

March 21, 2017

Atkins North America, Inc. 7604 Technology Way, Suite 400 Denver, Colorado 80237

Attention: Mr. Matt Aguirre, PE

Transportation Engineer

Subject: Life Cycle Cost Analysis, North I-25 Reconstruction Project – Additional Request

Element No. 3 Segment, Approximately 2,500 feet South of Larimer County Road 16 (LCR 16)) to LCR 16, Larimer County, Colorado, CDOT Project No. IM

0253-255(21506), RockSol Project Number 292.05

Dear Mr. Aguirre:

RockSol Consulting Group, Inc. (RockSol) has performed a Life Cycle Cost Analysis (LCCA) for the subject project as part of the pavement design evaluation. Per Section 13.2 of the 2017 CDOT ME Pavement Design Manual (PDM), a Life Cycle Cost Analysis (LCCA) comparing asphalt and concrete should be prepared for all surface treatment projects with more than \$2,000,000 initial pavement cost where both pavement types are considered feasible alternatives as determined by the CDOT Regional Materials Engineer.

This LCCA is based on proposed pavement construction for northbound and southbound I-25 between approximate Mile Post (MP) 253.7 to MP 254.2, located approximately ½-mile south of LCR 16 to LCR 16 (Project Station No. 3264+00 to 3291+00). The proposed I-25 mainline configuration for the Additional Requested Elements number three (ARE#3) area includes widening to the inside median area for express lane construction as well as outside areas as needed for the *2-plus-1* lane configuration.

Table 1 lists the approximate widths and lengths based on information provided in the project plans (*Exhibit 1-C3: ARE #3, Extend the Express Lane from Just North of LCR 16 to Approximately 2500 Feet South,* dated 1/26/2017) where new pavement is constructed over new subgrade and where new pavement is constructed over existing pavement (overlay section) are proposed in the ARE#3 Segment project limits. The term "overlay" is used in this LCCA only to indicate new pavement construction over existing pavement structure. Design life of 20 years for new flexible pavement and 30 years for new rigid pavement was used for design of new pavements for ARE#3.

For this project, two pavement types were considered for the LCCA; rigid pavement consisting of portland cement concrete pavement (PCCP) and flexible pavement consisting of hot mix asphalt (HMA) and stone matrix asphalt (SMA). An Annual Growth Rate of 2.6 percent was used for pavement thickness designs. A summary of evaluated pavement sections is presented in Tables 2A and 2B.

Table 1 – ARE#3 South Segment Project Area Description

	New Pav	ement ov	er New S	ubgrade	grade Overlay Section – New Pover Existing Paver						
Station No.	Average Width (ft)	Length (ft)	_		Average Width (ft)	Length (ft)	Area (SF)	Area (SY)			
3264+00 to 3291+00	50	2,700	135,000	15,000	74	2,700	199,800	22,200			

Table 2A – Evaluated Pavement Section Summary (New Pavement Construction)

North I-25 Mainline ARE#3 Segment Station and Mile Post	Full Depth Pavement Section (20 year SMA/HMA and 30 Year PCCP)						
	SMA over HMA (inches) (Note 1)	ABC (inches)	R-40 (inches)				
Station No. 3264+00 to 3291+00	12.5	6.0	24				
MP 253.7 to MP 254.2	PCCP (inches)	ABC (inches)	R-40 (inches)				
	12.0	6.0	24				

Note 1: 2 inches of SMA over 10.5 inches of new HMA.

ABC = CDOT Class 6 Aggregate Base Course. R-40 = R-Value of subgrade material for the minimum designed depth beneath ABC.

Table 2B - Evaluated Pavement Section Summary (Overlay Pavement Construction)

North I-25 Mainline ARE#3 Segment Station and Mile Post		rlay Pavement Section MA/HMA and 30 Yea	
	SMA over HMA (inches) (Note 1)	Remaining of Existing HMA after Milling (inches)	Minimum Rubblized Existing Concrete (inches)
Station No. 3264+00 to 3291+00 MP 253.7 to MP 254.2	4.0	4.0	8.0
IVIF 255.7 10 IVIF 254.2	PCCP (inches)	Remaining of Existing HMA after Milling (inches)	Minimum Rubblized Existing Concrete (inches)
	13.5	4.0	8.0

Note 1: 2 inches of SMA over 2 inches of new HMA.

All PCCP pavement sections presented in Tables 2A and 2B include ¼ inch allowance for future diamond grinding.

This LCCA is based on phasing for the initial pavement construction to be completed off the inside shoulder median area of northbound and southbound I-25, then traffic will be shifted onto the newly constructed pavement so overlay pavement can be constructed for northbound and

southbound I-25. RockSol understands that two lanes of traffic will be required to remain open for northbound and southbound I-25 during construction for this project. Initial pavement construction near overpasses will be governed by the construction phasing of the proposed bridge structures within the limits of the LCCA site. The estimate length of time for pavement construction is estimated to be significantly less than the estimated length of time for the construction of the proposed bridge structures planned for this project. A construction phasing schedule was not developed at the time of this LCCA.

Based on recent construction projects and traffic control permitting requirements for Region 4 along I-25, a workzone speed limit of 65 miles per hour (mph) and a workzone length of 0.5 miles (full project limit) was used for initial construction for long term traffic control purposes. A workzone speed limit of 55 mph and a workzone length of 0.5 miles was used for rehabilitation construction for short term operations.

LCCA Input Summary

The LCCA was performed using a 40-year analysis period and a 30-year design life period for rigid pavement, assuming an initial/base construction year of 2020. Based on Section 13.3.3 of the 2017 CDOT ME PDM, a triangular distribution with the most likely value of 27 years (2047) was used for the first rigid pavement rehabilitation cycle. The rigid pavement rehabilitation analysis included a ½ percent slab replacement in the travel lanes and 100 percent diamond grinding of ¼ inch and longitudinal and transverse joint resealing.

The LCCA was performed using a 40-year analysis period and a 20-year design life period for flexible pavement, assuming an initial/base construction year of 2020. Rehabilitation of the flexible pavement included a 2-inch mill and overlay with 2 inches of SMA and 1.5 inches of HMA at year 2034 and a 2-inch mill and overlay with 2 inches of SMA and 2 inches of HMA at year 2047. The rehabilitation time periods are based on Table 13.1 in the 2017 CDOT ME PDM and discussions with CDOT Region 4 Materials.

Additional factors used in the LCCA for both flexible and rigid pavements include a discount rate of 2.22 percent, Cost of Engineering (CE) of 22.1 percent, Traffic Control Cost of 15 percent for the initial construction and rehabilitation operations. A Preliminary Engineering (PE) cost of 10 percent was used for the rehabilitation operations.

Annual maintenance costs used for the LCCA are \$1,027 per lane mile for HMA and \$640 per lane mile for PCCP per Section 13.5.3 of the 2017 CDOT PDM.

Sources for evaluation of material costs and production rates included:

- 1) 2017 CDOT Pavement Design Manual (Chapter 13).
- 2) CDOT Colorado Construction Cost Index Report, Calendar Year 2016, Second Quarter.
- 3) 2013 through 2016 CDOT Cost Data Information and Bid Tabs.
- 4) Discussions with CDOT Region 4.
- 5) Discussions with representatives from the Colorado Asphalt Pavement Association (CAPA) and American Concrete Pavement Association (ACPA).
- 6) CDOT Engineering Estimates and Marketing Analysis information.
- 7) Recent E-470 Asphalt Paving Material Prices

Pricing for PCCP was evaluated with CDOT data for large projects considered appropriate for comparison and a plot of that price data is attached. Most of the price data was for PCCP ranging from 10 to 12 inches. Also evaluated was Table 13.19 of the 2017 CDOT M-E PDM which lists prices for PCCP, 12 or greater inches, with a normalized average price per square vard of \$38.36. This value is slightly higher than the price indicated in the price plot attached.

Also strongly considered was a recent PCCP paving project, I-25 from Lincoln to County Line that included PCCP which was 13-inches thick and was for nearly 75,000 square yards. For that project three bidders provided costs for the PCCP which were \$38.50, \$49.50, and \$52.00 per square yard (\$2.96, \$3.81, and \$4.00 per square yard-inch, respectively). ACPA has provided an estimated unit price of PCCP of \$3.50 to \$3.75 per square yard-inch. Based on this range of PCCP pricing, RockSol is using PCCP pricing that is consistent with the I-25 Lincoln to County Line bidding prices and the ACPA pricing estimate.

Pricing for SMA and S mix asphalt was evaluated using prices for projects bid after 2012 and a plot of the price data is included in Appendix A. Tack coat (emulsified asphalt – slow setting) was included as a cost item for this LCCA. Of the projects evaluated for cost, most listed tack coat as a separate cost item but some did not. Where tack coat was not listed as a separate cost item in the cost data, it was included in the SMA/ HMA cost data. To appropriately compare SMA/HMA costs for all projects evaluated, where tack coat was included in the HMA/SMA costs, an average cost for tack coat per ton of HMA/SMA was subtracted from the HMA/SMA unit costs for this LCCA.

Table 3 presents the basic material, construction and rehabilitation costs, and production rates.

Table 3 - Material, Construction and Rehabilitation Costs and Production Rates

Operation/Material	Production Rate	Minimum	Most Likely	Maximum
•		Cost (\$)	Cost (\$)	Cost (\$)
10.5-inches - HMA Grading S (100) PG 64-22 (price per ton)	2,200 tons/day (75%) 1,800 tons/day (25%)	60.00	65.00	70.00
2-inches - SMA (Fiber)	1,800 tons/day (75%) 1,500 tons/day (25%)	90.00	95.00	100.00
Planing/Milling (HMA) SY	2 days ahead of paving operations	2.04	2.27	2.50
Tack Coat Material (Emulsified Asphalt – Slow Setting) (SY)	Performed ahead of paving operations (same day/night)	0.28	0.38	0.48
Rigid Pavement 12 to 13.5 inches (price per SY-in)	5,500 (75%)(SY/day) 2,880 (25%) (SY/day) [Production rate includes time required to achieve strength and sealing]	3.25	3.50	3.75
Rigid Slab Replacement (SY) (includes removal/replacement)	5 Panels per day/night	125	150	175
Grinding Concrete Pavement (SY)	7,040 SY/day	3.00	3.50	4.00
Sawing and Sealing Concrete Joints (linear feet)	10,000 LF/day	2.25	2.75	3.25

The area for ARE#3 Segment is approximately 37,200 square yards (SY). Using the production rates of 5,500 SY per day for normal production (75 percent of the time) and 2,880 SY per day for lower production (25 percent of the time), the initial construction for the rigid alternative was determined to be 8 days.

A total of 4,092 tons of SMA and 11,105 tons of HMA was determined based on the total area and design thicknesses. Tack coat placement was based on total project square yardage, number of lifts for HMA/SMA placement, and an application rate of 0.1 gallons per square yard. Based on 25 percent of the total tons for low production days, 75 percent for normal production

days and the production rates listed in Table 3 for SMA and HMA material types, a total of 7 days was determined for initial construction of the flexible alternative.

User costs are included in the LCCA for both pavement alternatives for initial pavement construction and for their respective rehabilitation operations. User cost information from the LCCA is attached.

LCCA Output Summary

Based on the results of the LCCA, the probabilistic analysis indicates the rigid pavement option is less costly than the flexible pavement option by a difference of 17.7 percent at the 75 percentile as shown in Table 4. CDOT uses the 75 percentile as the basis for comparison of pavement alternatives. The output results for CDOT User Cost Website and RealCost are included in Appendix B.

Table 4 – Probabilistic LCCA Results (40 Year Analysis)
