

Why CO 83 & Stagecoach Road?

Current & Future Congestion

Traffic at CO 83 and Stagecoach Road is already pushing the operational limits of the intersection. This is anticipated to get worse as traffic continues to increase.

Safety

Safety has been a frequent concern due to the mountainous terrain, winding curves, and frequent speeding in the area.

Speed Management

Speeding along CO 83 is a problem. One of the long-term goals of this project is to slow traffic through the Black Forest area.

Growth & Development

Growth is accelerating in the area. It is important to ensure that the roadway network is able to safely handle the extra traffic.

Regional Planning

Based on regional planning analyses, the CO 83 corridor is anticipated to have two lanes in each direction to accommodate the future needs of the Black Forest area.
