB Max. Mean Added Loss
Compressive Loading	TIA/EIA-455-41 IEC 794-1-E3	0.20 dB Max. Mean Added Loss
Twist	TIA/EIA-455-85 IEC 794-1-E7	0.20 dB Max. Mean Added Loss
Low and High Temperature Bend	EIA/TIA-455-37 IEC 794-1-E11	0.40 dB Max. Mean Added Loss
External Freezing	EIA/TIA-455-98 IEC 794-1-F6	0.20 dB Max. Mean Added Loss
Temperature Cycling	EIA/TIA-455-3 IEC 794-1-F1	< 0.5 dB/km Max Added Loss 80 % < 0.25 dB/km Added Loss
Cable Aging	EIA/TIA-455-3 IEC 794-1-F1	< 1.0 dB/km Max Added Loss 80 % < 0.5 dB/km Added Loss
Water Penetration	EIA/TIA-455-82 IEC 794-1-F5	No flow after one hour from one meter length of cable

Note:

The tensile rating for all of the cables described should be 2.7 kN (600 lbf), with a compression rating of at least 220 N/cm under GR-20 requirements.

Cable Marking:

Printed Characters.

For standard outer jackets, printed characters shall be indent printed with white characters for black jackets, black characters for non-black jackets, or as otherwise specified.

For standard striped outer jackets, printed characters shall be indent printed with white characters for red, green, orange, yellow, blue striped cables, light-blue characters for white striped cables, or as otherwise specified by the customer.

The characters shall be of proper height and space to produce good legibility. Character heights of

2 mm should facilitate adequate readability. An occasional illegible marking is permitted if there is a legible marking on either side.

-7-

**REVISION OF SECTION 614
CCD LOOSE TUBE FIBER OPTIC CABLE**

Markings.

The cable shall be sequentially marked at one meter, or two-foot intervals depending on specific requirements issued by the City of Denver. The length marks shall not be reset to zero on any length of the cable. The actual length of cable shall be within +1, -0% of the marked length.

Each length of cable shall be marked with the following legend:

"(Manufacturer Name) OPTICAL CABLE, (Product Part Number), (Month and Year of Manufacture, [MM-YY]), (Telephone Symbol []), (Fiber Count [XXX F], where XXX is the number of optical fibers in the cable), and (Manufacturers' Serial Number) "

Re-Markings

Only one remarking is permitted. If required, either of the following methods for remarking shall be used:

Method A: Completely remove the defective marking and remark the characters with the original color.

Method B: Leave the defective marking on the jacket and remark on a different portion of the cable jacket with yellow character print. The new number sequence shall differ from any other existing marking by at least 5000.

Any cable that contains two sets of markings shall be labeled to indicate the color and sequential numbers to be used. The labeling shall also be applied to the reel tag.

Cable Packaging:

Reels.

The manufacturer shall supply the product using their standard reel sizes, methods, apparatus, and reel wood lagging, but stenciled according to these specifications. The specifications outlined here are guidelines on what is expected with respect to packaging.

Reels are assumed to be in good working condition, firm, and be able to support the product through shipping and final installation. Reels shall be clean, dry and free of excessive dirt. All reels shall be checked for high nails, stave fit and proper stenciling.

Reel Labels.

Each wooden reel shall be permanently marked with the following information:

- "(Manufacturer's name)" (red paint)
- "OPTICAL CABLE" (black paint)

-8-

**REVISION OF SECTION 614
CCD LOOSE TUBE FIBER OPTIC CABLE**

- An arrow and the wording “cable end” to indicate the position of the outside cable end. (red paint)
- An arrow and the wording “ROLL THIS WAY” to indicate the direction the reel should be rolled to prevent loosening of the cable. (black paint)
- Reel Number (red paint)

Cable handling stickers/cards must be attached to both flanges of every reel. Each sticker must be stapled to the flange. See Figure 4 for illustrations of the stickers to be used.

Reel Lagging:

Thermal Protection.

Outer layers of the reel shall be covered with a protective wrap to limit the solar heating of the cable. This helps limit the cable surface temperature so that it will not exceed 10 C (18 F) above ambient temperature under maximum solar radiation according to Telcordia GR-20 requirements.

All foil wrap shall be securely fastened to the cable by at least 2 pieces of strapping tape.

Composite & Wood Lagging.

Reels shipping domestically shall be lagged with a suitable protective wrap (can be the same thermal protection wrap) and banded with steel straps. This wrap shall cover the cable from flange to flange and provided some mechanical protection to the outer layers of cable as well as weather resistance. Reels shipping for export shall be lagged with wooden boards nailed to each flange and banded with steel straps in addition to the protective wrap around the outer layers of cable.

-9-

**REVISION OF SECTION 614
CCD LOOSE TUBE FIBER OPTIC CABLE**

Figure 4 – Reel Stickers

Other:

Cable Ends.

Each end of the cable shall have end seals, either end caps or KELLEMS® pulling grips, in order to prevent moisture ingress into the cable during shipping, storage, or installation.

The top end of the cable shall be securely fastened to the inside of the reel flange to prevent the cable from becoming loose in transit or during handling. The bottom end, “test tail”, shall be approximately three meters in length and easily accessible. The end shall be protected within a cable slot and be securely fastened to the outside of the reel flange with wire ties or walkout straps. Staples, nails or yarn attached to the reel during manufacturing shall be removed.

The cable slot can be partially protected to prevent the cable tail from moving outside this, however for export orders the cable slot must be completely sealed by either metallic protection rings, plywood covers, or other.

Cable Length Tolerance.

Cables ordered to standard factory lengths shall have an actual length within –0% and +5% of the length ordered unless otherwise specified by the customer.

-10-

**REVISION OF SECTION 614
CCD LOOSE TUBE FIBER OPTIC CABLE**

Certified Test Data.

Each cable shall have certified test data securely fastened to the reel in a waterproof wrapping. The certified test data sheet shall include the following information:

- Cable Number
- Date
- Customer Name
- Ordered Length
- Customer Order Number
- Ship Length
- Customer Cable Code
- Customer Reel Number
- Customer's Attenuation Specification(s)
- Number of Fibers
- Cable Construction
- Fiber Transmission Data
- Bandwidth Data – only applies to Multi-Mode Fibers
- Authorized Signature

Reel Tag.

Each cable shall have a reel tag securely fastened to the reel in a waterproof wrapping. The Reel Tag (Cut Length Data Sheet) shall include the following information:

- Cable Number
- Date
- Customer Name
- Ordered Length
- Customer Order Number
- Ship Length
- Customer Cable Code
- Customer Reel Number
- Customer's Attenuation Specification(s)
- Number of Fibers
- Beginning and Ending Sequential Length Markings
- Gross Weight
- Net Weight
- Inspected By Signature

REVISION OF SECTION 614 CCD TEST FIBER OPTIC CABLE

Section 614 of the Standard Specifications is hereby revised for this project as follows.

Subsection 614.08(p), CCD Test Fiber Optic Cable, is hereby added to the Standard Specifications and shall include the following:

This work consists of testing fiber optic cable for CCD. Testing shall include both new cable and existing cable. The test procedures involve an OTDR test and an Optical Power Meter Test.

The guidelines for fiber optic cable testing include:

Test jumpers and patch cords must be of the same fiber core size and connector type as the cable system.

The light source and OTDR must operate with the range of 1310 ± 10 nm or 1550 ± 20 nm for testing in accordance with ANSI/EIA/TIA-526-7.

The power meter and the light source must be set to the same wavelength during testing.

The power meter must be calibrated and traceable to the National Institute of Standards and Technology (NIST).

All system connectors, adapters and jumpers must be cleaned as per manufacturer's instructions before measurements are taken.

MATERIALS

The following items are required to perform fiber optic cable tests:

- an OTDR;
- a test reel, if necessary;
- a light source at the appropriate wavelength;
- Optical Power Measurement Equipment; and
- Test Jumpers as specified below.

- (a) CPR Test Jumper-1 and Test Jumper-2 shall be 1-5 meters long with connectors compatible with the light source and power meter and have the same fiber construction as the link segment being tested.

OPTICAL FIBER CABLE TESTING WITH O.T.D.R

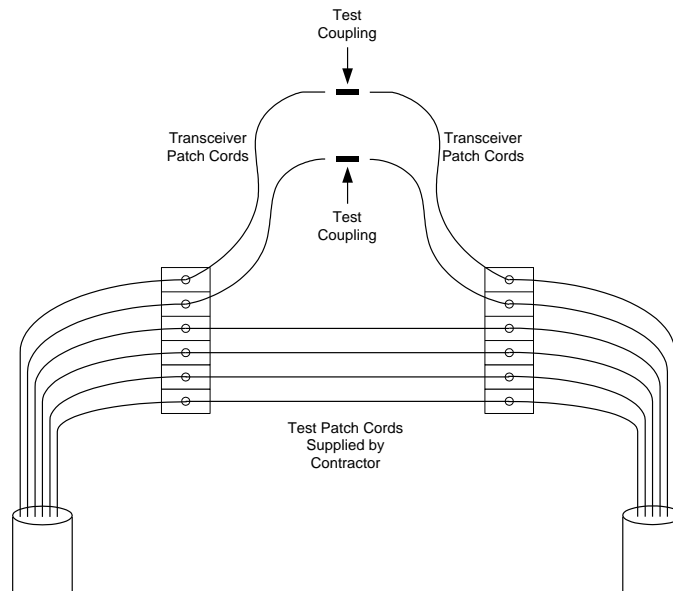

The Contractor shall perform an OTDR test of all fibers in all tubes on the reel prior to installation of the fiber. The test results shall be supplied to the Engineer prior to installation of the cable.

-2-

REVISION OF SECTION 614 CCD TEST FIBER OPTIC CABLE

If the fiber is specified as “Install Only”, the Contractor shall test the fiber on the reel and provide the test results to the Engineer prior to accepting the cable. After installation, if there are unused portions of cable remaining on the reel, the Engineer may request the Contractor or other qualified technician to perform a reel test. The Contractor shall provide the Engineer the test results prior to delivering the cable to the Engineer. Any cable damaged while in the Contractor’s possession shall be replaced at the Contractor’s expense.

All fiber testing shall be performed on all fibers in the completed end-to-end system. Testing shall consist of a bi-directional end-to-end OTDR trace performed per TIA/EIA-455-61. The system margin loss measurements shall be provided at 1310 and 1550nm. If the Plans require installation of a fiber optic patch panel, the Contractor shall supply patch cords to patch all terminated fibers through the panel for all fiber testing. If patch cords are specified in the Plans for final equipment installation, these patch cords shall be connected using a test coupling for the end-to-end test.

OTDR readings will be used to ensure proper installation and to troubleshoot faults. OTDR signature traces will be used for documentation and maintenance. An OTDR provides an indirect estimate of the loss of the cable plant, generally, more accurate or reliable values will be obtained by using an Optical Power Meter. For fibers that are identified in the Plans to be left non-terminated, an OTDR shall be used to test end-to-end attenuation.

Loss numbers for the installed link shall be calculated by taking the sum of the bi-directional measurements and dividing that sum by two.

The Contractor shall use an OTDR that is capable of storing traces electronically and shall save each final trace.

-3-

REVISION OF SECTION 614 CCD TEST FIBER OPTIC CABLE

To ensure the traces identify the end points of the fiber under test and the fiber designation, the Contractor shall use a test reel, if required, to eliminate the “dead zone” at the start of the trace so that the start of the fiber under test can be identified on the trace. Indicate the length of the test reel for all test results.

If the fiber designation is not indicated on the trace itself, the Contractor shall provide a cross-reference table between the stored trace file name and the fiber designation.

In compliance with EIA/TIA-455-61 “Measurement of Fiber or Cable Attenuation Using an OTDR” the Contractor shall record the following information during the test procedure:

- Names of personnel conducting the test.
- Type of test equipment used (manufacturer, model, serial number, calibration date).
- Date test is being performed.
- Optical source wavelength and spectral width.
- Fiber identification.
- End point locations.
- Launch conditions.
- Method of calculation for the attenuation or attenuation coefficient.
- Acceptable link attenuation.

OPTIC FIBER CABLE TESTING WITH OPTICAL POWER METER

The Contractor shall conduct an Optical Power Meter Test for each fiber installed.

Fiber optic cable segments shall be tested in one direction at both the 1310 nm and 1550 nm wavelength.

In compliance with TIA/EIA-526-7 “Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant,” the following information shall be recorded during the test procedure:

- Names of personnel conducting the test.
- Type of test equipment used (manufacturer, model, serial number, calibration date).
- Date test is being performed.
- Optical source wavelength and spectral width.
- Fiber identification.
- End point locations.
- Test direction.
- Reference power measurement (when not using a power meter with a Relative Power Measurement Mode).
- Measured attenuation of the link segment.
- Acceptable link attenuation.

-4-

REVISION OF SECTION 614 CCD TEST FIBER OPTIC CABLE

The minor attenuation differences due to test direction are on par with the accuracy and repeatability of the test method. Lateral segments within a building are limited to 90 meters. Therefore, attenuation differences caused by wavelength are insignificant, and as a result, single wavelength testing is sufficient.

ACCEPTABLE ATTENUATION VALUES

Acceptable attenuation values shall be calculated for each fiber tested. These values represent the maximum acceptable test values.

SM Fiber. The general attenuation equation for any SM link segment is as follows:

Acceptable Link Attn. = Cable Attn. + Connector Attn. + Splice Attn.

8.3 μm Single-mode Attenuation Coefficients:

Cable Attn.=Cable Length (km) x (0.34 dB/km@1310 nm or 0.25 dB/km@1550 nm)

Connection Attn. (ST or SC connectors)=(No. of Connections x 0.39 dB)+0.42 dB.

Connection Attn. (LC connectors)=(No. of Connections x 0.14 dB)+0.24 dB.

Splice Attn. (Mechanical or Fusion)=Splices x 0.30 dB.

TEST PROCEDURES

All fiber testing shall be performed on all fibers in the completed end-to-end system.

The Optical Power Meter fiber test shall be conducted as follows:

Clean the test jumper connectors and the test coupling per manufacturer's instructions.

Follow the test equipment manufacturer's initial adjustment instructions.

Connect Test Jumper-1 between the light source and the power meter. Avoid placing bends in the jumper that are less than 100 mm (4 inches) in diameter.

If the power meter has a Relative Power Measurement Mode, select it. If it does not, reduce the Reference Power Measurement (P_{ref}). If the meter can display power levels in dBm, select this unit of measurement to simplify subsequent calculations.

-5-

REVISION OF SECTION 614 CCD TEST FIBER OPTIC CABLE

Disconnect Test Jumper-1 from the power meter. Do NOT disconnect the test jumper from the light source.

Attach Test Jumper-1 to one end of the cable plant to be measured and Test Jumper-2 to the other end.

Record the Power Measurement (P_{sum}). If the power meter is in Relative Power Measurement Mode, the meter reading represents the true value. If the meter does not have a Relative Power Measurement Mode, perform the following calculation:

If P_{sum} and P_{ref} are in the same logarithmic units (dBm, dBu, etc.):

$$CPR (dB) = P_{sum} - P_{ref}$$

If P_{sum} and P_{ref} are in watts:

$$CPR (dB) = 10 \times \log_{10} [O_{sum}/P_{ref}]$$

TEST ACCEPTANCE

The Contractor shall demonstrate that each Optical Power Test results in acceptable attenuation values.

The Contractor, solely at the Contractor's cost, shall remake any fusion splices that have test results exceeding acceptable attenuation values.

The Contractor, solely at the Contractor's cost, shall retest any fiber links that have been re-spliced.

The Contractor, solely at the Contractor's cost, shall bring any link not meeting the requirements of this specification into compliance.

SUBMITTALS

The Contractor shall submit test results documentation as both a hard copy and electronic copy.

After each reel test, the Contractor shall submit one hard copy of the OTDR trace for every fiber on the reel. After installation, the Contractor shall submit one hard copy of the OTDR trace for every spliced fiber. Hard copy traces shall be organized and bound in logical order in an 8 1/2" x 11" hard cover binder.

-6-

**REVISION OF SECTION 614
CCD TEST FIBER OPTIC CABLE**

The Contractor shall submit, after approval of the hard copy traces, electronic copies of all traces and appropriate software to allow reading the traces. The Contractor shall submit one copy of the complete contract Plans, including additional drawings issued as part of any change orders, with any deviations clearly marked in color. Deviations to be noted and shall include but not be limited to the following:

- Fiber Splice location;
- Fiber Splice configuration; and
- Termination layout.

**REVISION OF SECTION 614
PACKETWAVE PLATFORM (8700)**

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

For this project, a Packetwave Platform shall be a Ciena 8700, which is a multi-terabit programmable Ethernet-over-Dense Wavelength Division Multiplexing (DWDM) packet switch. It shall be used to aggregate and switch large quantities of packet traffic and to address changes to the patterns, dynamics, and scale of traffic within CDOT's DWDM and Carrier Ethernet network.

There is one complete new Ciena 8700 Packetwave Platform to be installed as part of this Project.

The location for the new installation of Ciena 8700 Packetwave Platform is:

1. Interstate 70 and Airport Boulevard TMS Building

MATERIALS

The Ciena 8700 Packetwave Platform shall be configured for both control plane and switch fabric redundancy.

The Contractor shall furnish and install the Ciena 8700 Packetwave Platform and associated items as shown in Item Table 1 below.

All associated hardware and materials not listed in the item table are considered subsidiary and required for a complete installation and shall be included as part of the work.

Each Ciena 8700 Packetwave Platform shall be furnished and installed with a G.8032 ring protection configuration in conformance with Ciena's Ethernet Design and Configuration Services per the Department's requirements either prior to installation or during installation and configuration.

Final configuration including all IP schema design for data transport will be conducted by CDOT personnel and Ciena representatives after installation and G.8032 configuration.

If field changes are made which affect the original Contractor's material order for the Packetwave Platform and require any reconfiguration of the original order, the Contractor shall ensure that the Ciena representative is contacted and made aware of such changes to alleviate any possible delays in delivery and installation.

If for any reason the switch or associated materials are defective or are damaged at the time of installation by either the Contractor or by Ciena, the item shall be removed and replaced at no additional cost to the project. Items shall also be replaced if any failures occur do to manufacturer's defects, at no additional cost to the project prior to the final acceptance.

The Contractor shall contact the Ciena distributor for equipment quotations and purchasing purposes only. The Contractor shall not contact or rely on either the Ciena distributor or Ciena for network design related questions. It is the Contractor’s responsibility to provide the distributor’s representative all information required pertaining to the complete network design as shown in the project plans. All questions pertaining to the network design shall be conducted through the Project Engineer for help or clarification.

When requesting quotations, the Contractor shall submit to Ciena distributor or Ciena a complete package including the following items:

1. A complete list of required equipment for purchase including materials and quantities based on the individual pay item project specifications including those stated under the Method of Measurement section of the specification to achieve a complete item(s) installation per the project plans.
2. A PDF copy of all project specifications pertaining to the material being ordered.
3. A PDF copy of all networking project plan sheets.

CONSTRUCTION REQUIREMENTS

The Contractor shall furnish the Ciena 8700 Packetwave Platforms for the TMS Building as previously indicated. After the Contractor has placed the final order through the Ciena distributor’s representative, the order will be forwarded to Ciena for staging and configuration for the Packetwave Platform. Once the Packetwave Platform is complete and ready to ship by Ciena, all materials will be shipped to the Colorado Transportation Management Center directly from the Ciena facility.

When all material has arrived at the CTMC, CDOT personnel and Ciena representatives will schedule and conduct the installations. While the CDOT and Ciena personnel install the Packetwave Platform, the Contractor shall continue installation of the Ethernet Switches being purchased and installed as part of this project. This includes the Ciena 3930 Ethernet Switches, Ciena 3931 Ethernet Switches, Ciena 5150 Ethernet Switches, and the Ciena 5160 Ethernet Switches.

This work includes all items shown in Item Table 1; staging and configuration of the Ciena 8700 Packetwave Platform. Work includes all CAT6 Ethernet cables as well as multimode and single mode fiber optic pre-connectorized patch cables.

**REVISION OF SECTION 614
CARRIER ETHERNET PACKET-OPTICAL PLATFORM (6500)**

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

For this project, Carrier Ethernet Packet-Optical Platform shall be a Ciena 6500 Carrier Ethernet Packet-Optical Platform utilizing Dense Wavelength Division Multiplexing (DWDM) optics installed in communication node buildings to bi-directionally transport Ethernet data in a high speed backbone design. All Ciena 6500 Carrier Ethernet Packet-Optical Platform and upgrade network equipment shall be manufactured by Ciena.

There is one new Ciena 6500 Carrier Ethernet Platform required to be furnished and installed on this project.

The locations for the new installation of Ciena 6500 Carrier Ethernet Platforms is as follows;

1. Interstate 70 and Airport Boulevard.

MATERIALS

The Ciena 6500 Carrier Ethernet Packet-Optical Platforms shall be configured in both a full service configuration and a drop and repeat / regeneration configuration.

The Contractor shall furnish and install the Ethernet Platforms and associated items for each location as shown in Item Tables 1, 2, 3, 4 and 5 below.

All associated hardware and materials not listed in the item tables are considered subsidiary and required for a complete installation and shall be included as part of the work.

Each Ciena 6500 Carrier Ethernet Platform shall be furnished and installed with a G.8032 ring protection configuration in conformance with Ciena's Ethernet Design and Configuration Services per the Colorado

Department of Transportation (CDOT) requirements either prior to installation or at the individual installation sites.

Final configuration including all IP schema design for data transport will be conducted by CDOT personnel and Ciena representatives after installation and G.8032 configuration.

If field changes are made which affect the original Contractor's material order for the Ethernet Platforms and require any reconfiguration of the original order, the Contractor shall ensure that the Ciena representative is contacted and made aware of such changes to alleviate any possible delays in delivery and installation.

If for any reason the switch or associated materials are defective or are damaged at the time of installation by either the Contractor or by Ciena, the item shall be removed and replaced at no additional cost to the project. Items shall also be replaced if any failures occur do to manufacture's defects, at no additional cost to the project prior to the final acceptance.

network design related questions. It is the Contractor's responsibility to provide the distributor's representative all information required pertaining to the complete network design as shown in the project plans. All questions pertaining to the network design shall be conducted through the Project Engineer for help or clarification.

When requesting quotations, the Contractor shall submit to Ciena distributor or Ciena a complete package including the following items:

1. A complete list of required equipment for purchase including materials and quantities based on the individual pay item project specifications including those stated under the Method of Measurement section of the specification to achieve a complete item(s) installation per the project plans.
2. A PDF copy of all project specifications pertaining to the material being ordered.
3. A PDF copy of all networking project plan sheets.

CONSTRUCTION REQUIREMENTS

The Contractor shall furnish the Ciena 6500 Carrier Ethernet Packet-Optical Platforms for the Communications Node Buildings and all upgrade equipment for the existing Ciena 6500 Carrier Ethernet Packet-Optical Platform locations. After the Contractor has placed the final order through the CenturyLink representative, the order will be forwarded to Ciena for staging and configuration for all Optical Platforms. Once the Optical Platform units are complete and ready to ship by Ciena, all materials will be shipped to the Colorado Transportation Management Center directly from the Ciena facility.

When all material has arrived at the CTMC, CDOT personnel and Ciena representatives will schedule and conduct the installations. While the CDOT and Ciena personnel install the Optical Platforms, the Contractor shall continue installation of the Ethernet Switches being purchased and installed as part of this project. This includes the Ciena 3930 Ethernet Switches, Ciena 3931 Ethernet Switches, Ciena 5142 Ethernet Switch, Ciena 5150 Ethernet Switches, and the Ciena 5160 Ethernet Switches.

Carrier Ethernet Packet-Optical Platform shall include Ciena 6500 Carrier Ethernet Packet-Optical Platforms furnished and accepted for both the Communications Node Buildings and all Ciena

6500 Carrier Ethernet Packet-Optical Platform upgrade equipment to be installed at the existing Optical Platform locations.

This work includes all items shown on Tables 1, 2, 3, 4 and 5; staging and configuration of each Ciena 6500 Carrier Ethernet Packet-Optical Platform. Work includes all Cat-6 Ethernet cables and single mode fiber optic pre-connectorized patch cables.

**REVISION OF SECTION 614
ETHERNET ROUTER (5150)**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project, Ethernet Router shall be a Ciena 5150 Carrier Ethernet Service Aggregation Switch (SAS), utilizing 1 Gigabit small form-factor pluggable (SFP) and 10 Gigabit small form-factor pluggable (XFP) optic modules, installed in the regeneration node buildings/traffic management system buildings to bi-directionally transport Ethernet data to and from Ciena 3930 Carrier Ethernet Service Delivery Switches.

The Ethernet switch shall have forty eight 100M/1 Gigabit SFP ports. The switch shall also have four 10 gigabit ports. 1 gigabit ports and 10 gigabit ports shall have SFP and XFP optic modules, as described in the Project Specifications. Additionally, a SFP + optic module, if required for connection between a Ciena 5160 and the proposed Ciena 5150 shall also be provided.

A single mode, 9/125 um optical attenuator to match the wavelength of the SFP and XFP optic modules shall be included and installed in the receive port of the SFP and XFP on the Ciena 5150 Ethernet Switch, unless otherwise specified by the Engineer. Optical attenuators shall be provided and paid for as part of the Ethernet Router item.

MATERIALS

The Ethernet switch shall be configured with 48 100M/1000M SFP Ethernet ports two 10 Gigabit Module Slots and two 10 Gigabit XFP ports per module.

The Contractor shall furnish and install the Ethernet switch and associated items shown in Item Table A below. The Contractor shall also furnish the Ethernet switch software and maintenance licenses show in Item Tables B and C. Tables A, B and C describe items to be included with a single 5150 Carrier Ethernet Service Aggregation Switch.

**REVISION OF SECTION 614
ETHERNET ROUTER (5150)**

All associated hardware and materials not listed in the item tables are considered subsidiary and required for a complete installation and shall be included as part of the work.

Each Ethernet Router shall be capable of G.8032 ring protection configuration in conformance with the Ciena Ethernet Design and Configuration Services per the Colorado Department of Transportation (CDOT) requirements. CDOT will configure basic IP schema for each Ethernet Router.

Final configuration for data transport and G.8032 configuration will be conducted by CDOT personnel after network burn in.

If field changes are made which affect the original Contractor's material order for the Ethernet switches and require any changes of the original Ethernet Router order, the Contractor shall ensure that the Ciena distributor is contacted and made aware of such changes to alleviate any possible delays in delivery and installation.

If for any reason the switch or associated materials are defective or are damaged at the time of installation, the item shall be removed and replaced by the Contractor at no additional cost to the Project. Items shall also be replaced if there are any failures, including due to manufacture's defects. These replacements shall be included with the work at no additional cost to the Project.

The Contractor shall contact the Ciena distributor for equipment quotations and purchasing purposes only. It is the Contractor's responsibility to provide the distributor's representative all information required pertaining to the complete network design.

When requesting quotations, the Contractor shall submit to Ciena distributor or Ciena a complete package including the following items:

1. A complete list of required equipment for purchase including materials and quantities based on the individual item listed in the Project specifications. This includes items to achieve work completed and installed per the Project plans.
2. A PDF copy of all Project specifications pertaining to the material being ordered.
3. A PDF copy of all networking Project plan sheets.

CONSTRUCTION REQUIREMENTS

The 5150 Ethernet switch shall be installed in traffic management system buildings in the quantities required for this Project and will be connected via the fiber optic backbone to Ciena 3930 SDS at communication cabinet field device locations. Each Ethernet Router shall have a SFP optic module matching those in the field Ethernet switches. The 5150 SAS Ethernet switch shall also be connected to existing or proposed Ciena 5150 and Ciena 5160. This connection shall be made via the backbone fiber as designated on the Plans and described herein.

Spare ports in existing Ciena 5150 switches may not be used for any purposed on this project.

-4-

**REVISION OF SECTION 614
ETHERNET ROUTER (5150)**

The Contractor shall provide the number of Ciena 5150 switches needed to meet the following requirements:

1. The Ciena 5150 switches shall accommodate connections to all field switches installed on the Project; and
2. Out of the 48 100M/1G SFP ports available on a new Ciena 5150, there shall be a minimum of 29 ports that remain as spares for CDOT's future use. If a minimum of 29 spare 100M/1G SFP ports are not available at each node building, an additional Ciena 5150 shall be provided to meet this requirement. Spare ports in existing Ciena 5150 switches cannot be used to fulfill this requirement..

When using CWDM, the Contractor shall install single mode, bend insensitive, pre-connectorized duplex patch cables with a polyurethane jacket for connection from the CWDM mux/demux to the individual CWDM 100M/1G SFP modules in the Ciena 5150. The Contractor shall also install single mode, bend insensitive, pre-connectorized duplex patch cables with a polyurethane jacket for connection from the fiber optic termination panel to the XFP optic modules. Connectors for the patch cable shall be LC for the SFP, XFP and SFP+ optic modules. The Contractor shall verify the required connectors for each patch cable.

Ethernet Router shall include SFP optic modules, XFP optic modules, optical attenuator, power supplies, power cables, licenses, switch software, maintenance license, wiring, patch cables, and documentation.

REVISION OF SECTION 614 ETHERNET ROUTER (5160)

Section 614 of the Standard Specifications are hereby revised for this Project to include the following:

DESCRIPTION

1. For this Project, Ethernet Router shall be a Ciena 5160 Carrier Ethernet Service Aggregation Switch, utilizing Enhanced Small Form-factor Pluggable (SFP+) optic modules, installed in node buildings to aggregate local and remote Ciena 5150 Carrier Ethernet Service Aggregation Switches at 10 Gigabits per second (Gbps). The Ciena 5160 Carrier Ethernet Service Aggregation Switch shall interface to Ciena 6500 Packet-Optical Platform Switch at 10 Gbps, unless otherwise specified by CDOT.
2. The Ciena 5160 Carrier Ethernet Service Aggregation Switch shall have the ability to accept up to a maximum of twenty-four (24) 1 Gbps or 10 Gbps multi-rate SFP+ ports. All 10 Gigabit Small Form-factor Pluggable (XFP) optic modules for Ciena 5150s that will interface with the Ciena 5160 as part of this Project shall be provided by the Contractor. Additionally, the SFP+ optic module for the Ciena 5160 that is needed to interface with both the Ciena 5150 and 6500 shall also be provided by the Contractor.
3. A single mode, 9/125um optical attenuator to match the wavelength of the XFP optic modules shall be included and installed in the receive port of the fiber optic termination panel that is connected to the XFP in each remote Ciena 5150 (located in Node 2 and Port of Entry communication node buildings) interfacing with the Ciena 5160, unless otherwise required by the Engineer. Single mode, 9/125um optical attenuators to match the wavelength of the SFP+ optic module shall be included and installed in the receive port of the fiber optic termination panel that is connected to the SFP+ on the Ciena 5160, unless otherwise required by the Engineer. Optical attenuators shall also be provided by the Contractor

MATERIALS

The Ciena 5160 Carrier Ethernet Service Aggregation Switch shall be configured with twenty-four (24) 10G SFP+ ports, one (1) 10/100/1000M RJ-45 management port, one (1) console port (RJ-45, EIA-561), sixteen (16) external alarm inputs, one (1) RJ-45 sync input/output port and two (2) SMB sync input/output ports.

The Contractor shall furnish and install the Ciena 5160 Carrier Ethernet Service Aggregation Switch and associated items shown in Item Table A below. The Contractor shall also furnish the Ethernet switch software and maintenance licenses shown in Item Tables B and C. Item Tables A, B and C describe items to be included with a single 5160 Carrier Ethernet Service Aggregation Switch.

REVISION OF SECTION 614 ETHERNET ROUTER (5160)

All associated hardware and materials not listed in the item tables are considered subsidiary and required for a complete installation and shall be included as part of the work.

Final configuration including all IP schema design for data transport will be conducted by CDOT personnel after installation.

If field changes are made which affect the original Contractor's material order for the Ethernet Router and require any reconfiguration of the original Ethernet switch material orders, the Contractor shall ensure that the Ciena distributor is contacted and made aware of such changes to alleviate any possible delays in delivery and installation. If for any reason the router or associated materials are defective or are damaged at the time of installation by either the Contractor or Ciena, the item shall be removed and replaced at no additional cost to the Project. Items shall also be replaced if any failures occur due to manufacturer's defects, at no additional cost to the Project, prior to the final acceptance.

Neither the Ciena distributor nor Ciena Corporation have been involved in the design of the Project corridor network. The Contractor shall contact the CenturyLink representative for equipment quotations and purchasing purposes only. The Contractor shall not contact or rely on either Ciena distributor or Ciena for network design related questions.

When requesting quotations, the Contractor shall submit to Ciena distributor or Ciena a complete package including the following items:

- a) A complete list of required equipment for purchase including materials and quantities based on the individual Project specifications to achieve a complete item(s) installation.
- b) A PDF copy of all Project specifications pertaining to the material being ordered.
- c) A PDF copy of all networking Project plan sheets.

It is the Contractor's responsibility to provide the distributor's representative all information required pertaining to the complete network design. During the Project, the Ciena distributor or Ciena Corporation is not responsible for any type of network design aide. All questions pertaining to the network design shall be conducted through the Department for help or clarification.

CONSTRUCTION REQUIREMENTS

The 5160 SAS Ethernet switch shall be installed in the communications node buildings as require and will be connected via fiber to local and remote 5150s, unless otherwise required by CDOT. The 5160 SAS Ethernet switch shall also be connected to the Ciena 6500, unless otherwise required by CDOT.

For 5160 connection to remote 5150s, the Contractor shall install single mode, bend insensitive, pre-connectorized duplex patch cables with a polyurethane jacket for connection from the fiber optic termination panel to the SFP+ optic modules in the Ciena 5160. The Contractor shall also install multi-mode, bend insensitive, pre-connectorized duplex patch cables with a polyurethane jacket for connection from each local 5150 XFP optic module to the SFP+ optic modules in the Ciena 5160 located in the same communications node building. Connectors for the patch cable shall be LC for the XFP and SFP+ optic modules and LC for the fiber optic termination panel.

-4-

**REVISION OF SECTION 614
ETHERNET ROUTER (5160)**

Ethernet Router 5160 shall include a Ciena 5160 Carrier Ethernet SAS installed and accepted. Also included shall be 10Gig SFP+ multimode optics, 10Gig SFP+ single mode optics, 10Gig XFP multimode optics (for local Ciena 5150 switches), 10 Gig XFP single mode optics (for remote Ciena 5150 switches), 10Gig SFP+ multimode optics (for local Ciena 6500 switch), optical attenuators, power supplies, power cords, console cable, switch operating system, software licenses, maintenance services, basic configuration, wiring, single mode fiber optic pre-connectorized patch cables, multi-mode fiber optic pre-connectorized patch cables, documentation, and testing by the Ciena representative. Ciena representative shall be on-site for testing.

**REVISION OF SECTION 614
ETHERNET SWITCH (3930)**

Section 614 of the Standard Specifications is hereby revised for this Project as follows:

DESCRIPTION

For this Project Ethernet Switch shall be a Ciena 3930 Carrier Ethernet Service Delivery Switch (SDS) for installation in individual Intelligent Transportation Systems (ITS) device communication cabinets and/or variable message sign cabinets to transport Ethernet data to and from ITS Node Buildings and roadway ITS devices as shown in the Project plans. All Ethernet switches shall be manufactured by Ciena.

The Ethernet switch shall utilize Coarse Wavelength Division Multiplexing (CWDM) and Small Form-factor Pluggable (SFP) optic modules. Each switch shall be provided with both a CWDM SFP optic module and a 1310 nm SFP optic module where a two switch per wavelength deployment is utilized (typical design). The Contractor is advised that in certain cases there are more than two switches per wavelength and when this occurs, the switch or switches in the middle shall utilize two 1310 nm SFP optic modules. Optic modules shall be provided as described in the Project Specifications, 614 – CWDM SFP and 614 – Small Form-Factor Pluggable – 1310 nm SFP as part of this specification package. All optic modules for the Ciena 3930 shall a part of the Ethernet switch item.

The Ethernet switches shall interface with Ciena 5150 Ethernet aggregation switches located in regeneration node buildings along the Project corridor.

A single mode, 9/125um CWDM wavelength independent attenuator to match the wavelength of the SFP optic modules shall be included and installed in the communications cabinet termination patch panel. Optical attenuators shall be provided as described in the Project Specification, 614 - Coarse Wavelength Division Multiplexing Attenuator.

MATERIALS

The Ethernet switch shall be configured with two (2) 1GIG/10GIG SFP+ ports, four (4) 100M/1000M SFP ports and two (2) 10/100/1000M RJ-45 Ethernet ports. User Network Interface (UNI) ports are not required as part of the Ethernet switch.

The Contractor shall furnish and install the Ethernet switch and associated items shown in Item Table A below. The Contractor shall also furnish the Ethernet switch software and maintenance licenses show in Item Tables B and C. Tables A, B and C describe items for a single Ciena 3930 SDS Ethernet switch.

-2-

**REVISION OF SECTION 614
 ETHERNET SWITCH (3930)**

Table A – Ciena 3930 SDS Ethernet Switch, Typical Hardware Description

Item Description	Item Number	Quantity

**REVISION OF SECTION 614
ETHERNET SWITCH (3930)**

Matching CWDM SFP optic modules shall also be provided for Ciena 5150 Ethernet aggregation switches in each of the regeneration node buildings to which the Ciena 3930 switches communicate. Quantities for these Ciena 5150 Ethernet aggregation switch CWDM SFP optic modules shall be identified in material tables.

Each Ethernet Switch shall be furnished and installed with a G.8032 ring protection configuration in conformance with Ciena's Ethernet Design and Configuration Services per the Colorado Department of Transportation requirements either prior to installation or at the individual installation sites.

Preliminary configuration including all IP schema design for data transport will be conducted by CDOT personnel prior to installation. All final configurations and G.8032 configuration shall also be conducted by CDOT personnel.

If field changes are made which affect the original Contractor's material order for the Ethernet switches and require any reconfiguration of the original Ethernet switch material orders, the Contractor shall ensure that the Ciena distributor is contacted and made aware of such changes to alleviate any possible delays in delivery and installation. If for any reason the switch or associated materials are defective or are damaged at the time of installation by either the Contractor or by Ciena, the item shall be removed and replaced at no additional to the Project. Items shall also be replaced if any failures occur due to manufacturer's defects, at no additional cost to the Project prior to the final acceptance.

Neither Ciena distributor nor Ciena Corporation has been involved in the design of the Project network. The Contractor shall contact the Ciena distributor for equipment quotations and purchasing purposes only. The Contractor shall not contact or rely on either the Ciena distributor or Ciena for network design related questions.

When requesting quotations, the Contractor shall submit to the Ciena distributor a complete package including the following items:

1. A complete list of required equipment for purchase including materials and quantities based on the individual item listed in the Project specifications including those stated work items needed to achieve to complete the work and installation per the Project plans.
2. A PDF copy of all Project specifications pertaining to the material being ordered.
3. A PDF copy of all networking Project plan sheets.

It is the Contractor's responsibility to provide the distributor's representative all information required pertaining to the complete network design as shown in the Project plans. During the bidding process, the Ciena distributor or Ciena Corporation is not responsible for any type of network design aide. All questions pertaining to the network design shall be conducted through the Department for help or clarification.

CONSTRUCTION REQUIREMENTS

The 3930 SDS Ethernet switch will be installed in a communications cabinet or variable message sign and connected via the fiber optic backbone to a communications node building in a protected ring design. Each switch shall normally have both a CWDM SFP optic module and a 1310nm SFP optic module,

-4-

**REVISION OF SECTION 614
ETHERNET SWITCH (3930)**

except as previously noted where there are more than two switches per wavelength. Each switch shall be configured as part of creating a single carrier Ethernet diverse path sub-ring.

For connection of the switch to the optical fiber network, one (1) lateral fiber optic cable shall be terminated and patch cables shall be installed and connected to the optical ports of the switch. A total of four (4) lateral fiber strands shall be used for data communications to the switch. Two (2) lateral fiber strands shall be used for communications connecting the SFP optics carrying CWDM traffic and two (2) lateral fiber strands shall be used for communications connecting the 1310 nm SFP optics, except as noted where there are more than two switches per wavelength.

Additional splicing is required for the CWDM optical filters at each Ciena 3930 location. The CWDM optical filters shall be used to split a single CWDM wavelength from the multiple wavelengths being transmitted along the fiber strands, including passing a 1310 nm wavelength between Ciena 3930 switch pairs. See Plan sheets for splicing details and 614 – Single Wavelength CWDM Optical Filter.

The Contractor shall provide single mode, bend insensitive, pre-connectorized duplex patch cables with a polyurethane jacket for connection from the coarse wavelength division multiplexing SFP optic module and the 1310 nm SFP optic module. Connectors for the patch cable shall be LC on the Ethernet switch end and ST on the termination end. For Ethernet switches in node buildings, if applicable, proposed termination panels may use LC connectors to accommodate

The high termination requirements of the proposed fiber optic cable, accordingly LC-to-LC patch cables may be utilized at these locations.

The patch cable shall be of sufficient length to span from the termination patch panel to the Ethernet switch SFP ports with a maximum of two (2) feet of slack. They shall be installed in a manner which will not interfere with internal device equipment in the switch enclosure and will include cable management so as not to interfere with future maintenance within the enclosure.

For installations in variable message signs, the Contractor shall install an aluminum backplane on the internal structural supports of the sign housing. It shall be mounted in a location which will not interfere with internal equipment and future maintenance of the variable message sign electronics and cabling. The Ethernet switch shall not be mounted directly on to the variable message sign cabinet wall or sign support.

All material required for mounting of the Ethernet switch in the variable message sign cabinet shall be included in the price of the Ethernet switch.

A field site survey for final placement of the Ethernet switch in the variable message sign cabinet shall be conducted prior to installation.

If required the Contractor shall arrange to provide for a certified Ciena representative either on site or via remote access through the Colorado Transportation Management Center network to aid in the configuration and installation of the Ethernet switch.

See the Revision of Section 614 – Testing and Integration for additional requirements.

Ethernet Switch 3930 shall include Ciena 3930 Carrier Ethernet Service Delivery Switches installed and accepted. Work includes CWDM SFP optic module (for both Ciena 3930 and Ciena 5150 switches), 1310 nm SFP optic module, RJ-45 SFP modules, optical attenuator, power supplies, power

-5-

**REVISION OF SECTION 614
ETHERNET SWITCH (3930)**

cables, CAT6 Ethernet cables, single mode fiber optic pre-connectorized bend insensitive patch cables, material for the Ethernet switch attachment to the interior of the variable message sign, licenses, switch operating system and software, wiring, documentation, and configuration by the Ciena representative. Work includes arranging a Ciena representative to be either on-site or via remote access.

REVISION OF SECTION 614 ETHERNET SWITCH (3931)

Section 614 of the Standard Specifications is hereby revised for this project as follows:

DESCRIPTION

For this project, at locations where installation of a Ciena 3930 Carrier Ethernet Service Delivery Switch (SDS) is infeasible due to the size of the switch, Ethernet Switch shall be a Ciena 3931 Carrier Ethernet SDS integrated in a weather proof enclosure and shall be installed on support posts, in cabinets, or attached to the side of cabinets, to transport Ethernet data to and from roadway ITS devices on this project. All Ethernet switches shall be manufactured by Ciena.

The Ethernet switch shall utilize Coarse Wavelength Division Multiplexing (CWDM) and Small Form-factor Pluggable (SFP) optic modules. Each switch shall be provided with both a CWDM SFP optic module and a 1310 nm SFP optic module where a two switch per wavelength deployment is utilized (typical design). The Contractor is advised that in certain cases there are more than two switches per wavelength and when this occurs, the switch or switches in the middle shall utilize two 1310 nm SFP optic modules. Optic modules shall be provided as described in the Project Specifications, 614 – CWDM SFP and 614 – Small Form-Factor Pluggable – 1310 nm SFP as part of this specification package. All optic modules for the Ciena 3931 shall be paid for as part of the Ethernet switch pay item.

The Ethernet switches shall interface with Ciena 5150 Ethernet aggregation switches located in regeneration node buildings or the CTMC.

A single mode, 9/125um CWDM wavelength independent attenuator to match the wavelength of the SFP optic modules shall be included and installed in the communications cabinet termination patch panel. Optical attenuators shall be provided as described in the Project Specification, 614 - Coarse Wavelength Division Multiplexing Attenuator.

MATERIALS

The Ethernet switch shall be configured with two (2) 1GIG/10GIG SFP+ ports, four (4) 100M/1000M SFP ports and two (2) 10/100/1000M RJ-45 Ethernet ports. User Network Interface (UNI) ports are not required as part of the Ethernet switch.

The Contractor shall furnish and install the Ethernet switch and associated items shown in Item Table A below. The Contractor shall also furnish the Ethernet switch software and maintenance licenses show in Item Tables B and C. Tables A, B and C describe items for a single Ciena 3931 SDS Ethernet switch.

-2-

-3-

REVISION OF SECTION 614 ETHERNET SWITCH (3931)

Each Ethernet Switch shall be furnished and installed with a G.8032 ring protection configuration in conformance with Ciena's Ethernet Design and Configuration Services per the Colorado Department of Transportation requirements either prior to installation or at the individual installation sites.

Preliminary configuration including all IP schema design for data transport will be conducted by CDOT personnel prior to installation. All final configurations and G.8032 configuration shall also be conducted by CDOT personnel.

If field changes are made which affect the original Contractor's material order for the Ethernet switches and require any reconfiguration of the original Ethernet switch material orders, the Contractor shall ensure that the Ciena distributor is contacted and made aware of such changes to alleviate any possible delays in delivery and installation. If for any reason the switch or associated materials are defective or are damaged at the time of installation by either the Contractor or by Ciena, the item shall be removed and replaced at no additional cost to the project. Items shall also be replaced if any failures occur due to manufacturer's defects, at no additional cost to the project prior to the final acceptance.

Neither Ciena distributor nor Ciena Corporation has been involved in the design of the project network. The Contractor shall contact the Ciena distributor for equipment quotations and purchasing purposes only. The Contractor shall not contact or rely on either the Ciena distributor or Ciena for network design related questions.

When requesting quotations, the Contractor shall submit to the Ciena distributor a complete package including the following items:

1. A complete list of required equipment for purchase including materials and quantities based on the individual pay item project specifications including those stated under the Method of Measurement section of the specification to achieve a complete item(s) installation per the project plans.
2. A PDF copy of all project specifications pertaining to the material being ordered.
3. A PDF copy of all networking project plan sheets.

It is the Contractor's responsibility to provide the distributor's representative all information required pertaining to the complete network design as shown in the project plans. During the bidding process, the Ciena distributor or Ciena Corporation is not responsible for any type of network design aide. All questions pertaining to the network design shall be conducted through the Department for help or clarification.

CONSTRUCTION REQUIREMENTS

The 3931 SDS Ethernet switch shall be installed on device support posts and connected via the fiber optic backbone to a communications node building in a protected ring design. Each switch shall normally have both a CWDM SFP optic module and a 1310nm SFP optic module, except as previously noted where there are more than two switches per wavelength. Each switch shall be configured as part of creating a single carrier Ethernet diverse path sub-ring.

-4-

**REVISION OF SECTION 614
ETHERNET SWITCH (3931)**

For connection of the switch to the optical fiber network, one (1) lateral fiber optic cable shall be terminated and patch cables shall be installed and connected to the optical ports of the switch. A total of four (4) lateral fiber strands shall be used for data communications to the switch. Two (2) lateral fiber strands shall be used for communications connecting the SFP optics carrying CWDM traffic and two (2) lateral fiber strands shall be used for communications connecting the 1310 nm SFP optics, except as noted where there are more than two switches per wavelength.

Additional splicing is required for the CWDM optical filters at each Ciena 3931 location. The CWDM optical filters shall be used to split a single CWDM wavelength from the multiple wavelengths being transmitted along the fiber strands, including passing a 1310 nm wavelength between Ciena 3931 switch pairs. See 614 – Single Wavelength CWDM Optical Filter.

The Contractor shall provide single mode, bend insensitive, pre-connectorized duplex patch cables with a polyurethane jacket for connection from the coarse wavelength division multiplexing SFP optic module and the 1310 nm SFP optic module. Connectors for the patch cable shall be LC on the Ethernet switch end and ST on the termination end. For Ethernet switches in node buildings, if applicable, proposed termination panels may use LC connectors to accommodate

The high termination requirements of the proposed fiber optic cable, accordingly LC-to-LC patch cables may be utilized at these locations.

The patch cable shall be of sufficient length to span from the termination patch panel to the Ethernet switch SFP ports with a maximum of two (2) feet of slack. They shall be installed in a manner which will not interfere with internal device equipment in the switch enclosure and will include cable management so as not to interfere with future maintenance within the enclosure.

Two flexible liquid tight metal conduits shall be installed from the switch enclosure to the underside of the communications cabinet for electrical power cabling, single mode patch cables and Ethernet CAT6 communications cabling.

If required the Contractor shall arrange to provide for a certified Ciena representative either on site or via remote access through the Colorado Transportation Management Center network to aid in the configuration and installation of the Ethernet switch.

See project specific Testing and Integration for additional requirements.

Ethernet Switch 3931 shall include Ciena 3931 Carrier Ethernet service delivery switches installed and accepted for a complete installation. Also included shall be CWDM SFP optic module (for both Ciena 3931 and Ciena 5150 switches), 1310 nm SFP optic module, RJ-45 SFP modules, optical attenuator, power supplies, power cables, CAT6 Ethernet cables, single mode fiber optic pre-connectorized bend insensitive patch cables, material for the Ethernet switch attachment to the interior of the variable message sign, licenses, switch operating system and software, wiring, documentation, and configuration by the Ciena representative. Work includes arranging for a Ciena representative to be either on-site or via remote access.

**REVISION OF SECTION 614
 COARSE WAVELENGTH DIVISION MULTIPLEXING SFP**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project the Coarse Wavelength Division Multiplexing SFP shall be a single wavelength CWDM Small Form-Factor Pluggable (SFP) optic module for installation in a Ciena 3930/3931 Carrier Ethernet Service Delivery Switch (SDS). There shall also be a matching CWDM SFP optic module installed in the corresponding Ciena 5150 Carrier Ethernet Service Aggregation Ethernet Switch (SAS) located in an existing or new regeneration node building.. All CWDM SFP optic modules shall be provided from a manufacturer recommended by Ciena.

MATERIALS

The Contractor shall furnish and install the CWDM SFP optic modules in the wavelengths as shown in the item table below. This table describes optic modules for installation in Ciena 3930/3931 Carrier Ethernet SDS Ethernet switches, and Ciena 5150 Carrier Ethernet SAS switches located in existing or new regeneration node buildings. The Contractor shall be responsible for providing CWDM SFP optic modules for corresponding Ciena 5150 Carrier Ethernet SAS switches utilized on this project.

Item Table – CWDM SFP Optic Modules for Ciena 3930 Carrier Ethernet SDS switches, Ciena 5150 Carrier Ethernet SAS switches.

100M/1 GIG, SM SFP OPTIC, LC CONNECTOR, 80 KM, 1610 NM, EXT. TEMP	XCVR-A80D61

If for any reason the CWDM SFP optic modules are defective or are damaged at the time of installation by either the Contractor or by Ciena, the optic module shall be removed and replaced at no additional cost to the Project. CWDM SFP optic modules shall also be replaced if any failures occur due to manufacture’s defect, at no additional cost to the Project prior to the final network acceptance.

-2-

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXING SFP**

When requesting quotations, the Contractor shall submit to the Ciena distributor a complete package including the following items:

1. A complete list of required equipment for purchase including materials and quantities based on the individual Project specifications item including those items that are required to achieve the complete work items and installation per the Project plans.
2. A PDF copy of all Project specifications pertaining to the material being ordered.
3. A PDF copy of all networking Project plan sheets.

It is the Contractor's responsibility to provide the distributor's representative all information required pertaining to the complete network design.

CONSTRUCTION REQUIREMENTS

For Ciena 3930/3931 Carrier Ethernet SDS switch installations, a CWDM SFP optic module(s) shall be installed in each switch for CWDM data communications. A matching CWDM SFP optic module shall be at its corresponding Ciena 5150 Carrier Ethernet SAS switches located in existing or new regeneration node buildings.

The Contractor shall ensure that the wavelengths of the CWDM SFP optic modules installed in the Ciena 3930/3931 Carrier Ethernet SDS Ethernet switches match those installed in the corresponding Ciena 5150 Carrier Ethernet SAS Ethernet switch to ensure proper data communications.

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
 DENSE WAVE DIVISION MULTIPLEXING (DWDM)**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project, Ciena’s Common Photonic Layer shall be utilized as the DWDM transport platform and support up to 44 wavelengths at 100 GHz channel spacing as indicated in the table below. It shall be a supported service layer network element for the Ciena 6500 Packet-Optical Platform.

Dense Wave Division Multiplexing (DWDM)					
Channel (#)	Frequency (GHz)	Wavelength (nm)	Channel (#)	Frequency (GHz)	Wavelength (nm)

ITU Grid: C-Band, 100 GHz Spacing

Note: for 200 GHz spacing use either odd or even numbered channels.

**REVISION OF SECTION 614
SMALL FORM-FACTOR PLUGGABLE – 1310NM SFP**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project the Small Form-Factor Pluggable –SFP shall be a single wavelength SFP optic module for installation in Ciena 3930/3931 switches. All SFP optic modules shall be provided from a manufacturer recommended by Ciena.

MATERIALS

The Contractor shall furnish and install the SFP optic module shown in the item table below. This table describes the optic module for installation in the Ciena 3930/3931 Switches installed on this Project.

Item Table – 1310nm SFP Optic Modules for a Ciena 3930/3931 Ethernet SDS Switch.

Item Description	Item Number
100M/1 GIG, SM SFP OPTIC, LC CONNECTOR, 10 KM, 1310 NM, EXTENDED TEMPERATURE	XCVR-A10Y31

If for any reason the SFP optic modules are defective or are damaged at the time of installation by either the Contractor or by Ciena, the optic module shall be removed and replaced at no additional cost to the Project. SFP optic modules shall also be replaced if any failures occur due to manufacturer’s defects, at no additional cost to the Project prior to the final network acceptance.

When requesting quotations, the Contractor shall submit to the Ciena distributor a complete package including the following items:

1. A complete list of required equipment for purchase including materials and quantities based on the individual item as noted in the Project specifications including those items needed to achieve a work completed and installed per the Project plans.
2. A PDF copy of all Project specifications pertaining to the material being ordered.
3. A PDF copy of all networking Project plan sheets.

It is the Contractor’s responsibility to provide the distributor’s representative all information required pertaining to the complete network design. During the bidding process, the Ciena distributor or Ciena Corporation is not responsible for any type of network design aide. All questions pertaining to the design shall be through the Department for help or clarification.

CONSTRUCTION REQUIREMENT

For Ciena Carrier Ethernet switch installations, 1310nm SFP optic module shall be installed in each switch for data communications in a CWDM design between 2 adjoining Ethernet switches (and at switches located between two adjoining switches, as applicable).

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
BUFFER TUBE FAN-OUT KIT**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project, the Buffer Tube Fan-out Kit shall be furnished and installed on single mode fiber optic lateral cable ends in field communications cabinets.

MATERIALS

Buffer Tube Fan-Out Kits shall match the number of fiber strands in the lateral fiber optic cable. Buffer tube fan-out kits shall be compatible with the fiber optic cable being terminated and shall be color-coded to match the lateral fiber strand color. Fan out kit buffer tubes shall be 900 um. The buffer tube fan out kit fiber strand length shall be sufficient for routing and placement in the termination panel. All components of the fan-out kit shall be rated for outdoor use.

CONSTRUCTION REQUIREMENTS

The Contractor shall install fiber optic buffer tube fan-out kits on the lateral cable in each communications cabinet. The Contractor shall install fanned out cables on the ends of lateral fiber cable strands. Buffer tubes for lateral fiber strands shall be neatly coiled and secured within the field termination panels. Taping or leaving the buffer tubes unmanaged shall not be allowed.

REVISION OF SECTION 614 FIBER OPTIC TERMINATION PANEL

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of furnishing and installing fiber optic termination panels in communication cabinets and node regeneration buildings for single mode fiber optic cables.

MATERIALS

1. *Field Device Locations.* Fiber optic termination panels furnished and installed for field device locations shall meet the following requirements:

All termination panels shall be manufactured using aluminum and shall be finished with powder coat. The termination panels shall accommodate lateral fiber optic cables as shown on the plans. All termination panels shall be equipped with six port Straight Tip (ST) type bulkheads and be compliant with the Telcordia Technologies Generic Requirement (GR) GR-326 *Generic Requirements for Single Mode Optical Connectors and Jumper Assemblies, Latest Issue*. The manufacturer shall perform acceptance testing for insertion loss and return loss with the test certification provided with each patch panel.

All termination panels shall be compatible with the fiber optic cable being terminated.

The six port panels shall have hinged doors that provide access to both the fiber fan out and the termination bulkheads. The panel shall be sized to accommodate the entry of the lateral fiber optic cable, fiber fan out, and bulkheads with the access door closed. The fiber optic patch panel shall be suitable for wall mounting. Dimensions shall not exceed 5 inches wide × 6 inches long × 2 inches deep. Each fiber optic patch panel shall include a fiber adapter panel, adapters, field termination and polishing of fiber, strain relief, grommet tape, zip ties and wall mounting bracket. Terminations within the patch panel shall be polished with a physical contact (PC) finish.

24 port termination panels for lateral fiber optic cables shall be provided to accommodate 24 ports. 24 port termination panels shall be compatible with a 19-inch equipment rack. The panels shall be provided with two six port ST type bulkheads. The panel shall be provided with covers for the remaining spaces. The termination panel shall have a slide out interior.

Bulkheads in all termination panels shall be metal. Plastic bulkheads will not be accepted.

2. *Node Buildings.* Fiber optic termination/splice panels furnished and installed for node building locations shall meet the following requirements:

288 port termination/splice panels shall be provided at each node building where the 216 fiber optic backbone terminates. 24 port termination/splice panels shall be provided at each node building where the 24 strand fiber optic cable terminates. Fiber optic termination/splice panels shall be 19 inch EIA/ECA-310 compatible for mounting in cabinets and be equipped with a see-through latching front cover. The fiber optic termination/splice panel shall be designed around the physical protection requirements of Telcordia GR-63 *Network Equipment Building System (NEBS) Requirements*. It shall utilize aluminum construction per the requirements of ASTM B209 *Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate*.

-2-

REVISION OF SECTION 614 FIBER OPTIC TERMINATION PANEL

All fiber optic termination/splice panels shall come pre-configured with plates, adapters, splice drawers, connectors with pigtails, all necessary hardware, and cable clamps.

The connector style shall be LC (duplex) with an Angled Physical Contact (APC) finish and an optical return loss meeting or exceeding -60 dB. Each fiber optic termination/splice panel shall be loaded to accommodate the termination of all fibers contained within the proposed backbone cable, unless fibers are spliced through and not landed on the termination/splice panel. The termination panel shall have the ability to remove individual bulkheads or a set of bulkheads to access and clean the backside connection for future maintenance or troubleshooting, unless connectors are factory sealed in a module with a pigtail. Pigtails shall be stranded with single mode fibers and a minimum length of 15 feet for splicing and coiling. Pigtails shall be organized in the optical splice shelf. Buffer tubes, in splice tray, shall be secured with velcro strips unless stated another method is Approved by the manufacturer. Fusion splicing shall be utilized with heat shrink sleeve protectors, therefore the splice tray capacity, splice tray slots for fusion splices and number of splice trays shall be provided to accommodate the number of backbone fiber to pigtail splices along with the size of heat shrink sleeve protectors utilized. One cable clamp shall be provided for each fiber optic termination/splice panel.

Bulkheads in all termination panels shall be metal. Plastic bulkheads will not be accepted.

CONSTRUCTION REQUIREMENTS

Six port termination panels for lateral fiber optic cables shall be installed at locations where either existing or proposed equipment does not allow for the installation of a 24 port termination panel.

24 port termination panels shall be installed within communications cabinets and shall be mounted in locations that allow for ease of access and shall not interfere with maintenance of the internal equipment. 24 port termination panels shall be installed in communications cabinet 19-inch equipment racks.

Fiber terminations shall be as shown on the plans. The Contractor shall field terminate ST type bulkhead connectors on the ends of the lateral fiber cable strands and install them on the back side of the termination panel. The terminated connectors shall be nickel-plated with a ceramic ferrule and shall be polished with a physical contact finish. Buffer tube fan-out kits shall be paid for in accordance with the Revision of Section 614 – Buffer Tube Fan-Out Kit.

All termination panels shall have a labeling scheme that complies with the Department's current standard.

Instead of field terminating and polishing lateral fiber optic cables, the Contractor may use a single mode fiber pigtail that is factory terminated on six port ST type bulkhead and fusion splice the pigtail to the lateral fiber optic cable. If this method is used, the termination panel shall be sized and configured to accommodate splicing of the pigtail.

The Contractor shall use proper strain relief inside the termination panel for the fiber cable and fiber fan out strands per the manufacturer's recommendations. The use of tape to secure the individual fanned out strands to the bottom of the termination panel shall not be allowed. The Contractor shall allow enough

-3-

**REVISION OF SECTION 614
FIBER OPTIC TERMINATION PANEL**

slack in the terminated fiber to allow for opening and closing the termination panel without disturbing the terminated fiber.

All hardware shall be installed in accordance with manufacturer's recommendations.

See project specific Testing and Integration plan for additional requirements.

REVISION OF SECTION 614 OPTICAL ATTENUATOR

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

Coarse Wavelength Division Multiplexing Attenuator shall be installed for both CWDM and 1310nm SFP optic modules to reduce optical signal power to a receive level specified for the SFP optic modules based on the transmission loss of the corresponding link. These shall be installed at Ciena 3930/3931 Carrier Ethernet Service Delivery Switch and regeneration node building Mux/DeMux locations. The attenuator shall be installed in the receive port of the equipment cabinet fiber optic termination patch panel bulkhead or Mux/DeMux. All attenuators shall be compatible with the Ciena CWDM SFP optic modules.

MATERIALS

The Contractor shall furnish and install single mode, 9/125um CWDM wavelength independent attenuators to attenuate the incoming signal to a power acceptable within the Ethernet switch SFP optic module receive range.

For testing and attenuator selection, wavelengths of SFP optic modules on this Project are:

1430nm, 1450nm, 1470nm, 1490nm, 1510nm, 1530nm, 1550nm, 1570nm, 1590 nm, and 1610nm.

Attenuators for 1310nm wavelength SFP optic modules will not be required unless the incoming power exceeds the rated receive power of the SFP optic module, including a design margin of 6 dB (to allow for degradation over the life of the system).

The Contractor shall furnish and install a female to male plug type fiber optic attenuator. The types of fiber optic attenuators to be supplied shall match both the termination patch panel bulkhead port, the Mux/DeMux port and the fiber optic pre-connectorized patch cable connector.

The attenuators shall meet the following minimum specifications:

- (1) Return Loss: Less than or equal to 65dB (APC)
- (2) Attenuation Accuracy: +/-0.5 (1~10) +/-1.0(11~30)
- (3) Polarization Dependent Loss: Less than 0.2dB
- (4) Maximum Optical Input Power: 200mW
- (5) Operating Temp Range: -40 to 80°C
- (6) Low Polarization Dependent Loss (PDL)
- (7) Minimum 500 connect/disconnecting tested

The attenuators to be provided shall conform to the requirements of Telcordia Technologies GR-910 Generic Requirements for Fiber Optic Attenuators.

-2-

**REVISION OF SECTION 614
OPTICAL ATTENUATOR**

CONSTRUCTION REQUIREMENTS

After all splicing and fiber optic testing is completed the Contractor shall test the optical power of the incoming, (Receive) signal at each field Ethernet switch and existing node building location. To obtain the most accurate values of optical power, the testing equipment shall be attached to the SFP optic end of the pre-connectorized patch cable to be installed at that location.

Once the optical power has been tested, the Contractor shall install the appropriate attenuator in the receive port to meet the receive values of the SFP optic module, including a design margin of 6 dB (to allow for degradation over the life of the system).

Prior to installation, all attenuators shall be cleaned with lint-free fiber wipes moistened with Isopropyl Alcohol 99% U.S.P. After cleaning with alcohol, the bulkhead shall be cleaned with an optical connector cleaner to ensure that all residues are removed.

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
SINGLE WAVELENGTH COARSE WAVELENGTH DIVISION MULTIPLEXING (CWDM)
OPTICAL FILTER**

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

Single Wavelength Coarse Wavelength Division Multiplexing (CWDM) optical filter shall be manufactured specifically for use in CWDM equipment. It shall be provided and installed at all Ciena 3930/3931 Carrier Ethernet SDS Switch locations. All CWDM single channel filters shall be provided from a manufacturer recommended by Ciena.

MATERIALS

The CWDM optical filter shall have the capability of splitting a single CWDM wavelength from the multiple wavelengths being transmitted along the fiber strands including passing a 1310nm wavelength between Ethernet switch pairs. All remaining wavelengths other than those being added or dropped at the designated location shall be allowed to travel from Ethernet switch to Ethernet switch or regeneration node building.

The CWDM optical filters shall be provided with industry standard operating ranges of 1430nm to 1610nm to match wavelengths of the Coarse Wavelength Division Multiplexing Small Form-Factor Pluggable optic modules of the Ciena Ethernet switches. The individual filters shall have the following channel center wavelengths;

1430nm, 1450nm, 1470nm, 1490nm, 1510nm, 1530nm, 1550nm, 1570nm, 1590nm and 1610nm.

1310nm wavelength filters shall also be provided.

If for any reason the single wavelength filter is defective or is damaged at the time of installation by the Contractor, the filter shall be removed and replaced at no additional cost to the Project. Filters shall also be replaced if failures occur due to manufacture's defect, at no additional cost to the project prior to the final network acceptance.

CONSTRUCTION REQUIREMENTS

The filters shall match the industry standard wavelength of the Ethernet switch's Coarse Wavelength Division Multiplexing Small Form-Factor Pluggable (SFP) optic module and the 1310nm SFP optic module.

The CWDM optical filters shall have three (3) fiber pigtailed to be fusion spliced to lateral fiber optic cable strands and secured in the foam splice chips located on the splice tray in the splice closure. The pigtailed shall be provided with distinctive buffer tube colors designating "Pass", "Reflect" and "Common". If the filter pigtail buffer tubes are all of the similar color, The Contractor shall color code each individual tube for future maintenance.

The filters shall be provided with the optical wavelength printed indelibly on the filter body.

Bare fiber strands shall not be taped to the splice tray.

-2-

**REVISION OF SECTION 614
SINGLE WAVELENGTH COARSE WAVELENGTH DIVISION MULTIPLEXING (CWDM)
OPTICAL FILTER**

All splices and optical filter wavelengths shall be labeled on the splice tray.

If for any reason the Contractor installs or splices any single wavelength optical filter in a location which does not match the Ethernet switch coarse wavelength division multiplexing SFP optic modules, the Contractor shall replace the filter and re-splice all fibers at no additional cost to the Project.

Prior to splicing of the filters, the Contractor shall submit to the Department a Microsoft Excel spreadsheet containing the following information:

- (1) Splice Location for the CWDM and 1310nm filters (manhole milepost).
- (2) Serial Number of the CWDM and 1310nm filters.
- (3) Wavelength of the filter.
- (4) Usage and color of filter pigtails.

Once the spreadsheet has been submitted and Approvedd by the Department the splicing may begin.

The pigtails of the filters shall be labeled inside the splice closure.

See project specific Testing & Integration Plan for additional requirements.

REVISION OF SECTION 614 COARSE WAVELENGTH DIVISION MULTIPLEXING MODULE

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

Coarse Wavelength Division Multiplexing (CWDM) Module for this Project shall be rack mounted and support 10 wavelengths from 1430nm to 1610nm with LC/APC Port Bulkheads, Test In Port, Test Out Port and Pass Port installed in regeneration node buildings. The unit shall have the capabilities of passively multiplexing and de-multiplexing multiple wavelengths to and from field Ciena 3930/3931 Ethernet switches and regeneration node building Ciena Ethernet Switch small form-factor pluggable optic modules.

The 10-channel CWDM modules shall be supplied with the ability of connecting a Spectrum Analyzer to the test ports to test both the incoming and outgoing wavelengths without the need of disconnecting active patch cables transmitting or receiving data.

MATERIALS

Each 10-channel CWDM module shall have twelve (12) transmit / receive ports. Ten of the 12 ports shall be for individual wavelength matching the Ethernet switch CWDM, SFP optic modules.

The bulkhead connector for each port on the CWDM module shall be of the duplex LC/APC type; simplex LC/APC type bulkhead connector ports shall not be allowed.

The 10-channel CWDM module shall have the ability of multiplexing and de-multiplexing the following wavelengths;

1430nm, 1450nm, 1470nm, 1490nm, 1510nm, 1530nm, 1550nm, 1570nm, 1590nm and 1610nm.

The 10-channel CWDM modules shall also include a chassis capable of mounting in a 19 inch communications equipment rack or cabinet. The chassis shall have an integrated cable management tray on the front side to house the optical patch cables installed from the CWDM multiplexing module ports to the Ethernet switch optic modules.

CONSTRUCTION REQUIREMENTS

The 10-channel CWDM multiplexing modules and chassis shall be installed in 19 inch equipment racks or cabinets in regeneration node buildings. The 10-channel CWDM multiplexing modules and chassis shall be installed adjacent to its corresponding Ciena 5150 Carrier Ethernet SAS switch. New chassis and CWDM modules shall be procured in the quantities needed specifically for this Project. Single mode, bend insensitive, pre-connectorized duplex patch cable with a polyurethane jacket shall be installed from the 10-channel CWDM module to the backbone termination patch panel for transmitting and receiving communications to the field Ethernet switches. Connectors for the patch cable shall be LC on the 10-channel CWDM module end and LC on the termination patch panel end.

Single mode, bend insensitive, pre-connectorized duplex patch cables with a polyurethane jacket shall be installed from each 10-channel CWDM module wavelength Tx/Rx port to the matching CWDM SFP optic module its corresponding Ciena 5150 Carrier Ethernet SAS switch. A duplex patch cable shall be

-2-

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXING MODULE**

installed for each wavelength. Connectors for the patch cables shall be LC on the 10-channel CWDM module end and LC on the Ethernet switch SFP optic module end.

In regeneration node buildings, the patch cables shall be of sufficient length to span from the termination patch panel to the 10-channel CWDM module and from the 10-channel CWDM module to the Ciena 5150 Ethernet switch with a maximum of four (4) feet of slack for each cable. They shall be installed in a manner which will not interfere with equipment in the equipment racks and will include cable management so as not to interfere with future maintenance within the rack.

If for any reason the 10-channel CWDM module is defective or is damaged at the time of installation by the Contractor, the item shall be removed and replaced at no additional cost to the Project. Modules shall also be replaced if any failures occur due to manufacture's defect at no additional cost to the Project prior to the final network acceptance.

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXOR - OPTICAL TIME DOMAIN
REFLECTOMETER**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project Coarse Wavelength Division Multiplexing – Optical Time Domain Reflectometer (CWDM-OTDR) shall be a modular testing unit capable of testing coarse wavelength division multiplexing (CWDM) optical networks. After Project usage by the Contractor for fiber testing and analysis for the network turn up, the CWDM-OTDR shall become the property of the Colorado Department of Transportation, Colorado Transportation Management Center. The turnover shall be after the Contractor has completed all of the proposed fiber optic testing as stated in the Project specifications.

MATERIALS

The CWDM-OTDR shall be a portable device and shall have the ability to test 10 CWDM wavelengths including 1430nm, 1450nm, 1470nm, 1490nm, 1510nm, 1530nm, 1550nm, 1570nm 1590nm and 1610nm and shall meet with the following minimum requirements:

CWDM-OTDR Modular Test Unit Platform

1. The test set display shall have a 6.4” minimum color touch screen and shall offer the option of an optional outdoor enhanced screen.
2. The CWDM-OTDR shall be modular with at least 2 supported modules for optical testing, Ethernet, SDH, OSA and CD/PMD.
3. The platform shall support the use of a Fiber Inspection Probe with end-face analysis software.
4. The platform shall provide at least two USB 2.0 ports, one RJ-45 LAN 10/100/1000 Mbit/s, one headset jack.
5. Internal Storage - The test unit shall have 8 GB minimum internal memory, with this ability for a 16 GB internal memory upgrade configuration.

CWDM-OTDR Module Unit shall provide the following

1. Support ITU-based CWDM wavelengths of $\pm 3\text{nm}$ of central wavelength.
2. Support the intelligent Optical Link Mapper (iOLM) application
3. Use a dynamic multipulse acquisition that combines all the results into a single view, a single report and a single file.
4. Automatically adjust the test parameters in function of the link under test with no intervention from the user.
5. Have a dynamic range of minimum 40dB per wavelength.

-2-

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXOR - OPTICAL TIME DOMAIN
REFLECTOMETER**

6. Display the fiber elements in a linear view with representative icons for splice, connector, macro bend, splitter and end of fiber.
7. Display individual pass/fail status for each element of the network as well as a clear pass/fail status, all in the same window.
8. Prompt specific and detailed diagnosis on how to fix the network based on the failure cause found by the unit.
9. Capable of measuring the first connector of the network without the use of a launch cable.
10. Capable of using pre-defined or user-defined templates to set the pass/fail thresholds and identify the link information accordingly.
11. Test configurations should not include pre-defined test parameters such as pulse width, distance range or averaging time as these parameters should be always set by the unit automatically.
12. Support multiple level of auto-increment for file naming, be flexible for the number of increments and be flexible for the label name of increment.
13. Support, with user-defined, a minimum, a maximum and a maximum + minimum threshold for pass/fail status.
14. Be capable of generating reports in HTML format, directly from the platform.
15. Combine single mode and multimode testing into a single module
16. Have an event dead zone of maximum 0.8m on a -45dB reflectance, measured at 1.5dB on each side below the peak.
17. Have an attenuation dead zone of 4.5 meters or shorter on a -45dB reflectance, measured 0.5dB above the backscattering level.
18. Have a minimal sampling resolution of 0.04 meters.
19. Capable of storing over 5,000 OTDR traces
20. Shall be supplied with a batch post-processing software to generate reports, analyze the results, edit/add information to the files, for multiple files simultaneously.

The OTDR unit shall be used as a CW source to the selected wavelength for loss measurements.

The OTDR unit shall have a linearity of $\pm 0.03\text{dB/dB}$ or better.

The OTDR unit shall have a distance accuracy of $\pm (0.75 \text{ m} + 0.0025\% \times \text{distance})$ or better.

-3-

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXOR - OPTICAL TIME DOMAIN
REFLECTOMETER**

The CWDM-OTDR shall include the minimum following performance features:

1. A suspend mode from which the test set shall return to a “ready to test” state within 10 seconds.
2. Support the capability to run multiple applications and programs simultaneously.
3. Provide a multi-tasking environment and the capability to switch between different running applications.
4. The operating system shall be based on Windows OS technology and shall provide access to the Windows desktop.
5. The batteries shall be rechargeable lithium-ion batteries providing at least 8 hours of OTDR/iOLM operation as per Bellcore GR-196.
6. Shall operate while connected to a power supply (AC/DC adapter, input 100-240 VAC, 50-60 Hz) with or without the battery connected.
7. There shall be housing for the ability to provide for a built-in optional VFL and power meter (InGas or GeX, with or without CWDM frequencies).
8. The option for the following wireless interfaces:
 - A. 3G (additional hardware accessory)
 - B. Wi-Fi (built in hardware option)
 - C. Bluetooth (built in hardware option)

The CWDM-OTDR shall include the minimum following management features:

1. Cloud –based server application for device management with direct communication link to in platforms in the field.
2. Provides secure data storage and automatic backup of all data.
3. The server application supports communication (interoperable) with multiple platform types for broad-based applications.
4. The server application supports the automatic detection and synchronization of a platform to the server.
5. The management application supports the automatic upload of device inventory information to management application (no manual data entry).

-4-

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXOR - OPTICAL TIME DOMAIN
REFLECTOMETER**

6. The management application supports the automatic upload and display of all platform inventory data including: name of platform, alias, serial number, platform type, name of last user, name of the owner of the platform, test modules installed in platforms and all installed software and versions.
7. The management application supports the automatic, parallel distribution of software (push) to multiple (100+) user defined platforms simultaneously.
8. The management application supports the automatic, parallel distribution (push) of any file format including test configuration profiles to multiple (100+) user defined platforms simultaneously. File types should include but not limited to (.txt, .csv, .xls, .ppt, .doc, .pdf, .mp4, .avi, .wmv,)
9. The management application supports the ability to create customized reports based on the inventory data.
10. The management application supports the ability to create customized report templates that can be run on the database at any time.
11. The management application supports the automatic upload of test results directly from the platforms in the field. Supported test report uploads includes: Ethernet test reports (Y.1564, RFC2544, BERT), SONET/SDH reports (BERT), physical layer reports (OTDR, PMD, Chromatic dispersion (CD), Optical loss tests (OLTS), Optical spectrum analyzer (OSA)).
12. The management application provides search/filter capabilities to quickly pinpoint any test.
13. The management application provides a standardized format for all uploaded test results.

The CWDM-OTDR shall have the ability for both fiber optic inspection and the analysis of the findings by the device and include the minimum following Optical Verification and Performance Testing features:

1. The unit must support a fiber inspection probe for connector end-face inspection as well as on-board automated pass/fail analysis.
2. The fiber inspection probe shall have an Auto center feature that is compatible with single fiber connectors and MPO/MTP connectors.
3. The inspection probe shall have an Auto focus feature that is compatible with single fiber connectors and MPO/MTP connectors
4. The fiber inspection probe shall support 3 levels of magnifications :
 - a) High Magnification field of view: 304 μm x 304 μm
 - b) Medium magnification field of view: 608 μm x 608 μm

-5-

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXOR - OPTICAL TIME DOMAIN
REFLECTOMETER**

- c) Low magnification field of view: 912 μm x 912 μm
5. The fiber inspection probe shall have a capturing device of 5 megapixel CMOS or better.
 6. The fiber inspection probe shall have a blue LED light source.
 7. The fiber inspection probe shall have a resolution of 0.55 μm or better.
 8. The fiber inspection probe shall have a rugged design with rubber over molding for field applications.
 9. The fiber inspection probe should have a protective cap to protect the probe tip from physical damage.
 10. The fiber inspection probe shall support drop test resistance of 1 meter on a concrete surface on various axis
 11. The fiber inspection probe shall have a Pass/Fail status LED on the probe body.
 12. The fiber inspection probe shall have a capture and analysis button.
 13. The fiber inspection probe shall be compatible with handheld display, portable platforms or laptop/PC.
 14. The fiber inspection probe unit shall weight ≤ 0.3 kg (0.66 lb)
 15. The fiber inspection probe unit shall support operating temperature of -10°C to 50°C and storage temperature -40°C to 70°C.
 16. The fiber inspection probe unit shall allow the user to retest the same connector without affecting the file naming and report structure.

The fiber inspection probe must support a wide variety of inspection tips including but not limited to :

1. FC/SC APC tip for bulkhead adapter
2. LC tip for bulkhead adapter
3. LC angled tip for bulkhead adapter (60°)
4. LC/APC tip for bulkhead adapter
5. FC and SC angled tip for bulkhead adapter (60°)
6. SC tip for PC bulkhead adapter (extended)

-6-

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXOR - OPTICAL TIME DOMAIN
REFLECTOMETER**

7. ST tip for bulkhead adapter
8. Universal patch cord tip for 1.25 mm ferrule
9. Universal patch cord tip for 1.25 mm APC ferrule
10. Universal patch cord tip for 2.5 mm APC ferrule
11. ODC Socket (male) tip
12. ODC 2 Pin Plug (female) Guide & Universal tip
13. Optitap
14. MPO/MTP UPC and APC
15. The unit shall support the IEC-3-35/IPC 8497-1 standards or user-defined acceptance criteria.
16. The pass/fail connector analysis time shall be under 5 seconds
17. The application shall have a focus protection in the software to prevent out-of-focus image analysis
18. The connector analysis's focus level should appear in the test reports to ensure integrity of the results.
19. The unit shall be capable of modifying existing connector analysis standard criteria directly from the platform's application without the need of external software.
20. The unit shall be capable of generating reports directly from the field instrument without the need of external software.

Additional accessories and material to be provided with the CWDM-OTDR shall be:

Protective carrying case

1. Optical fiber trace software for report generation
2. Warranties
3. Configuration Certification
4. All Miscellaneous cabling
5. Instructions on all equipment units

-7-

**REVISION OF SECTION 614
COARSE WAVELENGTH DIVISION MULTIPLEXOR - OPTICAL TIME DOMAIN
REFLECTOMETER**

As part of the furnishing of the CWDM-OTDR, Contractor shall coordinate with onsite manufacturer representative to provide training for the proper use of the CWDM-OTDR. Training costs shall be included with the work. See Project Special Specification 614 – Test and Support Equipment for detailed requirements of the training.

REVISION OF SECTION 614 TEST AND SUPPORT EQUIPMENT

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project Test and Support Equipment shall include furnishing test equipment required to successfully turn up, test and analyze the fiber optic coarse wavelength division multiplexing Ethernet fiber optic network on this Project. The equipment shall be used by the Contractor during the Project construction time then delivered to the Colorado Department of Transportation, Colorado Transportation Management Center at the end of all network fiber optic testing and network acceptance.

MATERIALS

The Contractor shall purchase the test and support equipment prior to the installation of the fiber optic cable. The Contractor shall keep all equipment at a secured location to ensure that no loss or damage is caused by either vandalism or theft. At the end of the fiber optic network installation and acceptance, all test and support equipment shall become the property of Colorado Department of Transportation, Colorado Transportation Management Center.

The following equipment shall be included in work Test and Support Equipment. This equipment shall be used in the manner as stated in the Project Special Provision Specifications as part of this Project for fiber optic cable testing. An independent specification is provided in the Project Special Provision Specifications package for this item. The Contractor is required to submit cut sheet submittals for equipment included in this Specification.

Coarse Wavelength Division Multiplexing, Optical Time-Domain Reflectometer

The Coarse Wavelength Division Multiplexing, Optical Time-Domain Reflectometer (OTDR) shall include but not be limited to the OTDR unit, individual Coarse Wavelength Division Multiplexing (CWDM) testing modules, fiber inspection probe, cabling, OTDR trace reading software, operational documentation, protective case, calibration documentation, power cabling, warranties and all other materials provided with the original Coarse Wavelength Division Multiplexing, Optical Time-Domain Reflectometer purchase.

The Contractor shall purchase the test equipment listed prior to the installation of the fiber optic cable. During this time the Contractor shall become familiar with the equipment in preparation for use during the testing of the optical network. Once the optical fiber network is ready, the Contractor shall use this equipment for the CWDM testing.

Once the fiber optic network testing has been completed and the optical network has been accepted, the Contractor shall make arrangements for the transfer of all test and support equipment. The equipment shall be in "like new" condition with only normal wear and shall be fully tested and recalibrated prior to turnover. All recalibration and any required refurbishing to bring the equipment to the like new condition shall be conducted by the equipment manufacturer at the Contractor's expense as part of work. All materials, hardware, accessories and cases associated with the test and support equipment shall also be turned over to the Department.

-2-

**REVISION OF SECTION 614
TEST AND SUPPORT EQUIPMENT**

The Contractor shall schedule and provide training for the CWDM OTDR to the Colorado Transportation Management Center (CTMC) personnel. The training shall be scheduled and held in a meeting conference room at the CTMC in Golden Colorado. The Contractor shall work with Department to schedule and reserve the conference room at the CTMC.

The training shall be presented in person at the CTMC by the manufacturer's technical representative. Web conferencing / remote conferencing shall not be allowed. The Contractor shall schedule with the manufacturer to have a manufacturer's representative be on site at the CTMC to conduct the training. The Contractor may combine his training with the training for CTMC personnel utilizing the Project purchased equipment for training purposes.

The Test and Support Equipment shall include an Optical Spectrum Analyzer along with all associated materials, accessories and hardware for the equipment. All manufacture warranties shall be transferred to the Colorado Department of Transportation, Colorado Transportation Management Center upon the turnover of all materials. Onsite training by the manufacturer's technical representative is required.

REVISION OF SECTION 614 EQUIPMENT PROCUREMENT AND CONFIGURATION

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

To ensure that the Colorado Transportation Management Center (CTMC) personnel have sufficient time for the final configuration of the Ethernet switches on this Project, the Contractor shall submit all network equipment cut sheets to the ITS Project Engineer 30 days prior to start of work. This submittal shall include but not be limited to the following Project network equipment;

- Ethernet Switches
- Coarse Wavelength Division Multiplexing, Small Form-Factor Pluggable Optic Modules
- 1310 NM Small Form-Factor Pluggable Optic Modules
- All Licensing And Warranty Documentation
- All Materials Associated With The Installation Of The Ethernet Switches

After the review and Approval of the networking equipment cut sheets by CDOT, the Contractor shall place the order for the approved equipment to the Ciena distributor to ensure the timely delivery of the above listed Project network equipment.

Work on the network equipment requires CTMC personnel to configure each individual Ethernet switch in addition to the configuration of this Project network into the CTMC statewide intelligent transportation optical network. CTMC personnel require approximately 3 weeks to configure the switches. The Contractor shall coordinate with the Project Engineer to schedule the CTMC personnel for a window of time that the configuration may occur, dependent on anticipated equipment delivery.

For all Ciena products on the Project the Contractor shall have a Ciena certified technician with associated training and technology certificates on site or via remote access for any configuration and set up support required for a fully functional network.

The Contractor shall provide all required information to the CTMC for the Ethernet switches. This includes but not limited to the highway mile point of the Ethernet switch, the Project stationing of the Ethernet switch, and the devices to which they are connected. This information shall be submitted on an Excel spreadsheet at the time that the Contractor delivers the Ethernet switches to the CTMC for configuration.

REVISION OF SECTION 614 CLOSED CIRCUIT TELEVISION

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

This work consists of furnishing and installing a High Definition (HD) Internet Protocol (IP) Closed Circuit Television (CCTV) camera.

MATERIALS

CCTV camera shall include: The camera housing, pole mount adapter, Power over Ethernet (PoE) power supply, manufacturer supplied management software, Category 5e rated (Cat5e) cables, and all attachment hardware needed for a functionally complete installation.

(a) *Camera.*

The camera shall have pan, tilt, and zoom functionality enclosed in a sealed, environmentally controlled dome housing designed to operate in 100 percent humidity at an operating temperature range of -58°F to 122°F. The camera housing shall carry both IP66 and National Electrical Manufacturers Association (NEMA) 4x ratings. The camera shall utilize a 100 megabits per second 802.3 Ethernet connection for native communications and be powered from an 802.3at compliant Power over Ethernet (PoE) supply. The camera shall be able to display multiple individually configurable video streams up to 30 frames per second in high definition resolutions from 1920 x 1080 pixels to 320 x 180 pixels at a 16:9 aspect ratio in H.264 and Motion JPEG (MJPEG) formats using unicast or multicast delivery. The camera shall include functionality for onscreen titling, image overlay, and remote capture of at least 256 preset views. It shall include electronic image stabilization, ability to reduce effects of rain and fog in picture, and include ability to run manufacturer or third party analytics designed for roadway applications with output to initiate internal user programmed events or alarms to external systems using an open application programming interface (API) structure. An internal web interface shall be included for configuration with security functionality allowing a minimum of 20 user access levels with password protection. The camera shall be capable of implementing stream authentication for video security and the ability to modify view and control priority among configured users. Options for video storage shall be available via onboard Secure Digital (SD) memory slot or to network share. Camera status and diagnostics shall be available via Simple Network Management Protocol (SNMP) traps. The camera shall support:

1. IPv4/v6
2. Hypertext Transfer Protocol (HTTP)
3. Hypertext Transfer Protocol Secure (HTTPS)
4. Secure Socket Layer/Transport Layer Security (SSL/TLS)
5. Quality of Service (QOS) Layer 3 Differentiated services (DiffServ)
6. File Transfer Protocol (FTP)
7. Simple Mail Transfer Protocol (SMTP)

-2-

**REVISION OF SECTION 614
CLOSED CIRCUIT TELEVISION**

8. SNMP v1/2/3
9. Universal Plug and Play (UPnP)
10. Domain Name System (DNS)
11. Dynamic Domain Name System (DDNS)
12. Network Time Protocol (NTP)
13. Real-time Transport Protocol (RTP)
14. Real Time Streaming Protocol (RTSP)
15. Transmission Control Protocol (TCP)
16. User Datagram Protocol (UDP)
17. Internet Group Management Protocol (IGMP)
18. Real-time Transport Control Protocol (RTCP)
19. Address Resolution Protocol (ARP)
20. Socket Secure (SOCKS)

The camera shall be Open Network Video Interface Forum (ONVIF) compliant.

Technical specifications for the camera shall be as follows:

1. The lens shall be $f=4.44$ to 142.6 mm, F1.6 to F14.41, autofocus; focus range of 35 mm (wide) to 800 mm (telephoto) to infinity, with 62.8 degrees to 2.23 degrees horizontal angle of view.
2. Minimum illumination:
 - A. Color: 0.3 lux at 30 IRE F1.6
 - B. Black and White: 0.03 lux at 30 IRE F1.6
3. Shutter speed shall be variable from 1/33,000 to 0.25 seconds at 60 hertz.
4. The pan, tilt, and zoom functions shall provide 360 degrees of continuous pan rotation at 0.05 degrees per second to 450 degrees per second, a 220 degrees tilt range allowing for 20 degree view above the horizon at 0.05 degrees per second to 450 degrees per second, and minimum 32 times optical and 12 times digital zoom.

-3-

REVISION OF SECTION 614 CLOSED CIRCUIT TELEVISION

(b) *Manufacturer's Supplied Configuration and Management Software.*

Configuration software shall be included which gives the user access to discover and configure the camera using standard network protocols.

A centralized management software shall also be available to remotely discover and manage all available cameras across an Ethernet network for monitoring and configuration. The management software should be based on a server client architecture and shall include functionality to receive camera status, manage and apply blanket firmware updates to applicable devices, view/add/change user access accounts, and manage and apply device configuration templates using specific parameters saved by the user.

(c) *Pole-Mount Adapter Arm and Bracket.*

The adapter shall have a minimum 33 pound load rating and have provisions that allow mounting directly to the weatherproof dome housing without modification to the housing. The adapter bracket shall have slots for a minimum of two straps or banding material for mounting to the poles with diameters ranging from 3 inches to 6 inches. The bracket shall have cable strain relief in at least two locations on the reverse side, between the bracket and the pole.

(d) *Cat5e Cable.*

Cable shall be an eight wire twisted pair cable constructed of 24 American Wire Gauge (AWG) stranded copper wires with minimum Cat5e rating. The outer jacket shall be ultraviolet (UV) resistant polyvinylchloride (PVC) insulation designed for outdoor use. Shielded cable shall be used when prescribed by the manufacturer, run through conduit and enclosed structures, and when needed for equipment or electrostatic grounding. Shielded cable shall be terminated with either conductive or non-conductive male 8P8C connectors. Where shielded cable is used as an equipment ground, conductive connectors shall be used on both ends of the cable. Where shielded cable is used as an electrostatic drain, the grounded side of the connection shall be terminated with a conductive connector and the ungrounded side shall be terminated with a non-conductive connector. Unshielded cable shall be used for interconnections within the same cabinet, or where grounding and electromagnetic interference is not present. Unshielded cable shall be terminated with non-conductive male 8P8C connectors on both ends. All Cat-5e cables used for Ethernet data shall conform to the Telecommunications Industry Association/Electronic Industries Alliance (TIA/EIA) T-568B pin/pair assignments.

(e) *PoE Power Supply*

The PoE power supply shall be a mid-span type power supply that conforms to IEEE 802.3at. The operating temperature range of the PoE power supply shall be -40°F to 185°F.

CONSTRUCTION REQUIREMENTS

The CCTV camera shall be installed in accordance with these specifications and in accordance with manufacturer's recommendations. The Contractor shall make arrangements required for a qualified manufacturer's representative to be on-site to ensure proper installation of the CCTV camera.

-4-

REVISION OF SECTION 614 CLOSED CIRCUIT TELEVISION

The weatherproof dome housing shall be attached to the pole mount adapter using the materials supplied from the manufacturer.

The camera shall be attached 1 foot below the top of the pole at an orientation to achieve the optimal view of both the main and crossroad traffic, or as directed by the Engineer. Three quarter inch type 201 stainless steel strap used in conjunction with type 201 stainless steel buckles shall be used to band the camera assembly and pole mount adapter to the pole.

The PoE midspan module shall be securely mounted in the communication cabinet or directed by the Engineer. The PoE shall be plugged into a grounded non-ground-fault circuit interrupter (GFCI) protected outlet. If available, an Uninterruptible Power Supply (UPS) protected outlet shall be used to power the power supply.

A shielded Cat 5e cable with conductive RJ-45 terminations shall be run from the PoE supply to the camera providing a path to ground. A shielded Cat 5e cable with a conductive RJ-45 termination on one end and non-conductive termination on the other shall be installed from the PoE supply to the field communication device with the conductive termination plugged into the PoE supply. The total length of the Ethernet link over Cat 5e cable shall not exceed 100 meters per IEEE 802.3.

A maximum 1 inch hole shall be drilled in the mounting pole to allow passage of the Cat 5e cable. The hole shall be free of burrs and sharp edges prior to the installation of the cable. A weatherproof cable grommet shall be used in the 1 inch hole. The cable shall be attached to the reverse side of the mounting bracket to ensure proper strain relief. The Ethernet cable shall run down the interior of the structure and exit through non-metallic flexible conduit to the communication cabinet. The non-metallic flexible conduit shall be weather sealed on each end to eliminate exterior liquid entry.

The Contractor shall ensure that the installation meets all minimum requirements set forth by the manufacturer in a manner to ensure all work will be covered by the manufacturer's warranty.

The Contractor shall configure the camera with an IP address as provided by the Engineer.

The cameras shall be tested for full functionality and verification of access on the connected network. See project specific Testing & Integration Plan for additional requirements.

The Contractor's installation technician shall have certification by the CCTV manufacturer.

REVISION OF SECTION 614 BREAKAWAY TAPERED ITS STEEL POLE

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project, this work shall consist of furnishing and installing the steel tapered pole, breakaway transformer base, and fiber-optic disconnect, as described herein.

MATERIALS

An aluminum transformer base shall be provided which shall conform to breakaway requirements of the American Association of State Highway and Transportation Officials (AASHTO) 2013 Sixth Edition of the Standard Specification for the Supports for Highway Signs, Luminaires and Traffic Signals; and accepted for use by the Federal Highway Administration (FHWA). An aluminum access door and grounding provision with hardware shall be provided in the transformer base. The door opening shall be approximately 11 inches tall, 8.5 inches wide at the top, and 9 inches wide at the bottom. Connecting bolts, flat washers, bearing washers and hex nuts shall be provided with the base assembly. All structural fasteners shall be galvanized high strength carbon steel. All non-structural fasteners shall be galvanized or zinc-plated carbon steel or stainless steel. A satin finish shall be provided unless otherwise requested by the Engineer.

The fiber optic connection to the communications cabinet shall include a breakaway reusable connection system, within the transformer base, which is designed to disengage upon breakaway impact to the steel support pole. This breakaway connection shall be flood resistant, dust proof and waterproof. Connection shall be immediately reusable after breakaway impact, without field repair or re-termination of the fiber optic cable.

Steel Pole shall conform to the following requirements:

(a) *Fabricator.*

The fabricator shall be certified under Conventional Steel Building Structures (SBD) as set forth by the American Institute of Steel Construction (AISC) Quality Certified Fabricators Program. Proof of this certification shall be supplied with the submittal of poles to confirm that the fabricator has the personnel, organization, experience, procedures, knowledge, equipment, capability and commitment to fabricate quality steel pole structures.

(b) *Welding.*

All welding shall be in accordance with Sections 1 through 8 of the American Welding Society (AWS) D1.1 *Structural Welding Code- Steel*. Tackers and welders shall be qualified in accordance with the code. Tube longitudinal seam welds shall be free of cracks and excessive undercut, performed with automatic processes, and be visually inspected.

Longitudinal welds suspected to contain defects shall be magnetic particle inspected. All circumferential butt-welded pole splices shall be ultrasonically or radiographically inspected.

-2-

**REVISION OF SECTION 614
BREAKAWAY TAPERED ITS STEEL POLE**

(c) *Material Certifications.*

All materials and products shall be manufactured in the United States of America, and comply with American Society for Testing and Materials (ASTM) or AASHTO specifications. Mill certifications shall be supplied as proof of compliance with the specifications.

(d) *Pole Shaft.*

The pole shaft should be one piece construction, and shall conform to ASTM A595 with a minimum yield strength of 55 kips per square inch or ASTM A572 with a minimum yield strength of 55 kips per square inch. The shaft shall have a constant linear taper of 0.14 inch per foot, and contain only one longitudinal seam weld. Circumferential welded tube butt splices and laminated tubes are not permitted. Longitudinal seam welds within 6 inches of complete penetration pole to base plate welds shall be complete penetration welds.

(e) *Ground Lug.*

A ground lug shall be provided within the interior base of the pole for connection to a grounding system as specified in Revision of 614 – Grounding and Bonding. A bare copper ground wire shall be provided by the Contractor between the pole's ground lug and a ground rod adjacent to the pole's caisson to provide grounding. The ground wire shall be installed in a dedicated conduit (0.5 inch diameter, minimum) within the pole caisson provided by the Contractor. The Contractor shall bond the ground wire to the pole's ground lug and the ground rod in accordance with the Grounding and Bonding project special provisions.

(f) *Base Plates.*

At a minimum, base plates shall conform to ASTM A36 *Standard Specification for Carbon Structural Steel* or A572 Grade 50. Plates shall be integrally welded to the tubes with a telescopic welded joint or a full penetration butt weld with backup bar. Plates shall be hot dip galvanized per the requirements of the contract documents and finished in accordance with these specifications.

(g) *Anchor Bolts.*

At a minimum, anchor bolts shall conform to the requirements of ASTM F1554 for Grade 55. The upper 12 inches of the bolts shall be hot dip galvanized per ASTM A153. Each anchor bolt shall be supplied with two hex nuts and two flat washers. The strength of the nuts shall equal or exceed the proof load of the bolts.

CONSTRUCTION REQUIREMENTS

All work shall conform to the specifications referenced herein and the current edition of NFPA 70.

Each Breakaway Tapered ITS Steel Pole shall be installed as designed herein. The Contractor shall furnish and install all incidentals necessary to provide a complete working system at each location.

REVISION OF SECTION 614 CCTV POLE WITH LOWERING DEVICE

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

For this Project, this work shall consist of furnishing and installing the Closed-Circuit Television (CCTV) Internet Protocol (IP) based camera pole(s) and lowering system(s) as described herein.

MATERIALS

Subsection 614.02 shall include the following:

The camera lowering system shall be designed to support and lower an Ethernet (IP-based) CCTV camera, lens, housing, Pan-Tilt-Zoom (PTZ) mechanism, cabling, connectors and other supporting field components without damage or causing degradation of camera operations. The camera lowering system device and the pole are interdependent and shall be considered as single systems. The lowering system shall consist of a steel pole, suspension contact unit, divided support arm, and pole adapter for attachment to a pole top tenon, pole top junction box, conduit mount adapter and camera connection box. The divided support arm and receiver brackets shall be designed to self-align the contact unit with the pole center line during installation and ensure the contact unit cannot twist under high wind conditions. Round support arms will not be accepted. The camera lowering system shall withstand wind forces of 110 mph with a 30 percent gust factor using a 1.65 safety factor. The lowering system manufacturer shall furnish independent laboratory testing documents certifying adherence to the stated wind force criteria utilizing, as a minimum Effective Projected Area (EPA), the actual EPA or an EPA greater than that of the camera system to be attached. The camera lowering system to be furnished shall be the product of manufacturers with a minimum of five years of experience in the successful manufacturing of camera lowering systems. The lowering system provider shall be able to identify a minimum of three previous projects where the proposed system has been installed successfully for over a one-year period of time each.

The lowering system manufacturer shall furnish an authorized factory representative to support the Contractor with the assembly and testing of the first lowering system onto the pole assembly. The manufacturer shall furnish documentation to CDOT certifying that the Contractor has been instructed on the installation, operation and safety features of the lowering system for this specific Project. The Contractor shall be responsible for providing applicable "on site" operational instructions for CDOT maintenance personnel.

(a) *Suspension Contact Unit.*

The suspension contact unit shall have a load capacity 600 pounds with a 4 to 1 safety factor. There shall be a locking mechanism between the fixed and moveable components of the lowering system. The movable assembly shall have a minimum of two latches. This latching mechanism shall securely hold the device and its mounted equipment. The latching mechanism shall operate by alternately raising and lowering the assembly using the winch and lowering cable. When latched, all weight shall be removed from the lowering cable. The fixed unit shall have a heavy duty cast tracking guide and means to allow latching in the same position each time.

The contact unit housing shall be weatherproof with a gasket provided to seal the interior from dust and moisture. The entire unit shall have a minimum temperature rating of -40°F to +190°F.

-2-

REVISION OF SECTION 614 CCTV POLE WITH LOWERING DEVICE

The prefabricated components of the lift unit support system shall be designed to preclude the lifting cable from contacting the data, power or video cabling. The lowering system manufacturer shall provide a conduit mount adapter for housing the lowering cable. This adapter shall have an interface to allow the connection of a Contractor provided 1.25 inch PVC conduit and be located just below the cable stop block at the back of the lowering system. The Contractor shall supply internal conduit in the pole as directed by the lowering system manufacturer. The only cable permitted to move within the pole or lowering system during lowering or lifting shall be the stainless steel lowering cable. All other cables must remain stable and secure during lowering and lifting operations. Lowering systems for two camera installations shall be configured to not interfere with each other at any time during lowering operations.

The lowering system must be specifically equipped with electrical contacts connectors designed for extreme environmental outdoor use with a CCTV IP camera connected via an outdoor-rated CAT5e Shielded Twisted Pair (STP) cable utilizing Power over Ethernet (PoE).

The female and male socket contact halves of the connector block shall be made of a Underwriters Laboratories (UL) UL 94 *Standard for Tests for Flammability of Plastic Materials for Parts in Devices and Appliances*, V-0 rated thermosetting synthetic rubber. The female barrel contacts and the male pin contacts shall be permanently and integrally encased in this rubber material to ensure protection from moisture and the environment.

All current carrying male pin and female socket/barrel contacts shall be gold-plated per ASTM B488 *Standard Specification for Electrodeposited Coatings of Gold for Engineering Uses* over nickel-plated CA 360 in accordance with SAE International AMSQON290C *Nickel Plating (Electrodeposited)*. Male contact sizing shall be a minimum of 0.09 inches while the female contacts shall be at least 0.09 inches (inside diameter) at the contact area. All contact shall be a minimum of 0.09 inches in diameter at the contact area. Each individual female barrel contact shall have a nickel-plated CA 360 sleeve that prevents foreign matter from entering the contact area as well as preclude the possibility of the leaves of the female contact from opening beyond allowable limits and ensure a snug fit around the respective male pins. There shall be one contact that is positioned in a manner which will allow it to make first and break last providing optimum grounding performance.

Each Ethernet (IP-based) male-female connector shall include a total of 13 specifically designed contacts. Eight contacts soldered to outdoor-rated CAT5e STP wire end terminated with a shielded RJ-45 male connector and five contacts soldered to #18/1 UL lead wire – bare and numbered 1-5, which may be used for additional camera requirements including but not limited to power, alarms or grounds. All soldering shall be per IPC J STD-001E *Requirements for Soldered Electrical and Electronic Assemblies*. Each individual contact shall be rated for up to 600 volts and 7 amps, but de-rated according to the wire used in the application. For optimum weatherproofing, each male shall be self-wiping with a shoulder at the base of each male contact so that it will recess into the female block, thereby giving a rain-tight seal to each individual contact when mated. Furthermore, the wire leads from both the male and female rubber contact blocks shall be permanently and integrally molded in the synthetic rubber body. The facility manufacturing the electrical contact connector must comply with ISO 9001.

-3-

**REVISION OF SECTION 614
CCTV POLE WITH LOWERING DEVICE**

(b) *Lowering Tool.*

The camera lowering system shall be operated by use of a portable lowering tool. The tool shall consist of a lightweight metal frame and winch assembly with factory spooled stainless steel aircraft cable, a quick release cable connector, an adjustable safety clutch and a variable speed industrial duty electric drill motor. This tool shall be compatible with accessing the support cable through the hand hole of the pole. The lowering tool shall have the capability to be securely attached to the pole with one single bolt. The tool must support itself and the load during lowering and lifting operations. The winch assembly shall include an automatic braking system that provides a means to prevent freewheeling when loaded. One lowering tool per Project shall be delivered to the Department upon Project completion. The lowering tool shall have a reduction gear to reduce the manual effort required to operate the lifting handle to raise and lower a capacity load. The lowering tool shall be provided with an adapter for operating the lowering system by a portable drill using a clutch mechanism. The lowering tool shall be equipped with a positive braking mechanism to secure the cable reel during lifting and lowering operations and prevent freewheeling. The manufacturer shall provide a variable speed, heavy-duty reversible drill motor, clutch and one lowering tool for every five camera lowering system poles provided as part of this Project. The lowering tool shall be made of durable and corrosion resistant materials, powder coated steel, galvanized steel, heavy duty aluminum or otherwise protected from the environment by industry-accepted coatings to withstand exposure to a corrosive environment.

(c) *Camera Junction Box.*

The camera junction box shall be used to provide both a mounting location for the CCTV camera as well as an interface compartment for wire leads from the lowering system to the CCTV camera or applicable surge suppression module. The camera junction box shall consist of a two piece clamshell design with one removable hinge side and one latch side with a single toggle bolt to facilitate easy access. The general shape of the box shall be cylindrical to minimize the effective Projected area. The camera junction box shall be cast aluminum with stabilizing weights on the outside of the box to increase room on the interior. The camera junction box shall be capable of accommodating up to 40 pounds of stabilizing weights. The bottom of the camera junction box shall be drilled and tapped with a 1.5 inch National Pipe Thread (NPT) female thread to accept industry standard dome housings and must include the capability to be modified to accept a wide variety of other camera mountings. The camera junction box shall be gasketed to prevent water intrusion. The bottom of the camera junction box shall incorporate a screened and vented hole to allow airflow and reduce internal condensation.

(d) *Miscellaneous.*

All pulleys for the camera lowering system and portable lowering tool shall have sealed, self-lubricated bearings, oil tight bronze bearings, or sintered oil impregnated bronze bushings. The lowering cable shall be a minimum 0.125 inch diameter stainless steel aircraft cable with a minimum breaking strength of 1,740 pounds.

All electrical and video Ethernet connections between the fixed and lowered portion of the contact block shall be protected from exposure to the weather by both a gasket on the bottom side of the

-4-

REVISION OF SECTION 614 CCTV POLE WITH LOWERING DEVICE

bell housing enclosure as well as the “O” ring shoulders at the base of each male contact pin to prevent degradation of the power/signal contacts.

The interface and locking components shall be made of stainless steel or aluminum. All external components of the lowering system shall be made of corrosion resistant materials, powder coated, galvanized, or otherwise protected from the environment by industry-accepted coatings to withstand exposure to a corrosive environment.

In the event any CCTV is not properly weight balanced and plumb, the CCTV camera manufacturer shall provide weights or counterweights as necessary to assure that the alignment of pins and connectors are proper for the camera support to be raised into position without binding.

The CCTV camera manufacturer or Contractor shall provide all applicable power and signal connectors for attachment to the bare leads and shielded RJ-45 male connectors in the pole top and camera junction boxes.

The CCTV camera manufacturer or Contractor shall provide appropriate length of outdoor-rated CAT5e STP (stranded) cable (PoE/signal) in one continuous run from the respective equipment cabinet to the pole top junction box of each lowering system pole.

The caisson foundation shall be in accordance with the CDOT Caisson Foundation Detail for CCTV Pole with Lowering Device.

(e) *Camera Lowering System Pole.*

1. Dimensions and Pipe Wall Thickness

Steel pole dimensions, wall thickness, and details shall be in accordance with the most recent CDOT Standard Drawing “*CCTV Pole with Lowering Device*”.

2. Fabricator

The fabricator shall be certified under Conventional Steel Building Structures (SBD) as set forth by the American Institute of Steel Construction (AISC) Quality Certified Fabricators Program. Proof of this certification shall be supplied with its pole submittal to ensure that the fabricator has the personnel, organization, experience, procedures, knowledge, equipment, capability and commitment to fabricate quality steel pole structures.

3. Welding

All welding shall be in accordance with Sections 1 through 8 of the American Welding Society (AWS) AWS D1.1 Structural Welding Code for Steel. Tackers and welders shall be qualified in accordance with the code. Tube longitudinal seam welds shall be free of cracks and excessive undercut, performed with automatic processes, and be visually inspected. Longitudinal welds suspected to contain defects shall be magnetic particle inspected. All circumferential butt-welded pole splices shall be ultrasonically or radiographically inspected.

-5-

**REVISION OF SECTION 614
CCTV POLE WITH LOWERING DEVICE**

4. Material Certifications

All materials and products shall be manufactured in the United States of America, and comply with ASTM or AASHTO specifications. Mill certifications shall be supplied as proof of compliance with the specifications.

5. Pole Shaft

The pole shaft should be one piece construction up to 50 feet in length, and shall conform to ASTM A595 Standard Specification for Steel Tubes, Low Carbon or High-Strength Low-Alloy, Tapered for Structural Use Grade A with a minimum yield strength of 55 kips per square inch or ASTM A572 Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel with a minimum yield strength of 55 kips per square inch. Poles greater than 50 feet in length shall be of multi-piece construction. All structures with pole shaft diameters of 26 inches or less shall be round; pole shaft diameters greater than 26 inches may be round or multi-sided. The shaft shall have a constant linear taper not exceeding 0.14 inch per foot, and contain only one longitudinal seam weld. Circumferential welded tube butt splices and laminated tubes are not permitted. Longitudinal seam welds within 6 inches of complete penetration pole to base plate welds shall be complete penetration welds.

6. Hand Holes for Winch Operation

A single hand hole may be provided in lieu of the dual hand holds detailed. If a single hand hole is detailed, the hand hole opening shall be designed to meet AASHTO fatigue requirements in accordance with the latest interim revisions to the code, and reinforced with a minimum 2 inch wide hot rolled steel rim. The nominal outside dimension of a single hand hole shall be 6 inches by 27 inches. The single hand hole shall have a tapped hole for mounting the portable winch thereto and include a cover. Unless otherwise noted, the bottom lip of the single hand hole shall be located on the shaft between 30 inches to 33 inches from the baseplate.

7. Pole Top Tenon

The pole shall have a custom plate mounted tenon as detailed in the most recent CDOT Standard Drawing "*CCTV Pole with Lowering Device*".

8. Cable Supports/Electrical Cable Guides and Parking Stand (Eyebolts)

Cable supports, Electrical Cable Guides and Parking Stands shall be as detailed in the most recent CDOT Standard Drawing "*CCTV Pole with Lowering Device*".

9. Ground Lug

A ground lug shall be provided within the interior base of the pole for connection to a grounding system conforming to the requirements of Revision 614 – Grounding and Bonding. A bare copper ground wire shall be provided by the Contractor between the pole's ground lug and a ground rod adjacent to the pole's caisson to provide grounding. The ground wire shall be installed in a dedicated conduit (0.5 inch diameter, minimum) within the pole caisson as provided by the Contractor. The Contractor shall bond the ground wire to the pole's ground

-6-

REVISION OF SECTION 614 CCTV POLE WITH LOWERING DEVICE

lug and the ground rod. The Contractor shall furnish and install a copper coated steel ground rod (0.625 inch diameter and 8 feet long, minimum) and bond the ground rod to pole's ground lug. The cabinet ground busbar and electrical disconnect (if applicable) shall be bonded to the pole's ground lug through the use of ground wire. The size of the ground wire, bonding methods, and ground rod installation, material and size shall be in conformance with Article 250 of the current edition of National Fire Protection Association (NFPA) 70 National Electric Code (NEC), unless otherwise specified by the Engineer.

10. Base Plates

At a minimum, base plates shall conform to ASTM A36 Standard Specification for Carbon Structural Steel or A572 Grade 50. Plates shall be integrally welded to the tubes with a telescopic welded joint or a full penetration butt weld with backup bar. Plates shall be hot dip galvanized per the requirements of the contract documents.

11. Anchor Bolts

At a minimum, anchor bolts shall conform to the requirements of ASTM F1554 Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength Grade 55. The upper 12 inches of the bolts shall be hot dip galvanized per ASTM A153 Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware. Each anchor bolt shall be supplied with two hex nuts and two flat washers. The strength of the nuts shall equal or exceed the proof load of the bolts.

CONSTRUCTION REQUIREMENTS

All work shall conform to the specifications referenced herein and the current edition of NFPA 70.

Each CCTV Pole with Lowering Device shall be installed as described herein. The Contractor shall furnish and install all incidentals necessary to provide a complete working system at each location.

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

Section 614 is hereby added to the Standard Specifications for this project as follows:

DESCRIPTION

The Dedicated Short Range Communications (DSRC) Roadside Unit (RSU) is a short to medium range communications device that provides information and supports Public Safety operations in roadside to vehicle and vehicle to vehicle communication environments. The Roadside Unit is a grade electronic module that must be capable of both transmitting and receiving using DSRC radios, using the 5.9 Gigahertz (GHz) band Approved for DSRC use by the Federal Communications Commission (FCC). DSRC is a two-way wireless communication protocol that integrates and implements the appropriate Institute of Electrical and Electronics Engineers (IEEE), and the Society of Automotive Engineers (SAE) standards (IEEE 802.11p, IEEE 1609 family, and SAE J2735 message set dictionary).

MATERIALS

The RSU shall be enclosed a single enclosed unit with dual radios, powered through the Ethernet Interface. The 5.9.GHz DSRC radios on the board should be connected to the external Antenna 1 and Antenna 2 interfaces. The board contains a main processor running a Linux-based operating system, working in conjunction with additional processors running the DSRC Software Defined Radios. The RSU should have on board Global Positioning System (GPS) for location services and synchronization, a Power Over Ethernet (PoE) or Alternating Current (AC) power source with full surge protection, remote management support, an available software development kit (SDK) for application development, and logging and error reporting.

The RSU shall be shipped with a *Global Navigation Satellite System* (GNSS) antenna and two 5.9GHz omni antennas with external lightning protection.

1. 28±2 dB GNSS antenna
2. 5.9GHz Omni Antenna
3. 0-6 GHz Lightning Surge Protection

The minimum requirements for processing, memory, and storage shall be:

1. Processing: 500 MHZ
2. Memory: 256MB DDR RAM
3. Storage: 8GB compact flash

(a) *RSU Environmental Conditions.*

The RSU shall conform to the following environmental conditions:

-2-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

1. Operating temperature range: (-40° Celsius to +74° Celsius) (-40° Fahrenheit to +165° Fahrenheit)
2. Storage temperature range: (-45° Celsius to +85° Celsius) (-50° Fahrenheit to +185° Fahrenheit)
3. Operating shock and Vibration: United States Department Of Defense, Military Standard (MIL-STD) 810G, Method 514 and 516
4. Salt fog: United States Department Of Defense, Military Standard (MIL-STD) 810G, Method 509
5. Wind: The roadside unit mounting bracket shall be able to withstand winds up to 110 miles per hour per American Association of State Highway and Transportation Officials (AASHTO) 2013, Sixth Edition of the AASHTO Standard Specification for the Supports for Highway Signs, Luminaires and Traffic Signals, with the most recent Interim Revisions

(b) *RSU Performance*

1. Mean Time Between Failure MTBF: The roadside unit shall remain operational for an average of 200,000 hours under normal environmental conditions.
2. The roadside unit shall meet the operational availability requirements of 99.9%.
3. DSRC Radio Receive Range: The roadside unit shall receive DSRC messages throughout a range of 1m to 300m (1ft to 984ft), with a maximum Packet Error Rate of 10.0%, in an open field under the following conditions:
 - A. When receiving on an 802.11p Regulatory class 17 channel (even 10 MHz Service Channel, numbers 172 through 184).
 - B. When receiving Part 1 of the SAE J2735 defined Basic Safety Message (BSM)
 - C. With a BSM transmit rate of 10 Hz
 - D. With a Data Rate of 6 Mbps
 - E. With an RSU antenna centerline height of 8 meters
 - F. With a maximum BSM transmit Equivalent Isotropically Radiated Power EIRP
4. DSRC Radio Transmission Range: The roadside unit shall transmit DSRC messages throughout a range of 1m to 300m (1ft to 984ft), with a maximum Packet Error Rate of 10.0%, in an open field under the following conditions:

-3-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

- A. When transmitting on an 802.11p Regulatory class 17 channel (even 10 MHz Service Channel, numbers 172 through 184).
- B. When transmitting Wave Service Advertisements (WSA), as defined in IEEE 1609.3
- C. With a WSA Transmission Rate of 10 Hz
- D. With a Data Rate of 6 Mbps
- E. Using a receiver conforming to SAE J2945

(c) *RSU Enclosure.*

The enclosure shall be designed to comply with the following NEMA requirements:

- 1. Providing a degree of protection to personnel against access to hazardous parts (indoor/outdoor use)
- 2. Provide protection of the equipment inside the enclosure against ingress of solid foreign objects, falling dirt and windblown dust.
- 3. Provide protection with respect to harmful effects on the equipment due to the ingress of water (rain, sleet, snow, splashing water and hose directed water); and that will be undamaged by the external formation of ice on the enclosure.

The enclosure shall provide:

- 1. Protection classification: *National Electrical Manufacturers Association (NEMA) 4X*, Ingress Protection (IP) 66 rating
- 2. Provision for the following waterproof (IP66) connector interfaces
- 3. One Ethernet RJ45,
 - A. IEEE 802.3 10BASE-T, 802.3u 100BASE-TX, PoE 802.3af (Mode A and Mode B)
 - B. Input Voltage: 36 to 57Vdc.
 - C. Pin Configuration: 3/6, 1/2 or 4/5, 7/8
- 4. Three N-Type (F) Radio Frequency (RF) connectors (one GNSS and two 5.9GHz connectors)
- 5. Status Indication: The roadside unit shall include a light-emitting diode (LED) to indicate the operational status of the device in accordance with the following protocol: Off – No Power, Blinking Green – Device Start-Up, Solid Green - Device Operational, Amber - Firmware Update in Progress, Red-Fault
- 6. Multipin Digital Interface (Serial Console)

-4-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

7. The external PoE connector shall be compliant with the Outdoor IP66 rating.
8. Internal heat spreader
9. Die-cast Aluminum with a Powder-Coat finish and complete set of mounting holes to suit the particular PCB variant.

(d) *RSU Board.*

The Board shall be designed to provide a compact platform for the deployment of advanced connected vehicle applications and protocol stacks to enhance the performance of the DSRC Radio in mobile environments.

The Board shall provide:

1. Single or Dual channel IEEE 802.11p radio
2. IEEE 1609.1-4 protocol stacks, including security functions
3. Advanced vehicle positioning system, including
 - A. Advanced GNSS positioning system
 - B. Optional Dead Reckoning (DR) using vehicle sensors via Controller Area Network (CAN) bus or VIC inputs
4. High performance application processor for execution of ITS and safety applications
 - A. Processor
 - B. DDR memory
 - C. Linux operating system
5. Interface options
 - A. Ethernet Internet Protocol Version(IP v)4/IPv6 networking)
 - B. Universal Serial Bus (USB) 2.0 high-speed, on-the-go (host/peripheral)
 - C. Serial Console (Internal)
 - D. High speed CAN bus interface on VIC connector

-5-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

The Application Processor should run the latest Linux operating system, and ITS applications should be written as Linux application software. Non-volatile (flash memory) storage is accessible via standard Linux file-systems, and user interface devices are accessed via standard Linux Application Programming Interface (API).

(e) *DSRC Radio Transceiver.*

The DSRC radio should be comprised of the following components; Physical Layer Radio Transceiver (PHY), RF, and Medium Access Control (MAC) as described below:

1. Physical Layer Radio Transceiver (PHY).

The physical layer radio transceiver (PHY) shall be IEEE 802.11p compliant which employs advanced mobility receiver algorithms. The PHY RF front-end must provide multiple radio configurations, allowing the Carrier Board to implement single or dual radio DSRC systems.

The RF sub-system provides separate antenna ports for 5GHz bands.

The PHY shall provide 2-antenna diversity transmission and reception for optimum radio performance. The required operating modes and functionality of the PHY are as follows:

- A. Single-channel mode for (1 or 2 antenna diversity operation) and dual-channel mode (1 antenna per channel), 2 independent IEEE 802.11p for radios operating on different radio channels.
 - B. 10MHz, (DSRC) channel bandwidth modes.
 - C. Dual five GHz RF paths (5.18 GHz to 5.93 GHz)
 - D. Transmit mask meeting IEEE 802.11p Class C (5GHz band).
 - E. IEEE 802.11p enhanced adjacent channel receiver performance.
 - F. Transmit antenna cyclic delay diversity (2 antenna operation only).
2. Medium Access Control Layer.

The MAC shall be IEEE 802.11p compliant and provide fast, time-synchronized channel switching functionality. It should also provide support for multiple queue sets, allowing packets to be queued while the PHY/MAC is operating on another channel.

The MAC shall provide the following operating modes:

- A. Channel switching between 2 channels with independent sets of transmit queues.

-6-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

- B. Single radio, time-synchronized multi-channel operation
- C. Simple single radio channel operation
- D. Dual-radio, multi-channel operation
- E. Independent MAC/PHY entities operating concurrently on different radio channels.
- F. Optional coordination between channels to avoid self-interference when operating on close radio channels.
- G. Dual radio time synchronized multichannel operation.

Other features of the MAC should include Radio Channel Measurements, comprising the following:

- A. Channel utilization (ratio of channel busy time to measurement duration)
 - B. Channel active ratio (proportion of time that the radio is tuned to the Service Channel (SCH) or Control Channel (CCH), respectively)
 - C. Per-channel statistics (number of packets successfully transmitted, number of packets that failed to transmit, number of packets successfully received, and number of packets received in error. Broken down according to broadcast, multicast, and unicast packets).
 - D. Received signal and noise power levels
3. Processor.

The processor shall utilize the Linux operating system and provide flexibility for running multiple applications. The processor shall provide ample processing power for the ITS applications.

A wide selection of services available to applications should be provided, not limited to the following:

- A. Communication services.

The system shall provide a range of communication services for ITS applications. All communication services should be integrated within the Linux networking system. The following network protocols should be provided by the platform:

- (1) IPv6, IPv4 (Linux networking stack)
- (2) IEEE1609.3 (WAVE) Short Message Protocol WSMP and (WAVE) Management Entity WME management

-7-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

- (3) European Telecommunications Standards Institute (ETSI) TC-ITS
GeoNetworking (GN, GN6) and Basic Transport Protocol (BTP)

These communication protocols should have the capability to operate over the following communication interfaces available on the Unit board namely 10/100Mbps Ethernet and USB 2.0.

B. Ethernet.

The Unit processor shall provide a 100Mbps Ethernet interface (10BASE-T/100BASE-TX) which can be used as part of an application or alternatively used for debugging purposes or remote status and control. The Ethernet interface should be supported by Linux Ethernet device drivers, providing full IPv4/IPv6 over-Ethernet networking functionality.

C. Peripheral Interface Services.

General purpose interface services should be provided to allow interconnection with external peripheral devices and systems.

D. USB-OTG.

A USB 2.0 on-the-go (OTG) port should be available on the Unit Board, and shall be supported by Linux USB host and peripheral device driver APIs.

E. Serial Console.

The Unit Board may provide an optional serial port upgrade via the expansion connector through which the primary operating system console becomes available.

This port should be used primarily for system development and debug operations, but may also be used by applications.

F. Security Services

The Unit Board shall provide hardware security services necessary to support the IEEE 1609.2 and ETSI TS 102 867 standards.

- G. Add of field and/or remote upgrade feature to allow messages sets, firmware, application updates.

(f) *Certification Requirements.*

The Roadside Unit must conform to the US Department of Transportations' "DSRC Roadside Unit Specifications Document, version 4.1 and OmniAir certifications. OmniAir certification

-8-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

incorporates specific Wi-Fi and FCC requirements. To ensure conformance with DOT standards, the selected vendor should be on the United States Department of Transportation (USDOT) Research Qualified Products List (rQPL).

(g) *System Software Requirements.*

The RSU software is an application that will run on Wireless DSRC radios. The RSU software shall be able to perform the following requirements, at a minimum:

1. Broadcast SAE J2735 messages over the DSRC radio
2. Receive Wave Short Messages (WSM)
3. Route and forward IPv6 traffic for connected mobile units
4. Capture Communication Message Log (CML)
5. Capture System Status Log (SSL)
6. Transmit periodic heartbeat messages

(h) *Software Environment.*

The software environment shall be a Linux-based operating system which utilizes both Python and C-based components, or other equipment components which perform the requirements.

(i) *Ethernet Interface.*

The RSU software running on the DSRC radio utilizes the Ethernet interface to combine functions of both the Remote System interface (RSI) and the Local System Interface (LSI). This interface shall be able to perform the following requirements, at a minimum:

1. Successfully login to the RSU with the ability to start and stop the application and set configuration parameters
2. The ability to add, delete and modify active list messages
3. Transmit unicast heartbeat messages to a remote host
4. Accept SAE J2735 messages for immediate forwarding on the DSRC radio interface
5. Off-loading log messages about system status and communication history of the device.

-9-

**REVISION OF SECTION 614
 DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
 ROADSIDE UNIT**

(j) Summary of Software Operation.

The RSU software shall run on Wireless DSRC radio units and perform the following functions, at a minimum:

1. Broadcast SAE J2735 messages on the DSRC radio interface and monitor for forwarded SAE J2735 messages on its Ethernet interface to broadcast on the DSRC radio interface.
2. Log transmitted and received messages on DSRC radio interface (CML)
3. Log system status messages (System Status Log)
4. Receive Wave Short Messages (WSM)
5. Transmit Wave Service Announcements (WSA)
6. Route IPv6 traffic for connected mobile units
7. Transmit periodic heartbeat messages
8. Ensure message signing and verification in accordance with IEEE 1609.2 requirements.

(k) System Interfaces.

A brief description of these interfaces is provided below:

Interface	Description
Antenna 1 / 2	5.9 GHz N-Type Male for DSRC radio
LED	Multi-color Light Emitting Diode (LED)
USB	USB Type A female
Digital Interface	Ingress Protection rated connector providing RS232 serial
Ethernet	Ethernet socket with Power over Ethernet
GNSS Antenna	Global Navigation Satellite antenna connector (N-Type Male connector)

(l) DSRC Antenna Interfaces.

1. The RSU provides a single DSRC radio set, denoted by interfaces Antenna 1 and ANT2.

A. USB Interface

The USB interface shall be an IP66/IP67 rated USB-Type A Female connector with a threaded collar to provide a tight seal against water and dust.

B. Ethernet Interface.

-10-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

The Ethernet socket takes a RJ45 plug and connects to an internal Power over Ethernet Splitter providing separate power and Ethernet to the board. The internal PoE splitter is configured to support 802.3af Mode A/B.

C. GNSS Interface.

The RSU provides a GNSS interface to receive global positioning data transmitted by satellites.

(m) *Connected Vehicle Applications.*

Dedicated Short Range Communications has evolved significantly over the last 20 years. It is expected that the installed roadside units shall have the capability and flexibility to be integrated with various mobility, safety, and data applications within the Colorado Department of Transportation.

CONSTRUCTION REQUIREMENTS

(a) *Installation Requirements.*

1. Powering the Roadside Unit (RSU)

The PoE splitter, internal to the RSU, shall be configured to connect to a PoE (802.3af) Mode A/B Power Supply Equipment (PSE), supplying 48V DC or 110VAC over the Ethernet interface. If the installation site does not support 802.3af, then an additional PoE Injector taking DC input and supplying 48V DC 802.3af Mode A/B output will be required to power the unit. The maximum distance between the PSE and the Powered Device (PD), and the RSU, shall be 100 meters (328 feet). Providing power beyond 100 meters requires an additional PoE extender. Power consumption for the RSU shall not exceed 24 Watts.

2. RSU Antenna Connections.

The RSU requires Omni-directional antenna connected to each DSRC radio and a Global Positioning System (GPS) Antenna connected to the GNSS interface. All Radio Frequency (RF) connectors and lightning surge arresters shall be weatherproofed with self-fusing rubber tape.

3. Lightning Surge Arresters.

The DSRC radios and GNSS receiver on the RSU can be protected by attaching optional Lightning Surge Arresters. If lightning surge arresters are to be fitted, they must be connected directly to the RSU Antenna 1, Antenna 2 and GNSS interfaces. All lightning surge arresters shall be connected to a common earthing/grounding point. An earth grounding wire must be

-11-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

attached to the body of each lightning surge arrester. The earth grounding wires should be connected to same common earth ground point used by the RSU.

4. Omni Directional Antenna.

An optional Lightning Surge Arrester can be connected in-line with each DSRC radio. An earth grounding wire must be attached to the body of each lightning surge arrester. The earth grounding wires are connected to same common earth ground point used by the RSU. The RSU requires Omni-directional antenna connected to each DSRC radio and a Global Positioning System (GPS) Antenna connected to the GNSS interface. All Radio Frequency (RF) connectors and lightning surge arresters shall be weatherproofed with self-fusing rubber tape.

5. Pole Mounting.

The RSU shall have a flat surface, with equally spaced mounting holes and is capable of accepting an optional mounting bracket. The mounting bracket should be attached to facilitate mounting to a vertical or horizontal pole. Adjustable stainless steel straps can be threaded through slots in the mounting bracket to fasten the mounting bracket to the pole. When attaching an RSU to a horizontal pole, the minimum recommended separation between the pole and the Antenna closest to the pole is 2 meters (6.56 feet). For vertical mounting of an RSU, the mounting height of the RSU unit and varies based on roadway topology and ensuring the optimal line of sight.

(b) *DSRC Radio Interface.*

The RSU software running on the DSRC radio shall utilize the DSRC Radio interface to broadcast SAE J2735 messages, transmit Wave Service Announcements (WSA), traveler information messages, Radio Technical Commission for Maritime Services (RTCM) messages, and Geometric Intersection Description (GID)/MAP messages. Dual Radio support must be provided. The following networking support is required, namely:

1. IPv6
2. IPv4
3. Simple Internet Transition (SIT) Tunnel Support
4. System Status Log (SSL)
5. Secure Shell (SSH)
6. *Transport Layer Security (TLS)*

(c) *Software installation*

The RSU software shall run on Wireless DSRC radio units and incorporate field-proven Network Layer, Facilities Layer, and Applications Layer software libraries. In addition, the SDK shall allow users to develop their own applications and customize the system.

-12-

**REVISION OF SECTION 614
DEDICATED SHORT RANGE COMMUNICATIONS (DSRC)
ROADSIDE UNIT**

All DSRC radios/RSU software on this project shall include licensing for centralized manufacturer management software capable of remote device discovery, real-time device monitoring, troubleshooting, diagnostics, and automated configuration management

REVISION OF SECTION 614 FOLD-OVER TOWER (ITS)

Section 614 of the Standard Specifications is hereby revised to include the following:

DESCRIPTION

This work consists of furnishing and installing a heavy duty fold over tower, base assembly, concrete footing, concrete pad, conduit sweeps, pull boxes, chain link fencing and chain link gate at the locations shown on the Plans. The tower will be used to install road weather information systems (RWIS) and other ITS equipment.

MATERIALS

The heavy duty fold over tower and base assembly shall be a Heavy Duty Fold over Tower – Model MF 1333, 30 feet in height as supplied by Glen Martin Engineering, Inc., 13620 Old Hwy 40, Boonville, MO., 65233, (660) 882-2734. (www.glenmartin.com) or Approved equal.

Concrete footing shall be Concrete Class BZ and shall be in accordance with Section 601.

Concrete pad shall be Concrete Class B and shall be in accordance with Section 601.

Chain link fencing shall be a minimum of 6 feet in height when measured from ground surface. The gate for the chain link fence shall be between 3.5 feet and 4 feet in width, and shall include locking hasps and end caps. Materials for chain link fencing shall conform to CDOT Standard Plan M-607-2, latest version.

Conduit shall conform to Section 613 – Electrical Conduit

Pull boxes shall conform to Section 613 – Pull Boxes.

The Contractor shall supply six ½ inch diameter, 10 foot copper clad ground rods and ¾ inch acorn ground rod clamps.

CONSTRUCTION REQUIREMENTS

Contractor shall install heavy duty fold over tower and base assembly shall be installed in accordance with the details shown in the Plans per manufacturer's recommendations. The Contractor shall install the tower such that it will not become an obstruction or hazard when raised, lowered, or in the fold down state. The Contractor shall form and pour the tower footing per the Project detail included with the Project and in accordance with manufacturer recommendations. The Contractor shall install and cap conduit sweeps before pouring the footing.

A 5 foot wide by 6 foot long by 4 inch deep concrete pad shall be formed and poured after the tower footing has been installed. The Contractor shall set the pull boxes shown on the Project details and pour the pad around the pull boxes. All incoming conduits shall be installed under the concrete pad and shall be coupled to the conduits installed in the footing as required.

The Contractor shall install chain link fencing around the outside perimeter of the concrete pad. The chain link fence shall be installed from between 6 inches and 2 feet from the edge of concrete pad along the entire perimeter of the pad. The chain link gate shall be installed at the center opposite the hinged side of the tower and in a location that allows the tower to be folded down through the open gate.

-2-

**REVISION OF SECTION 614
FOLD-OVER TOWER (ITS)**

The Contractor shall make all arrangements for a qualified manufacturer's representative to be on-site to ensure proper installation. The Contractor shall perform an acceptance test procedure for approval and acceptance by the Department and in the presence a representative of the CDOT ITS department. The acceptance test shall include demonstrating the tower raises and lowers according to the manufacturer's design and is fully functional at completion.

REVISION OF SECTION 614 WEATHER MONITORING SYSTEM

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of furnishing, installing, and commissioning a weather monitoring station (WMS) at the locations shown on the Plans.

The WMS shall be specifically designed to monitor and collect real time atmospheric and pavement conditions along with color still frame video images of the roadway. The WMS shall be capable of sending this information to a centralized computer system compatible with existing CDOT ITS infrastructure. CDOT's centralized weather management server will poll the WMS to ask for data on a preset time interval specified by CDOT to transfer and refresh with current conditions. Data from the WMS shall comply with standard National Transportation Communications for Intelligent Transportation System Protocol (NTCIP).

The Contractor shall provide a detailed description (technical cut sheets) of the WMS to be supplied and the experience of the vendor/manufacturer in supplying such WMS to other agencies. The Contractor shall also provide written justification of the selection process used in the selection of a WMS vendor/manufacturer. Such justification shall assure that CDOT receives a state of the art WMS from a responsible vendor/manufacturer that is compatible with the existing statewide WMS system currently in place. CDOT may require the Contractor to document the proposed WMS can provide interoperability and connectivity to the existing statewide WMS system. The WMS equipment vendor chosen by the contractor must have at least ten successful WMS installations in North America. As part of the equipment approval process, CDOT may ask the Contractor to provide the names of at least three agencies, with names, telephone numbers and contact person to verify said WMS installations were successful.

After completion of the equipment installation, the equipment manufacturer representative shall perform all final system checks, sensor alignments, software setup, and software configuration to provide a fully operational WMS. The equipment vendor shall provide a limited, on-site warranty covering all equipment for a 12-month period from the WMS commissioning date.

MATERIALS

The WMS shall include a remote processing unit, a precipitation occurrence sensor, an air temperature/relative humidity sensor, a wind sensor/s, wired road surface sensors, a wired sub-surface sensor, a non-intrusive road surface condition sensor, a pan-tilt-zoom camera, and all mounting and attachment hardware, cables, test equipment, and manufacturer site commissioning necessary for a full and complete installation.

(a) *Remote Processing Unit (RPU).*

The RPU shall gather, process, and store data from all connected atmospheric sensors, pavement sensors and camera. The data shall be transmitted to CDOT's centralized weather management servers upon polled request via NTCIP ESS protocol. The RPU shall utilize a modular design consisting of a main data processing unit and secondary communication units that are used to power

-2-

REVISION OF SECTION 614 WEATHER MONITORING SYSTEM

and connect sensors at the WMS site. The main data processing unit shall utilize a Reduced Instruction Set Computing (RISC) type processor and run a Linux based operating system capable of multi-tasking operations that optimizes data acquisition from all connected devices. The RPU shall include in-built GPS for real-time clock synchronization and location definition.

The RPU shall support standardized communication protocols for sensors from various manufactures.

The RPU shall also have the capability to be reset from the centralized server. The RPU shall include a minimum of two 10/100 Ethernet ports, six serial ports configurable for RS-232 or RS-422/485 operating at full or half duplex from 300 to 115,200 bits per second. All circuitry of the RPU, the voltage inputs, the sensor inputs, and the communications ports shall be designed and tested to provide transient voltage and surge protection. The RPU shall include lightning protection for all channels and serial ports including auto-reset circuit breakers for power. The RPU shall operate in a range of 100 to 130 volts alternating current (VAC) at 55 to 65 hertz (Hz) and shall use not more than 60 watts of continuous power.

The RPU shall have the capability of being modified to utilize solar power and other power sources in place of conventional commercial electric power. Solar powered RPU sites shall operate a minimum of 72 hours without sunlight or solar charging of the batteries. A solar powered RPU shall operate within a power range of 12-32 VDC.

All RPU electronics shall be capable of operation over a minimum temperature range of -40°F to 160°F and 0 percent to 90 percent relative humidity non-condensing. The RPU shall support full site configuration and management via a web based user interface for on-site and remote access. The RPU shall be capable of communication to the centralized server via serial RS-232/422/485 utilizing point to point protocol (PPP) or point to multi-point protocol (PMPP) or 10/100 Ethernet connection utilizing Transmission Control Protocol/Internet Protocol (TCP/IP). The RPU hardware and software provided shall be compliant with the most current Federal standard National Transportation Communications for ITS (NTCIP) Environmental Sensor Station (ESS) communication protocols.

At minimum the RPU shall be capable of collecting data from the following:

1. one wired precipitation type sensor
2. one wired air temperature/relative humidity sensor
3. four wired road surface sensors
4. one wired wind speed/direction sensor
5. two non-intrusive pavement condition sensor
6. two non-intrusive pavement temperature sensor
7. one wired pan-tilt-zoom camera

The RPU shall include an IP66 rated lockable stainless steel AISI 316 powder coated enclosure that is resistant to weather, sunshine, de-icing chemicals, corrosion and damage from falling debris (ice, small rocks and tree branches) and vandalism. The enclosure shall be capable of being mounted on poles with an outer diameter range of 6 inches to 24 inches or EFS fold-over tower and have rubber flanges located at the bottom which provides cabling access. The enclosure shall house all RPU

-3-

REVISION OF SECTION 614 WEATHER MONITORING SYSTEM

electronics, power supplies, and communication equipment and not exceed dimensions of 24 inches height by 20 inches width by 8.25 inches depth.

(b) *Precipitation Type Sensor.*

The precipitation sensor shall utilize optical, infrared technology to detect precipitation with beam interruptions by precipitation particles. The precipitation type sensor shall sense the onset and cessation of precipitation in the form of rain, snow, sleet, and freezing rain and shall indicate when precipitation is occurring. The sensor shall provide all precipitation classification, measurements of intensity or water accumulation, as well as visibility. It shall provide proper operation over a minimum temperature range of -40°F to 140°F at 0 to 100% RH and also meet an IP66 rating. The sensor shall operate to specifications at cable lengths up to 100 feet from the RPU.

The sensor shall operate within a power range of 12–30 VDC and use no more than 5 watts of power. The sensor shall include RS-232, RS-485 data communication, and 4 to 20 mA outputs; and be capable of operating to specifications a cable lengths up to 100ft from the RPU.

Communication and power cable connecting the sensor to the RPU shall be shielded, with UV stable jacket rated for outdoor use. The Contractor is responsible for providing the correct length cable based on the planned installation.

(c) *Air Temperature/Relative Humidity Sensor.*

The Air Temperature/Relative Humidity Sensor shall accurately measure outside ambient air temperature and relative humidity. The sensor shall include an air temperature-sensing element that measures temperatures within a minimum range of -40°F to 140°F with an accuracy within 1 degree of actual temperature. The sensor shall include a relative humidity sensing element that measures a range from 0 to 100 percent relative humidity within 1% of actual humidity levels. System dew point temperature shall be calculated from the air temperature and relative humidity. The sensor shall be protected by UV stabilized white thermoplastic solar/wind-radiation shield and meet IP66 rating.

The sensor shall operate within a power range of 7–30 VDC and use no more than 5 watts of power. The sensor shall include RS-485 2 wire serial data communication, 0 to 10 voltage, and resistance level outputs; and be capable of operating to specifications on cable lengths up to 100 feet from the RPU.

Communication and power cable connecting the combined sensor to the RPU shall be shielded, with UV stable jacket rated for outdoor use. The Contractor is responsible for providing the correct length cable based on the planned installation.

The sensor shall include all mounting hardware necessary to complete the installation.

(d) *Wind Speed/Direction Sensor.*

The wind speed/direction sensor shall accurately measure wind speed and direction without moving parts. The sensor shall be corrosion resistant and satisfy IP66 and IP67 ratings. The sensor shall

-4-

REVISION OF SECTION 614 WEATHER MONITORING SYSTEM

include both 0 to 5000 millivolt analog and RS-232/RS-485 digital outputs. The sensor shall have an operating range of 0 to 145 miles per hour, with a survival operation limit of 190 miles per hour. Accuracy for measured wind speed shall be less than 3 percent of actual wind speed. Wind speed direction operating azimuth shall be measurable from 0 to 360 degrees, with an accuracy of +/- 2 degrees, and resolution of 1 degree. The minimum operating temperature range shall be -40°F to 140°F. The sensor shall include provisions to deter animal perching and nesting.

The sensor shall operate within a power range of 9-40 VDC and use no more than 30 watts of power. The sensor shall include both 0 to 5000 mV analog and RS-232/RS-485 digital outputs; and be capable of operating to specification on cable lengths up to 30 feet from the RPU.

The sensor shall include all mounting hardware necessary to complete the installation.

(e) *Wired Road Surface Sensors.*

The wired road surface sensor shall be a single passive solid-state electronic device that is capable of detecting:

- (1) Road surface temperature as measured from the top of the sensor from -40°F to 175°F.
- (2) Moisture presence on road surface 32°F (0°C)
- (3) Depth of moisture on roadway from 0.12 to 0.50 inches
- (4) Road moisture conductance for determining chemical presence.

The sensor shall be designed for mounting in the roadway for accurate measurement, without interfering with vehicle travel. The sensor shall be constructed of materials that have thermal characteristics similar to common pavement materials and approximate the roadway pavement color and texture. The sensor shall be manufactured with an integrated pre-attached cable up to 300 feet long for connection to the RPU. The sensor shall operate to specification at cable lengths up to 5,000 feet from the RPU.

The sensor shall be compatible with the RPU provided and shall supply data for calculating, freezing point temperature of roadway moisture, ice-control-chemical solution percentage for commonly used ice-control-chemicals, and road surface conditions including wet, dry, snow, and ice. The quantity of wired road surface sensors and desired sensor detection locations shall be provided on the Plans and Approved by the Department.

(f) *Wired Sub-Surface Sensor.*

The wired sub-surface sensor shall be a single passive solid-state electronic device that is capable of detecting ground temperature from -40 to 120 °F at a minimum depth of 18 inches. The sensor shall be compatible with the RPU provided. The sensor shall be manufactured with an integrated pre-attached cable up to 300 feet long for connection to the RPU.

-5-

**REVISION OF SECTION 614
WEATHER MONITORING SYSTEM**

(g) *Non-Intrusive Pavement Condition Sensors.*

The non-intrusive pavement condition sensor shall utilize Class 1 laser technology to accurately differentiate and measure presence of water, ice, slush, snow, and frost. The sensor shall also measure the level of grip and friction coefficient of the roadway. The sensor shall be capable of accurate measurements within a minimum range of 7-50 feet. The sensor shall operate in a minimum temperature range of -40 to 140 °F at 0 to 100 percent relative humidity.

The sensor shall operate within a power range from a 9 to 30 volt direct current (VDC) and use no more than 4 watts of power. The sensor shall provide RS-232 and RS-485 serial data communication interfaces and be capable of operation on cable lengths up to 300 feet from the RPU.

If the WMS tower is greater than 25 feet from the white edge line of the roadway being measured, then the non-intrusive pavement condition sensor shall include breakaway pole and underground conduit to install the sensor at an appropriate height to detect conditions in the closest lane of travel.

Communication and power cable connecting the sensor to the RPU shall be shielded, with UV stable jacket rated for outdoor use. The Contractor is responsible for ordering the correct cable length based on planned installation.

The sensor shall include all mounting hardware necessary to complete the installation.

The quantity of non-intrusive pavement condition sensors and desired sensor detection location shall be provided on the Plans and Approved by the Department.

(h) *Non-Intrusive Pavement Temperature Sensors.*

The non-intrusive pavement temperature sensor shall use infrared technology to accurately measure road surface temperature. The sensor shall be capable of accurate measurements within a minimum range of 7 to 50 feet. The sensor shall operate in a minimum temperature range of -40 to 140 °F at 0 to 100 percent relative humidity. The sensor shall be powered from a 9 to 30 VDC source and use no more than 0.05 watts of power. The sensor shall provide RS-232 and RS-485 serial data communication interfaces and be capable of operation on cable lengths up to 300 feet from the RPU.

If the WMS tower is greater than 25 feet from the white edge line of the roadway being measured, then the non-intrusive pavement temperature sensor shall include breakaway pole and underground conduit to install the sensor at an appropriate height to detect road temperature in the closest lane of travel.

Communication and power cable connecting the sensor to the RPU shall be shielded, with UV stable jacket rated for outdoor use. The Contractor is responsible for ordering the correct cable length based on planned installation.

The sensor shall include all mounting hardware necessary to complete the installation.

-6-

REVISION OF SECTION 614 WEATHER MONITORING SYSTEM

The quantity of non-intrusive pavement temperature sensors and desired sensor detection location shall be provided on the Plans and Approved by the Department.

(i) *Pan-Tilt-Zoom Camera.*

The camera shall have pan, tilt, and zoom functionality and shall be enclosed in a sealed, environmentally controlled dome housing designed to operate in 100 percent humidity at a minimum operating temperature of -40° to 122°F. The camera housing shall carry both IP66 and NEMA 4x ratings. The camera shall utilize a 100 megabits per second 802.3 Ethernet connection for native communications and be powered from an 802.3at compliant Power over Ethernet (PoE) supply. The camera shall be able to display multiple individually configurable video streams up to 30 frames per second in high definition resolutions from 1920x1080 to 320x180 at a 16:9 aspect ratio in H.264 and MJPEG formats. The camera shall allow for onscreen titling, image overlay, and capture of at least 256 presets views. It shall include electronic image stabilization and the ability to reduce effects of rain & fog in picture. The camera shall have an internal web interface for configuration with security functionality allowing multiple user access levels with password protection. The camera shall also be capable of using stream authentication for video security with a minimum of 20 access accounts. Edge storage shall also be available via Secure Digital (SD) memory slot. The camera shall be capable of video analytics via onboard or installable applications. The camera shall support IPv4/v6, HTTP, HTTPS, SSL/TSL, QOS Layer 3 DiffServ, FTP, SMTP, SNMP v1/2/3, UpnP, DNS, DDNS, NTP, RTSP, TCP, UDP, IGMP, RTCP, ARP, and SOCKS.

Technical specifications for the camera shall be as follows:

- (1) The lens shall be f=4.45 to 142.6 millimeter, F1.6 to 4.41, autofocus; focus range of 35 millimeter (wide) to 800 millimeter (telephoto) to infinity, with 62.98 degree to 2.23 degree horizontal angle of view.
- (2) Minimum illumination color 0.3 lux at 30 IRE F1.6 and black and white 0.03 lux at 30 IRE F1.6
- (3) Shutter speed shall be variable from 1/33,000 to 0.25 seconds at 60 hertz.
- (4) The pan, tilt, and zoom function shall provide 360 degrees of continuous pan rotation at 0.05 to 450 degrees per second, a 220 degree tilt range allowing for a 20 degree view above the horizon at 0.05 to 450 degrees per second, and minimum 32 times optical zoom and 12 times digital zoom.

CONSTRUCTION REQUIREMENTS

The Contractor shall install the WMS in accordance with the WMS vendor's recommendations, CDOT plans and Standard Specifications and all federal, state and local codes and requirements. The Contractor will be responsible for providing all traffic control and safety work zones for the installation of the roadway sensors in accordance with CDOT traffic control requirements.

The Contractor shall install a 120 volts alternating current (VAC) electrical supply from the power source shown on the plans to a location near the RPU. The Contractor shall connect the 120 VAC service to the

-7-

REVISION OF SECTION 614 WEATHER MONITORING SYSTEM

RPU power disconnects. The primary power shall be connected to the RPU with resettable overcurrent protection rated for 20 amps and voltage surge protection. Replacement and installation of RPU and sensors at existing locations shall be powered via uninterrupted power supply (UPS) when available.

The Contractor shall install the RPU electronics enclosure on the fold over tower per manufacturer recommendations.

The precipitation type sensor shall be mounted on the WMS tower per manufacturer's recommendations above ground level at the RPU. The sensor shall be configured and calibrated to function as designed with the RPU.

The air temperature/relative humidity sensor shall be mounted on the WMS tower per manufacturer's recommendations at the standard meteorological height of approximately 6 feet above ground level in a ultraviolet (UV) stabilized white thermoplastic solar radiation/wind-shield.

The wind sensor shall be mounted on top of the WMS tower per manufacturer's recommendations at the standard meteorological height of approximately 30 feet above ground level. The sensor shall be mounted such that birds are not able to perch or nest on the sensor. The sensor shall be configured and calibrated to function as designed with the RPU.

The wired road surface sensor shall be installed per manufacturer's recommendations after the top layer of all road resurfacing has been completed. Exact placement of the sensor shall be as determined by the Project Engineer, or Plans with guidance from the manufacturer. All cabling for the sensor, where it is not embedded in the road, shall be installed in conduit at a minimum depth of 36 inches. Installation shall be done in a manner to eliminate all cable splicing. The sensor shall be configured and calibrated to function as designed with the RPU.

The wired sub-surface sensor shall be installed per manufacturer's recommendations to detect temperature at a depth of 18 inches. Exact placement of the sensor shall be as determined by the Project Engineer with guidance from the manufacturer. All cabling for the sensor, where it is not embedded in the road, shall be installed in conduit at a minimum depth of 36 inches. Installation shall be done in a manner to eliminate all cable splicing. The sensor shall be configured and calibrated to function as designed with the RPU.

The non-intrusive pavement condition sensor shall be mounted on the WMS tower per manufacturer's recommendations at a height and angle that will allow measurement of the middle of the closest lane of travel. If the WMS tower is greater than 25 feet from the white edge line of the roadway being measured, then the non-intrusive conditions and temperature sensors shall be mounted on a breakaway pole installed 15 feet from the same white edge line. Conduit and pull boxes shall be installed between the WMS tower and fiberglass pole to connect the sensor to the WMS RPU.

The non-intrusive pavement temperature sensor shall be mounted on the WMS tower per manufacturer's recommendations at a height and angle that will allow measurement of the middle of the closest lane of travel. The Contractor is responsible for using the appropriate communication protocol based on RPU to sensor connection to maximize communications reliability.

-8-

**REVISION OF SECTION 614
WEATHER MONITORING SYSTEM**

The pan-tilt-zoom camera shall be installed per manufacturer recommendations on the WMS tower approximately 3 ft below the top of the structure, and configured for a minimum of two preset positions as determined by the Project Engineer.

All sensor and camera cables connecting to the RPU shall be secured to themselves and the structure every three ft. Cables for all sensors and camera shall enter through the bottom of the RPU enclosure be labeled by sensor type and location where applicable, and connect to the appropriate port on the RPU.

The Contractor is responsible for connecting the WMS RPU to communication infrastructure provided by the project where applicable.

After completion of the equipment installation, the equipment manufacturer representative shall perform all final system checks, sensor alignment and calibration, sensor setup, RPU configuration including site communication setup, software setup, and central server configuration to provide a fully operational WMS. If Contractor requests remote configuration via VPN, contractor shall complete and submit CDOT access form four (4) weeks in advance for approval.

All associated hardware required for a complete installation is considered subsidiary and is and shall be included as part of the work.

REVISION OF SECTION 614 ENVIRONMENTAL FRICTION SYSTEM

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of furnishing, installing, and commissioning an environmental friction system (EFS). The EFS shall be specifically designed to collect and distribute real time atmospheric and roadway pavement conditions to a centralized computer system compatible with existing Colorado Department of Transportation (CDOT) ITS infrastructure. CDOT's centralized weather management server will poll the EFS for data on preset time intervals, from two to ten minutes, to transfer and update with current conditions. Data from the EFS shall comply with standard National Transportation Communications for Intelligent Transportation System Protocol (NTCIP).

The Contractor shall submit detailed descriptions (technical cut sheets) of all components comprising the EFS; along with vendor/manufacturer experience in supplying and installing EFS to CDOT or other agencies. The Contractor shall also provide written justification of the selection process used in the selection of an EFS vendor/manufacturer. Such justification shall assure that CDOT receives a state of the art EFS from a responsible vendor/manufacturer that is compatible with the existing statewide system currently in place. CDOT may require the Contractor to document the proposed EFS can provide interoperability and connectivity to the existing statewide EFS system. The EFS equipment vendor chosen by the Contractor must have at least ten (10) successful EFS installations in North America. As part of the equipment approval process, CDOT may ask the Contractor to provide contact information from at least three (3) other agencies to verify said EFS installations were successful.

After completion of the equipment installation, the equipment manufacturer representative shall perform all final system checks, sensor alignments, software setup, and software configuration to provide a fully operational environmental friction system.

MATERIALS

The EFS shall include a remote processing unit, an air temperature/relative humidity sensor, a wind speed/direction sensor, a non-intrusive road surface condition sensor, a non-intrusive road surface temperature sensor, all mounting/attachment hardware, cables, test equipment, manufacturer site commissioning, and server configuration necessary for a full and complete installation.

(a) *Remote Processing Unit (RPU)*

The RPU shall gather, process, and store data from all connected sensors; and allow for remote data collection, via NTCIP ESS protocol, by CDOT's centralized weather management servers. The RPU shall utilize a modular design consisting of a main data processing unit and secondary communication units that are used to power and connect sensors at the EFS site. The main data processing unit shall utilize a Reduced Instruction Set Computing (RISC) type processor and run a Linux based operating system capable of multi-tasking operations to optimize data acquisition from all connected devices. The RPU shall include in-built GPS for real-time clock synchronization and location definition.

The RPU shall support standardized communication protocols for sensors from various manufactures.

The RPU shall include a minimum of two (2) 10/100 Ethernet ports and six (6) serial ports configurable for RS-232, RS-485 2 wire, or RS-485 isolated 4 wire; capable of operating at full or

-2-

REVISION OF SECTION 614 ENVIRONMENTAL FRICTION SYSTEM

half duplex from 300 to 115,200bps. All circuitry of the RPU, voltage inputs, sensor inputs, and communications ports shall be designed and tested to provide replaceable transient voltage and surge protection. The RPU shall include lightning protection for all communication channels and auto-reset circuit breakers for power.

The RPU shall utilize solid-state electronic components that operate consistently within a minimum temperature range of -40°F to 140°F and 0-90% RH non-condensing.

The RPU shall operate within a range of 90-260 VAC at 55-65 Hz and use no more than 60 watts of continuous power. The RPU shall have the capability of being modified to utilize solar power or other power sources in place of conventional commercial electric power. Solar powered RPU sites shall operate a minimum of 72 hours without sunlight or solar charging of the batteries. A solar powered RPU shall operate within a power range of 12-32 VDC.

The RPU shall support full site configuration and management via a web-based user interface for on-site and remote access. The RPU shall be capable of local and remote communications via serial RS-232, RS-485 2 wire and RS-485 isolated 4 wire utilizing PPP or PMPP protocols or 10/100 Ethernet connection utilizing TCP/IP protocol. The RPU hardware and software provided shall be compliant with the most current Federal standard National Transportation Communications for ITS (NTCIP) Environmental Sensor Station (ESS) communication protocols.

At minimum the RPU shall be capable of collecting data from the following:

- 1 wired air temperature/relative humidity sensor
- 1 wired wind speed/direction sensor
- 2 non-intrusive pavement condition sensor
- 2 non-intrusive pavement temperature sensor

The RPU shall include an IP66 rated lockable stainless steel AISI 316 powder coated enclosure that is resistant to weather, sunshine, de-icing chemicals, corrosion and damage from falling debris (ice, small rocks and tree branches) and vandalism. The enclosure shall be capable of being mounted on poles with an outer diameter range of 6 inches to 24 inches or EFS fold-over tower and have rubber flanges located at the bottom which provides cabling access. The enclosure shall house all RPU electronics, power supplies, and communication equipment and not exceed dimensions of 24 inches height by 20 inches width by 8.25 inches depth.

(b) *Air Temperature/Relative Humidity Sensor*

The air temperature/relative humidity sensor shall accurately measure outside ambient air temperature and relative humidity. The sensor shall have an air temperature sensing element that measures temperatures in a minimum range of -40°F to 140°F with an accuracy within 1 degree of actual temperature. The sensor shall have a relative humidity sensing element that measures a range of 0 to 100% RH with an accuracy within 1% of actual humidity levels. System dew point temperature shall be calculated from the air temperature and relative humidity. The sensor shall be protected by UV stabilized white thermoplastic solar/wind-radiation shield and meet IP66 rating.

-3-

**REVISION OF SECTION 614
ENVIRONMENTAL FRICTION SYSTEM**

The sensor shall operate within a power range of 7–30 VDC and use no more than 5 watts of power. The sensor shall include RS-485 2 wire serial data communication, 0 to 10 voltage, and resistance level outputs; and be capable of operating to specifications on cable lengths up to 100ft from the RPU.

Communication and power cable connecting the combined sensor to the RPU shall be shielded, with UV stable jacket rated for outdoor use. The Contractor is responsible for providing the correct length cable based on the planned installation.

The sensor shall include all mounting hardware necessary to complete the installation.

(c) *Wind Speed/Direction Sensor*

The wind speed/direction sensor shall accurately measure wind speed and direction without any moving parts. The sensor shall have an operating range of 0 to 145 mph, with a survival operation limit of 190 mph. Accuracy for measured wind speed shall be less than 3% of actual wind speed. Wind speed direction operating azimuth shall be measurable from 0 to 360°, with an accuracy of +/- 2°, and resolution of 1°. The sensor shall operate within a minimum temperature range of -40°F to 140°F. The sensor shall meet IP66 and IP67 ratings and include provisions to deter animal perching or nesting.

The sensor shall operate within a power range of 9-40 VDC and use no more than 30 watts of power. The sensor shall include both 0 to 5000 mV analog and RS-232/RS-485 digital outputs; and be capable of operating to specifications on cable lengths up to 100ft from the RPU.

Communication and power cable connecting the sensor to the RPU shall be shielded, with UV stable jacket rated for outdoor use. The Contractor is responsible for providing the correct length cable based on the planned installation.

The sensor shall include all mounting hardware necessary to complete the installation.

(d) *Non-Intrusive Pavement Condition Sensor*

The non-intrusive pavement condition sensor shall utilize Class 1 Laser technology to accurately differentiate and measure the presence of water, ice, slush, snow, or frost on the road surface. The sensor shall also measure the level of grip or friction coefficient of the roadway. The sensor shall be capable of accurate measurements within a minimum range of 7-50 feet. The sensor shall operate in a minimal temperature range of -40°F to 140°F at 0 to 100% RH.

The sensor shall operate within a power range of 9-30 VDC and use no more than 4 watts of power. The sensor shall provide RS-232 and RS-485 serial data communication interfaces; and be capable of operating to specifications a cable lengths up to 300ft from the RPU.

If the EFS is greater than 25ft from the white edge line of the roadway being measured, then the non-intrusive pavement condition sensor shall include a breakaway pole and underground conduit to install the sensor at an appropriate height to detect conditions in the closest lane of travel.

-4-

REVISION OF SECTION 614 ENVIRONMENTAL FRICTION SYSTEM

Communication and power cable connecting the sensor to the RPU shall be shielded, with UV stable jacket rated for outdoor use. The Contractor is responsible for providing the correct length cable based on the planned installation.

The sensor shall include all mounting hardware necessary to complete the installation.

The quantity of non-intrusive pavement condition sensors and desired detection location shall be provided on the Plans or by the Project Engineer.

(e) *Non-Intrusive Pavement Temperature Sensor*

The non-intrusive pavement temperature sensor shall use infrared technology to accurately measure road surface temperature. The sensor shall be capable of accurate measurements at distances of 7-50ft from the roadway. The sensor shall operate in a minimal temperature range of -40°F to 140°F at 0 to 100% RH.

The sensor shall operate within a power range of 9-30 VDC and use no more than 0.05 watts of power. The sensor shall provide RS-232 and RS-485 serial data communication interfaces; and be capable of operating to specifications a cable lengths up to 300ft from the RPU.

If the EFS is greater than 25ft from the white edge line of the roadway being measured, then the non-intrusive pavement temperature sensor shall include a breakaway pole and underground conduit to install the sensor at an appropriate height to detect road temperature in the closest lane of travel.

Communication and power cable connecting the sensor to the RPU shall be shielded, with UV stable jacket rated for outdoor use. The Contractor is responsible for providing the correct length cable based on the planned installation.

The sensor shall include all mounting hardware necessary to complete the installation.

The quantity of non-intrusive temperature sensors and desired detection locations shall be provided on the Plans or by the Project Engineer.

CONSTRUCTION REQUIREMENTS

The Contractor shall install the EFS in accordance with the EFS vendor's recommendations, CDOT Plans and Standard Specifications and all federal, state and local codes and requirements. The Contractor will be responsible for providing all traffic control/safety work zones for the installation of the roadway sensors in accordance with the CDOT traffic control requirements.

Allowable mounting structures for the Environmental Friction Sensor Station RPU and sensors include:

- WMS fold-over tower
- Dynamic message sign (DMS)
- Light standard metal pole
- Fiberglass pole
- Lowering device pole

-5-

REVISION OF SECTION 614 ENVIRONMENTAL FRICTION SYSTEM

Dependent on location and type of mounting structure additional mounting materials for sensors may be required to achieve accurate measurements. Contractor shall install all Environmental Friction Sensor System RPU and sensors per vendor's recommendations.

For new installations the Contractor shall install a 120 VAC electrical supply from the power source shown on the plans to a location near the RPU. The primary power should be connected to the RPU with resettable overcurrent protection rated for 20 amps, with voltage surge protection. Replacement and installation of RPU and sensors at existing locations shall be powered via uninterrupted power supply (UPS) when available.

The air temperature/relative humidity sensor shall be mounted on the EFS tower per manufacturer's recommendations at the standard meteorological height of approximately 6ft above ground level in a UV stabilized white thermoplastic solar/wind-radiation shield.

The wind sensor shall be mounted on top the EFS tower per manufacturer's recommendations at the standard meteorological height of approximately 30ft above ground level. The sensor shall be mounted such that birds are not able to perch or nest on the sensor. The sensor shall be configured & calibrated to function as designed with the RPU.

The non-intrusive pavement condition sensor shall be mounted on the EFS tower per manufacturer's recommendations at a height and angle that will allow measurement of the middle of the closest lane of travel.

The non-intrusive pavement temperature sensor shall be mounted on the EFS tower per manufacturer's recommendations at a height and angle that will allow measurement of the middle of the closest lane of travel.

If the EFS is greater than 25ft from the white edge line of the roadway being measured then the non-intrusive conditions and temperature sensors shall be mounted on a breakaway pole installed 15ft from the same white edge line. Conduit and pull boxes shall be installed between the EFS and pole to connect the sensor to the EFS RPU.

The Contractor is responsible for using the appropriate communication protocol based on RPU to sensor connection to maximize communications reliability.

All sensor cables connecting to the RPU shall be secured to themselves and the structure every three ft. Cables shall enter through the bottom of the RPU enclosure, be labeled by sensor type, and connect to the appropriate port on the RPU.

Any sensors installed on lowering device poles shall be mounted such that they don't interfere with the operation of the lowering system or device being lowered.

The Contractor is responsible for connecting the EFS to communication infrastructure provided by the project.

After completion of the equipment installation, the equipment manufacturer representative shall perform all final system checks, sensor alignments/calibration, sensor setup, RPU configuration including site communication setup, and central server configuration to provide a fully operational EFS. If Contractor

-6-

**REVISION OF SECTION 614
ENVIRONMENTAL FRICTION SYSTEM**

requests remote configuration via VPN, contractor shall complete and submit CDOT access form four weeks in advance for approval.

All associated hardware required for a complete installation is considered subsidiary and is and shall be included as part of the work.

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING

Section 614 of the Standard Specifications is hereby revised to include the following:

DESCRIPTION

The work shall include the engineering, structural design, off-site fabrication, delivery, and installation of a Traffic Management System Building. The Traffic Management System Building will house equipment that serves as the concentration point for field communications prior to integration with a communications backbone and shall house the communications backbone equipment, power distribution, standby power and miscellaneous equipment as specified in these specifications and as directed in the Plans.

The manufacture shall construct and deliver a Traffic Management System Building and associated equipment as shown on the Plans and as directed within these specifications. The term "associated equipment" shall be interpreted to include all components systems, and apparatus housed in, connected to, integral to the Traffic Management System Building.

The Traffic Management System Building location shall include an asphalt driveway to building and asphalt parking area to accommodate two vehicles. A chain link fence with a double gate shall also be provided at this location. At a minimum, the fence shall enclose the building, external grounding system, generator, and parking area.

Working drawings shall show Traffic Management System Building design, foundation design, electrical design, and any other associated equipment as shown on the plans and as directed within these specifications shall be sealed by an Engineer registered in the State of Colorado and shall be submitted in accordance with subsection 105.02 for approval

MATERIALS

The Traffic Management System Building shall be a precast concrete facility installed at the site as indicated on the Plans.

The Traffic Management System Building shall be certified in the State of Colorado and conform to the to the State's currently approved building codes including, but not limited to, the following standards: International Building Code (IBC), International Mechanical Code, Uniform Plumbing Code, International Plumbing Code, American with Disabilities Act (ADA) Accessibility Guidelines for Shelters and Facilities, International Fire Code, National Fire Protection Association (NFPA) guidelines, and the National Electric Code, and International Energy Conservation Code. For localized information on structural load requirements (e.g., live loads, snow loads, wind loads, etc.), the Traffic Management System Building shall conform to either the Structural Design section of the local agency building code, the State of Colorado adopted building code requirements, or structural load requirements stated herein, whichever is more stringent.. The structural design and details shall be stamped by a Colorado Professional Engineer.

The Traffic Management System Building shall nominally measure at least 28 feet by 14 feet unless otherwise required due to architecture circulation requirements, electrical equipment floor space, and working clearances and as Approved in writing by the Department. Future floor space shall be provided adjacent to the Traffic Management System Building UPS for the future addition of a second UPS in a 1+1 configuration.

-2-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

The Traffic Management System Building shall include:

- (1) Interior and exterior lights as indicated and scheduled on the plans
- (2) 20-Amp/120 volt alternating current duplex outlets as indicated on the plans
- (3) Special purpose 120 volt and 240 volt electrical outlets installed in cast boxes under the raised access floor as indicated on the plans
- (4) Power distribution to all installed electronic equipment, air conditioning and other associated equipment installed
- (5) Lightning protection for the overall integrated structure
- (6) Internal "Halo" grounding system including but not limited to bonding to the rack-mounted equipment, equipment racks/cabinets, raised access floor pedestals, overhead or underfloor cable pathways, and electrical equipment enclosures
- (7) A single point grounding system for the shelter and associated equipment.
- (8) Two air conditioning units under lead lag control
- (9) Rain hoods and filters, where applicable, for all ventilation fans, motorized louvers, air conditioner / heaters, doors, etc.
- (10) Vandal protection cages for the air conditioner / heaters and external lighting
- (11) Smoke alarms, over and under temperature alarms, door alarms, loss of power alarm, air conditioner / heater failure alarm
- (12) A standby power generator
- (13) A raised access floor system in the equipment room, color to be Approved by the Engineer
- (14) Interior wall paneling colors and style to be Approved by the Engineer
- (15) Exterior shall be stone aggregate, color and style to be Approved by the Engineer
- (16) A double wide door for entry into the equipment room
- (17) A single door for entry into the equipment room

All equipment and materials furnished for this Traffic Management System shall be new and of prime quality and shall not have been used previously.

The asphalt driveway and parking area shall conform to the requirements of Section 400 of the CDOT Standard Specifications for Hot-Mix Asphalt (HMA) pavement construction. The parking area shall accommodate two vehicles that each have the following dimensions: 20 feet in length and 7 feet in width. The site grading and driveway slope shall be designed and constructed such that surface water flows away from the building, generator, and parking area. A 6 feet high chain link fence with 24 feet wide double gate shall be provided to enclose the building, external grounding system, generator, and parking area. The chain link fence shall conform to the requirements of CDOT Standard Plan No. M-607-2 and include grounding, if required per code.

The Plans provide a suggested associated equipment layout and installation plan based on generic equipment and not necessarily the equipment selected by the Manufacture. To this extent, the Manufacture shall be responsible for providing:

- (1) Manufacturer's cut sheets, published specifications, shop drawings, material descriptions, and structural drawings of the Traffic Management System Building and its associated equipment shall be provided to the Engineer for review and approval.
 - a. Shop drawings shall include fabrication drawings and attachment of the various components,

-3-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

- including reinforcement detailing, bending, and placing concrete reinforcement in compliance with ACI 318 and Concrete Reinforcing Steel Institute (CRSI) Manual of Standard Practice, as applicable.
- b. Elevations, sections, and dimensions for all precast concrete units including anchors, inserts, and embedded cast-in place items.
 - c. Mechanical, electrical, and plumbing layouts indicating location of all respective equipment, and routing of conduits and plumbing lines.
- (2) Structural drawings, section details, and calculations provided shall be stamped by a Colorado Professional Engineer.
 - (3) Geotechnical Soils Report provided shall be stamped by a Colorado Professional Engineer.
 - (4) Foundation drawings and generator slab drawings and calculations provided shall be stamped by a Colorado Professional Engineer.
 - (5) Approvals and certificates as required by the State and/or code compliance.

Manufacturer shall perform work in compliance with applicable quality assurance requirements of ACI 318, Precast/Prestressed Concrete Institute (PCI) MNL-116, PCI MNL-120, PCI MNL-123, PCI MNL-124, and PCI MNL-127, as applicable.

The Manufacture shall provide commercial manuals on:

- (1) Automatic transfer switch
- (2) Transient voltage surge suppressor
- (3) Alarm system
- (4) Main service entrance disconnect
- (5) Electrical panel boards
- (6) Rack-mounted power distribution modules
- (7) All other supplies associated with equipment, where applicable

Documentation is considered to be part of the Traffic Management System Building delivery.

Each item of equipment and all of its auxiliary equipment shall be warranted by the Manufacture against all defects in material and workmanship for a period of 1 year. The Traffic Management System Building itself and the generator shall be warranted for five years for materials, workmanship, and structural integrity.

- (a) *Human Safety.*

All Traffic Management System Building equipment shall comply with all commercial safety standards for electronic equipment and shall not contain any sharp edges. Power input requirements (i.e., voltage and current) shall be marked clearly on all Traffic Management System Building equipment. All power interconnections shall be protected against inadvertent contact by maintenance personnel. No cabinet shall include any exposed voltage above 24 volts or exposed current above 100 miliampere. Protective covers shall be provided where required to prevent inadvertent power terminal contact by equipment technicians. Safety markings shall be included for any protective covers over high voltage, high current or both.

-4-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

(b) *System Safety.*

Shorting or opening an interface shall not cause permanent damage to an interface circuit. Lightning protection for all copper signal circuits shall be provided. All connectors and cables shall be clearly marked. Similarly, all indicators and controls shall be clearly and accurately marked as to function. All power interconnections shall be protected against inadvertent contact by maintenance personnel.

(c) *Lightning Protection.*

The manufacture shall furnish and install a lightning protection system for the Traffic Management System Building. The manufacturer shall provide the required number of 10 inch air terminals based on a 20 foot spacing as defined in NFPA-780. Firmly anchor all air terminals; course the conductors properly; run them straight between devices and make proper bends where required; use the proper attachment for Traffic Management System Building surface; utilizing aluminum components for mounting to aluminum flashing, and copper conductors and components for mounting on steel building components. Utilize copper for all conductors and components that may come in contact with the ground. Utilize bi-metallic connectors when connecting dissimilar metals. Mechanical connections may be utilized for exposed connections. Firmly attach conductors to the Traffic Management System Building (node building). Make all joints and connections in accordance with connector manufacturer's recommendations. The course of all conductors shall be horizontal or downward, never upward. The completed system shall comply with the latest editions of the Underwriters Laboratories (UL) "Installation Requirements for Lightning Protection Systems, UL96A" and National Fire Protection Association's "Lightning Protection Code," NFPA 780. Adequate wire length shall be provided from this system to attach to the ground once the Traffic Management System Building is in place.

(d) *Traffic Management System Building Ground.*

The manufacture shall furnish and install a power grounding system in accordance with the Plans. Grounding electrodes and grounding electrode conductors shall be provided and installed (i.e., bonded) per the NEC. All noncurrent carrying metal parts of electrical or electronic equipment shall be separated by at least 6 feet from those of the lightning protection system, per Article 810.18 of the NEC. The Traffic Management System Building shall include an interior halo ground ring that is interconnected with the building grounding electrode system. The halo ring shall facilitate a common bonding point for all Traffic Management System Building equipment ground conductors and other loose metals. The halo ring conductors shall be copper, installed on insulated standoffs. All halo cable connections shall be made with irreversible compression fittings. Connections to equipment enclosures shall be made with two-hole compression lug connectors. The building grounding plates shall be connected directly to the buried ring and utilized for system grounding as indicated on the Plans. Adequate wire length shall be provided from this system to attach to the ground once the Traffic Management System Building is in place.

(e) *Air Conditioner /Heater.*

HVAC design considerations shall be as required for the successful deployment of IT and telecommunications-related equipment in the Traffic Management System Building. Guidelines for

-5-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

optimal temperature and humidity set points in the Traffic Management System Building shall be as recommended by the American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) TC9.9, unless otherwise specified by the Engineer. The air conditioner / heater system, its appurtenances, and its installation shall comply with the requirements of the NEC, the NFPA, and the air conditioner / heater manufacture recommendations. A rain shield for the air conditioner / heaters shall be provided on the Traffic Management System Building exterior. The manufacture shall furnish and install steel bar or wire cage security for air conditioner / heaters to prevent theft, vandalism, and entry to the facility. The steel bar or wire cage shall not interfere with the air conditioner / heater's normal operation and performance.

Routine preventive maintenance (i.e., filter change), system control configuration, and electrical disconnect shall be feasible and convenient means of access to the system without complete disassembly of the steel-bar security. It shall not be possible to detach the air conditioner / heater security bars from the Traffic Management System Building exterior. Refer to the Revision of Section 614 – HVAC special provision for additional requirements.

(f) *Wire and Cable.*

All wiring shall be installed in accordance with NEC. All conductor sizes shall be in accordance with NEC and shall be copper. Where wire and cable routing is not shown, and destination only is indicated, the manufacture shall propose a routing and length required. All wire shall be new.

Insulation shall have a 600-volt rating. In light fixtures and other high temperature applications, the insulation shall be rated 90 °C.

Other areas shall use insulation rated 75 °C unless stated otherwise in other parts of these specifications and Plans. All conductors shall be suitable for the application intended. Conductors No. 10 American Wire Gauge (AWG) and larger shall be stranded. Conductors No. 12 AWG and smaller shall be solid.

Use type THW, THHN, or THWN insulation for feeders and branch circuits. Provide protection for exposed cables where subject to damage. Wiring inside junction boxes, equipment, and panel boards shall be performed in an organized, neat, and workmanlike manner. All wire and cable shall be installed in conduit (with obvious exceptions such as the interior cabinet wiring, etc.). Do not use wire smaller than No.12 AWG for outlet power and lighting circuits.

Splices only allowed in junction boxes. Use plastic ties to support cable as needed. All splices shall have an electrical resistance not in excess of a 60 ft. run of the conductor. Use solderless spring type pressure connectors with insulating covers for wire splices and taps, 10 AWG and smaller. Use mechanical or compression connectors for wire splices and taps, 8 A WG and larger. Thoroughly clean wire before installing lugs and connectors. At all splices and terminations, leave tails long enough to cut splices out and completely re-splice.

(g) *Conduit.*

All conduit runs and sizing shall be in compliance with the NEC unless larger conduit sizes are indicated on the drawings. Verify location and pathway of conduit runs before installation. Conduit shall be in run in either flexible or rigid conduit under the false floor to junction boxes and then

-6-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

routed to equipment. All conduits and boxes shall be securely fastened to the Traffic Management System Building structure.

Galvanized rigid conduit shall be used for the conduit run from the fiber optic manhole into the Traffic Management System Building.

Conduit shall conform to the following material requirements.

1. Rigid Metal Conduit and Fittings:
 - A. Rigid Steel Conduit: ANSI C80.1; hot-dip galvanized.
 - B. PVC Externally Coated Conduit: NEMA RN 1; rigid steel conduit with external PVC coating and internal galvanized surface.
 - C. Fittings and Conduit Bodies: NEMA FB 1; threaded type, material to match conduit.
2. Electrical Metallic Tubing (EMT) and Fittings:
 - A. EMT: ANSI C80.3; hot-dipped galvanized tubing.
 - B. Fittings and Conduit Bodies: NEMA FB 1; steel compression type.
3. Flexible Metal Conduit and Fittings:
 - A. Conduit: Galvanized steel strips, spirally wound.
 - B. Fittings and Conduit Bodies: NEMA FB 1.
4. Liquidtight Flexible Conduit and Fittings:
 - A. Conduit: Flexible metal conduit with PVC jacket and integral grounding conductor.
 - B. Fittings and Conduit Bodies: NEMA FB 1; liquidtight, zinc coated steel.
5. Nonmetallic Conduit and Fittings:
 - A. Conduit: NEMA TC 2; Schedule 40 PVC.
 - B. Fittings and Conduit Bodies: NEMA TC 3.

(h) *Foundation Requirements.*

The manufacture shall provide a professional engineered signed and stamped Traffic Management System Building foundation plan, generator pad, and calculations adequate for the Traffic Management System Building specified herein. The foundation shall be a steel reinforced concrete structural grade-beam supported by caissons. The generator pad shall be a steel reinforced concrete thickened edge slab. The manufacture shall have the foundation professional engineer perform a site soil survey as necessary for the proper foundation design and generator slab design for the site conditions. All concrete used in the grade beams shall have a minimum 4500 psi field compressive strength at 28 days, a minimum cement content of 615-660 lbs/cy, an air content of 5-8 percent, and a maximum water to cement ratio of 0.45. All concrete used in the caissons shall have a 4000 psi field compressive strength at 28 days, a minimum cement content of 610 lbs/cy, no minimum air content, and a maximum water to cement ratio of 0.45.

All reinforcing bars shall be ASTM A615, Grade 60. All concrete used in the generator slab shall have a minimum 4500 psi field compressive strength at 28 days, no minimum cement content, an air content of 5-8 percent, and a maximum water to cement ratio of 0.45. The configuration of the grade beam shall not restrict the installation or configuration of the entrance ramp to the shelter. The foundation and generator pad plan to be provided by the building manufacture shall be delivered to CDOT for approval.

-7-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

(i) *Traffic Management System Building – General.*

The Traffic Management System Building shall be dust-tight and watertight. The Traffic Management System Building shall also be secured from vermin. The Traffic Management System Building shall meet the structural specifications as set forth unless otherwise Approved by the Engineer.

1. Concrete

All concrete shall conform to the requirements of the soils report. Any requirements in this specification that conflict with the soils report shall be superseded by the requirements in the soils report. Portland cement shall conform to ASTM C150 Type V. Sand shall conform to ASTM C33. Lightweight fine and coarse aggregates shall conform to ASTM C330. Air entraining admixtures shall conform to ASTM C260. All concrete work shall conform to ACI 318 building code requirements for reinforced concrete and shall have minimum 28-day compressive test strength of 4000 psi, coarse aggregate shall be $\frac{3}{4}$ inch nominal size. Water shall be clean and potable. Cement aggregate shall be stored in a way that keeps them free from foreign substances that would affect their compatibility with the mixture and keep them from deteriorating.

Concrete shall have a density of 143 lbs/cf when cured. Concrete shall be cured in forms and protected from moisture loss, freezing and excessive heat until compressive strength reaches the required minimums. Any minor cracks and/or chips that do not affect the structural integrity of the panel or component shall be patched in accordance with ASTM C858. Severe cracks, spalling, etc. as evident once the Traffic Management System Building has been delivered shall be evaluated by the Traffic Management System Building manufacturer and the Engineer before repairs are attempted. CDOT may repair these areas and the cost of the repairs will be deducted from monies due to the Contractor. If the structural integrity is impaired, the building will be not accepted.

2. Reinforcing Steel

All reinforcing steel shall be sufficiently secured to withstand any displacement during the pouring operation. All bars shall be of intermediate grade, or hardcore billet steel conforming to ASTM A615 and or A706. All welded wire mesh shall be steel wire fabric conforming to the requirements of ASTM A 185.

3. Roof

The Traffic Management System Building shall have a 4 inch thick (minimum) reinforced concrete, gable panel roof. The roof is to have a 2 inch perimeter drip lip. Minimum pitch shall be 6.25 percent. Roof reinforcement shall consist of No.4 rebar and or welded wire-mesh. The rooftop surface and all joints and seems shall be water proof.

4. Walls

Walls shall be 4 inch thick (per ACI 318), flat reinforced concrete panels Wall reinforcement shall consist of No. 4 rebar, welded wire mesh or both. The Traffic Management System Building walls shall have a two-hour fire rating as described in the IBC. Interior walls shall be steel studs with R-14 minimum Polyisocyanurate insulation covered with $\frac{3}{4}$ inch thick plywood. The walls and ceiling shall be painted semi-gloss white. Floor to wall intersection

-8-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

shall be finished with 4 inch vinyl baseboard.

5. **Floor**
The floor shall be reinforced concrete, with 8 inch deep ribs and 2 inch thick flange. Ribs shall be spaced at 2 feet on center across the width of the Traffic Management System Building and 4 feet along the length (minimum). The floor shall contain provisions for lifting the Traffic Management System Building and securing it to the foundation. Floor reinforcement shall consist of No. 6 rebar, No.4 rebar, welded wire mesh or both.
6. **Panel Connections**
Panel to panel connections shall be welded using steel plates cast into the floor, roof and walls. Steel plates shall conform to ASTM A36. Welding shall conform to American Welding Society (AWS) D1.1 and AWS 01.4. Panel construction shall conform to ACI 318. All joints and seems shall be water proof.
7. **Structural Loading**
Structural loading shall be based on localized information on structural load requirements (e.g., live loads, snow loads, wind loads, etc.) and shall conform to either the Structural Design section of the local building code or the ensuing requirements, whichever is more stringent. The Traffic Management System Building floor shall be designed to support 15 lbs/sq ft dead load weight along with any live and dead loads imposed by the suspended floor when supported on a perimeter grade beam foundation. The roof shall be designed to support 10 lbs/sq ft dead load and 30 lbs/sf live load. The Traffic Management System Building shall be designed to withstand winds of 150 miles per hour, exposure D. Traffic Management System Building shall be designed to exceed seismic zone 4 requirements.
8. **Weather Resistance**
The Traffic Management System Building shall completely weatherproof. Each structural Panel shall be impregnated with a chemical moisture barrier to prevent seepage. All panel joints (wall to ceiling, wall to wall and wall to floor) shall be sealed with a permanent no-caulk weather seal (closed cell expanded neoprene). The wall to floor joint shall utilize a step joint, while all other joints shall have a groove/step joint all sealed with pre-compressed sealant tape. The doorways shall include a step-joint threshold and a drip overhang over the top of the doorframe.
9. **Exterior Finish**
The exposed reveals shall be-painted with sand textured concrete paint. The color shall be Home Depot, Color Bronze, Paint Code 151514229769 or an Approved equal color match. Samples of the painted exterior finish shall be submitted to and Approved by the Engineer.
10. **Traffic Management System Building Dimensions**
The outside dimensions of the Traffic Management System Building shall be at least 12 feet in width and 28 feet in length. The interior ceiling height shall be at least 8.5 feet in height after installation of the false floor.

-9-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

11. Raised Access Floor System

A raised access floor system shall be designed, engineered, fabricated and installed within the Traffic Management System Building equipment room to comply with performance requirements per test methods and references specified or, if not specified, per the manufacturers standard methods. The raised access floor system shall have a minimum height of 8 inch as measured from the Traffic Management System Building floor. The system shall not alter the A.D.A compliant entry guidelines into the Traffic Management System Building nor that for mobility issues. The completed floor system shall be rigid, free of vibration, free of rocking panels and shall provide a smooth uniform floor surface. The overall floor shall be level within plus or minus 0.5 inch in 10 feet non-cumulative. The access floor system shall consist of the following components:

Steel panels meeting the following requirements:

- A. The panels shall be modular, removable and shall measure 24 inch by 24 inch.
- B. The panels shall consist of a top steel sheet welded to a formed steel bottom pan.
- C. The panels shall be easily removable by one person with a lifting device, which shall be provided by the Manufacture, and shall be interchangeable except where cut for special conditions.
- D. Each panel shall support a concentrated load of 1000 lbs per square inch placed on an area at any location on the panel, with a maximum beam deflection of 1/8 inch.
- E. Each panel shall support a uniform load of 250 lbs per square inch placed on an area at any location on the panel with a maximum beam deflection of 1/16 inch.
- F. Each panel shall withstand a load of 2400 lbs per square inch placed on an area, at any location on the panel, without failure.
- G. Covering material for the panels to provide a low static, easily maintainable floor, that is slip resistant when wet. The covering shall be a minimum of 1/8 inch thick pressure laminate in color Approved by the Engineer. The covering shall be a surface sheet over a melamine-impregnated sheet with the core material being phenolic-impregnated kraft papers. The covering shall be bonded to the steel panel with a moisture resistant adhesive in accordance with the adhesive manufacturer's recommendations.

Adjustable height pedestal assemblies to support the steel panels shall meet the following requirements:

- (1) Pedestal assemblies shall be corrosion-resistant, aluminum or steel construction, and shall provide an adjustment range of +/- 1 inch.
- (2) Pedestal assemblies shall provide a means of leveling and locking the assembly at a selected height, which requires deliberate action to change height setting and prevents vibration displacement.
- (3) Threaded rods shall provide a specially designed anti-rotation device, such that when the head assembly is engaged in the base assembly, the head cannot freely rotate.
- (4) The pedestal assembly shall provide an 8000 lbs axial load without permanent deformation.
- (5) Pedestal assembly shall provide an average overturning moment of 8 lb-feet when glued to a clean, uncoated concrete surface. The pedestals shall adhere to

-10-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

the concrete floor with a sealer recommended by the manufacturer.

12. Traffic Management System Building Lighting

The interior lighting requirements of the Traffic Management System Building shall conform to the current version of Telecommunications Industry Association (TIA)-942. The illuminance requirements in the horizontal and vertical planes shall be articulated in the Plans and designed based on measurements three feet above the raised finished floor on the front and rear aisles of the racks/cabinets.

The interior Traffic Management System Building lighting shall be ceiling-mounted general-purpose fluorescent tube fixtures. Each light shall be equipped with 48-inch, T-8 LED tubes and full width reflectors. The ballast, if required, shall be electronic 120V, 60 Hz complying with Federal Energy Efficiency Standards. Interior lighting shall be controlled by two different wall-mounted 3-way switches located for easy access at each entrance. Exact location of the ceiling mounted fixtures shall be determined by the Manufacture based on his/her final equipment installation. Aside from illuminance requirements, fixture placement should also be based on accessibility for maintenance operations. Two (2) vandal-resistant and weatherproof exterior lighting fixtures shall be provided as indicated on the plans. Each fixture shall utilize an LED bulb (equivalent to a 60 W incandescent bulb) and be powered by 120VAC, 60 Hz, The exterior lighting shall be activated by motion within 10 feet or less of the door with activation for a minimum of 10 minutes by motion within 10 feet or less of the building with activation only during dusk to dawn.

13. Equipment Room Exterior Door

The door shall be constructed of 18 gauge galvanized steel, full flush, windowless, and painted to match exterior and interior. One door shall be doublewide with minimum dimensions of 7 feet in height and 6 feet in width. The other door shall be a minimum dimension of 7 feet in height and 3 feet in width. The hinges and other exterior hardware shall be stainless steel or other acceptable corrosion proof material. The hinges shall use flush-type, non-rising pins with concealed setscrews for security against vandalism. The doors shall include a neoprene gasket which, when closed, effectively prevents the entrance of air, blowing sand, dust, and water. A weather strip shall be provided at the bottom of the door. The doors lock shall be of a non-corrosive material and shall utilize the Velocity access control system from Identiv (formerly Hirsch) for compatibility with other CDOT facilities. Proposed access control system equipment, firmware, and software at the Traffic Management System Building must be compatible with the current version of Velocity and card credentialing being utilized by CDOT; and obtained and installed by a vendor authorized and certified by Identiv. The doors shall contain an alarm (magnetic sensor) to detect opening; this alarm shall be integrated with the Traffic Management System Building alarm terminal strip. The doors shall contain an astragal. The doors shall have a four-sided frame and shall be level with the raised floor system.

14. Electrical

The manufacture shall provide all electrical wiring, meter enclosure, power distribution panels, grounding, power protection, and lightning protection as required. Install, operate, and test the equipment from the power utility meter location to the power inputs of all associated equipment and electrical/electronic apparatus prior to shipment. All power cabling shall comply with the NEC. Grounding commonality with commercial utility power shall be

-11-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

provided. Grounding shall comply with the NEC and IEEE 1100, "Recommended Practice for Powering and Grounding Sensitive Electronic Equipment" as referenced for a single-point grounding system and as specified and indicated in the Plans.

The manufacture shall provide a steel 6 inch x 6 inch raceway the length of the Traffic Management System Building (28 feet) under the raised access floor at the middle point of the shelter for the purposes of future routing of equipment wiring.

There shall be two lateral raceway connections directed towards the conditioned power panel location and the floor access hole.

15. Service and Distribution

For information only, the power service provided to this Traffic Management System Building shall be 120/208 VAC 250 amp (80% rated), three phase, 60 Hz, four wire and ground. The building manufacture is required to uninstall the temporary meter and connect the service line to the permanent service disconnect switch / meter housing provided on the exterior of the building. The telephone service shall be a 1 megabyte line. If required, CDOT will install a temporary demark through a separate Project. The building manufacture is required to uninstall this temporary demark and install the service line to the permanent demark provided on the exterior of the building.

16. Automatic Transfer Switch

The Automatic Transfer Switch (ATS) shall transfer the load from the utility to the generator. The ATS shall be an open transition double throw switch furnished and installed at locations as shown on the Plans or as Approved by the Engineer. Switches shall be of the type Approved, indicated and specified herein. The ATS shall have a NEMA Type 1 rating and meet UL 98. Lugs shall be front removable and UL Listed for aluminum or copper. All current carrying parts shall be plated to resist corrosion. Switch operating mechanism shall be 3-pole and rated at 300 ampere. Provisions shall be made for padlocking the switch in the OFF position. Switch covers shall be attached with welded pin-type hinges. The switch enclosure shall be finished with gray baked enamel paint that is electrodeposited on cleaned, phosphate pretreated steel (Type 1). The enclosure shall be supplied with a metal nameplate that includes NORM-OFF-EMER markings.

17. Service Disconnect Switch (SDS)

The SDS shall be furnished and installed at locations as shown on the drawings. The SDS shall be of the type Approved, indicated and specified herein. The SDS shall be manufactured in accordance with the following standards UL 98 – Safety Enclosed and Dead Front Switches. The SDS shall be fused and suitable as use for service equipment and labeled for this application. All switches shall have switchblades which are visible when the switch is OFF and the cover is open. Lugs shall be UL Listed for 90°C conductors, aluminum or copper. All current-carrying parts shall be plated to resist corrosion. The switch operating mechanism shall be quick-make, quick-break such that, during normal operation of the switch contacts shall not be capable of being restrained by the operating handle after the closing or opening action of the contacts has started. The operating handle shall be an integral part of the box and not the cover. Provisions shall be provided for padlocking the switch in the OFF position. The enclosure shall be finished with gray baked enamel paint which is

-12-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

electrodeposited on cleaned, phosphate pre-treated steel, NEMA Type-3R. The SDS shall be 3-pole heavy duty, rated for 250 VAC and 400 amps. The ampere square seconds (I²t) and peak let-through current (I_p) ratings shall be in accordance with UL-489. Provide with Class-R 250-amp 80% rated fuses.

18. Main Power Distribution Panel Board

The panel boards shall be located on an inside wall of the building. All breakers shall be sized to accommodate the Manufactures selected equipment and or based on equipment manufacturer recommendations.

A. Panelboard Interior

- (1) The Main Power Distribution Panelboard shall be rated for 120/208 VAC, 250-amp 3-phase. Branch Circuit and UPS Distribution Panelboards shall be main circuit breaker type, rated for 120/208VAC, 200-amp, 3-phase; main circuit breaker size shall be as scheduled. The amperes interrupting current (AIC) rating of all Panelboards shall be as scheduled.
- (2) Provide one continuous bus bar per phase. Each bus bar shall have sequentially phased branch circuit connectors suitable for bolt-on branch circuit breakers. The bussing shall be fully rated. Panel board bus current ratings shall be determined by heat-rise tests conducted in accordance with UL 67. The bus shall be copper.
- (3) All current-carrying parts shall be insulated from ground and phase-to-phase by Noryl high dielectric strength thermoplastic or equivalent.
- (4) Split solid neutral shall be plated and located in the main compartment so all incoming neutral cable is the same length.
- (5) Interior trim shall be of dead-front construction to shield user from energized parts. Dead-front trim shall have pre-formed twist outs covering unused mounting space.
- (6) Name plates shall contain system information and catalog number or factory order number. Interior wiring diagram, neutral wiring diagram, UL Listed label and short circuit current rating shall be displayed on the interior or in a booklet format; Interiors shall be field convertible for top or bottom incoming feed. Main and sub feed circuit breakers shall be vertically mounted.

B. Main Circuit Breaker

- (1) The main circuit breaker shall have an over center, trip-free, toggle mechanism that shall provide quick-make, quick-break contact action. Circuit breakers shall have a permanent trip unit with thermal and magnetic trip elements in each pole.
- (2) Each thermal element shall be true root mean square (rms) sensing and be factory calibrated to operate in a 40° C ambient environment. Thermal elements shall be ambient compensating above 40° C.
- (3) Two and three-pole circuit breakers shall have common tripping of all poles.
- (4) Breaker handle and faceplate shall indicate rated ampacity. Standard construction circuit breakers shall be UL listed for reverse connection without restrictive line or load markings.
- (5) Lugs shall be UL listed to accept solid or stranded copper and aluminum conductors.

-13-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

- (6) Lugs shall support conductors that have a temperature rating of 75° C sized according to NEC Table B310.15. Lug body shall be bolted in place; snap-in designs are not acceptable.

C. Branch Circuit Breakers

- (1) Circuit breakers shall be UL listed.
- (2) Molded case branch circuit breakers shall have bolt-on type bus connectors.
- (3) Circuit breakers shall have an overcenter toggle mechanism that shall provide quick-make, quick-break contact action. Circuit breakers shall have thermal and magnetic trip elements in each pole. Two-pole circuit breakers shall have common tripping of all poles.
- (4) There shall be two forms of visible trip indication: The breaker handle shall reside in a position between ON and OFF and there shall be a red indicator appearing in the clear window of the circuit breaker housing.
- (5) The exposed faceplates of all branch circuit breakers shall be flush with one another.
- (6) Lugs shall be UL listed to accept solid or stranded copper and aluminum conductors.
- (7) Lugs shall support conductors that have a temperature rating of 90°C, sized according to NEC Table 310-16. Branch circuit breakers rated 30 amperes and below shall be UL Listed for 60°C rated wire.

D. Enclosures

- (1) NEMA Type 1
- (2) Enclosures shall be constructed in accordance with UL 50 requirements. Enclosures shall be painted with ANSI 49 gray enamel electrodeposited over cleaned phosphatized steel.
- (3) All doors shall be equipped with a tumbler-type vault lock and two additional trunk-type latches. All lock assemblies shall be keyed alike. Two keys shall be provided with each lock. A clear plastic directory cardholder shall be mounted on the inside of door.
- (4) Maximum enclosure dimensions shall not exceed 20 inch wide and 6.5 inch deep.

E. Installation

- (1) Install panel boards in accordance with manufacturer's written instructions, NEMA PB, 1.1, and NEC standards.
- (2) Anchor panel boards to structure and make branch circuit connections.
- (3) Inspect complete installation for physical damage, proper alignment, anchorage, and rounding.
- (4) Measure steady state load currents at each panel board feeder; rearrange circuits in the panel board to balance the phase loads within 20% of each other. Maintain proper phasing for multi-wire branch circuits,
- (5) Check tightness of bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver per manufacturer's written specifications.

-14-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

19. Transient Voltage Surge Suppression (TVSS)
A TVSS designed for permanent connection and service entrance application' shall be installed at the Traffic Management System Building as a means of power protection from damaging transients and electrical line noise. By definition, the term TVSS describes the equipment necessary for the protection of all AC electrical circuits from the effects of lightning' induced voltages and utility substation switching. The installation shall allow for servicing of the unit without interrupting power to the loads. The TVSS shall be designed to operate in a 3-phase 120/208 VAC 4-wire, , 60Hz system with protection modes from line to neutral, line to ground, and neutral to ground. The unit shall have maximum surge current rating of 100kiloampere. The unit shall be mounted in a NEMA 1 enclosure and provide visual failure indication and communicate them via relay contacts to the Traffic Management System Building alarm system. The TVSS shall be based on metal oxide varistor (MOV) technology with MOV s in parallel and individually fused. The TVSS shall be UL 1449 listed, and tested and approved for IEEE C62.41.1. Categories A, B, and C. The TVSS shall be installed in accordance with the manufacturers printed instructions to maintain warranty. No testing shall be required.
20. Grounding and Bonding.
The grounding design for all Traffic Management System Building equipment shall accomplish at least the following:
- A. Personnel and equipment protection from electrical hazards.
 - B. Prevent voltage potentials in the grounded power conductors of Node Building Shelter equipment.
 - C. Provide a single point grounding system for all associated equipment, enclosures, racks, drawers, assemblies, and subassemblies (i.e., chassis/rack) at each Traffic Management System Building site.
 - D. Prevent static charge accumulation that could promote electromagnetic interference or constitute a shock hazard to personnel.
 - E. Provide a fault current-to-ground path.

Safety considerations shall require the chassis or enclosures for electrical equipment to be grounded to minimize shock hazards to personnel. Proper grounding methods shall be implemented to minimize any noise voltage generated by currents from two or more circuits flowing through a common ground impedance and to avoid creating ground loops susceptible to magnetic fields and differences in ground potential. The manufacture shall implement grounding designs as specified in the specifications and on the Plans.

21. Grounding Configuration
The grounding system shall be composed of a buried ring, interior halo, ground connections, floor ground system, and rods as required. A horizontal ring shall completely encircle the Traffic Management System Building (buried ring).

This wire shall be solid tinned copper wire of No. 1/0 AWG or larger. The buried ring shall not be closer than 2 feet from the Traffic Management System Building foundations, and shall be exothermically welded to each ground rod. The buried ring depth shall be below the frost line of the installation site. The buried ring shall be tested after installation, and its

-15-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

resistance to earth ground shall be less than 10 ohms. The testing shall use the Biddle Instruments Model DET2/2 Digital Ground Tester or equivalent and follow all manufacturers' instructions.

The halo ground shall consist of a minimum No.2 AWG wire located approximately 6 inches below the finished ceiling and shall completely encircle the equipment room. The halo shall be utilized for equipment grounding and for grounding any other loose metals. The wire shall be green insulated stranded copper, bare stranded copper, or bare tinned solid copper. Each corner of the room shall have an omni-directional drop as indicated on the Plans. The wire size of the omni-directional drop shall be the same size and type as the halo ring. If solid tinned wire is used, the drop shall be one continuous wire and connected to the buried ring. If insulated wire is used, the drop shall extend to the floor, and then be connected in the same manner as the halo to a solid tinned wire of the same size of which shall be attached to the buried ring.

The drop, shall leave the Traffic Management System Building and be attached to the buried ring through penetrations of 45-degree angles (to minimize ground drop bend radii). The Traffic Management System Building penetrations are expected to be no more than 1 inch in diameter. The manufacture shall connect the Traffic Management System Building to the subgrade grounding ring.

The interior ground connections of the halo ring shall utilize irreversible compression type connectors. A two-hole compression type ground lug shall be used for equipment connections. An oxidizing preventative compound shall be applied to all mechanical connections, and paint shall be removed as necessary to insure positive bounding of all grounded equipment.

All external, buried connections shall be of the exothermically welded type. These include, but are not limited to, halo drops to ground rods, buried ring to ground rod, and halo drops to the buried ring.

The manufacture shall provide and implement all Traffic Management System Building grounding necessary on the interior to accommodate the associated power and lightning protection systems as indicated in the plans.

There shall be driven ground rods located at each corner of the Traffic Management System Building as indicated in the Plans. The rods shall be made of copper clad high-strength steel with minimum dimensions of 3/4 inch by 10 feet. The rods shall be located at least 2 feet from the edge of the foundations, and driven such that the top of the rod is below the frost line of the installation site. The rods shall be exothermically welded to the buried ring.

A copper grounding plate located inside the Traffic Management System Building shall be the connection point for system grounding and be directly connected to the buried ring.

The utility ground conductors for the Traffic Management System Building system ground

-16-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

shall be bonded at the service disconnect switch. All utility or service grounding shall conform to Article 250 of the National Electric Code.

The raised access floor shall have a grounding ring wire laid under the raised access floor and on top of the Traffic Management System Building concrete floor. Each floor pedestal assembly shall be connected to the floor ground ring. The floor ground ring will not be connected to the Traffic Management System Building grounding system, electrical grounding system, or lightning protection system.

22. Electric Service

The meter enclosure necessary for the Traffic Management System Building shall be obtained from Utility Company to coordinate the meter enclosure, weather head, conduits, and wire from the underground service through the meter enclosure to the service disconnect switch.

The electric service for the Traffic Management System Building shall be an underground line in conduit from an adjacent utility pole-mounted transformer, or pad-mounted transformer. The Contractor shall coordinate and provide the underground service from the adjacent pole to a new power meter installed at the Traffic Management System Building location. The Contractor shall obtain the State electrical permit for the Traffic Management

System Building and the service connection. The service to the Traffic Management System Building shall be 120/208 VAC, 3-phase, 250 amp.

23. Generator.

The work shall include obtaining and installing a generator and all necessary conduit and wiring to connect the generator to the Traffic Management System Building automatic transfer switch. This work shall include all necessary conduits, wires, enclosures, equipment, materials, and personnel. The generator shall be as specified within Section 614 Traffic Management System Building Generator.

24. UPS.

The work shall include sizing, obtaining, and installing a UPS system, all associated accessories, and all necessary conduit, pathways, and wiring to connect the UPS to the Traffic Management System Building UPS panel. The UPS shall conform to the minimum specifications within Section 614 Traffic Management System Building UPS.

25. Lightning Protection. The Manufacture shall provide a complete lightning protection system as shown in the Plans and as specified herein.

26. Traffic Management System Building Environmental Monitoring and Alarming

27. The Traffic Management System Building shall contain sensors for detecting:

- A. Over and under temperature conditions
- B. Prime power loss

-17-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

- C. Smoke alarm
- D. Door open
- E. Air conditioner / heater failure

All discrete alarm outputs shall be wired to a terminal block located at an equipment rack. The terminal block terminals and wires shall be labeled so as to designate the alarm. The terminal block shall be documented in the electrical schematics as well.

Smoke alarm with a dual chamber ionization detector and an alarm relay module installed in a UL listed junction box. The smoke alarm shall be 120 V AC and UL listed. Over and under temperature alarms shall be a bimetallic coil sensing element and an adjustable temperature range of -1°C to 43°C . The temperature alarm shall have gold-plated, normally open, dry alarm contacts and shall be UL listed.

28. Traffic Management System Building, Ventilation, and Air Conditioning (HVAC) Equipment
The work shall include obtaining and installing a generator and all necessary conduit and wiring to install the HVAC in the Traffic Management System Building. This work shall include all necessary conduits, wires, enclosures, equipment, materials, and personnel. The HVAC equipment shall be as specified within Section 614 HVAC.

(j) *Boxes.*

Outlet Boxes shall conform to the following requirements:

1. Provide galvanized or cadmium-plated pressed steel outlet boxes suitable for the conditions of each outlet. Provide multi-gang outlets of single box design; sectional boxes will not be acceptable.
2. Provide deep type cast metal outlet boxes located in damp locations exposed to weather or exposed areas subject to damage, complete with gasketed cover and threaded hubs.
3. Provide outlet boxes of sufficient volume to accommodate the number of conductors entering the box in accordance with the requirements of NFPA 70, and not less than 1-1/2 inch deep unless shallower boxes are required by structural conditions and are Approved by the Department.
4. Provide 4 inch octagonal ceiling outlet boxes.

Pull and Junction Boxes shall conform to the following requirements:

1. Provide galvanized sheet metal boxes conforming to NEMA OS 1. Provide hinged enclosures for all boxes larger than 12 inches in a single dimension.
2. Provide cast metal boxes for outdoor and wet locations conforming to NEMA 250; Type 4 and Type 6, flat-flanged, surface-mounted junction box, UL listed as rain tight with cover and ground flange, neoprene gasket, and stainless steel cover screws.

-18-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

(k) *Wire and Cable.*

Building wire shall conform to the following requirements:

Thermoplastic-Insulated Building Wire: NEMA WC 5.

1. Feeders and Branch Circuits Larger Than No. 6 AWG: Copper, stranded conductor, 600 volt insulation, THW, THHN/THWN, XHHW, RHW, UNO.
2. Feeders and Branch Circuits No. 6 AWG and Smaller: Copper conductor, 600 volt insulation, THW, THHN/THWN; smaller than No. 8 AWG, solid conductor, UNO. Control Circuits: Copper, stranded conductor 600 volt insulation, THW, THHN/THWN. Wiring types Wiring Connections and Splices shall conform to the following requirements:

1. Connect and splice wire No. 10 AWG and smaller with self-insulating, wire nut connectors.
2. Terminate and splice all No. 8 AWG and larger copper conductors, except for load side lugs on Class I and II switchboards, panelboards, motor control centers, fusible switches, circuit breakers, transformers and individual motor controllers with high conductivity, wrought copper, color-keyed compression connector similar to T & B Series 54100 for terminal connection; Series 54500 for two-way copper-to-copper splices; and Series 54700 for tapping and pigtailling copper conductors.
3. Set screw type connectors are only acceptable on the load side lugs of Class I and II switchboards, panelboards, circuit breakers, fusible switches and on individual motor controllers.
4. Where three or more conductors larger than No. 8 AWG are installed in wiring gutter, utilize a screw-type power distribution block. Utilize split-bolt mechanical connector, filled and taped for smooth joint, only where specifically requested by Contractor and Approved by the Department.

(l) *Grounding and Bonding Systems.*

Grounding and bonding wiring shall conform to the following requirements:

1. Stranded, copper cable. Foundation Electrodes: No. 2/0 AWG.
2. Grounding Electrode Conductor: Size to meet NFPA 70 requirements.

(m) *Automatic Transfer Switches.*

Quality Assurance for automatic transfer switches shall conform to the following regulatory requirements:

1. Conform to applicable code for standby electrical systems
2. Conform to UL 1008

-19-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

Automatic Transfer Switch materials shall conform to the following requirements:

1. Configuration: Electrically-operated, mechanically-held transfer switch; dual-motor operated.
2. Double-throw with simple over-center type linkage so that both sets of contacts move simultaneously.
3. Positively interlock, mechanically and electrically, the normal and emergency contacts to prevent simultaneous closing. Mechanically lock the switches without the use of hooks, latches, springs or semi-permanent magnets.
4. Provide separate arcing contacts for all poles. Molded case circuit breakers or contactors will not be acceptable. Provide brush type main contacts of silver alloy protected by arc barriers and arc quenchers.
5. Equip transfer switch with permanently attached, safe, dead-front manual operator with same transfer speed as electrical operator to prevent flashovers.
6. Provide sturdily built operating mechanism of industrial type components which does not depend on critical electrical or mechanical adjustments. Use of miniature type limit switches and nonindustrial type components will not be acceptable.
7. Provide silver alloy contacts with a minimum rating of 10 amperes on all relays. Provide industrial type control that meet or exceed NEMA and IEEE standards and are field adjustable and have replaceable contacts.
8. Ratings: Voltage: 120/208 volt 3-phase, 3-pole with solid neutral and ground, 60 hertz.
9. Automatic Sequence of Operation:
 - A. Initiate transfer of load to alternate source: Upon initiation by normal source monitor and permission by alternate source monitor.
 - B. Monitor before transfer to alternate power source: Frequency and voltage to be within acceptable limits.
 - C. Monitor normal source of power by use of voltage sensitive relays in each switch. Adjust relays to detect failure when a phase or leg drops below
 - D. 70 percent of normal voltage and sense restoration when all phases or legs have returned to at least 90 percent of normal voltage.
 - E. Provide close differential (90 percent dropout and 95 percent pickup) relays on connected load which will prevent transfer of load to emergency source upon a voltage frequency drop until it has reached at least 90 percent of rated voltage and frequency.
 - F. Provide a solid state timer to signal the generator to start after an adjustable time delay of 0.5 to 6 seconds. Provide lockout relay to prevent transfer until the generating set has reached 90 percent of voltage rating and frequency.
 - G. Time delay before transfer to emergency power: Provide adjustable time delay of 0 to 60 seconds on transfer to emergency.
 - H. Initiate retransfer load to normal source: Upon permission by normal source monitor.
 - I. Time delay before transfer to normal power: Provide an adjustable time delay on retransfer (0 to 25 minutes); factory set at 5 minutes, to assure a stable normal source before returning the load to the normal source. Include a bypass circuit switch to override time delay in the event of simultaneous failure of the emergency source and availability of a suitable normal source.
 - J. Time delay on retransfer: Provide an adjustable time delay between opening of emergency contacts and closing of normal contacts to allow motor loads to decay.

-20-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING**

- K. Time delay on engine shutdown: Provide an adjustable time delay on retransfer to normal (0 to 5 minutes); factory set at 5 minutes.
- 10. Enclosure: Type 1
- (n) *Accessories.*
 - 1. Indicating Lights: Mount in cover of enclosure to indicate normal source available, alternate source available, switch position.
 - 2. Test Switch: Mount in cover of enclosure to simulate failure of normal source.
 - 3. Return to Normal Switch: Mount in cover of enclosure to initiate manual transfer from alternate to normal source.
 - 4. Transfer Switch Auxiliary Contacts: One normally open; one normally closed.
 - 5. Normal Source Monitor: Monitor each line of normal source voltage and frequency; initiate transfer when voltage drops below 85 percent or frequency varies more than 5 hertz from rated nominal value.
 - 6. Alternate Source Monitor: Monitor alternate source voltage and frequency; inhibit transfer when voltage is below 85 percent or frequency varies more than 5 hertz from rated nominal voltage.

CONSTRUCTION REQUIREMENTS

Shop drawings shall be submitted for approval on all components of the Traffic Management System Building.

Foundation and generator slab drawings and calculations shall be submitted for approval.

The Contractor shall provide a block out in the Traffic Management System Building slab for six 3-inch communications conduit to enter the building sub-floor.

Measurement will be based on one complete Traffic Management System Building delivered and installed with an operational electrical system and an operational generator system. Delivery of the Traffic Management System Building shall also include all warranty and equipment documentation. All equipment necessary for the delivery and installation of the Traffic Management System Building at the site shall be included. The Traffic Management System Building shall be installed, tested, electrical system installed and all Traffic Management System Building components fully operational and integrated with CDOT CMTC prior to acceptance.

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT**

Section 614 of the Standard Specifications is hereby revised to include the following:

DESCRIPTION

This work consists of the following:

- (1) Furnish and install an access control system and associated accessories.
- (2) Furnish and install an Environmental Monitoring System and associated accessories.
- (3) Furnish and install racks and associated accessories for ITS and ETC equipment.
- (4) Furnish and install cable pathways and associated accessories for power and communications cabling.

MATERIALS

(a) *Access Control System.*

The proposed access control system for this facility shall be interoperable with existing CDOT employee badges. A minimum of one door controller shall be provided. The control panel shall utilize one proximity reader (short read range). A surface mounted box shall be provided for housing the proximity reader. The Access Control System shall be compatible with existing CDOT access control systems.

The new card access systems via existing network equipment to the main Velocity control software at CDOT Headquarters in Denver. Interaction with on-site personnel and access to these sites shall be coordinated through the Engineer.

The Contractor shall submit product information to Engineer for Approval.

1. CDOT currently uses the Identive Velocity access control system at numerous locations statewide. Accordingly, the access control system that is provided for these traffic management system building locations shall be interoperable with existing CDOT employee badges.
2. The controller shall be the Identive Model M1N one door controller with integrated Secure Network Interface Board (SNIB).
3. The control panel shall utilize one Identive Model CR20L-BL HID proximity reader (short read range of 3.75 inches).
4. Identive Model MB2 surface mounting boxes shall be provided for housing the proximity reader.
5. The locking mechanism shall utilize magnetic locks with a minimum resistance of 500 pounds. The failsafe mode shall be open. An internal push bar shall be installed on the door to allow for egress at all times.
6. The building equipment shall include the following:
 - A. Identive M1N Model 1 single door controller
 - B. Identive LIF-D1SP Ethernet to serial device server
 - C. Identive MR1A match reader interface assembly
 - D. Identive MB2 surface mount back box for MR1A
 - E. Identive CR20L-BL prox point reader
 - F. Identive MELM2 end of line module

-2-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT**

- G. Altronix AL125ULX lock power supply
 - H. 12 volt 5 amp hour SLA batteries
 - I. GE / Sentrol 1078C recessed door contact
 - J. Command Access CL93DEU REX electrified Best 9K lock with rex switch
 - K. RCI 9508-12S armored door transfer loop
 - L. Small Format Interchangeable Core (SFIC) core keyway for electric lockset
 - M. Cable, connectors and miscellaneous hardware
7. The Contractor is required to submit cut sheet submittals for all items included in this work for approval by the Department prior to installation.
 8. The work shall include the following elements:
 - A. Provide and install M1N controller and lock power supply inside the Traffic Management System Building on wall near entry door.
 - B. Connect 120 volts alternating current power to the M1N controller and lock power supply. Provide and install surface mounted conduit from the M1N panel to the reader, electric lock and network rack.
 - C. Provide and install MR1A, card reader, door contact and electric lock set with rex switch on door.
 - D. Provide and install cabling to devices on door from M1N panel. Terminate cabling to devices and M1N panel.
 - E. Provide and install Cat5e cabling from M1N panel to network rack.
 - F. Program new panel and door into existing Velocity software.
 - G. Install final connections to the main control equipment for the above referenced systems.
 9. The Contractor shall submit requests to the Engineer to store cable and equipment on site. These requests will be reviewed and Approved by the Engineer on a site-by-site basis.
 10. The Contractor is required to provide cabling diagrams showing the connectivity of all equipment that is to be installed as part of this item. These diagrams shall be provided prior to any cabling work for final approval by the Department.
 11. CDOT will make all connections to the existing Ethernet equipment, but this equipment shall be included in the cabling diagram as it pertains to device connection.
 12. The Contractor shall notify the Engineer a minimum of 48 hours in advance of any work that is to be performed in the Traffic Management System Building. The static internet protocol (IP) address for any given traffic management system building will be provided by CDOT. The Contractor shall notify the Engineer a minimum of 48 hours in advance regarding requests for this information.
 13. The Contractor shall bring the panel online and test for proper operation. The Contractor shall conduct final testing and inspection for the above referenced systems. Instruction shall be provided that will help enable members of the CDOT Intelligent Transportation Systems (ITS) Branch to create and maintain access for all applicable card holders that require access to a given traffic management system building. Instruction shall also be provided that will help enable members of the ITS Branch to monitor the on-going access that is occurring at a given traffic management system building.

-3-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT**

(b) *Mechanical Systems (Environmental Monitoring System).*

For this Project, the Mechanical Systems item shall be for the provision and installation of an Environmental Monitoring System for traffic management system buildings, as specified in the plans.

The Environmental Monitoring System shall also have a backup wireless communication system that will allow for continued monitoring if the primary communication system fails. A wireless cellular data modem, associated power supply, cellular antenna, antenna cable, communication cable, and any necessary mounting hardware shall be furnished and installed by the Contractor.

Interaction with on-site personnel and access to these sites shall be coordinated through the Engineer.

The Contractor is required to submit cut sheet submittals for all items included in this work for approval by the Department prior to installation.

The Mechanical Systems equipment shall include the following:

1. Large enterprise environment monitoring system.
2. External AC power, voltage, frequency, and current monitor.
3. External temperature / humidity sensor.
4. External smoke detection sensor.
5. External spot liquid detection with single-pole double throw (SPDT) contacts.

The Environmental Monitoring System shall satisfy the following criteria:

1. The system shall include three internal sensors: temperature, humidity and power. It shall also supports 16 external configurable sensors, eight digital input sensors, and four output relays for control of external devices.
2. Sensors shall be hot pluggable.
3. Shall be able to monitor (ping) up to 64 IP network devices – alerts are sent if devices are not responding.
4. Sensor conditions (events) shall be configurable to trigger alerts by themselves, and / or be used in combination with other events to trigger Smart Alerts.
5. Redundant dual power connection.
6. Includes internal battery backup
7. Includes Universal Serial Bus (USB) ports for connecting USB modem, for downloading log data to USB flash drive, or for connecting a USB Liquid Crystal Display (LCD) screen.
8. Supports IP network video cameras for live view of any facility.
9. The capability to trigger a snapshot from an IP camera after any programmed event.
10. Includes a server based management software for monitoring and control of the remote system and sensors.

The Environmental Monitoring System shall meet the following requirements:

1. Report temperatures from 32 to 104°F (0 to 40°C)

-4-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT**

2. Report humidity from 20 to 80 percent relative humidity at temperatures between 32 to 104°F (0 to 40°C)
3. Measure main voltage: 0 to 255 VAC / Measure battery voltage: 0 to 20 volts direct current (VDC)
4. Ethernet Port shall be a 10/100 Base-T Ethernet port with RJ45 Ethernet connector
5. Alerts can be provided by a minimum of four methods:
 - A. Email Authenticates
 - B. Web Interface
 - C. Simple network management protocol (SNMP) network management (V1/V2c/V3)
 - D. Front Panel Light Emitting Diodes (LEDs) for internal and external sensors, backup battery, data log, power, auxiliary power
6. The system can be accessed by a minimum of five methods:
 - A. Web Interface
 - B. Telnet
 - C. Secure Shell (SSH)
 - D. Network Operation (SNMP) V1/V2c/V3
 - E. RS232 (via female RJ45 RS232 connector & female USB Type B connector)
7. Shall support these protocols; HTTP/HTTPS, SNMP V1/V2c/V3, SMTP, TCP/IP, Syslog, SNMP, DHCP, SSHv2, SSLv3, LDAPv3, AES 256-bit, 3DES, Blowfish, RSA, EDH-RSA, Arcfour, IPV6, WAP 2.0
8. Shall have an operating temperature range of 32 to 100°F (0 to 38°C)
9. Shall be mountable in standard 19 inch rack.

The cellular wireless data modem shall be a standalone hardened unit designed to communicate to serial and Ethernet devices over 4G LTE and 3G wireless network. The modem shall consist of a unit capable of transmitting data by its embedded operating system and its own transmission control protocol/internet protocol (TCP / IP) stack to enable transmission of data from non-IP devices. The modem shall be capable of active/standby configuration for use as failover communication link for out of band management to network infrastructure. The modem shall meet the following minimum requirements:

1. Communication to Ethernet devices with a minimum of 1 x 10/100 RJ-45 Ethernet jacks.
2. Wireless Communications utilizing 802.11 b/g/n for connection with up to 32 devices at a time with WEP, WPA, WPA2, and AES encryption.
3. Support TCP/IP, UDP/IP, DHCP, HTTP, SNMP, SMTP, FTP, DMZ, PPPoE passthrough, DNS, DDNS, LAN/WAN affinity, VPN, VLAN support, MAC filtering, port forwarding, routing, and GPS protocols.
4. Visual light indicators that show unit status for power, cellular signal, network connection, and data activity.
5. Cellular network support for LTE at 700MHz and CDMA EV-DO rev A, 1x EV-DO rev 0, or 1xRTT at 800/1900 MHz with options for MIMO in LTE mode or receive diversity in CDMA mode.
6. Remotely upgradeable PRL, firmware, and configuration.
7. 4G cellular wireless with backwards compatibility to EV-DO rev A, A/O, CDMA 1x.
8. Built in GPS receiver with port for external antenna.
9. 50 ohm SMA antenna interfaces.
10. Operate on 9 to 18 VDC at 1.5 amps or less.

-5-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT**

11. Operate within a temperature range of -4 to 122°F (-30 to 70°C) at 10 to 85 percent humidity.

The power supply shall output a nominal 12 volts direct current at a minimum of 2 amps to power the wireless cellular data modem. The power supply shall be rated to operate within a temperature range of -10 to 130°F.

The cellular antenna shall be outdoor rated, omnidirectional, and capable of transmitting and receiving on at least 3 frequency bands: 700MHz for LTE and 800/1900 MHz with a minimum 3dBi gain. The antenna shall have an NMO mountable base that can be used for wall mounting.

The antenna cable shall be an RG-58 coaxial cable type rated at 50 ohms. The cable shall be terminated with a male SMA on one end for connection with the wireless cellular data modem. The other end shall be terminated with the correct connector to interface with the tri band antenna.

The communication cable shall be constructed from twisted pair cable with minimum 22 gauge stranded conductors. For Ethernet communication the cable shall be terminated with 8P8C connectors with T568B pin/pair assignments.

A 19 inch rack mountable shelf shall be included for installation of the modem

The environmental monitoring system shall be installed in a 19 inch rack as shown on the Plans or directed by the Department. The liquid detection sensor shall be installed on the low point of the floor. In buildings with raised floor this will be underneath the raised floor. The temperature and humidity sensor shall be installed on the high point of the rack that the monitoring system is installed. The smoke detection sensor shall be installed in the ceiling in middle of the room.

The wireless cellular data modem shall be installed below the environmental monitor in a rack mountable shelf. The cellular antenna shall be mounted on the exterior of traffic management system buildings to get the best possible receive signal. Any cable penetrations made in the building shall be watertight and cable runs shall include drip loops to eliminate any moisture ingress into the building. A complete installation consists of the wireless cellular data modem, power supply, dual band antenna, antenna cable, communication cable, and wiring power to the unit. The Contractor shall install the power supply to the wireless cellular modem per manufactures recommendations. The Contractor shall connect the wireless cellular modem end equipment as specified in the Plans or directed by the Department. The placement of the unit shall allow provision for cable installation and maintenance as indicated on the Project Detail Sheet and manufacturer's recommendations. All electrical wiring and connections shall meet NEC standards. The Contractor is responsible for supplying all necessary cabling, connectors, and hardware for a fully functional installation.

The Contractor shall notify the Engineer a minimum of 48 hours in advance of any work that is to be performed in the traffic management system building.

The Contractor shall bring the system online and test for proper operation. The Contractor shall conduct final testing and inspection for the above referenced systems. Instruction shall be provided that will help enable members of the CDOT ITS Branch to configure the system.

-6-

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT

Provision and installation of the backup wireless communication system will not be measured and paid for separately, but shall be part of the Mechanical Systems item. It shall include a warranty, testing, documentation, all necessary wiring, RF antenna, communication cables, labor and other items necessary to complete the work.

(c) Cabinets (for ITS equipment)

Provide a minimum of seven freestanding equipment cabinets within the Airport Node. Six cabinets shall be used to store fiber optic termination/splice panels and associated ITS equipment and the one other cabinet shall be used for ETC equipment. Each cabinet enclosure shall have a rectangular frame with removable top panel, side panels and doors. The installed cabinets shall include horizontal and vertical cable management accessories that keep network cables organized.

Each cabinet frame shall be rectangular with four corner posts, manufactured from aluminum with bolted frame construction. The sides of the frame shall have three supports located near the top, middle and bottom to allow attachment of equipment mounting rails and cable management accessories. Each cabinet frame shall have a static load limit of 2000 pounds.

Each cabinet shall not exceed 28 inches in width (overall), 34 inches in depth (overall), and 84 inches in height (overall). Leveler feet, which are required, shall not add more than an additional 1 inch to the height of the cabinet.

Each cabinet shall include two pairs of equipment mounting rails. Mounting rails shall bolt to the supports located near the top, middle and bottom of the frame and shall be fully adjustable in depth to provide front and rear support for equipment. Equipment mounting rails shall be spaced horizontally to support 19 inch wide EIA/ECA-310 compliant rack mount equipment and shall provide up to 30 inches of rail-to-rail depth for equipment. Mounting rails shall be L-shaped. The front flange shall be #12-24 threaded according to the EIA/ECA-310 universal hole pattern with equipment mounting holes on alternating 0.625 inch – 0.625 inch – 0.5 inch vertical hole centers. Rack mount spaces or Rack Units (RU) shall be 1.75 inches high and shall be marked and numbered on the mounting rails. Numbering shall start at the bottom of the rail. Mounting rails shall provide 45 RU of usable vertical panel space for equipment installation.

Each cabinet shall include a solid top panel with a vented section for a top-mount fan near the front and rear of the panel and edge-protected cable access ports along the right and left sides of the panel. Two locking side panels with keyed latches shall be provided. Each cabinet shall include a single front door with a perforated metal panel and quick-release hinge pins. The front door shall be removable and reversible to open from the right or left. The front door shall have a single point, spring loaded, push button latch with a keyed lock. Each cabinet shall include a single rear door with a perforated metal panel and quick release hinge pins. The rear door shall be removable and reversible to open from the right or left. The rear door shall have a single point, spring loaded, push button latch with a keyed lock that matches the front door of the cabinet. Cabinets for ETC equipment shall be keyed differently than cabinets containing ITS equipment. The keyed lock for the ETC equipment cabinet shall be the same for the front and rear doors. The cabinet frame, top panel, side panels, and doors for the cabinet shall be manufactured from aluminum. The door latch, door hinges, and top panel cable access ports may be plastic. The cabinet frame and door frames shall be anodized aluminum. The top panel, side panels, mounting rails, and door panels shall be

-7-

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT

painted gray with powder coat paint. Plastic components shall be black. The cabinet frame shall assemble with hardware provided by the cabinet manufacturer.

Each cabinet shall be UL Listed as a Communications Circuit Accessory to standard UL 1863 Communications Circuit Accessories under category DUXR.

Each cabinet shall include four leveling feet, four clamps for securing the leveling feet to the floor, and a means for bonding the cabinet to the existing Telecommunications Grounding Busbar (TGB) in the Traffic Management System Building.

Each installed cabinet shall be equipped with a vertical cable manager to store network cables. The vertical cable manager shall attach to the side of the cabinet frame in the space between the frame and the side panel and shall be adjustable in depth to match equipment requirements. The vertical cable manager shall have individual C-shaped plastic cable rings. The rings shall be able to align with the side or the front/rear of the cabinet.

Each installed cabinet shall be equipped with rack mount horizontal cable managers to organize cables in the RU above and below each patch or splice panel and/or Ethernet switch within the cabinet. Each horizontal cable manager shall be 19 inch EIA/ECA-310 compatible and not more than 2 RU high. The horizontal cable manager shall be a single sided U-shaped trough with a front facing snap on cover. Plastic T-shaped cable guides along the top and bottom edge of the cable manager shall divide cable openings that allow cables to exit or enter the top or bottom of the manager. The cable manager shall be sized to hold 24 patch cords per RU and have a depth that allows the cabinet door to be securely closed without crushing or putting undue pressure on fiber optic patch cords.

Each cabinet shall be equipped with two vertical mount (zero U) Power Distribution Units (PDUs), including vertical PDU mounting brackets, as required. Each PDU shall be on a separate electrical circuit and backed up by the building UPS. The PDUs shall be designed in accordance with the applicable sections of UL 60950-1 (Active/Most Current Edition): Information Technology Equipment – Safety. PDUs shall be rated for 30A of integral branch overload protection, with 120V input and output. Single phase input power shall be provided via a minimum 10 foot power cord with appropriate locking input plug connection. PDUs shall be equipped with 27 NEMA 5-20R power outlets. PDUs shall be equipped with upgradable network communications to support remote monitoring and/or control capabilities. PDUs shall provide local and remote monitoring of individual PDU volts, amps, watts, and kilowatt-hours and provide user positioned LCD status display for local monitoring. Vertical mount dimensions shall not exceed 69 inches (H) x 2 inches (W) x 4 inches (D). The PDUs shall be rated for operation at ambient temperatures of 32°F to 131°F for altitudes 10,000 feet above sea level with a relative humidity of 0% to 95%, non-condensing and non-corrosive. Each PDU shall include a user's manual that contains installation drawings and instructions, a functional description of the equipment, safety precautions, illustrations, and operating procedures. The manufacturer shall warrant each PDU against defects in materials and workmanship for a minimum period of two (2) years. Before shipment, the manufacturer shall fully and completely test each PDU to assure compliance with the specification. The manufacturer shall submit certified test reports showing the results of the factory testing that shall be included in each shipping box containing a PDU.

-8-

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT

Each cabinet shall be equipped with a top mount fan kit to help remove hot air from within the cabinet. The fan kit shall include four 100 cfm fans in two housings that attach to the cabinet's top panel. The fan kit shall include a single attached 15 feet long power cord with a molded NEMA 5-15P.

One universal cabinet light shall be furnished and installed at the top, rear of each cabinet. The universal cabinet light shall be EIA/ECA-310 compliant for 19 inch racks and not exceed 1 RU in height. It shall be mounted with the light source facing into the cabinet to direct illumination downward. The light source shall be fluorescent or LED and not exceed 8 W of power consumption from a 115 VAC source. A lens shall be provided to protect the light source from accidental contact and must be either clear or white. Each universal cabinet light shall include an on/off switch and a minimum 6 feet of power cord.

The Contractor shall provide a minimum of 100 additional #12-24 equipment mounting screws for future use by the Department to attach equipment to the equipment mounting rails in the cabinet. The screws shall be contained in a bag and stored in an identifiable location within the cabinet.

The Contractor shall install and adjust to position all accessories including vertical cable managers, equipment mounting rails, etc. using the cabinet manufacturer's installation instructions.

When a cabinet supports active electronic equipment, any type of shielded cable, or cable termination device requiring a ground connection, the Contractor shall furnish and install a rack mount horizontal bus bar to the cabinet in order to provide multiple bonding points on the cabinet for the cabinet and its rack mounted equipment. A horizontal rack mount busbar shall be constructed of a minimum 0.1875 inch thick by 0.75 inch high hard-drawn electrolytic tough pitch 110 alloy copper bar. The bar shall be 19 inch EIA/ECA-310 compatible for mounting on the back side of cabinets and installed per the manufacturer's installation instructions. The bar shall have a minimum of eight 6-32 tapped ground mounting holes on 1 inch intervals and four 0.281 inch holes for the attachment of two-hole grounding lugs. Each bar shall include a copper splice bar of the same material (to transition between adjoining cabinets) and two each 12-24 by 0.75 inch copper-plated steel screws and flat washers for attachment to the cabinet. The bar shall be UL Listed as grounding and bonding equipment. All active electronic equipment installed within the cabinets that can be grounded shall be bonded to the bus bar using a minimum #6 AWG stranded green insulated Type MTW conductor with a yellow helical stripe of appropriate length. All cabinets shall be securely bonded to each other and to the TGB in the node, unless otherwise specified by the Department. Attach an appropriately sized bonding conductor sized, per TIA-607, or as defined by local code or the Department between the TGB and each cabinet. Attach the bonding conductor to the cabinet using included hardware according to the cabinet manufacturer's installation instructions. The Contractor shall provide the bonding conductor, compression lugs, antioxidant, and all necessary hardware required to make the connections between each cabinet's equipment and its busbar and between cabinets and the TGB.

(d) Cable Pathways (for communications cabling)

This section includes the minimum requirements for the cable ladder installations in new Traffic Management System Buildings. Included in this section are the minimum composition requirements and installation methods for the cable ladders.

-9-

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT

All cable and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated herein shall be subject to the control and approval of the Department. Equipment and materials shall be of the quality and manufacture indicated. Where “approved equal” is stated, equipment shall be equivalent in every way to that of the equipment specified and subject to approval. Strictly adhere to all American National Standards Institute (ANSI), Building Industry Consulting Service International (BICSI), Electronic Industries Alliance (EIA), National Electrical Contractors Association (NECA), National Electrical Manufacturers Association (NEMA), National Fire Protection Association (NFPA), and Telecommunications Industry Association (TIA) recommended installation practices when installing communications/data cabling. Material and work specified herein shall comply with the applicable requirements of: TIA – 569-B Commercial Building Standard for Telecommunications Pathways and Spaces; ANSI/TIA – 568-C Commercial Building Telecommunications Cabling Standard; ANSI/NECA/BICSI 568 – Standard for Installing Commercial Building Telecommunications Cabling; TIA – 606-A Administration Standard for Commercial Telecommunications Infrastructure; ANSI-J-STD – 607-A Joint Standard for Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications; ANSI/TIA-942 Telecommunications Infrastructure Standard for Data Centers; NFPA 70 – National Electric Code; NEMA – VE 1 – Metal Cable Tray Systems; and NEMA – VE 2 – Metal Cable Tray Installation Guidelines. Provide product data for the following: manufacturers data/cut sheets, specifications and installation instructions for all products.

Ladder rack shall be manufactured from tubular steel. Stringers (sides) should be made from 3/8” wide by 1-1/2” high tubular steel with 0.065” wall thickness. Cross members (rungs) should be made from 1” wide by 1/2” high tubular steel with 0.065” wall thickness. Ladder rack (stringers) should be 9’-8 1/2” long. Cross members should be welded in between stringers on 9” centers beginning 4-1/4” from one end so that there are thirteen cross members per ladder rack. There should be 8” of open space in between each cross member. Ladder rack should be delivered individually boxed, and shall be available in widths as required for the size and amount of cables being installed as part of this Project plus 100% spare capacity. Ladder rack shall be UL Classified for suitability as an equipment-grounding conductor, unless otherwise specified by the Department. Minimum combined cross sectional area of the stringers will be 0.40 square inches. A label affixed to the side stringer of the ladder rack shall identify the manufacturer, the UL Classification and the minimum combined cross sectional area of the stringers. Finish shall be gold chem. over zinc plating.

Horizontal 90° turns should be factory-fabricated, made from 3/8” wide by 1-1/2” high tubular steel with 0.065” wall thickness. Stringers (sides) should be curved to allow a smooth horizontal 90° turn. Cross members should be welded in between stringers on approximate 23° increments so that there are 5 cross members per turn. Horizontal 90° turns shall be available in widths as required for the size and amount of cables being installed as part of this Project plus 100% spare capacity. Horizontal 90° turns shall be UL Classified for suitability as an equipment-grounding conductor, unless otherwise specified by the Department. Minimum combined cross sectional area of the stringers should be 0.40 square inches. A label affixed to the side stringer of the horizontal 90° turn

-10-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT**

shall identify the manufacturer, the UL Classification and the minimum combined cross sectional area of the stringers. Finish shall be gold chem. over zinc plating.

Vertical-to-horizontal 90° turns should be factory-fabricated, made from 3/8" wide by 1-1/2" high tubular steel with 0.065" wall thickness. Stringers (sides) should be curved to allow a smooth vertical-to-horizontal transition. Cross members should be welded in between stringers on approximate 23° increments so that there are 3 cross members per turn. Vertical-to-horizontal 90° turns shall be available in several widths as required for the size and amount of cables being installed as part of this Project plus 100% spare capacity. Vertical-to-horizontal 90° turns shall be UL Classified for suitability as an equipment-grounding conductor, unless otherwise specified by the Department. Minimum combined cross sectional area of the stringers should be 0.40 square inches. A label affixed to the side stringer of the vertical-to-horizontal 90° turn shall identify the manufacturer, the UL Classification and the minimum combined cross sectional area of the stringers. Finish shall be gold chem. over zinc plating.

Horizontal-to-vertical 90° turns should be factory-fabricated, made from 3/8" wide by 1-1/2" high tubular steel with 0.065" wall thickness. Stringers (sides) should be curved to allow a smooth horizontal-to-vertical transition. Cross members should be welded in between stringers on approximate 23° increments so that there are 3 cross members per turn. Horizontal-to-vertical 90° turns should be available in several widths as required for the size and amount of cables being installed as part of this Project plus 100% spare capacity. Horizontal-to-vertical 90° turns shall be UL Classified for suitability as an equipment-grounding conductor, unless otherwise specified by the Department. Minimum combined cross sectional area of the stringers should be 0.40 square inches. A label affixed to the side stringer of the vertical-to-horizontal 90° turn shall identify the manufacturer, the UL Classification and the minimum combined cross sectional area of the stringers. Finish shall be gold chem. over zinc plating.

Corner brackets should be factory-fabricated, made from 3/8" wide by 1-1/2" high tubular steel with 0.065" wall thickness. The inside stringers of the corner bracket should form a 90° corner. The outside stringer of the corner bracket should be formed as a 90° radius. Corner brackets shall be available in sizes as required for the size and amount of cables being installed as part of this Project plus 100% spare capacity. Installation hardware shall be included with the intersection radius. Finish shall be gold chem. over zinc plating.

A method shall be provided for splicing ladder rack sections and fabricated turns together end-to-end or side-to-end to form a continuous pathway. Splices shall be UL Classified and must electrically bond pathway components. No accessory grounding kit should be required. Splices should be manufactured from steel or aluminum. Splice kits shall include installation hardware. Finish shall be gold chem. over zinc plating.

Supports shall be sized to match the width of the ladder rack that is supported. Support design shall allow the support to be placed under the ladder rack at any point mid-span, but not under a ladder rack splice. Each support should be punched with a pattern of holes that allows attachment of ladder

-11-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT**

rack to the support. Each support shall include a pair of J-bolts (and hardware) appropriately sized for securing ladder rack to the support. Supports should be manufactured from steel or aluminum. Finish shall be gold chem. over zinc plating.

Cable straps used for attaching cable bundles to the ladder rack cross members shall be reusable with a hook and loop-style closure, at least 3/4" wide, and sized for cable bundles that are 2", 3" or 4" in diameter. Cable retaining posts used to keep cable from falling off of the side of the ladder rack should be manufactured from 1" by 1/2" tubular steel with 0.065" wall thickness. Cable retaining posts should be 8" high and should attach to the side stringer of the ladder rack with included hardware. The top of the cable retaining posts shall be fitted with a rubberized end cap to protect cables. End caps used to cover the ends of ladder rack shall be manufactured from a black fire-retardant rubberized material. End caps should be sized for 3/8" wide by 1-1/2" high side stringers and should be sold in pairs. End closing kits used to cover the end of ladder rack should be manufactured from 3/8" wide by 1-1/2" high tubular steel with 0.065" wall thickness. Kits shall consist of a bar cut to match the width of the ladder rack and the hardware required to attach the bar to the end of a length of ladder rack. Radius drops used to create a radius to form cables over as the cables exit or enter the ladder rack should be manufactured from aluminum extrusion. The extrusion should be formed in a 90° arc with a minimum bend radius consistent with the required bend radius of the cables being installed. Radius drops should attach to either the side stringer or the cross member of the ladder rack using a clevis pin. Radius drops should include 1-1/2" high cable spools that attach to the top of the radius drop to guide cables. Movable cross members used to support cross member radius drops in between welded cross members on ladder rack should be manufactured from 3/8" by 1-1/2" aluminum bar. Movable cross members shall attach to ladder rack at the side stringers with included hardware so that the location of the movable cross member can be adjusted. Movable cross member shall support a cross member radius drop. Cable spools used to separate ladder rack into multiple cable pathways shall be made from a black flame retardant plastic material. Cable spools shall attach to the cross members with a clip that allows the width of the ladder rack to be divided into any proportion. The spools should be about 4" tall, with a 2" diameter top cap, and a body that tapers from the top to the bottom. Auxiliary support brackets used to support cables that should be physically separated from the cables in the ladder rack should be made from 1/8" by 1" steel bar. The bracket should be L-shaped and attach to the side stringer of the ladder rack. The bracket should hang below the ladder rack a minimum of 4". The bracket support surface should be 4" long. The bracket shall be zinc plated with a gold chem. finish.

All components of the ladder rack system (ladder rack, turns, splices, supports, and accessories) shall be from a single manufacturer. Ladder rack shall be installed with side stringers facing down so that the ladder forms an inverted U-shape and so that welds between the stringers (sides) and cross members (middle) face away from cables. Ladder rack shall be secured to the structural ceiling, building truss system, wall, floor or the tops of equipment cabinets using the manufacturer's recommended supports and appropriate hardware as defined by local code or the Department. Ladder rack shall be supported every 5' or less in accordance with TIA-569-B. Ladder rack shall be supported within 2' of every splice and within 2' on both/all sides of every intersection. Support ladder rack within 2' on both sides of every change in elevation. Support

-12-

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT

ladder rack every 2' when attached vertically to a wall. Secure ladder rack to each support with included hardware so that, at a minimum, ladder rack is connected to each support by two fasteners. Ladder rack splices shall be made in mid-span, not over a support, with the manufacturer's recommended splice hardware. Heavy-duty splices shall be provided for ladder racks in excess of 18" width. Heavy-duty splices are required for any splice formed in the vertical orientation including changes in elevation formed using vertical-to-horizontal 90° turns or horizontal-to-vertical 90° turns. Use heavy-duty splices to secure all overhead turns to the overhead horizontal pathway(s). When the pathway is overhead, ladder rack shall be installed with a minimum clearance of 12" above the ladder rack. Leave a minimum of 3" in between ladder rack and the tops of equipment cabinets. When installed under a raised floor, ladder rack shall be installed with a minimum 3" clearance between the top of the ladder rack and the bottom of the floor tiles or floor system stringers, whichever is lower in elevation. Maintain a minimum 3" clearance between ladder racks wherever ladder racks cross. Within each Traffic Management System Building, ladder racks shall be electrically continuous and bonded to the Telecommunications Grounding Busbar (TGB), unless otherwise specified by the Department. Ladder rack shall be bonded to the TGB using an approved ground lug on the ladder rack and a minimum #6 AWG grounding wire or as recommended by the Department. The quantity of the installed cables within the ladder rack shall not exceed a whole number value equal to 50% of the interior area of the ladder rack divided by the cross-sectional area of the cable. The interior area of ladder rack shall be considered to be the width of the ladder rack multiplied by a height of 2", unless cable retaining posts are added to the ladder rack. The interior area of ladder rack equipped with cable retaining posts shall be considered to be the width of the ladder rack multiplied by a height of 6". Actual cable fill for ladder rack that is not equipped with cable retaining posts shall not exceed 2" in height. Actual cable fill for ladder rack equipped with cable retaining posts shall not exceed 6" in height. The combined weight of cables within the ladder rack shall not exceed the stated load capacity of the ladder rack as stated in the manufacturer's product specifications or design tables. Cables (cable bundles) shall be secured to the cross members of ladder rack with ¾" wide reusable straps. Straps are not required when ladder rack is equipped with cable retaining posts. When cable fill exceeds 2" in height or when cable bundles cannot be secured directly to the ladder rack cross members with a strap, add 8" high cable retaining posts to the open sides of the ladder rack. Cable fill within any ladder rack should not exceed 6" in height. Cover the exposed ends of cable runway that do not terminate against a wall, the floor or the ceiling with fire-retardant black colored end caps made from a rubberized material or an end closing kit consisting of a flat bar of ladder rack stringer material factory cut to the width of the ladder rack and secured to the ladder rack with a junction splice kit. Separate different cable media types within the ladder rack pathway. Treat each type of cable media separately when determining cable fill limits. Where cable exits or enters the side of overhead ladder rack to access a cabinet or termination panel, a radius drop shall be used to guide the cable. Maintain a minimum separation of 2' between ladder rack used for communications cables and pathways for other utilities or building services. The installer shall correct any minor cosmetic damage (chips, small scratches, etc.) resulting from normal handling during the installation process. If a component is cosmetically damaged to the extent that correction in the field is obvious against the factory finish, the component shall be replaced with a new component finished from the factory. If a component is

-13-

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT

physically damaged due to mishandling or modification during the installation process, it shall not be used as part of the ladder rack system.

CONSTRUCTION REQUIREMENTS

All cable and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Contract Documents shall be subject to the control and approval of CDOT or CDOT's designated representative. Equipment and materials shall be of the quality and manufacture indicated.

Strictly adhere to all Building Industry Consulting Service International (BICSI), National Electrical Contractors Association (NECA), National Fire Protection Association (NFPA) and Telecommunications

Industry Association (TIA) recommended installation practices when installing communications/data cabling and grounding.

Provide product data for the following: Manufacturers data sheets/cut sheets, specifications and installation instructions for all products.

(c) *Field Quality Control.*

1. Inspect wire and cable for physical damage and proper connection.
2. Torque test conductor connections and terminations to manufacturer's recommended values.
3. Inspect and test in accordance with NETA ATS, except Section 4.
4. Grounding and Bonding: Perform inspections and tests listed in NETA ATS, Section 7.13.

(d) *Grounding and Bonding Installation.*

1. Bond together each metallic raceway, pipe, duct and other metal object entering space under access floors. Bond to underfloor ground grid. Use 2 AWG bare copper conductor.
2. Equipment Grounding Conductor: Provide separate, insulated conductor within each feeder and branch circuit raceway. Terminate each end on suitable lug, bus, or bushing.
3. Interface with site grounding system installed.
4. Locate and install anchors, fasteners, and supports in accordance with NECA "Standard of Installation".
5. Do not fasten supports to pipes, ducts, mechanical equipment, or conduit.
6. Do not use spring steel clips and clamps.
7. Do not use powder-actuated anchors.
8. Do not drill or cut structural members.

(e) *Equipment Ground.*

1. Provide complete ground system for building consisting of copper cable, ground rods, and exothermic connections to serve service entrance, building structural steel, metallic enclosures, and conduit systems.

-14-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING EQUIPMENT**

2. Provide separate, insulated equipment grounding conductor from main service ground to each main switchboard and in feeders and branch circuits. Terminate each end a grounding lug, bus, or bushing. Do not use conduit as grounding conductor.
 3. Provide bonding jumper at expansion joints, points of electrical discontinuity, or connections in conduit where firm mechanical bond is not possible, such as flexible connections and insulating couplings.
 4. Ground each lighting and power panelboard by connecting grounding conductor to grounding stud.
 5. Bond every new item of equipment served by electrical system to building equipment ground system including switchboards, panelboards, disconnect switches, receptacles, controls, fans, air handling units, pumps, and flexible duct connections.
- (f) *Access Control System.*
2. Test the system to determine that it is free from grounds, open and short circuits.
 3. Test system in accordance with manufacturer's recommendations in presence of Owner's representative:
 - A. Operate initiating devices.
 - B. Verify device operation.
 - C. Verify signal operations.
 - D. Verify system responds properly

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING UPS

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of furnishing and installing a Traffic Management System Building Uninterruptible Power Supply (UPS) and associated accessories.

Additional floor space adjacent to the Traffic Management System Building UPS, provided as part of this Project, shall be reserved when sizing the Traffic Management System Building for the future addition of a similar UPS for a 1+1 configuration. The future UPS shall be connected in parallel to the UPS provided as part of this Project for extra capacity.

MATERIALS

(a) *Standards.*

The UPS shall be designed in accordance with the applicable sections of the current revision of the following documents. Where a conflict arises between these documents and statements made herein, the statements in this specification shall govern.

1. UL Standard 1778
2. IEEE C62.41.1, Category A & B
3. National Electrical Code (NFPA 70)
4. ANSI/IEC 60529-2004 Degrees of Protection Provided by Enclosures (IP Code)

(b) *Modes of Operation.*

The UPS shall operate as a true on-line system:

1. Normal - The critical alternating current (AC) load shall be continuously supplied by the UPS inverter. The input converter shall derive power from a utility AC source and shall supply direct current (DC) power to the inverter. The battery charger shall maintain a float-charge on the battery.
2. Back-up - Upon failure of utility AC power the critical AC load shall be supplied by the inverter. In this mode the inverter shall be powered from the battery. There shall be no interruption in power to the critical load upon failure and restoration of the utility AC source.
3. Recharge - Upon restoration of utility AC power, the input converter shall automatically restart and resume supplying power to the inverter. The battery charger shall resume recharge of the battery.
4. Automatic Restart - After a utility AC power outage and complete battery discharge, the UPS shall automatically restart and resume supplying power to the critical load. In addition, the

-2-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

battery charger shall automatically recharge the battery. This feature shall be enabled (factory default) and shall be capable of being disabled by the user. The user shall also be able to program two auto restart delay settings:

- A. Battery capacity percent level
 - B. Countdown timer
5. Bypass - The bypass shall provide an alternate path for power to the critical load and shall be capable of operating in the following manner:
- A. Automatic - In the event of an internal failure or should the inverter overload capacity be exceeded, the UPS shall perform an automatic transfer of the critical AC load from the inverter to the bypass source.
 - B. Manual - Should the UPS need to be taken out of service for limited maintenance or repair, manual activation of the bypass shall cause an immediate transfer of the critical AC load from the inverter to the bypass source. The input converter, inverter, and battery charging operations shall continue to operate, provided the control enable switch is in the "On" position.

(c) Performance Requirements.

1. System

- A. Input to output isolation shall be provided via the output transformer, regardless of the operating mode. (UPS or bypass)
- B. The UPS shall provide provisions for remote stop (Emergency Power Off) capability.

6. AC Input to UPS shall conform to the following:

- A. Voltage Configuration: 120/208-VAC 3-Phase. The operating voltage range shall be variable based upon output loading percentages as follows:

% UPS Load	Input Voltage
80 – 100%	170 VAC
60 – 80%	144 VAC
30 – 60%	127 VAC
0 – 30%	110 VAC

- B. Frequency: 40 to 70 Hz.
- C. Input Current Distortion: 5 percent Total Harmonic Distortion (THD) maximum at full load.

-3-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

- D. Input Power Factor: 0.98 lagging at 100 percent rated load.
 - E. Inrush Current: 150 percent of full load input current maximum for three cycles.
 - F. Surge Protection: Shall sustain input surges without damage per criteria listed in IEEE C62.41, Category B.
- (d) *AC Output shall conform to the following:*
- 1. Voltage Configuration: 120/208-VAC 3-Phase.
 - 2. Voltage Regulation: +/- 3 percent steady state.
 - 3. Frequency Regulation: 60 Hz, +/- 0.5 percent.
 - 4. Frequency Slew Rate: shall be field selectable from 0.5 to 5.0 Hz maximum per second.
 - 5. Bypass Frequency Synchronization Range: shall be field selectable from 0.5 to 5.0 Hz maximum per second.
 - 6. Voltage Distortion: 3 percent THD maximum into a 100 percent linear load, 7 percent THD maximum into a 100 percent non-linear load with crest factor ratio of 3:1.
 - 7. Load Power Factor Range: 0.5 lagging to 1.
 - 8. Output Power Rating: Rated kVA at 0.7 lagging power factor.
 - 9. Overload Capability: >100 percent to 110 percent indefinitely, 111 percent to 150 percent for ten seconds, and 151 percent to 200 percent for 0.25 seconds. The load shall be transferred to bypass when one of the previous conditions are exceeded. >201 percent for minimum two cycles, then shut down of UPS. Immediate shutdown into a short circuit.
 - 10. Voltage Transient Response: +/- 7 percent maximum for a load step, up to and including 100 percent of the UPS rating.
 - 11. Transient Recovery Time: To within 1 percent of steady state output voltage within 96 milliseconds.
- (e) *Batteries.*
- 1. Internal Battery: The battery shall consist of flame retardant, valve regulated, lead acid cells. The UPS shall be suitable for installation inside a computer room per requirements of UL Standard 1778.
 - 2. Reserve Time: The UPS shall contain an internal battery system to provide a reserve time of five minutes at 100 percent load and 12.5 minutes at 50 percent load, with an equal number of power and battery modules fitted. The UPS shall include provisions to fit additional battery

-4-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

modules internally if space permits. The UPS shall also interface with an external battery cabinet.

3. Battery Recharge: The UPS shall include temperature-compensated battery charging. When equal number of power modules and battery modules are fitted the battery charger shall be
4. able to recharge the internal batteries from 10 percent charge to 90 percent charge in six hours at nominal input voltage and nominal ambient temperature.

(f) *Environmental Conditions.*

1. Ambient Temperature
 - A. Operating: UPS 32° F to +104° F; battery 68° F to 77° F for optimum performance.
 - B. Storage: UPS -4° F to +140° F; battery -4° F to 77° F for maximum 6 months.
2. Relative Humidity
 - A. Operating: 5 percent to 95 percent non-condensing.
 - B. Storage: 5 percent to 95 percent non-condensing.
3. Altitude
 - A. Operating: To 10,000 feet. Derating/reduced operating temperature range shall be required for higher altitudes.
 - B. Storage: To 30,000 feet.
4. Audible Noise - Noise generated by the UPS during normal operation shall not exceed 62 dBA measured at three feet from the surface of the UPS.
5. Electrostatic Discharge - The UPS shall be able to withstand a minimum 15 kV without damage and shall not affect the critical load.

(g) *User Documentation.*

The specified UPS system shall be supplied with two user's manuals. Manuals shall include installation drawings and instructions, a functional description of the equipment with block diagrams, safety precautions, illustrations, step by step operating procedures, and routine maintenance guidelines.

(h) *Quality Assurance*

The manufacturer shall have a minimum of thirty years of experience in the design, manufacture, and testing of solid-state UPS systems.

-5-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

(i) *Factory Testing.*

Before shipment, the manufacturer shall fully and completely test the system to assure compliance with the specification. These tests shall include operational discharge and recharge tests on the internal battery to guarantee rated performance. The UPS shall ship completely assembled with all modules installed. The manufacturer shall submit certified test reports showing the results of the factory testing for acceptance to be included with each shipping unit.

(j) *Fabrication.*

All materials and components making up the UPS shall be new, of current manufacture, and not in prior service except as required during factory testing. The UPS shall be constructed of replaceable subassemblies. All active electronic devices shall be solid-state.

1. **Wiring:** Wiring practices, materials, and coding shall be in accordance with the requirements of the National Electrical Code (NFPA 70).
2. **Cabinet:** The UPS unit shall be comprised of: power module, battery module, control module, and user interface module housed in a single free-standing enclosure that shall meet the requirements of IP20. The UPS system shall be designed such that the battery modules may be installed into all module bays in the cabinet and power modules into all module bays in the top half of the cabinet. The UPS cabinet shall be cleaned, primed, and painted with the manufacturer's standard color. Casters and leveling feet shall be provided.

(k) *Cooling.*

The UPS shall be cooled by forced air via internally mounted fans.

(l) *Input Converter.*

1. **General:** Incoming AC power shall be converted to a regulated DC output by the input converter for supplying DC power to the inverter. The input converter shall provide input power factor and input current distortion correction.
2. **AC Input Current Limit:** The input converter shall be provided with AC input overcurrent protection.
3. **Input Protection:** The UPS shall have built-in protection against undervoltage, overcurrent, and overvoltage conditions including low-energy surges introduced on the primary AC source and the bypass source. The UPS shall sustain input surges without damage per criteria listed in IEEE C62.41, Category A & B. The UPS cabinet shall contain an input breaker sized to supply full 20 kVA rated load and to recharge the battery at the same time.

-6-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

4. **Battery Recharge:** The UPS shall contain temperature-compensated battery charging. When an equal number of power modules and battery modules are installed the battery charger shall be able to recharge the internal batteries to 90 percent charge in six hours at nominal input voltage and nominal ambient temperature.
5. **Charger Output Filter:** The battery charger shall be a DC power supply.

(m) Inverter.

1. **General:** The inverter shall convert DC power from the input converter output, or the battery, into precise regulated sine wave AC power for supporting the critical AC load.
2. **Overload:** The inverter shall be capable of supplying current and voltage for overloads exceeding 100 percent and up to 200 percent of full load current. A visual indicator and audible alarm shall indicate overload operation. For greater currents and longer time duration, the inverter shall have electronic current-limiting protection. The inverter shall be self-protecting against all magnitudes of connected output overload. Inverter control logic shall sense and disconnect the inverter from the critical AC load without the requirement to clear protective fuses. The load shall be transferred to bypass when one of the above conditions is exceeded
3. **Maximum Load Alarm:** The user shall be able to set the alarm point to a value less than 100 percent rating such that the UPS will alarm before an overload condition or loss of redundancy is reached.
4. **Output Frequency:** The output frequency of the inverter shall be controlled by an oscillator. The oscillator shall hold the inverter output frequency to +/- 0.5 percent for steady state and transient conditions. The inverter shall track the bypass continuously if the bypass source maintains a frequency within the user-selected synchronization range. If the bypass source fails to remain within the selected range, the inverter shall revert to the internal oscillator.
5. **Output Protection:** The UPS inverter shall employ electronic current limiting.
6. **Battery over Discharge Protection:** The UPS control logic shall control the shutdown voltage set point. This point is dependent on the rate of discharge.

(n) Display and Controls.

1. **General**
 - A. The front panel shall consist of multiple status LEDs, switches, and a four line by twenty character liquid crystal display (LCD) for additional alarm and configuration information. All mimic display light emitting diodes (LEDs) shall be green in color and shall indicate the following:
 - (1) AC Input

-7-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

- (2) On Battery
 - (3) Load On/Off
 - (4) On Inverter
 - (5) On Bypass
- B. The UPS fault indicator shall be used with additional indicators listed below and audible alarms to notify the user that a UPS fault condition has occurred. The color of the fault indicator LED shall be amber.
- (1) Replace Battery Module
 - (2) Replace Power Module
 - (3) Replace Control Module
 - (4) On Bypass
 - (5) Low Battery
 - (6) Over Temp Warning
 - (7) UPS Shutdown
- C. If there is a fault condition, the UPS shall attempt to maintain conditioned power to the load or transfer to bypass. There shall also be a visual indication on each module that indicates if the module failed and needs to be replaced.
- D. In addition to an audible/visual fault signal the UPS shall also record fault occurrences in a rolling event log. The event log on the standard unit shall record up to 255 occurrences, with the oldest events discarded first, etc. The user shall have access to the event log through the LCD display. Every alarm and event recorded in the event log shall contain a time and date stamp.
2. Audible Alarms
- A. The volume of all audible alarms shall be at least 65 dBA at a distance of three feet. An audible alarm shall be used in conjunction with the LED/LCD indication to indicate a change in UPS status.
 - B. The audible alarms shall enunciate for utility line loss, low battery (while on battery), and all other alarm conditions. For all alarm conditions, the user will look at the display to determine the cause of error/alarm.

-8-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

- C. All alarm tones shall be a continual tone until the condition rectifies itself or the alarm is silenced. Once silenced, the audible alarm shall not sound until a new alarm condition is present.
- 3. Alarm Silence Button: In addition to the load On/Off switch, the user interface shall include an audible 'Alarm Silence' switch. If the alarm silence switch is pressed for one second, all current audible alarms shall be disabled. If a new alarm occurs, or a cancelled alarm condition disappears and then re-appears, the audible alarm shall be re-enabled.
- 4. LCD Display: The display shall be capable of being used to program all information (voltage, frequency, etc.) into the UPS. All display values that require time and date shall be 'year 2000' compliant.

(o) Automatic Battery Test.

- 1. The UPS shall initiate an automatic battery testing sequence periodically, at a programmed day and time of day, selectable by the end user. The user shall be able to select the interval of the battery test and shall be able to select 1, 2, 3, 4, or 6 week intervals, and shall be able to select to disable the automatic battery test.
- 2. Should a battery failure occur, the battery module shall disconnect itself from the critical DC bus and the UPS shall immediately return to normal mode and fault signals (visual, audible, and remote via serial) shall be communicated. No audible or remote (via serial/contact closures) indication of the battery test shall be communicated during the duration of the automatic battery test.
- 3. The automatic battery test factory default settings shall be enabled at a two week interval and shall occur on Wednesdays at 0600 hours (based on the twenty-four hour clock).

(p) Remote Emergency Power Off (REPO).

- 1. The remote emergency power off function (REPO) shall allow the user to disable all UPS outputs in an emergency situation. The REPO shall be able to interface with either normally open (N.O.) or normally closed (N.C.) systems. The REPO shall be activated when a pair of Safety Extra Low Voltage (SELV) contacts, external to the UPS, are activated. The REPO connection shall be through a simple terminal block type connector.
- 2. The REPO function shall not operate if no system control modules are present in the UPS or if the manual bypass switch is in the bypass position. The user will supply a means of interfacing with the REPO circuit to allow disconnecting the UPS input feeder breaker to remove all sources of power to the UPS and the connected equipment to comply with local wiring codes/regulations.
- 3. Regardless of the UPS mode of operation when the REPO is activated, the UPS output shall not be re-enabled until the following occurs:

-9-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

- A. REPO contacts are reset (closed if N.C. contacts are used and open if N.O. contacts are used)
- B. Input circuit breaker is closed
- C. Control enable switch is turned on
- D. User interface on/off switch is depressed

(q) *Bypass.*

1. General: A bypass circuit shall be provided as an integral part of the UPS. The bypass shall have an overload rating of 300 percent rated full load for ten cycles and 1000 percent for sub-cycle fault clearing. The bypass control logic shall contain an automatic transfer control circuit that senses the status of the inverter logic signals and operating and alarm conditions. This control circuit shall provide a transfer of the load to the bypass source, without exceeding the transient limits specified herein, when an overload or malfunction occurs within the UPS.
2. Automatic Transfers
 - A. The transfer control logic shall automatically activate the bypass, and shall transfer the critical AC load to the bypass source, after the transfer logic senses one of the following conditions:
 - (1) Inverter overload capacity exceeded
 - (2) Inverter over temperature
 - (3) UPS fault condition
 - B. For inverter overload conditions, the transfer control logic shall inhibit an automatic transfer of the critical load to the bypass source if one of the following conditions exists:
 - (1) Inverter/Bypass voltage difference exceeding preset limits (± 15 percent of nominal)
 - (2) Bypass frequency out of preset limits (± 5 percent of nominal frequency)
 - C. Automatic Retransfer: Retransfer of the critical AC load from the bypass source to the inverter output shall be automatically initiated unless inhibited by the manual control. The transfer control logic shall inhibit an automatic retransfer of the critical load to the inverter if one of the following conditions exists:
 - (1) Bypass out-of-synchronization range with inverter output
 - (2) Overload condition exists in excess of the inverter full load rating

-10-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

- (3) UPS fault condition present

D. Manual Transfer

- (1) The UPS shall have a manual bypass function. The manual bypass function shall be provided via a switch mounted on the bottom-front of the UPS. The AC break time between inverter and bypass shall be less than four milliseconds.
- (2) The manual bypass shall be configured to wrap around the rectifier, battery charger, inverter, and battery in the same manner as the automatic bypass. The manual bypass shall not wrap around the electromagnetic interference (EMI) filtering, overcurrent protection or isolation transformer.
- (3) The UPS shall initiate an audible alarm upon transfer to manual bypass. The audible alarm shall be capable of being silenced by the user. The alarm shall continue to sound (unless silenced) while in bypass mode..

(r) *Internal Battery.*

Flame retardant, valve regulated, gas recombination, lead acid batteries shall be used as a stored-energy source for the specified UPS system. The battery shall be housed in separate replaceable modules that slide into all open bays of the UPS cabinet, and shall be sized to support the inverter at rated load and power factor, in an ambient temperature between 68°F and 77° F, for five minutes of reserve time at 100 percent load, and 12.5 minutes of reserve time at 50 percent load. The expected life of the battery shall be five years or a minimum of 250 complete discharge cycles. For extended battery reserve time, additional battery modules may be added if the frame size allows; external battery cabinets shall be available as an option.

(s) *Communications.*

The UPS shall allow for flexibility in communications via two DB9 communication ports and four Ethernet ports on the rear of the UPS. The UPS shall be able to communicate through two communications ports simultaneously; the media of either communications port shall be able to change without affecting the operation of the UPS.

(t) *Network Communications.*

A communications interface card that provides HTTP supported SNMP communication over a local area network shall be furnished and installed, unless otherwise specified by the Engineer. This card shall support 10/100 megabits per second Ethernet over unshielded twisted pair connection.

CONSTRUCTION REQUIREMENTS

All cable and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the Contract Documents shall be

-11-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

subject to the control and approval of CDOT or CDOT's designated representative. Equipment and materials shall be of the quality and manufacture indicated.

The Contractor shall provide manufacturer's equipment data sheets, specifications and installation instructions for all products.

(a) *Equipment Labeling.*

Equipment labeling shall be provided for each UPS and shall include all critical information concerning the system to which it is affixed. This information shall include the following:

1. Equipment nomenclature and designation (e.g., UPS 1)
2. System capacity rating in kVA and kW (e.g., 20 kVA / 18 kW)
3. Input voltage, phasing, and connection (e.g., 480 V, 3-Phase, 3-Wire Input)
4. Output voltage, phasing, and connection (e.g., 120/208 V, 3-Phase, 4-Wire Output)
5. Frequency and power factor (e.g., 60 Hz, 0.9 PF Lagging)
6. System or switchboard serving this piece of equipment
7. System, switchboard, or load that is being served by this equipment

(b) *Field Quality Control.*

The following inspections and test procedures shall be performed by factory trained field service personnel during the UPS start-up.

1. Visual Inspection
 - A. Inspect equipment for signs of shipping or installation damage.
 - B. Verify installation per drawings.
 - C. Inspect cabinets for foreign objects.
 - D. Verify neutral and ground conductors are properly sized and configured.
2. Mechanical Inspection
 - A. Check all power modules are correctly fitted.
 - B. Check all battery modules are correctly fitted
 - C. Check all terminal screws, nuts, and spade lugs for tightness.

-12-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING UPS**

3. Electrical Inspection
 - A. Confirm input voltage and phase rotation is correct.
 - B. Verify bypass voltage jumper is correct for voltages being used.

(c) *Unit Start-Up and Site Testing.*

The manufacturer's field service personnel shall provide site testing. Site testing shall consist of a complete test of the UPS system and the associated accessories supplied by the manufacturer. A partial battery discharge test shall be performed as part of the standard start-up procedure. The test results shall be documented, signed, and dated. Failure of one portion of the test shall require corrective action to that portion of the test and retesting of the entire system.

REVISION OF SECTION 614 HVAC

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

This work consists of furnishing and installing heating, ventilation, and air conditioning (HVAC) units for Traffic Management System Buildings.

MATERIALS

The Contractor shall furnish and install a self-contained wall mount heating, ventilation, and air conditioning (HVAC) unit suitable for outdoor use that is fully compatible with installation in the traffic management system building. The unit shall be completely factory assembled and tested and shall include compressor, indoor and outdoor coils, fans and motors as required, pre-wired controls, interconnecting refrigerant tubing, wiring, disconnects, and other necessary components mounted in a corrosion resistant cabinet. The units shall be Underwriters Laboratories (UL) approved and Air-Conditioning, Heating, and Refrigeration Institute (AHRI) AHRI Standard 210 certified.

Each HVAC unit shall have a Seasonal Energy Efficiency Ratio/Energy Efficiency Ratio (SEER/EER) rating of 10 or higher at AHRI conditions of 20°C wet bulb, 25°C dry bulb entering indoor air, and condenser entering air temperature of 35°C dry bulb. The total net cooling minimum capacity of the individual units shall be 56,500 British Thermal Units per Hour (BTUH) or greater, and sensible capacity shall be 45,600 BTUH or greater at AHRI conditions stated above. Electric resistance heating of 10 kilowatts shall be provided integral to the units. The compressor shall be a hermetic-type unless otherwise Approved by the Engineer. The refrigeration circuit shall include high and low pressure switches with a lockout relay. The contacts of the lockout relay shall be used to represent air conditioner / heater failure and shall be connected to the alarm terminal blocks.

The condenser and evaporator coils shall be constructed of aluminum plate fins mechanically bonded to seamless copper tubes. Outdoor fans shall be direct driven, slow speed propeller type for quiet operation. An economizer shall be factory installed within the cabinet of the air conditioner / heater. Slip-in economizers are not acceptable. The economizer shall include an enthalpy sensor to control the damper by measuring the total heat content of the outside air.

Unless otherwise noted on the plans; provide 230-VAC, 1-Phase units for buildings with a 120/240-VAC, 1-Phase electrical service, 200-VAC, 3-Phase units for buildings with a 120/208-VAC, 3-Phase electrical service, and 460-VAC, 3-Phase units for buildings with a 277/480-VAC, 3-Phase electrical service.

The air conditioning system shall include a lead/lag controller with thermostat with temperature adjustments over a minimum range of 15°C to 35°C. The air conditioner / heater controller shall have a programmable, 7-day, 24-hour clock with battery backup selectable for automatic air conditioner / heater switch over. It shall be possible to activate both air conditioner / heaters to accelerate cooling of the Traffic Management System Building when the building has reached a high ambient temperature.

CONSTRUCTION REQUIREMENTS

Shop drawings shall be submitted for Approval.

All installation work shall be completed in a professional and workman like manner.

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING GENERATOR**

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

The work shall include obtaining and installing a generator and all necessary conduit and wiring to connect the generator to the automatic transfer switch in the Traffic Management System Building. This work shall include all necessary conduits, wires, enclosures, equipment, materials, and personnel.

MATERIALS

The Contractor shall provide a generator with an environmental enclosure rated for installation in an exterior uncovered setting. The generator set shall be of the latest commercial design and shall include all of the necessary accessories for complete and operational installation as shown on the plans and in the specifications. The equipment supplied and installed shall meet the requirements of the National Electrical Code (NEC), along with all applicable local codes and regulations. All equipment shall be new and of current production of a national firm that manufactures the generator set and controls, transfer switches, switchgear, and assembles the generator set as a complete and coordinated system. There shall be one source of responsibility for warranty, parts, and service through a local representative with factory-trained service personnel.

(a) *Equipment.*

1. The generator shall be rated at not less than 60-kW/75-kVA at 120/208-VAC 3-Phase, and shall include an enclosed molded-case 250 Amp, 3-Pole output circuit breaker. The generator shall be capable of this rating while operating in an ambient condition of 90°F and 4800 feet above sea level.
2. Vibration isolators shall be provided between the engine-alternator and heavy-duty steel base.
3. The unit shall be supplied with all hardware to bolt the unit to a concrete slab.

(b) *Engine - The engine shall be equipped with the following:*

1. An electronic isochronous governor capable of +0.5 percent steady-state frequency regulation.
2. 12 Volt positive engagement solenoid shift-starting motor.
3. 70 Ampere minimum automatic battery charging alternator with solid-state voltage regulation.
4. Positive displacement, full pressure lubrication oil pump, cartridge oil filters, dipstick, and oil drain.
5. Dry-type replaceable air cleaner elements for normal applications.
6. The engine shall be fueled with natural gas and be supplied with a unit-mounted electric solenoid fuel shut-off valve, flexible fuel line, and secondary fuel pressure regulator.

-2-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING GENERATOR**

7. The engine shall have a minimum of eight cylinders, and be liquid-cooled by a unit-mounted radiator, blower fan, water pump, and thermostats. This system shall properly cool the engine with up to 0.5 inches water static pressure on the fan in an ambient temperature up to 122°F (50°C).
- (c) *Alternator.*
1. The alternator shall be of a permanent magnet brushless design.
 2. The alternator shall be salient-pole, brushless, 12-lead reconnectable, self-ventilated of drip-proof construction with amortisseur rotor windings and skewed stator for smooth voltage waveform. The insulation shall meet the NEMA MG1-2014 Part 33.4 for Class H and be insulated with epoxy varnish to be fungus resistant per NEMA RE 2-1999. Temperature rise of the rotor and stator shall be limited to 266°F (130°C). The excitation system shall be of brushless construction controlled by a solid-state voltage regulator capable of maintaining voltage within +/- 2 percent at all constant loads from 0 percent to 100 percent of rating. The regulator must be isolated to prevent tracking when connected to silicon-controlled rectifier (SCR) loads, and provide individual adjustments for voltage range, stability and volts-per-hertz operations, and be protected from the environment by conformal coating.
 3. The generator set shall meet the transient performance requirements of ISO 8528-5, class G2.
 4. The alternator excitation shall be of a permanent magnet exciter design.
 5. The generator shall be inherently capable of sustaining at least 250 percent of rated current for at least ten seconds under a 3-phase symmetrical short circuit without the addition of separate current support devices.
 6. The alternator having a single maintenance-free bearing, shall be directly connected to the flywheel housing with a semi-flexible coupling between the rotor and the flywheel.
- (d) *Controller.*
1. Set-mounted controller capable of facing right, left, or rear, shall be vibration isolated on the alternator enclosure. The controller shall be capable of being remote-mounted. The microprocessor control board shall be moisture proof and capable of operation from -40°F (-40°C) to 185°F (85°C). Relays shall only be acceptable in high-current circuits.
 2. Circuitry shall be of plug-in design for quick replacement. Controller shall be equipped to accept a plug-in device capable of allowing maintenance personnel to test controller performance without operating the engine.
 3. The controller shall include the following features:
 - A. Fused DC circuit.

-3-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING GENERATOR**

- B. Speed sensing and a second independent starter motor disengagement systems shall protect against starter engagement with a moving flywheel. Battery charging alternator voltage shall not be acceptable for this purpose.
 - C. Complete 2-wire start/stop control, which shall operate on closure of a remote contact.
 - D. The starting system shall be designed for restarting in the event of a false engine start, by permitting the engine to completely stop and then re-engage the starter.
 - E. Cranking cyler with 15 second ON and OFF cranking periods.
 - F. Overcrank protection designed to open the cranking circuit after 75 seconds if the engine fails to start.
 - G. Circuitry to shut down the engine when signal for high coolant temperature, low oil pressure, or overspeed is received.
 - H. Engine cool down timer factory set at five minutes to permit unloaded running of the standby set after transfer of the load to normal.
 - I. 3-position (Automatic-OFF-TEST) selector switch. In the TEST position, the engine shall start and run regardless of the position of the remote starting contacts. In the Automatic position, the engine shall start when contacts in the remote control circuit close and stop five minutes after those contacts open. In the OFF position, the engine shall not start even though the remote start contacts close. This position shall also provide for immediate shutdown in case of an emergency. Reset of all faults shall also be accomplished by putting the switch to the OFF position.
 - J. Audible alarm with silencing means per NFPA 110.
4. Standard indicating lights to signal the following shall be included:
- A. Not-in-Auto (flashing red)
 - B. Overcrank (red)
 - C. Emergency Stop (red)
 - D. High Engine Temperature (red)
 - E. Overspeed (red)
 - F. Low Oil Pressure (red)
 - G. Battery Charger Malfunction (red)
 - H. Low Battery Voltage (red)
 - I. Low Fuel (red)
 - J. Auxiliary Prealarm (yellow)
 - K. Auxiliary Fault (red)
 - L. System Ready (green)
5. Test button for indicating lights.
6. Terminals shall be provided for each indicating light above, plus additional terminals for common fault and common pre-alarm.

-4-

**REVISION OF SECTION 614
TRAFFIC MANAGEMENT SYSTEM BUILDING GENERATOR**

(e) *Instrument Panel.*

The instrument panel shall include the following:

1. Dual range voltmeter 3 1/2 inch, +/- 2 percent accuracy
2. Dual range ammeter 3 1/2 inch, +/- 2 percent accuracy.
3. Voltmeter-ammeter phase selector switch.
4. Lights to indicate high or low meter scale.
5. Direct reading pointer-type frequency meter 3 1/2 inch, 0.5 percent accuracy, 45 to 65 hertz (Hz) scale.
6. Panel-illuminating lights.
7. Battery charging voltmeter.
8. Coolant temperature gauge.
9. Oil pressure gauge.
10. Running-time meter.
11. Voltage-adjust rheostat

(f) *Accessories.*

1. An 80 percent rated line circuit breaker of 250 amperes, 240 volt rated, molded case type, generator mounted. A resettable line current sensing circuit breaker with inverse time versus current response shall be furnished which protects the generator from damage due to its own high current capability. This breaker shall not trip within the ten seconds specified above to allow selective tripping of down-stream fuses or circuit breakers under a fault condition. This breaker shall not automatically reset, preventing restoration of voltage if maintenance is being performed. A field current-sensing breaker shall not be acceptable.
2. Engine block heater. Thermostatically controlled and sized to maintain manufacturers recommended engine coolant temperature to meet the start-up requirements of NFPA 110, Level 1.
3. Weather housings shall be constructed of rugged steel, cleaned, phosphated, and electrocoat painted inside and out with rust inhibiting primer and exterior coat of the manufacturer's standard color. Side panels shall be lockable and easily removed for servicing.
4. Battery rack, and battery cables, capable of holding the manufacturer's recommended batteries, shall be supplied.
5. 6 Ampere automatic float and equalize battery charger with +/- 1 percent constant voltage regulation from no load to full load over +/-10 percent.
6. AC input line variation, current limited during engine cranking and short circuit conditions, temperature compensated for ambient temperatures from -40°F (-40°C) to +140°F (60°C), 5 percent accurate voltmeter and ammeter, fused, reverse polarity and transient protected.
7. The engine exhaust silencer shall be coated to be temperature and rust resistance, rated for critical application. The silencer shall reduce total engine exhaust noise by 25-35 decibels (A).
8. Gas-proof, seamless, stainless steel, flexible exhaust bellows with threaded NPT connection.

-5-

REVISION OF SECTION 614 TRAFFIC MANAGEMENT SYSTEM BUILDING GENERATOR

9. Two flexible fuel lines rated at a minimum of 257°F and 100 pounds per square inch ending in pipe thread.
10. Generator rodent guards.

The generator set shall conform to the requirements of the following codes and standards:

1. NFPA 70 – National Electrical Code. Equipment shall be suitable for use in systems in compliance to Article 700, 701, and 702.
2. NFPA 110 – Emergency and Standby Power Systems. The generator set shall meet all requirements for Level 1 systems. Level 1 prototype tests required by this standard shall have been performed on a complete and functional unit, component level type tests shall not substitute for this requirement.
3. UL 2200. The generator set shall be listed to UL 2200 or submit to an independent third party certification process to verify compliance as installed.

CONSTRUCTION REQUIREMENTS

The Contractor shall submit foundation and generator slab drawings and calculations for approval.

The generator shall be installed in accordance with the manufacturer's recommendations. It shall be leveled on the pad. It shall be bolted to the pad in accordance with manufacturer's recommendations.

A site test shall be performed by the manufacturer. An installation check, start-up, and Traffic Management System Building load test shall be performed by the generator manufacturer's local representative. The engineer, regular operators, and the maintenance staff shall be notified of the time and date of the site test five business days in advance of the tests. The tests shall include:

1. Fuel, lubricating oil, and antifreeze shall be checked for conformity to the manufacturer's recommendations, under the environmental conditions present and expected.
2. Accessories that normally function while the generator set is standing by shall be checked prior to cranking the engine. These shall include: block heaters, battery charger, alternator strip heaters, remote annunciator, etc.
3. Start-up under test mode to check for exhaust leaks, path of exhaust gases outside the shelter, cooling air flow, movement during starting and stopping, vibration during running, normal and emergency line-to-line voltage and frequency, and phase rotation.
4. Automatic start-up by means of simulated power outage to test remote-automatic starting, transfer of the load, and automatic shutdown. Prior to this test, all transfer switch timers shall be adjusted for proper system coordination. Engine coolant temperature, oil pressure, and battery charge level along with generator set voltage, amperes, and frequency shall be monitored throughout the test. An external load bank shall be connected to the system if sufficient Traffic Management System Building load is unavailable to load the generator set to the nameplate kilowatt rating.

REVISION OF SETION 614 ITS TEST LAB

Section 614 of the Standard Specifications is hereby revised for this project as follows:

DESCRIPTION

The Contractor shall set up an ITS test laboratory for testing ITS devices and shall provide all ITS equipment required for the test lab. This allows the CDOT's software developer (CTMS Integrator) to remotely operate and view devices, such as dynamic message signs (DMS) during the software development and testing phases for device(s). The Contractor shall provide devices and associated equipment from the manufacturers for software driver development, software testing and integration of the device into the CMTC and overall ITS system. The Contractor shall provide a secure location to house the ITS test lab equipment.

MATERIALS

The following device shall be furnished and fully functional, (with exception of integration) for the ITS test lab:

1. All types of variable message sign to be used on Project (including but not limited to DMS and SMVMS);
2. All CCTV cameras;
3. DSRC Radio; and
4. Three LUS signs. Signs shall be set up for concurrent testing.

The Contractor shall provide remote communications through a VPN access to the ITS test lab to allow for test message delivery to the device(s) from the CTMS Integrator.

The Contractor shall provide a web interface camera for the test lab to allow for the test lab devices to be remotely monitored and verify messages by the CTMS Integrator and the CTMC.

The Contractor will install and configure all devices in the test lab with the firmware that will be utilized with that device.

This test lab shall include all communications and power distribution assemblies, load centers, and cabling necessary to provide a wholly functional system.

Communications equipment will include, but is not limited to, an Ethernet switch and jumper cables. Communications shall be either on the Contractor's internal network, be placed on cellular modems, or provide other means of communication between the test lab and the CTMS Integrator's offsite testing location. All cabinets and controllers shall be provided as necessary.

CONSTRUCTION REQUIREMENTS

The Contractor shall work with the CTMS Integrator to configure and set up the test lab and devices. The Contractor shall provide an indoor facility where all ITS test lab equipment and devices, can be set up for

-2-

**REVISION OF SECTION 614
ITS TEST LAB**

testing. Contractor will fully set up the devices and equipment, provide power and communications to allow for the CTMS Integrator to test integration of device.

CTMS Integrator will need to have access to the facility during business hours.

The Contractor shall provide all test lab devices and equipment, and provide the CTMS Integrator remote access to the fully functional ITS test lab nine months before devices are to be installed. The CTMS Integrator needs this time in the test lab to verify device compatibility prior to the large volume ordering and for software development prior to installation of devices. The Contractor shall work with the software developer and CTMS Integrator to configure the test lab and adjust devices for testing. This may require resetting placement and angles of signs to allow for visibility and operations from remote testing location by the CTMS Integrator. The ITS test lab shall remain operational through Final Acceptance.

REVISION OF SECTION 614 TOLL SYSTEM INTEGRATION

Section 614 of the Standard Specifications is hereby revised for this Project as follows:

DESCRIPTION

Subsection 614.01 shall include the following:

This work includes furnishing and installing infrastructure to support an electronic toll collection system to be provided by the ETC System Integrator under separate contract to CDOT / High Performance Tolling Enterprise (HTPE). Infrastructure is to be furnished and installed by the Contractor which includes: PVC conduit, electrical power, gantries, poles, foundations and cabinets as shown in the plan sheets and described in the Special Provisions. Supporting / coordinating activities include lane closures and traffic control as requested by the ETC Systems Integrator and approved according to applicable lane closure policies.

MATERIALS

Subsection 614.02 shall include the following:

All infrastructure components, lane closures, and traffic control shall comply with the individual specifications related to them within these Special Provisions.

CONSTRUCTION REQUIREMENTS

Subsection 614.09 shall include the following:

The System Integrator will be required to follow the applicable lane closure policy for traffic control for all equipment installation, configuration, integration, and testing activities on the facility. In addition, the System Integrator will be required to schedule all work activities with the Contractor and provide at least 48 hours' notice of any lane closures needed to do the work. If a lane closure cannot be accommodated the Contractor shall propose another time period that is conducive to their work schedule. Any delays to the Project due to scheduling this work are the responsibility of the Contractor.

The Contractor will provide and coordinate traffic control for the ETC System Integrator's activities during the requested and approved lane closure.

Due to long delays regarding equipment of this nature the Contractor can expect up to 6 months backlog from vendors to receive equipment for this work both by the ETC System Integrator and the Contractor and this should be taken into account in the work schedule. This work will include conduit, cabinets, wire, toll equipment, poles, attachments, AVI readers, backup systems, mounting brackets, fiber connectors, connection, etc.

REVISION OF SECTION 614 ITS AND CCD OFFLINE DEVICES

Section 614 of the Standard Specifications is hereby revised for this project to include the following:

DESCRIPTION

Throughout the duration of the project, the Contractor is responsible for the maintenance of all ITS and CCD devices and communications infrastructure contained within the limits of this project.

Offline, as used in this specification, is defined as time during which data or video is not being received by a Colorado Operations Center or Node Building.

CONSTRUCTION REQUIREMENTS

The Contractor and the Department shall provide CDOT ITS (Jill Scott at office: 303.512.5805, jill.scott@state.co.us) and Region 1 Traffic Maintenance (Ben Kiene at office: 303.365.7307, benjamin.kiene@state.co.us) an advanced notice for all planned CDOT outages, and shall provide CCD an advance notice for all CCD devices as described below:

(a) *Planned ITS Outages.*

A “planned outage” is considered to be any loss of device functionality or communication that can be anticipated in advance due to work activities within or related to the Project. For planned outages, CDOT ITS or CCD shall be given proper advance notice as described below. All proposed equipment, power, and all temporary communications necessary for maintaining ITS devices during construction shall be constructed and put in place prior to the cutover or reset in order to minimize downtime of devices.

1. ITS Network: The Contractor shall submit a fiber optic backbone cutover plan to CDOT ITS or CCD for review 30 calendar days prior to disruption of communications or device outages, as well as a one week advance notice to CDOT ITS or CCD of any fiber optic backbone cutover work. This cutover plan shall detail how the Contractor will sequence the construction activities, so that the new backbone is installed and spliced into the existing devices and the node building such that 12-hours of downtime is not exceeded. CDOT’s or CCD’s network fibers shall be spliced first in the sequence. The fiber optic backbone splicing shall be scheduled for an overnight shift such that the ITS network shall be fully functional by 4 AM and the remaining cable is complete by 9 AM, unless otherwise Approved by the Engineer. The fiber optic backbone splicing shall be scheduled between Tuesday and Thursday, except holidays, unless otherwise Approved by the Engineer.

For work on node locations, the Engineer shall be notified about the need to shut down power in order to perform electrical wiring work at least 48 hours before the power needs to be shut down. Additionally, the Engineer shall be notified the day before the shutdown and on the morning of the day of the shutdown. Power shall be turned off in a responsible manner that will not harm existing node components. All necessary precautions and preparations shall be made and coordinated with CDOT prior to power being turned off. Power may not be off for a period of longer than 45 minutes unless specifically authorized by the Engineer.

-2-

**REVISION OF SECTION 614
ITS AND CCD OFFLINE DEVICES**

2. ITS Devices: The Contractor shall provide a 72-hour advance notice to CDOT ITS or CCD to coordinate any downtime for ITS devices for a planned outage. Allowable offline periods for ITS field devices shall be a 48-hour period scheduled between Tuesday and Thursday, excluding holidays, unless otherwise Approved by the Engineer. ITS field devices covered under this special provision include, but are not limited to, CDOT and CCD CCTVs, MVRDs, RWISs, TTIs, ramp meters, DMSs, dopplers, ATRs, and CCD traffic signals. No more than two ITS devices shall be inoperable at any one time.

For locations with new poles, all work on the new pole including installation of the cabinet, power, pull boxes, and fiber optic cables shall be advanced to the greatest possible degree of completion before any part of the existing system is disturbed. When the existing system is disturbed at a one location, work at that location shall progress continuously until that new or reset installation is fully operational and connected to the CMTC.

Installation of in-cabinet elements into new cabinets shall be done at locations where no construction traffic control is required.

(b) *Unplanned ITS Outages.*

An “unplanned outage” is considered to be any loss of network communications or device functionality that CDOT ITS or CCD does not receive proper advance notice, as described above, or is due to the Contractor’s negligence, act or omission under their control.

1. ITS Network: If the Contractor damages the CDOT ITS or CCD fiber optic backbones, CDOT ITS or CCD lose communications or power to a node building or operations center as a result of the Contractor’s negligence, act or omission under their control (e.g. Contractor damages ITS fiber optic backbone, disables the power to a node building/CTMC, or disables the communications between CMTC, node building and/or device), the Contractor shall be charged a disincentive. This disincentive is assessed per the requirements in Schedule 6 (*Performance Mechanism*) of this Project Agreement.

REVISION OF SECTION 614 GROUNDING AND BONDING

Section 614 of the Standard Specifications is hereby revised for this project as follows:

DESCRIPTION

This work consists of grounding and bonding requirements at project locations for all Intelligent Transportation System (ITS) related structures, poles, service pedestals and cabinets. The work covered in this section consists of labor, materials, and services required for a functional and unobtrusive grounding system.

- (a) *General.* Provide comprehensive grounding and bonding for ITS related equipment. CDOT's target resistance to ground value is equal to or less than 10 Ω .
- (b) *Applicable Documents.* Work performed in this section shall comply with the most current edition of the following codes and standards:
 1. IEEE 81 – Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Grounding System,
 2. IEEE C2 – National Electrical Safety Code,
 3. NEMA GR 1 – Grounding Rod Electrodes and Grounding Rod Electrode Couplings,
 4. NFPA 70 – National Electrical Code,
 5. NFPA 70E – Standard for Electrical Safety in the Workplace,
 6. NFPA 780 – Standard for the Installation of Lightning Protection Systems,
 7. TIA-607 – Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises,
 8. UL 96 – Lightning Protection Components,
 9. UL 96A – Installation Requirements for Lightning Protection Systems, and
 10. UL 467 – Grounding and Bonding Equipment.
- (c) Identify to the Engineer any conflicts between the requirements of codes/standards development organizations and the specifications for this project.
- (d) *Submittals.*
 1. Provide cut-sheets of each type of product proposed for approval by the Engineer prior to commencement of work.
 2. Provide a system plan, conductor routing, supports, connectors and ground rods along with connection, mounting and splicing details.

MATERIALS

Components.

1. Grounding electrodes (driven rods): Provide ground rods that meet or exceed the following requirements:
 - A. Preferred: Copper-clad steel ground rods (pointed) shall not be less than 0.625 inch diameter and a minimum of eight feet in length. It shall be UL certified and have a minimum plating thickness of 10 mil copper cladding.
 - B. Other Alternatives: Other ground rod types, such as chemical ground electrodes, may be considered based on site soil chemistry, adjacent electrically bonded structures, or if the

-2-

REVISION OF SECTION 614 GROUNDING AND BONDING

installation must occur in a corrosive area. The Contractor shall obtain written permission from the Engineer prior to using the previously mentioned alternatives.

2. **Grounding Electrode Conductor:** The grounding electrode conductor shall be solid or stranded copper with a minimum size of #6 AWG, unless otherwise specified. The Contractor shall size the grounding electrode conductor in accordance with Article 250.66 of the NEC. Bare and insulated grounding electrode conductors shall be permitted, as Approved by the Engineer. Insulated grounding electrode conductors shall be Type THWN and conform to the requirements of Article 310 of the NEC. Insulated grounding electrode conductors shall utilize a green jacket color. The grounding electrode conductor run shall be installed in one continuous run without a splice or joint, except as permitted in accordance with Article 250.64(C) of the NEC.
 - A. For bonding between a cabinet frame and busbar, a braided ground strap shall be utilized. The braided ground strap shall consist of non-insulated tinned copper flat braid wire with a minimum width of 0.5 inches and a thickness of 0.07 inches (based on estimated #6 AWG equivalence).
3. **Grounding Connectors:** Grounding connectors shall be provided for attachment to grounding electrodes, ground bus and ground lugs. Grounding and bonding connections shall be made by means of a compression connector, a mechanical connector, or an exothermic weld. Mechanical and compression connectors shall have only one conductor installed unless designed or UL-listed for more conductors. Mechanical connections shall only be permitted when a compression or exothermic connection cannot be made.
4. **Ground Bus:** Provide copper bar stock grounding busbar. The minimum size shall be 0.25 inch thick by 2 inches high by 6 inches wide and positions for five lugs, unless otherwise specified by the Engineer. Hole patterns on the busbar shall accommodate two-hole lugs in accordance with TIA-607 and hole spacing should not be less than 0.75 inch. Busbar must be wall mountable and UL certified. Stand-off brackets shall also be included and brackets shall be manufactured from 300 series stainless steel with stainless steel bolts and lock washers.

CONSTRUCTION REQUIREMENTS

General: Install equipment, materials and devices in accordance with equipment manufacturer's written instructions and in compliance with applicable installation standards.

1. **Connections:**
 - A. Provide exothermically welded connections below grade and in areas exposed to visible moisture.
 - B. Provide heavy duty bolted clamped connections, UL listed, above grade and in areas where safety to personnel and structures dictate.
2. **Installation:**

-3-

**REVISION OF SECTION 614
GROUNDING AND BONDING**

- A. Install one grounding electrode. Each grounding electrode shall be installed such that at least the entire length is in contact with the soil. Where a rock bottom is encountered, the grounding electrode installation shall conform to the requirements of Article 250.53(G) of the NEC. The grounding electrode system shall be installed within CDOT right-of-way.
 - B. Leave top of grounding electrode exposed for testing and for verifying quantities.
 - C. Measure the resistance of the installed grounding electrode with respect to the surrounding soil using an earth ground resistance tester.
 - D. If the results exceed 10Ω , install a second grounding electrode a minimum of one electrode length away from the first grounding electrode. The bonding jumper used to connect grounding electrodes shall be installed and sized in accordance with Article 250.53(C) of the NEC.
 - E. Measure the resistance of the installed grounding electrode system with respect to the surrounding soil using an earth ground resistance tester.
 - F. Record and report results to Engineer in writing. CDOT's target resistance to ground is equal to or less than 10Ω , however after installing two grounding electrodes, a resistance to ground value equal to or less than 25Ω will be accepted by CDOT. The Contractor shall be responsible for confirming the resistance to ground requirements with the various manufacturers of the equipment it procures for this project. Where manufacturers have more stringent resistance to ground requirements for operational performance and warranties, the Contractor shall be required to adhere to the manufacturer's requirements for acceptance by CDOT.
 - G. In the absence of low resistance soil conditions, the Engineer, at his/her sole discretion, may allow the use of the following: bentonite to fill the ground rod hole; chemical electrodes; or ground enhancement material. The Contractor shall obtain written permission from the Engineer prior to using the previously mentioned materials.
3. Surface Preparation
- A. Ground Bus: An abrasive pad shall be used to remove any dirt, grease, oil and oxidation from the ground bus. A thin coating of antioxidant compound shall be applied to the connection point on the ground bus. Using stainless steel hardware, the Contractor shall tighten and torque to the value specified for the hardware grade, material and size. Only one lug shall be installed per a two-hole mounting on a bonding surface. Lugs shall not overlap or use the same mounting holes on a bonding surface. Due to thermal cycling anticipated in the field environment, the lock washer shall be substituted with flat washers and a cupped spring washer (i.e., Belleville washer), with the cup against the head of the bolt.

-4-

REVISION OF SECTION 614 GROUNDING AND BONDING

- B. **Other Surfaces:** Clean the surface thoroughly where the grounding lug is to be connected. The grounding surface shall be clean of any paint, dirt, grease, oil, rust and other oxidation. A thin coating of antioxidant compound shall be applied to the connection point on the surface. Using stainless steel or silicon bronze hardware, the Contractor shall tighten and torque to the value specified for the hardware material and size. Lugs shall not overlap or use the same mounting holes on a bonding surface. The lock washer shall be substituted with flat washers and a cupped spring washer, with the cup against the head of the bolt.
- C. **Ground Attachment to Structures and Poles:** The grounding electrode conductor shall be connected to the ground stud on a structure or within a pole using stainless steel nuts and cupped spring washers. The connector type for the grounding electrode conductor shall be a full circle connector sized appropriately for the diameter of the ground stud and the wire gauge of the conductor.

Where a ground stud does not exist on a structure or within a pole, the Contractor shall install a tapped and threaded hole to accommodate the grounding electrode conductor and screw. The connector type for the grounding electrode conductor shall be a full circle connector sized appropriately for the diameter of the screw and the wire gauge of the conductor. Stainless steel screws and cupped spring washers shall be included.

- D. **Grounding Connectors:** The lug size, configuration and material for compression connectors shall be selected based on the grounding electrode conductor size and fastening conditions. The insulation shall be trimmed back so that the bared grounding electrode conductor is slightly longer than the barrel. After applying an antioxidant compound on the exposed grounding electrode conductor, insert the conductor so that it touches the end of the barrel as viewed through the inspection port. Ensure the grounding electrode conductor remains at the end of the barrel before making the first crimp nearest the tongue end and working toward the conductor with the remaining crimps. The lug manufacturer's instructions shall be followed for the number of crimps and their location on the barrel.

For exothermic welds to the grounding electrode conductor, select the mold and weld metal applicable to the conductor size and lug configuration. Clean and dry (using a torch) the grounding electrode conductor and the mold. Insert the conductor and lug into the mold. Close the handle clamp, lock the mold and then insert the disk into the mold. Pour the weld metal into the mold and apply the starting material over the weld metal and on the lip of the mold. Close the cover and ignite using a flint igniter. After the reaction is complete, wait a minimum of 15 seconds and then open the mold and remove the finished lug connection. Clean any slag from the finished lug connection.

See project specific Testing & Integration Plan for additional requirements.

**REVISION OF SECTION 614
GLOBAL POSITIONING SYSTEM (GPS)**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

The Contractor shall provide Global Positioning System (GPS) Coordinate information for all device, conduit, pull box and manhole locations on this Project. Coordinates of both proposed and existing devices in the project limits shall be provided. GPS coordinates shall be provided in both hard copy and electronic shape file formats.

MATERIALS

Documentation verifying the type of GPS unit being proposed for use and the specifications of the unit shall be provided to the Department for review prior to data gathering.

CONSTRUCTION REQUIREMENTS

The Contractor shall provide geodetic datum for all roadway devices, conduit, fiber optic pull boxes and manholes within the project limits. This shall include Intelligent Transportation System devices, communications cabinets, traffic signal controller cabinets, ramp metering cabinets, automated traffic recorder cabinets, conduit, pull boxes and fiber optic cable running line manholes.

The Contractor shall use a device designed specifically for mapping GPS information to Universal Transverse Mercator (UTM) Zone 13 coordinate system utilizing 1983 North American Datum (NAD83). Cell phones with GPS capabilities shall not be allowed for determining GPS location.

The GPS data shall be expressed in Latitude and Longitude and Universal Transverse Mercator (UTM) Zone 13 utilizing 1983 North American Datum (NAD83). Altitude shall be expressed in meters:

Latitude and Longitude shall be provided in Decimal Degree (DD) format to a precision of six decimal places.

Example - Latitude: _____ Longitude _____ Altitude (m) _____

North American Datum shall be provided in coordinates to a precision of three decimal places.

Example - X (easting) _____ Y (northing) _____ Z (m) _____

For data collection, the Contractor shall use the averaged waypoint. Minimum averaging time at each location shall be two minutes prior to documenting the information.

Accuracy tolerances for data collected by the GPS unit shall be within a maximum of 1 meter.

The Contractor shall completely fill in all information on the forms provided with Revision of Section 614 – ITS As-Built Documentation for submittal to the Department.

The Contractor shall provide electronic shapefiles with the GPS information for CDOT to import into their software. The mandatory file extensions needed for the shapefiles include .shp, .shx, .dbf, and .prj. The following shapefile attributes shall be collected by the Contractor:

-2-

**REVISION OF SECTION 614
GLOBAL POSITIONING SYSTEM (GPS)**

- A. Fiber Cables
 - (1) Cable size and type
 - (1) Depth of cable (in inches)
 - (2) Owner
 - (3) Cable manufacturer
 - (4) Cable length
 - (5) Device connected to (if fiber lateral)
 - (6) Optical wavelengths to each communication device at the port level
 - (7) Patch panel size, type, manufacturer, and position for each fiber

- B. Power Cables
 - (1) Number and size of conductors
 - (2) Depth of cable (in inches)
 - (3) Owner
 - (4) Cable length

- C. Communication Device
 - (1) Type
 - (2) Manufacturer
 - (3) Configuration
 - (4) Ports: type and status: active or unused.
 - (5) Fiber strand corresponding to each active port
 - (6) Port wavelength

- D. Fiber/Power Structure (Pull Box / Manhole)
 - (1) Location ID
 - (2) Direction and number of empty and used conduits
 - (3) Structure type – manhole or pull box
 - (4) Manufacturer
 - (5) Size – diameter of manhole or dimensions of pull box
 - (6) Fiber Slack Loop – total length of slack loop in the units reported on the cable
 - (7) Fiber Slack Storage Type – note if it is inside a manhole or pull box and if it is connected to a splice canister. Is it a coil or figure eight?
 - (8) Hazardous – is the structure hazardous? If so, why? Examples of hazardous structures include confined spaces, atmospheric, concerns, falls from heights due to slip, trips or falls, or manholes over 5' deep.

- E. Splice Enclosure
 - (1) Splice enclosure type
 - (2) Splice enclosure manufacturer
 - (3) Owner
 - (4) Installer
 - (5) Date installed
 - (6) Location type
 - (7) Location description
 - (8) Grounding method
 - (9) Site-specific comments

-3-

**REVISION OF SECTION 614
GLOBAL POSITIONING SYSTEM (GPS)**

- F. Electronic Marker
 - (1) Marker Type
 - (2) Marker Manufacturer
 - (3) Marker Color and Frequency

- G. Conduit System
 - (1) Buried Depth
 - (2) Encasement type
 - (3) Manufacturer
 - (4) Measured length
 - (5) Installation date
 - (6) Duct bank height
 - (7) Duct bank width
 - (8) Material
 - (9) Construction status
 - (10) Duct availability

- H. ITS Device Point
 - (1) Device Type – CCTV, TTI, DMS, MVRD, etc.

- I. Power Structure (Meter/Disconnect)
 - (1) Type – power meter or disconnect
 - (2) Capacity / Breaker sizes

**REVISION OF SECTION 614
ITS SYSTEM AS-BUILT DOCUMENTATION**

Section 614 of the Standard Specifications is hereby revised for this Project to include the following:

DESCRIPTION

The Contractor shall complete and transmit to the Department the ITS as-built documentation as part of the final submittals on the Project.

MATERIALS

There are no materials requirements associated with this special provision.

CONSTRUCTION REQUIREMENTS

The Contractor shall document the as-built device, communications, and power infrastructure placement and material information. The Contractor shall clearly mark the plan sheets with red ink describing the as-built condition of all elements installed, including all changes made to fiber optic splicing. The as-built markups shall include the following information related to location markers:

- (1) Type of location marker installed
- (2) Distances between location markers
- (3) Distances between pull boxes and manholes to ITS devices
- (4) The distance and location to each CDOT utility point of service connection source point which the local utility companies have provided, including electrical power, transformer source, and telephone pedestals.

At the end of the Project, the Contractor shall create a legible PDF scan of the marked up as-built drawings, and submit the hard copy and PDF to the Department.

The Contractor shall complete the following forms included in this special provision:

- (1) Form 1411—ITS Device Installation Checklist
- (2) ITS As-Built Documentation Form
- (3) Fiber Optic Cable As-Built Documentation Form

Prior to filling out forms, the Contractor shall review the forms and instructions and request all necessary clarification from the Department. Instructions for Form 1411 are included in this special provision.

The Contractor shall request from the Department electronic copies of the ITS As-Built Documentation Form and the Fiber Optic Cable As-Built Documentation Form. The Contractor shall fill out the electronic forms and provide the completed forms to the Department. The file name of the electronic forms shall include the form type, the five-digit construction subaccount number, and a description of the installation location.

**REVISION OF SECTION 614
ITS SYSTEM AS-BUILT DOCUMENTATION**

FORM 1411 INSTRUCTIONS

The following instructions are provided for information to the Contractor. The Contractor shall direct all questions regarding form 1411 to the CDOT ITS Engineer.

Project Engineer / Installer / Contact # / Installation Date

Fill in the name (first, last) of the Project Engineer and device Installer and phone numbers for both parties. Fill in the date of installation.

Device Type

Place a check next to the type of device being installed, or fill in the box marked "Other."

Location / Roadway / Direction / Crossroad / Mile Marker

Fill in the name of the major roadway on which the device is installed, the direction of travel on the side of road on which the device is installed, the nearest crossroad, and highway mile marker to the nearest hundredth of a mile. For the direction of travel, odd numbered highways are always considered north-south highways and even numbered highways are always considered east-west highways.

Latitude / Longitude / Altitude

Fill in the latitude, longitude, and altitude using the method described and the precision and accuracy defined in the special provision Revision of Section 614 – Global Positioning System (GPS).

Manufacturer / Model # / Warranty Start / Warranty Expiration Date / Warranty Contact Information

Fill in the manufacturer name, device model number, manufacturer warranty state date, warranty expiration date, and warranty contact information. The warranty contact information shall be the name and telephone number of the party responsible for addressing warranty issues with the device.

Maintenance Responsibility

With input from the Department, check the applicable box to identify the CDOT personnel responsible for maintaining the device. If a specific CDOT region is responsible, define whether region maintenance or traffic group is responsible for maintenance.

Travel Time to Device from Golden, CO

Use a reliable mapping tool to provide an approximate travel time in minutes (assuming no traffic) from 425 Corporate Circle, Golden, Colorado, 80401 to the device location. Google maps, Apple maps, and Bing maps are examples of reliable mapping tools.

-4-

**REVISION OF SECTION 614
ITS SYSTEM AS-BUILT DOCUMENTATION
FORM 1411 INSTRUCTIONS (CONTINUED)**

Equipment Access

Briefly describe how maintenance personnel will access both the communications cabinet and device. If the communications cabinet is at ground level and the device requires a bucket truck for access, write “Cabinet ground level, device bucket truck” or something similar.

Roadway Closure Requirements for Maintenance

Describe what portion of the paved roadway is required to be occupied by a maintenance vehicle to access the communication cabinet and device.

Communications / Additional Communication Notes

Check the appropriate box for the type of communications used for the device, or fill in the box marked “Other.” Provide additional applicable communications notes.

Device Purpose

With input from the Department, check the applicable box to identify the purpose of the device.

Pictures

Check that each described picture (at a minimum) has been taken and provided in a digital format to the Department. Label each picture file with the major street name, mile marker to the nearest hundredth, device type, and brief description of the picture (e.g. cabinet).

Power Provider / Contact / Account

Insert the name of the power service provider, power company contact phone number, and account number for the device service. If no new power service was provided for the device, fill in “NA”

Comm. Provider / Contact / Account

Insert the name of the communications service provider, communications service contact phone number, and account number for the device service. If communications is via CDOT’s network, fill in “CDOT”.

Provide redline as-builts

Check the box after redline as-builts of power and communications service points are provided as described.

Additional Notes

Fill in additional notes that are relevant to future maintenance operations.
