

Transportation Improvements Needed?

Safety Problem: *There is a higher than expected number of crashes along the SH 7 corridor, primarily due to traffic congestion.*

Congestion Problem: *Traffic congestion along the corridor occurs today and is expected to increase due to local and regional population and employment growth.*

Access Problem: *Most of the SH 7 corridor currently has an access category that favors through movements and limits additional access for existing and planned future development along the corridor.*

Multimodal Problem: *Multimodal infrastructure and connectivity are lacking along SH 7.*
