## REPORT HIGHLIGHTS

This report outlines the results of the 2015 mail survey conducted by National Research Center, Inc., on behalf of the Colorado Department of Transportation (CDOT).

This survey assesses Colorado residents' attitudes and behaviors related to seat belt use, speeding, distracted driving and alcohol, marijuana and prescription medication use. Results from the 2015 survey are compared to the 2104 iteration of the survey to track changes in attitudes and behaviors and inform the development of related media campaigns. Results of the 2015 survey are also compared by age, gender, primary vehicle type used, motorcycle ownership, region (Front Range or other counties), income level and years of residency in Colorado.

### Coloradans almost always wore their seat belts.

- In 2015, 91% of respondents said they always wore their seat belt, which was an increase from 86% in 2014.
- Residents whose primary vehicle was a pickup truck were less likely to report always wearing seat belts compared to those who drove cars, SUVs, vans or minivans. Only 75% of respondents whose primary vehicle was a pickup truck said they always wore a seat belt.

### Trip length and type of road mattered when deciding to wear seat belts.

- Most Coloradans always wore seat belts regardless of the trip type, but they were more likely to wear seat belts when travelling on highways or interstates (97% always) and when taking longer trips (94%) than for short trips (88%) or trips on local or neighborhood roads (89%).
- Coloradans whose primary vehicle was a pickup truck were most likely to say they never wear seat belts for all types of trips. While a large majority wore them on highways (91%), fewer wore them on local roads (77%).

### Some non-users could use a reminder, but others don't like or trust seat belts.

- While 37% of people who didn't always use a seat belt thought a simple reminder, such as a beep, would help them buckle up, 24% did not believe seat belts improved safety or that seatbelts even reduced safety and 48% said they were uncomfortable.

### Only about half of Coloradans thought it was likely they would get a ticket if they didn't wear a seat belt.

- 47% of respondents thought they would be very or somewhat likely to receive a ticket if they didn't wear a seat belt for six months.
- Women, adults who were 35 or older, residents in Front Range counties and those in the lower income bracket were more likely to think they would get a ticket than were their counterparts.

### **Most Coloradans would support a law that made seat belt violations primary.**

- 43% of Coloradans thought not wearing a seat belt was a primary violation (law enforcement could pull them over for that infraction alone) but 19% did not know if they were primary or secondary (38% thought they were secondary).
- 65% said they would support a law that made seat belt non-use a primary violation.
- Women (73%) were more likely than men (56%) to support this as a primary violation.
- Most who provided the reason for their support said seat belts reduce injury and/or save lives, but a few also thought it reduced insurance costs for seat belt users.
- Those who opposed cited their right to choose, concern that it would take law enforcement away from more important tasks and the concern that law enforcement would use this to generate extra revenue.

### **Most Coloradans admitted to speeding at least some of the time.**

- 45% of Coloradans said they sped some of the time and 22% sped all or most of the time (29% rarely and 4% never sped).
- More high income than low income residents admitted to speeding, but speeding decreased as respondents got older and length of residency increased.
- Pickup truck drivers were much less likely to speed than those in cars, SUVs, vans or minivans.

### **Speeding was more common on highways than on local roads.**

- 35% of Coloradans sped at least some of the time on neighborhood roads (speed limit of 25-30 mph) compared to 50% on main city roads (speed limit of 35-45 mph), 74% on local highways (speed limit of 55 mph) and 76% on main highways or interstates (speed limit of 65 mph).
- Younger adults were most likely to speed on all roads, middle-aged adults second most likely and older adults being least likely.
- While 13% of Coloradans were comfortable driving over 35 mph on a road with a 30 mph speed limit, more (31%) were comfortable driving over 70 mph on a road with a 65 mph speed limit.

### **Most Coloradans thought they risked a ticket if they sped consistently.**

- Compared to 2014, fewer 2015 respondents thought they were likely to get a ticket for speeding.
  - A majority of Coloradans thought it was somewhat or very likely (72%) that they would be stopped by the police if they consistently drove 5 mph over the 30 mph speed limit for the next 6 months. This was 77% in 2014.
  - Most also thought it was somewhat or very likely (51%) that they would be stopped by the police if they consistently drove 5 mph over the 65 mph speed limit for the next 6 months. This was 55% in 2014.

- Those in the higher income bracket were less likely to think they would get a ticket for speeding than those in the lower income bracket.

### **There were many distractions in Colorado cars.**

- 25% of Coloradans said they had read a message on a device and 16% wrote a message on a device while driving at least sometimes in the week before the survey. This was similar to 2014.
- 38% had talked on a hand-held cell phone and 41% had talked on a hands-free phone while driving.
- Most (63%) had selected entertainment on an iPod, CD player, radio or other device and many had eaten food (41%) while driving.

### **Younger adults were more likely to be texting.**

- Older adults (aged 55 or older) were least likely to engage in any distracted driving behaviors.
- Younger adults were most likely to send (29% at least sometimes) or read (43%) messages via text, email, or social media site while driving, use a hand-held cell phone (53%), select entertainment on an iPod, CD player, radio or other device (71%) or enter GPS information (26%) while driving.
- Women were more likely than men to be distracted by managing pets or passengers or by eating.

### **Drinking, marijuana use and use of prescription medications that could affect driving were all more prevalent among younger adults.**

- More young adults used marijuana (28% in the past 30 days) than middle aged adults (14%) or older adults (6%).
- More young adults drank at least once in the 30 days before the survey (77%) than middle aged adults (63%) or older adults (39%).
- More young adults used a prescription medication that might impair driving at least once in the 30 days before the survey (15%) than middle aged adults (10%) or older adults (7%).

### **Driving after drinking, marijuana use or prescription medication use was more prevalent among men, younger adults and in non-Front Range counties.**

- More young (38%) and middle-aged adults (32%) drove a motor vehicle within 2 hours after drinking alcoholic beverages in the 30 days before the survey than older adults (16%).
- More young adults (16%) drove a motor vehicle within 2 hours after consuming marijuana in the 30 days before the survey than middle-aged (8%) and older adults (3%).
- More men than women drove after using marijuana in the 30 days before the survey.
- More Front Range residents than those in other counties drove after consuming alcohol, marijuana or prescription drugs in the 30 days before the survey.

### **While fewer people used marijuana or prescription medications than used alcohol, the prevalence of driving after use was highest among those who used marijuana or prescription medications.**

- 45% of respondents who drank alcoholic beverages in the 30 days before the survey drove a motor vehicle within 2 hours after drinking alcohol at least once in the same time period.
- 55% of those who used marijuana drove a motor vehicle within 2 hours after consuming marijuana.
- 66% of those who used prescription medications that might impair driving drove a motor vehicle within 2 hours of taking those prescription medications.
- On average those who said they had driven within 2 hours of drinking did so on 2.3 of 30 days; those who said they had driven within 2 hours of marijuana use did so on 7.1 of 30 days; and those who said they had driven within 2 hours of taking prescription medications that could impair driving did so on 3.3 of 30 days.

### **Most Coloradans don't "use and drive" and most think it is unsafe to do so.**

- Only 13% of Coloradans thought they could safely drive under the influence of marijuana, 9% thought they could safely drive under the influence of alcohol and 16% thought they could safely drive under the influence of certain prescription medications.
- The proportion who thought they could drive under the influence of marijuana remained the same, but the proportion who thought they could safely drive under the influence of alcohol or certain prescription medications dropped from 2014 to 2015.
- Younger adults were more likely than older adults to think they could safely drive after consuming marijuana and also to think that driving after consuming marijuana was safer than driving after using alcohol.
- Those in the lower income bracket were more likely to think it was safe to drive after using marijuana.

### **Coloradans thought that drinking and driving was more likely to lead to a DUI than driving after marijuana or prescription medication use.**

- While many Coloradans said they did not know how likely it was that a person would get a DUI if they drove after consuming marijuana (24%) or prescription medications (35%), of those with an opinion, only 35% thought it was likely you would get a DUI driving after using certain prescription medications (46% if the person was pulled over) and 51% thought it was likely you would get a DUI driving after consuming marijuana (78% if the person was pulled over).
- 72% of Coloradans thought it was likely that they would get pulled over if they drove with more than the legal limit of alcohol in their body, but fewer thought it was likely (52%) that they would get pulled over if they were over the legal limit for marijuana.

**Many Coloradans were interested in personal breathalyzers.**

- Only 2% of respondents had tried a smartphone breathalyzer, but 40% they would use one if given the chance and 21% were interested in purchasing one.

**Most Coloradans thought CDOT was doing a good job and CDOT information sources were all used.**

- When asked to rate the overall job CDOT does, 59% said it was excellent or good, 33% thought it was fair and 9% gave a poor rating.
- Coloradans took advantage of the variety of information sources offered by CDOT; with 81% using the CDOT in the news (TV, radio or paper) as a frequent or occasional source and 79% using highway signs frequently or occasionally. Other sources were used by smaller portions of the population: COtrip.org (35% used it frequently or occasionally), 511 (14%), CDOT mobile app (13%), social media (12%) and GovDelivery (12%).

## REPORT OVERVIEW

---

Each year the Colorado Department of Transportation (CDOT) conducts several media campaigns to encourage safe driving habits. In support of these campaigns, a mail survey of Colorado adults is conducted to assess their current attitudes and driving behaviors related to seat belt use, speeding, distracted driving and alcohol, marijuana and prescription medication use.

In 2015, surveys were mailed to 3,600 Colorado households in late October. The address sample was randomly selected, but stratified by region to ensure sufficient responses by non-Front Range households. The survey was also programmed online and respondents were given the option of returning the paper survey or completing the survey online. To ensure comparability, this followed the same protocol as the 2014 survey.

This report outlines the results of the 2015 survey, with comparisons to the 2014 results when appropriate. Responses to survey questions are presented in charts and tables. For ease of display in bar charts, when one percent or fewer of respondents chose a specific question category (for example, “somewhat likely” or “never”), the category is included in the chart, but the actual percentage is not shown (for example “1%” or “0.6%”).

Crosstabulations of results by gender, age, primary vehicle type used, motorcycle ownership, region (in or outside the Front Range), income level and years of residency in Colorado also are presented throughout the report. When results for subgroups (age, gender, region, etc.) are compared, statistically significant differences are noted. In charts, subgroup comparisons are only shown when there are statistically significant differences. In tables, statistically significant differences are shaded.

*Appendix A* contains a complete set of frequencies for all the questions in the 2015 mail survey. These are presented with the “don’t know” responses for each survey question. In the body of the report the “don’t know” responses are generally excluded and the results presented are for those respondents who had an opinion. *Appendix B* shows the results of each question by subgroup (gender, age, primary vehicle type used, motorcycle ownership, region, income level and years of residency in Colorado).

A detailed description of the survey methodology, including how the data were weighted to match population norms and information about testing for statistical differences, can be found in *Appendix C*.

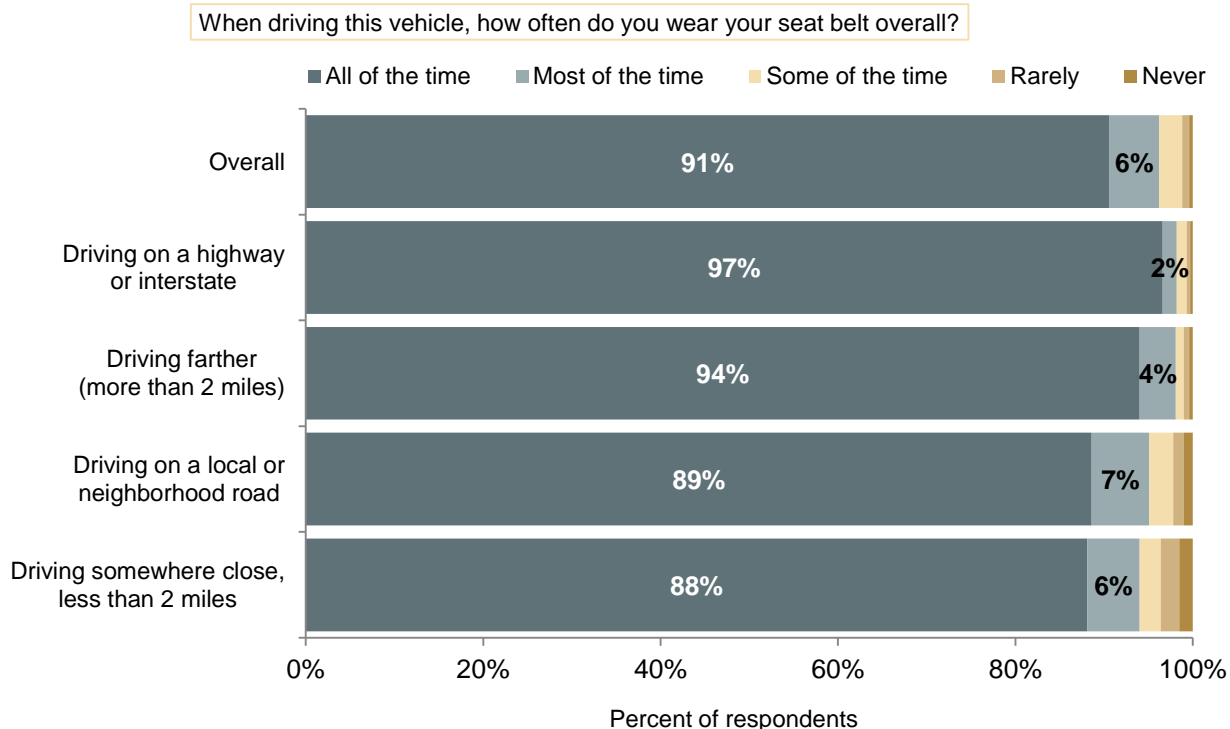

## SEAT BELT USE

A large majority of Coloradans (91%) said they always wear their seat belt everywhere they drive and only 1% said they rarely or never wear a seat belt (see Figure 1). This was an improvement from 2014 (see Figure 2).

While most Coloradans wear seat belts for every trip, seat belt usage did vary slightly by trip type (see Figure 1). Coloradans were most likely to always wear seat belts when travelling on highways or interstates (97%) and when taking longer trips (94%) than for short trips (88%) or trips on local or neighborhood roads (89%).

Results were compared by several demographic characteristics: respondents' gender, age, location of residence (in a Front Range county versus other county), type of vehicle they primarily drove, whether they owned a motorcycle, their household income and how many years they have lived in Colorado (see Figure 3). Women were more likely than men to always wear a seat belt, overall, and when they were driving on a highway or interstate. Younger adults were generally similar to middle aged and older adults, but were more likely to wear their seatbelts on a highway or interstate. Those driving pickup trucks were less likely to always wear a seat belt than those in cars, SUVs, vans or minivans, on all types of roads. Motorcycle owners were less likely than those without motorcycles to say they always wear a seat belt. Those in the lowest income bracket were less likely than those with middle or higher incomes to always wear a seat belt, particularly on local roads and for short trips.

Figure 1: Frequency of Overall Seat Belt Use by Survey Iteration

**Figure 2: Always Wears a Seat Belt by Survey Iteration**

When driving your primary vehicle (the one you use most often), how often do you wear your seat belt...	2015 November	2014 November
Overall	91%	86%
Driving on a highway or interstate	97%	95%
Driving farther (more than 2 miles)	94%	90%
Driving on a local or neighborhood road	89%	84%
Driving somewhere close, less than 2 miles	88%	83%

*Excludes those who chose "don't know."*

*Shaded cells indicate that the difference between categories is statistically significant.*

Figure 3: Always Wears a Seat Belt by Demographic Groups (2015)

When driving your primary vehicle (the one you use most often), how often do you wear your seat belt...	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado
Overall	91%	88%	93%	91%	90%	91%	90%	91%	95%	75%	94%	83%	91%	84%	93%	93%	93%	90%	90%
Driving on a highway or interstate	97%	95%	98%	99%	96%	95%	96%	97%	98%	91%	98%	94%	97%	96%	97%	97%	97%	97%	96%
Driving farther (more than 2 miles)	94%	92%	95%	95%	93%	94%	93%	94%	97%	84%	95%	91%	94%	92%	95%	94%	98%	93%	93%
Driving on a local or neighborhood road	89%	88%	89%	85%	90%	91%	89%	89%	93%	77%	89%	86%	89%	81%	91%	92%	88%	89%	89%
Driving somewhere close, less than 2 miles	88%	88%	87%	87%	88%	89%	89%	88%	93%	77%	87%	84%	88%	80%	90%	92%	89%	88%	87%

Excludes those who chose "don't know."

Shaded cells indicate that the difference between categories is statistically significant.

Those who did not always wear a seat belt when driving were asked if there was anything that might compel them to wear one for each trip. About half of those who didn't always use a seat belt wanted seat belts to be more comfortable; 4 in 10 said a reminder, such as a beep, would help and a quarter would use it if they thought it increased safety.

**Figure 4: Things that Might Compel Seat Belt Use (2015)**

Is there anything that would compel you to wear your seat belt all the time? I would always wear my seat belt if... <sup>1</sup>	Percent
Seatbelts were more comfortable	48%
My car had a reminder (like beeping when I am not wearing a seatbelt)	37%
I thought seatbelts would make me safer	24%
I saw people being ticketed for not wearing a seatbelt	18%
I thought you could get ticketed for not wearing a seatbelt	17%
I didn't think seatbelts might hurt me	16%
Other (please specify)	8%
<b>Total respondents</b>	<b>100%</b>

*Only asked if respondent said they did not always wear a seat belt when driving.  
Total may exceed 100% as respondents could provide more than one response.*

Just under half of Coloradans (47%) thought that it was very or somewhat likely that they would get a ticket if they did not use a seat belt at all while driving over the next six months. This was a slight decrease from 2014, when half of Coloradans (50%) thought that it was very or somewhat likely that they would get a ticket if they did not use a seat belt at all while driving over the next six months.

**Figure 5: Likelihood of Being Ticketed for Not Wearing a Seat Belt by Survey Iteration**

Assume that you do NOT use your seat belt AT ALL while driving over the next six months. How likely do you think you will be to receive a ticket for not wearing a seat belt?

*Excludes those who answered "don't know."*

Coloradans’ perception of the likelihood of being ticketed for not wearing a seat belt did not vary by whether they owned a motorcycle, but did vary by respondent gender, age, income, type of vehicle they primarily use, region of residence and the number of years they had lived in Colorado.

Women were more likely than men to think they would get a ticket and middle-aged and older adults were more likely than younger adults. Those in the Front Range and those newer to Colorado were more likely than those in non-Front Range counties and those who had been in Colorado for 10 or more years to think not wearing a seat belt would result in a ticket. Those in the lower income bracket were more likely to think they would get a ticket than those of middle income and those with a higher income were least likely. Coloradans who drove cars were slightly less likely to think not wearing a seat belt would result in a ticket than those in trucks, vans and SUVs.

Figure 6: Likelihood of Being Ticketed for Not Wearing a Seat Belt by Demographic Groups (2015)

Assume that you do NOT use your seat belt AT ALL while driving over the next six months. How likely do you think you will be to receive a ticket for not wearing a seat belt?

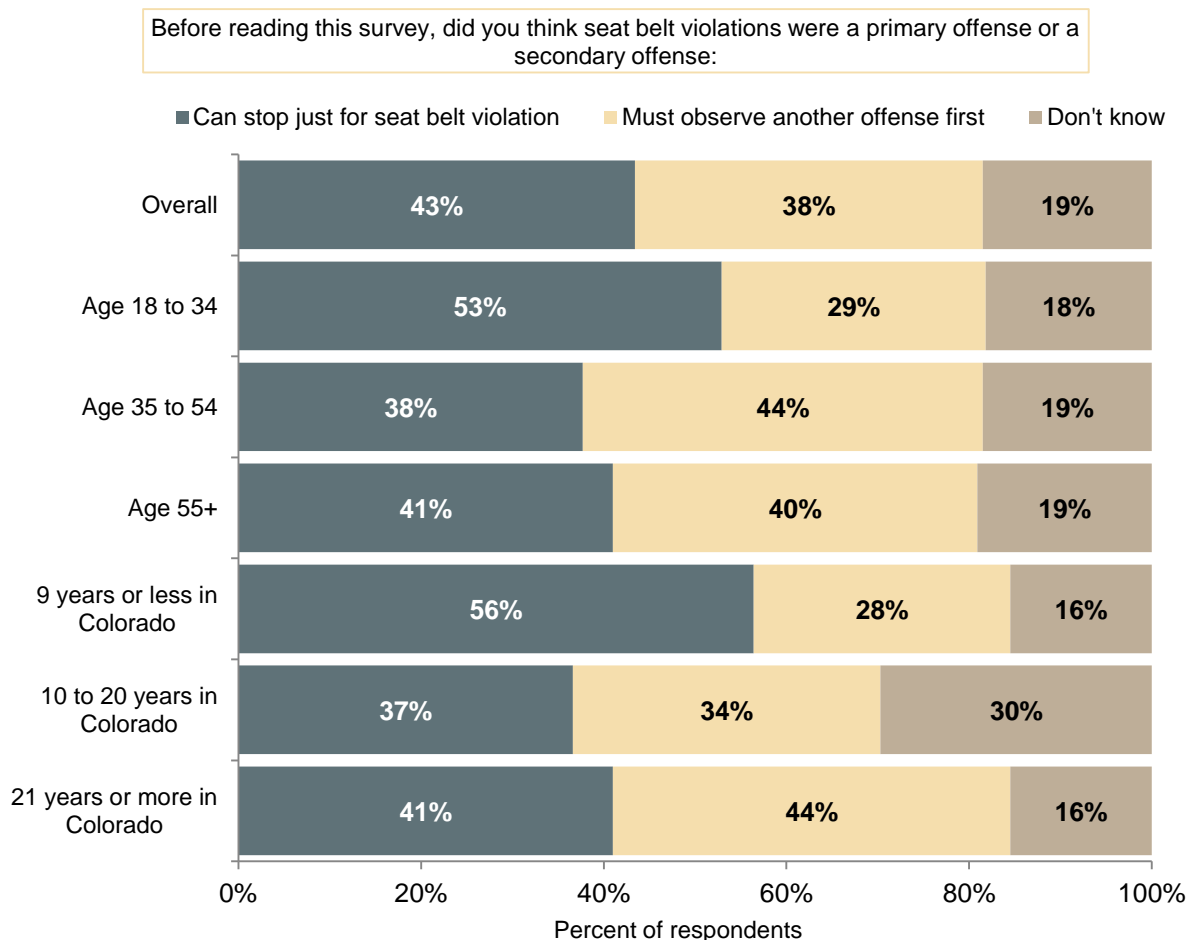

Demographic groups with no statistically significant differences between categories were not included in this chart.

Colorado seat belt laws vary depending on the age of the driver. For adult drivers, they are secondary violations, meaning the police cannot pull over a driver if their only violation is not wearing a seat belt, but can cite a driver for not wearing a seat belt if they were pulled over for a primary violation (such as speeding). Under Colorado Graduated Drivers License laws, teen drivers can be pulled over if their only violation is the driver or any passenger (regardless of age) not wearing a seat belt. Under Colorado’s general seat belt laws, when there is an adult driver, passenger seat belt violations are secondary unless the passenger is 15 years old or younger.

About 2 in 10 Coloradans did not know whether seat belt non-use was a primary or secondary violation and 43% thought it was primary. Younger adults (18-34) were more likely than those aged 35 and older, to think seat belt non-use was a primary violation. This may be related to knowledge of graduated license requirements for youth. Those newer to Colorado were more likely than those who had been in Colorado 10 or more years to think it was a primary violation.

**Figure 7: Understanding of Status of Seat Belt Non-Use Violations by Demographic Groups (2015)**

*Demographic groups with no statistically significant differences between categories were not included in this chart.*

Most Coloradans (65%) supported non-seat belt use being a primary violation. Men were less supportive of such laws than women and older adults were more supportive than middle-aged or younger adults. Pickup truck drivers were less supportive of making seat belt non-use a primary violation than those driving cars, SUVs, vans or minivans.

**Figure 8: Support for Seat Belt Non-Use as Primary Violation by Demographic Groups (2015)**

How strongly would you support or oppose a new law to make not wearing a seat belt a "primary offense," so law enforcement could pull people over and ticket them if a driver or passenger was not wearing a seatbelt (when no other traffic violation has occ

*Demographic groups with no statistically significant differences between categories were not included in this chart.*

When asked why they would support or oppose a new law to make not wearing a seat belt a primary offense, 45% of those that provided a reason said seat belts save lives or reduce the risk of injury while 20% thought it was important to keep it an individual choice.

**Figure 9: Reasons for Supporting or Opposing Seat Belt Primary Offense Law by Survey Iteration**

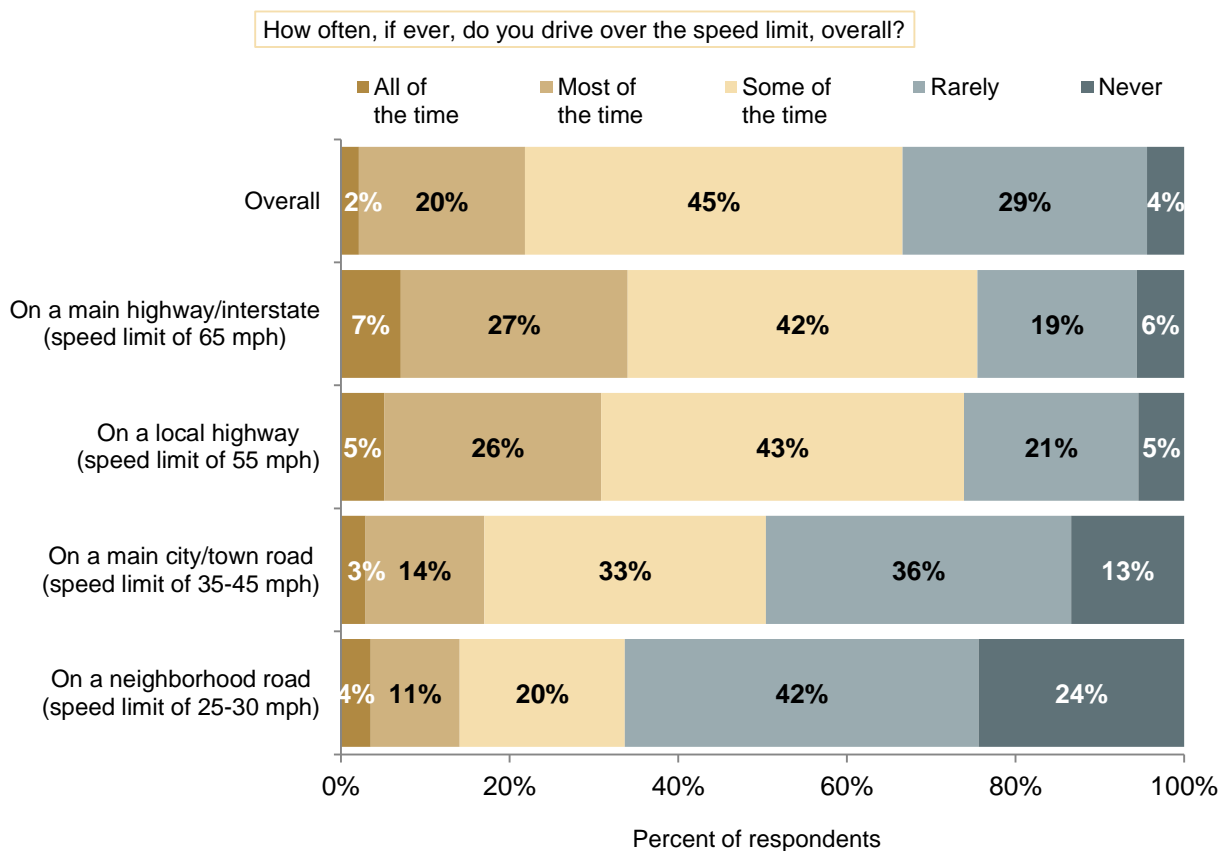

Why would you support or oppose creating a new law that makes not wearing a seat belt a “primary offense”?	2015 November
Saves lives/reduce risk of injury	45%
Support (no specific reason given)	7%
Costs to others/Lower insurance costs	5%
Depends/Neutral/Thought it already was primary	3%
Should be a choice	20%
Law enforcement has better things to do/do not need more laws	12%
Law enforcement oversteps boundary/just wants more revenue	6%
Oppose (no specific reason given)	7%
Only hurt themselves	3%
Does not always save lives/can hurt you	2%

## SPEEDING

In 2015, two-thirds of Coloradans admitted to speeding, at least sometimes, while 33% said they rarely or never speed. Twenty-two percent said they speed most or all of the time. This was similar to results from 2014.

Coloradans were most likely to speed on roads that have higher speed limits and roads that are less local in scope. While about 35% sped at least some of the time on neighborhood roads (speed limit of 25-30 mph), about half sped on main city roads (speed limit of 35-45 mph), 74% sped on local highways (speed limit of 55 mph) and 75% sped on main highways or interstates (speed limit of 65 mph).

**Figure 10: Frequency of Speeding (2015)**

**Figure 11: Always, Mostly or Sometimes Speed by Survey Iteration**

How often, if ever, do you drive over the speed limit...?	2015 November	2014 November
Overall	67%	65%
On a main highway/interstate (speed limit of 65 mph)	76%	72%
On a local highway (speed limit of 55 mph)	74%	70%
On a main city/town road (speed limit of 35-45 mph)	50%	49%
On a neighborhood road (speed limit of 25-30 mph)	34%	31%

*Excludes those who chose "don't know."*

*Shaded cells indicate that the difference between categories is statistically significant.*

Younger drivers were more frequent speeders (only 22% rarely or never sped) compared to drivers aged 55 years or older (49% rarely or never sped). Those who were newer to Colorado (9 years or fewer) sped more often compared to drivers who had lived in Colorado longer (10 years or more). Those in pickup trucks were less likely to speed compared to those in cars, SUVs, vans or minivans, while those with higher incomes sped more often than those with lower incomes.

Men and women had similar speeding patterns as did Front Range and non-Front Range residents and those that owned or did not own motorcycles.

Figure 12: Always, Mostly or Sometimes Speed by Demographic Groups (2015)

How often, if ever, do you drive over the speed limit...?	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado
Overall	67%	68%	66%	78%	69%	51%	67%	67%	71%	58%	66%	67%	67%	54%	68%	79%	80%	69%	61%
On a main highway/interstate (speed limit of 65 mph)	76%	76%	75%	86%	80%	59%	80%	75%	78%	68%	77%	76%	76%	60%	81%	86%	80%	83%	71%
On a local highway (speed limit of 55 mph)	74%	74%	74%	84%	76%	61%	74%	74%	76%	67%	76%	77%	74%	58%	79%	85%	82%	76%	70%
On a main city/town road (speed limit of 35-45 mph)	50%	53%	48%	57%	57%	35%	46%	51%	52%	55%	47%	43%	51%	41%	50%	62%	62%	56%	44%
On a neighborhood road (speed limit of 25-30 mph)	34%	36%	31%	38%	35%	27%	30%	34%	37%	37%	28%	30%	34%	32%	36%	34%	38%	35%	32%

Excludes those who chose "don't know."

Shaded cells indicate that the difference between categories is statistically significant.

When asked how fast they were comfortable driving in a 30 mph zone, 55% of Coloradans said they were comfortable driving at least a few miles per hour over the limit while about 14% were comfortable driving more than 5 mph over the 30 mph limit; 31% were only comfortable at or below the speed limit. This was similar to 2014.

**Figure 13: Maximum Safe Speed when Speed Limit is 30 mph by Survey Iteration**

What is the maximum speed you personally feel safe driving on a local road where the speed limit is 30 mph?

This did not vary by gender, motorcycle ownership or region, but did vary by other demographic characteristics (see Figure 14). Older adults were most likely to say they were only comfortable driving at or below the 30 mph limit (47%), compared to 32% of middle-aged adults and 16% of younger adults. Pickup truck drivers were less likely to feel comfortable speeding than were those in cars or SUVs/vans. Those who had lived in Colorado longer were less likely to speed than those newer to Colorado and more people with higher incomes than people with lower incomes were comfortable speeding in a 30mph zone.

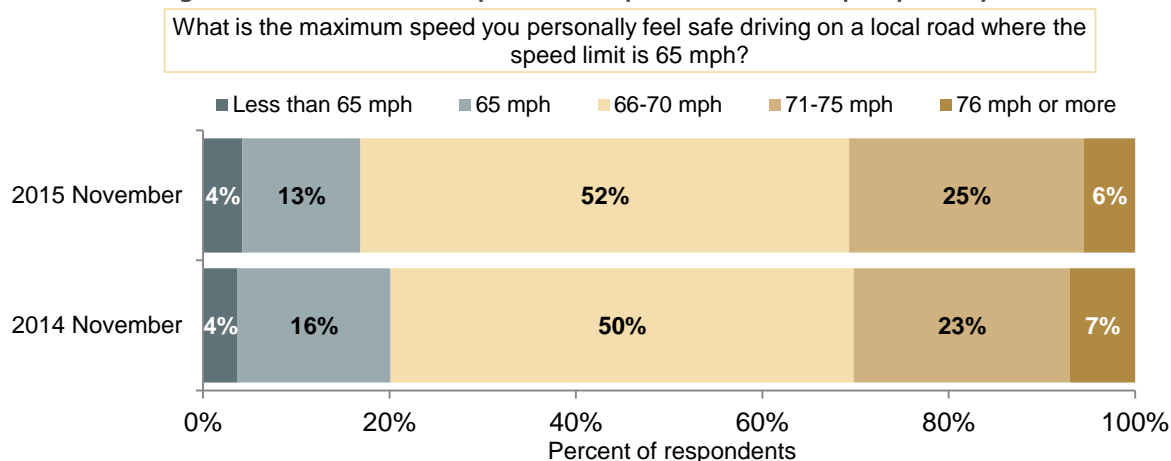

Figure 14: Maximum Safe Speed when Speed Limit is 30 mph by Demographic Groups (2015)

Demographic groups with no statistically significant differences between categories were not included in this chart.

When asked how fast they were comfortable driving in a 65 mph zone, 52% of Coloradans said they were comfortable driving at least a few miles per hour over the limit while about 31% were comfortable driving more than 5 mph over the 65 mph limit; 17% were only comfortable at or below the speed limit. This was similar to 2014.

**Figure 15: Maximum Safe Speed when Speed Limit is 65 mph by Survey Iteration**

This varied by all tested demographics except motorcycle ownership. While about the same proportion of men and women had said they sped, more men than women said they were comfortable driving at higher speeds. Older adults were most likely to say they were only comfortable driving at or below the 65 mph limit (35%), compared to 15% of middle-aged adults and 3% of younger adults. Those with higher incomes and those newer to Colorado were more comfortable at higher speeds than those with lower incomes and long term Colorado residents. Pickup truck drivers were more likely to prefer lower speeds than those with other vehicles.

Front Range residents had more variation in their preferences than those in other counties. In the Front Range, 21% said they were only comfortable at or below the speed limit but 43% were comfortable going 5 mph or more above the speed limit, while in non-Front Range counties, 16% said they were only comfortable at or below the speed limit but 29% were comfortable going 5 mph or more above the speed limit.

Figure 16: Maximum Safe Speed when Speed Limit is 65 mph by Demographic Groups (2015)

Demographic groups with no statistically significant differences between categories were not included in this chart.

A majority of Coloradans (72%) thought it was at least somewhat likely that they would get stopped by the police if they consistently drove 5 mph over the 30 mph speed limit for the next 6 months. Fewer Coloradans (51%) thought it was at least somewhat likely that they would get stopped for going 5-10 mph over a 65 mph speed limit. For both speed limits, this was a decrease from 2014 when a few more Coloradans thought it was likely that they would get stopped.

**Figure 17: Likelihood of Being Stopped for Speeding on a Local Road by Survey Iteration**

Suppose you drove your motor vehicle consistently 5-10 mph over the speed limit on ... for the next 6 months. How likely or unlikely is it that the police would stop you at least once?

**Figure 18: Very or Somewhat Likely to Receive a Ticket for Speeding by Survey Iteration**

Suppose you drove your motor vehicle consistently 5–10 mph over the speed limit on... for the next 6 months. How likely or unlikely is it that the police would stop you at least once?	2015 November	2014 November
On a local road where the speed limit is 30 mph	72%	77%
On a road where the speed limit is 65 mph	51%	55%

*Excludes those who chose "don't know."*

*Shaded cells indicate that the difference between categories is statistically significant.*

These assessments did not vary by age, vehicle type and motorcycle ownership. However, more women than men thought consistently speeding on a highway would result in a stop. Those in non-Front Range counties and those who were newer to Colorado were more likely to think they would be stopped for speeding on a local road than those in the Front Range and long term residents. . Those with lower incomes were more likely than those with higher incomes to think they would be stopped if they consistently sped on either a local road or a highway.

Figure 19: Very or Somewhat Likely to Receive a Ticket for Speeding by Demographic Groups (2015)

Suppose you drove your motor vehicle consistently 5–10 mph over the speed limit on... for the next 6 months. How likely or unlikely is it that the police would stop you at least once?	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado

## DISTRACTED DRIVING

---

There are many ways a driver might be distracted while driving and survey respondents were asked whether they had engaged in any of a number of potential distracted driving behaviors in the week before the survey (see Figure 20). In the 2015 survey, most respondents (63%) reported at least sometimes selecting entertainment on an iPod, CD player, radio or other device while driving in the week prior to the survey and many had talked on a hand-held cell phone (38%), eaten food (41%) or talked on a hands-free phone (41%) while driving. About one-quarter read a message via text, email or social media at least sometimes while driving. This was similar to 2014.

Many (44%) also said they were sometimes (or more often) distracted by something else when driving. When asked to describe this distraction, 28% mentioned wildlife or scenery and 21% said accidents or bad drivers on the road and 20% mentioned finding something in the car or recovering something they dropped or spilled. Others mentioned smoking or lighting a cigarette, adjusting the temperature or mirrors in the car or looking for addresses or signs.

Figure 20: Distracted Driving Behaviors (2015)

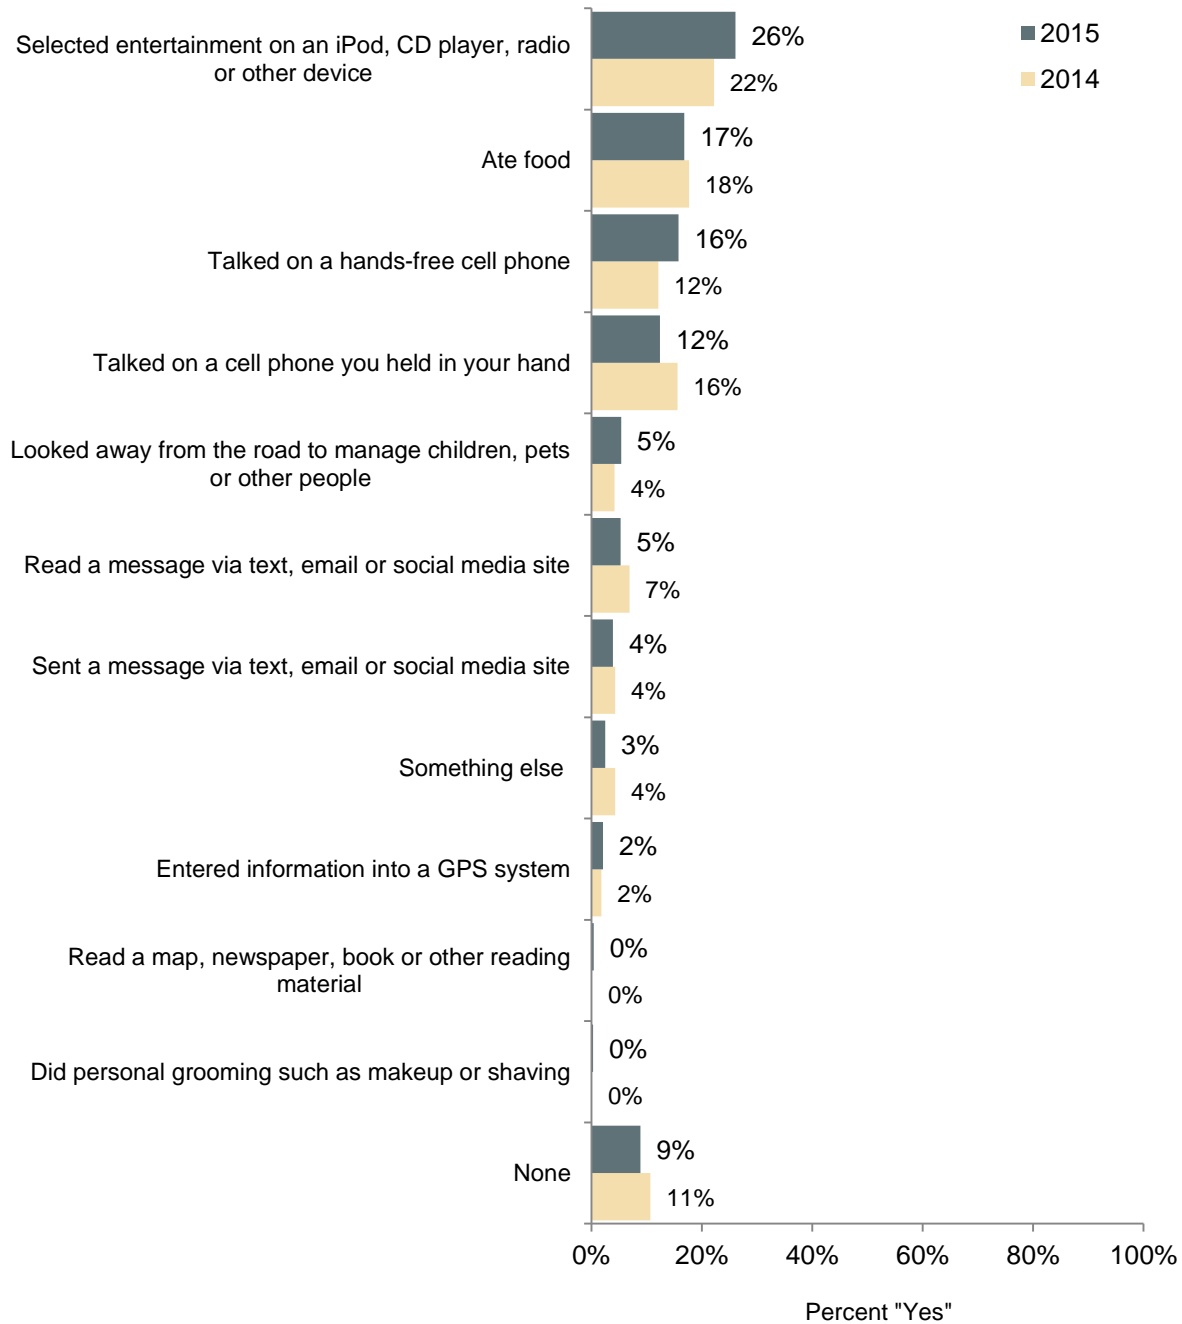

During the past seven days, how often, if ever, did you do each of the following while you were driving (i.e., while the vehicle was actually in motion)?

When asked which one of these behaviors they did most often while driving, the most frequent were selecting entertainment on an iPod, CD player, radio or other device (26%), eating food (17%), talking on a hands-free cell phone (16%) or talking on a hand-held cell phone (12%).

**Figure 21: Most Frequent Distracted Driving Behavior by Survey iteration**

Of those things you said you had done at least once while driving in the past 7 days, which ONE did you do most often?

Distracted driving behaviors varied by gender, age, region, vehicle type, income and length of residency in Colorado, but not motorcycle ownership (see Figure 22).

Women were more likely than men to be distracted by doing personal grooming and eating food.

Younger adults (aged 18 to 34) were more likely than middle aged and older adults to engage in most distracted driving behaviors. Although, more middle aged adults (than younger or older) did personal grooming while driving.

Front Range residents were more likely than those in non-Front Range counties to talk on hands-free cell phones, select entertainment or look away from the road to manage children, pets or other people.

Pickup truck drivers were more likely to eat food while driving than those in cars or SUVs, vans or minivans. Those in cars were more likely to read a text message. Those in SUVs, vans or minivans were more likely to select entertainment, do personal grooming or look away from the road to manage children, pets or other people.

Those in the highest income bracket (household income of \$100,000 or more) were more likely than those with less income to talk on a hands-free cell phone, enter information into a GPS system and select entertainment on an iPod, CD player, radio or other device.

Respondents who lived in Colorado for a longer period (21 years or more) were less likely to read a message via text, email or social media site, talk on a hands-free cell phone, enter information into a GPS system or look away from the road to manage children, pets or other people while driving.

Figure 22: Distracted Driving Behavior (Percent Sometimes, Often or Every Time I Drove) by Demographic Groups (2015)

During the past seven days, how often, if ever, did you do each of the following while you were driving (i.e., while the vehicle was actually in motion)?	Overall	Female	Male	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado

*Shaded cells indicate that the difference between categories is statistically significant.*

## ALCOHOL, MARIJUANA AND PRESCRIPTION MEDICATIONS

Six in 10 respondents had consumed alcohol in the month prior to completing the 2015 survey, 16% had consumed marijuana and 11% had used prescription medications that could impair their driving. This was an increase in alcohol and marijuana consumers from 2014 to 2015.

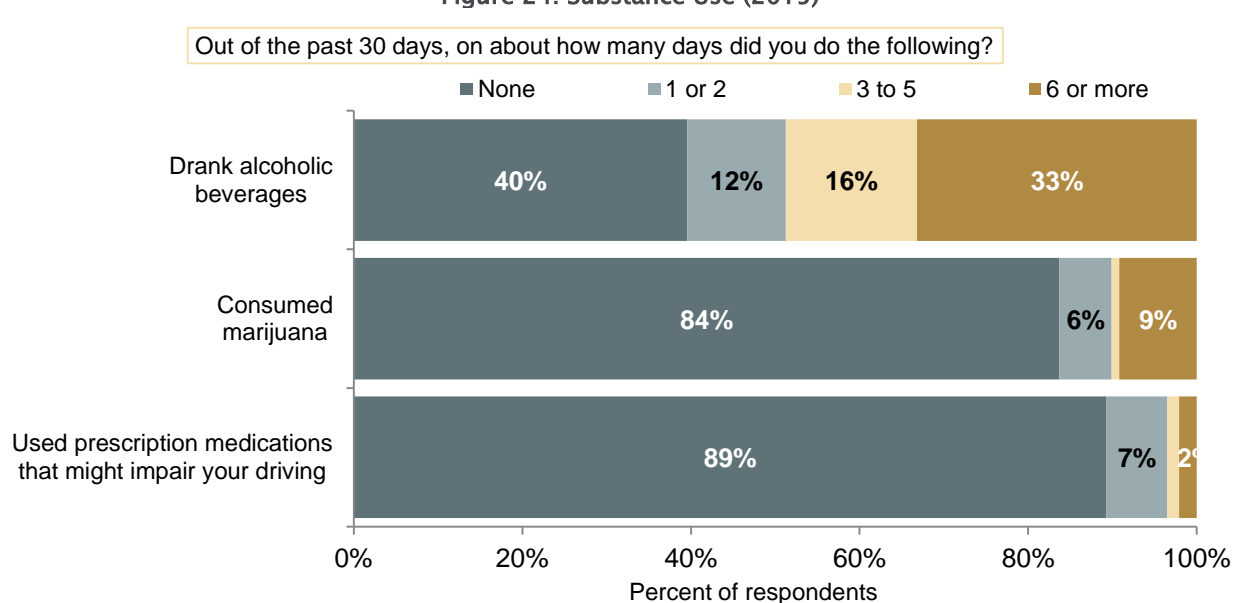

Figure 23: Ever Used Substance or Drove After Using by Survey Iteration

Out of the past 30 days, on about how many days did you do the following?	2015 November	2014 November
Drank alcoholic beverages	60%	53%
Consumed marijuana	16%	12%
Used prescription medications that might impair your driving	11%	10%
Drove a motor vehicle within 2 hours after drinking alcoholic beverages	29%	28%
Drove a motor vehicle within 2 hours after consuming marijuana	9%	7%
Drove a motor vehicle within 2 hours after using prescription medications that might impair your driving	7%	7%

Shaded cells indicate that the difference between categories is statistically significant.

Of the 60% who did drink, just over half drank on 6 days or more (out of 30), just over one-quarter drank on 3 to 5 days and about 20% drank on 1 or 2 days. Of the 16% who consumed marijuana, just over half used marijuana on 6 days or more (out of 30) and most others did so on 1 or 2 days. Most people who used prescription medications that might impair driving did so only on 1 or 2 days.

Figure 24: Substance Use (2015)

Most Coloradans had not driven a motor vehicle within 2 hours after drinking alcoholic beverages (71% on no days), within 2 hours after consuming marijuana (91% on no days) or after using prescription medications that might impair driving (93% on no days). Most of those who did drive while possibly impaired did so on 1 or 2 of the past 30 days.

**Figure 25: Driving after Substance Use (2015)**

Out of the past 30 days, on about how many days did you do the following?

Of the 483 respondents who drank alcoholic beverages in the 30 days before the survey, 219 (45%) of them drove a motor vehicle within 2 hours after drinking alcoholic beverages at least once in the same time period. In this 30 day period, 55% of those who used marijuana drove a motor vehicle within 2 hours after consuming marijuana and 66% of those who used prescription medications that might impair driving drove a motor vehicle within 2 hours of taking those prescription medications.

On average those who drove after drinking did so on 2.3 of 30 days, those who drove after consuming marijuana did so on 7.1 of 30 days and those who drove after using potentially-impairing prescription medication did so on 3.3 of 30 days.

**Figure 26: Average Days of Substance Use and Driving, for Those Who Used Substance (2015)**

Out of the past 30 days, on about how many days did you do the following?	Number doing activity	Average days out of last 30	Standard Error	Median	Minimum	Maximum
Drank alcoholic beverages	483	10.2	0.4	7	1	30
Consumed marijuana	129	13.9	1.1	7	1	30
Used prescription medications that might impair your driving	86	6.5	1.1	1	1	30
Drove a motor vehicle within 2 hours after drinking alcoholic beverages	219	2.3	0.1	2	1	10
Drove a motor vehicle within 2 hours after consuming marijuana	71	7.1	1.1	1	1	30
Drove a motor vehicle within 2 hours after using prescription medications that might impair your driving	57	3.3	1.0	1	1	30

Both substance use and driving after use varied by respondent characteristics (see Figure 27).

Men were more likely than women to consume marijuana but a similar proportion drank alcohol and used prescription medication that could impair driving. Men were more likely than women to drive after drinking but a similar proportion of men and women drove after consuming marijuana or taking prescription medications that could impair driving.

Younger adults were most likely, middle aged adults were second most likely and older adults were least likely to drink alcohol, consume marijuana or to use prescription medication that could impair driving. This was also true for driving after drinking or consuming marijuana, but younger, middle aged and older adults were equally likely to drive after taking prescription medication that could impair driving.

Residents in Front Range counties were more likely than those in other counties to say they drank alcohol, consumed marijuana or used prescription medication that could impair driving, and they were also more likely to have driven after using one of these substances.

Those who drove cars were more likely to drink alcohol or consume marijuana and more likely to drive after consuming marijuana. Those who drove SUVs, vans or minivans were least likely to use marijuana.

Those with the highest incomes were more likely than others to drink alcohol and to drive after drinking while those with the lowest incomes were more likely to consume marijuana.

Residents who had lived in Colorado for fewer years were more likely than long term residents to drink alcohol or consume marijuana and to drive after drinking or consuming marijuana.

Figure 27: Ever Used Substance or Drove After Using by Demographic Groups (2015)

	Overall	Female	Male	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado

might impair your driving																				

*Shaded cells indicate that the difference between categories is statistically significant.*

Most Coloradans (76%) would feel comfortable driving after having one or two drinks in a two-hour period.

**Figure 28: Number of Drinks Consumed While Feeling Safe to Drive by Survey Iteration**

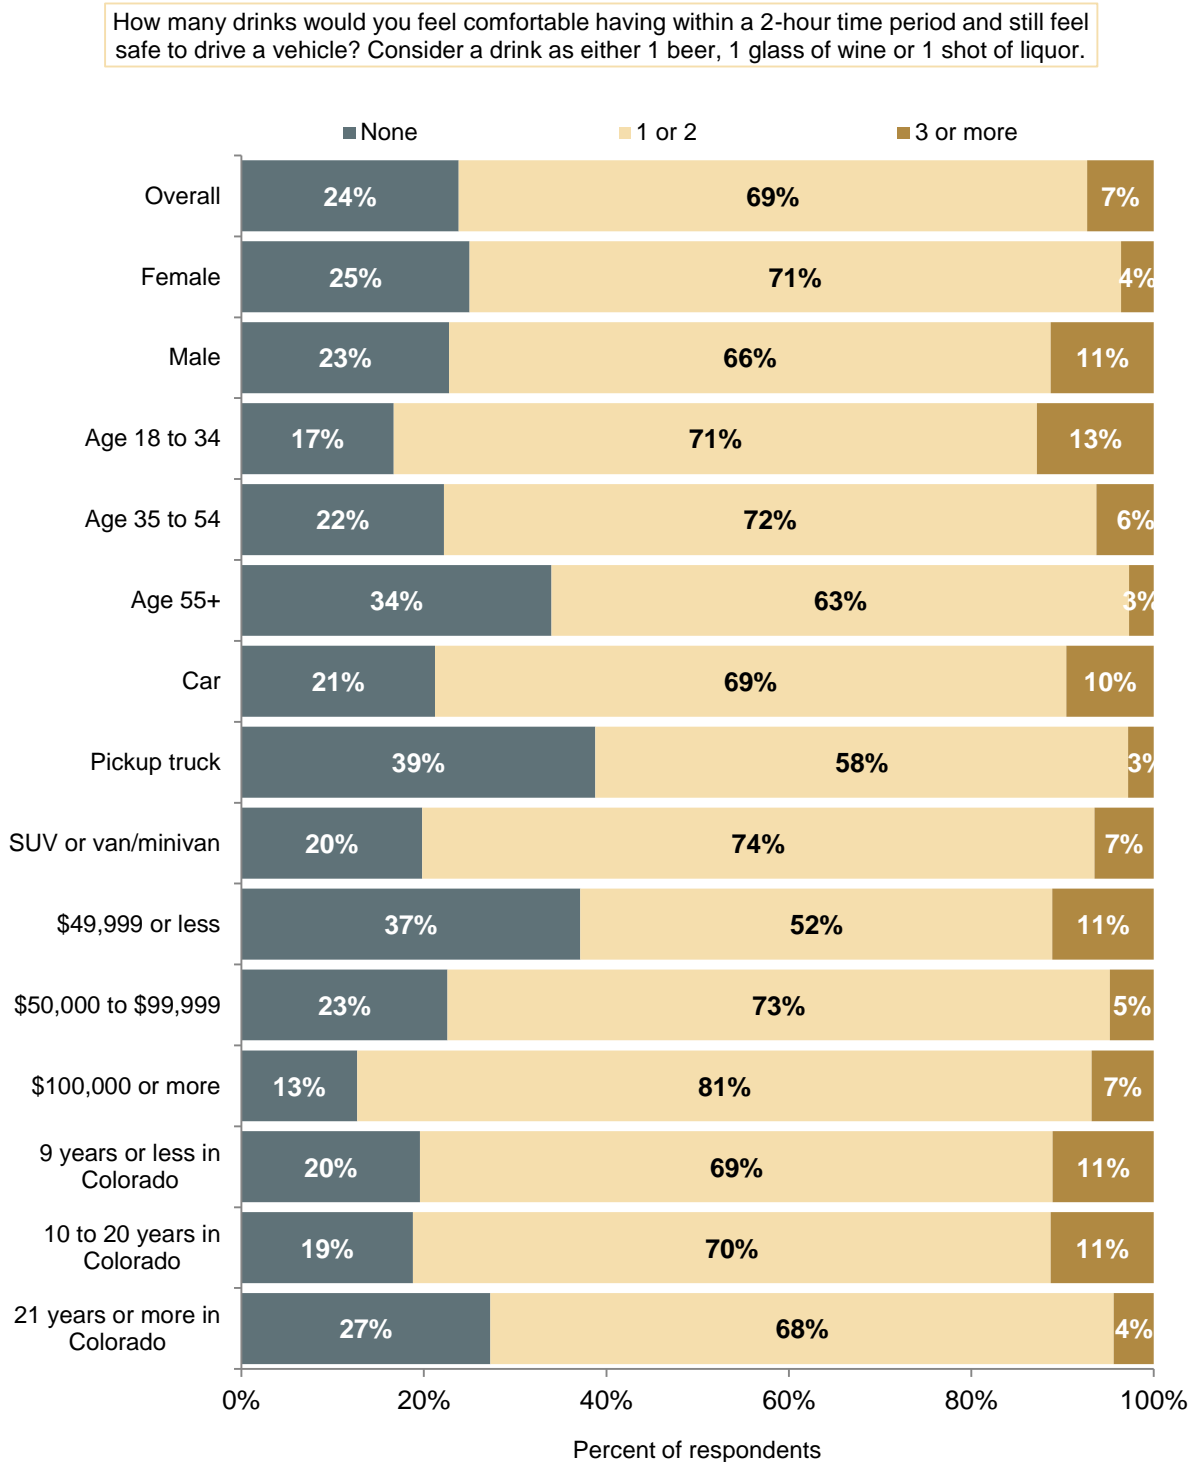

How many drinks would you feel comfortable having within a 2-hour time period and still feel safe to drive a vehicle? Consider a drink as either 1 beer, 1 glass of wine or 1 shot of liquor.

Men, younger adults, those with higher incomes, those driving cars, SUVs, vans or minivans and those newer to the state were more likely than their counterparts to be comfortable having one or two drinks in the two-hour period before they drove.

Figure 29: Number of Drinks Consumed While Feeling Safe to Drive by Demographic Groups (2015)

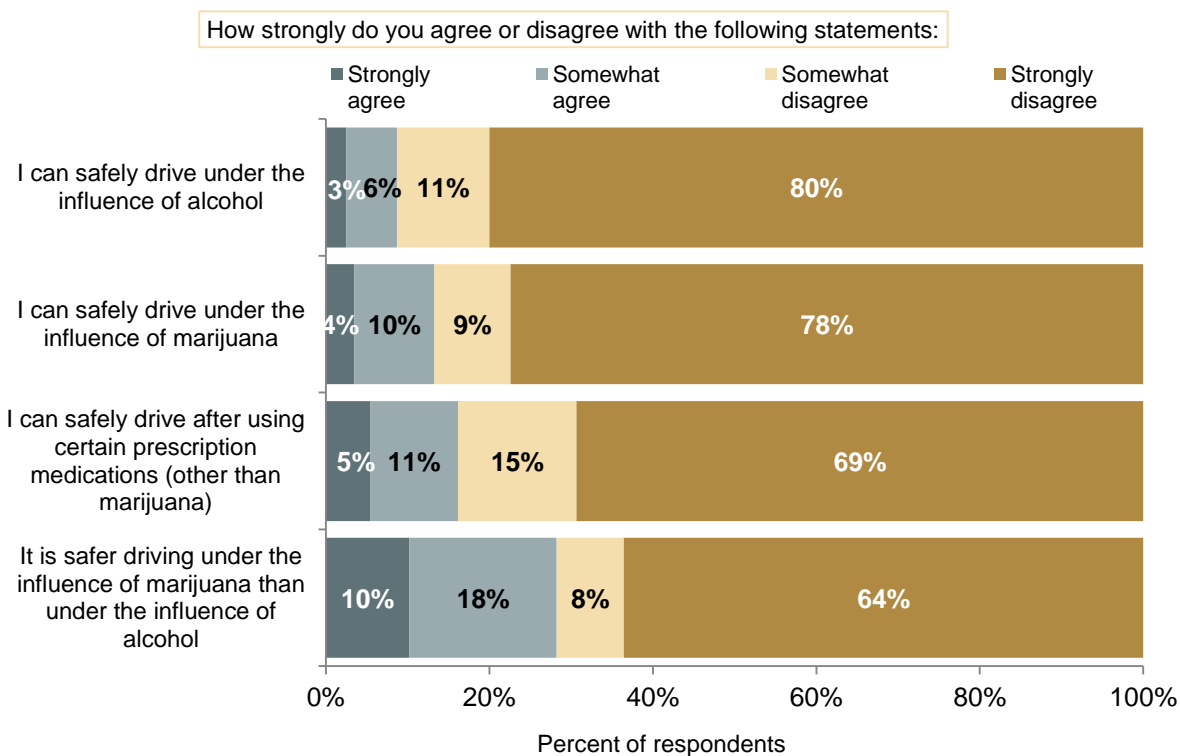

Demographic groups with no statistically significant differences between categories were not included in this chart.

Most Coloradans do not think it is safe to drive under the influence of alcohol, marijuana, or certain prescription medications and only 26% somewhat or strongly agreed that it was safer to drive under the influence of marijuana than alcohol.

In 2015, fewer Coloradans than in 2014 agreed with the statements “I can safely drive under the influence of alcohol” and “I can safely drive after using certain prescription medications (other than marijuana).”

**Figure 30: Safety While Driving Under the Influence (2015)**

**Figure 31: Percent Agreement with Statements about Safety While Driving Under the Influence by Survey Iteration**

Percent strongly or somewhat agree with the following statements:	2015 November	2014 November
I can safely drive under the influence of alcohol	9%	15%
I can safely drive under the influence of marijuana	13%	12%
I can safely drive after using certain prescription medications (other than marijuana)	16%	23%
It is safer driving under the influence of marijuana than under the influence of alcohol	28%	24%

*Shaded cells indicate that the difference between categories is statistically significant.*

Opinion on the safety of driving after consuming substances that may impair did not vary by gender or motorcycle ownership. However, younger adults were more likely than older adults to think they could safely drive after consuming marijuana and also to think that driving after consuming marijuana was safer than driving after using alcohol.

Those living outside the Front Range were more likely than those in the Front Range to think that driving after consuming marijuana was safer than driving after using alcohol and that they could drive safely after using prescription medications.

Coloradans whose primary vehicle was a car (rather than an pickup truck, SUV, van or minivan) were more likely to think they could safely drive after consuming marijuana and also to think that driving after consuming marijuana was safer than driving after using alcohol.

Those with lower incomes were more likely than those with middle or higher incomes to think they could safely drive after using marijuana.

Coloradans who moved to the state more recently (9 years or less) were more likely than longer term residents to think they could safely drive after consuming alcohol or marijuana and also to think that driving after consuming marijuana was safer than driving after using alcohol.

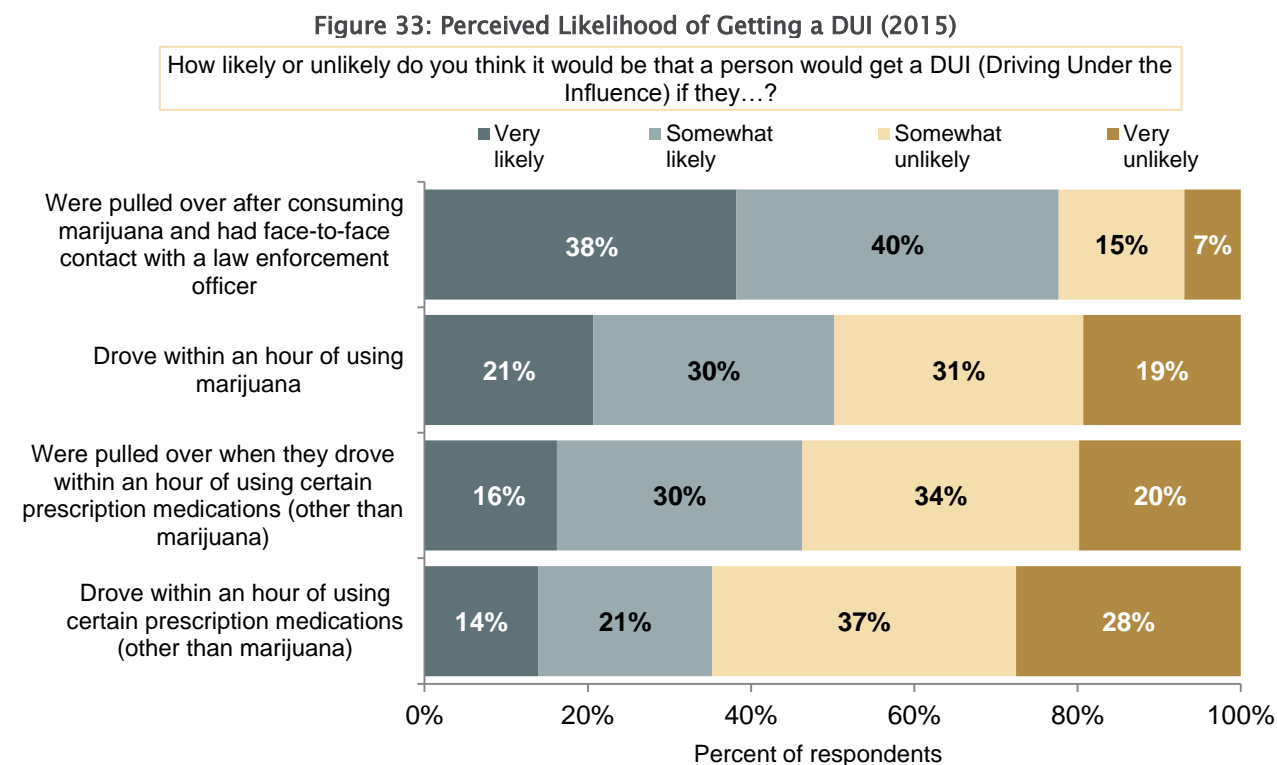

Figure 32: Percent Agreement with Statements about Safety While Driving Under the Influence by Demographic Groups (2015)

Percent strongly or somewhat agree with the following statements:	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado

I can safely drive after using certain prescription medications (other than marijuana)	16%	17%	15%	12%	17%	18%	7%	17%	18%	17%	13%	22%	15%	15%	16%	17%	15%	15%	16%
It is safer driving under the influence of marijuana than under the influence of alcohol	28%	29%	27%	46%	19%	18%	14%	31%	34%	22%	24%	31%	28%	32%	25%	30%	44%	28%	23%

Shaded cells indicate that the difference between categories is statistically significant.

When asked about the likelihood of getting a DUI in each of four situations related to marijuana and prescription medication use, about one-quarter of respondents said they didn't know if it was likely or unlikely.

Of those with an opinion (Figure 33), about half thought that it would be somewhat or very likely that a person would get a DUI if they drove within an hour of consuming marijuana and about 8 in 10 thought it would be somewhat or very likely that a person would get a DUI if they drove after consuming marijuana and had face-to-face contact with a law enforcement officer. Fewer thought driving after using certain prescription medications would result in a DUI, even if the person was pulled over.

*Excludes those who chose "don't know."*

**Figure 34: Percent who thought it was Very or Somewhat Likely that a Person Would Get a DUI by Survey Iteration**

How likely or unlikely do you think it would be that a person would get a DUI (Driving Under the Influence) if they...?	2015 November	2014 November
Were pulled over after consuming marijuana and had face-to-face contact with a law enforcement officer	78%	81%
Drove within an hour of using marijuana	50%	55%
Were pulled over when they drove within an hour of using certain prescription medications (other than marijuana)	46%	46%
Drove within an hour of using certain prescription medications (other than marijuana)	35%	36%

*Excludes those who chose "don't know."*

*Shaded cells indicate that the difference between categories is statistically significant.*

Men and women had similar assessments of the risks of getting a DUI if they consumed marijuana or a prescription medication and drove.

Younger adults were less likely than older adults to think they would get a DUI if they were pulled over after consuming marijuana and had face-to-face contact with a law enforcement officer.

Those on the Front Range were more likely than those from other counties to think you would get a DUI if you drove after consuming marijuana or prescription medications and if you were pulled over after you consumed marijuana.

Those who drove cars were less likely than those who drove pickup trucks to think consuming marijuana and then driving would result in a DUI.

Motorcycle owners were less likely than those without motorcycles to think driving after consuming marijuana and being pulled over after consuming marijuana would result in DUIs.

Those who lived for more years in Colorado were more likely than those newer to Colorado to think they would get a DUI if they were pulled over after consuming marijuana and had face-to-face contact with a law enforcement officer, but they were less likely to think driving after prescription medication use would result in a DUI.

Figure 35: Percent who thought it was Very or Somewhat Likely that a Person Would Get a DUI by Demographic Groups (2015)

How likely or unlikely do you think it would be that a person would get a DUI (Driving Under the Influence) if they...?	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado
Drove within an hour of consuming marijuana	50%	53%	47%	47%	50%	54%	65%	48%	42%	62%	54%	36%	52%	55%	51%	42%	53%	52%	48%
Were pulled over after consuming marijuana and had face-to-face contact with a law enforcement officer	78%	80%	75%	72%	82%	80%	84%	77%	74%	82%	81%	65%	79%	82%	79%	71%	71%	76%	81%

Excludes those who chose "don't know."

Shaded cells indicate that the difference between categories is statistically significant.

Some Coloradans are unsure about whether DUIs can be given for impairment due to marijuana or prescription medication use. While most think you can get a DUI, 19% didn't know if it applied to marijuana use in general, 25% didn't know if it applied to prescription marijuana and 35% didn't know if it applied to prescription medications.

Figure 36: Knowledge of DUI Laws (2015)

Figure 37: Percent Who Thought a Person Would Get a DUI by Survey Iteration

To the best of your knowledge, can a person ...	2015 November	2014 November
Get a DUI as a result of driving after consuming marijuana recreationally	77%	75%
Get a DUI as a result of driving after using medically prescribed marijuana	70%	65%
Get a DUI as a result of driving after using certain prescription medications (other than marijuana)	57%	53%

*Includes those who chose "don't know."*

*Shaded cells indicate that the difference between categories is statistically significant.*

Opinions did not vary by gender, region, income or length of residency, but younger adults, those who drove cars and those who owned motorcycles were more likely than their counterparts to know that a person could get a DUI for impairment from recreational or medical marijuana or other prescription medications.

Figure 38: Percent Who Thought a Person Would Get a DUI by Demographic Groups (2015)

To the best of your knowledge, can a person ...	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado

*Shaded cells indicate that the difference between categories is statistically significant.*

Most Coloradans thought it was somewhat (46%) or very (26%) likely that they would get pulled over if they drove a motor vehicle after drinking alcohol and the amount of alcohol in their body was more than what the law allows for drivers, but fewer thought it was somewhat (31%) or very (21%) likely that they would get pulled over if they were over the legal limit for marijuana. This was similar in 2014 and 2015.

**Figure 39: Perceived Likelihood of Getting Pulled Over by Law Enforcement (2015)**

Suppose you [...]. How likely or unlikely is it that the law enforcement would stop you?

**Figure 40: Percent Who Thought a Person was Very or Somewhat Likely to Get Pulled Over by Demographic Groups (2015)**

Suppose you... How likely or unlikely is it that law enforcement would stop you?	2015 November	2014 November
Drove a motor vehicle after drinking alcohol and the amount of alcohol in your body was more than what the law allows for drivers	72%	75%
Drove a motor vehicle after consuming marijuana and the amount of marijuana in your body was more than what the law allows for drivers	52%	57%

*Excludes those who chose "don't know."*

*Shaded cells indicate that the difference between categories is statistically significant.*

While a majority of all Coloradans thought you were likely to get pulled over if you drove a motor vehicle after drinking alcohol and the amount of alcohol in your body was more than what the law allows for drivers, the proportion did vary by gender, vehicle type, income and length of residency. Men, car drivers, those with higher incomes and those with a longer length of residency were less likely than their counterparts to think they would be pulled over when above the legal limit for alcohol.

About half of Coloradans thought you were likely to get pulled over if they drove a motor vehicle after consuming marijuana and the amount of marijuana in your body was more than what the law allows for drivers. This did not vary by age, motorcycle ownership or income but did vary by gender, vehicle type, region and length of residency. Men, car drivers, those in non-Front Range counties and those with a longer length of residency were less likely than their counterparts to think they would be pulled over when above the legal limit for marijuana.

Figure 41: Percent Who Thought a Person was Very or Somewhat Likely to Get Pulled Over by Demographic Groups (2015)

Suppose you... How likely or unlikely is it that law enforcement would stop you?	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado
Drove a motor vehicle after drinking alcohol and the amount of alcohol in your body was more than what the law allows for drivers	72%	66%	78%	75%	71%	70%	75%	72%	69%	76%	74%	68%	73%	78%	75%	62%	76%	80%	68%
Drove a motor vehicle after consuming marijuana and the amount of marijuana in your body was more than what the law allows for drivers	52%	49%	53%	41%	53%	61%	63%	50%	44%	59%	57%	46%	52%	56%	53%	41%	57%	46%	51%

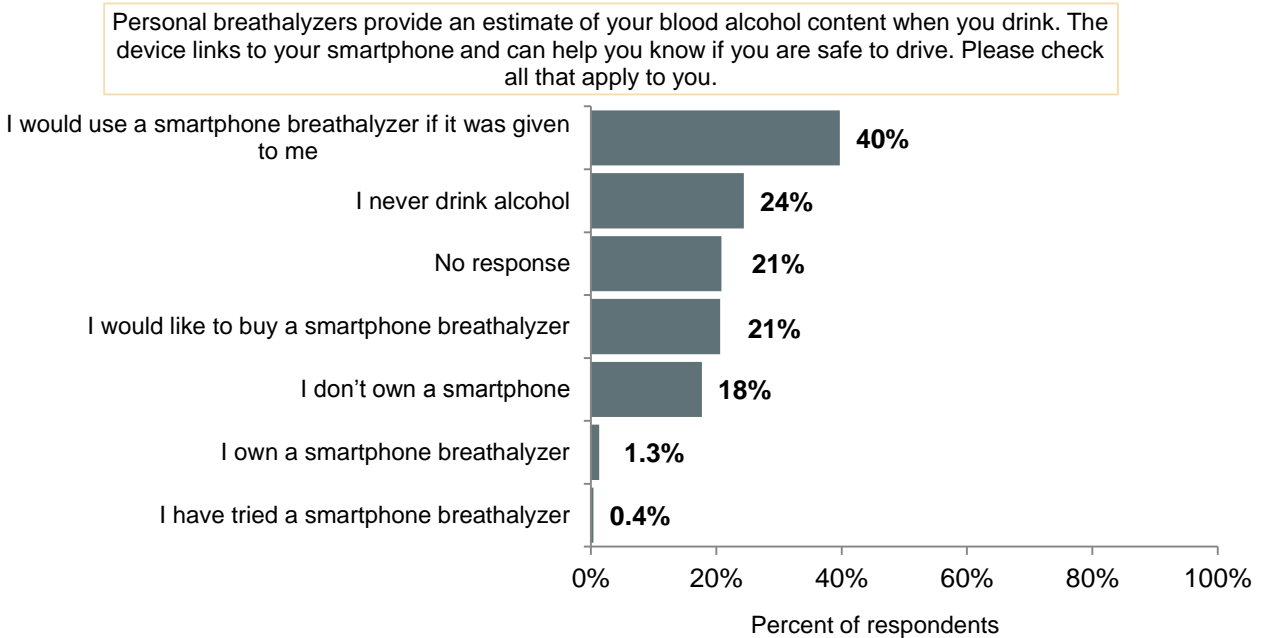

Excludes those who chose "don't know."

Shaded cells indicate that the difference between categories is statistically significant.

Most Coloradans did not have any experience with personal breathalyzers, but 40% would like to try one and 21% would like to buy one. Of those willing to purchase a personal breathalyzer, most would do so if it was \$39 or less (62%) or \$40 to \$59 (29%); only 8% would pay more.

Interest varied by demographic characteristics. Men, younger adults, higher income and newer residents were less likely to say they don't drink and more likely to be interested in trying or buying a breathalyzer.

**Figure 42: Interest in Personal Breathalyzers (2015)**

**Figure 43: Willingness to Pay for Smartphone Breathalyzer (2015)**

What is the most you would pay?	Percent	Number
\$39 or less	62%	N=106
\$40-\$59	29%	N=49
\$60-\$79	5%	N=9
\$80-\$99	0%	N=1
\$100 or more	3%	N=5
Total	100%	N=100

*Asked only if said they would like to buy a Smartphone Breathalyzer.*

Figure 44: Interest in Personal Breathalyzers by Demographic Groups (2015)

Personal breathalyzers provide an estimate of your blood alcohol content when you drink. The device links to your smartphone and can help you know if you are safe to drive.	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado
I would use a smartphone breathalyzer if it was given to me	40%	43%	37%	57%	44%	18%	53%	38%	41%	32%	43%	37%	40%	35%	42%	45%	50%	43%	35%
I never drink alcohol	24%	22%	27%	21%	19%	35%	22%	25%	21%	38%	21%	23%	25%	37%	27%	9%	26%	18%	26%
No response	21%	16%	24%	13%	26%	20%	12%	22%	20%	17%	23%	18%	21%	17%	14%	32%	12%	26%	22%
I would like to buy a smartphone breathalyzer	21%	24%	17%	34%	20%	8%	24%	20%	26%	15%	16%	25%	20%	16%	20%	28%	25%	28%	16%

Shaded cells indicate that the difference between categories is statistically significant.

## CDOT

Residents were asked to give CDOT an overall rating for the job it does building and maintaining interstates, U.S. highways and state highways to ensure that Colorado has a safe and efficient highway system. Most (59%) thought CDOT did an excellent or good job, while 33% said it was fair and 9% gave a poor rating. Men gave CDOT higher ratings than women, and motorcycle owners gave lower ratings than those without motorcycles.

**Figure 45: Overall Rating of CDOT by Demographic Groups (2015)**

CDOT builds and maintains interstates, U.S. highways and state highways to ensure that Colorado has a safe and efficient highway system. How would you rate the job CDOT does, overall?

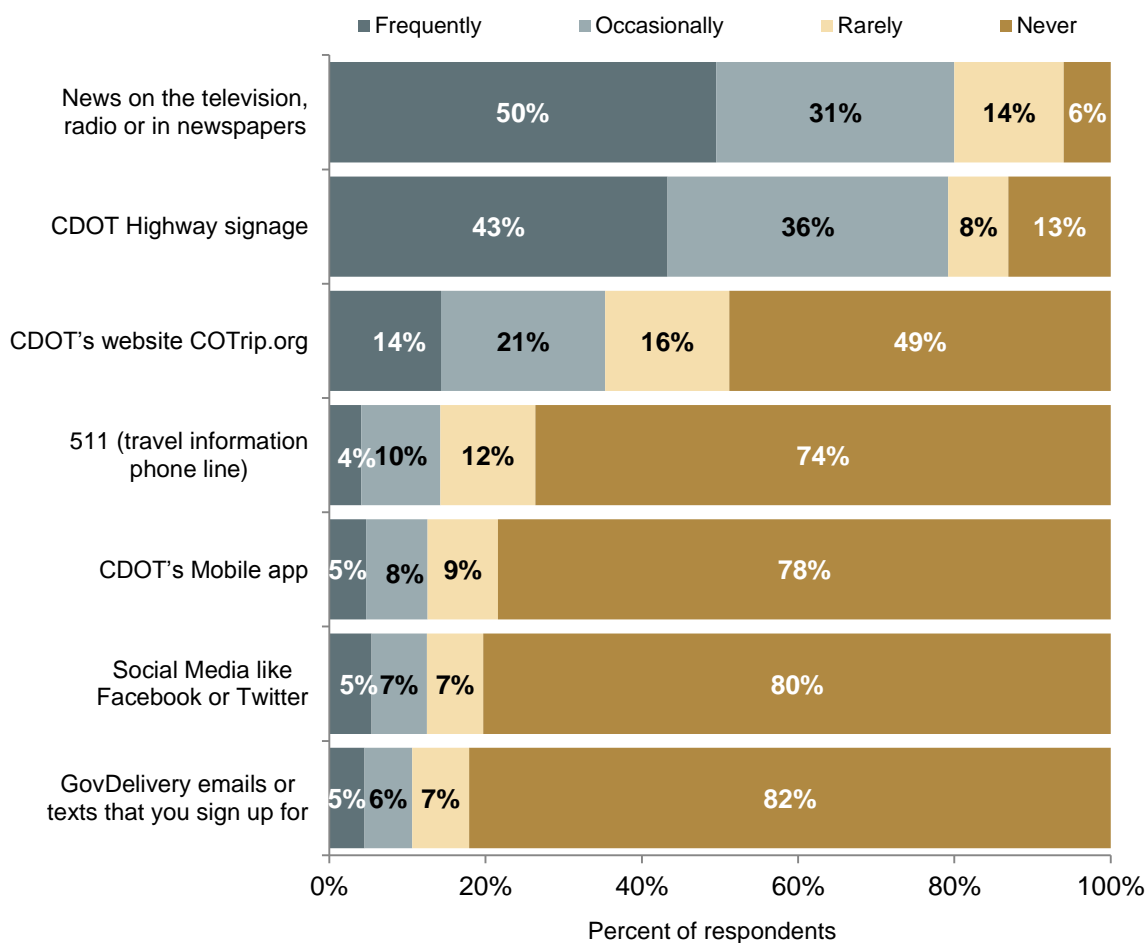

The most popular CDOT sources for information about Colorado highways were news on the television, radio or in newspapers (50% used this frequently and 31% occasionally) and CDOT Highway signage (43% used this frequently and 36% occasionally). CDOT’s website (COTrip.org) was used at least occasionally by 35% of Coloradans. Other sources were used by fewer people, but about 1 in 20 Coloradans said they frequently used GovDelivery emails or texts, CDOT’s Mobile app, Social Media and 511.

**Figure 46: Use of CDOT Information Sources (2015)**

CDOT shares information about Colorado highways (such as road conditions, construction, accidents, or traffic speed) through several sources. Please tell us how often you use each of these sources to get information about Colorado highways.

Women and those in the Front Range were more likely than their counterparts to use social media to get CDOT information, Younger adults were more likely to social media, middle aged adults were more likely to use the website and highway signage and older adults were more likely to use the 511 phone line. Coloradans in the lower income range were less likely to use highway signage and the CDOT website for information and those who lived in Colorado 9 year or less, were less likely to access information through the news, the website, 511 or GovDelivery emails or texts.

Figure 47: Ever Use CDOT Information Sources by Demographic Groups (2015)

Please tell us how often you use each of these sources to get information about Colorado highways.	Overall	Male	Female	Age 18 to 34	Age 35 to 54	Age 55+	Front Range	Not Front Range	Car	Pickup truck	SUV or van/minivan	Motorcycle owner	No motorcycle	\$49,999 or less	\$50,000 to \$99,999	\$100,000 or more	9 years or less in Colorado	10 to 20 years in Colorado	21 years or more in Colorado
News on the television, radio or in newspapers	91%	90%	91%	81%	95%	96%	87%	91%	88%	95%	91%	90%	91%	88%	90%	93%	88%	85%	94%

 Shaded cells indicate that the difference between categories is statistically significant.

## APPENDIX A: COMPLETE SET OF SURVEY FREQUENCIES INCLUDING DON'T KNOW RESPONSES

This appendix includes the frequencies for all questions asked in the 2015 Statewide Mail survey.

Question 1								
When driving your primary vehicle (the one you use most often), how often do you wear your seat belt?	All of the time	Most of the time	Some of the time	Rarely	Never	Don't know	Refused	Total
When driving this vehicle, how often do you wear your seat belt?	91%	6%	3%	1%	0%	0%	0%	100%
	N=746	N=46	N=21	N=6	N=4	N=0	N=0	N=824
When you are driving somewhere close, less than 2 miles	88%	6%	2%	2%	1%	0%	0%	100%
	N=724	N=49	N=20	N=17	N=12	N=0	N=0	N=822
When you are driving farther (more than 2 miles)	94%	4%	1%	1%	0%	0%	0%	100%
	N=771	N=34	N=7	N=5	N=3	N=0	N=0	N=821
When you are driving on a local or neighborhood road	89%	6%	3%	1%	1%	0%	0%	100%
	N=728	N=53	N=22	N=10	N=8	N=0	N=0	N=822
When you are driving on a highway or interstate	97%	2%	1%	0%	0%	0%	0%	100%
	N=795	N=13	N=9	N=3	N=2	N=0	N=0	N=822

Question 2		
Is there anything that would compel you to wear your seatbelt all the time? I would always wear my seatbelt if...	Percent	Number
I always wear my seatbelt	92%	N=757
Seatbelts were more comfortable	4%	N=31
My car had a reminder (like beeping when I am not wearing a seatbelt)	3%	N=24
I thought seatbelts would make me safer	2%	N=16
I saw people being ticketed for not wearing a seatbelt	1%	N=12
I thought you could get ticketed for not wearing a seatbelt	1%	N=11
I didn't think seatbelts might hurt me	1%	N=10

Question 2		
Other (please specify)	1%	N=5
Total respondents	100%	N=820
*Asked only of those who do not always wear seatbelt.		
May add to more than 100% as respondent could choose more than one option.		

Question 2 "Other" Responses	
Is there anything that would compel you to wear your seatbelt all the time? I would always wear my seatbelt if...	Number
Bad roads.	N=1
Easier to put on.	N=1
I remember to put it on	N=1
If I was a bad driver.	N=1
It didn't take me longer to buckle up than it does to drive less than 2 min.	N=1
No	N=1
Not needed on rural roads.	N=1
Not wearing it at 15 mph on our back road.	N=1
Only time it is not worn is when traveling in our private community.	N=1
Pay me 1,100,000 bucks.	N=1
Sometimes I just forget.	N=1
Usually wear it but sometimes just forget to.	N=1

Question 3		
Assume that you do NOT use your seat belt AT ALL while driving over the next six months. How likely or unlikely do you think it is that you would get a ticket for not wearing a seat belt?	Percent	Number
Very likely	15%	N=122
Somewhat likely	26%	N=206
Somewhat unlikely	21%	N=167
Very unlikely	25%	N=200
Don't know	12%	N=96
Total	100%	N=791

Question 4		
Before reading this survey, did you think seat belt violations were a primary offense or a secondary offense:	Percent	Number

Question 4		
Can stop just for seat belt violation	43%	N=355
Must observe another offense first	38%	N=312
Don't know	19%	N=152
Total	100%	N=819

Question 5		
How strongly would you support or oppose a new law to make not wearing a seat belt a “primary offense,” so law enforcement could pull people over and ticket them if a driver or passenger was not wearing a seatbelt (when no other traffic violation has occurred)?	Percent	Number
Strongly support	39%	N=318
Somewhat support	21%	N=172
Somewhat oppose	14%	N=117
Strongly oppose	19%	N=158
Don't know	7%	N=57
Total	100%	N=822

Question 6		
Why would you support or oppose creating a new law that makes not wearing a seat belt a “primary offense”?	Percent	Number
Saves lives/reduce risk of injury	45%	N=288
Should be a choice	20%	N=126
Law enforcement has better things to do/do not need more laws	12%	N=78
Support	7%	N=46
Oppose	7%	N=44
Law enforcement oversteps boundary/just wants more revenue	6%	N=36
Costs to others/Lower insurance costs	5%	N=33
Only hurt themselves	3%	N=22
Depends/Neutral/Thought it already was primary	3%	N=19
Does not always save lives/can hurt you	2%	N=13
Other	1%	N=4
Total respondents	100%	N=642

Question 7							
How often, if ever, do you drive over the speed limit?	All of the time	Most of the time	Some of the time	Rarely	Never	Don't know	Total
Overall	2%	20%	45%	29%	4%	0%	100%
	N=17	N=156	N=355	N=230	N=35	N=3	N=795
On a neighborhood road (speed limit of 25–30 mph)	3%	11%	20%	42%	24%	0%	100%
	N=28	N=84	N=156	N=333	N=194	N=2	N=796
On a main city/town road (speed limit of 35–45 mph)	3%	14%	33%	36%	13%	0%	100%
	N=23	N=111	N=265	N=287	N=107	N=3	N=795
On a local highway (speed limit of 55 mph)	5%	26%	43%	21%	5%	0%	100%
	N=41	N=206	N=345	N=166	N=43	N=2	N=804
On a main highway/interstate (speed limit of 65 mph)	7%	27%	41%	19%	6%	0%	100%
	N=57	N=216	N=333	N=151	N=45	N=3	N=806

Question 8		
What is the maximum speed you personally feel safe driving on a local road where the speed limit is 30 mph?	Percent	Number
Less than 30 mph	4%	N=35
30 mph	27%	N=223
31–35 mph	55%	N=452
36–40 mph	13%	N=108
41 mph or more	0%	N=3
Total	100%	N=821

Question 9		
What is the maximum speed you personally feel safe driving when the speed limit is 65 mph?	Percent	Number
Less than 65 mph	4%	N=34
65 mph	13%	N=105
66–70 mph	52%	N=430

CDOT | 2015 Mail Survey about Driving Behaviors

71-75 mph	25%	N=207
76 mph or more	5%	N=45
Total	100%	N=821

Question 10						
Suppose you drove your motor vehicle consistently 5–10 mph over the speed limit for the next 6 months. How likely or unlikely is it that the police would stop you at least once?	Very likely	Somewhat likely	Somewhat unlikely	Very unlikely	Don't know	Total
Driving consistently over the speed limit on a local road where the speed limit is 30 mph	26%	43%	16%	11%	4%	100%
	N=212	N=351	N=135	N=86	N=37	N=821
Driving consistently over the speed limit on a road where the speed limit is 65 mph	15%	34%	26%	21%	4%	100%
	N=122	N=277	N=213	N=173	N=33	N=817

Question 11						
During the past seven days, how often, if ever, did you do each of the following while you were driving (i.e., while the vehicle was actually in motion)?	Never	Rarely	Sometimes	Often	Every time I drove	Total
Sent a message via text, email or social media site	65%	20%	13%	3%	0%	100%
	N=534	N=161	N=103	N=21	N=2	N=820
Read a message via text, email or social media site	48%	27%	20%	5%	0%	100%
	N=394	N=221	N=160	N=42	N=3	N=820
Ate food	32%	27%	32%	9%	0%	100%
	N=263	N=222	N=259	N=75	N=1	N=820
Talked on a hands-free cell phone	47%	12%	21%	18%	2%	100%
	N=385	N=95	N=174	N=147	N=15	N=816
Talked on a cell phone you held in your hand	36%	26%	28%	10%	0%	100%
	N=292	N=211	N=231	N=81	N=4	N=819
Entered information into a GPS system	63%	21%	11%	4%	0%	100%
	N=515	N=175	N=92	N=37	N=1	N=819
Selected entertainment on an iPod, CD player, radio or other device	20%	17%	28%	26%	10%	100%
	N=162	N=136	N=230	N=210	N=80	N=818
Did personal grooming such as makeup or shaving	94%	4%	2%	1%	0%	100%

Question 11						
	N=768	N=30	N=16	N=6	N=0	N=819
Read a map, newspaper, book or other reading material	93%	5%	2%	0%	0%	100%
	N=764	N=40	N=15	N=1	N=0	N=820
Looked away from the road to manage children, pets or other people	52%	30%	12%	7%	0%	100%
	N=423	N=244	N=96	N=54	N=4	N=820
Something else that might have distracted you from driving (please specify)	0%	56%	32%	7%	4%	100%
	N=0	N=108	N=63	N=14	N=8	N=193

Question 11 Other Distractions		
Please specify what else might have distracted you from driving?	Percent	Number
Wildlife or scenery	28%	N=27
Accidents or bad drivers	21%	N=20
Adjust temperature, mirrors	6%	N=5
Smoking, lighting cigarette	1%	N=1
Looking for address or sign	8%	N=7
Finding object/recovering something that fell or spilled	20%	N=19
Other	16%	N=15
Total	100%	N=95

Question 12		
Of those things you said you had done at least once while driving in the past 7 days, which ONE did you do most often? (Check one)	Percent	Number
Selected entertainment on an iPod, CD player, radio or other device	26%	N=211
Ate food	17%	N=136
Talked on a hands-free cell phone	16%	N=128
Talked on a cell phone you held in your hand	12%	N=100
None	9%	N=72

CDOT | 2015 Mail Survey about Driving Behaviors

Looked away from the road to manage children, pets, or other people	5%	N=44
Read a message via text, email or social media site	5%	N=43
Sent a message via text, email or social media site	4%	N=32
Other action that might have distracted you from driving (SPECIFY)	3%	N=21
Entered information into a GPS system	2%	N=17
Read a map, newspaper, book, or other reading material	0%	N=3
Did personal grooming such as makeup or shaving	0%	N=2
Total	100%	N=809

Question 12							
Out of the past 30 days, on about how many days did you do the following?	None	1 or 2	3 to 5	6 to 10	11 or more	Missing	Total
Drank alcoholic beverages	38%	11%	15%	11%	21%	3%	100%
	N=317	N=94	N=125	N=92	N=172	N=26	N=826
Consumed marijuana	81%	6%	1%	2%	7%	4%	100%
	N=667	N=49	N=7	N=15	N=58	N=29	N=826
Used prescription medications that might impair your driving	87%	7%	1%	0%	2%	3%	100%
	N=715	N=58	N=11	N=0	N=17	N=26	N=826
Drove a motor vehicle within 2 hours after drinking alcoholic beverages	69%	21%	5%	2%	0%	3%	100%
	N=567	N=175	N=40	N=18	N=0	N=26	N=826
Drove a motor vehicle within 2 hours after consuming marijuana	88%	6%	0%	1%	2%	3%	100%
	N=726	N=46	N=1	N=10	N=17	N=26	N=826
Drove a motor vehicle within 2 hours after using prescription medications that might impair your driving	90%	6%	0%	0%	0%	3%	100%
	N=743	N=49	N=4	N=1	N=4	N=26	N=826

Question 12 (Average Days in Past 30 Days)						
Out of the past 30 days, on about how many days did you do the following?	Number	Mean	Std Error	Median	Minimum	Maximum
Drank alcoholic beverages	800	6.2	.3	2	0	30
Consumed marijuana	797	2.3	.3	0	0	30
Used prescription medications that might impair your driving	800	.7	.1	0	0	30
Drove a motor vehicle within 2 hours after drinking alcoholic beverages	800	.7	.1	0	0	10
Drove a motor vehicle within 2 hours after consuming marijuana	800	.7	.1	0	0	30
Drove a motor vehicle within 2 hours after using prescription medications that might impair your driving	800	.2	.1	0	0	30

Question 12 (Average Days for Those Who Did Activity in Past 30 Days)						
Out of the past 30 days, on about how many days did you do the following?	Number	Mean	Std Error	Median	Minimum	Maximum
Drank alcoholic beverages	483	10.2	.4	7	1	30
Consumed marijuana	129	13.9	1.1	7	1	30
Used prescription medications that might impair your driving	86	6.5	1.1	1	1	30
Drove a motor vehicle within 2 hours after drinking alcoholic beverages	234	2.3	.1	2	1	10
Drove a motor vehicle within 2 hours after consuming marijuana	74	7.1	1.1	1	1	30
Drove a motor vehicle within 2 hours after using prescription medications that might impair your driving	57	3.3	1.0	1	1	30

Question 14		
How many drinks would you feel comfortable having within a 2-hour time period and still feel safe to drive a vehicle? Consider a drink as either 1 beer, 1 glass of wine or 1 shot of liquor.	Percent	Number
0	24%	N=186
1	38%	N=301
2	0%	N=1
2	30%	N=237
3	5%	N=43
4	1%	N=10
5	1%	N=4
10	0%	N=0
23	0%	N=1
Total	100%	N=784

Question 15						
How strongly do you agree or disagree with the following statements:	Strongly agree	Somewhat agree	Somewhat disagree	Strongly disagree	Don't know	Total
I can safely drive under the influence of alcohol	2%	6%	11%	75%	6%	100%
	N=19	N=47	N=85	N=602	N=52	N=805
I can safely drive under the influence of marijuana	2%	6%	6%	51%	34%	100%
	N=18	N=52	N=49	N=412	N=272	N=804
I can safely drive after using certain prescription medications (other than marijuana)	3%	7%	9%	45%	35%	100%
	N=28	N=56	N=75	N=361	N=280	N=801
It is safer driving under the influence of marijuana than under the influence of alcohol	7%	12%	6%	43%	33%	100%
	N=55	N=98	N=45	N=344	N=263	N=804

Question 16						
How likely or unlikely do you think it would be that a person would get a DUI (Driving Under the Influence) if they...?	Very likely	Somewhat likely	Somewhat unlikely	Very unlikely	Don't Know	Total
Drove within an hour of using marijuana?	15%	22%	23%	14%	26%	100%
	N=125	N=179	N=185	N=117	N=209	N=814
Were pulled over after consuming marijuana and had face-to-face contact with a law enforcement officer?	31%	32%	13%	6%	19%	100%
	N=252	N=260	N=101	N=46	N=151	N=811
Drove within an hour of using certain prescription medications (other than marijuana)?	10%	16%	28%	21%	25%	100%
	N=84	N=129	N=225	N=166	N=205	N=809
Were pulled over when they drove within an hour of using certain prescription medications?	12%	23%	26%	15%	25%	100%
	N=99	N=184	N=207	N=121	N=200	N=811

Question 17				
To the best of your knowledge, can a person ...	Yes	No	Unsure	Total
To the best of your knowledge, can a person get a DUI as a result of driving after using marijuana?	77%	4%	19%	100%

Question 17				
	N=631	N=30	N=155	N=815
To the best of your knowledge, can a person still get a DUI if the marijuana was medically prescribed?	70%	5%	25%	100%
	N=569	N=39	N=207	N=815
Can a person get a DUI as a result of driving after using certain prescription medications?	57%	9%	35%	100%
	N=462	N=71	N=282	N=815

Question 18		
Suppose you drove a motor vehicle after drinking alcohol and the amount of alcohol in your body was more than what the law allows for drivers. How likely or unlikely is it that the law enforcement would stop you?	Percent	Number
Very Likely To Stop You	24%	N=195
Somewhat Likely To Stop You	42%	N=339
Somewhat Unlikely To Stop You	21%	N=169
Very Unlikely To Stop You?	4%	N=36
Don't know	9%	N=74
<b>Total</b>	<b>100%</b>	<b>N=813</b>

Question 19		
Suppose you drove a motor vehicle after consuming marijuana and the amount of marijuana in your body was more than what the law allows for drivers. How likely or unlikely is it that the police would stop you?	Percent	Number
Very Likely To Stop You	16%	N=128
Somewhat Likely To Stop You	23%	N=189
Somewhat Unlikely To Stop You	27%	N=218
Very Unlikely To Stop You?	10%	N=81
Don't know	24%	N=198
<b>Total</b>	<b>100%</b>	<b>N=814</b>

Question 20		
Personal breathalyzers provide an estimate of your blood alcohol content when you drink. The device links to your smartphone and can help you know if you are safe to drive.	Percent	Number
I would use a smartphone breathalyzer if it was given to me	50%	N=328
I never drink alcohol	31%	N=201
I would like to buy a smartphone breathalyzer	26%	N=170
I don't own a smartphone	22%	N=146

Question 20		
I own a smartphone breathalyzer	2%	N=11
I have tried a smartphone breathalyzer	1%	N=3
Total	100%	N=654

Question 20a		
What is the most you would pay?	Percent	Number
\$39 or less	62%	N=106
\$40-\$59	29%	N=49
\$60-\$79	5%	N=9
\$80-\$99	0%	N=1
\$100 or more	3%	N=5
Total	100%	N=170

Question 21		
CDOT builds and maintains interstates, U.S. highways and state highways to ensure that Colorado has a safe and efficient highway system. How would you rate the job CDOT does, overall?	Percent	Number
Excellent	10%	N=80
Good	49%	N=398
Fair	33%	N=265
Poor	9%	N=72
Total	100%	N=815

Question 22						
CDOT shares information about Colorado highways (such as road conditions, construction, accidents, or traffic speed) through several sources. Please tell us how often you use each of these sources to get information about Colorado highways.	Never	Rarely	Occasionally	Frequently	Not sure	Total

Question 27		
What is your gender?	Percent	Number
Male	50%	N=405
Female	50%	N=409
Total	100%	N=814

Question 28		
Which of the following races or ethnicities do you consider yourself to be?	Percent	Number
White	88%	N=716
Spanish, Hispanic or Latino	9%	N=76
Some other race	3%	N=24
American Indian or Alaskan Native	3%	N=23
Black or African American	1%	N=10
Asian, Asian Indian or Pacific Islander	1%	N=10
Total	100%	N=811

Question 29		
What is the highest level of education you have completed	Percent	Number
11th grade or less	1%	N=12
12th grade/GED	10%	N=80
Some college or trade school	28%	N=231
College graduate	39%	N=323
Post-graduate degree (Master's, Ph.D., etc.)	21%	N=172
Total	100%	N=817

Question 30		
How much do you think your household's total income before taxes will be for the current year? Please include in your total income money from all sources for all persons living in your household.	Percent	Number
Less than \$35,000	17%	N=137
\$35,000 to \$49,999	14%	N=107
\$50,000 to \$74,999	21%	N=165
\$75,000 to \$99,999	17%	N=137
\$100,000 or more	30%	N=239

Question 30		
Total	100%	N=785

## APPENDIX B: SURVEY RESULTS BY GENDER, AGE, REGION, PRIMARY VEHICLE USED, MOTORCYCLE OWNERSHIP, ANNUAL INCOME AND YEARS LIVING IN COLORADO

The tables that follow show comparisons of survey results by the geographic location of survey respondents, type of vehicle used and whether the respondent owned a motorcycle. When there is a statistically significant difference in the results between respondent subgroups, it is noted with a diamond (♦) after the relevant demographic characteristic.

Question 1a: Frequency of Overall Seat Belt Use

## APPENDIX C: SURVEY METHODOLOGY

---

Each year the Colorado Department of Transportation (CDOT) implements media campaigns to encourage safe driving habits, or dissuade unsafe driving habits, in the areas of seat belt use, speeding, distracted driving and impaired driving. Surveys of Colorado residents are conducted to support and measure the impact of these campaigns. Prior to October 2014 this was done through telephone surveys before and after the campaigns. In October 2014 these methods were revised and since that time telephone surveys are used to assess the impact of the campaigns and an annual mail surveys are used to assess behaviors and attitudes related to driving habits.

The primary reason for the change is that mail surveys elicit more candor about sensitive subjects (such as drinking and driving). Respondents are truly anonymous and do not have to admit socially unacceptable behaviors in conversation with an interviewer. Mail surveys also engender higher response rates and may better represent the population.

### Developing the Survey Instrument

The 2015 mail survey builds on the 2014 iteration. National Research Center, Inc. (NRC) and CDOT staff modified a few questions for clarity, removed one because it no longer provided needed information and added new questions to address new concerns.

### Selecting Survey Recipients

“Sampling” refers to the method by which survey recipients are chosen. The “sample” refers to all those who were given a chance to participate in the survey. A US Postal Service address list was purchased with geocoded addresses and counties were appended to the addresses. From that list, a total of 3,600 mailing addresses were randomly selected.. Non-Front Range counties were over-sampled relative to their smaller populations to ensure enough responses from these counties to reach a minimum margin of error around estimates of non-Front Range residents’ opinions.

The survey cover letter included a link to an online version of the paper survey and offered the respondent an opportunity to complete it online instead of by mail. Of the 3,600 surveys mailed out, 145 were undeliverable due to vacant housing or an invalid address. Of the 3,455 surveys delivered, 785 were completed via mail and 44 were completed online for a total of 829 completed surveys and a response rate of 24%.

### *Confidence Intervals*

It is customary to describe the precision of estimates made from surveys by a “level of confidence” and accompanying “confidence interval” (or margin of error). A traditional level of confidence, and the one used here, is 95%. A 95% confidence interval indicates that for every 100 random samples of this many residents, 95 of the confidence intervals created will include the “true” population response. This theory is applied in practice to

mean that the “true” perspective of the target population lies within the confidence interval created for a single survey. For example, if 85% of respondents said they always wear their seat belt, then the 3% margin of error (for the 95% confidence interval) indicates that the range of likely responses for the entire state is between 82% and 88%. This source of error is called sampling error. In addition to sampling error, other sources of error may affect any survey, including the non-response of residents with opinions different from survey responders.

The 95% confidence interval can be any size and quantifies the sampling error or imprecision of the survey results because some residents’ opinions are relied on to estimate all residents’ opinions. The confidence interval for the CDOT Mail survey is no greater than plus or minus 3.2 percentage points around any given percent reported for all respondents (921 completed surveys).

The appendices include more detailed comparisons of the survey results by respondent characteristics and by survey iteration. Chi-square or ANOVA tests of significance were applied to these breakdowns of selected survey questions. A “p-value” of 0.05 or less indicates that there is less than a 5% probability that differences observed between groups are due to chance; or in other words, a greater than 95% probability that the differences observed in the selected categories of the sample represent “real” differences among those populations. When differences between subgroups are statistically significant, they are noted in the tables or text.

## Survey Analysis

### *Weighting the Data*

The demographic characteristics of the survey respondents were compared to those found in the 2010 Census estimates for adults in the State of Colorado. Survey results were weighted using these population norms to reflect the appropriate percent of those residents. Other discrepancies between the whole population and the respondents also were aided by the weighting due to the intercorrelation of many socioeconomic characteristics.

The variables used for weighting were age, gender, race/ethnicity, area of Colorado (Front Range<sup>1</sup> or non-Front Range) and telephone service (cell-only, landline only or dual use). This decision was based on the disparity between the survey respondent characteristics and the population norms for these variables, the saliency of these variables in detecting differences of opinion among subgroups and previous practice.

The primary objective of weighting survey data is to make the survey respondents more reflective of the larger population of the community. This is done by: 1) reviewing the demographics of survey respondents and comparing them to the population norms

---

<sup>1</sup> Defined as the counties of Adams, Arapahoe, Boulder, Broomfield, Denver, Douglas, El Paso, Jefferson, Larimer, Pueblo and Weld.

from the most recent Census or other sources and 2) comparing the responses to different questions for demographic subgroups. The demographic characteristics that are least similar to the Census and yield the most different results are the best candidates for data weighting. A third criterion sometimes used is the importance that the community places on a specific variable. For example, if a community feels that accurate race representation is key to staff and public acceptance of the study results, additional consideration will be given in the weighting process to adjusting the race variable.

A special software program using mathematical algorithms is used to calculate the appropriate weights. Several different weighting “schemes” were tested to ensure the best fit for the data. Additionally, residents not in the Front Range were oversampled to ensure adequate representation. As a consequence, results must be weighted to recapture the proper representation of younger adults and Front Range residents. The results of the weighting scheme are presented in Table 1.

Table 1: Weighting Table for the CDOT Mail Survey 2015

	State of Colorado 2010 Census	Weighted	Unweighted
Male	50%	50%	49%
Female	50%	50%	51%
18 to 24	32%	32%	8%
25 to 34	38%	38%	26%
35 to 44	30%	30%	66%
Not white only	17%	17%	17%
White only	83%	83%	83%
Front Range	70%	72%	54%
Non-Front Range	30%	28%	46%

*Analyzing the Data*

The electronic dataset was analyzed by NRC staff using the Statistical Package for the Social Sciences (SPSS). For the most part, frequency distributions are presented in the body of the report along with comparisons of respondent characteristics. A complete set of frequencies for each survey question is presented in Appendix A.
