

# I-70 Mountain Corridor Incident Management Plan

Corridor-wide and County-specific Incident Management Plans have been developed to facilitate efficient coordination of the closure and opening of the Interstate during both major and minor incidents (i.e., snow events, sink holes, accidents, rock fall).

## **I-70 Corridor Wide Incident Management Plan**

The Corridor-wide plan focuses on major events that would necessitate the closure of I-70 and re-routing of traffic to alternate routes for a significant amount of time and beyond county-specific detours.

## **Eagle, Summit, and Clear Creek County Incident Management Plans**

### **Major Objectives:**

- Consistent communication protocol
- Unified command including public communication
- Staged closures and openings
- Expansion of truck parking and chain stations throughout the Corridor
- Local community management including detour routes and parking options
